CLASSICAL DICTIONARY:

CONTAINING AN ACCOUNT OF

THE PRINCIPAL PROPER NAMES

MENTIONED IN

ANCIENT AUTHORS,

AND

INTENDED TO ELUCIDATE ALL THE IMPORTANT POINTS CONNECTED WITH THE
GEOGRAPHY, HISTORY, BIOGRAPHY, MYTHOLOGY, AND FINE ARTS

OF THE

GREEKS AND ROMANS.

TOGETHER WITH

AN ACCOUNT OF COINS, WEIGHTS, AND MEASURES,

WITH TABULAR VALUES OF THE SAME.

BY

✓
CHARLES ANTHON, LL.D.,

JAY-PROFESSOR OF THE GREEK AND LATIN LANGUAGES IN COLUMBIA COLLEGE,
NEW-YORK, AND RECTOR OF THE GRAMMAR-SCHOOL.

"Huc undique gaza."—VIRG.

NEW-YORK:

PUBLISHED BY HARPER & BROTHERS,

NO. 82 CLIFF-STREET.

1848.

Entered, according to Act of Congress, in the year 1841, by
CHARLES ANTHON, LL.D.,
In the Clerk's Office of the Southern District of New-York

J O H N A N T H O N, E S Q.,

COUNSELLOR AT LAW, &c.,

WHO, AMID THE DUTIES OF A LABORIOUS PROFESSION, CAN STILL FIND LEISURE
FOR HOLDING CONVERSE WITH THE PAGES OF ANTIQUITY, AND IN WHOM
LEGAL ERUDITION IS SO HAPPILY BLENDED WITH THE LIGHTER
GRACES OF ANCIENT AND MODERN LITERATURE,

THIS WORK

IS

AFFECTIONATELY INSCRIBED,

AS A FEEBLE RETURN FOR MANY ACTS OF FRATERNAL KINDNESS, AND (IF A BROTHER
MAY BE ALLOWED TO EXPRESS HIMSELF IN THIS WAY) AS A TESTIMONIAL
OF FOND REGARD FOR EMINENT ABILITIES IN UNISON
WITH EMINENT INTEGRITY AND WORTH

P R E F A C E

TO THE FOURTH EDITION.

IN laying the result of his labours before the public, the author wishes it to be distinctly understood, that the present volume is not, as some might perhaps imagine, merely an improved edition of the Classical Dictionary of Lempriere, but a work entirely new, and resembling its predecessor in nothing but the name. The author owes it, in fact, to himself to be thus explicit in his statement, since he would feel but poorly compensated for the heavy toil expended on the present work, were he regarded as having merely remodelled, or given a new arrangement to, the labours of another. So far from this having been done, there are, in truth, but few articles, and those not very important ones, wherein any resemblance can be traced between Lempriere's work and the present. In every other respect, the Classical Dictionary now offered to the public will be found to be as different from Lempriere's as the nature of the case can possibly admit.

It cannot be denied that Lempriere's Classical Dictionary was a very popular work in its day. The numerous editions through which it ran would show this very conclusively, without the necessity of any farther proof. Still, however, it may be asserted with equal safety, that this same popularity was mainly owing to the circumstance of there being no competitor in the field. Considered in itself, indeed, the work put forth but very feeble claims to patronage, for its scholarship was superficial and inaccurate, and its language was frequently marked by a grossness of allusion, which rendered the book a very unfit one to be put into the hands of the young. And yet so strong a hold had it taken of public favour both at home and in our own country, that not only were no additions or corrections made in the work, but the very idea itself of making such was deemed altogether visionary. The author of the present volume remembers very well what surprise was excited, when, on having been employed to prepare a new edition of Lempriere in 1825, he hinted the propriety of making some alterations in the text. The answer received from a certain quarter was, that one might as well think of making alterations in the Scriptures as in the pages of Dr. Lempriere! and that all an editor had to do was merely to revise the references contained in the English work. When, however, several palpable errors, on the part of Lempriere, had been pointed out by him, and the editor was allowed to correct these and others of a similar kind, he still felt the impossibility of presenting the work to the American public in that state in which alone it ought to have appeared, partly from the undue estimation in which the labours of Dr. Lempriere were as yet generally held, and partly from a consciousness of his own inability, through the want of a more extended course of reading, to do justice to such a task. With all its imperfections, however, the edition referred to was well received; and when a second one was soon after called for, the publisher felt himself emboldened to allow the editor the privilege of introducing more extensive improvements, and of making the work, in every point of view, more deserving of patronage.

The republication of this latter edition in England, and the implied confession, connected with such a step, that the original work of Lempriere stood in need of improvement, now broke the charm which had fettered the judgments of so many of our own countrymen, and it then began to be conceded on all sides that the Classical Dictionary of Dr. Lempriere was by no means entitled to the claim of infallibility; nay, indeed, that it was defective throughout. When the ownership of the work, therefore, passed into the hands of the Messrs. Carvill, and a new edition was again wanted, those intelligent and enterprising publishers gave the editor permission to make whatever alterations and improvements he might see fit; and the Classical Dictionary now appeared in two octavo volumes, enriched with new materials derived from various sources, and presenting a much fairer claim than before to the attention of the student.

This last-mentioned edition became, in its turn, soon exhausted, and a new one was demanded; when the copyright of the work passed from the Messrs. Carvill to the Brothers Harper. To individuals of less liberal spirit, and more alive to the prospect of immediate

advantage, it would have appeared sufficient to republish merely the edition in two volumes, without any farther improvement. The Messrs. Harper, however, thought differently on the subject. They wished a Classical Dictionary in as complete and useful a form as it could possibly be made; and, with this view, notwithstanding the large amount which had been expended on the purchase of the work, the stereotype plates were destroyed, though still perfectly serviceable, and the editor was employed to prepare a work, which, while it should embrace all that was valuable in the additions that had from time to time been made by him, was to retain but a very small portion of the old matter of Lempriere, and to supply its place with newly-prepared articles. This has now, accordingly, been done. A *new work* is the result; not an improved edition of the old one, but a work on which the patient labour of more than two entire years has been faithfully expended, and which, though comprised in a single volume, will be found to contain much more than even the edition of Lempriere in two volumes, as published by the Messrs. Carvill. Whatever was worth preserving among the additions previously made by the editor, he has here retained; but, in general, even these are so altered and improved as, in many instances, to be difficult of recognition; while, on the other hand, all the old articles of Lempriere, excepting a few, have been superseded by new ones.

Such is a brief history of the present work. It remains now to give a general idea of the manner in which it has been executed. The principal heads embraced in the volume are, as the title indicates, the Geography, History, Biography, Mythology, and Fine Arts of the Greeks and Romans. The subject of Archæology is only incidentally noticed, as it is the intention of the author to edit, with all convenient speed, a Dictionary of Greek and Roman Antiquities, which will contain an abstract of all the valuable matter connected with these subjects that is to be found in the writings of the most eminent German philologists. Only a few, therefore, of the more important topics that have a bearing on Archæology, are introduced into the present volume, such as the Greek Theatre, and theatrical exhibitions in general, the national games of Greece, the dictatorship and agrarian laws of the Romans, and some other points of a similar kind.

If the author were asked on what particular subject, among the many that are discussed in the present volume, the greatest amount of care had been expended, he would feel strongly inclined to say, that of Ancient Geography. Not that the others have been by any means slighted, and the principal degree of labour concentrated under this head. Far from it. But the fact is, that in a work like the present, the articles which relate to Ancient Geography are by far the most numerous, and, in some respects, the most important, and require a large portion of assiduous care. In what relates, therefore, to the Geography of former days, the author thinks he can say, without the least imputation of vanity, that in no work in the English language will there be found a larger body of valuable information on this most interesting subject, than in that which is here offered to the American student. In connexion with the geography of past ages, various theories, moreover, are given respecting the origin and migration of different communities, and some of the more striking legends of antiquity are referred to concerning the changes which the earth's surface has from time to time undergone. Some idea of the nature of these topics may be formed by consulting the following articles: *Egyptus, Atlantis, Gallia, Græcia, Lætonia, Mediterraneum Mare, Mæroë, Ogyges, Pelasgi, and Phœnicia*. Nor is this all. Books of Travels have been made to contribute their stores of information, and the student is thus transported in fancy to the scenes of ancient story, and wanders, as it were, amid the most striking memorials of the past.

The Historical department has also been a subject of careful attention. Here, again, the origin of nations forms a very attractive field of inquiry, and the student is put in possession of the ablest and most recent speculations of both German and English scholarship. The Argonautic expedition, for example, the legend of the Trojan war, events dimly shadowed forth in the distant horizon of "gray antiquity;" the origin of Rome, the early movements of the Doric and Ionic races among the Greeks; or, what may prove still more interesting to some, the origin of civilization in India and the remote East; all these topics will be found discussed under their respective heads, and will, it is hoped, teach the young student that history is something more than a mere record of dates, or a chronicle of wars and crimes.

Particular attention has also been paid to the department of Biography. This subject will be found divided into several heads: biographical sketches, namely, of public men, of individuals eminent in literature, of scientific characters, of physicians, of philosophers, and

also of persons distinguished in the early history of the Christian Church. The literary biographies, in particular, will, it is conceived, be found both attractive and useful to the student, since we have no work at present in the English language in which a full view is given of Grecian and Roman literature. The sketches of ancient mathematicians, and of other individuals eminent for their attainments in science, will not be found without interest even in our own day. Nor will the medical man depart altogether unrewarded from a perusal of those biographies which treat of persons distinguished of old in the healing art. In the accounts, moreover, that are given of the philosophers and philosophic systems of antiquity, although half-learned sciolists have passed upon these topics so sweeping a sentence of condemnation, much curious information may nevertheless be obtained, and much food for speculation, too, on what the mind can effect by its own unaided powers in relation to subjects that are of the utmost importance to us all. The ecclesiastical biographies will also be found numerous, and, it is hoped, not uninteresting. None of them fall properly, it is true, within the sphere of a Classical Dictionary, yet they could not well have been omitted, since many of the matters discussed in them have reference more immediately to classical times.

The subject of Mythology has supplied, next to that of Ancient Geography, the largest number of articles to the present work. In the treatment of these, it has been the chief aim of the author to lay before the student the most important speculations of the two great schools (the Mystic and anti-Mystic) which now divide the learned of Europe. At the head of the former stands Creuzer, whose elaborate work (*Symbolik und Mythologie der alten Völker*) has reappeared under so attractive a form through the taste and learning of Guigniaut. The champion of the anti-Mystic school appears to be Lobeck, although many eminent names are also marshalled on the same side. It has been the aim of the author to give a fair and impartial view of both systems, although he cannot doubt but that the former will appear to the student by far the more attractive one of the two. In the discussion of mythological topics, very valuable materials have been obtained from the excellent work of Keightley, who deserves the praise of having first laid open to the English reader the stores of German erudition in the department of Mythology. The author will, he trusts, be pardoned for having intruded some theories of his own on several topics of a mythological character, more particularly under the articles *Amazones*, *Asi*, *Io*, *Odinus*, and *Orpheus*. It is a difficult matter, in so attractive a field of inquiry as this, to resist the temptation of inflicting one's own crude speculations upon the patience of the reader. In preparing the mythological articles, the greatest care has been also taken to exclude from them everything offensive, either in language or detail, and to present such a view of the several topics connected with this department of inquiry as may satisfy the most scrupulous, and make the present work a safe guide, in a moral point of view, to the young of either sex.

The department of the Fine Arts forms an entirely new feature in the present work. The biographies of Artists have been prepared with great care, and criticisms upon their known productions have been given from the most approved authorities, both ancient and modern. The information contained under this head will, it is conceived, prove not unacceptable either to the modern artist or the general reader.

In a work like the present, the materials for which have been drawn from so many sources, it would be a difficult task to specify, within the limits of an ordinary preface, the different quarters to which obligations are due. The author has preferred, therefore, appending to the volume a formal catalogue of authorities, at the risk of being thought vain in so doing. A few works, however, to which he has been particularly indebted, deserve to be also mentioned here. These are the volumes of Cramer on Ancient Geography; the historical researches of Thirlwall; and the work of Keightley already referred to. From the Encyclopædia also, published by the Society for the Diffusion of Useful Knowledge, numerous excellent articles have been obtained, which contribute in no small degree to the value of the present publication. In every instance care has been taken to give at the end of each article the main authority from which the materials have been drawn, a plan generally pursued in works of a similar nature, and which was followed by the author in all the editions of Lempriere prepared by him for the press. A fairer mode of proceeding cannot well be imagined. And yet complaint has been made in a certain quarter, that the articles taken from the Encyclopædia just mentioned are not duly credited to that work, and that the title of the work itself has been studiously changed. Of the fallacy of the first charge, any one can satisfy himself by referring to the pages of the present volume where those articles appear; while, with regard to the second, the author has merely to remark, that in

substituting the title of "Encyclopædia of Useful Knowledge" for the more vulgar one of "Penny Cyclopædia," he always conceived that he was doing a service to that very publication itself. At all events, the change of title, if it were indeed such, appears to have been a very proper one, since it met with the tacit approbation of certain so-called critics, who would never have allowed this opportunity of gratifying personal animosity to have passed unheeded, had they conceived it capable of furnishing any ground of attack.

The account of Coins, Weights, and Measures, which accompanied the edition of Lempriere in two volumes, has been appended to the present work in a more condensed and convenient form. It is from the pen of Abraham B. Conger, Esq., formerly one of the Mathematical instructors in Columbia College, but at present a member of the New-York bar. The very great clearness and ability which characterize this Essay have been fully acknowledged by its republication abroad in the Edinburgh edition of Potter's Grecian Antiquities, and it will be found far superior to the labours of Arbuthnot, as given in the Dictionary of Lempriere.

Before concluding, the author must express his grateful obligations to his friend, Francis Adams, Esq., of Banchory Ternan, near Aberdeen (Scotland), for the valuable contributions furnished by him under the articles *Ætius*, *Alexander of Tralles*, *Aretæus*, *Celsus*, *Dioscorides*, *Galenus*, *Hippocrates*, *Nicander*, *Oribasius*, *Paulus Ægineta*, and many other medical biographies scattered throughout the present work. Mr. Adams is well known abroad as the learned author of "Hermes Philologicus," and the English translator of "Paul of Ægina." Whatever comes from his pen, therefore, carries with it the double recommendation of professional talent and sound and accurate scholarship.

With regard to the typographical execution of the present volume, the author need say but little. The whole speaks for itself, and for the unsparing liberality of the publishers. In point of accuracy, the author is sure that no work of its size has ever surpassed it; and for this accuracy he is mainly indebted to the unremitting care of his talented young friend, Mr. Henry Drisler, a graduate of Columbia College, and one of the Instructors in the College-school, of whose valuable services he has had occasion to speak in the preface to a previous work.

Columbia College, August 1, 1842.

In preparing the present edition for the press, the greatest care has been taken to correct any typographical errors that may hitherto have escaped notice, and to introduce such other alterations as the additional reading of the author, and new materials, furnished by works of a similar nature, have enabled him to make. In furtherance of this view, he has appended a Supplement to the present volume, containing all that appeared to him important in the first number of the new Classical Dictionary, now in a course of publication from the London press, as well as in the numbers, which have thus far appeared, of Pauly's "*Real-Encyclopädie der Classischen Alterthumswissenschaft*," which constitutes, in fact, the principal source of supply from which the authors of the new Classical Dictionary have drawn their materials. The articles contained in the Supplement will be found referred to in the body of the work under their respective heads, thus enabling the reader to ascertain, at a glance, what additions have been actually made.

Columbia College, March 1, 1843.

CLASSICAL DICTIONARY,

&c. &c. &c.

ABA

ABÆ, I. a city of Phocis, near and to the right of Elatea, towards Opus. The inhabitants had a tradition that they were of Argive descent, and that their city was founded by Abas, son of Lynceus and Hypermnestra, grandson of Danaus (*Paus.* 10, 35). It was most probably of Thracian, or, in other words, Pelasgic origin. Abæ was early celebrated for its oracle of Apollo, of greater antiquity than that at Delphi (*Steph. B.*). In later days, the Romans also testified respect for the character of the place, by conceding important privileges to the Abæans, and allowing them to live under their own laws (*Paus. l. c.*). During the Persian invasion, the army of Xerxes set fire to the temple, and nearly destroyed it; soon after it again gave oracles, though in this dilapidated state, and was consulted for that purpose by an agent of Mardonius (*Herod.* 8, 134). In the Sacred war, a body of Phocians having fled to it for refuge, the Thebans burned what remained of the temple, destroying, at the same time, the suppliants (*Diod. S.* 16, 58). Hadrian caused another temple to be built, but much inferior in size. This city possessed also a forum and a theatre. Ruins are pointed out by Sir W. Gell (*Itin.* 266) near the modern village of *Éxarcho*.

ABÆUS, a surname of Apollo, derived from the town of Abæ in Phocis, where the god had a rich temple. (*Hesych.*, s. v. 'Αβαι.—*Herod.* 8, 33.)

ABACÆNUM, a city of the Siculi, in Sicily, situated on a steep hill southwest of Messana. Its ruins are supposed to be in the vicinity of *Tripi*. Being an ally of Carthage, Dionysius of Syracuse wrested from it part of the adjacent territory, and founded in its vicinity the colony of Tyndaris (*Diod. S.* 14, 78, 90). Ptolemy calls this city 'Αβάκαινα, all other writers 'Αβακῆνον. According to Bochart, the Punic appellation was *Abacin*, from *Abac*, "extollere," in reference to its lofty situation. (*Cluver. Sic. Ant.* 2, 386.)

ABALUS. *Vid.* Basilis.

ABANTES, an ancient people of Greece, whose origin is not ascertained; probably they came from Thrace, and having settled in Phocis, built the city Abæ. From this quarter a part of them seem to have removed to Eubœa, and hence its name *Abantias*, or *Abantis* (*Strabo*, 444). Others of them left Eubœa, and settled for a time in Chios (*Paus.* 7, 4); a third band, returning with some of the Locri from the Trojan war, were driven to the coast of Epirus, settled in part of Thesprotia, inhabited the city Thronium, and gave the name *Abantis* to the adjacent territory (*Paus.* 5, 22). The Thracian origin of the Abantes is contested by Mannert (8, 246), though supported, in some degree, by Aristotle, as cited by Strabo. They had a custom of cutting off the hair of the head before, and suffering it to grow long behind (*Il.* 2, 542). Plutarch (*Vit. Thes.* 5) states, that they did this to prevent the enemy, whom they always boldly fronted, from seizing

ABA

them by the fore part of their heads. The truth is, they wore the hair long behind as a badge of valour, and so the scholiast on Homer means by *ἀνδρείας χάριν*. The custom of wearing long hair characterized many, if not all of the warlike nations of antiquity; it prevailed among the Scythians, who were wont also to cut off the hair of their captives as indicative of slavery (*Hesych.*—*Bayeri Mem. Scyth. in comment. Acad. Petr.* 1732, p. 388); and also among the Thracians, Spartans, Gauls (*Galli comati*), and the early Romans (*intonsi Romani*). As to the origin of this custom among the Spartans, Herodotus (1, 82) seems to be in error, in dating it from the battle of Thyrea, since Xenophon (*Lac. Pol.* 11, 3) expressly refers it to the time of Lycurgus (*Plut. Vit. Lys.* 1). The practice of scalping, which, according to Herodotus (4, 64), existed among the ancient Scythians (*Casaub. ad Athen.* 524), and is still used by the North American Indians, appears to owe its origin to this peculiar regard for the hair of the head. The greatest trophy for the victor to gain, or the vanquished to lose, would be a portion of what each had regarded as the truest badge of valour, and the skin of the head would be taken with it to keep the hair together. On the other hand, shaving the head was a peaceful and religious custom, directly opposed to that just mentioned. It was an indispensable rite among the priests of Egypt (*Herod.* 2, 36); and even the deities in the hieroglyphics have their heads without hair. Hence, too, may be explained what is said of the Argippæi, or Bald-headed Scythians (*Herod.* 4, 23). No one offered violence to them; they were accounted sacred, and had no warlike weapons. Were they not one of those sacerdotal colonies which, migrating at a remote period from India, spread themselves over Scythia, and a large portion of the farther regions of the West?

ABANTIÆDES, a masculine patronymic given to the descendants of Abas, king of Argos, such as Acrisius, Perseus, &c. (*Ovid. Met.* 4, 673.)

ABANTIÆS, I. one of the ancient names of Eubœa. (*Vid.* Abantes.) Strabo (444) calls it Abantis.—II. A female patronymic from Abas, as Danaë, Atalanta, &c.

ABANTIDAS, a tyrant of Sicyon, in the third century B.C. He seized upon the sovereign power, after having slain Clinias, who was then in charge of the administration. Clinias was the father of the celebrated Aratus, and the latter, at this time only seven years of age, narrowly escaped sharing the fate of his parent. (*Plut. Vit. Arat.* 2.)

ABANTIS. *Vid.* Abantias II.

ABÆRIS, I. a Scythian, or Hyperborean, mentioned by several ancient writers. Iamblichus states that Abaris was a disciple of Pythagoras, and performed many wonders with an arrow received from Apollo (*Vit. Pythag.*, p. 28, ed. Kuster.) Herodotus informs us (4, 36) that he was carried on this arrow over the

whole earth without tasting food. But there are strong doubts as to the accuracy of the text given by Wesseling and Valckenær. The old editions read *ὡς τὸν δίστον περιέφερε οὐδὲν σιτέοντος*, which agrees with the account given in the Fragment of Icyurgus cited by Eudocia (*Villois. Anecd.* 1, 20), where he is said to have traversed all Greece, holding an arrow as the symbol of Apollo. The time of his arrival in Greece is variously given (*Bentl. Phil.* 95). Some fix it in the 3d Olympiad (*Harpoer.—Suid.*), others in the 21st, others much lower. One authority is weighty: Pindar, as cited by Harpocration, states that Abaris came to Greece while Cræsus was king of Lydia. An extraordinary occasion caused his visit. The whole earth was ravaged by a pestilence; the oracle of Apollo, being consulted, gave answer that the scourge would only cease when the Athenians should offer up vows for all nations. Another account makes him to have left his native country during a famine (*Villois. Anecd. l. c.*). He made himself known throughout Greece as a performer of wonders; delivered oracular responses (*Clem. Alex. Str.* 399); healed maladies by charms or exorcisms (*Plato, Charm.* 1, 312, *Bekk.*); drove away storms, pestilence, and evils. His oracles are said to have been left in writing (*Apollon. Hist. Comment.* c. 4. Compare *Schol. Aristoph.* p. 331, as emended by Scaliger). The money obtained for these various services, Abaris is said to have consecrated, on his return, to Apollo (*Jambl. V. P.* 19), whence Bayle concludes, that the collecting of a pious contribution formed the motive of his journey to Greece (*Dict. Hist. et Crit.* 1, 4). He formed also a Palladium out of the bones of Pelops, and sold it to the Trojans (*Jul. Firmicus*, 16). Modern opinions vary: Brucker (*Hist. Phil.* 1, 355—*Enfield*, 1, 115) regards him as one who, like Empedocles, Epimenides, Pythagoras, and others, went about imposing on the vulgar by false pretensions to supernatural powers; and Lobeck (*Aglaoph.* vol. i., p. 313, *seq.*) is of the same opinion. Creuzer (*Symb.* 2, 1, 267) considers Abaris as belonging to the curious chain of connexion between the religions of the North, and those of Southern Europe, so distinctly indicated by the customary offerings sent to Delos from the country of the Hyperboreans. The same writer then cites a remarkable passage from the *Hialmarsaga*: "From Greece came Abor and Samolis, with many excellent men; they met with a very cordial reception; their servant and successor was Hæse of Glisivalr." The allusion here is evidently to Abaris and Zamolxis; and if this passage be authentic, Abaris would have been a Druid of the North, and the country of the Hyperboreans the Hebrides. The doctrines of the Druids, as well as those of Zamolxis, resemble the tenets of the Pythagorean school, and in this way we may explain that part of the story of Abaris which connects him with Pythagoras (*Origen. Philos.* 882, 906, *ed. de la Rue.—Chardon de la Rochette, Melang. de Crit.* vol. i., p. 58). Unfortunately, the *Saga* of Hialmar is by the ablest critics of the North considered a forgery (*Müller's Sagabibl.* 2, 663). Still, other grounds have been assumed for making Abaris a Druidical priest; and the opinion is maintained by several writers (*Toland's Misc. Works*, 1, 181.—*Higgins' Celtic Druids*, 123.—*Southern Rev.* 7, 21.) One argument is derived from Himerius (*Phot. Bibl.* vol. ii., p. 374, *ed. Bekker*), that he travelled in Celtic costume; in a plaid and pantaloons. Creuzer, after some remarks on this history, indulges in an ingenious speculation, by which Abaris becomes a personification of writing, and the doctrines communicated by it, as well as the advantages resulting from these doctrines, and from science or wisdom in general. As the Runic characters of the North are here referred to, a part of his argument rests on the etymology of "Runic," *rinnen, runen*, "to run," "to move rapidly along." This, together with the arrow-like form of most of

them, will make Abaris, travelling on his arrow, to be him that moves rapidly along, *Runa*, the scribe, prophet, deliverer; and, at the same time, the personification of writing, as the source of all knowledge, and of safety to man. Thus the legend of Abaris may mark the propagation of writing from the summits of Caucasus, for spreading civilization as well to the Greeks, as the nations of the North. For other speculations, compare Müller (*Dorier*, 1, 364) and Schwenk (*Etymol.-Myth. Anleut.* 358), who see in Abaris the god himself, Apollo 'Αφαρεύς or 'Αφαῖος, "luminous," under the Macedonian form 'Αβαρίς, become his own priest (*Creuzer*, 2, 1, 269).—II. A city of Egypt, called also *Avaris* ('Αβαρίς, or 'Αβαρίς). Manetho places it to the east of the Bubastic mouth of the Nile, in the Saitic Nome (*Joseph. c. Ap.* 1, 14). Mannert identifies it with what was afterward called Pelusium; for the name Abaris disappeared, when the shepherd-race retired from Egypt, and the situation of Pelusium coincides sufficiently with the site of Abaris, as far as authorities have reached us. Manetho, as cited by Josephus, says, that Salatis, the first shepherd-king, finding the position of Abaris well adapted to his purpose, rebuilt the city, and strongly fortified it with walls, garrisoning it with a force of 240,000 men. To this city Salatis repaired in summer time, in order to collect his tribute, and to pay his troops, and to exercise his soldiers with the view of striking terror into foreign states. Manetho also informs us, that the name of the city had an ancient theological reference (*καλουμένην δ' ἀπό τινος ἀρχαίας θεολογίας Ἀβαρίν*). Other writers make the term Abaris denote "a pass," or "crossing over," a name well adapted to a stronghold on the borders. Compare the Sanscrit *upari* (over, above), the Gothic *ufar*, the Old High German *ubar*, the Persian *cher*, the Latin *super*, the Greek *ὑπέρ*, &c.

ABARNIS, or -US, I. a name given to that part of Mysia in which Lampascus was situated. Venus, according to the fable, here *disowned* (*ἀπηνόμισατο*) her offspring Priapus, whom she had just brought forth, being shocked at his deformity. Hence the appellation. The first form *Aparnis*, was subsequently altered to *Abarnis* (*Steph. B.*).—II. A city in the above-mentioned district, lying south of Lampascus (*Steph. B.*).

ABAS, I. or ABUS, a mountain of Armenia Major; according to D'Anville, the modern *Abi-dag*, according to Mannert (5, 196), *Ararat*; giving rise to the southern branch of the Euphrates (*Vid. Arsianias*).—II. A river of Albania, rising in the chain of Caucasus, and falling into the Caspian Sea. Ptolemy calls it Albanus. On its banks Pompey defeated the rebellious Albanians (*Plut. Vit. Pomp.* 35).—III. The 12th king of Argos. (*Vid. Supplement.*)—IV. A son of Metaneira, changed by Ceres into a lizard for having mocked the goddess in her distress. Others refer this to Ascalaphus.—V. A Latin chief who assisted Æneas against Turnus, and was killed by Lausus. (*Æn.* 10, 170, &c.)—VI. A soothsayer, to whom the Spartans erected a statue for his services to Lysander, before the battle of Egospotamos. He is called by some writers *Ilagias* ('Αγίας).

ABASCANTUS. *Vid. Supplement.*

ABASITIS, a district of Phrygia Epictetus, in the vicinity of Mysia; in it was the city of Ancyra, and here, according to Strabo (576), the Macestus or Megistus arose.

ABĀTOS. *Vid. Philæ.*

ABDALONĪMUS, one of the descendants of the kings of Sidon, so poor that, to maintain himself, he worked in a garden. When Alexander took Sidon, he made him king, and enlarged his possessions for his disinterestedness. (*Justin*, 11, 10.—*Curt.* 4, 1.) Diodorus Siculus (17, 46) calls him Ballonymus, a corruption of the true name as given by Curtius and Justin. Wesseling (*ad Diod. S. l. c.*) considers the word equivalent, in the Phœnician tongue, to *Abd-al-anim*, "Ser-

ous Dei prädatoris," and thinks that the latter part of the compound, *anim*, may be traced in the name of the god *Anammelech* (2 Kings, 17, 31). Gesenius (*Gesch. der Hebr. Sprache und Schrift*, 228) makes *Abdalonimus*, as an appellation, the same with *Abd-alonim*, "Servant of the gods."

ABDERA, I. a city of Thrace, at the mouth of the Nestus: Ephorus (*Steph. B.*) wrote in sing. Ἀβδῆρον, but the plural is more usual, τὰ Ἀβδῆρα. The Clazomenian Timesius commenced founding this place, but, in consequence of the Thracian inroads, was unable to complete it; soon after, it was recolonized by a large body of Teians from Ionia, who abandoned their city, when besieged by Harpagus, general of Cyrus (*Herod.* 1, 168). Many Teians subsequently returned home; yet Abdera remained no inconsiderable city. There are several other accounts of the origin of this place, but the one which we have given is most entitled to credit. The city of Abdera was the birthplace of many distinguished men, as Anaxarchus, Democritus, Hecataeus, and Protagoras; the third, however, must not be confounded with the native of Miletus. (*Crenzer, Hist. Antiq. Gr. Fragm.* 9, 28.) But, notwithstanding the celebrity of some of their fellow-citizens, the people of Abdera, as a body, were reputed to be stupid. In the *Chiliads* of Erasmus, and the *Adagia Veterum*, many sayings record this failing; Cicero styles Rome, from the stupidity of the senators, an Abdera (*Ep. ad Att.* 4, 16); Juvenal calls Abdera itself, "the native land of blockheads" (*perreum patriam*, 10, 50; compare Martial, 10, 25; "Abderitana pectora plebis"). Much of this is exaggeration. Abdera was the limit of the Odrysian empire to the west (*Thuc.* 2, 29). It afterward fell under the power of Philip; and, at a later period, was delivered up by one of its citizens to Eumenes, king of Pergamus (*Diod. S. Fragm.* 30, 9, 413, *Bip.*). Under the Romans it became a free city (*Abdera libera*), and continued so even as late as the time of Pliny (4, 11). It was famous for mullets, and other fish (*Dorio, ap. Athen.* 3, 37.—*Archestr. ap. exund.* 7, 124). In the middle ages Abdera degenerated into a very small town, named Polystylus, according to the Byzantine historian, Curopalate (*Wasse, ad Thuc.* 2, 97). Its ruins exist near *Cape Buloustra*. (*French Strabo*, 3, 180, § 3.)—II. A town of Hispania Bætica, east of Malaca, in the territory of the Bastuli Pœni, lying on the coast; Strabo calls the place Ἀβδῆρα (157). Ptolemy Ἀβδῆρα, Steph. B. Ἀβδῆρα, a coin of Tiberius Abdera (*Vaillant, col. 1*, p. 63.—*Rasche's Lex. Rei Num.* 1, 23). It was founded by a Phœnician colony, and is thought to correspond to the modern *Adra*. (*Ukert's Geogr.* 2, 351.)

ABDERUS, a Locrian, armour-bearer of Hercules; torn to pieces by the mares of Diomedes, which the hero, warring against the Bistones, had intrusted to his care. According to Philostratus (*Icon.* 2, 35), Hercules built the city of Abdera in memory of him.

ABDIAS. *Vid.* Supplement.

ABELLA, a town of Campania, northeast of Nola, founded by a colony from Chalcis, in Eubœa, according to Justin (20, 1). Its ruins still exist in *Arche Vecchia*. Small as was Abella, it possessed a republican government, retaining it until subdued by the Romans; the inhabitants *Abellani*, are frequently mentioned by ancient writers; the only fact worthy of record is, that their territory produced a species of nut, *nux Abellana* or *Arellana*, apparently the same with what the Greek writers call κάρον Ποντικόν, Ἡρακλειωτικόν or λεπτρόν (*Dioscor.* 1, 179.—*Athen.* 2, 42). The tree itself is the *καρὰ Ποντική*, and corresponds to the *corylus* of Virgil, and the *corylus Arellana* of Linnaeus, class 21. (*Fée, Flore de Virgile*, 223.)

ABELLINUM, I. now *Abellino*, a city of the Hirpini, in Samnium; the inhabitants of which were called, for distinction's sake, *Abellinates Protopi* (*Plin.* 3, 2.—*Pol.* 67).—II. A city of Lucania, near the source of

the Aciris; called *Abellinum Marsicum*. It is thought by Cluver (*Ital. Antiq.* 2, 1280) and D'Anville (*Geogr. Anc.* 57) to accord with *Marsico Vetere*.

ABELLIO. *Vid.* Supplement.

ABGÆRUS, I. a name common to many kings of Edessa, in Mesopotamia; otherwise written *Abagarus*, *Agbarus*, *Augurus*, &c. The first monarch of this name (*Euseb. H. E.* 1, 13) wrote a letter to our Saviour, and received a reply from him (*vid.* Edessa). The genuineness of these letters has been much disputed among the learned. (*Cave's Lit. Hist.* 1, 2.—*Lardner's Cred.* 7, 22.)—II. The name, according to some authorities, of the Arabian prince or chieftain who perfidiously drew Crassus into a snare, which proved his ruin; called Ἀκβαρος by Appian (*B. P.* 34), Ἀριάνης (*Plut. Crass.* 21), Ἀγβαρος (*Dio Cass.* 40, 20).

ABIA, I. the southernmost city of Messenia, on the eastern shore of the Messenian Gulf. Pausanias (4, 30) identifies it with Ire, Ἰρη, one of the places offered by Agamemnon to Achilles (*Il.* 9, 292). Abia, together with the adjacent cities of Thuria and Pheræ, separated from Messenia, and became part of the Achaean confederacy; afterward they again attached themselves to the Messenian government. At a later period, Augustus, to punish the Messenians for having favoured the party of Antony, annexed these three cities to Laconia. But this arrangement continued only for a short time, since Ptolemy and Pausanias include them again among the cities of Messenia.—II. Nurse of Hyllus, in honour of whom Cresphontes changed the name of Ire to Abia. (*Paus.* 4, 30, 1.)

ABII, a Scythian nation, supposed by the earlier Greeks to inhabit the banks of the Tanais. Homer is thought to allude to them, *Il.* 13, 6, where for ὡάνων, some read Ἀβίων τε. By others they are supposed to be identical with the Macrobiani. The name Ἀβιοί is thought by Heyne (*ad. Il. l. c.*) to allude to their living on lands common to the whole nation, or to their having a community of goods, or perhaps to their poverty, and their living in wagons. Curtius (7, 6) states, that these Abii sent ambassadors to Alexander with professions of obedience. But the Macedonians encountered no Abii; they only believed that they had found them. The name they probably had learned from Homer, and knew that they were a people to the north, forming part of the great Scythian race. Supposing themselves, therefore, on the banks of the Tanais, they gave the name *Abii* to the people, who had sent ambassadors, merely because they had heard that the Abii dwelt on that river.

ABILA, or **ABYLA**, I. a mountain of Africa, opposite Calpe (*Gibraltar*), supposed to coincide with *Cape Serra*. It is an elevated point of land, forming a peninsula, of which a place named Ceuta closes the isthmus. Of the two forms given to the name of this mountain by ancient writers, that of *Abyla* is the more common. The name is written by Dionysius (*Perieg.* 336), Ἀβύλη. According to Avienus (*Ora Mart.* 345), *Abila* is a Carthaginian or Punic appellative for "any lofty mountain." This name appears to have passed over into Europe, and to have been applied, with slight alteration of form, to the opposite mountain, the rock of *Gibraltar*. Eustathius (*ad Dionys. P.* 64) informs us that in his time the latter mountain was named *Calpe* by the Barbarians, but *Aliba* by the Greeks; and that the true *Abila*, on the African side, was called *Abenna* by the natives, by the Greeks *Κυνηγητική*. At what time the present *Gibraltar* began to be called Calpe, is difficult to determine; probably long antecedent to the age of Eustathius. Calpe itself is only *Aliba* shortened, and pronounced with a strong Oriental aspirate. In the word *Aliba* we likewise detect the root of *Alp*, or, rather, the term itself, which may be traced directly to the Celtic radical *Alb*. The situation of Abila gave it, with the opposite Calpe, a

conspicuous place in the Greek mythology. (*Vid.* Hercules Columnæ, and Mediterraneum Mare)—II. A city of Palestine. 12 miles east of Gadara (*Euseb. v. 'Abel 'Aupē. ων*). Ptolemy is supposed to refer to it under the name *Abida*, an error probably of copyists. (*Mannert*, 6, 1, 323.)—III. A city of Coele Syria, now *Bellinas*, in a mountainous country, about 18 miles north-west of Damascus. Ptolemy gives it the common name *'Abūla*. Josephus calls it *'Abēla*, and also *'Abēlμαχία*, the latter coming from the Hebrew name *Abel Beth Maacha*, or *Malacha* (*Reland, Palest.*, 520).

ABILÈNE, a district of Coele Syria. (*Vid.* Abila III.)

ABISAKES. *Vid.* Supplement.

ABITIÂNUS. *Vid.* Supplement.

ABΛΛIBUS. *Vid.* Supplement.

ABNOBA, according to Ptolemy (2, 11), a chain of mountains in Germany, which commenced on the banks of the Mœnus, now *Mayne*, and, running between what are now *Hesse* and *Westphalia*, terminated in the present Duchy of *Paderborn*. Out of the north-eastern part of this range, springs, according to the same authority, the Amisus, now *Ems*. Subsequent writers, however, seem to have limited the name *Abnoba* to that portion of the *Black Forest* where the *Danube* commences its course, and in this sense the term is used by Tacitus. A stone altar, with *ABNOBA* inscribed, was discovered in the *Black Forest* in 1778; and in 1784, a pedestal of white marble was found in the Duchy of *Baden*, bearing the words *DIANÆ ABNOBÆ*. These remains of antiquity, besides tending to designate more precisely the situation of the ancient *Mons Abnoba*, settle also the orthography of the name, which some commentators incorrectly write *Arnoba*. (Compare *La Germanie de Tacite, par Panckouke*, p. 4, and the *Atlas, Planche deuxième*.)

ABONITICUS, a small town and harbour of Paphlagonia, southeast of the promontory Carambis. It was the birthplace of an impostor, who assumed the character of Æsculapius. Lucian (*Pseud.* 58) states, that he petitioned the Roman emperor to change the name of his native city to Ionopolis, and that the request of the impostor was actually granted. The modern name *Incobli* is only a corruption of Ionopolis. (*Marcian, Peripl.*, p. 72.—*Steph. B.*)

ABORIGINES, a name given by the Roman writers to the primitive race, who, blending with the Siculi, founded subsequently the nation of the Latins. The name is equivalent to the Greek *αὐτόχθονες*, as indicating an indigenous race. According to the most credible traditions, they dwelt originally around Mount *Velino*, and the Lake *Fucinus*, now *Celano*, extending as far as *Carseoli*, and towards *Reate*. This was Cato's account (*Dionys. H.* 2, 49); and if Varro, who enumerated the towns they had possessed in those parts (*Il.* 1, 14), was not imposed on, not only were the sites of these towns distinctly preserved, as well as their names, but also other information, such as writings alone can transmit through centuries. Their capital, *Listra*, was lost by surprise; and exertions of many years to recover it, by expeditions from *Reate*, proved fruitless. Withdrawing from that district, they came down the *Anio*; and even at *Tibur*, *Antemne*, *Ficulea*, *Tellena*, and farther on at *Crustumium* and *Aricia*, they found *Siculi*, whom they subdued or expelled. The Aborigines are depicted by Sallust and Virgil as savages living in hordes, without manners, law, or agriculture, on the produce of the chase, and on wild fruits. This, however, does not agree with the traces of their towns in the Apennines; but the whole account was, perhaps, little else than an ancient speculation on the progress of mankind from rudeness to civilization. The Aborigines are said to have revered Janus and Saturn. The latter taught them husbandry, and induced them to choose settled habitations, as the founders of a better way of life. From this ancient race, as has already been re-

marked, blending with a remnant of the *Siculi*, sprang the nation of the Latins; and between Saturn and the time assigned for the Trojan settlement, only three kings of the Aborigines are enumerated, *Picus*, *Faunus*, and *Latinus*. (*Niebuhr, Rom. Hist.* 1, 62, *Cambr.*) As to the name of this early race, the old and genuine one seems to have been *Casici* or *Cassei* (*Sauferius in Serv. ad Æn.* 1, 10); and the appellation of Aborigines was only given them by the later Roman writers. (*Heyne, Excurs.* 4, *ad Æn.* 7.) Cluver, and others, have maintained the identity of the Aborigines and *Pelasgi*, a position first assumed by *Dionysius of Halicarnassus*. *Mannert* (9, 436) thinks, that the *Pelasgi* were a distinct race, who, on their arrival in Italy, united with the people in question, and that both became gradually blended into one race, the *Etrurian*. Some are in favour of writing *Aberrigines*, and refer to the authority of *Festus*, who so styles them as having been wanderers (*ab, erro*), when they took possession of that part of the country where they subsequently dwelt. In this *Festus* is supported by the author of the *Origin of the Romans*, but the opinion is an incorrect one.

ABORRAS. *Vid.* Chaboras.

ABRADATAS, a king of *Susa*, who submitted, with his army, to *Cyrus*, when he learned that his wife *Panthea*, who had been made prisoner by the latter, was treated by him with great kindness and humanity. He was subsequently slain in fighting for *Cyrus*. His wife, unable to survive his loss, slew herself upon his corpse. *Cyrus* erected a monument to their memory. (*Xen. Cyrop.* 5, 6, &c.)

ABRINCATŪI, a nation of Gaul, situate, according to the common opinion, on the western coast, north of the *Liger*, or *Loire*, and whose capital, *Ingena*, is supposed to coincide with *Ananches* (*D'An. Geogr. Anc.—Cellar. Geogr. Ant.* 1, 161, *Schw.*). If we follow Ptolemy, this people rather seem to have occupied what would now correspond to a part of *Eastern Normandy*, in the district of *Ouche*, and stretching from the vicinity of the *Rille* to the banks of the *Seine* (*Mannert*, 2, 167).

ABRO, I. an Athenian, who wrote on the festivals and sacrifices of the Greeks. His work is lost. (*Steph. B. s. v. Βάρυ*).—II. A grammarian of *Rhodes*, who taught rhetoric at *Rome* in the reign of *Augustus*. He was a pupil of *Tryphon*. (*Suid. s. v.*)—III. A grammarian, who wrote a treatise on *Theocritus*, now lost.—IV. An Athenian, son of the orator *Lycurgus*. (*Plut. Vit. X. Orat.*)—V. An Argive of most luxurious and dissolute life, who gave rise to the proverb, *Ἀβρωνος βίος* (*Abronis vita*). (*Erasm. Chil.* p. 487.)

ABROCŌMAS, I a son of *Darius*, by *Phrataguna*, daughter of *Otanes*. He accompanied *Xerxes* in his *Grecian* expedition, and was slain at *Thermopylæ*. (*Herod.* 7, 224.)—II. A satrap. (*Vid.* Supplement.)

ABRON or HABRON. *Vid.* Supplement.

ABRONIUS, Silo, a Latin poet of the Augustan age, and the pupil of *Porcius Latro*. He wrote some fables, now lost. (*Senec. Suasor.* 2, 23.) Vossius says there were two of this name, father and son.

ABRONŪCHUS. *Vid.* Supplement.

ABROSŌLA, a town of *Galatia*, on the frontiers of *Phrygia*, and, according to the Itinerary, twenty-four miles from *Pessinus*. It is recognised by Ptolemy (p. 120), who assigns it to *Phrygia Magna*.

ABRŌTA, the wife of *Nisus*, king of *Megar*. As a memorial of her private virtues, *Nisus*, after her death, ordered the garments which she wore to become models of female attire in his kingdom. Hence, according to *Plutarch*, the name of the Megarian robe *ἀβρότητα*. (*Quæst. Græc.* p. 294.)

ABROTŌNUM, a town of *Africa*, near the *Syrtis Minor*, and identical with *Sabrata*. (*Vid.* *Sabrata*.)

ABSIŌTHII. *Vid.* Apsynthii.

ABSYRTIDES, islands at the head of the Adriatic, in the Sinus Flanaticus, *Gulf of Quarnero*; named, as tradition reported, from Absyrtus the brother of Medea, who, according to one account, was killed here. (*Hygin.* 23.—*Strabo*, 315.—*Mela*, 2, 7.—*Pliny*, 3, 26.) Apollonius Rhodius (4, 330) calls them Brygides, and states (v. 470) that there was in one of the group a temple erected to the Brygian Diana. Probably the name given to these islands was a corruption of some real appellation, which, though unconnected with the fable, still, from similarity of sound, induced the poets to connect it with the name of Medea's brother. The principal island is Absorus, with a town of the same name. (*Ptol.* 63.) These four islands are, in modern geography, *Cherso*, *Osero* (the ancient Absorus), *Ferossina*, *Chao*. (*Cramer's Anc. Italy*, 1, 137.)

ABSYRTOS, a river falling into the Adriatic Sea, near which Absyrtus was murdered. The more correct form of the name, however, would seem to have been *Absyrtis*, or, following the Greek, *Apsyrtis* (Ἀψυρτίς). Consult *Grotius* and *Corte*, *ad Luc. Pharsal.* 3, 190.

ABSYRTUS (Ἀψυρτός), a son of Æetes, and brother of Medea. According to the Orphic *Argonautica* (v. 1027), Absyrtus was despatched by his father with a large force in pursuit of Jason and Medea, when their flight was discovered. Medea, on the point of falling into the hands of the young prince, deceived him by a stratagem, and the Argonauts, having slain him, cast his body into the sea. The corpse, floating about for some time, was at last thrown up on one of the islands, thence called Absyrtides. According to Apollonius Rhodius (4, 207), Absyrtus, having reached the Adriatic before the Argonauts, waited there to give them battle. Mutual fear, however, brought about a treaty, by which the Argonauts were to retain the fleece, but Medea was to be placed in one of the neighbouring islands, until some monarch should decide whether she ought to accompany Jason, or return with her brother. Medea, accordingly, was placed on an island sacred to Diana, and the young prince, by treacherous promises, was induced to meet his sister by night in order to persuade her to return. In the midst of their conference he was attacked and slain by Jason, who lay concealed near the spot, and had concerted this scheme in accordance with the wishes of Medea. The body was interred in the island. Both these accounts differ from the common one, which makes Medea to have taken her brother with her in her flight, and to have torn him in pieces to stop her father's pursuit, scattering the limbs of the young prince on the probable route of her parent. This last account makes the murder of Absyrtus to have taken place near Tomi, on the Euxine, and hence the name given to that city, from the Greek *τομή*, *sectio*; just as Absyrtus, or Apsyrtus, is said to have been so called from *ἀπό* and *σπάρω*. (*Hygin.* 23.—*Apollod.* 1, 9, 24.—*Cic. N. D.* 3, 19.—*Ovid, Trist.* 3, 9, 11.—*Heyne, ad Apollod. l. c.*) According to the Orphic Poem, Absyrtus was killed on the banks of the Phasis, in Colchis.

ABULITES. *Vid. Supplement.*

ABURIA GENS. *Vid. Supplement.*

ABURNUS VALENS. *Vid. Supplement.*

ABUS, a river of Britain, now the *Humber*. Camden (*Brit.* p. 634) derives the ancient name from the old British word *Aber*, denoting the mouth of a river, or an estuary. The appellation will suit the Humber extremely well, as it is rendered a broad estuary by the waters of the Ouse.

ABYDĒNUS, I. a pupil of Berosus, flourished 268 B.C. He wrote in Greek an historical account of the Chaldeans, Babylonians, and Assyrians, some fragments of which have been preserved for us by Eusebius, Cyrill, and Syncellus. An important fragment, which clears up some difficulties in Assyrian history,

has been discovered in the Armenian translation of the Chronicon of Eusebius.—II. A surname of Palæphatus. (*Vid. Palæphatus*, IV.)

ABYDOS, I. a celebrated city of Upper Egypt, northwest of Diospolis Parva. Strabo (813) describes it as once next to Thebes in size, though reduced in his days to a small place. The same writer mentions the palace of Memnon in this city, built on the plan of the labyrinth, though less intricate. Osiris had here a splendid temple, in which neither vocal nor instrumental music was allowed at the commencement of sacrifices. Plutarch (*de Is. et Os.* 359, 471, W₃ α.) makes this the true burial-place of Osiris, an honour to which so many cities of Egypt aspired; he also informs us that the more distinguished Egyptians frequently selected Abydos for a place of sepulture. (*Zoëga, de Obel.* 284.—*Creuzer's Comment. Herod.* 1, 97.) All this proves the high antiquity of this city, and accounts for the consideration in which it was held. Ammianus Marcellinus states (19, 12) that there was a very ancient oracle of the god Besa in this place, to which applications were wont to be made orally and in writing. (Compare *Euseb. H. E.* 6, 41.) Abydos is now a heap of ruins, as its modern name, *Madfūn*, implies. The ancient appellation has been made to signify, by the aid of the Coptic, "abode, or habitation, common to many." (*Creuzer, l. c.*, 1, 100.)—II. An ancient city of Mysia, in Asia Minor, founded by the Thracians, and still inhabited by them after the Trojan war. Homer (*Il.* 2, 837) represents it as under the sway of prince Asius, a name associated with many of the earliest religious traditions of the ancient world (*vid. Asia*). At a later period the Milesians sent a strong colony to this place to aid their commerce with the shores of the Propontis and Euxine. (*Strabo*, 591.—*Thuc.* 8, 62.) Abydos was directly on the Hellespont, in nearly the narrowest part of the strait. This, together with its strong walls and safe harbour, soon made it a place of importance. It is remarkable for its resistance against Philip the Younger, of Macedon, who finally took it, partly by force, partly by stratagem. (*Polyb.* 16, 31.) In this quarter, too, was laid the scene of the fable of Hero and Leander. Over against Abydos was the European town Sestos; not directly opposite, however, as the latter was somewhat to the north. The ruins of Abydos are still to be seen on a promontory of low land, called *Nagara-Bornou*, or *Pesquères Point*. (*Hobhouse's Jour.* 2, 217, *Am. ed.*) Wheeler has rectified in this particular the mistake of Sandys (*Voyage*, 1, 74), who supposed the modern castle of Natolia to be on the site of the ancient Abydos. The castles *Chanak-Kalessi*, or *Sultanie-Kalessi*, on the Asiatic side, and *Chelit-Bawri*, or *Kelidir-Bahar*, on the European shore, are called by the Turks *Bogaz-Hessarleri*, and by the Franks the old castles of Natolia and Roumelia. The town of *Chanak-Kalessi*, properly called *Dardanelles*, has extended its name to the strait itself (*Hobhouse*, 215). Over the strait between Abydos and Sestos, Xerxes caused two bridges to be erected when marching against Greece, and it was here that, seated on an eminence, where a throne had been erected for him, he surveyed his fleet, which covered the Hellespont, while the neighbouring plains swarmed with his innumerable troops. (*Herod.* 7, 44.) The intelligent traveller above quoted remarks: "The Thracian side of the strait, immediately opposite to *Nagara*, is a strip of stony shore, projecting from behind two cliffs; and to this spot, it seems, the European extremities of Xerxes' bridges must have been applied, for the height of the neighbouring cliffs would have prevented the Persian monarch from adjusting them to any other position. There is certainly some ground to believe, that this was the exact point of shore called from that circumstance *Apophathra* (*Strabo*, 591), since there is, within any probable distance, no other flat land on the Thra-

cian side, except at the bottom of deep bays, the choice of which would have doubled the width of the passage. Sestos was not opposite to the Asiatic town, nor was the Hellespont in this place called the Straits of Sestos and Abydos, but the Straits of Abydos. Sestos was so much nearer the Propontis than the other town, that the ports of the two places were 30 stadia, or more than 3 1-2 miles from each other. The bridges were on the Propontic side of Abydos, but on the opposite quarter of Sestos; that is to say, they were on the coasts between the two cities, but nearer to the first than to the last." (*Hobhouse, l. c.*) The ancient accounts make the strait in this quarter seven stadia, or 875 paces, broad, but to modern travellers it appears to be nowhere less than a mile across.

ACACALLIS. *Vid.* Supplement.

ACACĒSIUM, a town of Arcadia, situate on a hill called Acacesius, and lying near Lycosura, in the south-western angle of the country. Mercury Acacesius was worshipped here (*Paus. 8, 36*). Some make the epithet equivalent to *μυθῶδες κακοῦ παραινύς, nullius mali auctor*, ranking Mercury among the *dei averrunci* (*Spanh. ad Callim. H. in D. 143.—Heyne, ad Il. 16, 185*).

ACACĪUS, I. a disciple of Eusebius, bishop of Cæsarea, whom he succeeded in 338 or 340. He was surnamed *Μορόβλαβος (Luscus)*, and wrote a *Life of Eusebius*, not extant; 17 volumes of *Commentaries on Ecclesiastes*; and 6 volumes of *Miscellanies*. Acacius was the leader of the sect called *Acacians*, who denied the Son to be of the same substance as the Father. (*Socr. Hist. 2, 4.—Epiph. Har. 72.—Fabr. Bibl. Gr. 5, 19.—Cave's Lit. Hist. 1, 206*).—II. A patriarch of Constantinople in 471, who established the superiority of his see over the eastern bishops. He was a favourite with the Emperor Zeno, who protected him against the pope. Two letters of his are extant, to Petrus Trullo, and Pope Simplicius. (*Theodor. 5, 23.—Cave, l. 417*).—III. A bishop of Berea, assisted at the Council of Constantinople in 381. (*Theodor. 5, 32*).—IV. A bishop of Melitene, in Armenia Minor, present at the Council of Ephesus in 431, and has left in the Councils (vol. 3) a *Homily against Nestorius* (*Nicephor. 16, 17.—Cave 1, 417*).—V. A bishop of Amida, distinguished for piety and charity in having sold church-plate, &c., to redeem 7000 Persian prisoners on the Tigris, in Mesopotamia. His death is commemorated in the Latin church on April 9th. (*Socr. 7, 21.—Fabr. Bibl. Gr. 5, 19*).

ACĒCUS. *Vid.* Supplement.

ACADĒMĪA, a public garden or grove in the suburbs of Athens, about 6 stadia from the city, named from Academus or Hecademus, who left it to the citizens for gymnastics (*Paus. 1, 29*). It was surrounded with a wall by Hipparchus (*Suid.*); adorned with statues, temples, and sepulchres of illustrious men; planted with olive and plane trees; and watered by the Cephissus. The olive-trees, according to Athenian fables, were reared from layers taken from the sacred olive in the Erechtheum (*Schol. Ed. Col. 730.—Paus. 1, 30*), and afforded the oil given as a prize to victors at the Panathenæan festival (*Schol. l. c.—Suid. v. Μορίαί*). The Academy suffered severely during the siege of Athens by Sylla; many trees being cut down to supply timber for machines of war (*Appian, B. M. 30*). Few retreats could be more favourable to philosophy and the Muses. Within this enclosure Plato possessed, as part of his humble patrimony, a small garden, in which he opened a school for the reception of those inclined to attend his instructions (*Diog. L. Vit. Plat.*). Hence arose the *Academic* sect, and hence the term *Academy* has descended, though shorn of many early honours, even to our own times. The appellation *Academia* is frequently used in philosophical writings, especially in Cicero, as indicative of the Academic sect. In this

sense, Diogenes Laertius makes a threefold division of the Academy, into the *Old*, the *Middle*, and the *New*. At the head of the *Old* he puts Plato, at the head of the *Middle* Academy, Arcesilaus, and of the *New*, Lacydes. Sextus Empiricus enumerates five divisions of the followers of Plato. He makes Plato founder of the 1st Academy; Arcesilaus of the 2d; Carneades of the 3d; Philo and Charnides of the 4th; Antiochus of the 5th. Cicero recognises only two Academies, the *Old* and *New*, and makes the latter commence as above with Arcesilaus. In enumerating those of the *Old* Academy, he begins, not with Plato, but Democritus, and gives them in the following order: Democritus, Anaxagoras, Empedocles, Parmenides, Xenophanes, Socrates, Plato, Speusippus, Xenocrates, Polemo, Crates, and Crantor. In the *New*, or Younger, he mentions Arcesilaus, Lacydes, Evander, Hegesinus, Carneades, Clitomachus, and Philo. (*Acad. Quest. 4, 5*). If we follow the distinction laid down by Diogenes, and alluded to above, the *Old* Academy will consist of those followers of Plato who taught the doctrine of their master without mixture or corruption; the *Middle* will embrace those who, by certain innovations in the manner of philosophizing, in some measure receded from the Platonic system without entirely deserting it; while the *New* will begin with those who relinquished the more obnoxious tenets of Arcesilaus, and restored, in some measure, the declining reputation of the Platonic school.—II. A Villa of Cicero near Puteoli (*Pliny, 31, 2*). As to the quantity of the penult in *Academia*, Forcellini (*Lex. Tot. Lat.*) makes it common. Bailey cites Dr. Parr in favour of its being always *long* in the best writers. Maltby (in *Morell's Thes.*) gives 'Ακαδημία, and 'Ακαδημία. Hermann (*ad Aristoph. Nub. 1001*) makes the penult of 'Ακαδημία short by nature, but lengthened by the force of the accent, as the term was in common and frequent use. (Compare the remarks of the same scholar, in his work of *Metris*, p. 36, *Glasg.*)

ACADĒMUS, an ancient hero, whom some identify with Cadmus. According to others (*Plut. Thes. 32*), he was an Athenian, who disclosed to Castor and Pollux the place where Theseus had secreted their sister Helen, after having carried her off from Sparta; and is said to have been highly honoured, on this account, by the Lacedæmonians. From him the name of the Academia, presented to the people of Athens, is thought to have been named (*vid.* Academia).

ACALANDRUS, or ACALYNDRUS, a river of Magna Græcia, falling into the Bay of Tarentum. Pliny (3, 2) places it to the north of Heraclea, but incorrectly, since, according to Strabo (283), it flowed in the vicinity of Thurii. The modern name, according to D'Anville, is the *Salandrella*; but, according to Mannert (9, 2, 231), the *Roccanello*.

ACAMANTIS, I. a name given to the island of Cyprus, from the promontory Acamas. (*Steph. B.*)—II. An Athenian tribe.

ACĒMAS, I. a promontory of Cyprus, to the north-west of Paphos. It is surmounted by two sugarloaf summits, and the remarkable appearance which it thus presents to navigators as they approach the island on this side, caused them, according to Pliny (5, 31), to give the name of Acamantis to the whole island.—II. A son of Theseus and Phædra. He was deputed to accompany Diomedes, when the latter was sent to Troy to demand Helen. During his stay at Troy he became the father of Munitus by Laodicea, one of the daughters of Priam. He afterward went to the Trojan war, and was one of the warriors enclosed in the wooden horse. On his return to Athens, he gave name to the tribe Acamantis. (*Paus. 10, 26.—Quint. Sm. 12.—Hygin. 108*).

ACAMPISIS, a river of Colchis, running into the Euxine; the Greeks called it Acampsis from its impetuous course, which forbade approach to the shore, *a, non*,

κάμψις, *inflectio*. This name more particularly applied to its mouth; the true appellation in the interior was *Boas*. (Arrian, *Per. M. Eur.* 119, *Blanc*.)

ACANTHUS, I. a city near Mt. Athos, founded by a colony of Andrians, on a small neck of land connecting the promontory of Athos with the continent. Strabo (*Epit.* l. 7, 330) places it on the Singiticus Sinus, as does Ptolemy (p. 82), but Herodotus distinctly fixes it on the Strymonic Sinus (6, 44; 7, 22), as well as Scymnus (p. 646) and Mela (2, 3), and their opinions must prevail against the two authors above mentioned. Mannert (7, 451) supposes the city to have been placed on the Singiticus Sinus, the harbour on the Sinus Strymonicus. On the other hand, Gail (*Geogr. d'Hérod.* 2, 280.—*Atlas, Ind.* 2.—*Anal. des Cartes*, p. 21) makes two places of this name to have existed, one on the Strymonicus, the other on the Singiticus Sinus. Probably *Erissos* is the site of ancient Acanthus. Ptolemy speaks of a harbour named Panormus, probably its haven (p. 82.—*Cramer's Anc. Greece*, 1, 262.—*Walpole's Collect.* 1, 225.) The Persian fleet despatched under Mardonius, suffered severely in doubling the promontory of Athos; and Xerxes, to guard against a similar accident, caused a canal to be dug through the neck of land on which Acanthus was situated; through this his fleet was conducted. (*Herod.* 7, 22.) From the language of Juvenal (10, 173), and the general sarcasm of Pliny (5, 1, "*portentosa Græciæ mendacia*"), many regard this account of the canal as a fable, invented by the Greeks to magnify the expedition of Xerxes, and thus increase their own renown. But vestiges of the canal were visible in the time of Ælian (*H. A.* 13, 29); modern travellers also discover traces of it (*Choiseul-Gouffier, Voy. Pittoresque* 2, 2, 148.—*Walpole, l. c.*)—II. A city of Egypt, the southernmost in the Memphitic Nome. Ptolemy gives it a plural form, probably from the thorny thickets in its vicinity, *ἀκανθαί*: Strabo (809) adopts the singular form, as does also Diodorus Siculus (1, 97). Ptolemy places this city 15 minutes distant from Memphis. It is the modern *Dashur*.

ACARNAN. *Vid.* Supplement.

ACARNANIA, a country of Greece Proper, along the western coast, having Ætolia on the east. The natural boundary on the Ætolian side was the Achelous, but it was not definitely regarded as the dividing limit until the period of the Roman dominion. (*Strab.* 450.) Acarnania was for the most part a productive country, with good harbours (*Scylax* 13). The inhabitants, however, were but little inclined to commercial intercourse with their neighbours; they were almost constantly engaged in war against the Ætoliens, and consequently remained far behind the rest of the Greeks in culture. Hence, too, we find scarcely any city of importance within their territories; for Anactorium and Leucas were founded by Corinthian colonies, and formed no part of the nation, though they engrossed nearly all its traffic. Not only Leucadia, indeed, but also Cephalenia, Ithaca, and other adjacent islands, were commonly regarded as a geographical portion of Acarnania, though, politically considered, they did not belong to it, being inhabited by a different race. (*Mannert*, 8, 33.) The Acarnanians and Ætoliens were descended from the same parent-stock of the Leleges or Curetes, though almost constantly at variance. The most important event for the Acarnanians was the arrival among them of Alcmaeon, son of Amphiaraus, who came with a band of Argive settlers a short time previous to the Trojan war, and united the inhabitants of the land and his own followers into one nation. His new territories were called Acarnania, and the people Acarnanians. The origin of the name Acarnania, however, is uncertain. It was apparently not used in the age of Homer, who is silent about it, though he mentions by name the Ætoliens, Curetes, the inhabitants of the Echinades, and the Teleboans

or Taphians. According to some, it was derived from Acarnas, son of Alcmaeon (*Strabo*, 462.—*Apollod.* 3, 7, 7.—*Thuc.* 2, 102.—*Paus.* 8, 24). But the remark just made relative to the silence of Homer about the Acarnanians seems to oppose this. More likely the appellation was grounded on a custom, common to the united race, of wearing the hair of the head cut very short, *ἀκαρίς*, a *intens.*, and *κρίνω*, in imitation of the Curetes, who cut their hair close in front, and allowed it to grow long behind (*vid.* Abantes). The Ætoliens and Acarnanians were in almost constant hostility against each other, a circumstance adverse to the idea of a common origin. It is curious, however, that the Ætoliens appear to have had no other object in view, in warring on their neighbours, than to compel them to form with them one common league; which they would scarcely have done towards persons of a different race. (*Mannert*, 8, 46.) This constant and mutual warfare so weakened the two countries eventually, that they both fell an easy prey to the Macedonians, and afterward to the Romans. The latter people, however, amused the Acarnanians in the outset with a show of independence, declaring the country to be free, but soon annexed it to the province of Epirus. The dominion of the Romans was far from beneficial to Acarnania; the country soon became a mere wilderness; and as a remarkable proof, no Roman road was ever made through Acarnania or Ætolia, but the public route lay along the coast, from Nicopolis on the Ambracian Gulf to the mouth of the Achelous. (*Mannert*, 8, 60.) The present state of Acarnania (now *Carnia*) is described by Hobhouse (*Journ.* 174, *Am. ed.*) as a wilderness of forests and unpeopled plains. The people of Acarnania were in general of less refined habits than the rest of the Greeks; and from Lucian's words (*Dial. Meretr.* 8, 227., *Bip.*), *χοιρίσκος* 'Ακαρνάντιος, their morals were generally supposed to be depraved. Independently, however, of the injustice of thus stigmatizing a people on slight grounds, considerable doubt attaches to the correctness of the received reading, and the explanation commonly assigned to it. Guyetus conjectures *Ἀγαρεύς*, and Erasmus, explaining the adage, favours this correction. (Compare *Bayle, Dict. Hist.* 1, 40.) The Acarnanians, according to Censorinus (*D. N.* 19), made the year consist of but six months, in which respect they resembled the Carians; Plutarch (*Num.* 19) states the same fact. (Compare *Fabricii Menol.* p. 7.)

ACARNAS and **AMPHOTERUS**, sons of Alcmaeon and Callirhoë. Alcmaeon having been slain by the brothers of Alpheisibœa, his former wife, Callirhoë obtained from Jupiter, by her prayers, that her two sons, then in the cradle, might grow up to manhood, and avenge their father. On reaching man's estate, they slew Pronous and Agenor, brothers of Alpheisibœa, and, soon after, Phlegus her father. Acarnas, according to some, gave name to Acarnania; but *vid.* Acarnania. (*Paus.* 8, 24.)

ACASTUS, son of Pelias, king of Iolcos in Thessaly. Pelcus, while in exile at his court, was falsely accused by Astydania, or, as Horace calls her, Hippolyte, the wife of Acastus, of improper conduct. The monarch, believing the charge, led Pelcus out, under the pretence of a hunt, to a lonely part of Mount Pelion, and there, having deprived him of every means of defence, left him exposed to the Centaurs. Chiron came to his aid, having received for this purpose a sword from Vulcan, which he gave to Pelcus as a means of defence. According to another account, his deliverer was Mercury. Pelcus returned to Iolcos, and slew the monarch and his wife. There is some doubt, however, whether Acastus suffered with his queen on this occasion. He is thought by some to have been merely driven into exile. (*Op. Met.* 8, 306.—*Heroid.* 13, 25.—*Apollod.* 1, 9, &c.—*Schol. ad Apoll. Rh.* 1, 224.)

ACCA LAURENTIA, I. more properly **LAURENTIA**

(*Heins. ad Orid. Fast.* 3, 55), the wife of Faustus, shepherd of king Numitor's flocks. She became foster-mother of Romulus and Remus, who had been found by her husband while exposed on the banks of the Tiber and suckled by a she-wolf. Some explain the tradition by making *Lupa* ("she-wolf") to have been a name given by the shepherds to Larentia, from her modest character (*Plut. Rom.* 4); a most improbable solution. We have here, in truth, an old poetic legend, in which the name Larentia (*Lar*), and the animals said to have supplied the princes with sustenance (*vid.* Romulus), point to an Etrurian origin for the fable. When the milk of the wolf failed, the woodpecker, a bird sacred to Mars, brought other food; other birds, too, consecrated to auguries by the Etrurians, hovered over the babes to drive away the insects. (*Niebuhr's Rom. Hist.* 1, 185.)—II. The Romans yearly celebrated certain festivals, called Larentalia, a foolish account of the origin of which is given by Plutarch (*Quæst. Rom.* 272). There is some resemblance between Plutarch's story and that told by Herodotus (2, 122) of Rhampsinitus, king of Egypt, and the goddess Ceres; and it may, therefore, like the latter, have for its basis some agricultural or astronomical legend. (Consult *Bachr. ad Herod. l. c.*)

ACCIA, or, more correctly, Atia, the sister of Julius Cæsar, and mother of Augustus. Cicero (*Phil.* 3, 6) gives her a high character. She was the daughter of M. Atius Balbus. (*Cic. l. c.*—*Suet. Aug.* 4.)

ACCÏUS, I. (*Vid. Supplement.*)—II. ACCRUS T., a native of Pisaurum in Umbria, and a Roman knight, was the accuser of A. Cluentius, whom Cicero defended, B.C. 66. He was a pupil of Hermagoras, and is praised by Cicero for accuracy and fluency. (*Brut.* 23.)

ACCO, a general of the Gauls, at the head of the confederacy formed against the Romans by the Senones, Carnutes, and Treviri. Cæsar (*B. G.* 6, 4, 44), by the rapidity of his march, prevented the execution of Acco's plans; and ordered a general assembly of the Gauls to inquire into the conduct of these nations. Sentence of death was pronounced on Acco, and he was instantly executed.

ACÊ, a seaport town of Phœnicia, a considerable distance south of Tyre. On the gold and silver coins of Alexander the Great, struck in this place with Phœnician characters, it is called *Aco*. The Hebrew Scriptures (*Judges*, 1, 31) term it *Accho*, signifying "straitened" or "confined." Strabo calls it 'Ακῆ (758). It was afterward styled *Ptolemais*, in honour of Ptolemy, son of Lagus, who long held part of southern Syria under his sway. The Romans, in a later age, appear to have transformed the Greek accusative *Ptolemaida* into a Latin nominative, and to have designated the city by this name; at least it is so written in the *Itin. Antonin.* and *Hierosol.* The Greeks, having changed the original name before this into 'Ακῆ, connected with it the fabulous legend of Hercules having been bitten here by a serpent, and of his having cured (ἀκούσαι) the wound by a certain leaf. (*Steph. B. v. Πτολεμαῖς.*) The compiler of the *Etym. Magn.* limits the name of 'Ακῆ to the citadel, but assigns a similar reason for its origin. (Compare the learned remarks of Reland, on the name of this city, in his *Palest.*, p. 535, seq.) Accho was one of the cities of Palestine, which the Israelites were unable to take (*Judges*, 1, 31). The city is now called *Acra*, more properly *Acca*, and lies at the northern angle of the bay, to which it gives its name, which extends, in a semicircle of three leagues, as far as the point of Carmel. During the Crusades it sustained several sieges. After the expulsion of the Knights of St. John, it fell rapidly to decay, and was almost deserted till Sheikh Daher, and, after him, Djeddar Pasha, by repairing the town and harbour, made it one of the first places on the coast. In modern times it has been

rendered celebrated for the successful stand which it made, with the aid of the British, under Sir Sidney Smith, against the French, under Bonaparte, who was obliged to raise the siege after twelve assaults. The strength of the place arose in part from its situation. The port of *Acra* is bad, but Dr. Clarke (*Travels*, 6, 89) represents it as better than any other along the coast. All the rice, the staple food of the people, enters the country by *Acra*; the master of which city, therefore, is able to cause a famine over all Syria. This led the French to direct their efforts towards the possession of the place. Hence, too, as Dr. Clarke observes, we find *Acra* to have been the last position in the Holy Land from which the Christians were expelled.

ACĒLUM, a town of Cisalpine Gaul, among the Euganei, north of Patavium, and east of the Medoacus Major, or *Brenta*. It is now *Asola*. (*Plin.* 3, 19.—*Ptol.* 63.)

ACERBAS, a priest of Hercules at Tyre, who married Dido, the sister of Pygmalion the reigning monarch, and his own niece. Pygmalion murdered him in order to get possession of his riches, and endeavoured to conceal the crime from Dido; but the shade of her husband appeared to her, and disclosing to her the spot where he had concealed his riches during life, exhorted her to take these and flee from the country. Dido instantly obeyed, and leaving Phœnicia, founded Carthage on the coast of Africa. (*Vid.* Dido.) Virgil calls the husband of Dido *Sichæus*; but Servius, in his commentary, informs us, that this appellation of *Sichæus* is softened down from *Sicharbes*. Justin (18, 4) calls him *Acerbas*, which appears to be an intermediate form. Gesenius (*Phœn. Mon.*, p. 414) makes *Sicharbas* come from *Isicharbas* ("vir gladii") or *Masicharbas* ("opus gladii," i. e., qui gladio omnia sua debet). If we reject the explanation of Servius the name *Sichæus* may come from *Zachi*, "purus, justus."

ACERRÆ, I. a town of Cisalpine Gaul, west of Cremona and north of Placentia; supposed to have occupied the site of *Pizzighetone*; called by Polybius (2, 31) Ἀχέρρα, and regarded as one of the strongholds of the Insubres. It must not be confounded with another Celtic city, *Acara* (*Ἀκαρά*, *Strabo*, 216), or *Acerra* (*Plin.* 3, 14), south of the Po, not far from Forum Lepidi and Mutina (*Mannert*, 9, 170): Tzschucke incorrectly reads Ἀχέρραι for Ἀκαρά, making the two places identical. (*Tzsch. ad Strab. l. c.*)—II. A city of Campania, to the east of Atella, called by the Greeks Ἀχέρρα, and made a Municipium by the Romans at a very early period (*Livy*, 8, 14). It remained faithful when Capua yielded to Hannibal, and was hence destroyed by that commander. It was subsequently rebuilt, and in the time of Augustus received a Roman colony, but at no period had many inhabitants, from the frequent and destructive inundations of the Clanus. (*Frontinus, de Col.* 102.—*Virg. G.* 2, 225, *et Schol.*) The Modern *Acerra* stands nearly on the site (*Mannert*, 9, 780).

ACERSCOMES, a surname of Apollo, signifying "unshorn," i. e., ever young (*Juv.* 8, 128). Another form is ἀκερκεμήνη. Both are compounded of ἀ priv., κείρω, fut., ἄλ. κέρσω, to cut, and κόμη, the hair of the head. The term is applied, however, as well to Bacchus as to Apollo. (Compare the Lat. *intonsus*, and *Ruperti, ad Juv. l. c.*)

ACES, a river of Asia, on the confines, according to Herodotus (3, 117), of the Chorasmiens, Hyrcanians, Parthians, Sarangians, and Thamaneans. The territories of all these nations were irrigated by it, through means of water-courses; but when the Persians conquered this part of Asia, they blocked up the outlets of the stream, and made the reopening of them a source of tribute. The whole story is a very improbable one. Rennell thinks that there is some allusion

in it to the Oxus or Oclius, both of which rivers have undergone considerable changes in their courses.

ACESANDER. *Vid.* Supplement.

ACĒSAS. *Vid.* Supplement.

ACĒSIAS. *Vid.* Supplement.

ACĒSINES, a large and rapid river of India, falling into the Indus. It is commonly supposed to be the *Ravei*, but Rennell makes it, more correctly, the *Jenub.* (*Vincent's Comm. and Nar. of the Anc.*)

ACĒSIUS, I. a surname of Apollo, under which he was worshipped in Elis, where he had a splendid temple in the agora. This surname is the same as *Ἀλεξίκακος*, and means the averter of evil.—II. (*Vid.* Supplement.)

ACĒSTES. *Vid.* Ægestes.

ACĒSTODORUS. *Vid.* Supplement.

ACĒSTOR, I. an ancient statuary mentioned by Pausanias (6, 7, 2). He was a native of Chossus, or at least exercised his art there for some time, and was the father of that Amphion who was the pupil of Polichus of Corcyra. Polichus lived about Olymp. 80, 82, and Acēstor must have been his contemporary. (*Sillig, Dict. of Anc. Artists.*)—II. *Vid.* Supplement.

ACHĒA, Ἀχαια, a surname of Pallas. Her temple among the Daunians, in Apulia, contained the arms of Diomedes and his followers. It was defended by dogs, which fawned on the Greeks, but fiercely attacked all other persons (*Aristot. de Mirab.*).—II. Ceres was also called Achaea, from her grief (ἄχος) at the loss of Proserpina (*Plut. in Is. et Os.*). Other explanations are given by the scholiast (*ad Aristoph. Acharn.* 674). Consult also *Kuster* and *Brunck, ad loc.*, and *Suidas, s. v.*

ACHĒAI, one of the main branches of the great Æolic race. (*Vid.* Achæia and Græcia, especially the latter article.)

ACHĒMĒNES, the founder of the Persian monarchy, according to some writers, who identify him with the *Giem Schid*, or *Djemshid*, of the Oriental historians (*vid.* Persia). The genealogy of the royal line is given by Herodotus (7, 11) from Achæmenes to Xerxes. The earlier descent, as given by the Grecian writers, and according to which, Perseus, son of Perseus and Andromeda, was the first of the line, and the individual from whom the Persians derived their national appellation, is purely fabulous. Æschylus (*Pers.* 762) makes the Persians to have been first governed by a Mede, who was succeeded by his son; then came Cyrus, succeeded by one of his sons; next Merdis, Maraphis, Artaphernes, and Darius; the last not being, however, a lineal descendant. For a discussion on this subject, consult Stanley, *ad loc.*; Larcher, *ad Herod.* 7, 11, and Schütz, *Excurs. 2, ad Æsch. Pers. l. c.*

ACHĒMENIDES, I. a branch of the Persian tribe of Pasargada, named from Achæmenes, the founder of the line. From this family, the kings of Persia were descended (*Herod.* 1, 126). Cambyses, on his deathbed, entreated the Achæmenides not to suffer the kingdom to pass into the hands of the Medes (3, 65).—II. A Persian of the royal line, whom Ctesias (32) makes the brother, but Herodotus (7, 7) and Diodorus Siculus (11, 74) call the uncle of Artaxerxes I. The latter styles him Achæmenes. (*Bachr, ad Ctes. l. c.*—*Wesscl. ad Herod. l. c.*)

ACHĒORIN STATIO, I. a place on the coast of the Thracian Chersonesus, where Polyxena was sacrificed to the shade of Achilles, and where Hecuba killed Polymnestor, who had murdered her son Polydorus.—II. The name of Achæorum Portus was given to the harbour of Corone, in Messenia.

ACHĒUS, I. a son of Xuthus. (*Vid.* Græcia, relative to the early movements of the Grecian tribes).—II. A tragic poet, born at Eretria, B.C. 484, the very year Æschylus won his first prize. We find him contending with Sophocles and Euripides, B.C. 447. With such competitors, however, he was, of course, not very successful. He gained the dramatic victory

only once. Athenæus, however (6, p. 270), accuses Euripides of borrowing from this poet. The number of plays composed by him is not correctly ascertained. Suidas (*s. v.*) gives three accounts, according to one of which he exhibited 44 plays; according to another, 30; while a third assigns to him only 24. Most of the plays ascribed to him by the ancients are suspected by Casaubon (*de Sat. Poes.* 1, 5) to have been satyric. The titles of seven of his satyirical dramas, and of ten of his tragedies, are still known. The extant fragments of his pieces have been collected and edited by Ulrichs, Bonn, 1834. He should not be confounded with a latter tragic writer of the same name, who was a native of Syracuse.—III. A river, which falls into the Euxine on the eastern shore, above the Promontorium Heracleum. The Greek form of the name is Ἀχαιοῦς, -οὔντρος. (*Arrian, Per. Mar. Eux.* 130, *Blanc.*)—IV. An historian mentioned by the scholiast on Pindar (*Ol.* 7, 42). Vossius (*Hist. Gr.* 4, p. 501) supposes him to be the same with the Achæus alluded to by the scholiast on Aratus (*v.* 171); but Boeckh throws very great doubt on the whole matter. (*Boeckh, ad Schol. Pind. l. c.*, vol. ii., p. 166.—V. A general of Antiochus the Great. (*Vid.* Supplement.)

ACHAIA, I. a district of Thessaly, so named from the Achæi (*vid.* Græcia). It embraced more than Phthiotis, since Herodotus (7, 196) makes it comprehend the country along the Apidanus. Assuming this as its western limit, we may consider it to have reached as far as the Sinus Pelasgiæus and Sinus Maliæus on the east. (*Mannert, 7, 599.*) Larcher (*Hist. d'Herod.* 8, 7, *Table Geogr.*) regards Melitæa as the limit on the west, which lies considerably east of the Apidanus. That Phthiotis formed only part of Achæia, appears evident from the words of Scymnus (*v.* 604). Ἐπειρ' Ἀχαιοὶ παράλιον Φθιωτικοί (*Gail, ad loc.*) Homer (*Il.* 3, 258) uses the term Ἀχαιίδα, *sc. χώραν*, in opposition to Argos, Ἀργος, and seems to indicate by the former, according to one scholiast, the Peloponnesus; according to another, the whole country occupied by the Hellenes (τὴν πᾶσαν Ἑλληνικὴν γῆν, *Schol. Il.* 3, 75).—II. A harbour on the northeastern coast of the Euxine, mentioned by Arrian, in his *Periplus of the Euxine* (131, *Blanc.*), and called by him *Old Achæia* (τὴν παλαιὰν Ἀχαιίαν). The Greeks, according to Strabo (416), had a tradition, that the inhabitants of this place were of Grecian origin, and natives of the Bæotian Orchomenus. They were returning, it seems, from the Trojan war, when, missing their way, they wandered to this quarter. Appian (*B. M.* 67, 102, *Schw.*) makes them to have been Achæans, but in other respects coincides with Strabo. Müller (*Gesch. Hellen. Stämme, &c.*, 1, 282) supposes the Greeks to have purposely altered the true name of the people in question, so as to make it resemble Achæi (Ἀχαιοί), that they might erect on this superstructure a mere edifice of fable.—III. A country of the Peloponnesus, lying along the Sinus Corinthiacus, north of Elis and Arcadia. A number of mountain-streams, descending from the ridges of Arcadia, watered this region, but they were small in size, and many mere winter-torrents. The coast was for the most part level, and was hence exposed to frequent inundations. It had few harbours; not one of any size, or secure for ships. On this account we find, that of the cities along the coast of Achæia, none became famous for maritime enterprise. In other respects, Achæia may be ranked, as to extent, fruitfulness, and population, among the middle countries of Greece. Its principal productions were like those of the rest of the Peloponnesus, namely, oil, wine, and corn. (*Mannert, 8, 384.*—*Heeren's Ideen, &c.*, 3, 27.) The most ancient name of this region was Ægialea or Ægialos, Ἀιγιάλος, "*sea-shore*," derived from its peculiar situation. It embraced originally the territory of Sicyon, since here stood the early capital of the Ægiali or Ægialenses.

The origin of the Ægialii appears to connect them with the great Ionic race. Ion, son of Xuthus, came from Attica, according to the received accounts, settled in this quarter (*Paus.* 7, 1.—*Strabo*, 383), obtained in marriage the daughter of King Schinus, and from this period the inhabitants were denominated Ægialean Ionians. Pausanias, however, probably from other sources of information, makes Xuthus, not Ion, to have settled here. The Pelasgi appear also to have spread over this region, and to have gradually blended with the primitive inhabitants into one community, under the name of Pelasgic Ægialeans (*Herod.* 7, 94). Twelve cities now arose, the capital being Helice, founded by Ion. At the period of the Trojan war, these cities were subject to the Achæans, and acknowledged the sway of Agamemnon as the head of that race. Matters continued in this state until the Dorian invasion of the Peloponnesus. The Achæans, driven by the Dorians from Argos and Lacedæmon, took refuge in Ægialea, under the guidance of Tisamenos, son of Orestes. The Ionians gave their new visitors an unwelcome reception; a battle ensued, the Ionians were defeated, and shut up in Helice; and at last were allowed by treaty to leave this city unmolested, on condition of removing entirely from their former settlements. They migrated, therefore, into Attica (*Paus.* 7, 1), but soon after left this latter country for Asia Minor (*vid.* Jones and Ionica). The Achæans now took possession of the vacated territory, and changed its name to Achaia. Tisamenos having fallen in the war with the Ionians, his sons and the other leaders divided the land among themselves by lot, and hence the old division of twelve cantons or districts, as well as the regal form of government, continued until the time of Ægygus or Gygus. (*Strabo*, 384.—*Paus.* 7, 6.—*Polyb.* 2, 41.) After this monarch's decease, each city assumed a republican government. The Dorians, from the very first, had made several attempts to drive the Achæans from their newly-acquired possessions, and had so far succeeded as to wrest from them Sicyon, with its territory, which was ever after regarded as a Dorian state. All farther attempts at conquest were unsuccessful, from the defence made by the Achæans, and the aid afforded to them by their Pelasgic neighbours in Arcadia. The result of this was an aversion on the part of the Achæans to everything Dorian. Hence they took no part with the rest of the Greeks against Xerxes; hence, too, we find them, even before the Peloponnesian war, in alliance with the Athenians; though, in the course of that war, they were forced to remain neutral, or else at times, from a consciousness of their weakness, to admit the Dorian fleets into their harbours. (*Thucyd.* 1, 111 and 115.—*Id.* 2, 9.—*Id.* 8, 3.—*Id.* 2, 84.) The Achæans preserved their neutrality also in the wars raised by the ambition of Macedon; but the result proved most unfortunate. The successors of Alexander seemed to consider the cities of Achaia as fair booty, and what they spared became the prey of domestic tyrants. Even after the Peloponnesus had ceased to be the theatre of war, and a Macedonian garrison was merely kept at the Isthmus, the public troubles seemed only on the increase. The whole country, too, began to be infested by predatory bands, whose numbers were daily augmented by the starving cultivators of the soil. At length, four of the principal cities of Achaia, viz., Patræ, Dyne, Tritæa, and Phare, formed a mutual league for their common safety. (*Polyb.* 2, 41.) The plan succeeded, and soon ten cities were numbered in the alliance. About twenty-five years after, Sicyon was induced to join the league by the exertions of Aratus, and he himself was chosen commander-in-chief of the confederacy. All the more important cities of the Peloponnesus gradually joined the coalition. Sparta alone kept aloof, and, in endeavouring to enforce her compliance, Ara-

tus was defeated by the Lacedæmonian monarch Cleomenes. The Achæan commander, in an evil hour, called in the aid of Macedon; for though he succeeded by these means in driving Cleomenes from Sparta, yet the Macedonians from this time remained at the head of the league, and masters of the Peloponnesus. Aratus himself fell a victim to the jealous policy of Philip. The troubles that ensued gave the Romans an opportunity of interfering in the affairs of Greece, and at last Corinth was destroyed, and the Achæan league annihilated by these new invaders. (*Vid.* Ætolia and Corinth.) Mummius, the Roman general, caused the walls of all the confederate cities to be demolished, and the inhabitants to be deprived of every warlike weapon. The land was also converted into a Roman province, under the name of Achaia, embracing, besides Achaia proper, all the rest of the Peloponnesus, together with all the country north of the isthmus, excepting Thessaly, Epirus, and Macedonia. (*Vid.* Epirus and Macedonia.) The dismantled cities soon became deserted, with the exception of a few, and in what had been Achaia proper only three remained in later times, Ægium, Ægira, and Patræ. In our own days, the last alone survives, under the name of *Patras*. The entire coast from Corinth to Patræ shows only one place that deserves the name of a city, or, rather, a large village; this is *Vostitza*, near the ruins of the ancient Ægium. (*Mannert*, 8, 392.)

ACHAÏCUS, a philosopher, whose time is unknown. He wrote a work on Ethics. (*Diog. Laert.* 6, 99.)

ACHARNÆ, Ἀχαρναί (or, as Stephanus Byzantinus writes the name, Ἀχάρνα), one of the most important boroughs of Attica, lying northwest of Athens and north of Eleusis. It furnished 3000 heavy-armed men as its quota of troops, which, on the supposition that slaves are not included, will make the entire population about 15,000. (*Thucyd.* 2, 20.—*Mannert*, 8, 330.) This large number, however, did not all dwell in villages, but were scattered over the borough, which contained some of the finest and most productive land in Attica. From a sarcasm of Aristophanes (*Acharn.* 213.—*Id.* *ibid.* 332, *scqq.*) we learn, that many of the Achæanenses (Ἀχαρνεῖς) followed the business of charcoal-burning. This borough belonged to the tribe Ceneis (Οἰνής), and was distant 60 stadia from Athens. (*Thucyd.* 2, 21.)

ACHATES, a friend of Æneas, whose fidelity was so exemplary, that *Fidus Achates* became a proverb. (*Virg. Æn.* 1, 312.)

ACHELOÏDES, a patronymic given to the Sirens as daughters of Achelous. (*Ovid, Met.* 5, *fab.* 15.—*Gierig, ad loc.*)

ACHELOÛS, I. a river of Epirus, now the *Aspro Potamo*, or "White River," which rises in Mount Pinus, and, after dividing Acarnania from Ætolia (*Strab.* 450), falls into the Sinus Corinthiacus. It was a large and rapid stream, probably the largest in all Greece, and formed at its mouth, by depositions of mud and sand, a number of small islands called Echinades. The god of this river was the son of Oceanus and Tethys, or of the Sun and Terra. Fable speaks of a contest between Hercules and the river god for the hand of Deianira. The deity of the Achelous assumed the form of a bull, but Hercules was victorious and tore off one of his horns. His opponent, upon this, having received a horn from Amalthea, the daughter of Oceanus, gave it to the victor, and obtained his own in return. Another account (*Ovid, Met.* 9, 63) makes him to have first assumed the form of a serpent, and afterward that of a bull, and to have retired in disgrace into the bed of the river Thoas, which thenceforward was denominated Achelôis. A third version of the fable states, that the Naiads took the horn of the conquered deity, and, after filling it with the various productions of the seasons, gave it to the goddess of plenty, whence the origin of the *cornu copie*. They

who pretend to see in history an explanation of this legend, make the river Achelous to have laid waste, by its frequent inundations, the plains of Calydon. This, introducing confusion among the landmarks, became the occasion of continual wars between the Ætolians and Acarnanians, whose territories the river divided as above stated, until Hercules, by means of dikes, restrained its ravages, and made the course of the stream uniform. Hence, according to this explanation, the serpent denoted the windings of the stream, and the bull its swellings and impetuosity, while the tearing off of the horn refers to the turning away of a part of the waters of the river, by means of a canal, the result of which draining was shown in the fertility that succeeded. (*Diocl. Sic.* 4, 35.) The Achelōus must have been considered a river of great antiquity as well as celebrity, since it is often introduced as a general representative of rivers, and is likewise frequently used for the element of water. (*Eustath.* ad *Il.* 21, 194.—*Eurip.* *Bacch.* 625.—*Id.* *Androm.* 167.—*Aristoph.* *Lysistr.* 381.—*Hayne*, ad *Il.* 21, 194.) The reason of this peculiar use of the term will be found in the remarks of the scholiast. The Achelōis was the largest river in Epirus and Ætolia, in which quarter were the early settlements of the Pelasgic race, from whom the Greeks derived so much of their religion and mythology. Hence the frequent directions of the Oracle at Dodona, "to sacrifice to the Achelōis," and hence the name of the stream became associated with some of their oldest religious rites, and was eventually used in the language of poetry as an appellation, *κατ' ἑξῆχην*, for the element of water and for rivers, as stated above (*Ἀχελῷον πᾶν πηγαῖον ὕδωρ*).—II. There was another river of the same name, of which nothing farther is known, than that, according to Pausanias (8, 38), it flowed from Mount Sipylus. Homer, in relating the story of Niobe (*Il.* 24, 615), speaks of the desert mountains in Sipylus, where are the beds of the goddess-nymphs, who dance around the Achelōis.—III. A river of Thessaly, flowing near Lamia. (*Strab.* 434.)

ACHERUS, a borough of the tribe Hippothoontis, in Attica. (*Steph. B.*—*Aristoph.* *Eccles.* 350.)

ΑΧΕΡΩΝ, I. a river of Epirus, rising in the mountains to the west of the chain of Pindus, and falling into the Ionian sea near *Glykys Limen* (Γλυκίς Λίμνη). In the early part of its course, it forms the *Palus Acherusia* (Ἀχερουσία Λίμνη), and, after emerging from this sheet of water, disappears under ground, from which it again rises and pursues its course to the sea. Strabo (324) makes mention of this stream only after its leaving the Palus Acherusia, and appears to have been unacquainted with the previous part of its course. Thucydides, on the other hand (1, 46), would seem to have misunderstood the information which he had received respecting it. His account is certainly a confused one, and has given rise to an inaccuracy in D'Anville's map. The error of D'Anville and others consists in placing the Palus Acherusia directly on the coast, and the city of Ephyre at its northeastern extremity; in the position of the latter contradicting the very words of the writer on whom they rely. No other ancient authority places the Palus Acherusia on the coast. Pausanias (1, 17) makes the marsh, the river, and the city, to have been situated in the interior of Thesprotis; and he mentions also the stream Cocytus (which he styles ὕδωρ ὑπερπείσσαν), as being in the same quarter. He likewise states it as his opinion, that Homer, having visited these rivers in the course of his wanderings, assigned them, on account of their peculiar nature and properties, a place among the rivers of the lower world. The poets make Acheron to have been the son of Sol and Terra, and to have been precipitated into the infernal regions and there changed into a river, for having supplied the Titans with water during the war which they waged with Jupiter. Hence its waters were muddy and bit-

ter; and it was the stream over which the souls of the dead were first conveyed. The Acheron is represented under the form of an old man arrayed in a humid vestment. He reclines upon an urn of a dark colour. In Virgil and later poets Acheron sometimes designates the lower world.—II. A river of Bruttium, flowing into the Mare Tyrrhenum a short distance below Pandosia. Alexander, king of Epirus, who had come to the aid of the Tarentines, lost his life in passing this river, being slain by a Lucanian exile. He had been warned by an oracle to beware of the Acherusian waters and the city Pandosia, but supposed that it referred to Epirus and not to Italy. (*Justin.* 12, 2.—*Liv.* 8, 24.)—III. A river of Elis, which falls into the Alpheus. On its banks were temples dedicated to Ceres, Proserpina, and Hades, which were held in high veneration. (*Strab.* 344.)—IV. A river of Bithynia, near the cavern Acherusia, and in the vicinity of Heraclæa. (*Apollon. Rhod.* 2, 745.)

ACHERONTIA, I. a town of Bruttium, placed by Pliny on the river Acheron (*Plin.* 3, 5).—II. A city of Lucania, now *Acerenza*, on the confines of Apulia. It was situated high up on the side of a mountain, and from its lofty position is called by Horace *nidus Acherontia*, "the nest of Acherontia." Procopius speaks of it as a strong fortress in his days. (*Horat. Od.* 3, 4, 14, et *schol.* ad *loc.*—*Procop.* 3, 23.)

ACHERUSIA, I. a lake in Epirus, into which the Acheron flows. (*Vid.* Acheron).—II. According to some modern expounders of fable, a lake in Egypt, near Memphis, over which the bodies of the dead were conveyed, previous to their being judged for the actions of their past lives. The authority cited in support of this is Diodorus Siculus (1, 92). A proper examination of the passage, however, will lead to the following conclusions: 1st, that no name whatever is given by Diodorus for any particular lake of this kind; and, 2d, that each district of Egypt had its lake for the purpose mentioned above, and that there was not merely one for the whole of Egypt. (*Diocl. Sic.* 1, 92, et *Wesseling.* ad *loc.*)—III. A cavern in Bithynia, near the city of Heraclæa and the river Oxinas, probably on the very spot which Arrian (*Periplus Mar. Eux.*, p. 125, ed. Blancard) calls Tyndarideæ. Xenophon (*Anab.* 6, 2) names the whole peninsula, in which it lies, the Acherusian Promontory. This cavern was two stadia in depth, and was regarded by the adjacent inhabitants as one of the entrances into the lower world. Through it Hercules is said to have dragged Cerberus up to the light of day; a fable which probably owed its origin to the inhabitants of Heraclæa. (*Diocl. Sic.* 14, 31.—*Dionys.* *Perieg.* 790, et *Eustath.* ad *loc.*) Apollonius Rhodius (2, 730) places a river, with the name of Acheron, in this quarter. This stream was afterward called, by the people of Heraclæa, Soonantes (Σοωνάτης), on account of their fleet having been saved near it from a storm. (*Apollon. Rhod.* 2, 746, et *schol.* ad *loc.*) Are the Acheron and the Oxinas the same river?

ACHILLAS, I. a bishop of Alexandria from A.D. 311 to 321. His martyrdom is commemorated on the 7th of November.—II. An Alexandrian priest, banished with Arius, 319 A.D. He fled to Palestine.—III. (*Vid.* Supplement)

ACHILLEA, an island near the mouth of the Borys thenes, or, more properly, the western part of the *Dromus Achillis* insulated by a small arm of the sea. (*Vid.* Dromus Achillis and Leuce.)

ACHILLES, a poem of Statius, turning on the story of Achilles. (*Vid.* Statius.)

ACHILLES, I. a son of the Earth (γηῖνης), unto whom Juno fled for refuge from the pursuits of Jupiter, and who persuaded her to return and marry that deity. Jupiter, grateful for this service, promised him that all who bore this name for the time to come should be illustrious personages. (*Ptol.* *Hephæst*

apud Photium, Biblioth., vol. i., p. 152, *ed. Bekker.*)—II. The preceptor of Chiron (*Id.*)—III. The inventor of the ostracism (*Id.*)—IV. A son of Jupiter and Lamia. His beauty was so perfect, that, in the judgment of Pan, he bore away the prize from every competitor. Venus was so offended at this decision, that she inspired Pan with a fruitless passion for the nymph Echo, and also wrought a hideous change in his own person (*Id.*)—V. A son of Galatus, remarkable for his light coloured, or, rather, whitish hair (*Id.*)—VI. The son of Peleus, king of Phthiotis in Thessaly. His mother's name appears to have been a matter of some dispute among the ancient expounders of mythology (*Schol. ad Apoll. Rhod.* 1, 558), although the more numerous authorities are in favour of Thetis, one of the sea-deities. According to Lycophron (r. 178), Thetis became the mother of seven male children by Peleus, six of whom she threw into the fire, because, as Tzetzes informs us in his scholia, they were not of the same nature with herself, and the treatment she had received was unworthy of her rank as a goddess. The scholiast on Homer, however (*Il.* 16, 37), states, that Thetis threw her children into the fire in order to ascertain whether they were mortal or not, the goddess supposing that the fire would consume what was mortal in their natures, while she would preserve what was immortal. The scholiast adds, that six of her children perished by this harsh experiment, and that she had, in like manner, thrown the seventh, afterward named Achilles, into the flames, when Peleus, having beheld the deed, rescued his offspring from this perilous situation. Tzetzes (*ubi supra*) assigns a different motive to Thetis in the case of Achilles. He makes her to have been desirous of conferring immortality upon him, and states that with this view she anointed him (*ἔχρεν*) with ambrosia during the day, and threw him into fire at evening. Peleus, having discovered the goddess in the act of consigning his child to the flames, cried out with alarm, whereupon Thetis, abandoning the object she had in view, left the court of Peleus and rejoined the nymphs of the ocean. Diety's Cretensis makes Peleus to have rescued Achilles from the fire before any part of his body had been injured but the heel. Tzetzes, following the authority of Apollodorus, gives his first name as *Ligyron* (Λιγύρων), but the account of Agamestor, cited by the same scholiast, is more in accordance with the current tradition mentioned above. Agamestor says, that the first name given to Achilles was *Pyrissos* (Πυρίσσος), i. e., "saved from the fire." What has thus far been stated in relation to Achilles, with the single exception of the names of his parents, Peleus and Thetis, is directly at variance with the authority of Homer, and must therefore be regarded as a mere posthomeric fable. The poet makes Achilles say, that Thetis had no other child but himself; and though a daughter of Peleus, named Polydora, is mentioned in a part of the *Iliad* (16, 175), she must have been, according to the best commentators, only a half sister of the hero. (Compare *Heyne, ad loc.*) Equally at variance with the account given by the bard, is the more popular fiction, that Thetis plunged her son into the waters of the Styx, and by that immersion rendered the whole of his body invulnerable, except the heel by which she held him. On this subject Homer is altogether silent; and, indeed, such a protection from danger would have derogated too much from the character of his favourite hero. There are several passages in the *Iliad* which plainly show, that the poet does not ascribe to Achilles the possession of any peculiar physical defence against the chances of battle. (Compare *Il.* 20, 262; *id.* 288; and especially, 21, 166, where Achilles is actually wounded by Asteropæus.) The care of his education was intrusted, according to the common authorities, to the centaur Chiron, and to Phoenix, son of Amyntor. Homer, however, mentions

Phoenix as his first instructor (*Il.* 9, 481, *seqq.*), while from another passage (*Il.* 11, 831) it would appear, that the young chieftain merely learned from the centaur the principles of the healing art. Those, however, who pay more regard in this case to the statements of other writers, make Chiron to have had charge of Achilles first, and to have fed him on the marrow of wild animals; according to Libanius, on that of lions, but according to the compiler of the *Etymol. Mag.*, on that of stags. (Compare *Bayle, Diet. Hist.* 1, 53.) Chiron is said to have given him the name of *Achilles* (Ἀχιλλεύς), from the circumstance of his food being unlike that of the rest of men (*à priv.*, and *χιλή*, "fructus quibus rescuntur homines"). Other etymologies are also given; but most likely none are true. (Compare, on this part of our subject, the *Etymol. Mag.*—*Ptol. Hephest. apud Photium, Biblioth.*, vol. i., p. 152, *ed. Bekker.*—*Heyne, ad Il.* 1, 1.—*Wassenberg, ad schol. in Il.* 1, p. 130.) Calchas having predicted, when Achilles had attained the age of nine years, that Troy could not be taken without him, Thetis, well aware that her son, if he joined that expedition, was destined to perish, sent him, disguised in female attire, to the court of Lycomedes, king of the island of Scyros, for the purpose of being concealed there. A difficulty, however, arises in this part of the narrative, on account of the early age of Achilles when he was sent to Scyros, which can only be obviated by supposing, that he remained several years concealed in the island, and that the Trojan war occupied many years in preparation. (Compare the remarks of *Heyne, ad Apollod.*, l. c., p. 316, and *Gruber, Wörterbuch der altclassischen Mythologie und Religion*, vol. i., p. 32.) At the court of Lycomedes, he received the name of *Pyrrrha* (Πυρρᾶ, "Ru-fa"), from his golden locks, and became the father of Neoptolemus by Deidamia, one of the monarch's daughters. (*Apollod. l. c.*) In this state of concealment Achilles remained, until discovered by Ulysses, who came to the island in the disguise of a travelling merchant. The chieftain of Ithaca offered, it seems, various articles of female attire for sale, and mingled with them some pieces of armour. On a sudden blast being given with a trumpet, Achilles discovered himself by seizing upon the arms. (*Apollod. l. c.*—*Statius, Achill.* 2, 201.) The young warrior then joined the army against Troy. This account, however, of the concealment of Achilles is contradicted by the express authority of Homer, who represents him as proceeding directly to the Trojan war from the court of his father. (*Il.* 9, 439.) As regards the forces which he brought with him, the poet makes them to have come from the Pelasgian Argos, from Alus, Alope, and Trachis, and speaks of them as those who possessed Phthia and Hellas, and who were called Myrmidones, Hellenes, and Achæi. (*Il.* 2, 681, *seqq.*) Hence, according to Heyne, the sway of Achilles extended from Trachis, at the foot of Mount Ceta, as far as the river Enipeus, where Pharsalus was situated, and thence to the Peneus.—The Greeks, having made good their landing on the shores of Troas, proved so superior to the enemy as to compel them to seek shelter within their walls. (*Thucyd.* 1, 11.) No sooner was this done than the Greeks were forced to turn their principal attention to the means of supporting their numerous forces. A part of the army was therefore sent to cultivate the rich vales of the Thracian Chersonese, then abandoned by their inhabitants on account of the incursions of the barbarians from the interior. (*Thucyd. ubi supra.*) But the Grecian army, being weakened by this separation of its force, could no longer deter the Trojans from again taking the field, nor prevent succours and supplies from being sent into the city. Thus the siege was protracted to the length of ten years. During a great part of this time, Achilles was employed in lessening the resources

of Priam by the reduction of the tributary cities of Asia Minor. With a fleet of eleven vessels he ravaged the coasts of Mysia, made frequent disembarcations of his forces, and succeeded eventually in destroying eleven cities, among which, according to Strabo (584), were Hypoplacian Thebe, Lynessus, and Pedasus, and in laying waste the island of Lesbos. (Compare *Homer*, *Il.* 9, 328.) Among the spoils of Lynessus, Achilles obtained the beautiful Briseis, while, at the taking of Thebe, Chryseis the daughter of Chryses, a priest of Apollo at Chrysa, became the prize of Agamemnon. A pestilence shortly after appeared in the Grecian camp, and Calchas, encouraged by the proffered protection of Achilles, ventured to attribute it to Agamemnon's detention of the daughter of Chryses, whom her father had endeavoured to ransom, but in vain. The monarch, although deeply offended, was compelled at last to surrender his captive, but, as an act of retaliation, and to testify his resentment, he deprived Achilles of Briseis. Hence arose "the anger of the son of Peleus," on which is based the action of the *Iliad*. Achilles on his part withdrew his forces from the contest, and neither prayers, nor entreaties, nor direct offers of reconciliation, couched in the most tempting and flattering terms (*Il.* 9, 119, *seqq.*), could induce him to return to the field. Among other things the monarch promised him, if he would forget the injurious treatment which he had received, the hand of one of his daughters, and the sovereignty of seven cities of the Peloponnesus. (*Il.* 9, 142 and 149.) The death of his friend Patroclus, however, by the hand of Hector (*Il.* 16, 821, *seqq.*), roused him at length to action and revenge, and a reconciliation having thereupon taken place between the two Grecian leaders, Briseis was restored. (*Il.* 19, 78, *seqq.*—*Id.* 246, *seqq.*) As the arms of Achilles, having been worn by Patroclus, had become the prize of Hector, Vulcan, at the request of Thetis, fabricated a suit of impenetrable armour for her son. (*Il.* 18, 468, *seqq.*) Arrayed in this, Achilles took the field, and after a great slaughter of the Trojans, and a contest with the god of the Scamander, by whose waters he was nearly overwhelmed, met Hector, chased him thrice around the walls of Troy, and finally slew him by the aid of Minerva. (*Il.* 22, 136, *seqq.*) According to Homer (*Il.* 24, 14, *seqq.*), Achilles dragged the corpse of Hector, at his chariot-wheels, thrice round the tomb of Patroclus, and from the language of the poet, he would appear to have done this for several days in succession. Virgil, however, makes Achilles to have dragged the body of Hector thrice round the walls of Troy. In this it is probable that the Roman poet followed one of the *Cyclic*, or else *Tragic*, writers. (*Heyne, Excurs.* 18, *ad Æn.* 1.) The corpse of the Trojan hero was at last yielded up to the tears and supplications of Priam, who had come for that purpose to the tent of Achilles, and a truce was granted the Trojans for the performance of the funeral obsequies. (*Il.* 24, 599.—*Id.* 669.) Achilles did not long survive his illustrious opponent. Some accounts make him to have died the day after Hector was slain. The common authorities, however, interpose the combats with Penthesilea and Menmon previous to his death. (Compare *Heyne, Excurs.* 19, *ad Æn.* 1.—*Quint. Smyrn.* 1, 21, *seqq.*) According to the more received account, as it is given by the scholiast on Lycophron (*v.* 269), and also by Dictys Cretensis and Dares Phrygius, Achilles, having become enamoured of Polyxena, the daughter of Priam, signified to the monarch that he would become his ally on condition of receiving her hand in marriage. Priam consented, and the parties having come for that purpose to the temple of the Thymbræan Apollo, Achilles was treacherously slain by Paris, who had concealed himself there, being wounded by him with an arrow in the heel. Another tradition, related by Arctinus, makes him to have been

slain (in accordance with Hector's prophecy, *Il.* 21, 452), in the Scæan gate, while rushing into the city. Hyginus states that Achilles went round the walls of Troy, boasting of his exploit in having slain Hector, until Apollo, in anger, assumed the form of Paris, and slew him with an arrow (*Hygin. fab.* 107), but, with surprising inconsistency, he mentions in another place (*fab.* 110), that he was slain by Deiphobus and Alexander or Paris. The scholiast on Lycophron, cited above, says that the Trojans would not give up the corpse of Achilles until the Greeks had restored the various presents with which Priam had redeemed the dead body of Hector. The ashes of the hero were mingled in a golden urn with those of Patroclus, and the promontory of Sigæum is said to mark the place where both repose. A tomb was here erected to his memory, and near it Thetis caused funeral games to be celebrated in honour of her son, which were afterwards annually observed by a decree of the oracle of Dodona (*vid.* Sigæum). It is said, that, after the taking of Troy, the ghost of Achilles appeared to the Greeks, and demanded of them Polyxena, who was accordingly sacrificed on his tomb by his son Neoptolemus, or Pyrrhus. (*Eurip. Hec.* 35, *seqq.*—*Senec. Troad.* 191.—*Orid. Met.* 13, 441, *seqq.*—*Q. Calab.* 14.) Another account makes the Trojan princess to have killed herself through grief at his loss. (*Tzetzes, ad Lycophr.* 323.—*Philostratus, Heroica*, p. 714, *ed. Morellus*.) The Thessalians, in accordance with the oracle just mentioned, erected a temple to his memory at Sigæum, and rendered him divine honours. Every year they brought thither two bulls, one white and the other black, crowned with garlands, and along with them some of the water of the Sperchius. (*Gruber, Wörterbuch der altclassischen Mythologie*, vol. i., p. 48.) Another and still stranger tradition informs us, that Achilles survived the fall of Troy and married Helen; but others maintain that this union took place after his death, in the island of Leuce, where many of the ancient heroes lived in a separate elysium (*vid.* Leuce). When Achilles was young, his mother asked him whether he preferred a long life spent in obscurity, or a brief existence of military glory. He decided in favour of the latter. (Compare *Il.* 9, 410, *seqq.*) Some ages after the Trojan war, Alexander, in the course of his march into the East, offered sacrifices on the tomb of Achilles, and expressed his admiration as well of the hero, as of the bard whom he had found to immortalize his name. (*Plutarch, Vit. Alexand.* 15.)—VII. TATIUS, a native of Alexandria, commonly assigned to the second or third century of the Christian era. The best critics, however, such as Huet, Chardon la Rochette, Coray, and Jacobs, make him to have flourished after the time of Heliodorus, since they have discovered in him what they consider manifest imitations of the latter writer. Nay, if it be true that Musæus, whom he has also imitated, composed his poem of Hero and Leander before 430 or 450 of our era, we must then place Achilles Tatius even as low as the middle of the 5th century. (*Schoell, Hist. Litt. Gr.* 6, 231.) According to Suidas, he became, towards the end of his life, a Christian and bishop. But as the lexicographer makes no mention of his episcopal see, and as Photius, who speaks in three different places of him, is silent on this head, it may be permitted us to doubt the accuracy of Suidas's statement. (*Photii Bibliothec.*, vol. i., p. 33, *ed. Bekker*.—*Id. ibid.*, p. 50.—*Id. ibid.*, p. 66.) Equally unworthy of reliance would appear to be another remark of the same lexicographer, that Achilles Tatius wrote a treatise on the sphere. If this were correct, we ought to put him one or two centuries earlier, inasmuch as Firmicus, a Latin writer of the middle of the fourth century, cites the "Sphere of Achilles." (*Astron.* 4, 10.) Suidas, however, who is not accustomed to discriminate very nicely between persons bearing the same name, here confounds

aim with the author of the "Introduction to the Phenomena of Aratus" (*vid.* No. VIII.). Achilles Tatius is the author of a romance, entitled, *Tà katà Leucippēn kai Klitophōnta*, "The loves of Leucippe and Clitophon," as it is commonly translated. Some critics, such as Huet and Saumaise, have preferred it to the work of Heliodorus; but Villosion, Coray, Wytenbach, Passow, Villemain, and Schoell, restore the pre-eminence to the latter. (*Schoell, Hist. Litt. Gr.*, vol. vi., p. 233.—*Foreign Quarterly Review*, No. 9, p. 131.) "The book," says Villemain, "is written under an influence altogether pagan, and in constant allusion to the voluptuous fables of mythology." The remark is perfectly correct. Pictures of the utmost licentiousness, and traces of everything that is infamous in ancient manners, are seen throughout. Unchaste in imagination, and coarse in sentiment, the author has made his hero despise at once the laws of morality and those of love. Clitophon is a human body, uninformed by a human soul, but delivered up to all the instincts of nature and the senses. He neither commands respect by his courage nor affection by his constancy. Struggling, however, in the writer's mind, some finer ideas may be seen wandering through the gloom, and some pure and lofty aspirations contrasting strangely with the chaos of animal instincts and desires. His Leucippe glides like a spirit among actors of mere flesh and blood. Patient, high-minded, resigned, and firm, she endures adversity with grace; preserving, throughout the helplessness and temptations of captivity, irreproachable purity, and constancy unchangeable. The critics, while visiting with proper severity the sins both of the author and the man, do not refuse to render full justice to the merits of the work. It possesses interest, variety, probability, and simplicity. "The Romance of Achilles Tatius," says Villemain, "purified as it should be, will appear one of the most agreeable in the collection of the Greek Romances. The adventures it relates present a pregnant variety; the succession of incidents is rapid; its wonders are natural; and its style, although somewhat affected, is not wanting in spirit and effect." Photius also, as rigorous in morals as a bishop should be, praises warmly the elegance of the style, observing that the author's periods are precise, clear, and euphonious. (*Foreign Quarterly Review*, No. 9, p. 131.) Saumaise was of opinion, that Achilles Tatius had given to the world two several editions of his romance, and that some of the manuscripts which remain belong to the first publication of the work, while others supply us with the production in its revised state. Jacobs, however, in the prolegomena to his edition, has shown that the variations in the manuscripts, which gave rise to this opinion, are to be ascribed solely to the negligence of copyists, as they occur only in those words which have some resemblance to others, and in which it was easy to err. Few works, moreover, were as often copied as this of Achilles Tatius. The best edition is that of *Jacobs*, 2 vols. 8vo, *Lips.*, 1821, in which may be seen a very just, though unfavourable, critique on the editions of *Saumaise* and *Boden*, the former of which appeared in 1640, 12mo, *Lugd. Bat.*, and the latter in 1776, 8vo, *Lips.* A French version of the work is given in the "*Collection des Romans Grecs, traduits en Français; avec des notes, par M.M. Courier, Larcher, et autres Hellénistes*," 14 vols. 16mo, Paris, 1822-1824.—VIII. Tatius, an astronomical writer, supposed to have lived in the first half of the fourth century, since he is quoted by Firmicus (*Astron.* 4, 10), who wrote about the middle of the same century. Suidas confounds him with the individual mentioned in No. VII. We possess, under the title of *Εἰσαγωγή εἰς τὰ Ἀράτων Φαινόμενα*, "Introduction to the Phenomena of Aratus," a fragment of his work on the sphere. This fragment is given in the *Uranologia of Petavius* (Petavius), Paris, 1630, fol.

ACHILLEUM, a town on the Cimmerian Bosphorus, where anciently was a temple of Achilles. It lay near the modern *Buschuk*. (*Mannert*, 4, 326.)

ACHILLEUS, I. a relation of Zenobia, invested with the purple by the people of Palmyra, when they revolted from Aurelian. (*Vopisc.*) Zosimus calls him Antiochus (1, 60).—II. A Roman commander, in the reign of Dioclesian, who assumed the purple in Egypt. The emperor marched against him, shut him up in Alexandria, and took the place after a siege of eight months. Achilles was put to death, having been exposed to lions, and Alexandria was given up to pillage. (*Oros.* 7, 25.—*Aurel. Vict. de Cas.* c. 39.)

ACHIVI, properly speaking, the name of the Achæan race (*Ἀχαιοί*) Latinized. Its derivation through the Æolic dialect is marked by the digammated sound of the letter *v* (*Ἀχαιΐοι*). This appellation was generally applied by the Roman poets, especially Virgil, as a name for the whole Greek nation, in imitation of the Homeric usage. In *legal strictness* it should have been confined by the Romans to the inhabitants of the province of Achaia.

ACHLYS. *Vid.* Supplement.

ACHMET. *Vid.* Supplement.

ACHOLUS. *Vid.* Supplement.

ACICHORIUS, a general with Brennus in the expedition which the Gauls undertook against Præonia. (*Paus.* 10, 19.) He was chosen by Brennus as his lieutenant, or, rather, as a kind of *colleague*, which office the name itself, in the original language of the Gauls, is said to designate. Thus the true Gallic appellation was *Kikhoiāour*, or *Akikhhoiāour*, which the Greeks softened into *Κίχριος* (*Diad. Sic. frag. lib.* 22—vol. ix., p. 301, *ed. Bip.*) and *Ἀκίχριος* (*Paus.* 10, 19), and which they mistook for a proper name. (Compare *Thierry, Histoire des Gaulois*, vol. i., p. 145, and *Owen's Welsh Dictionary*, s. v. *Cycwriawr*.) Diodorus Siculus (l. c.) makes Cichorius to have succeeded Brennus.

ACIDALIA, a surname of Venus, from a fountain of the same name at Orchomenus, in Bœotia, sacred to her. The Graces bathed in this fountain.

ACILIUS. *Vid.* Supplement.

ACILIA, I. *gens*, a plebeian family of Rome, of whom many medals are extant. (*Rasche, Lex. Rei Num.*, vol. i., col. 47.) The name of this old and distinguished line occurs five times in the consular fasti, during the time of the republic, and twelve times in those of the empire, down to the reign of Constantine. (*Sigon. Fast. Cons.*) The two most celebrated branches of the house were those of Acilius Glabrio and Acilius Balbus.—II. *Lex.*, a law introduced by Acilius the tribune, A.U.C. 556, for the planting of five colonies along the coast of Italy, two at the mouths of the Vulturnus and Lirernus, one at Puteoli, one at Salerno, and one at Buxentum. (*Liv.* 32, 29).—III. *Calpurnia Lex* (introduced A.U.C. 686), excluded from the senate, and from all public employments, those who had been guilty of bribery at elections. Cicero calls it merely *Calpurnia Lex*, but others *Acilia Calpurnia Lex*. (*Ernesti, Ind. Leg.*)—IV. *Lex.*, a law introduced A.U.C. 683, by the consul Manius Acilius Glabrio, relative to actions *de pecuniis repetundis*. It determined the forms of proceeding, and the penalties to be inflicted. (Compare *Ernesti, Ind. Leg.*)

ACILIUS, I. a Roman, who wrote a work in Greek on the history of his country, and commentaries on the twelve tables. He lived B.C. 210, and was a contemporary of Cato's. His history was translated into Latin by an individual named Clandius, and was entitled, in this latter language, *Annales Acilienses*. (*Foss. Hist. Gr.* 1, 10).—II. Quintus, appointed a commissioner, about 200 B.C., for distributing among the new colonists the conquered lands along the Po.—III. A tribune, author of the law respecting the maritime colonies. (*Vid.* Acilia II).—IV. Glabrio M., a consul

with P. Corn. Scipio Nasica, A.U.C. 561, and the conqueror of Antiochus at Thermopylæ. (*Liv.* 35, 24.—*Id.* 36, 19.)—V. Glabrio M., son of the preceding, a decemvir. He built a temple to Piety, in fulfilment of a vow which his father had made when fighting against Antiochus. He erected also a gilded statue (*statuam auratam*) to his father, the first of the kind ever seen at Rome. (*Val. Max.* 2, 5.—*Liv.* 40, 34. Compare *Hasse, ad loc.*)—VI. A consul, A.U.C. 684, appointed to succeed Lucullus in the management of the Mithradatic war. (*Cic. in Verr.* 7, 61.)—VII. Aviola Manius, a lieutenant under Tiberius in Gaul, A.D. 19, and afterward consul. He was roused from a trance by the flames of the funeral pile, on which he had been laid as a corpse, but could not be rescued. (*Plin.* 7, 53.—*Val. Max.* 1, 8.)—VIII. Son of the preceding, consul under Claudius, A.D. 54.—IX. A consul with M. Ulpian Trajanus, the subsequent emperor. He was induced to engage with wild beasts in the arena, and, proving successful, was put to death by Domitian, who was jealous of his strength.

ACIRIS, now the *Agri*, a river of Lucania, rising near Abellinum Marsicum, and falling into the Sinus Tarentinus. Near its mouth stood Heraclea.

ACINOFUS. *Vid.* Supplement.

ACIS, a Sicilian shepherd, son of Faunus and the nymph Simæthis. He gained the affections of Galathea, but his rival Polyphemus, through jealousy, crushed him to death with a fragment of rock, which he hurled upon him. Acis was changed into a stream, which retained his name. According to Servius (*ad Virg. Eclog.* 9, 39) it was also called Acilius. Cluverius places it about two miles distant from the modern *Castello di Aciri*. Fazellus, however, without much reason, assigns the name of Acis to the *Fiume Freddo*, near *Taormina*. Sir Richard Hoare describes the Acis of Cluverius as a limpid though small stream. The story of Acis is given by Ovid (*Met.* 13, 750, *seq.*)

ACOKTES. *Vid.* Supplement.

ACOMINATUS. *Vid.* Nicetas.

ACONTIUS, a youth of Cea, who, when he went to Delos to sacrifice to Diana, fell in love with Cydippe, a beautiful virgin, and, being unable to obtain her, by reason of his poverty, had recourse to a stratagem. A sacred law obliged every one to fulfil whatever promise they had made in the temple of the goddess; and Acontius having procured an apple or quince, wrote on it the following words: "I swear by Diana I will wed Acontius." This he threw before her. The nurse took it up, and handed it to Cydippe, who read aloud the inscription, and then threw the apple away. After some time, when Cydippe's father was about to give her in marriage to another, she was taken ill just before the nuptial ceremony. Acontius thereupon hastened to Athens, and, the Delphic oracle having declared that the illness of Cydippe was the punishment of her perjury, the parties were united.

ACORUS. *Vid.* Supplement.

ACRA, I. a village on the Cimmerian Bosphorus. (*Strab.*, p. 494.)—II. A promontory and town of Scythia Minor, now *Ekerne* or *Cavarna*.

ACHRADINA, one of the five divisions of Syracuse, and deriving its name from the wild pear trees with which it once abounded (*ἀχράς*, a wild pear-tree). It is sometimes called the citadel of Syracuse, but incorrectly, although a strongly fortified quarter. It was very thickly inhabited, and contained many fine buildings, yielding only to Ortygia. (*Laporte Du Theil, ad Strab.*, vol 2, p 258, *not.* 3, *French transl.*) As regards the situation of Achradina, and its aspect in more modern times, compare *Swinburn, Travels in the Two Sicilies*, 3, 382 (*French transl.*), and Güllér, *de Situ et Origine Syracusarum*, p. 49, *seqq.*

ACRÆA. *Vid.* Supplement.

ACRÆPHNIA, a city of Bœotia, situate on Mount Ptoüs, towards the northeast extremity of the Lake Co-

pais. It was founded either by Athamas, or by Acræpheus, a son of Apollo. Pausanias calls the place Acræphnium (9, 23.—Compare *Steph. Byz. s. v.*).

ACRAGALLINÆ. *vid.* Craualidæ.

ACRAGAS, I. the Greek name of Agrigentum.—II. A river in Sicily, on which Agrigentum was situate. It gave its Greek name to the city. The modern name is *San Blasio*. (*Mannert*, 9, 2, 354.)—III. An engraver on silver, whose country and age are both uncertain. He is noticed by Pliny (33, 12, 55), who speaks of cups of his workmanship, adorned with sculptured work, preserved in the temple of Bacchus at Rhodes. His hunting pieces on cups were very famous. (*Sillig, Diet. Art. s. v.*)

ACRATUS, a freedman of Nero, sent into Asia to plunder the temples of the gods, which commission he executed readily, being, according to Tacitus (*Ann.* 15, 45), "*cuicumque flagitio promptus*." Secundus Carinas was joined with him on this occasion, whom Lipsius (*ad Tac. l. c.*) suspects to be the same with the Carinas sent into exile (*Dio Cassius*, 59, 20) by the Emperor Caligula, for declaiming against tyrants. Compare *Jurinal*, 7, 204.

ACRIDOPHAGI, an Æthiopian nation, who fed upon locusts. Diodorus Siculus (3, 28) says, that they never lived beyond their 40th year, and that they then perished miserably, being attacked by swarms of winged lice (*πτεροποι φθειρες*), which issued forth from their skin. The account given of their diet is much more probable. The locust is said to be a very common and palatable food in many parts of the East, after having been dried in the sun. This is thought by some to have constituted the food of the Israelites on the occasion mentioned in Exodus (16, 14). Wesseling (*ad Diod. Sic.* 3, 28) is of this opinion. But the *salicim* of Moses evidently mean *quails*, as the received version has rendered the word.

ACRION, a Locrian, was a Pythagorean philosopher: he is mentioned by Valerius Maximus (8, 7) under the name of *Arion*, which is a false reading instead of *Acron*. (*Cic. Fin.* 5, 9.)

ACRISONÆIS, a patronymic appellation given to Danaë, as daughter of Acrisius. (*Virg. Æn.* 7, 410, and *Servius, ad loc.*)

ACRISONIÆDES, a patronymic of Persens, from his grandfather Acrisius. (*Ovid, Met.* 5, *v.* 70.)

ACRISIUS, son of Abas, king of Argos, by Ocalea, daughter of Manteneus. He was born at the same birth as Prætus, with whom it is said that he quarrelled even in his mother's womb. After many dissensions, Prætus was driven from Argos. Acrisius had Danaë by Eurydice, daughter of Lacedæmon; and an oracle having declared that he should lose his life by the hand of his grandson, he endeavoured to frustrate the prediction by the imprisonment of his daughter, in order to prevent her becoming a mother (*vid.* Danaë). His efforts failed of success, and he was eventually killed by Perseus, son of Danaë and Jupiter. Acrisius, it seems, had been attracted to Larissa by the reports which had reached him of the prowess of Perseus. At Larissa, Perseus, wishing to show his skill in throwing a quoit, killed an old man who proved to be his grandfather, whom he knew not, and thus the oracle was fulfilled. Acrisius reigned about 31 years. (*Hugon. fab.* 63.—*Ovid, Met.* 4, *fab.* 16.—*Horat.* 3, *od.* 16.—*Apollod.* 2, 2, &c.—*Paus.* 2, 16, &c.—*Vid.* Danaë, Perseus, Polydectes.)

ACRITAS, a promontory of Messenia, in the Peloponnesus. (*Plin.* 4, 5.—*Mela*, 2, 3.) Now Cape *Gallo*.

ACROATHOS, or ACROTHOÛM. The name Acroathos properly denotes the promontory of the peninsula of Athos, now Cape *Monte Santo*. It is the lower one of the two, the upper one being called Nymphæum (Promontorium). By Acrothoûm (or Acrothoi) is meant a town on the peninsula of Athos, situate some distance up the mountain, and of which Mela observes

(2, 3), that the inhabitants were supposed to live beyond the usual time allotted to man. (Compare *Thucyd.* 4, 109.—*Scylax*, p. 26.—*Steph. Byz.* s. v. Ἀθωγ.—*Strab. epit. lib.* 7, 331.)

ACROCEARAUNIA, or ACROCEARAUNII Montes. *vid.* Ceraunia.

ACROCORINTHUS, a high hill, overhanging the city of Corinth, on which was erected a citadel, called also by the same name. This situation was so important a one as to be styled by Philip the fetters of Greece. The fortress was surprised by Antigonus, but recovered in a brilliant manner by Aratus. (*Strab.* 8, 380.—*Paus.* 2, 4.—*Plut. Vit. Arat.*—*Stat. Theb.* 7, v. 106.) "The Acrocorinthus, or Acropolis of Corinth," observes Dodwell, "is one of the finest objects in Greece, and, if properly garrisoned, would be a place of great strength and importance. It abounds with excellent water, is in most parts precipitous, and there is only one spot from which it can be annoyed with artillery. This is a pointed rock, at a few hundred yards to the southwest of it, from which it was battered by Mohammed II. Before the introduction of artillery, it was deemed almost impregnable, and had never been taken except by treachery or surprise. Owing to its natural strength, a small number of men was deemed sufficient to garrison it; and in the time of Aratus, according to Plutarch, it was defended by 400 soldiers, 50 dogs, and as many keepers. It was surrounded with a wall by Cleomenes. It shoots up majestically from the plain to a considerable height, and forms a conspicuous object at a great distance: it is clearly seen from Athens, from which it is not less than forty-four miles in a direct line. Strabo affirms that it is 3 1-2 stadia in perpendicular height, but that the ascent to the top is 30 stadia by the road, the circuitous inflections of which render this no extravagant computation. The Acrocorinthus contains within its walls a town and three mosques. Athenæus commends the water in the Acrocorinthus as the most salubrious in Greece. It was at this point that Pegasus was drinking when taken by Bellerophon." (*Dodwell*, vol. 2, p. 187.) All modern travellers who have visited this spot, give a glowing description of the view obtained from the ridge. Consult, in particular, *Clarke's Travels*, vol. 6, p. 750.

ACRON, I. a king of the Cæninenses, whom Romulus slew in battle, after the affair of the Sabine women. His arms were dedicated to Jupiter Feretrius, and his subjects were incorporated with the Roman people. (*Plut. Vit. Rom.*) Propertius styles him *Cæninus Acron*, from the name of his city and people (4, 10, 7), and also *Herculeus* (4, 10, 9), from the circumstance of all the Sabine race tracing their descent from Hercules or Sancus.—II. A celebrated physician of Agrigentum in Sicily, contemporary with Empedocles (*Diog. Laert.* 8, 65). Plutarch speaks of his having been at Athens during the time of the great plague, which occurred B.C. 430. He aided the Athenians on that occasion, by causing large fires to be kindled in their streets. (*Plut. Is. et Os.* 383.) Acron is generally regarded as the founder of the sect of Empirics or Experimentalists (*Pseud. Gal. Isag.* 372). As this school of medicine, however, had a much later date, it is probable that he was merely one of the class of physicians called *περιόδοι*, who did not confine themselves to mere theory, but went round and visited patients. His contempt for the mysterious charlatanism of Empedocles drew upon him the hatred of that philosopher. At least it is fair to suppose that this was the cause of their enmity. Acron wrote, according to Suidas, a treatise in Doric Greek, on the healing art, and another on diet. He appears also, from the words of the lexicographer, to have turned his attention in some degree to the influence of climate. (Consult *Sprengel, Hist. Med.* 1, 273.)—III. Helenius Acron, an ancient commentator. The period

when he lived is uncertain: he is thought, however, to have been later than Servius. Acron's scholia on Horace have descended to us in part, or at least only a part was ever published. They are valuable on account of their containing the remarks of C. Æmilius, Julius Modestus, and Q. Terentius Scaurus, the oldest commentators on Horace. Acron also wrote scholia on Terence, which are cited by Charisius, but they have not reached us. Some critics ascribe to him the scholia which we have on Persius. (*Schoell, Hist. Litt. Rom.* 3, 326.)

ACROPOLIS, in a special sense, the citadel of Athens, an account of which will be given under the article *Athenæ*.

ACROPOLITA. *Vid.* Supplement.

ACROTATUS, I. son of Cleomenes, king of Sparta, died before his father, leaving a son called Areus, who contended for the crown with Cleonymus his uncle, and obtained it through the suffrages of the senate. Cleonymus, in his disappointment, called in Pyrrhus of Epirus. (*Paus.* 3, 6.—*Plut. vit. Pyrrh.*—*Paus.* 1, 13).—II. A king of Sparta, son of Areus, and grandson of the preceding. He reigned one year. Before ascending the throne, he distinguished himself by courageously defending Sparta against Pyrrhus. (*Plut. vit. Pyrrh.*)

ACROTHOUM. *Vid.* Acroathos.

ACTA or ACTE, strictly speaking, a beach or shore on which the waves break, from ἄγω, "to break." According to Apollodorus (*Steph. B. s. v.* Ἀκτῆ), the primitive name of Attica was Ἀκτῆ (Acte), from the circumstance of two of its sides being washed by the sea. The name is also applied by Thucydides to that part of the peninsula of Athos which is below the city of Sane and including it. Besides Sane, the historian mentions five other cities as being situate upon it. (*Thucyd.* 4, 109.)

ACTÆON, a celebrated hunter, son of Aristæus and Autonoe the daughter of Cadmus. Having inadvertently, on one occasion, seen Diana bathing, he was changed by the goddess into a stag, and was hunted down and killed by his own hounds. (*Ov. Met.* 3, 155, *seqq.*) The scene of the fable is laid by the poets at Gargaphia, a fountain of Bœotia, on Mount Cithæron, about a mile and a half from Platæa. From a curious passage in Diodorus Siculus (4, 81), a suspicion arises, that the story of Actæon is a corruption of some earlier tradition, respecting the fate of an intruder into the mysteries of Diana. Wesseling's explanation does not appear satisfactory, although it may serve as a clew to the true one. (*Wesseling, ad Diod. Sic. l. c.*)

ACTÆUS, the first king of Attica, according to the ancient writers. He was succeeded by Cecrops, to whom he had given one of his daughters in marriage. (*Paus.* 1, 2.—*Clem. Alex.* 1, 321.) He is called by some Actæon. (*Strab.* 397.—*Harpocr.* s. v. Ἀκτῆ.—Consult *Schæbelis, ad Paus. l. c.*)

ACTE, a freed woman of Asiatic origin. Suetonius (*Vit. Ner.* 28) informs us, that Nero, at one time, was on the point of making her his wife, having suborned certain individuals of consular rank to testify, under oath, that she was descended from Attalus. From a passage in Tacitus (*Ann.* 14, 2) it would appear, that Seneca introduced this female to the notice of the tyrant, in order to counteract, by her means, the dreaded ascendancy of Agrippina. (Compare *Dio Cass.* 61, 7.)

ACTIA, games renewed by Augustus in commemoration of his victory at Actium. They are also styled *Ludi Actiaci* by the Latin writers, and were celebrated in the suburbs of Nicopolis. Strabo makes them to have been quinquennial. Previously, however, to the battle of Actium they occurred every three years. (*Strab.* 7, 325.)

ACTIS, one of the Heliades, or offspring of the Sud,

who, according to Diodorus Siculus (5, 57), migrated from Rhodes into Egypt, founded Heliopolis, and taught the Egyptians astrology. The same writer states, that the Greeks, having lost by a deluge nearly all their memorials of previous events, became ignorant of their claim to the invention of the science in question, and allowed the Egyptians to arrogate it to themselves. Wesseling considers this a mere fable, based on the national vanity of the Greeks, who, it is well known, inverted so many of the ancient traditions, and in this case, for example, made that pass from Greece into Egypt, which came in reality from Egypt to Greece. (*Wess. ad Diod. Sic. l. c.*)

ACTISĀNES, according to Diodorus Siculus (1, 60), a king of Ethiopia, who conquered Egypt and de-throned Amasis. He was remarkable for his moderation towards his new subjects, as well as for his justice and equity. All the robbers and malefactors, too, were collected from every part of the kingdom, and, having had their noses cut off, were established in Rhinocolura, a city which he had founded for the purpose of receiving them. We must read, no doubt, with Stephens and Wesseling, in the text of Diodorus, Ἀκτισῆς instead of Ἀκασίς, for the successor of Apries cannot here be meant. Who the Actisanes of Diodorus was, appears to be undetermined. According to Wesseling (*ad loc.*), Strabo is the only other writer that makes mention of him. (*Strabo, 759*)

ACTIUM, originally the name of a small neck of land, called also Acte (Ἀκτῆ), at the entrance of the Sinus Ambracius, on which the inhabitants of Anactorium had erected a small temple in honour of Apollo. On the outer side of this same promontory was a small harbour, the usual rendezvous of vessels which did not wish to enter the bay. Scylax (p. 13) calls this harbour Acte. Thucydides, however, applies this name to the temple itself. Polybius (4, 63) makes mention of the temple, under the appellation of Actium, and speaks of it as belonging to the Acarnanians. Actium became famous, in a later age, for the decisive victory which Augustus gained in this quarter over the fleet of Marc Antony. From the accounts given of it by the Roman writers, Actium appears to have been, about the time of this battle, nothing more than a temple on a height, with a small harbour below. The conqueror beautified the sacred edifice, and very probably a number of small buildings began after this to arise in the vicinity of the temple. (*Strab. 325.—Sueton. Vit. Aug. 17.—Cic. ep. ad fam. 16, 9.*) Hence Strabo (451) applies to it the epithet of ἁγίον. It never, however, became a regular city, although an inattentive reader would be likely to form this opinion from the language of Mela (2, 3) and Pliny (4, 1). Both these writers, however, in fact confound it with Nicopolis. There are no traces of the temple at the present day, but Pouqueville found some remains of the Hippodrome and Stadium. More within the Sinus Ambracius (*Gulf of Arta*) lies the small village of Actio. Hence probably, according to Mannert, originated the error of D'Anville, who places Actium, in contradiction to all ancient authorities, at some distance within the bay. (*Vid. Nicopolis, and compare Mannert, 8, 70.—Pouqueville, 3, 445.*)

ACTIUS, a surname of Apollo, from Actium, where he had a temple. (*Virg. Æn. 8, v. 704.*)

ACTIUS NAVIUS. *Vid. Attus Navius.*

ACTOR, the father of Menætiæ, and grandfather of Patroclus, who is hence called Actorides. The birth of Actor is by some placed in Locris, by others in Thessaly. As a Thessalian, he is said to have been the son of Myrmidon and Pisidia, the daughter of Æolus, and husband of Ægina, daughter of the Asopus; and to have conceded his kingdom, on account of the rebellion of his sons, to Pelæus. (*Œc. Trist. 1, 9.*) Consult, on the different individuals of this name, the remarks of Heyne, *ad Apollod. 3, 13.*

ACTORIDES, I. a patronymic given to Patroclus, grandson of Actor. (*Ovid, Met. 13, fab. 1.*)—II. The sons of Actor and Molione. (*Vid. Molionides.*)

ACTORIUS. *Vid. Supplement.*

ACTUARIUS. *Vid. Supplement.*

ACULEO. *Vid. Supplement.*

ACUMENUS. *Vid. Supplement.*

ACUSILĀUS, a Greek historian, born at Argos, and who lived, according to Josephus (*contr. Ap. 1, 2*), a short time previous to the Persian invasion of Greece, being a contemporary of Cadmus of Miletus. He wrote a work entitled "*Genealogies*," in which he gave the origin of the principal royal lines among his countrymen. He made historic times commence with Phoroneus, son of Inachus, and he reckoned 1020 years from him to the first Olympiad, or 776 B.C. We have only a few fragments of his work, collected by Sturz, and placed by him at the end of those of Pherecydes, published at Gera, 2d. ed., 1824.

ACUTĪCUS, M., an ancient comic writer, author of various pieces, entitled, *Leones, Gemini, Boetia*, &c., and ascribed by some to Plautus. (*Voss. de Poet. Lat. c. 1.*)

AD AQUAS, AD AQUĪLAS, &c., a form common to very many names of places. The Roman legions, on many occasions, when stopping or encamping in any quarter, did not find any habitation or settlement by which the place in question might be designated, and therefore selected for this purpose some natural object, or some peculiar feature in the adjacent scenery. Thus *Ad Aquas* indicated a spot near which there was water, or an encampment near water, &c. Another form of common occurrence is that which denotes the number of miles on any Roman road. Thus, *Ad Quartum*, "at the fourth mile-stone," supply *lapidem*. So also, *Ad Quintum, Ad Decimum*, &c.

ADA, the sister of Artemisia. She married Hirdrieus, her brother (such unions being allowed among the Carians), and, after the death of Artemisia, ascended the throne of Caria, and reigned seven years conjointly with her husband. On the death of Hirdrieus she reigned four years longer, but was then driven from her dominions by Pixodarus, the youngest of her brothers, who had obtained the aid of the satrap Orontobates. Alexander the Great afterward restored her to her throne. She was the last queen of Caria. (*Quint. Curt. 2, 8.*)

ADAD, an Assyrian deity, supposed to be the sun. Macrobius (*Sat. 1, 23*) states, that the name Adad means "*One*" (*Unus*), and that the goddess Adargatis was assigned to this deity as his spouse, the former representing the Sun, and the latter the Earth. He also mentions, that the effigy of Adad was represented with rays inclining downward, whereas they extend upward from that of Adargatis. Selden (*de Diis Syris, c. 6, synt. 1*) thinks that Macrobius must be in error when he makes Adad equivalent to "*One*," and that he must have confounded it with the word Chad, which has that meaning.

ADÆUS. *Vid. Supplement.*

ADAMANTÆA, Jupiter's nurse in Crete, who suspended him in his cradle from a tree, that he might be found neither on the earth, the sea, nor in heaven. To drown the infant's cries, she caused young boys to clash small brazen shields and spears as they moved around the tree. She is probably the same as Amalthea.

ADAMANTĪUS. *Vid. Supplement.*

ADĀNA, a city of Cilicia, southeast of Tarsus, on the Sarus, or *Sihon*. It was at one time a large and well-known place, and was said to have been founded by Adanus, son of Uranus and Gæa. (*Steph. B.*)

ADDŪA, now *Adda*, a river of Cisalpine Gaul, rising in the Rhetian Alps, traversing the Lacus Larius, and falling into the Po to the west of Cremona. In the old editions of Strabo, it is termed in one passage

(204) the Adula (*ὁ Ἀδούλας*), but this is an error of the copyists, arising probably from the name of Mount Adula, which precedes. Tzschucke restores *ὁ Ἀδούλας*.

ADĒS, or HĀDES, an epithet originally of Pluto, the monarch of the shades; afterward applied to the lower world itself. The term is derived by most etymologists from *ἀ* privative, and *εἶδω*, *vidēo*, alluding to the darkness supposed to prevail in this abode of the dead. That this is the true derivation, indeed, will appear from what the poets tell us of the helmet of Pluto (*κρυπτή Ἀΐδος*), which had the power of rendering the wearer invisible. (*Hom. Il. 5. 845.*) For farther remarks on the Hades of the Greeks, *vid.* Tartarus.

ADGANDESTRĪUS, a prince of the Catti, who wrote a letter to the Roman senate, in which he promised to destroy Arminius, if poison should be sent him for that purpose from Rome. The senate answered, that the Romans fought their enemies openly, and never used perfidious measures. (*Tacit. Ann. 2. c. 88.*)

ADHERBAL, son of Micipsa, and grandson of Masinissa, was besieged at Cirta, and put to death by Jugurtha, after vainly imploring the aid of Rome, B.C. 112. (*Sallust. Jug. 5. 7. &c.*) According to Gezenius (*Phoen. Mon. p. 399. seq.*), the more Oriental form of the name is *Atherbal*, signifying "the worshipper of Baal." From this the softer form *Adherbal* arose. The MSS. of Sallust often give *Atherbal*, with which we may compare the Greek Ἀράβαξ. (*Diod. Sic. lib. 34. fragm.—vol. 10. p. 132. ed. Bip.—Polyb. 1. 46. &c.*)

ADIABĒNE, a region in the northern part of Assyria, and to the east of the Tigris. During the Macedonian sway, it comprised all the country between the Zabus Major and Minor. Under the Parthian sway it comprehended the country as far as the Euphrates, including what was previously Aturia. It was afterward the seat of a kingdom dependant on the Parthian power, which disappeared from history, however, on the rise of the second Persian empire. (*Plin. 5. 12. &c.*)

ADIATORIX. *Vid.* Supplement.

ADIMANTUS. *Vid.* Supplement.

ADMĒTĒ, I. (*Vid.* Supplement.)—II. A daughter of Oceanus and Tethys, whom Hyginus, in the preface to his fables, calls Admeto, and a daughter of Pontus and Thalassa, which last was the offspring of Æther and Hemera. (*Hom. Hymn. in Cererem, 421.—Hesiod. Theog. 349.*)

ADMĒTUS, I. son of Pheres, king of Phæræ in Thesaly, and who succeeded his father on the throne. He married Theone, daughter of Thestor, and, after her death, Alcestit, daughter of Pelias, so famous for her conjugal heroism. It was to the friendship of Apollo that he owed this latter union. The god having been banished from the sky for one year, in consequence of his killing the Cyclopes, tended during that period the herds of Admetus. Pelias had promised his daughter to the man who should bring him a chariot drawn by a lion and a wild boar, and Admetus succeeded in this by the aid of Apollo. The god also obtained from the Fates, that Admetus should not die if another person laid down his or her life for him, and Alcestit heroically devoted herself to death for her husband. Admetus was so deeply affected at her loss, that Proserpina actually relented; but Pluto remained inexorable, and Hercules at last descended to the shades and bore back Alcestit to life. Admetus was one of the Argonauts, and was also present at the hunt of the Calydonian boar. Euripides composed a tragedy on the story of Alcestit, which has come down to us. (*Apollod. 1. 8.—Tibull. 2. 3.—Hygin. fab. 50. 51. &c.*)—II. A king of the Molossi, to whom Themistocles, when banished, fled for protection. (*Vid.* Themistocles.)—III. A Greek epigrammatic poet, who lived in the early part of the second century after Christ.

ADMO, an engraver on precious stones in the time of Augustus. His country is uncertain. An elegant portrait of Augustus, engraved by him, is described by *Mongez, Icon. Rom. tab. 18. n. 6.*

ADONĪA, a festival in honour of Adonis, celebrated both at Byblus in Phœnicia, and in most of the Grecian cities. Lucian (*de Syria Dea.—vol. 9. p. 88. seqq. ed. Bip.*) has left us an account of the manner in which it was held at Byblus. According to this writer, it lasted during two days, on the first of which everything wore an appearance of sorrow, and the death of the favourite of Venus was indicated by public mourning. On the following day, however, the aspect of things underwent a complete change, and the greatest joy prevailed on account of the fabled resurrection of Adonis from the dead. During this festival the priests of Byblus shaved their heads, in imitation of the priests of Isis in Egypt. In the Grecian cities, the manner of holding this festival was nearly, if not exactly, the same with that followed in Phœnicia. On the first day all the citizens put themselves in mourning, coffins were exposed at every door; the statues of Venus and Adonis were borne in procession, with certain vessels full of earth, in which the worshippers had raised corn, herbs, and lettuce, and these vessels were called the gardens of Adonis (*Ἀδωνίδος κήποι*). After the ceremony was over they were thrown into the sea or some river, where they soon perished, and thus became emblems of the premature death of Adonis, who had fallen, like a young plant, in the flower of his age. (*Histoire du Culte d'Adonis: Mem. Acad. des Inscrip. &c., vol. 4. p. 136. seqq.—Dupuis, Origine des Cultes, vol. 4. p. 118. seqq., ed. 1822.—Valckenær, ad Theoc. Ἀδωνίως, in Arg.*) The lettuce was used among the other herbs on this occasion, because Venus was fabled to have deposited the dead body of her favourite on a bed of lettuce. In allusion to this festival, the expression Ἀδωνίδος κήποι became proverbial, and was applied to whatever perished previous to the period of maturity. (*Adagia Veterum, p. 410.*) Plutarch relates, in his life of Nicias, that the expedition against Syracuse set sail from the harbours of Athens, at the very time when the women of that city were celebrating the mournful part of the festival of Adonis, during which there were to be seen, in every quarter of the city, images of the dead, and funeral processions, the women accompanying them with dismal lamentations. Hence an unfavourable omen was drawn of the result of the expedition, which the event but too fatally realized. Theocritus, in his beautiful Idyll entitled Ἀδωνίωζοντα, has left us an account of the part of this grand anniversary spectacle termed ἡ εἵρσις, "the finding," i. e., the resurrection of Adonis, the celebration of it having been made by order of Arsinoë, queen of Ptolemy Philadelphus. Boettiger (*Sabina, p. 265*) has a very ingenious idea in relation to the fruits exhibited on this joyful occasion. He thinks it impossible, that even so powerful a queen as Arsinoë should be able to obtain in the spring of the year, when this festival was always celebrated, fruits which had attained their full maturity (*ὥρια*). He considers it more than probable that they were of wax. This conjecture will also furnish another, and perhaps a more satisfactory, explanation of the phrase Ἀδωνίδος κήποι, denoting things whose exterior promised fairly, while there was nothing real or substantial within. Adonis was the same deity with the Syrian Tammuz, whose festival was celebrated even by the Jews, when they degenerated into idolatry (*Ezekiel, 8. 14*); and Tammuz is the proper Syriac name for the Adonis of the Greeks. (*Cruzer's Symbolik, vol. ii. p. 86.*) (*Vid.* Adonis.)

ADONĪS, I. son of Cinyras, by his daughter Myrrha (*vid.* Myrrha), and famed for his beauty. He was ardently attached to the chase, and notwithstanding the entreaties of Venus, who feared for his safety and loved him tenderly, he exposed himself day after day in the

hunt, and at last lost his life by the tusk of a wild boar whom he had wounded. His blood produced the anemone, according to Ovid (*Mét.* 10, 735); but according to others, the adonium, while the anemone arose from the tears of Venus. (*Bion, Epitaph. Ad.* 66.) The goddess was inconsolable at his loss, and at last obtained from Proserpina, that Adonis should spend alternately six months with her on earth, and the remaining six in the shades. 'This fable is evidently an allegorical allusion to the periodical return of winter and summer. (*Apollod.* 3, 14.—*Or. l. c.*—*Bion, l. c.*—*Virg. Ecl.* 10, 18, &c.) "Adonis, or Adonai," observes R. P. Knight, "was an Oriental title of the sun, signifying Lord; and the boar, supposed to have killed him, was the emblem of winter; during which the productive powers of nature being suspended, Venus was said to lament the loss of Adonis until he was again restored to life; whence both the Syrian and Argive women annually mourned his death and celebrated his renovation; and the mysteries of Venus and Adonis at Byblus in Syria were held in similar estimation with those of Ceres and Bacchus at Eleusis, and Isis and Osiris in Egypt. Adonis was said to pass six months with Proserpina and six with Venus; whence some learned persons have conjectured that the allegory was invented near the pole, where the sun disappears during so long a time; but it may signify merely the decrease and increase of the productive powers of nature as the sun retires and advances. The Vishnoo or Juggernaut of the Hindus is equally said to lie in a dormant state during the four rainy months of that climate: and the Osiris of the Egyptians was supposed to be dead or absent forty days in each year, during which the people lamented his loss, as the Syrians did that of Adonis, and the Scandinavians that of Frey; though at Upsal, the great metropolis of their worship, the sun never continues any one day entirely below their horizon." *An Inquiry into the Symbolical Language of Ancient Art and Mythology* (*Class. Journal*, vol. 25, p. 42.)—II. A river of Phœnicia, which falls into the Mediterranean below Byblus. It is now called *Nahr Ibrahim*. At the anniversary of the death of Adonis, which was in the rainy season, its waters were tinged red with the ochrous particles from the mountains of Libanus, and were fabled to flow with his blood. But Dupuis (4, p. 121), with more probability, supposes this red colour to have been a mere artifice on the part of the priests.

ADRAMYTTEIUM, a city of Asia Minor, on the coast of Mysia, and at the head of an extensive bay (Sinus Adramyttæus) facing the island of Lesbos. (Strabo (605) makes it an Athenian colony. Stephanus Byzantinus follows Aristotle, and mentions Adramys, the brother of Cræsus, as its founder. This last is more probably the true account, especially as an adjacent district bore the name of Lydia. According, however, to Eustathius and other commentators, the place existed before the Trojan war, and was no other than the Pedasus of Homer (*Plin.* 5, 32). This city became a place of importance under the kings of Pergamus, and continued so in the time of the Roman power, although it suffered severely during the war with Mithradates. (*Strab.* 605.) Here the *Conventus Juridicus* was held. The modern name is *Adramyt*, and it is represented as being still a place of some commerce. It contains 1000 houses, but mostly mean and miserably built. Adramyttium is mentioned in the Acts of the Apostles (ch. 27, 2).

ADRANA, a river in Germany, in the territory of the Catti, and emptying into the Visurgis. Now the *Eder*.

ADRANTUS. *Vid.* Supplement.

ADRANTUS. *Vid.* Supplement.

ADRASTEIA (Ἀδράστεια), I. a region of Mysia, in Asia Minor, near Priapus, at the entrance of the Propontis, and containing a plain and city of the same name. The appellation was said to have been derived

from Adrastus, who founded in the latter a temple to Nemesis. (*Strab.* 588.—*Steph. B. s. v.*) This etymology, however, appears very doubtful. A more correct one is given under No. II. The city had originally an oracle of Apollo and Diana, which was afterward removed to Parium in its vicinity. Homer makes mention of Adrastea, but Pliny is in error (5, 32) when he supposes Parium and Adrastea to have been the same.—II. A daughter of Jupiter and Necessity, so called, not from Adrastus, who is said to have erected the first temple to her, but from the impossibility of the wicked escaping her power: ἄ privative, and δρᾶω, "to flee." She is the same as Nemesis.—III. A Cretan nymph, daughter of Melissens, to whom the goddess Rhea intrusted the infant Jupiter in the Dictæan grotto. In this office Adrastea was assisted by her sister Ida and the Curetes (*Apollod.* 1, 1, 6; *Callim. Hymn. in Jov.* 47), whom the scholiast on Callimachus calls her brothers. Apollonius Rhodius (3, 132, *seqq.*) relates that she gave to the infant Jupiter a beautiful globe (σφαῖρα) to play with, and on some Cretan coins Jupiter is represented sitting on a globe. (*Spanheim ad Callim. l. c.*)

ADRASTUS, I. a king of Argos, son of Talaus and Lysimache. (*Vid.* Supplement.)—II. A son of the Phrygian king Gordius, who had unintentionally killed his brother, and was, in consequence, expelled by his father, and deprived of everything. He took refuge as a suppliant at the court of Cræsus, king of Lydia, who received him kindly and purified him. After some time he was sent out as guardian of Atys, the son of Cræsus, who was to deliver the country around the Mysian Olympus from a wild boar which had made great havoc in it. Adrastus had the misfortune to kill the young prince Atys while throwing his javelin at the wild beast: Cræsus pardoned the unfortunate man, as he saw in this accident the will of the gods and the fulfilment of a prophecy; but Adrastus could not endure to live longer, and accordingly killed himself or the tomb of Atys. (*Herod.* 1, 35–45.)—III. A Peripatetic philosopher, born at Aphrodisias in Caria, and who flourished about the beginning of the second century of our era. He was the author of a treatise on the arrangement of Aristotle's writings and his system of philosophy, quoted by Simplicius (*Præfat. in viii. lib. phys.*), and by Achilles Tatius (p. 82). Some commentaries of his on the *Timæus* of Plato are also quoted by Porphyry (p. 270, in *Harm. Ptol.*), and a treatise on the categories of Aristotle by Galen. None of these have come down to us, but a work on Harmonics (περί Ἀρμονικῶν) is preserved in manuscript in the Vatican library.—IV. Father of Eurydice, and grandfather of Laomedon. (*Apollod.* 3, 12, 3.)—V. Son of the soothsayer Merope of Percote. He went to the Trojan war with his brother, against the will of his father, and was slain by Diomedes.

ADRIA, ATRIA, or HADRIA, I. in the time of the Romans a small city of Cisalpine Gaul, on the river Tarnarus, near the Po. Its site is still occupied by the modern town of *Atri*. In the ages preceding the Roman power, Adria appears to have been a powerful and flourishing commercial city, as far as an opinion may be deduced from the circumstance of its having given name to the Adriatic, and also from the numerous canals which were to be found in its vicinity. (Compare *Liv.* 5, 33.—*Strab.* 218.—*Justin.* 20, 1.—*Plin.* 3, 16.) It had been founded by a colony of Etrurians, to whose labours these canals must evidently be ascribed, the name given to them by the Romans (*fossionæ Philistinæ*) proving that they were not the work of that people. (Compare *Müller, Etrusk.*, vol. 1, p. 228, *in notis.*) The fall of Adria was owing to the inroads of the Gallic nations, and the consequent neglect of the canals. Livy, Justin, and most of the ancient historians, write the name of this city *Adria*; the geographers, on the other hand, prefer

Adria. In Strabo alone the reading is doubtful. Manutius and Cellarius, on the authority of inscriptions and coins, give the preference to the form *Hadria*. Berkel (*ad Steph. Byzant.*, v. 'Αδρία) is also in favour of it. It must be observed, however, that *Adria* is found on coins as well as the aspirated form. (*Rasche, Lex Rei Num.*, vol. 4, col. 9.—*Cellarius, Geogr. Ant.* 1, 509)—II. A town of Picenum, capital of the Præutii, on the coast of the Adriatic. Here the family of the Emperor Adrian, according to his own account, took its rise. The modern name of the place is *Adri* or *Atri*.

ADRIANOPŌLIS, or HADRIANOPŌLIS, I. one of the most important cities of Thrace, founded by and named after the Emperor Adrian or Hadrian. Being of comparatively recent date, it is consequently not mentioned by the old geographical writers. Even Ptolemy is silent respecting it, since his notices are not later than the reign of Trajan. The site of this city, however, was previously occupied by a small Thracian settlement named Uskudama; and its very advantageous situation determined the emperor in favour of erecting a large city on the spot. (*Ammian. Marcell.* 14, 11.—*Eutrop.* 6, 8.) Adrianopolis stood on the right bank of the Hebrus, now *Maritza*, which forms a junction in this quarter with the Arda, or Ardisus, now *Arda*, and the Tonzus, now *Tundschä*. (Compare *Zosimus*, 2, 22.—*Lamprid. Elagab.* 7.) This city became famous in a later age for its manufactories of arms, and in the fourth century succeeded in withstanding the Goths, who laid siege to it after their victory over the Emperor Valens. (*Ammian. Marcell.* 31, 15.) Hierocles (p. 635) makes it the chief city of the Thracian province of Hamimontius. The inhabitants were probably ashamed of their Thracian origin, and borrowed therefore a primitive name for their city from the mythology of the Greeks. (*Vid.* Orestias.) Mannert (7, 263) thinks that the true appellation was Odrysus, which they thus purposely altered. The modern name of the place is *Adrianople*, or rather *Edrinch*. It was taken by the Turks in 1360 or 1363, and the Emperor Amurath made it his residence. It continued to be the imperial city until the fall of Constantinople; but, though the court has been removed to the latter place, Adrianople is still the second city in the empire, and very important, in case of invasion by a foreign power, as a central point for collecting the Turkish strength. Its present population is not less than 100,000 souls.—II. A city of Bithynia in Asia Minor, founded by the Emperor Adrian. D'Anville places it in the southern part of the territory of the Mariandyni, and makes it correspond to the modern *Boli*.—III. Another city of Bithynia, called more properly *Adriani* or *Hadriani* ('Αδριάνου). It is frequently mentioned in ecclesiastical writers, and by Hierocles (p. 693), and there are medals existing of it, on which it is styled *Adriani* near Olympus. Hence D'Anville, on his map, places it to the southwest of Mount Olympus, in the district of Olympena, and makes it the same with the modern *Edrenos*. Mannert opposes this, and places it in the immediate vicinity of the river Rhyndacus.—IV. A city of Epirus, in the district of Thesprotia, situate to the southeast of Antigonea, on the river Celydnus. Its ruins are still found upon a spot named *Trinopolis*, an evident corruption of its earlier name. (*Hughes' Travels*, 2, 236).—V. A name given to a part of Athens, in which the Emperor Adrian or Hadrian had erected many new and beautiful structures. (*Gruter, Inscript.*, p. 177.)

ADRIANUS, a Roman emperor. (*Vid.* Hadrianus.)

ADRIANUS. *Vid.* Supplement.

ADRIAS, the name properly of the territory in which the city of *Adria* in Cisalpine Gaul was situated. Herodotus (5, 9) first speaks of it under this appellation (ὁ Ἀδρίας), which is given also by many subsequent Greek writers. (Compare *Scylax*, p. 5.) Most

of them, however, considered it very probably a name for the Adriatic. Strabo (123,) certainly uses it in this sense (Ὁ δ' Ἰόνιος κόλπος μέρος ἐστὶ τοῦ νῦν Ἀδρίου λεγόμενον). More careful writers, however, and especially Polybius, give merely ὁ Ἀδρίας, without any mention of its referring to the Adriatic. The latter author, although acquainted with the form *Adriaticus* (τὸν Ἀδριατικὸν μυχόν, 2, 16), yet, when he wishes to designate the entire gulf, has either ὁ κατὰ τὸν Ἀδρίαν κόλπος (2, 14), or ἡ κατὰ τὸν Ἀδρίαν θάλαττα (2, 16). So, in speaking of the mouths of the Po, he uses the expression οἱ κατὰ τὸν Ἀδρίαν κόλποι (2, 14). Hence both Casaubon and Schweighæuser, in their respective editions of Polybius, are wrong, in translating ὁ Ἀδρίας by *Mare Adriaticum* and *Sinus Adriaticus*.

ADRIATICUM (or HADRIATICUM) MARE, called also *Sinus Adriaticus* (or *Hadriaticus*), the arm of the sea between Italy and the opposite shores of Illyricum, Epirus, and Greece, comprehending, in its greatest extent, not only the present Gulf of Venice, but also the Ionian Sea. Herodotus, in one passage (7, 20), calls the whole extent of sea along the coast of Illyricum and Western Greece, as far as the Corinthian Gulf, by the name of the Ionian Sea (Ἰόνιος πόντος). In another passage he styles the part in the vicinity of Epidamnus, the Ionian Gulf (6, 127). Scylax makes the Ionian Gulf the same with what he calls *Adrias* (τὸ δὲ αὐτὸ Ἀδρίας ἐστὶ, καὶ Ἰόνιος, p. 11), and places the termination of both at Hydruntum (Λιμὴν Ὑδρόντος ἐπὶ τῷ τοῦ Ἀδρίου ἢ τῷ τοῦ Ἰωνίου κόλπον στόματι, p. 5). He is silent, however, respecting the Ionian Sea, as named by Herodotus. Thucydides, like Herodotus, distinguishes between the Ionian Gulf and Ionian Sea. The former he makes a part of the latter, which reaches to the shores of Western Greece. Thus he observes, in relation to the site of Epidamnus, Ἐπίδαμος ἐστὶ πόλις ἐν δεξιᾷ ἀπέναντι τὸν Ἰόνιον κόλπον (1, 24). These ideas, however, became changed at a later period. The limits of what Scylax had styled Ἀδρίας, and made synonymous with Ἰόνιος κόλπος, were extended to the shores of Italy and the western coast of Greece, so that now the Ionic Gulf was regarded only as a part of Ἀδρίας, or the Adriatic. Eustathius informs us, that the more accurate writers always observed this distinction (οἱ δὲ ἀκριβέστεροι τὸν Ἰόνιον μέρος τοῦ Ἀδρίου φασί. *Eustath. ad Dionys. Perieg.* v. 92). Hence we obtain a solution of Ptolemy's meaning, when he makes the Adriatic extend along the entire coast of Western Greece to the southern extremity of the Peloponnesus. The *Mare Superum* of the Roman writers is represented on classical charts as coinciding with the *Sinus Hadriaticus*, which last is made to terminate near Hydruntum, the modern *Otranto*. By *Mare Superum*, however, in the strictest acceptation of the phrase, appears to have been meant not only the present Adriatic, but also the sea along the southern coast of Italy, as far as the Sicilian straits, which would make it correspond, therefore, very nearly, if not exactly, to the ὁ Ἀδρίας of the later Greek writers.

ADRUNETUM. *Vid.* Hadrumetum.

ADUATĒTUM, a city of Gaul, in the territory of the Tungri, who appear to have been the same with the *Aduatici* or *Aduatici* of Cæsar (*B. G.* 2, 29), unless the former appellation is to be regarded as a general one for the united German tribes, of whom the *Aduatici* formed a part. (Compare *Tacitus, de mor. Germ.* c. 2.) This city is called Ἀτουάκοντον by Ptolemy, and *Aduaca Tongrorum* in the *Itinerarium Anton* and *Tab. Peut.* At a later period it took the name of Tongri from the people themselves. Mannert makes it the same with the modern *Tongres*, and D'Anville with *Falais* on the *Mélaigne*. The former of these geographers, however, thinks that it must have been distinct from the *Aduatua Castellum* mentioned by Cæ-

sat (*B. G.* 6, 32), which he places nearer the Rhine. (*Mannert*, 2, 200.)

ΑΔΥΑΤΙCΙ or ΑΔΥΑΤΙCΙ, a German nation, who originally formed a part of the great invading army of the Teutones and Cimbri. They were left behind in Gaul, to guard a part of the baggage, and finally settled there. Their territory extended from the Scaldis, or *Scheld*, eastward as far as Mosæ Pons, or *Maastricht*. (*Mannert*, 2, 199.)

ΑΔΥΛΙC, called by Pliny (6, 29) Oppidum Adulitarum, the principal commercial city along the coast of Æthiopia. It was founded by fugitive slaves from Egypt, but fell subsequently under the power of the neighbouring kingdom of Auxume. Ptolemy writes the name Ἀδούλη, Strabo Ἀδουλεί, and Stephanus Byzantinus ἈδουλίC. Adulis has become remarkable on account of the two Greek inscriptions found in it. Cosmas Indicopleustes, as he is commonly called, was the first who gave an account of them (*l.* 2, p. 140, *apud Montfaucon*). One is on a kind of throne, or rather armchair, of white marble, the other on a tablet of touchstone (ἀπὸ βασιανίτου λίθου), erected behind the throne. Cosmas gives copies of both, and his MS. has also a drawing of the throne or chair itself. The inscription on the tablet relates to Ptolemy Energetes, and his conquests in Asia Minor, Thrace, and Upper Asia. It is imperfect, however, towards the end; although, if the account of Cosmas be correct, the part of the stone which was broken off was not large, and, consequently, but a small part of the inscription was lost. Cosmas and his coadjutor Menas believed that the other inscription, which was to be found on the throne or chair, would be the continuation of the former, and therefore give it as such. It was reserved for Salt and Buttman to prove, that the inscription on the tablet alone related to Ptolemy, and that the one on the throne or chair was of much more recent origin, probably as late as the second or third century, and made by some native prince in imitation of the former. One of the principal arguments by which they arrive at this conclusion is, that the inscription on the throne speaks of conquests in Æthiopia which none of the Ptolemies ever made. (*Museum der Alterthums-Wissenschaft*, vol. 2, p. 105, *seqq.*)

ΑΔΥΡΜΑΧΙΔÆ, a maritime people of Africa, near Egypt. Ptolemy (*lib.* 4, c. 5) calls them Adyrnachites, but Herodotus (4, 168), Pliny (5, 6), and Silius Italicus (3, 279), make the name to be Adyrmachidæ (Ἀδρυμαχίδαι). Hence, as Larcher observes (*Histoire d'Herodote*, vol. 8, p. 10, *Table Geogr.*), the text of Ptolemy ought to be corrected by these authorities. The Adyrmachidæ were driven into the interior of the country when the Greeks began to settle along the coast.

ÆΑ, the city of king Æetes, said to have been situated on the river Phasis in Colchis. The most probable opinion is, that it existed only in the imaginations of the poets. (*Mannert*, 4, 397.)

ÆÆCÆ, a tyrant of Samos, deprived of his tyranny by Aristagoras, B.C. 500. He fled to the Persians, and induced the Samians to abandon the other Ionians in the sea-fight with the Persians. He was restored by the Persians in the year B.C. 494. (*Herodotus*, 4, 138.)

ÆΑCΙΔΕC, I. a patronymic of the descendants of Æacus, such as Achilles, Peleus, Pyrrhus, &c. (*Virg. Æn.* 1, 99, &c.) The line of the Æacidæ is given as follows: Æacus became the father of Telamon and Peleus by his wife Endeis. (*Tzetzes, ad Lycophr. v.* 175, calls her Deis, ΔῆιC.) From the Nereid Psamathe was born to him Phocus (*Hesiod. Theog.* 1003, *seqq.*), whom he preferred to his other sons, and who became more conspicuous in gymnastic and naval exercises than either Telamon or Peleus. (*Müller, Æginet*, p. 22.) Phocus was, in consequence, slain by his brothers, who thereupon fled from the vengeance

of their father. (*Dorotheus, apud Plut. Parall.* 25, 277, *W.*—*Heyne, ad Apollod.* 12, 6, 6.) Telamon took refuge at the court of Cychreus of Salamis, Peleus retired to Phthia in Thessaly. (*Apollod. l. c.*—*Pherecyd. apud Tzetz. in Lycophr. v.* 175.) From Peleus came Achilles, from Telamon Ajax. Achilles was the father of Pyrrhus, from whom came the line of the kings of Epirus. From Teucer, the brother of Ajax, were descended the princes of Cyprus; while from Ajax himself came some of the most illustrious Athenian families. (*Müller, Æginet*, p. 23.)—II. The son of Arymbas, king of Epirus, succeeded to the throne on the death of his cousin Alexander, who was slain in Italy. (*Livy*, 28, 24.) Æacides married Phthia, the daughter of Menon of Pharsalus, by whom he had the celebrated Pyrrhus, and two daughters, Deidamea and Troias. In B.C. 317, he assisted Polysperchon in restoring Olympias and the young Alexander, who was then only five years old, to Macedonia. In the following year he marched to the assistance of Olympias, who was hard pressed by Cassander. But the Epirotes disliked the service, rose against Æacides, and drove him from his kingdom. Pyrrhus, who was then only two years old, was with difficulty saved from destruction by some faithful servants. But, becoming tired of the Macedonian rule, the Epirotes recalled Æacides in B.C. 313. Cassander immediately sent an army against him under Philip, who conquered him the same year in two battles, in the last of which he was killed. (*Pausan.* 1, 11.)

ÆÆCUC. *Virg. Supplement.*

ÆÆΑ, a name given to Circe, because born at Æa. (*Virg. Æn.* 3, 386.)

ÆΑΝΤΕΥΜ, a small settlement on the coast of Troas, near the promontory of Rhæteum. It was founded by the Rhodians, and was remarkable for containing the tomb of Ajax, and a temple dedicated to his memory. The old statue of the hero was carried away by Antony to Egypt, but was restored by Augustus. (*Strabo*, 595.) In Pliny's time this place had ceased to exist, as may be inferred from his expression, "*Fuit et Æanteum*" (5, 30). Mannert asserts, that Lechevalier is wrong, in placing the mound of Ajax on the summit of the hill by *Intepe*.

ÆΑΝΤΙΝΕC, I. one of the *Tragic Pleiades*. (*Virg. Alexandrina Schola*.) He lived in the time of the second Ptolemy.—II. The tyrant of Lampsacus, to whom Hippias gave his daughter Archedice.

ÆΑC, a river of Epirus, thought to be the modern *Vajussa*, falling into the Ionian Sea. Isaac Vossius, in his commentary on Pomponius Mela (2, 3, *extr.*), charges Ovid with an error in geography, in making this river fall into the Peneus (*Met.* 1, 577). But Vossius was wrong himself in making the verb *conueniunt*, as used by Ovid, in the passage in question, equivalent to *ingrediuntur*. Ovid only means that the deities of the river mentioned by him met together in the cave of the Peneus.

ÆΕΝΕΙC, a town of Eubœa in the district Histæotis, famed for its hot baths, which even at the present day are the most celebrated in Greece. The modern name of the place is *Dipso*. But, according to Sibthorpe (*Walpole's Coll.*, vol. 2, p. 71), *Lipso*. In Plutarch (*Sympos.* 4, 4), this place is called Galepsus (Γάληψος), which many regard as an error of the copyists. If the modern name as given by Sibthorpe be correct, it appears more likely that *Lipso* is a corruption of Galepsus, and that the latter was only another name for the place, and no error.

ÆΕDÆC. *Virg. Supplement.*

ÆΕDÆCUC, a Cappadocian, called a Platonic, or perhaps, more correctly, an Eclectic philosopher, who lived in the 4th century, and was the friend and most distinguished scholar of Iamblichus. After the death of his master, the school of Syria was dispersed, and Æedesius, fearing the real or fancied hostility of the

Christian emperor Constantine to philosophy, took refuge in divination. An oracle in hexameter verse rescued a pastoral life as his only retreat; but his disciples, perhaps calming his fears by a metaphorical interpretation, compelled him to resume his instructions. He settled at Pergamus, where he numbered among his pupils the Emperor Julian. After the accession of the latter to the imperial purple, he invited Ædesius to continue his instructions, but the latter, being unequal to the task through age, sent in his stead Chrysanthus and Eusebius, his disciples. (*Eunap. Vit. Ædes.*)

ÆDESSA. *Vid.* Edessa.

ÆDON. *Vid.* Philomela.

ÆDŪI, a powerful nation of Gaul. Their confederation embraced all the tract of country comprehended between the *Allier*, the middle *Loire*, and the *Saône*, and extending a little beyond this river towards the south. The proper capital was Bibracte, and the second city in importance Noviodunum. The political influence of the Ædui extended over the Mandubæ or Mandubii, whose chief city Alesia traced its origin to the most ancient periods of Gaul, and passed for a work of the Tyrian Hercules. (*Diod. Sic. 4, 19.*) This same influence reached also the Ambarri, the Insubres, and the Segusiani. The Bituriges themselves, who had been previously one of the most flourishing nations of Gaul, were held by the Ædui in a condition approaching that of subjects. (*Thierry, Histoire des Gaulois*, 2, 31.) When Cæsar came into Gaul, he found that the Ædui, after having long contended with the Arverni and Sequani for the supremacy in Gaul, had been overcome by the two latter, who called in Ariovistus and the Germans to their aid. The arrival of the Roman commander soon changed the aspect of affairs, and the Ædui were restored by the Roman arms to the chief power in the country. They became, of course, valuable allies for Cæsar in his Gallic conquests. Eventually, however, they embraced the party of Vercingetorix against Rome; but, when the insurrection was quelled, they were still favourably treated on account of their former services. (*Cæs. B. G. 1, 31, seqq.*)

ÆËTA, or ÆËTES, king of Colchis, son of Sol, and Perseus, the daughter of Oceanus, was father of Medea, Absyrtus, and Chalciope, by Idyia, one of the Oceanides. He killed Phryxus, son of Athamas, who had fled to his court on a golden ram. This murder he committed to obtain the fleece of the golden ram. The Argonauts came against Colchis, and recovered the golden fleece by means of Medea, though it was guarded by bulls that breathed fire, and by a venomous dragon. (*Vid.* Jason, Medea, and Phryxus.) He was afterward, according to Apollodorus, deprived of his kingdom by his brother Perses, but was restored to it by Medea, who had returned from Greece to Colchis. (*Apollod. 1, 9, 28.—Heyne, ad Apollod. l. c.—Or. Met. 7, 11, seqq., &c.*)

ÆËTIAS, ÆËTIS, and ÆËTINE, patronymic forms from ÆËTES, used by Roman poets to designate his daughter Medea. (*Orid. Met. 7, 9, 296.*)

ÆGA. *Vid.* Supplement.

ÆGÆ, I. a small town on the western coast of Eubœa, southeast of Ædepsus. It contained a temple sacred to Neptune, and was supposed to have given name to the Ægean. (*Strab. 386.*)—II. A city of Macedonia, the same with Edessa.—III. A town of Achaia, near the mouth of the Crathis. It appears to have been abandoned eventually by its inhabitants, who retired to Ægira. The cause of their removal is not known. (*Strabo, 386.*)—IV. A town and seaport of Cilicia Campestris, at the mouth of the Pyramus, and on the upper shore of the Sinus Issicus. The modern village of *Ayas* occupies its site. (*Strab. 676.—Plin. 5, 27.—Lucan, 3, 225*)

ÆGÆA, I. a city of Mauritania Cæsariensis. (*Ptol.*)—II. A surname of Venus, from her worship in the

islands of the Ægean Sea. (*Statius, Thebais*, 8, 4, 7, 8.)

ÆΓÆON, I. one of the fifty sons of Lycaon, whom Jupiter slew. (*Apollod. 3, 8, 1.*)—II. A giant, son of Uranus by Gæa. (*Vid.* Supplement.)

ÆGÆUM MARE, that part of the Mediterranean lying between Greece and Asia Minor. It is now called the *Archipelago*, which modern appellation appears to be a corruption of *Ægio Pelago*, itself a modern Greek form for *Αἰγαῖον πῆλαγος*. Various etymologies are given for the ancient name. The most common is that which deduces it from Ægeus, father of Theseus; the most plausible is that which derives it from Ægæ in Eubœa. (*Strab. 386.*) In all probability, however, neither is correct. The Ægean was accounted particularly stormy and dangerous to navigators, whence the proverb *τὸν Αἰγαῖον πῆλιν (scil. κόλπων)*. (*Erasm. Chil. Col. 632.*)

ÆGÆUS, a surname of Neptune, given him as an appellation to denote the god of the waves. Compare *Müller, Geschichte*, &c. (*Die Dörer*), vol. 2, p. 238, *in notis*.

ÆΓΑΛΕΟΣ, a mountain of Attica, from the summit of which Xerxes beheld the battle of Salamis. (*Herod. 8, 90.*) According to Thucydides (2, 19), it was situate to the left of the road from Athens to Eleusis. Mount Ægaleos seems indeed to be a continuation of Corydallus, stretching northward into the interior of Attica. The modern name is *Skaramanga*. (*Cramer's Greece*, 2, 355.)

ÆΓΑΤΕS, or ÆGUSÆ, three islands off the western extremity of Sicily, between Drepana and Lilybæum. The name Ægusa (*Αἰγούσα*) properly belonged to but one of the number. As this, however, was the principal and most fertile one (now *Farigiana*), the appellation became a common one for all three. The Romans corrupted the name into Ægades. (*Mela*, 2, 7.—*Florus*, 2, 2.) Livy, however (21, 10, &c.), uses the form Ægates. The northernmost of these islands is called by Ptolemy Phorbantia (*Φορβαντία*), i. e., the pasture-island, which the Latin writers translate by Bucina, i. e., Oxen-island, it being probably uninhabited, and used only for pasturing cattle. This island is very rocky, and bears in modern times the name of *Leranco*. The third and westernmost island was called Hiera (*Ἱερά*), which Pliny converts into Hieronesus, i. e., Sacred island. At a later period, however, the Romans changed the name into Maritima, as it lay the farthest out to sea. Under this appellation the *Ilin. Marit.* (p. 492) makes mention of it, but errs in giving the distance from Lilybæum as 300 stadia, a computation which is much too large. The modern name is *Maritimo*. Off these islands the Roman fleet, under Lutatius Catulus, obtained a decisive victory over that of the Carthaginians, and which put an end to the first Punic war. (*Liv. 21, 10.—Id. ibid. 41.—Id. 22, 54.*)

ÆGESTA, an ancient city of Sicily, in the western extremity of the island, near Mount Eryx. The Greek writers name it, at one time Ægesta (*Ἀἰγέστα*), at another Egesta (*Εὔεστα*). The cause of this slight variation would seem to have been, that the city was one not of Greek origin, and that the name was written from hearing it pronounced. In a later age, when the inhabitants attached themselves to the Roman power, they called their city *Sgesta*, and themselves *Sgestani*, according to Festus (s. v. *Sgesta*), who states, that the alteration was made to obviate an improper ambiguity in the term. (*Præposita est ei S. litera ne obsceno nomine appellaretur.*) It is more probable, however, that the Romans caused it to be done on account of the ill-omened analogy in sound between Ægesta or Egesta, and the Latin term *egestas*, "want." Thucydides (6, 2) states, that after the destruction of Troy, a body of the fugitives found their way to this quarter, and, uniting with the Sicani, whom they

found settled here, formed with them one people, under the name of Elymi. In the course of time their numbers were still further increased by the junction of some wandering Achæi. This seems to have been the generally-received idea among the Greeks, respecting the origin of the Elymi and Ægestæi. Its improbability, however, is apparent even at first view. When the Romans became masters of these parts, after the first Punic war, they readily adopted the current tradition respecting the people of Ægesta, as well as the idea of an affinity, through the line of Æneas, between themselves and the latter, and the legend is interwoven also with the subject of the Æneid (5, 36, *seqq.*—*Vid.* Ægestes). From the circumstance of the Romans having recognised the affinity of the Ægestæans to themselves, we find them styled, in the Duilian inscription, “the kinsmen of the Roman people.” COC-NATI P. R. (*Cicconius, de Col. Rostr. Duil., Lugd. Bat.* 1597.) Cicero, too (*in Verrem* 4, 33), adopts the current tradition of the day. Whatever our opinion may be relative to the various details of these legends, one thing at least very clearly appears, which is, that Ægesta was not of Grecian origin. Thucydides (7, 58), in enumerating the allies of Syracuse, speaks of the people of Himera as forming the only Grecian settlement on the northern coast of Sicily; and in another part (7, 57), expressly classes the Ægestæans among Barbarians (*Βαρβάρων Ἑγεσταιῶν*). The origin of Ægesta, therefore, may fairly be ascribed to a branch of the Pelasgic race, the Trojans themselves being of the same stock. (*Vid.* Æneas.) Previous to the arrival of the Romans in Sicily, the Ægestæans were engaged in a long contest with the inhabitants of Selinus. Finding themselves, however, the weaker party, they solicited and obtained the aid of Athens. The unfortunate issue of the Athenian expedition against Syracuse, compelled the Ægestæans to look for new allies in the Carthaginians. These came to their aid, and Selinus fell; but Ægesta also shared its fate, and the city remained under this new control, until, for the purpose of regaining its freedom, it espoused the cause of Agathocles. The change, however, was for the worse; and the tyrant, offended at their unwillingness to contribute supplies, murdered a part of the inhabitants, drove the rest into exile, and changed the name of the city to Διοκρόπολις, settling in it at the same time a body of deserters that had come over to him. (*Polyb.* 20, 71.) The death of Agathocles very probably restored the old name, and brought back the surviving part of the former inhabitants, since we find the appellation Ægesta reappearing in the first Punic war (*Polyb.* 1, 24), and since the Ægestæans, during that same conflict, after slaughtering a Carthaginian garrison which had been placed within their walls, were able to declare themselves the kinsmen of the Roman people. (*Zonaras*, 8, 4.) It was this pretended affinity between the two communities that preserved Ægesta from oblivion after it had fallen beneath the Roman sway, and we find Pliny (3, 8) naming the inhabitants among the number of those who enjoyed the *jus Latinum*. The ruins of the place are found, at the present day, near the modern *Alcamo*. (*Mannert*, 9, 2, 393, *seqq.*—*Hoare's Classical Tour*, 2, 61.)

ÆGESTES, Ægestus, or, as Virgil writes it, Acestes, a son of the river-god Crimissus, by a Trojan mother, according to one account, while another makes both his parents to have been of Trojan origin. Laomedon, it seems, had given the daughters of a distinguished person among his subjects to certain Sicilian mariners, to carry away and expose to wild beasts. They were brought to Sicily, where the god of the Crimissus united himself to one of them, and became father of Ægestes. This is the first account just alluded to. The other one is as follows: A young Trojan, of noble birth, being enamoured of one of the three females

already mentioned, accompanied them to Sicily, and there became united to the object of his affection. The offspring of this union was Ægestes. (*Dion. Hal.* 1, 52.) Both accounts, of course, are purely fabulous. In accordance, however, with the popular legend respecting him, Virgil makes Ægestes, whom he calls, as already stated, Acestes, to have given Æneas a hospitable reception, when the latter, as the poet fables, visited Sicily in the course of his wanderings. (*Vid.* Ægesta.)

ÆGEUS, I, a king of Athens, son of Pandion. His legitimacy, however, was disputed; and when, after the death of Pandion, he entered Attica at the head of an army, and recovered his patrimony, he was still the object of jealousy to his three brothers, although he shared his newly-acquired power with them. As he was long childless, they began to cast a wishful eye towards his inheritance. But a mysterious oracle brought him to Træzene, where fate had decreed that the future hero of Athens should be born. Æthra, the daughter of the sage King Pittheus, son of Pelops, was his mother, but the Træzenian legend called Neptune, not Ægeus, his father. Ægeus, however, returned to Athens, with the hope that, in the course of years, he should be followed by a legitimate heir. At parting he showed Æthra a huge mass of rock, under which he had hidden a sword and a pair of sandals: when her child, if a boy, should be able to lift the stone, he was to repair to Athens with the tokens it concealed, and to claim Ægeus as his father. From this deposite, Æthra gave her son the name of Theseus (*Θησεύς*, from *θεῖω*, *θήσω*, to deposite or place). When Theseus had grown up and been acknowledged by his father (*vid.* Theseus), he freed the latter from the cruel tribute imposed by Minos (*vid.* Minotaurus); but, on his return from Crete, forgot to hoist the white sails, the preconcerted signal of success, and Ægeus, thinking his son had perished, threw himself from a high rock into the sea. (*Apollod.* 3, 15, 5, *seqq.*—*Plut. Vit. These.*, &c.) The whole narrative respecting Ægeus is a figurative legend. He is the same as Neptune; his name *Αἰγείος*, indicating “the god of the waves,” from *αἶψα*, the waves of the sea, and hence the Træzenian legend makes Neptune at once to have been the father of Theseus. Theseus himself, moreover, appears to be nothing more than a mythic personage. He is merely the type of the establishment of the worship of Neptune (*Θησεύς*, from *θεῖω*, *θήσω*, to place or establish). Even his mother's name, Æthra, would seem to allude figuratively to the pure, clear atmosphere of religious worship connected with the rites of Neptune, when firmly established. (*Αἶθρα*, i. e., *αἶθρα*, pure, clear air.) So, also, the contest between Theseus and the Pallantides (*vid.* Pallantides), would seem to be nothing more than a religious contest between the rival systems of Neptune and Minerva. The worship of Neptune prevailed originally in the Ionian cities (*Müller, Dorians*, 1, 266), and the legend of Theseus is an Ionian one; whereas the worship of Minerva, at Athens, dates back to the time of Cecrops.—II. An eponymic hero at Sparta, son of Æolicus. (*Vid.* Supplement.)

ÆGIALÆA, I. according to the common account, a daughter of Adrastus, but more probably the daughter of his son Ægealeus. (*Heyne, ad Apollod.* 1, 86.) She was the wife of Diomedes, and is said to have been guilty of the grossest incontinence during her husband's absence in the Trojan war. (*Apollod.* l. c.—*Or. Ib.* 350, &c.) The beautiful passage in the *Iliad*, however (5, 412, *seqq.*), where mention is made of her, strongly countenances the idea that the story of her improper conduct is a mere posthomeric or cyclic fable.—II. An island of the Ægean, between Cythera and Crete, now *Cerigo*. Biondelmonti (*Ins. Arch.* 10, 65) calls it *Sichilus* or *Sequibus*, a corruption, probably, from the modern Greek *εἰς Αἰγυλίαν*. (*De*

Sinner, *ad loc.*)—III. The earliest name for the country along the northern shore of the Peloponnesus. (*Vid.* *Archaia*, III.)

ÆGIALEUS, son of Adrastus, by Amphithea, daughter of Pronax, and a member of the expedition led by the Epigoni against Thebes. He was the only leader slain in this war, as his father had been the only one that survived the previous contest. (*Vid.* *Epigoni*.) Compare the scholiast, *ad Pind. Pyth.* 8, 68.

ÆGIDES, a patronymic of Theseus. (*Homer, Il.* 1, 265.)

ÆGILA, a town in Laconia, where Ceres had a temple. Aristomenes, the Messenian leader, endeavoured on one occasion to seize a party of Laconian females who were celebrating here the rites of the goddess. The attempt failed, through the courageous resistance of the women, and Aristomenes himself was taken prisoner. He was released, however, the same night, by Archidamea, the priestess of Ceres, who had before this cherished an affection for him. She pretended that he had burned off his bonds, by moving himself up towards the fire, and remaining near enough to have them consumed. (*Paus.* 4, 17.)

ÆGIMIUS, a king of the Dorians, reigning at the time in Thessaly, near the range of Pindus. (*Heyne, ad Apollod.* 2, 7, 7.) He aided Hercules, according to the Doric legend, in his contest with the Lapithæ, and received, as a reward, the territory from which they were driven. (*Apollod. l. c.*) Ægimius is a conspicuous name among the founders of the Doric line, and mention is made by the ancient writers of an epic poem, entitled *Αἰγιμῶς*, which is ascribed by some to Hesiod, by others to Cæcrops the Milesian. (*Heyne, l. c.*) The posterity of Ægimius formed part of the expedition against the Peloponnesus, and the Doric institutions of Ægimius are spoken of by Pindar (*Pyth.* 1, 124), as forming the rule or model of government for the Doric race. (Compare Müller, *Dorians*, vol. 2, p. 12.)

ÆGIMURUS, a small island in the Gulf of Carthage. There were two rocks near this island, called *Ara Ægimuri*, which were so named, because the Romans and Carthaginians concluded a treaty on them. The modern *Zouamoor* is the Ægimurus of antiquity.

ÆGIMUS. *Vid.* Supplement.

ÆGINA, I, a daughter of the river Asopus, carried away by Jupiter, under the form of an eagle, from Phlius to the island of Enone. (Compare *Spanheim, ad Callim. Hymn. in Del.* v. 77.—*Heyne, ad Apollod.* 3, 12, 6.—*Sturz, ad Hellanic.* p. 50.—*Id.* *ad Pherecyd.* p. 178.) She gave her name to the island. Some authorities make Jupiter to have assumed, on this occasion, the appearance of a flame of fire; but this evidently is corrupted from another part of the same fable, which states that Asopus was struck with thunder by the god for presuming to pursue him. (*Apollod.* 3, 12, 6.) The Asopus here alluded to, is the Sicyonian stream which flowed by the walls of Phlius. It must not be confounded with the Boeotian river of the same name. (Compare *Pindar, Nem.* 9, 9.—*Aristarch. ad N.* 3, 1.—*Pausan.* 2, 5, 2.)—II. An island in the Sinus Saronicus, near the coast of Argolis. The earliest accounts given by the Greeks make it to have been originally uninhabited, and to have been called, while in this state, by the name of Enone; for such is evidently the meaning of the fable, which states, that Jupiter, in order to gratify Æacus, who was alone there, changed a swarm of ants into men, and thus peopled the island. (*Vid.* *Æacus*, *Myrmidones*, and compare *Pausan.* 2, 29, and *Apollod.* 3, 12, 7.) It afterward took the name of Ægina, from the daughter of the Asopus. (*Vid.* *Ægina*, I.) But, whoever may have been the earliest settlers on the island, it is evident that its stony and unproductive soil must have driven them at an early period to engage in maritime affairs. Hence they are said to have been the first who coined

money for the purposes of commerce, and used regular measures, a tradition which, though no doubt untrue, still points very clearly to their early commercial habits. (*Strabo*, 375.—*Ælian, Var. Hist.* 12, 10.—*Vid.* *Phidon*.) It is more than probable, that their commercial relations caused the people of Ægina to be increased by colonies from abroad, and Strabo expressly mentions Cretans among the foreign inhabitants who had settled there. After the return of the Heracleidæ, this island received a Dorian colony from Epidaurus (*Pausan.* 2, 29.—*Tzetz. ad Lac.* 176), and from this period the Dorians gradually gained the ascendancy in it, until at last it became entirely Doric, both in language and form of government. Ægina, for a time, was the maritime rival of Athens, and the competition eventually terminated in open hostilities, in which the Athenians were only able to obtain advantages by the aid of the Corinthians, and by means of intestine divisions among their opponents. (*Herod.* 8, 46, and 5, 83.) When Darius sent deputies into Greece to demand earth and water, the people of Ægina, partly from hatred towards the Athenians, and partly from a wish to protect their extensive commerce along the coasts of the Persian monarchy, gave these tokens of submission. (*Herod.* 6, 49.) For this conduct they were punished by the Spartans. In the war with Xerxes, therefore, they sided with their countrymen, and acted so brave a part in the battle of Salamis as to be able to contest the prize of valour with the Athenians themselves, and to bear it off, as well by the universal suffrages of the confederate Greeks (*Herod.* 8, 93), as by the declaration of the Pythian oracle. (*Id. ibid.* 122; compare *Plut. Vit. Themist.*) After the termination of the Persian war, however, the strength of Athens proved too great for them. Their fleet of seventy sail was annihilated in a sea-fight by Pericles, and many of the inhabitants were driven from the island, while the remainder were reduced to the condition of tributaries. The fugitives settled at Thyrea in Cynuria, under the protection of Sparta (*Thucyd.* 1, 105, and 108.—*Id.* 2, 27.—*Id.* 4, 57), and it was not until after the battle of Ægos Potamos, and the fall of Athens, that they were able to regain possession of their native island. (*Xen. Hist. Gr.* 2, 5.—*Strabo*, 8, p. 376.) They never attained, however, to their former prosperity. The situation of Ægina made it subsequently a prize for each succeeding conqueror, until at last it totally disappeared from history. In modern times the island nearly retains its ancient name, being called *Egina*, or with a slight corruption *Engia*, and is represented by travellers as being beautiful, fertile, and well cultivated. As far back as the time of Pausanias, the ancient city would appear to have been in ruins. That writer makes mention of some temples that were standing, and of the large theatre built after the model of that in Epidaurus. The most remarkable remnant of antiquity which this island can boast of at the present day, is the temple of Jupiter Panhellenius, situated on a mount of the same name, about four hours' distance from the port, and which is supposed to be one of the most ancient temples in Greece, and one of the oldest specimens of the Doric style of architecture. Mr. Dodwell pronounces it the most picturesque and interesting ruin in Greece. For a full account of the Ægina marbles, consult *Quarterly Journal of Sciences*, No. 12, p. 327, *seqq.*, and No. 14, p. 229, *seqq.*

ÆGINETA PAULUS, I, or Paul of Ægina, a celebrated Greek physician, born in the island of Ægina. He appears to have lived, not in the fourth century, as René Moreau and Daniel Leclerc (Clericus) have asserted, but in the time of the conquests of the Calif Omar, and, consequently, in the seventh century. We have very few particulars of his life handed down to us. We know merely that he pursued his medical studies at Alexandria some time before the taking of

this city by Amrou, and that, for the purpose of adding to his stock of professional knowledge, he travelled not only through all Greece, but likewise in other countries. Paul of Ægina closes the list of the classic Greek physicians, for after him the healing art fell, like so many others, into neglect and barbarism, and did not regain any portion of its former honours until towards the twelfth century. As Paul made himself very able in surgery, and displayed great skill also in accouchements, the Arabians testified their esteem for him by styling him the accoucheur. Though he cannot be regarded as altogether original, since he abridged Galen, and obtained many materials from Aëtius and Oribasius, yet he frequently lays down opinions of his own, differing from those of Galen, and more than once has the courage to refute the positions of Hippocrates. His descriptions of maladies are short and succinct, but exact and complete. He frequently assumes, as the basis of his explanations, the Galenian theory of the cardinal humours. It is in surgery particularly that Paul of Ægina appears to advantage, not only because he had acquired more experience than any other Greek physician in this branch of his art, but also because he does not servilely copy his predecessors. In this respect some authors place him by the side of Celsus, and on certain points even give him the preference. One of the most curious chapters in that part of his writings which relates to surgery, is the one which treats of the various kinds of arrows used among the ancients, and of the wounds inflicted by them. The work of this physician, which has come down to us, is entitled *An Abridgment of All Medicine*, and consists of seven books, compiled from the writings of the more ancient physicians, with his own observations subjoined. It has passed through many editions, of which the following are the principal ones. The Greek text merely, *Venet. ap. Ald.*, 1528, and *Basil.*, 1538, *fol.* This latter edition is much superior to the former, as it was corrected by Gemusius, and contains his learned annotations. Latin editions: *Basil.*, 1532 and 1546, *fol.*: *Col. Agr.*, 1534 and 1548, *fol.*: *Paris.*, 1532, *fol.*: *Venet.*, 1553 and 1554, 8vo: *Lugd.*, 1562 and 1567, 8vo. This last is the best of the Latin editions, since it contains the notes and commentaries of Gonthier, D'Andernach, Cornarius, J. Goupil, and Dalechamp. An Arabic edition was published also by Honain, a celebrated Syrian physician. Parts of the work have also been printed separately at various times, and particularly the first book, under the title of *Præcepta Salubria* (*Paris*, 1510, *ap. Henr. Steph.*, 4to.—*Argent.*, 1511, 4to, &c.). A French translation of the surgical writings of Paul of Ægina was given in 1539, from the Lyons press, in 12mo, by Pierre Tolet. The excellent version, however, by *F. Adams, Esq.*, of Baughory-Ternan, Aberdeen, will supersede all others. Only one volume has thus far been published. (*Boegr. Univ.*, vol. 33, p. 186, *seqq.*—*Schöll, Hist. Litt. Gr.*, vol. 7, p. 256.)—II. A modeller of Ægina, adverted to by Pliny (35, 11). There is some doubt whether *Ægineta* was his own name, or merely an epithet designating the place of his birth. The former is the more probable opinion, and is advocated by Müller (*Ægin.* 107.—*Sillig, Dict. Art. s. v.*).

ÆGIOTENUS, or "Ægis bearer" (from *aiγίς* and *ἔχω*), a poetical appellation of Jove. (*Vid.* Ægis.)

ÆGIPAN, a poetical appellation of Pan, either from his having the legs of a goat, or as the guardian of goats. Plutarch (*Parall.*, p. 311) makes it analogous to the Latin *Silvanus*.

ÆGIRA, a city of Achaia, near the coast of the Sinus Corinthiacus, and to the northwest of Pellene. It was a place of some importance, and the population is supposed to have been from 8 to 10,000. Polybius (4, 57) makes the distance from the sea seven stadia; Pausanias, however (7, 26), removes the harbour twelve stadia from the city. There is no contradic-

tion in this, as the harbour lay, not directly north, but northeast from the city. In the middle ages, Ægira took the name of *Vostitza*. (*Georg. Phranza*, 2, 9.) It is now *Vostica*, a deserted place to the east of *Vostitza*, the ancient Ægium. (*Mamert, Geogr.*, vol. 8, p. 396.)

ÆGIS, the shield of Jupiter, made for him by Vulcan (*Il.* 15, 310), and borne also by Apollo (*Il.* 15, 229) and Minerva (5, 738). It inspired terror and dismay, and, by its movements, darkness, clouds, thunder and lightning were collected. (*Il.* 17, 594.) Hence, in later poets, it has also the meaning of a storm or hurricane. (*Æsch. Choëph.* 584.—*Eurip. Ion*, 996.) According to some, Minerva had an ægis of her own, distinct from Jupiter's, and she placed in the centre of it the head of Medusa; but the Gorgon's head appears also on Jupiter's shield. (*Eustath. ad Il.* 5, 741.—*Heyne, ad Apollod.* 2, 43.) As Minerva typifies the mind or wisdom of Jove, there is a peculiar propriety in her wielding the same ægis with her great parent.—The etymology of the term *aiγίς* is disputed. The common derivation makes it come from *aiξ*, *aiγός*, "a goat," and to have been so named from its being covered with the skin of the goat that had suckled the infant Jove. This derivation, however, appears to be based entirely on an accidental resemblance between *aiγίς* and *aiξ*, *aiγός*, and is evidently the invention of later writers and fabulists. The true etymology is from *αἰσσω*, *αἰζω*, "to move rapidly," "to rush," "to arouse," &c., and comports far better with the idea of brandishing to and fro a terror-inspiring shield.—The meaning of a coat of mail, or, rather, leathern tunic, with or without plates of metal, belongs to another *aiγίς*, which is correctly deduced from *aiξ*. (Compare *Herod.* 4, 189.)

ÆGISTHUS, son of Thyestes by his own daughter Pelopea. (*Vid.* Atreus.) Having been left guardian of Agamemnon's kingdom when that monarch sailed for Troy, he availed himself of his absence to gain the affections of Clytemnestra his queen, and, when Agamemnon returned from the war, caused him to be slain. (*Vid.* Agamemnon and Clytemnestra.) On the death of the monarch he usurped the throne, and reigned seven years, when he was slain, together with Clytemnestra, by Orestes, the son of Agamemnon. (*Vid.* Orestes.—*Hygin. fab.* 87, *seq.*—*Paus.* 2, 16.—*Soph. Electr.*—*Æsch. Agam.*—*Eurip. Orest.*, &c.)

ÆGIÏUM, a town of Ætolia, northeast of Naupactus, and about eighty stadia from the sea. It occupied an elevated situation in a mountainous tract of country. (*Thucyd.* 3, 97.) Ægiëum is perhaps *Ægæ* (*Αἰγᾶ*), which Stephanus Byzantinus places in Ætolia.

ÆGIUM, a city of Achaia, on the coast of the Sinus Corinthiacus, and northwest of Ægira. After the submersion of Helice it became the chief place in the country, and here the deputies from the states of Achaia long held their assemblies, until a law was made by Philopœmen, ordaining that each of the federal cities should become in its turn the place of rendezvous. (*Liv.* 38, 7, and 30.—Compare *Polybius*, 2, 54, and 4, 7.) According to Strabo (385, 387), these meetings were convened near the town, in a spot called Ænarium, where was a grove consecrated to Jupiter. Pausanias (7, 24) affirms, that in his time the Achæans still collected together at Ægium, as the Amphictyons did at Delphi and Thermopylæ. According to Strabo, Ægium derived its name from the goat (*aiξ*) which was said to have nourished Jupiter here. The modern town of *Vostitza* lies in the immediate neighbourhood.

ÆGLE. *Vid.* Supplement.

ÆGLEIS. *Vid.* Supplement.

ÆGLES, a Samian wrestler, born dumb. Seeing some unlawful measures pursued in a contest, which would deprive him of the prize, his indignation gave him on a sudden the powers of utterance which had

been denied him from his birth, and he ever after spoke with ease. (*Val. Max.* 1, 8, 4.—*Aul. Gell.* 5, 9.)

ÆGLÈTES, a surname of Apollo as the god of day. (*Αἰγλήτης*, from *αἰγλήη*, "brightness.") In the legend given by Apollodorus (1, 9, 26) respecting the island of Anaphe, the epithet Ægletes appears to point to Apollo as the darter of the lightning also (*Apollo Fulgurator*). Compare Heyne, *ad Apollod.* 1, 9, 26, *not. crit.*

ÆGOLŪS, an appellation given to Bacchus at Potniæ in Boeotia, because he had substituted a goat in the place of a youth, who was annually sacrificed there. (*αἶξ*, and *βύλλω*.) Compare Pausanias 9, 8, where Kuhn, however, proposes *Αἰγολόρον* for *Αἰγολόλου*.—By Ægobolium, on the other hand, is meant a species of mystic purification. The catechumen was placed in a pit, covered with perforated boards, upon which a goat was sacrificed, so as to bathe him in the blood that flowed from it. Sometimes, for a goat, a bull or ram was substituted, and the ceremony was then called, in the first case, *Taurobolium*, in the second *Criobolium*. (*Knight, Inquiry*, &c., § 168.)

ÆGOS POTAMOS, i. e., the goat's river, called also Ægos Potamoi, and by the Latin writers Ægos Flumen, a small river in the Thracian Chersonese, and south of Callipolis, which apparently gave its name to a town or port situate at its mouth. (*Herod.* 9, 119.—*Steph. Byz.* s. v. *Αἰγὸς Ποταμοί*.) Manner thinks, that the town just mentioned was the same with that called Cressa by Scylax (p. 28), and Cissa by Pliny (4, 9). But consult *Gail, ad Scyl.* l. c. as regards the meaning of the phrase *ἐν τῷ Αἰγὸς ποταμῷ*, employed by Scylax. (*Geogr. Gr. Min.* 1, 439, *ed. Gail*.) At Ægos Potamos the Athenian fleet was totally defeated by the Spartan admiral Lysander, an event which completely destroyed the power of the former state, and finally led to the capture of Athens. (*Xen. Hist. Gr.* 2, 19.—*Diod. Sic.* 13, 105.—*Plut. Vit. Alcib.*—*Corn. Nep. Vit. Alcib.*) The village of Galata probably stands on the site of the town or harbour. (*Cramer's Ancient Greece*, vol. 1, p. 330.)

ÆGOSIÆ, a Gallic nation, who served in the army of Attalus on one of his expeditions. He afterward assigned them a settlement along the Hellespont. (*Polyb.* 5, 77, *seq.*) Casaubon, in his Latin version of Polybius, has "*Ægosages (sive ii sunt Tectosages)*." Schweighæuser, misled by this conjecture, introduces *Τεκτοσάγας* into the Greek text of the historian in place of *Αἰγόσαγας*, the common reading. In his annotations, however, he acknowledges his precipitancy. Compare the Historical and Geographical index to his edition of Polybius (vol. 8, pt. i., p. 198), in which he conjectures that *Τρυόσαγες*, which occurs in another passage of Polybius (5, 53), ought to be written *Αἰγόσαγες* also.

ÆGYS, a town of Laconia, on the borders of Arcadia, and contiguous to Belmina. (*Polyb.* 2, 54.)

ÆGYPTUS, or more correctly Ægyssus, a city of Mesia Inferior, in the region called Parva Scythia, and situate on the bank of the Danube, not far above its mouth. It is mentioned by Ovid (*Ep. ex Pont.* 1, 8, 13). Near this place, according to D'Anville, Darius Hystaspis constructed his bridge over the Danube, in his expedition against the Scythians. (As regards the true reading, consult *Cellarius, Geogr.* 2, 468.)

ÆGYPTI, the inhabitants of Egypt. *Vid. Egyptus.*

ÆGYPTIUM MARE, that part of the Mediterranean Sea which is on the coast of Egypt.

ÆGYPTUS, I. a son of Belus, and brother of Danaus. He received from his parent the country of Arabia to rule over; but subsequently conquered the land of "the black-footed race" (*Μελαμπόδων*), and gave it his name. Ægyptus was the father of 50 sons, and Danaus, to whom Libya had been assigned, of 50 daughters. Jealousy breaking out between Danaus and the sons of Ægyptus, who aimed at depriving him

of his dominions, the former fled with his 50 daughters, and settled eventually in Argolis. The sons of Ægyptus came, after some interval of time, to Argos, and entreated their uncle to bury in oblivion all enmity, and to give them their cousins in marriage. Danaus, retaining a perfect recollection of the injuries they had done him, and distrusting their promises, consented to bestow his daughters upon them, and divided them accordingly by lot among the suitors. But on the wedding day he armed the hands of the brides with daggers, and enjoined upon them to slay in the night their unsuspecting bridegrooms. All but Hypermetra obeyed the cruel order, while she, relenting, spared her husband Lynceus. Her father at first put her in close confinement, but afterward forgave her, and consented to her union with Lynceus. (*Vid. Danaus, Danaides*, &c.—*Apollod.* 2, 1, 5, *seqq.*—*Hygin. fab.* 168, 170.—*Öv. Heroid.* 14, &c.)—II. An extensive country of Africa, bounded on the west by part of Marmarica and by the deserts of Libya, on the north by the Mediterranean, on the east by the Sinus Arabicus and a line drawn from Arsinoë to Rhinocolura, and on the south by Æthiopia. Egypt, properly so called, may be described as consisting of the long and narrow valley which follows the course of the Nile from Syene (or Assuan) to Cairo, near the site of the ancient Memphis. To the Nile, Egypt owes its existence as a habitable country, since, without the rich and fertilizing mud deposited by the river in its annual inundations, it would be a sandy desert. At three different places, previous to its entering Egypt, this noble stream is threatened to be interrupted in its course by a barrier of mountains, and at each place the barrier is surmounted. The second cataract, in Turkish Nubia, is the most violent and unnavigable. The third is at Syene, and introduces the Nile into Upper Egypt. From Syene to Cairo the river flows along a valley about eight miles broad, between two mountain ridges, one of which extends to the Red Sea, and the other terminates in the deserts of ancient Libya. The river occupies the middle of the valley as far as the strait called *Jebel-êl-Silsili*. This space, about forty miles long, has very little arable land on its banks. It contains some islands, which, from their low level, easily admit of irrigation. At the mouth of the *Jebel-êl-Silsili* (*Girard, Mem. sur l'Egypte*, vol. 3, p. 13), the Nile runs along the right side of the valley, which in several places has the appearance of a steep line of rocks cut into peaks, while the ridge of the hills on the left side is always accessible by a slope of various acclivity. These last mountains begin near the town of Siout, the ancient Lycopolis, and go down towards Faioum, the ancient Arsinoitic Nome, diverging gradually to the west, so that between them and the cultivated valley there is a desert space, becoming gradually wider, and which in several places is bordered on the valley-side by a line of sandy downs lying nearly south and north. The mountains which confine the basin of the Nile in Upper Egypt are intersected by defiles, which on one side lead to the shores of the Red Sea, and on the other to the Oases. These narrow passes might be habitable, since the winter rains maintain for a time a degree of vegetation, and form springs which the Arabs use for themselves and their flocks. The strip of desert land which generally extends along each side of the valley, parallel to the course of the Nile (and which must not be confounded with the barren ocean of sand that lies on each side of Egypt), now contains two very distinct kinds of land; the one immediately at the bottom of the mountain, consists of sand and round pebbles; the other, composed of light drifting sand, covers an extent of ground formerly arable. If a section of the valley is made by a plane perpendicular to its direction, the surface will be observed to decline from the margins of the river to the bottom of the hills, a circumstance

also remarked on the banks of the Mississippi, the Po, part of the Borysthenes, and some other rivers. Near *Beni-soof*, the valley of the Nile, already much widened on the west, has on that side an opening, through which a view is obtained of the fertile plains of *Fai-oom*. These plains form properly a sort of table-land, separated from the surrounding mountains on the north and west by a wide valley, of which a certain proportion, always laid under water, forms what the inhabitants call *Birket-él-Karoon*. (*Vid.* Mæris.) Near Cairo, the chains which limit the valley of the Nile diverge on both sides. The one, under the name of *Jibbel-al-Narroun*, runs northwest towards the Mediterranean: the other, called *Jibbel-al-Attaka*, runs straight east of Suez. In front of these chains a vast plain extends, composed of sands, covered with the mud of the Nile. At the place called *Batu-el-Bahara*, near the ancient Cerasorus, the river divides into two branches; the one of which flowing to *Rosetta*, near the ancient Ostium Bolbitinum, and the other to *Damietta*, the ancient Tamiathis, at the Ostium Phatæticum, contain between them the present Delta. But this triangular piece of insulated land was in former times much larger, being bounded on the east by the Pelusian branch, which is now choked up with sand or converted into marshy pools; while on the west it was bounded by the Canopic branch, which is now partly confounded with the canal of Alexandria, and partly lost in Lake *Elko*. But the correspondence of the level of the surface with that of the present Delta, and its depression as compared with that of the adjoining desert, together with its greater verdure and fertility, still mark the limits of the ancient Delta, although irregular encroachments are made by shifting banks of drifting sand, which are at present on the increase. Egypt then, in general language, may be described as an immense valley or longitudinal basin, terminating in a Delta or triangular plain of alluvial formation; being altogether, from the heights of Syene to the shores of the Mediterranean, about 600 miles in length, and of various width. (*Malte-Brun, Geogr.* vol. 4, p. 21, *seqq.*)

1. Fertility of Egypt.

Almost the whole of the productive soil of Egypt consists of mud deposited by the Nile; and the Delta, as in all similar tracts of country, is entirely composed of alluvial earth and sand. To ascertain the depth of this bed, the French *savans*, who accompanied the military expedition into Egypt, sank several wells at distant intervals; and from their observations have been obtained the following results. *First*, that the surface of the soil, as already mentioned, descends more or less rapidly towards the foot of the hills, which is the reverse of what occurs in most valleys; *secondly*, that the depth of the bed of mud is unequal, being in general about five feet near the river, and increasing gradually as it recedes from it: *thirdly*, that beneath the mud there is a bed of sand similar to that always brought down by the river. The first-mentioned peculiarity is satisfactorily explained by the absence of rain, which, in other countries, washes down the soil from the hills, and, carrying it to the stream in the bottom of the valley, forms a basin, the sides of which have a concave surface; whereas, in Egypt, the soil is conveyed by the inundation from the river into the valley, and the deposits, therefore, will be greatest near its banks. The more rapid the current, also, the smaller will be the quantity of mud deposited. The bed of quartzose sand upon which it rests is about thirty-six feet in depth, and is superposed on the calcareous rock which forms the basis of the lower country. The waters of the river filter through this bed of sand, and springs are found as soon as the borer has reached any considerable depth. Ancient Egypt was remarkable for its fertility. The staple commodity

was its grain, the growth of which was so abundant as to afford at all times considerable supplies to the neighbouring countries, particularly Syria and Arabia; and in times of scarcity or famine, which were frequently felt in those countries, Egypt alone could save their numerous population from starving. Egypt, in fact, unlike every other country on the globe, brought forth its produce independent of the seasons and the skies; and while continued drought in the neighbouring countries brought one season of scarcity after another, the granaries of Egypt were full. Hence, too, Egypt became regarded as one of the granaries of Rome. (*Aurel. Victor., Epit. c. 1.*) The Rev. Mr. Jewett has given a striking example of the extraordinary fertility of the soil of Egypt. "I picked up at random," says he, "a few stalks out of the thick corn-fields. We counted the number of stalks which sprouted from single grains of seed; carefully pulling to pieces each root, in order to see that it was but one plant. The first had seven stalks; the next three; the next nine; then eighteen; then fourteen. Each stalk would have been an ear." Numerous canals served to carry the waters of the Nile to some of those parts which the inundation could not reach, while machinery was employed to convey the means of irrigation to others. Many of these canals still exist, many have long since disappeared, and not a few tracts of sandy country have displayed themselves in modern times where formerly all was smiling and fertile. Nearly the whole extent from the southern confines to the neighbourhood of Thebes is one barren and sandy waste. Assigning to Upper Egypt an average breadth of ten miles, and allowing for the lateral valleys stretching out from the Delta, it is supposed that the portion of territory, at the present day, in Egypt, capable of cultivation, may amount to about 16,000 square miles, or, in round numbers, ten millions of acres. The total population is estimated at about two millions and a half, which would give about 156 to every square mile. Nearly one half of this territory, it is supposed, is either periodically inundated, or capable of artificial irrigation. The remaining part requires a more laborious cultivation, and yields a more scanty produce. The inundated lands, though they have successively borne one crop, and frequently two, year after year, without intermission, for more than 3000 years, still retain their ancient fertility, without any perceptible impoverishment, and without any farther tillage than the adventitious top-dressing of black, slimy mould by the overflowing of the river. Where the inundation does not reach, the crops are very scanty; wheat does not yield above five or six for one; but for maize and millet the soil is particularly adapted, and these, with rice, lentils, and pulse, constitute the principal food of nine tenths of the inhabitants, allowing the exportation of the greater part of the wheat produced. Taking, then, into consideration the quantity of land once arable, which is now covered with sand, the double harvest, and, of some productions, more than semi-annual crops, the smaller quantity of food which is requisite to sustain life in southern latitudes, and the extent to which the more barren soil was formerly rendered available by the cultivation of the olive, the fig-tree, the vine, and the date-palm, we shall no longer be at a loss to account for the immense fertility and populousness of ancient Egypt, a country said to have contained in former days 7,500,000 souls.—One of the most celebrated productions of Egypt is the *lotus*. The plant usually so denominated is a species of water-lily (*nymphaea lotus*), called by the Arabs *nuphar*, which, on the disappearance of the inundation, covers all the canals and pools with its broad round leaves, amid which the flowers, in the form of cups of bright white or azure, expand on the surface, and have a most elegant appearance. Sonnini says, that its roots form a tubercle, which is gathered when the waters of the

Nile subside, and is boiled and eaten like potatoes, which it somewhat resembles in taste. Herodotus (2, 92) states, that the Egyptians not only ate the root, but made a sort of bread of the seed, which resembled that of the poppy. He adds, that there is a second species, the root of which is very grateful, either fresh or dried. The plant which was chiefly eaten by the ancient Egyptians, and which is so frequently carved on the ancient monuments, is supposed to be the *nymphaea nelumbo*, or *nelumbium speciosum*, the "sacred bean" of India, now found only in that country. Its seeds, which are about the size of a bean, have a delicate flavour resembling almonds, and its roots also are edible. The lotus of Homer, however, the fruits of which so much delighted the companions of Ulysses, is a very different plant, namely, the *ziziphus lotus* (*rhamnus*), or jujube, which bears a fruit the size of a sloe, with a large stone, and is one of the many plants which have been erroneously fixed on by learned commentators as the *dudaim* (mandrakes) of the sacred writings. The *papyrus*, not less celebrated in ancient times than the lotus, and which is believed to have disappeared from the banks of the Nile, has been rediscovered in the *cyperus papyrus* of Linnaeus. The *colocassium* is still cultivated in Egypt for its large esculent roots. The banks of the river and the canals sometimes present coppices of acacia and mimosa, and there are groves of rose-laurel, willow, cassia, and other shrubs. Faioum contains impenetrable hedges of *cactus*, or Indian fig. But, though so rich in plants, Egypt is destitute of timber, and all the firewood is imported from Caramania. (*Malte-Brun, Geogr.*, vol. 4, p. 38, *seqq.*—*Modern Traveller* (Egypt), p. 18, *seqq.*)

2. Animal Kingdom.

The animal kingdom of Egypt will not detain us long. The want of meadows prevents the multiplication of cattle. They must be kept in stables during the inundation. The Mamelukes used to keep a beautiful race of saddle-horses. Asses, mules, and camels appear here in all their vigour. There are also numerous herds of buffaloes. In Lower Egypt there are sheep of the Barbary breed. The large beasts of prey find in this country neither prey nor cover. Hence, though the jackal and hyena are common, the lion is but rarely seen in pursuit of the gazelles which traverse the deserts of the Thebaid. The crocodile and the hippopotamus, those primeval inhabitants of the Nile, seem to be banished from the Delta, but are still seen in Upper Egypt. The islands adjoining the cataracts are sometimes found covered with crocodiles, which choose these places for depositing their eggs. The voracity of the hippopotamus has, by annihilating his means of support, greatly reduced the number of his race. Ab-dollatif, with some justice, denominates this ugly animal an enormous water-pig. It has been long known that the ichneumon is not tamed in Upper Egypt, as Buffon had believed. The ichneumon is the same animal which the ancients mention under that name, and which has never been found except in this country. It possesses a strong instinct of destruction, and, in searching for its prey, exterminates the young of many noxious reptiles. The eggs of crocodiles form its favourite food; and in addition to this its favourite repast, it eagerly sucks the blood of every creature which it is able to overcome. Its body is about a foot and a half in length, and its tail is of nearly equal dimensions. Its general colour is a grayish brown; but, when closely inspected, each hair is found annulated with a paler and a darker hue. Zoology has lately been enriched with several animals brought from Egypt, among which are the *coluber haje*, an animal figured in all the hieroglyphical tables as the emblem of Providence; and the *coluber vipera*, the true viper of the ancients. The Nile seems to contain some singular fishes hitherto unknown to systematic naturalists. Of this the

Polyptere bichir, described by Geoffroy-Saint-Hilaire (*Annales du Muséum*, vol. 1, p. 57), is a very remarkable example. That able naturalist observes, in general, that the birds of Egypt differ not much from those of Europe. He saw the Egyptian swan, represented in all the temples of Upper Egypt, both in sculptures and in coloured paintings, and entertains no doubt that this bird was the *chenalopeus* (*vulpanser*) of Herodotus, to which the ancient Egyptians paid divine honours, and had even dedicated a town in Upper Egypt, called by the Greeks *Chenoboscium*. It is not peculiar to Egypt, but is found all over Africa, and almost all over Europe. The *Ibis*, which was believed to be a destroyer of serpents, is, according to the observations of Cuvier, a sort of curlew, called at present *Abouhannars*. Grobert and Geoffroy-Saint-Hilaire have brought home mummies of this animal, which had been prepared and entombed with much superstitious care. (*Mémoire sur l'Ibis*, par M. Cuvier.—*Malte-Brun, Geogr.*, vol. 4, p. 45, *seqq.*)

3. Name of Egypt.

The name by which this country is known to Europeans comes from the Greeks, some of whose writers inform us that it received this appellation from Ægyptus, son of Belus, having been previously called *Æria*. (Compare *Eusebius, Chron.*, lib. 2, p. 284, *ed. Maii et Zohrab*.) In the Hebrew Scriptures it is styled *Mitsraim*, and also *Matsor*, and *harets Cham*: of these names, however, the first is the one most commonly employed. The Arabians and other Orientals still know it by the name of *Mesr* or *Micr*. According to general opinion, Egypt was called *Mitsraim* after the second son of Ham. Bochart, however, opposes this (*Geogr. Sacr.* 4, 24), and contends that the name of Mitsraim, being a dual form, indicates the two divisions of Egypt into Upper and Lower. Calmet (*Dict. art. Mitsraim*) supposes, that it denotes the people of the country rather than the father of the people. Josephus (*Ant. Jud.* 1, 6) calls Egypt *Mesra*; the Septuagint translators, *Metsraim*; Eusebius and Suidas, *Mestraia*. The Coptic name of Old Cairo is still *Mistram*; the Syrians and Arabs call it *Masra* or *Massera*. The other appellation, *Matsor*, as given above, Bochart has clearly proved to mean a *fortress*; and, according to him, Egypt was so called, either from its being a region fortified by nature, or from the word *tsor*, which signifies *narrow*, and which he thinks sufficiently descriptive of the valley of Upper Egypt. Sir W. Drummond (*Origines*, 2, 55) inclines to the first of these two etymologies, because Diodorus Siculus (1, 30) and Strabo (803) remark, that Egypt was a country extremely difficult of access; and Diodorus, speaking of the Upper Egypt, observes, that it seems not a little to excel other limited places in the kingdom, by a natural fortification (*ὀχυρότητι ὁρατικῇ*) and by the beauty of the country. The third appellation mentioned above, namely, *harets Cham*, "the land of Ham," seems to have been the poetical name for Egypt among the Hebrews, and accordingly it occurs only in the Psalms. It is a tradition, at least as old as the time of St. Jerome, that the land of Ham was so named after the son of Noah. (*Quæst. in Genesim*.—*Drummond's Origines*, 2, 45, *seqq.*) There may, however, be reason to think, that the patriarch was named after the country where it is supposed he finally settled. In Hebrew, *cham* signifies "calidus;" and *chom*, "fuscus," "niger." In Egyptian we find several words which are nearly the same both in sound and sense. Thus *χμοι*, *chmoi*, signifies "calor;" and *χαμε*, *chame*, "niger." The Egyptians always called their country *Chemia* or *Chame*, probably from the burned and black appearance of the soil. (Compare *Plut. de Is. et Os.*, p. 364.—*Shaw's Travels*, fol. ed., p. 432.—*Calmet's Dict.*, art. *Ham*.) The name *Æria* has a similar reference, and would seem to have been a translation of the native

word, the primitive *áip* denoting obscurity, duskiness. Thus, the scholiast on Apollonius Rhodius (1, 580) says, that Thessaly was called *Ἡρία*, according to one explanation, on account of the dark colour of its soil; and adds that Egypt was denominated *Ἡρία* for a similar reason. Bryant (6, 149), who cites this passage of the scholiast, represents it as a vulgar error; but his reasoning is, as usual, unsatisfactory. The etymology of the word *Egypt* has occupied the attention and baffled the ingenuity of many learned writers. The most common opinion is, that *Αἴγυπτος* is composed of *αἶα* (for *γαῖα*), *land*, and *γύπτος*, or rather *κόπτω*, and that, consequently, *Egypt* signifies the *land of Kopt*, or the *Koptic land*. Others derive it from *αἶα*, and *γῆψ*, the black vulture, the colour of that bird (whence the Latin *subeulhurius*, "blackish") being, according to them, characteristic of the soil or its inhabitants. Mede conceives the primitive form to have been *Aia Cuphti*, the land of Cuphti; while Bruce says, that *Y Egypt*, the name given to Egypt in Ethiopia, means the country of canals. Eusebius, who is supposed to have followed Manetho, the Egyptian historian, states, that Ramses, or Ramesses, who reigned in Egypt (according to Usher) B.C. 1577, was also called *Ægyptus*, and that he gave it his name, as has already been mentioned. (*Euseb. Chron.* 2, p. 284, ed. *Maitt et Zohrab*.)

4. Divisions of Egypt.

In the time of the Pharaohs, Egypt was divided into the Thebais, Middle, and Lower Egypt. The Thebais extended from Syene, or, more correctly speaking, Philæ, as far as Abydos, and contained *ten* districts, jurisdictions, or, as the Greeks called them, *nomes* (*Νόμοι*. *Herod.* 2, 164). The Coptic word is *Phosch*. (*Cham-pollion, l'Égypte sous les Pharaons*, 1, 66.) To these succeeded the *sixteen* nomes of Middle Egypt (*Strabo*, 787), reaching to Cercasorus, where the Nile began to branch off. Then came the *ten* nomes of Lower Egypt, or the Delta, extending to the sea. The whole number of nomes then was *thirty-six*, and this arrangement is said by Diodorus Siculus (1, 50) to have been introduced by Sesostris (Sethosis-Ramesses) previous to his departure on his expedition into Asia, in order that, by means of the governors placed over each of these nomes, his kingdom might be the better governed during his absence, and justice more carefully administered. It is more than probable, however, that this division was much older than the time of Sesostris (*Cham-pollion, l'Égypte*, &c., 1, 71), and the account given by Strabo, respecting the halls of the labyrinth, would seem to confirm this. The geographer informs us, that the halls of this structure coincided with the number of the nomes, and the building would seem to have occupied a central position with respect to these various districts, having eighteen nomes to the north, and as many to the south, and thus answering a civil as well as a religious purpose. (*Ritter, Erdkunde*, 2d ed., 1, 704.) Under the dynasty of the Ptolemies the number of the nomes became enlarged, partly by reason of the new and improved state of things in that quarter of Egypt where Alexandria was situated, partly by the addition of the Oases to Egypt, and partly also by the alterations which an active commerce had produced along the borders of the Arabian Gulf. A change also took place, about this same period, in the three main divisions of the land. Lower Egypt now no longer confined itself to the limits of the Delta, but had its extent enlarged by an addition of some of the neighbouring nomes. In like manner, Upper Egypt, or the Thebais, received a portion of what had formerly been included within the limits of Middle Egypt, so that eventually but seven nomes remained to this last-mentioned section of country, which therefore received the name of *Heptanomis*. (*Mannert, Geogr.* 10, 1, 303.)

Under the Roman dominion, Thebais alone was regarded as a separate division of the country; all the rest of the land obtained no farther division than that produced by its nomes. Hence Pliny (5, 9), after mentioning eleven nomes as forming the district of Thebais, speaks of the country around Pelusium as consisting of four others, and then, without any other division, enumerates thirty nomes in the rest of Egypt. At this time, then, the nomes had increased to 45. They became still farther increased, at a subsequent period, by various subdivisions of the older ones. Hence we find Ptolemy enumerating still more nomes than Pliny, while he omits the mention of others recorded by the latter, which probably existed no longer in his own days. At a still later period we hear little more of the nomes. A new division of the country took place under the Eastern empire. An imperial Prefect exercised sway over not only Egypt, but also Libya as far as Cyrene, while a *Comes Militaris* had charge of the forces. The power of the latter extended over all Egypt as far as Ethiopia, but a *Dux*, who was dependant on him, exercised particular control over the Thebais. This arrangement seems to have been introduced in the time of the Emperor Theodosius, as appears from the language of the *Notitia*. From this time, the whole of Middle Egypt, previously named Heptanomis, bore the name of *Arcadia*, in honor of Arcadius, eldest son of Theodosius. A new province also had arisen a considerable time before this, named *Augustamnica*, from its lying chiefly along the Nile. It comprised the eastern half of the Delta, together with a portion of Arabia as far as the Arabian Gulf, and also the cities on the Mediterranean coast as far as the Syrian frontier. Its capital was Pelusium. The name of this province is mentioned by the ecclesiastical writers as early as the time of Constantine, and it occurs also in the history of Ammianus Marcellinus (22, 16). About the time of Justinian, in the sixth century, the position of the various archbishops and bishoprics, all subject to the patriarchate of Alexandria, gave rise to a new distribution of provinces. The territory of Alexandria, with the western portion of the Delta in the vicinity of the Ostium Canopicum, was called "The First Egypt," and the more eastern part, as far as the Ostium Phatneticum, was termed "The Second Egypt." The northeastern quarter of the Delta, on the Pelusiac arm of the Nile, together with the eastern tract as far as the Arabian Gulf, received the appellation of "The First Augustamnica," and had Pelusium for its capital. The inner part of the western Delta, as far as the Ostium Phatneticum, was named "The Second Augustamnica." Its capital was Leontopolis. Thus the Delta, with the country immediately adjacent, embraced four small provinces. Middle Egypt still retained a large part of its previous extent, under the name of Middle Egypt or Arcadia (*Μέση Αἴγυπτος*, ἡ *Ἀραδιά*). Memphis belonged to it as the northernmost state; but it was by this time greatly sunk in importance, and Oxyrynchus had succeeded it as the metropolis. Amid all these changes, the Thebais was continually regarded as a separate district. It now received new accessions from the north, and a double appellation arose. The northern and smaller portion, which had originally formed a part of Middle Egypt, was called "The First Thebais." To it was appended the *Oasis Magna*, and its Metropolis was Antæopolis. The southern regions as far as Philæ and Thatus, including a small part of Ethiopia, formed "The Second Thebais." Its capital was Coptos. It seems unnecessary to pursue the subsequent changes that gradually ensued, especially as they are of no peculiar importance either in point of history or geography. (Compare *Heroedes, Syncecdemos*; in Wesseling's *Rom. Itin.* Amst., 1735, 4to.—*Mannert, Geogr.* 10, 1, 305, seq.)

5. *Population of Egypt.*

Diodorus Siculus (1, 31) states, on the authority of the ancient Egyptian records, that the land contained, in the time of the Pharaohs, more than 18,000 cities and villages. The same writer informs us, that, in the time of the first Ptolemy, the number was above 30,000. In this latter statement, however, there is an evident exaggeration. Theocritus (*Idyll.* 17, 82, *seqq.*) assigns to Ptolemy Philadelphus the sovereignty over 33,333 cities. In this also there is exaggeration, but not of so offensive a character as in the former case, since the sway of Philadelphus did, in fact, extend over other countries besides Egypt; such as Syria, Phœnicia, Cyprus, Pamphylia, Caria, &c. Pomponius Mela (1, 9), and Pliny (5, 9), who frequently copies him, confine themselves with good reason to a more moderate number. According to them, the Egyptians occupied, in the time of Amasis, 20,000 cities. This number is borrowed from Herodotus (2, 77), and may be made to correspond with that first given from Diodorus Siculus, if we take into consideration that Amasis had extended his sway over Cyrenaica also, and that this may serve to swell the number as given by Herodotus, Mela, and Pliny, leaving about 18,000 for Egypt itself. Diodorus Siculus (*l. c.*) gives the ancient population of the country as seven millions, an estimate which does not appear excessive, when compared with that of other lands. The number would seem to have been somewhat increased during the reign of the Ptolemies, and to have continued so under the Roman sway, since we find Josephus (*Bell. Jud.* 2, 16) estimating the population of Egypt, in the time of Vespasian, at 7,500,000, without counting that of Alexandria, which, according to Diodorus (17, 52), was 300,000, exclusive of slaves. When we read, however, in the same Diodorus (1, 31), that in his days the inhabitants of Egypt amounted to "not less than three millions" (*οὐκ ἐλάττωτες εἶναι τριακοσίων sc. μυριάδων*), we must regard this number as the interpolation of a scribe, and must consider Diodorus as merely wishing to convey this idea, that, in more ancient times, the population was said to have been seven millions, and that in his own days it was not inferior to this. (*Τοῖς δὲ σημαντὸς λαοῦ τοῦ πάλαιον ὅσαι γεγονέναι περὶ ἐπτακοσίας μυριάδας, καὶ καθ' ἡμᾶς δὲ οὐκ ἐλάττωτες εἶναι* [*τριακοσίων*]). Compare Wesseling, *ad loc.*—Mannert, 10, 2, 309, *seqq.*)

6. *Complexion and Physical Structure of the Egyptians.*

A few remarks relative to the physical character of this singular people, may form no uninteresting prelude to their national history. There are two sources of information respecting the physical character of the ancient Egyptians. These are, first, the descriptions of their persons incidentally to be met with in the ancient writers; and, secondly, the numerous remains of paintings and sculptures, as well as of human bodies, preserved among the ruins of ancient Egypt. It is not easy to reconcile the evidence derived from these different quarters. The principal data from which a judgment is to be formed are as follows: 1. *Accounts given by the ancients.* If we were to judge from the remarks in some passages of the ancient writers alone, we should perhaps be led to the opinion that the Egyptians were a woolly-haired and black people, like the negroes of Guinea. There is a well-known passage of Herodotus (2, 104), which has often been cited to this purpose. The authority of this historian is of the more weight, as he had travelled in Egypt, and was, therefore, well acquainted, from his own observation, with the appearance of the people; and it is well known that he is in general very accurate and faithful in relating the facts and describing the objects which fell under his personal observation. In his account

of the people of Colchis, he says, that they were a colony of Egyptians, and he supports his opinion by this argument, that they were *μελαγχροες καὶ οὐλότριγες*, or, "black in complexion, and woolly-haired." These are exactly the words used in the description of undoubted negroes. The same Colchians, it may be observed, are mentioned by Pindar (*Pyth.* 4, 377) as being black, with the epithet of *κελαιῶπες*, on which passage the scholiast observes, that the Colchians were black, and that their dusky hue was attributed to their descent from the Egyptians, who were of the same complexion. Herodotus, in another place (2, 57), alludes to the complexion of the Egyptians, as if it was very strongly marked, and, indeed, as if they were quite black. After relating the fable of the foundation of the Dodonean oracle by a black pigeon, which had fled from Thebes in Egypt, and uttered its prophecies from the oaks at Dodona, he adds his conjecture respecting the true meaning of the tale. He supposes the oracle to have been instituted by a female captive from the Thebaid, who was enigmatically described as a bird, and subjoins, that, "by representing the bird as black, they marked that the woman was an Egyptian." Some other writers have left us expressions equally strong. Æschylus, in the *Suppliants* (v. 722, *seqq.*), mentions the crew of an Egyptian bark, as seen from an eminence on shore. The person who spies them concludes them to be Egyptians from their black complexion:

πρέπονσι δ' ἄνδρες νῆοι μελαγχροῖς
γυῖοισι λευκῶν ἐκ πεπλομένων ἰδεῖν.

There are other passages in ancient writers, in which the Egyptians are mentioned as a swarthy people, which might with equal propriety be applied to a perfect black, or to a brown or dusky Nubian. We have, in one of the dialogues of Lucian (*Navigium seu Vota*.—vol. 8, 157, *cd. Bip.*), a ludicrous description of a young Egyptian, who is represented as belonging to the crew of a trading vessel at the Piræus. It is said of him, that, "besides being black, he had projecting lips, and was very slender in the legs, and that his hair and the curls bushed up behind marked him to be of servile rank." The words of the original are, *οὗτος δὲ πρὸς τῷ μελαγχρῶν εἶναι, καὶ πρόχειλός ἐστι, καὶ λεπτός ὡς ἀνὰ τοῖν σκελῶν, . . . ἡ κόμη δὲ, καὶ ἐς τοῦπίσω οὐ πλόκαμος συνεσπειραμένος, οὐκ ἐλευθέριον ὅσαν αὐτὸν εἶναι*. The expression, however, which is here applied to the hair, seems rather to agree with the description of the bushy curls worn by the Noubas, than with the woolly heads of negroes. Mr. Legh, in speaking of the Barabras, near Syene, says, "The hair of the men is sometimes frizzled at the sides, and stiffened with grease, so as perfectly to resemble the extraordinary projection on the head of the Sphinx. But the make of the limbs corresponds with the negro." (*Legh's Travels in Egypt*, p. 98.) In another physical peculiarity the Egyptian race is described as resembling the negro. Elian (*Hist. Anim.* 7, 12) informs us, that the Egyptians used to boast that their women, immediately after they were delivered, could rise from their beds, and go about their domestic labour. Some of these passages are very strongly expressed, as if the Egyptians were negroes; and yet it must be confessed, that if they really were such, it is singular we do not find more frequent allusion to the fact. The Hebrews were a fair people, fairer at least than the Arabs. Yet, in all the intercourse they had with Egypt, we never find in the sacred history the least intimation that the Egyptians were negroes; not even on the remarkable occasion of the marriage of Solomon with the daughter of Pharaoh. Were a modern historian to record the nuptials of a European monarch with the daughter of a negro king, such a circumstance would surely find its place. And since Egypt was so closely connected, first with

Grecian affairs when under the Ptolemies, and afterward with the rest of Europe when it had become a Roman province, it is very singular, on the supposition that this nation was so remarkably different from the rest of mankind, that we have no allusion to it. We seldom find the Egyptians spoken of as a very peculiar race of men. These circumstances induce us to hesitate in explaining the expressions of the ancients in that very strong sense in which they at first strike us.—2. The second class of data, from which we may form a judgment on this subject, are *Paintings in Temples, and other remains*. If we may judge of the complexion of the Egyptians from the numerous paintings found in the recesses of temples, and in the tombs of the kings in Upper Egypt, in which the colours are preserved in a very fresh state, we must conclude that the general complexion of this people was a chocolate, or a red copper colour. This may be seen in the coloured figures given by Belzoni, and in numerous plates in the splendid “Description de l’Egypte.” This red colour is evidently intended to represent the complexion of the people, and is not put on in the want of a lighter paint or flesh colour: for when the limbs or bodies are represented as seen through a thin veil, the tint used resembles the complexion of Europeans. The same shade might have been generally adopted if a darker one had not been preferred, as more truly representing the natural complexion of the Egyptian race. (Compare *Belzoni’s Remarks*, p. 239.) Female figures are sometimes distinguished by a yellow or tawny colour, and hence it is probable that the shade of complexion was lighter in those who were protected from the sun. A very curious circumstance in the paintings found in Egyptian temples remains to be noticed. Besides the red figures, which are evidently meant to represent the Egyptians, there are other figures which are of a black colour. Sometimes these represent captives or slaves, perhaps from the negro countries; but there are also paintings of a very different kind, which occur chiefly in Upper Egypt, and particularly on the confines of Egypt and Ethiopia. In these the black and the red figures hold a singular relation to each other. Both have the Egyptian costume, and the habits of priests, while the black figures are represented as conferring on the red the instruments and symbols of the sacerdotal office. “This singular representation,” says Mr. Hamilton, “which is often repeated in all the Egyptian temples, but only here at Philæ and at Elephantine with this distinction of colour, may very naturally be supposed to commemorate the transmission of religious fables and the social institutions from the tawny Ethiopians to the comparatively fair Egyptians.” It consists of three priests, two of whom, with black faces and hands, are represented as pouring from two jars strings of alternate sceptres of Osiris and *ermes ansata* over the head of another whose face is red. There are other paintings which seem to be nearly of the same purport. In the temple of Philæ, the sculptures frequently depict two persons who equally represent the characters and symbols of Osiris, and two persons equally answering to those of Isis; but in both cases one is invariably much older than the other, and appears to be the superior divinity. Mr. Hamilton conjectures that such figures represent the communication of religious rites from Ethiopia to Egypt, and the inferiority of the Egyptian Osiris. In these delineations there is a very marked and positive distinction between the black figures and those of fairer complexion; the former are most frequently conferring the symbols of divinity and sovereignty on the other. Besides these paintings described by Mr. Hamilton, there are frequent repetitions of a very singular representation, of which different examples may be seen in the beautiful plates of the “Description de l’Egypte.” In these it is plain, that the idea meant to be conveyed can be nothing else than

this, that the red Egyptians were connected by kindred, and were, in fact, the descendants of a black race, probably the Ethiopian. (Compare plate 92 of the work just alluded to, and also plates 84 and 86.) In the same volume of the “Description de l’Egypte” is a plate representing a painting at Eilithia. Numerous figures of the people are seen. It is remarkable that their hair is black and curled. “Les cheveux noirs et frisés, sans être court et crépus comme ceux des Negres.” This is probably a correct account of the hair of the Egyptian race.—3. The third class of data for the present investigation is obtained from the *form of the scull*. In reference to the form of the scull among the ancient Egyptians, and their osteological characters in general, there is no want of information. The innumerable mummies, in which the whole nation may be said to have remained entire to modern times, afford sufficient means of ascertaining the true form of the race and all its varieties. Blumenbach, who has collected much information on everything relating to the history of mummies, in his excellent “Beyträge zur Naturgeschichte,” concludes with a remark that the Egyptian race, in his opinion, contains three varieties. These are, *first*, the Ethiopian form; *secondly*, the “Hindus-artige,” or a figure resembling the Hindus; and, *thirdly*, the “Berber-ähnliche,” or, more properly, Berberin-ähnliche, a form similar to that of the Berbers or Berberins. It must be observed, however, that Blumenbach has been led to adopt this opinion, not so much from the mummies he has examined, as from the remains of ancient arts and from historical testimonies. As far as their osteological characters are concerned, it does not appear that the Egyptians differed very materially from Europeans. They certainly had not the character of the scull which belonged to the negroes in the western parts of Africa; and if any approximation to the negro scull existed among them, it must have been rare and in no great degree. Sömmering has described the heads of four mummies seen by him; two of them differed in nothing from the European formation; the third had only one African character, viz., that of a larger space marked out for the temporal muscle; the characters of the fourth are not particularized. Mr. Lawrence, in whose work (*Lectures on Physiology*, p. 299, *Am. ed.*) the above evidence of Sömmering is cited, has collected a variety of statements respecting the form of the head in the mummies deposited in the museums and other collections in several countries. He observes, that in the mummies of females seen by Dénon, in those from the Theban catacombs engraved in the great French work, and in several skulls and casts in the possession of Dr. Leach, the osteological character is entirely European; lastly, he adduces the strong evidence of Cuvier, who says, that he has examined in Paris, and in the various collections of Europe, more than fifty heads of mummies, and that not one among them presented the characters of the negro or Hottentot. (*Lawrence’s Lectures*, p. 301.—*Observations sur le cadavre de la Venus Hottentotte*, par M. Cuvier, *Mém. du Muséum d’Hist. Nat.*, 3, 173, *seqq.*) It could therefore be only in the features, as far as they depend on the soft parts, that the Egyptians bore any considerable resemblance to the negro. And the same thing might probably be affirmed of several other nations, who must be reckoned among the native Africans. Particularly it might be asserted of the Berberins or Nubians already mentioned, and of some tribes of Abyssinians. A similar remark might be made of the Copts. In neither of these races is it at all probable that the scull would exhibit any characteristic of the negro. It is here, then, that we are to look for the nearest representatives of the ancient Egyptians and Ethiopians, and particularly to the Copts, who are descended from the former, and to the copper-coloured races resembling the Berberins or Nubians. Dénon

makes mention of the resemblance which the Copts bear to the human figures painted or sculptured among the ruins of ancient Egypt. He adds the following remarks. "As to the character of the human figure, as the Egyptians borrowed nothing from other nations, they could only copy from their own, which is rather delicate than fine. The female forms, however, resembled the figures of beautiful women of the present day; round and voluptuous; a small nose, the eyes long, half shut, and turned up at the outer angle like those of all persons whose sight is habitually fatigued by the burning heat of the sun or the dazzling whiteness of snow; the cheeks round and rather thick, the lips full, the mouth large, but cheerful and smiling; displaying, in short, the African character, of which the negro is the exaggerated picture, though perhaps the original type." The visages carved and painted on the heads of the sarcophagi may be supposed to give an idea of an Egyptian countenance. In these there is a certain roundness and flatness of the features, and the whole countenance, which strongly resembles the description of the Copts, and in some degree that of the Berberins. The colour of these visages is the red coppery hue of the last-mentioned people, and is nearly the same, though not always so dark, as that of the figures painted in the temples and catacombs. The most puzzling circumstance in this comparison refers to the hair. The Copts are said to have frizzled or somewhat crisp, though not woolly, hair. The old Egyptians, as well as the Ethiopians, are termed by the Greeks *οὐλότριγες*. But the hair found in mummies is generally, if not always, in flowing ringlets, as long and as smooth as that of any European. Its colour, which is often brown, may depend on art, or the substance used in embalming. But the texture is different from what we should expect it to be, either from the statements of ancient writers, or from the description of the races now existing in the same countries.—*Conclusion.* From what has been adduced, we may consider it as tolerably well proved, that the Egyptians and Ethiopians were nations of the same race, whose abode, from the earliest periods of history, were the regions bordering on the Nile. These nations were not negroes, such as the negroes of Guinea, though they bore some resemblance to that description of men, at least when compared with the people of Europe. This resemblance, however, did not extend to the shape of the skull, in any great degree at least, or in the majority of instances. It perhaps only depended on a complexion and physiognomy similar to those of the Copts and Nubians. These races partake, in a certain degree, of the African countenance. The hair in the Ethiopians and Egyptians must sometimes have been of a more crisp or bushy kind than that which is often found in mummies; for such is the case in respect to the Copts, and the description of the Egyptians by all ancient writers obliges us to adopt this conclusion. In complexion it seems probable that this race was a counterpart of the Foulahs, in the west of Africa, nearly in the same latitude. The blacker Foulahs resemble in complexion the darkest people of the Nile; they are of a deep brown or mahogany colour. The fairest of the Foulahs are not darker than the Copts, or even than some Europeans. Other instances of as great a variety may be found among the African nations, within the limits of one race, as in the Bishuané Kaffers, who are of a clear brown colour, while the Kaffers of Natal on the coast are of a jet black. From some remarks of Diodorus and Plutarch, it would appear that the birth of fair, and even red-haired individuals, occasionally happened in the Egyptian race. Both these writers say, that Typhon was *πυρρόος*, or *red-haired*; the former adds that a few of the native Egyptians were of that appearance: *ὀλίγοις τινάς*. (*Diod. Sic. 1, 88.—Plut. de Is. et Os., p. 363.—*

Prichard's Physical History of Mankind, 1, 316, seqq., 2d ed.)

7. Origin of Egyptian Civilization.

The question that now presents itself is one of a singularly interesting character. Whence arose the arts and civilization of Egypt? Were they indigenous, or did they come to her as the gift of another land? Everything seems to countenance the idea that civilization came gradually down the valley of the Nile, from the borders of Ethiopia to the shores of the Mediterranean. It would appear, that when the arts of civilized life were first introduced into Upper Egypt, the lower section of the country formed merely a vast morass or gulf of the sea, and that they followed in their progressive development the course of the stream. (Compare *Herodotus, 2, 4.—Id. ibid. 5.—Id. ibid. 11, seqq.—Diod. Sic. 1, 34;—and the memoirs of Girard, Andrôssy, &c., in the Description de l'Égypte.* Compare also the remarks in the present volume under the article Delta.) Monuments, tradition, analogies of every kind, are here in accordance with natural probabilities. There was a period when the names of Ethiopia and Egypt were confounded together, when the two nations were thought to form but a single people. (Compare the proofs of this assertion, as collected and discussed by Creuzer, *Commentat. Herodot., p. 178, seqq.*, in opposition to Champollion the younger; and also the remarks in the present volume, under the articles *Æthiopia* and *Meroë*.) In all the recitals and legends of the earliest antiquity the Egyptians are associated with the Ethiopians, and to the latter is assigned a distinguished character for wisdom, knowledge, and piety, which testifies to their priority in the order of civilization. (Compare *Heeren, Ideen, 2, 1, 314, 405, &c.*) We see also the common traditions of the two nations referring to Meroë the origin of most of the cities of Upper Egypt, and, among others, of Thebes. It is to Meroë, its ancient metropolis, that Thebes attaches itself, when, for the purpose of extending their commercial interests, they send a colony to found, in the midst of the deserts, a new city of Ammon. (*Herod. 2, 42.—Diod. Sic. 2, 3.*) The same institutions, a similar religion, language, and mode of writing, together with manners most strongly resembling one another, attest the primitive connexion that subsisted between these three sacred cities, though so widely apart. It appears, then, that a sacred caste, established from a remote period on the borders of the Nile, in the island, or, rather, peninsula formed by the Astapus and Astaboras, sent forth gradually its sacerdotal colonies, carrying with them agriculture and the first arts of civilized life, along the regions to the north, and that these, proceeding slowly onward, passed eventually the cataract of Syene, and entered upon the valley of Egypt. Placing commerce under the safeguard of religion, and subjugating the inhabitants of the regions to which they came, more by the benefits they conferred than by any exercise of force, these strangers became at last the controlling power of the land, and laid the foundation of that brilliant character in the annals of civilization which has acquired for Egypt so imperishable a name. (Compare *Heeren, Ideen, 2, 1, 363, seqq.—Id. ibid. 2, 532, seqq.—Görres, Mythengeschichte, 2, 331, seqq.—Creuzer, Commentat. Herodot., p. 178, seqq.—Id. Symbolik, par Guignaut, 1, 2, 778, seqq.*) But whence came the civilization of Meroë?—This question will be considered in a different article. (*Vid. Meroë.*)

8. Egyptian History.

The Egyptians, like the Hindus and Persians, had allegorical traditions among them respecting the introduction of agriculture and the first beginnings of civilization in their country. Such were the *Songs of Isis*, whose high antiquity is attested by Plato (*de Leg.*

2.—*Pt. 3, vol. 2, p. 239, ed. Bekker.* They had, in the second place, epic traditions, a kind of poetic chronicles, embracing the succession of high priests, and the dynasties of the Pharaohs, or monarchs of the country. Such were the volumes of papyrus, which the priests unrolled to satisfy the questions of Herodotus (2, 100). We would err greatly, however, were we to suppose that these were actual histories. They were rather a species of heroic tales, intermingled with religious legends, and where allegory still played the chief part, as in the *Ramayan* and *Mahabharat* of the Hindus, the *Schahnameh* of the Persians, and the traditions of the Greeks previous to the return, or invasion, of the Heraclidæ. These originals are unfortunately lost for us. In their stead we have the sacred books of the Hebrews, which offer a great number of recitals on this subject, but fragmentary in their nature, without development, and often extremely vague. Hence it is difficult to conciliate these recitals with those of the Greeks, which are in general more circumstantial and extended. Some time before Herodotus, Hippys of Rhegium and other travellers had visited Egypt. Among these Hecateus of Miletus is the most conspicuous. He travelled thither about the 59th Olympiad, and described particularly the upper part of Egypt, bestowing especial attention on the state or city of Thebes, and the history of its kings. Hence the reason why Herodotus says so little on these points. (*Creezer, fragm. Hist. Græc. antiquissim.*, p. 16, *seqq.*—*Schöll, Hist. Lit. Gr.* 2, 135, *seqq.*) About the same period, Hellanicus of Lesbos also gave a description of Egypt. (*Hellanicæ fragm.*, ed. *Sturz.*, p. 39, *seqq.*) Herodotus succeeded. Visiting the country about seventy years after its conquest by the Persians, he traversed its whole extent, and consigned to his great work all that he had seen, all that he had heard from the priests, as well with regard to the monuments as the history of Egypt, and added to these his own opinions on what had passed under his view or been related to him by others. (*Herod. lib. 2 et 3.*) The state or city of Memphis is the principal subject of his narrative. After him came Theopompus of Chios, Ephorus of Cume (*Fragm. ed. Marx.*, p. 213, *seqq.*), Eudoxus of Cnidus, and Philistus of Syracuse. But their works have either totally perished, or at best only a few fragments remain. At a latter period, and subsequent to the founding of Alexandria, Hecateus of Abdera travelled to Thebes. This took place under the first Ptolemy. (*Creezer, fragm.*, &c., p. 28, *seqq.*—*Schöll, Hist. Lit. Gr.* 3, 211, *seqq.*) In the reign of Ptolemy Philadelphus, two centuries and a half before the Christian era, Manetho, an Egyptian priest, of Heliopolis in Lower Egypt, wrote, by order of that prince, the history of his own country in the Greek language, translating it, as he states himself, out of the sacred records. His work is, most unfortunately, lost; but the fragments which have been preserved to us by the writings of Josephus, in the first century of the Christian era, as well as by the Christian chronographers, are, entitled to confidence, of the highest historical value. What we have remaining of the work of Manetho presents us with a chronological list of the successive rulers of Egypt, from the first foundation of the monarchy to the time of Alexander of Macedon, who succeeded the Persians. This list is divided into thirty dynasties. It originally contained the length of reign as well as the name of every king; but, in consequence of successive transcriptions, variations have crept in, and some few omissions also occur in the record, as it has reached us through the medium of different authors. The chronology of Manetho, adopted with confidence by some, and rejected with equal confidence by others (his name and his information not being even noticed by some of the modern systematic writers on Egyptian history), has received the most unquestionable and

decisive testimony of his general fidelity by the interpretation of the hieroglyphic inscriptions on the existing monuments; so much so, that, by the accordance of the facts attested by these monuments with the record of the historian, we have reason to expect the entire restoration of the annals of the Egyptian monarchy antecedent to the Persian conquest, and which, indeed, is already accomplished in part. (*Quarterly Journal of Science, New Series*, vol. 1, p. 180.) The next authority after Manetho is Eratosthenes. He was keeper of the Alexandrian library in the reign of Ptolemy Euergetes, the successor to Ptolemy Philadelphus. Among the few fragments of his works which have reached us, transmitted through the Greek historians, is a catalogue of thirty-eight or thirty-nine kings of Thebes, commencing with Menes (who is mentioned by the other authorities also as the first monarch of Egypt), and occupying by their successive reigns 1055 years. (*Foreign Quarterly*, No. 24, p. 358.) These names are stated to have been compiled from original records existing at Thebes, which city Eratosthenes visited expressly to consult them. The names of the first two kings of the first dynasty of Manetho are the same with those of the first two kings in the catalogue of Eratosthenes; but the remainder of the catalogue presents no farther accordance, either in the names or in the duration of the reigns. Next to Herodotus, Manetho, and Eratosthenes, the most important authority, in relation to Egypt and its institutions, is Diodorus Siculus, who lived under Cæsar and Augustus, and who, independent of his own observations and his researches on the spot, refers frequently, in this part of his work, to the old Greek historians, and particularly to Hecateus of Miletus, after whom he describes the ancient kingdom of Thebes, and gives an account of the monuments of this famous city, with surprising fidelity. (*Description de l'Égypte*, 2, 59, *seqq.*—Compare *Heyne, de fontibus Diad. Sic. in Comment. Soc. Gött.* 5, 104, *seqq.*) Strabo, the celebrated geographer, visited Egypt in the suite of Ælius Gallus, about the commencement of our era. He does not content himself, however, with merely recounting what fell under his own personal observation, but frequently refers to the earlier writers. Plutarch, in many of his biographies, and especially in his treatise on Isis and Osiris; Philostratus, in his life of Apollonius; Porphyry, Iamblichus, Horapollo, and many other writers, have preserved for us a large number of interesting particulars relative to the antiquities and the religion of Egypt.—We have already alluded to the quarter whence the germe of Egyptian civilization is supposed to have been derived. The first impression having been one of a sacerdotal character, we find the beginnings of Egyptian history partaking, in consequence, of the same. Hence the tradition, emanating from the priests of Egypt, according to which the supreme deities first reigned over the country; then those of the second class; after these the inferior deities; then the demigods; and, last of all, men. The first deity that reigned was *Kneph*: this embraces the most ancient period, of an unknown duration. To Kneph succeeded *Phtha*, who has for his element, fire, and whose reign it is impossible to calculate. Next came the Sun, his offspring, who reigned thirty thousand years. After him, Cronos (Saturn) and the other gods occupy, by their respective rules, a period of three thousand nine hundred and eighty-four years. Then succeeded the Cabiri, or planetary gods of the second class. After these came the demigods, to the number of eight, of whom Osiris was probably regarded as the first. After the gods and demigods appeared human kings and the first dynasty of Thebes, composed of thirty-seven kings, who succeeded one another for the space of fourteen hundred years, or, according to others, one thousand and fifty-five. (*Compare Chron. Egypt., ap. Euseb. Thes. Temp.* 2, p. 7, and *Manetho*,

ap. *Synce*l.) Görres thinks that these thirty-seven kings, who are given as so many mortals, may have been nothing else but the thirty-seven Decans, with Menes at their head; so that, by rejecting this dynasty as a continuation of the divine dynasties, those of a strictly human nature, and, with them, the historical times of Egypt, will have commenced, according to the calculations of this ingenious and profound writer, 2712 years before the Christian era. (*Görres, Mythengeschichte*, vol. 2, p. 412.—Compare *Creuzer, Symbolik*, 1, 469, *seqq.*, and *Guignaut's* note, 1, 2, 841.) Be this, however, as it may, the common account makes *Menes* to have been the first human king of Egypt, and his name begins the dynasties of Thebes, of This, and of Memphis. Menes completed the work of the gods, by perfecting the arts of life, and dictating to men the laws he had received from the skies. This *Menes*, or *Menas*, or *Mines* (a name which Eratosthenes makes equivalent to *Dionios*, i. e., *Jovialis*), can hardly be an historical personage. He resembles a sort of intermediate being between the gods and the human kings of the lands, a divine type of man, a symbol of intelligence descended from the skies, and creating human society upon earth; similar to the *Menou* or *Manou* of India, the *Minos* of Crete, &c. He is a conqueror, a legislator, and a benefactor of men, like Osiris-Bacchus; like him, he perishes under the blows of Typhon, for he was killed by a hippopotamus, the emblem of this evil genius; like him, moreover, he has the ox for his symbol, Mnevis the legislator being none other than the bull Mnevis of Heliopolis. (Compare *Volney, Recherches sur l'Hist. Anc.* 3, 282, *seqq.*—*Prichard's Analysis of Egyptian Mythology*, p. 381.—*Creuzer's Symbolik, par Guignaut*, 1, 2, 780.) The successor of Menes was Thoth, or Athoth, to whom is ascribed the invention of writing, and many other useful arts. We have in the fragments of Manetho a full list of two dynasties seated at This, at the head of the first of which we find these two names. These two dynasties include fifteen kings, and may therefore have continued about 400 years; the duration assigned to their collective reigns, in Eusebius's version of Manetho, is 554 years, but this is probably too long, as it is a sum that far exceeds what would be the result of a similar series of generations of the usual length. From the time of Menes to that of Moeris, Herodotus leaves us entirely in the dark. He states merely (2, 100) that the priests enumerated between them 330 kings. Diodorus Siculus (1, 45) counts, in an interval of 1400 years between Menes and Busiris, eight kings, seven of whom are nameless, but the last was Busiris II. This prince is succeeded by eight descendants, six of whom are in like manner nameless, and the seventh and eighth are both called Uchoreus. From Uchoreus to Moeris he reckons twelve generations. Manetho, on the other hand, reckons between Menes and the time at which we may consider his history as becoming authentic, sixteen dynasties, which includes nearly three thousand years. But, whatever opinion we may form relative to these obscure and conflicting statements, whether we regard these early dynasties as collateral and contemporary reigns (*Creuzer's Symbolik, par Guignaut*, 1, 2, 780), or as belonging merely to the fabulous periods of Egyptian history, the following particulars may be regarded as tolerably authentic. Egypt, during this interval, had undergone numerous revolutions. She had detached herself from Ethiopia; the government, wrested from the priestly caste, had passed into the hands of the military order; Thebes, now become powerful in resources, and asserting her independence, had commenced under a line probably of native princes, her career of conquests and brilliant undertakings. On a sudden, in the time of a king called, by Manetho, Timaos, but who does not appear among the names in his list of

dynasties, a race of strangers entered from the east into Egypt. (*Josephus, contra Ap.* 1, 14.—Compare *Eusebius, Præp. Ev.* 10, 13.) Everything yielded to these fierce invaders, who, having taken Memphis, and fortified Avaris (or Abaris), afterward Pelusium, organized a species of government, gave themselves kings, and, if we believe certain traditions, founded On (the city of the Sun; Heliopolis), to the east of the apex of the Delta. (*Juba*, cited by *Pliny*, 6, 34. Compare *Volney, Recherches sur l'Hist. Anc.* 3, 247, *seqq.*—*Prichard's Analysis of Egyptian Mythology*, p. 66, *Append.*—*Creuzer, Commentat. Herodot.*, p. 188, *seqq.*) More than two centuries passed under the dominion of this race. They are commonly called the shepherd race, and their dynasty that of the *Hycsos*, or Shepherd-kings. The sway of these invaders is said by Manetho to have been tyrannical and cruel. They exercised the utmost atrocity towards the native inhabitants, putting the males to the sword, and reducing their wives and children to slavery. The conquest of Egypt by the Shepherds, as they are called, dates in the year 2082 B.C. Their dynasty continued to rule at Memphis 260 years, and their kings, six in number, were Salatis, Beon, Apachnas, Apophis, Janias, and Asseth. It was during the rule of the shepherd race that Joseph was in Egypt. Thus we have it at once explained how strangers, of whom the Egyptians were so jealous, should be admitted into power; how the king should be even glad of new settlers, occupying considerable tracts of his territory; and how the circumstance of their being shepherds, though odious to the conquered people, would endear them to a sovereign whose family followed the same occupation. After the death of Joseph, the Scripture tells us that a king arose who knew not Joseph. This strong expression could hardly be applied to any lineal successor of a monarch who had received such signal benefits from him. It would lead us rather to suppose, that a new dynasty, hostile to the preceding, had obtained possession of the throne. Now this is exactly the case. For a few years later, the Hycsos, or Shepherd-kings, were expelled from Egypt by Amosis, called on monuments Amenophthip, the founder of the eighteenth, or Diospolitan dynasty. He would naturally refuse to recognise the services of Joseph, and would consider all his family as necessarily his enemies; and thus, too, we understand his fears lest they should join the enemies of Egypt, if any war fell out with them. (*Exod.* 1, 10.) For the Hycsos, after their expulsion, continued long to harass the Egyptians by attempts to recover their lost dominion. (*Rosellini*, p. 291.) Oppression was, of course, the means employed to weaken first, and then extinguish, the Hebrew population. The children of Israel were employed in building up the cities of Egypt. It has been observed by Champollion, that many of the edifices erected by the eighteenth dynasty are upon the ruins of older buildings, which had been manifestly destroyed. (*2de Lett.*, p. 7, 10, 17.) This circumstance, with the absence of older monuments in the parts of Egypt occupied by the Hycsos, confirms the testimony of historians, that these conquerors destroyed the monuments of native princes; and thus was an opportunity given to the restorers of a native sovereignty to employ those whom they considered their enemies' allies in repairing their injuries. To this period belong the magnificent edifices of Karnac, Luxor, and Medinet-Abou. At the same time we have the express testimony of Diodorus Siculus, that it was the boast of the Egyptian kings that no Egyptian had put his hand to the work, but that foreigners had been compelled to do it (1, 56). With regard to the opinion entertained by many learned men, that the children of Israel were themselves the shepherd race, it may be sufficient to remark that the Hycsos, as represented on monuments, have the features, colour, and other

distinctives, not of the Jewish, but of the Scythian tribes. It was under a king of the eighteenth dynasty that the Israelites went out from Egypt, namely, Ramses V., the 16th monarch of the line. We have here, in this eighteenth dynasty, the commencement of what may be properly termed the second period of Egyptian history. The names of the monarchs are given as follows by the aid of Champollion's discoveries: 1. *Thoutmosis I.*, of whom there is a colossal statue in the museum at Turin. 2. *Thoutmosis II.* (*Amon-Mut*), whose name appears on the most ancient parts of the palace of Karnac. 3. His daughter *Amenisi*, who governed Egypt for the space of twenty-one years, and erected the greatest of the obelisks of Karnac. This vast monolith is erected in her name to the god Ammon, and the memory of her father. 4. *Thoutmosis III.*, surnamed *Meri*, the *Moeris* of the Greeks. The remaining monuments of his reign are the pilaster and granite halls of Karnac, several temples in Nubia, the great Sphinx of the Pyramids, and the colossal obelisk now in front of the church of St. John Lateran at Rome. 5. His successor was *Amenophis I.*, who was succeeded by, 6. *Thoutmosis IV.* This king finished the temples of the Wady Alfa and Arnada, in Nubia, which Amenoph had begun. 7. *Amenophis II.*, whose vocal statue, of colossal size, attracted the notice of the Greeks and Romans. (*Vid.* Memnon, and Memnonium.) The most ancient parts of the palace at Luxor, the temple of Cnophis at Elephantine, the Memnonium, and a palace at Sohled, in Nubia, are monuments of the splendour and piety of this monarch. 8. *Horus*, who built the grand colonnade of the palace at Luxor. 9. Queen *Amencheres*, or *Tmau-Mot*, commemorated in an inscription preserved in the museum at Turin. 10. *Ramses I.*, who built the hypostyle hall at Karnac, and excavated a sepulchre for himself at Behan-el-Moulouk. 11 and 12. Two brothers *Mandoueli* and *Ousirci*. They have left monuments of their existence, the last in the grand obelisk now in the Piazza del Popolo at Rome; the first, in the beautiful palace at Kourna, and the splendid tomb discovered by Belzoni. 13. Their successor caused the two great obelisks at Luxor to be erected. This was the second *Ramses*. 14. *Ramses III.* Of this king dedicatory inscriptions are found in the second court of the palace of Karnac, and his tomb still exists at Thebes. 15. *Ramses IV.*, surnamed *Mei-Amoun*, built the great palace of Medinet-Abou, and a temple near the southern gate of Karnac. The magnificent sarcophagus which formerly enclosed the body of this king, has been removed from the catacombs of Behan-el-Moulouk, and is now in the Museum of the Louvre. He was succeeded by his son, 16. *Ramses V.*, surnamed *Amenophis*, who is considered as the last of this dynasty, and who was the father of Sesostris. The acts of none of the kings of this dynasty are commemorated by the Greek historians, with the exception of Moeris. He is celebrated by them for a variety of useful labours, and appears to have done much to promote the prosperity of Egypt, particularly by forming a lake to receive the surplus waters of the Nile during the inundation, and to distribute them for agricultural purposes during its fall. (*Vid.* Moeris.) The reign of Ramses Amenophis is the era of the Exodus. The Scripture narrative describes this event as connected with the destruction of a Pharaoh, and the chronological calculation adopted by Rossellini would make it coincide with the last year of this monarch's reign. Wilkinson and Greppo, however, maintain that we need not necessarily suppose the death of a king to coincide with the exit from Egypt, as the Scripture speaks, with the exception of one poetical passage, of the destruction of Pharaoh's host rather than of the monarch's own death. But in Rossellini's scheme, this departure from the received interpretation is not wanted. Wilkinson makes the exodus to have taken place

in the fourth year of the reign of Thothmes III. (*Mat. Hierog.*, p. 4.—*Manners and Customs*, &c., vol. 1, p. 54.) Vast, however, as was the glory of this line of kings, it was eclipsed by the greater reputation of the chief of the next, or nineteenth dynasty, Ramses VI., the famed Sesostris (called also *Sesoosis* or *Sethos* and likewise *Ægyptus*, or *Rameses the Great*.—Compare *Champollion, Syst. Hierogl.*, p. 224, *seqq.*). Sesostris regenerated, in some sense, his country and nation, by chasing from it the last remnant of the stranger-races which had dwelt within the borders of Egypt, by giving to the Egyptian territory certain fixed limits, by dividing it into nomes, and by giving a powerful impulse to arts, to commerce, and to the spirit of conquest. One may see in Herodotus and Diodorus what a strong remembrance his various exploits in Africa, Asia, and perhaps even Europe, had left behind them. His labours in Egypt are attested by numerous monuments, not only from the Mediterranean to Syene, but far beyond, in Ethiopia, which at this time probably formed a portion of Egypt. (*Champollion, Syst. Hierogl.*, p. 239, 391.) The result of his military expeditions was to enrich his country with the treasures of Ethiopia, Arabia Felix, and India, and to establish a communication with the countries of the East by means of fleets which he equipped on the Red Sea. That the history of his conquests has been exaggerated by the priests of Egypt, whose interests he favoured, cannot be denied. Equally apparent is it that his history bears some resemblance to the legends of Osiris. These assimilations, however, of their heroes to their gods, were familiar to the priests of the land. (*Vid.* Sesostris.) This nineteenth dynasty, at the head of which stands Sesostris, consisted of six kings, all of whom bear, upon monuments, the name of Ramses, with various distinguishing epithets. The last of these is supposed to have been contemporary with the Trojan war, and to be the one called Polybus by Homer. The twentieth dynasty of Manetho also took its title from Thebes. Their names may still be read upon the temples of Egypt; but the extracts from Manetho do not give their epithets. In the failure of his testimony, Champollion Figeac has had recourse to the list given by Syncellus. The chief of this dynasty is celebrated, under the name of Remphis, or Rempsinitus, for his great riches. Herodotus gives him, for his successor, Cheops, the builder of the largest of the Pyramids. The same authority places Cephrenes, the builder of the second Pyramid, next in order; and, after him, Mycerinus, for whom is claimed the erection of the third Pyramid. The researches of the two Champollions have not discovered any confirmation of this statement of the father of profane history. The next dynasty, the twenty-first of Manetho, derived its name from Tanis, a city of Lower Egypt. It was composed of seven kings, the first of whom was the *Mendes* of the Greek historians, the *Smendis* of Manetho, whose name Champollion reads, upon the monument of his reign, *Mandoutheph*. He was the builder of the fabric known in antiquity by the name of the labyrinth. The other kings of this family are also commemorated. The account which has reached us of the building of the labyrinth, throws great light upon the state of the government of Egypt during the reign of Mendes and his successors. It was divided into as many separate compartments as there were *nomes* in Egypt, and in them, at fixed periods, assembled deputations, from each of these districts, to decide upon the most important questions. Hence we may infer, that, in the change of dynasty, the Egyptians had succeeded in the establishment of a limited monarchy, controlled like the constitutional governments of Europe, if not by the immediate representatives of the people, at least by the expression of the opinion of the *notables*. The ruins of Bubastis, in turn, present memorials of the reigns of the Bubastite kings. (*Bulletin des Sciences Hist.*,

7, 472) These succeeded the first dynasty of Tanites; and we find Egypt again immediately connected with Judea, and its history with that of the Scriptures. *Sesonehis*, the head of this dynasty, was the conqueror of Rehoboam, the son of Solomon, and the plunderer of the treasures of David. This king, the *Sesak* of the second Book of Kings, built the great temple of Bubastis, which is described by Herodotus, and likewise the first court of the palace of Karnac at Thebes. His son *Osorechon* (*Zorochi*), who also led an army into Syria, continued the important works commenced by his father. But their successor *Takelliothis*, is only known to us by a simple funeral picture, consecrated to the memory of one of his sons. This painting has been broken, and one half is preserved in the Vatican, while the other forms a part of the royal collection at Turin. Various buildings are found among the ruins of Heliopolis, and still more among those of Tanis, constructed in the reigns of the Pharaohs of the second Tanite dynasty. (*Bulletin des Sciences Hist.*, 7, 472.) Upon these the names of three of them have been deciphered, *Petubastes*, *Osorthos*, and *Psammos*. Champollion considers them as having immediately preceded the great Ethiopian invasion, which gave to Egypt a race of kings from that country. Manetho, however, places Bocchoris between these two races, forming his twenty-fourth dynasty of one Saite. The yoke of these foreign conquerors does not appear to have been oppressive, as is evident from the number of monuments that exist, not only in Ethiopia, but in Egypt, bearing dedications made in the name of the kings of this race, who ruled at the same time in both countries. The names inscribed on these monuments are *Schabak*, *Serckotheph*, *Tahrak*, and *Amenasa*, all of whom are mentioned, either by Greek or sacred historians, under the names of *Sabacon*, *Sevechus*, *Tharaca*, and *Anmeris*. (*Bulletin des Sciences Hist.*, *ubi supra*.) No more than three of these kings are mentioned in the list of Manetho as belonging to this dynasty, the last being included in that which follows. On the departure of the Ethiopians, the affairs of Egypt appear to have fallen into great disorder. This civil discord was at last composed by *Psammiticus* I. Memorials of his reign are found in the obelisk now on Monte Litorio at Rome, and in the enormous columns of the first court of the palace of Karnac at Thebes. (*Bulletin des Sciences Hist.*, vol. 7, p. 471.) The rule of Necho II. is commemorated by several *stela* and statues. It was this monarch that took Jerusalem, and carried King Jehoiachaz into captivity. On the isle of Philæ are found buildings bearing the legend of *Psammiticus* II., as well as of *Apries* (the *Hophras* of Scripture). An obelisk of his reign also exists at Rome. The greater part of the fragments of sculpture, scattered among the ruins of Sais, bear the royal legend of the celebrated Amasis, and a monolith chapel of rose granite, dedicated by him to the Egyptian Minerva, is in the museum of the Louvre. *Psammiticus* was the last of this dynasty of Saites. Few tokens of his short reign are extant, besides the inscription of a statue in the Vatican. He was defeated and dethroned by *Cambyses*: nor did he long survive his misfortune. With him fell the splendour of the kingdom of Egypt; and from this date (525 B.C.), the edifices and monuments assume a character of far less importance. Still, however, we find materials for history. Even the ferocious *Cambyses* is commemorated in an inscription on the statue of a priest of Sais, now in the Vatican. The name of *Darius* is sculptured on the columns of the great temple of the Oasis; and in Egypt we still read inscriptions dated in different years of the reigns of *Xerxes* and *Artaxerxes*. (*Bulletin des Sciences Hist.*, 7, 471.) During the reigns of the last three kings, a constant struggle was kept up by the Egyptians for their independence. The Persian yoke was for a moment shaken off by *Amartyas* and *Nephertus*. Two

Sphinges in the Louvre bear the legend of *Nephertus* and his successor *Achoris*, who are also commemorated by the sculptures of the temple of Elythya. In the Institute of Bologna there is a statue of the Mendesian *Nephertus*; and the names of the two *Nectanebi*, who succeeded him in the conduct of this national war, are still extant on several buildings of the isle of Philæ, and at Karnac, Kourna, and Saft. *Darius* Ochus, in spite of the valiant resistance of these last kings, again reduced Egypt to the condition of a Persian province; but his name is nowhere to be found among the remains yet discovered in Egypt. Thus, then, the researches of Champollion have brought to our view an almost complete succession of the kings of Egypt, from the invasion of the Hyksos to the final conquest by the Persians, whose empire fell to Alexander in 332 B.C. It tallies throughout, in a remarkable manner, with the remains of the historian Manetho; and, by the aid of his series of dynasties, the gaps left by hieroglyphic discoveries may be legitimately filled up. Before the former era all is dark and obscure; in the next part we have little but a list of names; but, from the reign of *Psammiticus* I., ample materials exist in the histories of Herodotus and Diodorus; and from the reign of *Darius* Ochus, the annals of Egypt become incorporated with those of Greece. Any farther reference, therefore, to the history of Egypt becomes superfluous in this place. (*Vid* Ptolemæus.) With regard, however, to the discoveries of Champollion, the following interesting particulars may be stated. *Philip Aridaus*, the brother of Alexander, is commemorated at Karnac, and on the columns of the temple at Asschnonneim. The name of the other Alexander, the son of the conqueror by Roxana, is engraved on the granite propylæa at Elephantine. *Ptolemy Soter*, and his son *Ptolemy Philadelphus*, have left the remembrance of their prosperous reigns in various important works. *Euergetes* I. not only ruled over Egypt, but rendered his name celebrated by his military expeditions, both in Africa and Asia. His titles are, therefore, not only inscribed on the edifices constructed during his reign in Egypt, but are to be met with in Nubia, particularly on the temple of Dakhê; and the *basso relieves*, on a triumphal gate constructed by him at Thebes, may be admired even among the ancient relics of the magnificence of the eighteenth dynasty. The temple of Antæopolis dates from the reign of *Ptolemy Philopator* and Arsinoë his wife. In his reign, too, the ancient palaces of Karnac and Luxor, at Thebes, were repaired. *Ptolemy Epiphanes*, and his wife *Cleopatra* of Syria, dedicated one of the many temples of Philæ, as well as the temple of Edfou. Of the Roman emperors we find inscribed in hieroglyphics the names and titles of *Augustus*, *Tiberius*, *Caligula*, *Claudius*, *Nero*, *Vespasian*, *Titus*, *Domitian*, *Nerva*, *Trajan*, *Adrian*, *Marcus Aurelius*, *Lucius Verus*, and *Commodus*. This last name is to be read four times among the inscriptions of the temple of Esné; which, before this discovery, was considered to have been erected in an age far more remote than is reached by any of our histories. So far from this, it is, in truth, with but one exception, the most modern of all the edifices yet discovered in the Egyptian style of architecture. Thus, then, as far down as the year 180 of our present era, the worship of the ancient Egyptian deities was publicly exercised, and preserved all its external splendour; for the temples of Dendera, Esné, and others constructed under the Roman rule, are, for size and labour, if not for their style of art, well worthy of the ages of Egyptian independence. Previous to these discoveries, it had become a matter of almost universal belief, that the arts, the writing, and even the ancient religion of Egypt, had ceased to be used from the time of the Persian conquest. (*American Quarterly Rev.*, No. 7, p. 34, *seqq.* — *Quarterly Journal of Science*, &c., New Series, 1833, *seqq.*)

9. *Egyptian Writing.*

In writing their language, the ancient Egyptians employed three different kinds of characters. First: *figurative*; or representations of the objects themselves. Secondly: *symbolic*; or representations of certain physical or material objects, expressing metaphorically, or conventionally, certain ideas; such as, a people obedient to their king, figured, metaphorically, by a bee; the universe, conventionally, by a beetle. Thirdly: *phonetic*, or representative of sounds, that is to say, strictly alphabetical characters. The phonetic signs were also portraits of physical and material objects; and each stood for the initial sound of the word in the Egyptian language which expressed the object portrayed: thus a lion was the sound *L*, because a lion was called *Labo*; and a hand a *T*, because a hand was called *Tot*. The form in which these objects were presented, when employed as phonetic characters, was conventional and *definite*, to distinguish them from the same objects used either figuratively or symbolically. Thus, the conventional form of the phonetic *T* was the hand open and outstretched. In any other form the hand would be either a figurative or a symbolic sign. The number of distinct characters employed as phonetic signs appears to have been about 120; consequently, many were homophones, or having the same signification. The three kinds of characters were used indiscriminately in the same writing, and occasionally in the composition of the same word. The formal Egyptian writing, therefore, such as we see it still existing on the monuments of the country, was a series of portraits of physical and material objects, of which a small proportion had a symbolical meaning, a still smaller proportion a figurative meaning, but the great body were phonetic or alphabetical signs: and to these portraits, sculptured or painted with sufficient fidelity to leave no doubt of the object represented, the name of hieroglyphics or sacred characters has been attached from their earliest historic notice. The manuscripts of the same ancient period make us acquainted with two other forms of writing practised by the ancient Egyptians, both apparently distinct from the hieroglyphic, but which, on careful examination, are found to be its immediate derivatives; every hieroglyphic having its corresponding sign in the *hieratic*, or writing of the priests, in which the funeral rituals, forming a large portion of the manuscripts, are principally composed; and in the *demotic*, called also the *enchorial*, which was employed for all more ordinary and popular usages. The characters of the hieratic are, for the most part, obvious running imitations or abridgments of the corresponding hieroglyphics; but in the demotic, which is still farther removed from the original type, the derivation is less frequently and less obviously traceable. In the hieratic, fewer figurative or symbolic signs are employed than in the hieroglyphic; their absence being supplied by means of the phonetic or alphabetical characters, the words being spelt instead of figured; and this is still more the case in the demotic, which is, in consequence, almost entirely alphabetical. After the conversion of the Egyptians to Christianity, the ancient mode of writing their language fell into disuse; and an alphabet was adopted in substitution, consisting of the twenty-five Greek letters, with six additional signs expressing articulations and aspirations unknown to the Greeks, the characters for which were retained from the demotic. This is the Coptic alphabet, in which the Egyptian appears as a written language in the Coptic books and manuscripts preserved in our libraries; and in which, consequently, the language of the inscriptions on the monuments may be studied. The original mode in which the language was written having thus fallen into disuse, it happened at length that the signification of the characters, and even the nature of the system of

writing which they formed, became entirely lost, such notices on the subject as existed in the early historians being either too imperfect, or appearing too vague, to furnish a clew, although frequently and carefully studied for the purpose. The repossession of this knowledge will form, in literary history, one of the most remarkable distinctions, if not the principal one, of the age in which we live. It is due primarily to the discovery by the French, during their possession of Egypt, of the since well-known monument, called the Rosetta Stone, which, on their defeat and expulsion by the British troops, remained in the hands of the victors, was conveyed to England, and deposited in the British Museum. On this monument the same inscription is repeated in the Greek and in the Egyptian language, being written in the latter both in hieroglyphics and in the demotic or enchorial character. The words Ptolemy and Cleopatra, written in hieroglyphics, and recognised by means of the corresponding Greek of the Rosetta inscription, and by a Greek inscription on the base of an obelisk at Philæ, gave the phonetic characters of the letters which form those words: by their means the names were discovered, in hieroglyphic writing, on the monuments of all the Grecian kings and Grecian queens of Egypt, and by the comparison of these names one with another, the value of all the phonetic characters was finally ascertained. The first step in this great discovery was made by a distinguished scholar of England, the late Dr. Young; the key found by him has been greatly improved, and applied with indefatigable perseverance, ingenuity, and skill to the monuments of Egypt, by the celebrated Champollion. (*Quarterly Journal of Science, &c., New Series*, vol. 1, p. 176, *seqq.*—Compare *Edinburgh Review*, Nos. 89 and 90.—*American Quarterly Review*, No. 2, p. 438, *seqq.*—*Foreign Quarterly Review*, No. 8, p. 438, *seqq.*, and the *Supplement to the Encyclopædia Britannica*, vol. 4, pt. 1, s. v. *Egypt*.—*Wiseman's Lectures*, p. 255, *seqq.*)

10. *Animal Worship.*

There was no single feature in the character and customs of the ancient Egyptians which appeared to foreigners so strange and portentous as the religious worship paid to animals. The pompous processions and grotesque ceremonies of this celebrated people excited the admiration of all spectators, and their admiration was turned into ridicule on beholding the object of their devotions. It was remarked by Clemens (*Pædag. lib.* 3) and Origen (*adv. Cels.* 3, p. 121), that those who visited Egypt approached with delight its sacred groves, and splendid temples, adorned with superb vestibules and lofty porticoes, the scenes of many solemn and mysterious rites. "The walls," says Clemens, "shine with gold and silver, and with amber, and sparkle with the various gems of India and Ethiopia; and the recesses are concealed by splendid curtains. But if you enter the penetralia, and inquire for the image of the god for whose sake the fane was built, one of the Pastophori, or some other attendant on the temple, approaches with a solemn and mysterious aspect, and, putting aside the veil, suffers you to peep in and obtain a glimpse of the divinity. There you behold a snake, a crocodile, or a cat, or some other beast, a fitter inhabitant of a cavern or a bog than a temple." The devotion with which their sacred animals were regarded by the Egyptians, displayed itself in the most whimsical absurdities. It was a capital crime to kill any of them voluntarily (*Herod.* 2, 65); but if an ibis or a hawk were accidentally destroyed, the unfortunate author of the deed was often put to death by the multitude, without form of law. In order to avoid suspicion of such an impious act, and the speedy fate which often ensued, a man who chanced to meet with the carcass of such a bird began immediately to wail and lament with the utmost vociferation, and to protest

that he found it already dead. (*Diodorus Siculus*, 1, 83.) When a house happened to be set on fire, the chief alarm of the Egyptians arose from the propensity of the cats to rush into the flames over the heads or between the legs of the spectators: if this catastrophe took place, it excited a general lamentation. At the death of a cat, every inmate of the house cut off his eyebrows; but at the funeral of a dog, he shaved his head and whole body. (*Herod.* 2, 66.) The carcasses of all the cats were salted, and carried to Bubastus to be interred (*Herod.* 2, 67); and it is said that many Egyptians, arriving from warlike expeditions to foreign countries, were known to bring with them dead cats and hawks, which they had met with accidentally, and had salted and prepared for sepulture with much pious grief and lamentation. (*Diod. Sic.* 1, 83.) In the extremity of famine, when they were driven by hunger to devour each other, the Egyptians were never accused of touching the sacred animals. Every nome in Egypt paid a particular worship to the animal that was consecrated to its tutelal god; but there were certain species which the whole nation held in great reverence. These were the ox (*vid.* Apis), the dog, and the cat; the hawk and the ibis; and the fishes termed oxyrhynchus and lepidotus. (*Strabo*, 812.) In each nome the whole species of animals, to the worship of which it was dedicated, was held in great respect; but one favoured individual was selected to receive the adoration of the multitude, and supply the place of an image of the god. Perhaps this is not far from the sense in which Strabo distinguishes the *sacred* from the *divine* animals. Thus, in the nome of Arsinoë, where crocodiles were sacred, one of this species was kept in the temple and worshipped as a god. He was tamed and watched with great care by the priests, who called him "Suchos," and he ate meat and cakes which were offered to him by strangers. (*Strabo*, 811.) In the same neighbourhood there was a pond appropriated to the feeding of crocodiles, with which it was filled, the Arsinoites carefully abstaining from hunting any of them. Sacred bulls were kept in several towns and villages, and nothing was spared that seemed to contribute to the enjoyment of these horned gods, which were pampered in the utmost luxury. Among insects, the cantharus, scarabæus, or beetle, was very celebrated as an object of worship. Plutarch says it was an emblem of the sun; but Horapollo is more particular, and informs us that there were three species of sacred beetles, of which one was dedicated to the god of Heliopolis, or the Sun; another was sacred to the Moon; and a third to Hermes or Thoth. The reasons he assigns for the consecration of this insect are derived from the notions entertained respecting its mode of reproduction and its habits, in which the Egyptians traced analogies to the movements of the heavenly bodies. It was believed that all these insects were of the male sex. The beetle was said to fecundate a round ball of earth, which it formed for the purpose. In this they saw a type of the sun, in the office of demigurgos, or as forming and fecundating the lower world (*Horapoll. Hieroglyph.* 1, 10.—*Plut. de Is. et Os.*, p. 355.—*Porphyr. de Abstin.*, lib. 4.—*Euscb. Præp. Evang.* 3, 4.) Nor was the adoration of the Egyptians confined to animals merely. Many plants were regarded as mystical or sacred, and none more so than the lotus, of which mention has already been made, in the section that treats of the fertility of Egypt. In the lotus, or *nymphaa nelumbo*, which throws its flowers above the surface of the water, the Egyptians found an allusion to the sun rising from the surface of the ocean, and it is on the blossom of this plant that the infant Harpocrates is represented as reposing. The peach-tree was also sacred to Harpocrates; and to him the first fruits of lentils and other plants were offered, in the month Mesori. It is well known, too, that the Egyptians worshipped the onion. Plutarch refers

this superstition to a fancied relation between this plant and the moon. Leeks also, and various legumina, were held in similar veneration. (*Minutus Felix*, p. 278.) The acacia and the heliotrope are said to have been among the number of those plants that were consecrated to the sun. (Compare *Kircher's Oedipus*, 3, 2.) The laurel was regarded as the most noble of all plants. We learn from Clemens Alexandrinus that there were thirty-six plants dedicated to the thirty-six genii, or decans, who presided over their portions of the twelve signs of the zodiac. (*Prichard's Analysis of Egyptian Mythology*, p. 301, *seqq.*)

11. Explanation of Animal Worship.

The origin of animal worship, and the reasons or motives which induced the Egyptians to represent their gods under such strange forms, or to pay divine honours to irrational brutes, and even to the meanest objects in nature, is an inquiry which has occupied the attention of the learned in various times. Herodotus pretended to be in possession of more information on this subject than he chose to make public. It has been conjectured that he was desirous of concealing his ignorance under a cloak of mystery. The later Greek writers seem to have been more intent on offering excuses for the follies of the Egyptians, than on unfolding the real principles of their mythology; and we find various and contradictory opinions maintained with equal confidence. It appears, indeed, that the Egyptian priests themselves, in the time of the Ptolemies, and at the era of the Roman conquest, were by no means agreed on this subject. To endeavour to explain it by a reference to the metamorphoses which the gods underwent, when they fled from Typhon and sought concealment under the forms of animals, is to account for an absurdity by a fable. To go back, as some do, to the standards, or banners, borne by the different tribes or communities that formed the component parts of the earlier population, is to invert the order of ideas. A people may choose for a standard the representation of an object which they adore; but they will not be found to adore any particular object because they may have chosen it for a standard or banner. The opinion, on the other hand, which refers animal worship to the policy of kings, and to their seeking to divide their subjects by giving them different objects of religious veneration, is an awkward application of the system of Euhemerus, according to which all religions were nothing in effect but civil institutions, the offspring of skillful legislators. Fetishism has been anterior to all positive law. Favoured by the interests of a particular class, it has been enabled, it is true, to prolong itself during a state of civilization and by the force of authority; but it must spring originally and freely from the very bosom of barbarism. Equally untenable is the position, which supposes, that the Egyptians were induced to pay divine honours to animals, out of gratitude for the benefits which they derived from them; to the cow and the sheep, for the clothing and sustenance which they afford; to the dog, for his care in protecting their houses against thieves; to the ibis, for delivering their country from serpents; and to the ichneumon, for destroying the eggs of the crocodile. This conjecture is refuted by the well-known fact, that a variety of animals which are of no apparent utility, and even several species which are noxious and destructive, and the natural enemies of mankind, received their appropriate honours, and were regarded with as much reverence as the more obviously useful members of the animal creation. The shrew-mouse, the pike, the beetle, the crow, the hawk, the hippopotamus, can claim no particular regard for the benefits they are known to confer on the human race; still less can the crocodile, the lion, the wolf, or the venomous asp urge any such pretension. Yet we have seen that all these creatures, and others of a sim-

fiar description, were worshipped by the Egyptians with the most profound devotion: nay, mothers even rejoiced when their children were devoured by crocodiles. It may be farther observed, that some of those animals which afford us food and raiment, and which are, on that account, among the most serviceable, were rendered of little or no utility to the Egyptians on account of this very superstition. They regarded it as unlawful to kill oxen for the sake of food, and not only abstained from slaughtering the sheep, but likewise, under a variety of circumstances, from wearing any garment made of its wool, which was regarded as impure, and defiling the body that was clothed with it. These considerations seem to prove, that the adoration of animals among the Egyptians was not founded on the advantages which mankind derive from them. Another attempt at explaining this mystery, which receives greater countenance from the general character of the Egyptian manners and superstition, is the conjecture of Lucian. (*De Astrolog.*—*ed. Bip.*, vol. 5, p. 218.) This writer pretends, that the sacred animals were only types or emblems of the asterisms, or of those imaginary figures or groups into which the ancients had, at a very early period, distributed the stars; distinguishing them by the names of living creatures and other terrestrial objects. According to Lucian, the worshippers of the bull Apis adored a living image of the celestial Taurus; and Anubis represented the Dog-star or the constellation of Sirius. This hypothesis has received more attention than any other among modern writers. Dupuis has made it the basis of a very ingenious attempt to explain the mythologue of Isis and Osiris, and several other fables of antiquity, which this author resolves into astronomical figments, or figurative accounts of certain changes in the positions of the heavenly bodies. (*Origine de tous les Cultes*, 2, 270, *seqq.*, *ed.* 1822.) The hypothesis of Lucian, however, will not endure the test of a rigid scrutiny. For if we examine the constellations of the most ancient spheres, we find but few coincidences between the zodia or celestial images, and that extensive catalogue of brute creatures which were adored as divinities on the banks of the Nile. Where, for example, shall we discover the ibis, the cat, the hippopotamus, or the crocodile? Besides, if we could trace the whole series of deified brutes in the heavens, it would still remain doubtful, whether the Egyptian animals were consecrated subsequently to the formation of the sphere, as types or images of the constellations; or the stars distributed into groups, and these groups named with reference to the quadrupeds, birds, and fishes that were already regarded as sacred. There are, indeed, many circumstances which might render the latter alternative the more probable. But the relation between the animals of the sphere and those of the Egyptian temples are by far too limited to warrant any such speculation; and Lucian, moreover, is an author who is by no means deserving of much credit on a subject of this nature. Porphyry, in his conjectures, approaches nearer the truth. The divinity, according to him, embraces all beings; he resides, therefore, in animals also, and man adores him wherever he is found. In other words, the worship of animals was intimately connected, according to this writer, with the doctrine of emanation. (*Porphyr. de Abstinencia*, 4, 9.—Compare *Eusebius, Præp. Evang.* 3, 4.) This explanation, however, does not go far enough. It takes no notice of that peculiar combination by which the worship of animals is made to assume a regular form, and to continue itself long after man has placed the deity far above the limits of physical existence.—The discovery of a mode of worship among certain savage tribes in our own days, perfectly analogous to the system of animal adoration which prevailed among the Egyptians, furnishes us with a certain clew amid these conflicting hypotheses, and that clew is Fetichism. We

perceive, remarks Heeren (*Ideen*, vol. 2, p. 664), the worship of animals from Ethiopia to Senegal, among nations completely uncivilized. Why, then, seek for a different origin among the Egyptians? Place among the African negroes of the present day corporations of priests arrived at the knowledge of the movement of the heavenly bodies, and preserving in their sanctuary this branch of human science screened from the curiosity of the uninitiated and profane. These sacerdotal corporations will never seek to change the objects of vulgar adoration; on the contrary, they will consecrate the worship that is paid them, and will give that worship more of pomp and regularity. They will seek, above all, to make the intervention of the sacerdotal caste a necessary requisite in every ceremony; they will then attach, in a mystic sense, these material objects of worship to their hidden science; and the result will be a system of religion precisely similar to that of Egypt, with Fetichism for its basis, the worship of the heavenly bodies for its outward characteristic, and within, a science founded on astronomy, and by the operation of which the fetichs, that serve as gods for the people, become merely symbols for the priests. It was thus that the priests of Meroë, in sending forth their sacerdotal colonies, carefully observed the rule of attaching to themselves the natives among whom they chanced to come, by adopting a part of their external worship, and by assigning to the animals which these natives adored a place in the temples erected by them, which thence became the common sanctuaries and the centres of religion for all. To invert the order to which we have just alluded is a palpable error. What had been for a long time acknowledged for a sign or symbol, could not, on a sudden, be transformed into a god; but it is easy to conceive how that which passes for a god with the mass of the people may become an allegory or emblem with a more enlightened caste. Apis, for example, owed to certain spots, at first fortuitous, afterward renewed by art, the honour of being one of the signs of the zodiac. The salacity of the goat made it a type of the great productive power in nature. The cat was indebted to its glossy fur, and the ibis to its equivocal colour, which appeared, as it were, something intermediate between the night and the day, for being symbols of the moon; the falcon became one of the year, and the scarabeus of the sun. The case was the same with trees and plants, fetichs no less highly revered than animals. The leaves of the palm, the longevity of which tree seemed a special privilege from on high, adorned the couches of the priests, because this tree, putting forth branches every month, marks the renewal of the lunar cycle. (*Diod. Sic.* 1, 34.—*Plin.* 13, 17.) The lotus, known also as a sacred plant to the people of India, the cradle of Brahma (*Maurice, Hist. of Indost.* 1, 60), as well as that of Harpocrates; the persea, brought from Ethiopia by a sacerdotal colony (*Diod. Sic. l. c.*—*Schol. in Nicandr. Therapeut.* v. 764); the amoglossum, whose seven sides recall to mind the seven planets; and which was styled, on this account, the glory of the skies (*Kircher, Ed. Egypt.* 3, 2); the onion, whose pellicles were thought to resemble so many concentric spheres, and which was therefore viewed as a vegetable image of the universe, always different and yet always the same, and where each part served as the representative of the whole; all these became so many symbols having more or less connexion with astronomical science. In them the people beheld the objects of ancient adoration, and the priests characteristics that enabled them to mark out and perpetuate their scientific discoveries. To these elements of worship was added, without doubt, the influence of localities, that at one time disturbed by partial differences the uniformity which the sacred caste were desirous of establishing, and at another associated with the rites, that had reference to the general principles of astronomical

science, certain practices which resulted merely from peculiarity of situation. Hence, on the one hand, the diversity of animals adored by the communities of Egypt. Had these been merely pure symbols, would the priests, who sought to impart a uniform character to their institutions, have ever introduced them! These varieties in the objects of worship are only to be explained by the yielding, on the part of a sacerdotal order, to the antecedent habits of the people. (*Vogel, Rel. der Äg.*, p. 97, *seqq.*) Hence, too, on the other hand, those numerous allegories, heaped up together without being connected by any common bond, and forming, if the expression be allowed, so many layers of fable. Apis, for example, at first the manitou-prototype of his kind, afterward the depository of the soul of Osiris, is found to have a third meaning, which holds a middle place between the other two. He is the symbol of the Nile, the fertilizing stream of Egypt; and while his colour, the spots of white on his front, and the duration of his existence, which could not exceed twenty-five years, have a reference to astronomy, the festival of his reappearance was celebrated on the day when the river begins to rise. The result, then, of what we have here advanced, is simply this: The animal-worship of the Egyptians originated in fetichism. The sacerdotal caste, in allowing it to remain unmolested, arrayed it in a more imposing garb, and, while they permitted the mass of the people to indulge in this gross and humiliating species of adoration, reserved for themselves a secret and visionary system of pantheism or emanation. (*Constant, de la Religion*, 3, 62, *seqq.*—*Prichard's Analysis of Egyptian Mythology*, p. 330, *seqq.*)

12. Egyptian Castes.

Among the institutions of Egypt, none was more important in its influence on the character of the nation, than the division of the people into tribes or families, who were obliged by the laws and superstitions of the country to follow, without deviation, the professions and habits of their forefathers. Such an institution could not fail of impressing the idea of abject servility on the lower classes; and, by removing in a great measure the motive of emulation, it must have created, in all, an apathy and indifference to improvement in their particular professions. Wherever the system of castes has existed, it has produced a remarkably permanent and uniform character in the nation; as in the example furnished by the natives of Hindustan. These people agree in almost every point with the description given of them by Megasthenes, who visited the court of an Indian king soon after the conquest of the East by the Macedonians. We have no very accurate and circumstantial account of the castes into which the Egyptian people were divided, and of the particular customs of each. It appears, indeed, that innovations on the old civil and religious constitution of Egypt had begun to be introduced as early as the time of Psammetichus, when the ancient aversion of the people to foreigners was first overcome. The various conflicts which the nation underwent, between that era and the time when Herodotus visited Egypt, could not fail to break down many of the fences, which ancient priestcraft had established for maintaining the influence of superstition. Herodotus is the earliest writer who mentions the castes or hereditary classes of the Egyptians, and his account appears to be the result of his personal observation only. Had this historian understood the native language of the people; had he been able to read the books of Hermes, in which the old sacerdotal institutions were contained, we might have expected from him as correct and ample a description of the distribution of the castes in Egypt, as that which modern writers have gained in India from the code of Menu, respecting the orders and subdivisions of the community in Hindustan. Diodorus, who had more favourable

opportunities of information, and who seems to have made a very diligent use of them, may be supposed to be more accurate, in what refers to the internal polity of this nation, than Herodotus. Strabo has mentioned, in a very summary manner, the division of the Egyptians into classes. He distinguishes the two higher ranks, namely, the sacerdotal and the military classes, and includes all the remainder of the community under the designation of the agricultural class, to whom he assigns the employments of agriculture and the arts. Diodorus subdivides this latter class. After distinguishing from it the sacerdotal and military orders, he observes, that the remainder of the community is distributed into three divisions, which he terms *Herdsmen*, *Agriculturists*, and *Artificers*, or men who laboured at trades. Herodotus very nearly agrees in his enumeration with that of Diodorus. His names for the different classes are as follows: 1. *Priests*, or the sacerdotal class. 2. *Warriors*, or the military class. 3. *Cowherds*. 4. *Swineherds*. 5. *Traders*. 6. *Interpreters*. 7. *Pilots*. In this catalogue the third and fourth classes are plainly subdivisions of the third of Diodorus, whom that writer includes under the general title of herdsmen. The caste of interpreters, as well as that of pilots, must have comprised a very small number of men, since the Egyptians had little intercourse with foreigners, and, until the time of the Greek dynasty, their navigation was principally confined to sailing up and down the Nile. The pilots were probably a tribe of the same class with the artificers or labouring artisans of Diodorus. The traders of Herodotus must be the same class who are called agriculturists by Diodorus. Thus, by comparing the different accounts, we are enabled to arrange the several branches of the Egyptian community into the following classes. 1. The Sacerdotal order. 2. The Military. 3. The Herdsmen. 4. The Agricultural and Commercial class. 5. The Artificers, or labouring artisans. The employments of all these classes were hereditary, and no man was allowed by the law to engage in any occupation different from that in which he had been educated by his parents. It was accounted an honourable distinction to belong either to the sacerdotal or the military class. The other orders were considered greatly inferior in dignity, and no Egyptian could mount the throne who was not descended from the priesthood or the soldiery. (*Prichard's Analysis of Egyptian Mythology*, p. 373, *seqq.*) After death, however, no grade was regarded, and every good soul was supposed to become united to that essence from which it derived its origin. (*Wilkinson, Manners and Customs*, &c., 1, 245.)

13. Egyptian Priesthood.

The inquiry respecting the sacerdotal caste of Egypt is rendered a difficult one principally on the following account, because the writers, from whose statements we obtain our information, lived in an age when the Egyptian priesthood had already suffered many and important alterations, and had been deprived of a large portion of their former consideration and influence. Each successive revolution in the state must have had a direct bearing upon them, or, rather, they must have been the first with whom it came in contact. Their political influence, therefore, must have been gradually diminished, and their sphere of action circumscribed. Under the Persian sway, in particular, their power must have been reduced to within but narrow limits, and our only wonder is, when we consider the strong hostility displayed by these conquerors towards the sacerdotal or ruling caste, that it did not fall entirely to the ground. Herodotus then, and still more the writers from whom Diodorus Siculus has received his information on this subject, saw merely the shadow of that extensive power and influence which the priests of Egypt had formerly possessed.

And yet, even in the statements which we obtain from this quarter, traces may easily be found of what the Egyptian hierarchy once was; so that from these, when taken together, we are enabled to form a tolerably accurate idea of the earlier power which this remarkable order had enjoyed. The sacerdotal caste was spread over the whole of Egypt; their chief places of abode, however, were the great cities, which, at one time or other, had been the capitals of the land, or else had held a high rank among the other Egyptian cities. These were Thebes, Memphis, Sais, Heliopolis, &c. Here, too, were the chief temples, which are so often mentioned in the accounts of Herodotus and other writers. Every Egyptian priest had to belong to the service of some particular deity, or, in other words, to be attached to some temple. The number of priests for any deity was never determined; nor could it indeed have been subjected to any regulations on this head, since priesthood was hereditary in families, and these must have been more or less numerous according to circumstances. Not only was the priestly caste hereditary in its nature, but also the priesthoods of individual deities. The sons, for example, of the priests of Vulcan at Memphis, could not enter as members into the sacerdotal college at Heliopolis; nor could the offspring of the priests of Heliopolis belong to the college of Memphis. Strange as this regulation may appear, it was nevertheless a natural one. Each temple had extensive portions of land attached to it, the revenues of which, belonging as they did to those whose forefathers had erected the temple, were received by the priests as matters of hereditary right, and made those who tilled these lands be regarded as their dependants or subjects. Hence, as both the temple-lands and revenues were inherited, the sacerdotal colleges had of consequence to be kept distinct. The priesthood, moreover, of each temple was carefully organized. They had a high-priest over them, whose office was likewise hereditary. It need hardly be remarked, that there must have been gradations also among the various high-priests, and that those of Thebes, Memphis, and the other chief cities of the country, must have stood at the head of the order. These were, in a certain sense, a species of hereditary princes, who stood by the side of the monarchs, and enjoyed almost equal privileges. Their Egyptian title was *Piromis*, which Herodotus translates by *καλὸς κἀγαθός*, i. e., "noble and good," and which points not so much to moral excellence as to nobility of origin. (Compare *Welker, Theognidis Reliquie*, p. xxiv.) Their statues were placed in the temples. Whenever they are mentioned in the history of the country, they appear as the first persons in the state, even in the Mosaic age. When Joseph was to be elevated to power, he had to connect himself by marriage with the sacerdotal caste, and was united to the daughter of the high-priest at On, or Heliopolis. The organization of the inferior priesthood was different probably in different cities, according to the situation and wants of the surrounding country. They formed not only the ruling caste, and supplied from their number all the offices of government, but were in possession likewise of all the learning and knowledge of the land, and the exercise of this last had always immediate reference to the wants of the adjacent population. We must banish the idea, then, that the priests of Egypt were merely the ministers of religion, or that religious observances constituted their principal employment. They were, on the contrary, judges also, physicians, astronomers, architects; in a word, they had charge of every department that was in any way connected with learning and science. It appears, from the whole tenor of Egyptian history, that each of the great cities of the land possessed originally one chief temple, which, in process of time, became the head temple of the surrounding district, and the deity worshipped in it the

local or patron deity of the adjacent country. The priests of Memphis were always styled (according to the nomenclature of the Greeks) priests of Vulcan; those of Thebes, priests of the Theban Jove; those of Sais, priests of the Sun, &c. These head-temples mark the first settlements of the sacerdotal colonies as they gradually descended the valley of the Nile. The number of deities to whom temples were erected, in Upper Egypt at least, seem to have been always very limited. In this quarter we hear merely of the temples of Ammon, Osiris, Isis, and Typhon. In Middle and Lower Egypt, the number appears to have been gradually enlarged.—The next subject of inquiry has reference to the revenues of the sacerdotal order. Here also we must dismiss the too common opinion, that the priests of Egypt were a class supported by the monarch or the state. They were, on the contrary, the principal landholders of the country, and, besides them, the right of holding lands was enjoyed only by the king and the military caste. Changes, of course, must have ensued amid the various political revolutions to which the state has been subject, in this important branch of the sacerdotal power, yet none of such a nature as materially to affect the right itself; and hence we find that a large, if not the largest and fairest, portion of the lands of Egypt, remained always in the hands of the priests. To each temple, as has already been remarked, were attached extensive domains, the common possession of the whole fraternity, and their original place of settlement. These lands were let out for a moderate sum, and the revenue derived from them went to the common treasury of the temple, over which a superintendent, or treasurer, was placed, who was also a member of the sacerdotal body. From this treasury were supplied the wants of the various families that composed the sacred college. They had also a common table in their respective temples, which was daily provided with all the good things, not excepting imported wines, that their rules allowed. So that no part of their private property was required for their immediate support. For that they possessed private property is not only apparent from the circumstance of their marrying and having families, but it is also expressly asserted by Herodotus. From all that has been said then, it follows, that the sacerdotal families of Egypt were the richest and most distinguished in the land, and that the whole order formed, in fact, a *highly privileged nobility*. The priests of Egypt were distinguished for great cleanliness of person and peculiarity of attire. It cannot be doubted but that the nature of the climate and the character of the country exercised a great influence, not only on these points, but also on their general mode of life; though, independent of this, they would seem to have been well aware how important agents general cleanliness and frequent ablutions become in producing and establishing the blessings of health, both in individuals and communities. Hence the conspicuous example of external cleanliness which they made a point of showing the lower orders. They wore garments of linen, not, as some think, of fine cotton (*Schmidt, de Sacerdotibus Ægypt.*, p. 26), fresh washed, taking particular care to have them always clean. They shaved all parts of their body once in three days. They wore shoes made of byblus, bathed themselves twice in cold water by day and twice by night, and entirely rejected the use of woollen garments. (*Heeren's Ideen*, 2, 2, 125, seqq.)

14. Motives for Embalming Bodies.

It has often been observed, that the practice of embalming the dead, and preserving them with so much care and in so costly a manner, seems to indicate some peculiarity in the opinions of the Egyptian philosophers respecting the fate of the soul. On this subject we have no precise and satisfactory information. The an-

cient writers have left us only a few hints, more or less obscure, which scarcely afford anything beyond a mere foundation for conjectures. The President de Goguet, relying on a statement of Servius, supposes that the Egyptians embalmed their dead for the sake of maintaining the connexion between the soul and the body, and preventing the former from transmigrating. (*Origin of Laws, &c.*, vol. 3, p. 68, *Eng. transl.*) According to the Egyptian doctrine of transmigration, as explained by Herodotus (2, 127), the soul of a man passed through the bodies of living creatures, and returned to inhabit a human form at the expiration of three thousand years. The cycle, however, does not commence until the body begins to perish, and the second human habitation of the soul is a new one. The pains and torments, therefore, of passing through this cycle of three thousand years, and through animals innumerable, might be reserved for those whose actions in life did not entitle them to be made into mummies, and whose bodies would therefore be exposed to decay. In a second trial in the world, the unfortunate penitent might avoid his former errors. Hence, say the advocates for this opinion, the body of a father or ancestor was often given as a pledge or security, and it was one that was valued more highly than any other. It was the most sacred of all the obligations which a man could bind himself by, and the recovery of the pledge, by performing the stipulated condition, was an indispensable duty. (*Long's Anc. Geogr.*, p. 61.) Others have imagined, that the views with which the Egyptians embalmed their dead bodies were more akin to those which rendered the Greeks and Romans so anxious to perform the usual rites of sepulture to their departed warriors, namely, an idea that these solemnities expedited the journey of the soul to the appointed region, where it was to receive judgment for its former deeds, and to have its future doom fixed accordingly. This, they maintain, is implied by the prayer, said to have been uttered by the embalmers in the name of the deceased, entreating the divine powers to receive his soul into the regions of the gods. (*Porphy. de Abstem.*, 4, 10.—*Prichard's Analysis of Egyptian Mythology*, p. 200.) Perhaps, however, the practice of embalming in Egypt was the result more of necessity than of choice, and, like many other of the customs of the land, may have been identified by the priests with the national religion, in order to ensure its continuance. The rites of sepulture in Egypt grew out of circumstances peculiar to that country. The scarcity of fuel precluded the use of the funeral pile; the rocks which bounded the valley denied a grave; and the sands of the deserts afforded no protection from outrage by wild beasts; while the valley, regularly inundated, forbade it to be used as a charnel-house, under penalty of pestilence to the living. Hence grew the use of antiseptic substances, in which the nation became so skilled, as to render the bodies of their dead inaccessible to the ordinary process of decay.

15. Arts and Manufactures of the Egyptians.

The topics on which we intend here to touch, derive no small degree of elucidation from the paintings discovered in the tombs of Egypt. Weaving appears to have been the employment of a large majority of the nation. According to Herodotus (2, 35), it was an occupation of the men, and, therefore, not merely a domestic employment, but a business carried on also in large establishments or manufactories. The process of weaving is frequently the subject of Egyptian paintings. It is depicted in the most pleasing manner in the drawing given by *Minutoli* (pl. 24, 2) from the tombs of Beni Hassan. The loom is here of very simple construction, and is fastened to four props or supports driven into the ground. The finished part of the work is checkered green and yellow, the byssus being generally dyed before weaving. Even as early

as the time of Moses, this class of manufactures had attained a very great perfection (*Goguet, Origin of Laws, &c.*, vol. 2, p. 86, *seqq.*); and, at a still more distant period, the time of Joseph (*Genesis*, 45, 22), fine vestments were among the articles most usually bestowed as presents. We have no necessity, however, to go back to these authorities; the monuments speak a language that cannot be misunderstood. Both in the plates accompanying the great French work on Egypt, as well as the drawings obtained by Belzoni from the tombs of the kings at Thebes, and those given by *Minutoli*, we see these vestments in all their gay colours, and of various degrees of fineness. Some are so fine that the limbs appear through them. (Compare, in particular, the vestment of the king, as given in the *Description de l'Égypte, Planches*, vol. 2, pl. 31, and Belzoni's plates.) Others, on the contrary, are of a thicker texture. The kings and warriors commonly wear short garments; the agricultural and working classes, merely a kind of white apron. The priests have long vestments, sometimes white, at other times with white and red stripes: sometimes adorned with stars, at other times with flowers, and again glittering with all the colours of the East. Whether silk vestments can be found among them remains still undecided. (*Heeren's Ideen*, vol. 2, pt. 2, p. 368, *seqq.*) The Egyptians, from a most remote era, were celebrated for their manufacture of linen. The quantity, indeed, that was manufactured and used in Egypt was truly surprising; and, independently of that made up into articles of dress, the great abundance used for enveloping the mummies, both of men and animals, show how large a supply must have been kept ready for the constant demand at home, as well as for that of the foreign market. That the bandages employed in wrapping the dead are of linen, and not, as some have imagined, of cotton, has been ascertained by the most satisfactory tests. (*Wilkinson*, vol. 3, p. 115.) That the skill of the Egyptians in the application of colours kept pace with that displayed in the art of weaving, is evident from what has already been remarked. We find among them all colours; white, yellow, red, blue, green, and black. What the colouring materials themselves were, how far they were obtained from Egypt, or to what extent they were brought from Babylonia and India, cannot be clearly determined. That the Tyrians had a share in these will appear more than probable, when we call to mind that they were permitted to have an establishment or factory at Memphis. Pliny (35, 42) extols the beautiful pigments of the Egyptians, and the testimony of all modern travellers is in full accordance with his statements. The Egyptians mixed their paint with water, and it is probable that a little portion of gum was sometimes added, to render it more tenacious and adhesive. In most instances we find red, green, and blue adopted; a union which, for all subjects and in all parts of Egypt, was a particular favourite. When black was introduced, yellow was added to counteract or harmonize with it; and, in like manner, they sought for every hue its congenial companion. The following analysis of Egyptian colours, that were brought by Wilkinson from Thebes, is given by Dr. Ure. "The colours are green, blue, red, black, yellow, and white. 1. The green pigment, scraped from the painting in distemper, resists the solvent action of muriatic acid, but becomes thereby of a brilliant blue colour, in consequence of the abstraction of a small portion of yellow ochreous matter. The residuary blue powder has a sandy texture; and, when viewed in the microscope, is seen to consist of small particles of blue glass. On fusing this vitreous matter with potash, digesting the compound in diluted muriatic acid, and treating the solution with water of ammonia in excess, the presence of copper becomes manifest. A certain portion of precipitate fell, which, being dissolved in muriatic acid and tested, proved to

be the oxyde of iron. We may hence conclude, that the green pigment is a mixture of a little ochre, with a pulverulent glass, made by vitrifying the oxydes of copper and iron with sand and soda. 2. The blue pigment is a pulverulent blue glass, of like composition, without the ochreous admixture, brightened with a little of the chalky matter used in the distemper preparation. 3. The red pigment is merely a red earthy bole. 4. The black is bone black, mixed with a little gum, and containing some traces of iron. 5. The white is nothing but a very pure chalk, containing hardly any alumina, and a mere trace of iron. 6. The yellow pigment is a yellow iron ochre." (*Wilkinson*, vol. 3, p. 301.) Next in importance to weaving must be ranked *Metal-lurgy*. As far as we can judge from the colour, which is always green, brass seems to have been constantly employed where in other nations iron would be. The war-chariots appear to be entirely of the former metal. Their green colour, as well as their shape, and the lightness and elegance of their wheels, are thought clearly to indicate this. The arms, moreover, of the Egyptians appear to be nearly all of brass, and not only the swords, but the bows also, and quivers are made of it. These, together with the instruments for cutting that are found depicted among the hieroglyphics, are always green. In the infancy of the arts and sciences, the difficulty of working iron might long withhold the secret of its superiority over copper or bronze; but it cannot reasonably be supposed that a nation so far advanced, and so eminently skilled in the art of working metals as the Egyptians, should have remained ignorant of its use, even if we had no evidence of its having been known to the Greeks and other people; and the constant employment of bronze arms and implements is not a sufficient argument against their knowledge of iron, since we find the Greeks and Romans made the same things of bronze, long after the period when iron was universally known. If we reject this view of the question, we must come at once to the conclusion that the Egyptians possessed an art of hardening copper and bronze which is now lost to the world. The skill of the Egyptians in compounding metals is abundantly proved by the vases, mirrors, arms, and implements of bronze discovered at Thebes; and the numerous methods they adopted for varying the composition of bronze by a judicious mixture of alloys, are shown in the many qualities of the metal. They had even the secret of giving to bronze or brass blades a certain degree of elasticity, as may be seen in the dagger of the Berlin museum. Another remarkable feature in their bronze is the resistance it offers to the effects of the atmosphere; some continuing smooth and bright, though buried for ages, and since exposed to the damp of European climates. (*Wilkinson*, vol. 3, p. 253.) Other lost arts in metallurgy may be evidenced by the well-known fact, that the Hebrew legislator inferentially ascribes to the Egyptian chemists the art of making gold liquid, and of retaining it in that state. This we have not the power to do. Still, however, it must be confessed, that the Egyptians cannot properly be considered as at any time acquainted with the science of chemistry; though they were early made aware of various chemical facts, and many undoubted proofs of this have been collected in one or two not inconsiderable works devoted to the subject. Their progress in the manufacture of not only white but coloured glass may also be instanced. Seneca informs us that they made artificial gems of extraordinary beauty. (*Epist.*, 90.) They had a method of purifying natron, and of extracting potash from cinders. They prepared lime by the calcination of calcareous stones, and had an intimate knowledge of the uses to which it may be applied, as also that it renders the carbonate of soda caustic. Litharge, together with the vitriolic and many other

salts, were perfectly known to them. They made wine, vinegar, and even beer. Their method of embalming, whatever it was, may be reckoned among the evidences of their chemical knowledge. The statements on this subject by Herodotus and Diodorus Siculus are very unsatisfactory; and there is reason to believe, as it was the object of the embalmers to shroud their art in mystery, that those writers were either totally deceived, or, at least, that the mummifying drug was artfully concealed from their knowledge. Another important branch of the domestic arts was *Pottery*, in which the Egyptians displayed a skill not at all inferior to that of the Greeks; and they who suppose that graceful forms in pottery, porcelain, bronze, or even more precious materials, were indigenous to Greece alone, will find many things to undeceive them in the paintings of Egypt. The country possessed a species of clay extremely well adapted to this purpose, and which is still found there. (*Reynier, Economie des Egypt.*, p. 274.) Coptos was the chief seat of this branch of industry, as *Keft* (or *Kuft*), in its immediate vicinity, is at the present day. The vases thus manufactured served for holding the water of the Nile, to which they were believed to impart an agreeable coolness, an opinion that prevails even in modern times. Besides, however, being applied to household purposes, they were used also for the purpose of holding the mummies of the sacred animals, such as the ibis and others. The vases depicted on the monuments of Egypt are sometimes adorned with the most brilliant colours. As to the elegance of form and ornament in domestic and other articles, the Egyptians can stand comparison with any other nation of antiquity, the Greeks not excepted. Their couches and seats might serve as patterns even for our own; their silver tripods, beautiful baskets, and distaffs, as we see them in paintings, were known even in the days of the *Odyssey* (4, 128), and their musical instruments exceed those of modern times in the beauty and variety of their shape. Those who wish to examine more fully into this branch of our subject are referred to Rossellini's great work, or the more accessible one of Wilkinson. The productions of the goldsmiths and silversmiths of Thebes are exhibited by Rossellini, and they fully demonstrate the high pitch of refinement to which they had brought the working of the precious metals. He exhibits gold and silver tureens, urns, vases, banqueting cups, &c., of the most exquisitely beautiful workmanship, and of the most tasteful as well as elegant forms. In surveying them, the classical reader will be convinced that Homer drew little on his imagination in describing the gift of plate made to Helen by the wife of the Egyptian king Thone. But Homer ascribes still more extraordinary wonders to the goldsmiths of the same time. They must have succeeded in uniting the most skilful mechanical clockwork with the workmanship of gold; for he describes golden statues, thrones, and footstools moving about as if instinct with life. It would appear, indeed, that we had made, at the present day, little or perhaps no improvement on the forms of the vases and vessels to which we have above referred, and that an Egyptian buffet or sideboard, with all its details, not excluding dishes, plates, knives, and spoons, near four thousand years ago, bore a striking resemblance to the sideboards of modern palaces and villas. Still farther, a survey of the trades and manufactures of Egypt, as afforded by the ancient paintings, exhibits, in a great degree, the same tools, implements, and processes, as are employed in workshops and manufactories at the present day. The whole process of manufacturing silk and cotton, with all its details of reeling, carding, weaving, dyeing, and patterning, may be more especially named. (*Foreign Quarterly Review*, No 32, p. 308, seqq.)

16. *Trade of Egypt.*

Nature has destined Egypt, by its products, its general character, and its geographical position, for one of the principal trading countries of the globe. Neither the despotism under which it has groaned for centuries, nor the bloody feuds and wars of which it has so often been the scene, have operated, for any length of time, to deprive it of these advantages; the purposes of Nature may be impeded, but they cannot be wholly destroyed. The situation of Egypt, a fertile district, abounding in the first necessities of life, between the arid deserts of Asia and Africa, has in all ages given it a value which, in another position, it could not have. From the time of Jacob to the present day, it has been the granary of the less fertile neighbouring countries. The natural facilities for internal communication were, at an early period, increased by the formation of canals, which united the various arms of the river that bound or flow through the Delta. From Syene to about lat. 31° N. there is one uninterrupted boat-navigation, which is seldom impeded for want of water. The conveyance of articles up the stream is favoured at certain seasons by the steady winds from the north. A description of the Nile-boad, called *Baris*, is given by Herodotus (2, 96). One of the great national festivals, that of Artemis at Bubastis, was celebrated during the annual inundation: the people, in boats, sailed from one town to another, and their numbers were increased by the inhabitants of every town that was visited. As it was an idle time for the agriculturists, like the winter of other climates, it was spent in carousing and drunkenness. The quantity of wine consumed was immense, and the whole of it was procured by giving in exchange Egyptian commodities. The Egyptians were never a nation of sailors, for their country furnished no materials for building large vessels. Till the time of Psammetichus, foreigners, though allowed to trade there, were subject to many strict regulations, and were regarded as suspicious persons. Egypt, being a grain-country, would be more likely to receive the visits of foreigners, than to make, herself, any active commercial speculations. The later Pharaohs, after Psammetichus, as also the Ptolemies, could only then build fleets when the woods of Phœnicia were under their control; and it is well known what bloody wars were carried on for the possession of these regions between the Ptolemies and Seleucidæ. It may be easily imagined, too, that the Tyrians and Sidonians were never anxious to make the Egyptians a maritime people, even if the latter had possessed the inclination to become such. The true reason why the Egyptians forbade all foreigners to approach their coast, is to be found in the peculiar character of early commerce. All the nations that trafficked on the Mediterranean were at that time pirates, with whom the carrying away the inhabitants from the coasts and selling them for slaves had become a lucrative branch of commerce. It was natural, then, that a people who had no ships of their own to oppose to such visitants, should forbid them, under any pretext, to approach their coasts. Passages occur, it is true, in the ancient writers, which render it doubtful whether there were not some exceptions to what has just been remarked. Homer makes Menelaus to have sailed to Egypt, and Diodorus Siculus mentions a maritime city, named Thonis, to which he assigns a great antiquity. The colonies, too, that are said to have sailed from Egypt to Greece, as, for example, those of Danaus and Cecrops, suppose an acquaintance with the art of navigation. The question, however, admits of a serious consideration, whether the Phœnicians were not in these cases the agents of commerce and transportation. The reign of Psammetichus and his successors changed the character of the Egyptians, or at least altered the old and settled policy of the country. Foreign merchants were sub-

ject to fewer restraints; the exchange of Egyptian commodities was extended; and, as Herodotus expressly remarks, agriculture and individual wealth were never so much improved in Egypt as under this system of free trade. The Egyptian kings now acquired a fleet, the materials for which, or the vessels themselves, they could procure from the Phœnicians or the Greeks. Neco, the successor of Psammetichus, and the conqueror of Jerusalem (*Herod.*, 2, 159.—Compare *Kings*, book 2, ch. 23, and *Jeremiah*, ch. 46), formed the project of uniting the Nile to the Red Sea by a canal: this canal was not completed till the time of Darius I., the Persian king. The object of the Pharaohs and the monarchs of Persia was to facilitate the transportation of commodities from the Red Sea to Egypt; for the Egyptians had long been accustomed to receive the products of India and Arabia up this gulf. This artificial channel was neglected on account of the difficulty of navigating the northern part of the Red Sea; it existed under the Ptolemies, but a land communication was also formed between the Coptos and the ports of Myos-hormos and Berenice on the gulf, and this remained for a long time the great commercial road between the western and the eastern world. In Upper Egypt, the city of Thebes was once the centre of commerce for Africa and Arabia: under its colossal porticoes and market-houses, the wares of southern Africa, and the products of Arabia and India, were collected. Its fame had spread, probably through the Phœnician traders, as far as the country of the Homeric poems (*Il.*, 9, 381). A modern traveller, Denon, standing amid the ruins of Thebes, could feel and comprehend the advantages of its situation: he could compute the number of days' journey which separated him from the towns of Arabia, the emporium of Meorœ, and the cities of central Africa. In the mountains east of Thebes, the precious metals were once found: the mines were worked by prisoners of war or by slaves. Agatharchides, a Greek geographer (*Geogr. Gr. Min.*, vol. 1, p. 212, *ed. Hudson*), in the time of the sixth Ptolemy, visited these mines, of which he has given a most exact description. Thus Thebes possessed, in the precious metals, one of those articles of commerce which invite strangers. Memphis, in Lower Egypt, was the centre of commerce when Herodotus visited Egypt. The gold, the ivory, and the slaves of Africa, the salt of the desert, wine imported from Greece and Phœnicia twice a year, with the products of India and Yemen, were collected in this market. In exchange, the merchants received the precious metals, grain, and linen (or perhaps cotton) cloths, which Herodotus compares with those of Colchis. Amasis, who was a usurper, and a prince fond of foreign luxuries, did not scruple to make great innovations. He admitted foreigners more freely into Lower Egypt, and appointed Naucratis, on the Canopic branch, as the residence of the Greek merchants. He carried his liberality so far as to permit non-resident Greeks to build temples to their national gods, and use the precincts as market-places: several Ionian and Dorian cities of Asia, together with the town of Mytilene, built a noble temple, called the Hellenium, and, by their joint votes, appointed the superintendents of the market and the commercial establishment. Some other Greek towns also followed their example. (*Long's Anc. Geogr.*, p. 64, *seqq.*—*Heeren's Ideen*, vol. 2, pt. 2, p. 373, *seqq.*)

17. *Style of Egyptian Art.*

The same veneration for ancient usage and the stern regulations of the priesthood, which forbade any innovation in the form of the human figure, particularly in subjects connected with religion, fettered the genius of the Egyptian artists, and prevented its development. The same formal outline, the same attitudes and postures of the body, the same conventional mode of rep-

representing the different parts, were adhered to at the latest as at the earliest periods. No improvements, resulting from experience and observation, were admitted in the mode of drawing the figure; no attempt was made to copy nature, or to give proper action to the limbs. Certain rules, certain models, had been established by law, and the faulty conceptions of earlier times were copied and perpetuated by every successive artist. Egyptian bas-relief appears to have been, in its origin, a mere copy of painting, its predecessor. The first attempt to represent the figures of the gods, sacred emblems, and other subjects, consisted in painting simple outlines of them on a flat surface, the details being afterward put in with colour. But, in process of time, these forms were traced on stone with a tool, and the intermediate space between the various figures being afterward cut away, the once level surface assumed the appearance of a bas-relief. It was, in fact, a pictorial representation on stone, which is evidently the character of all the bas-reliefs on Egyptian monuments, and which readily accounts for the imperfect arrangement of their figures. Deficient in conception, and, above all, in a proper knowledge of grouping, they were unable to form those combinations which give true expression. Every picture was made up of isolated parts, put together according to some general notions, but without harmony or preconceived effect. The human face, the whole body, and everything they introduced, were composed, in the same manner, of separate members, placed together one by one, according to their relative situations: the eye, the nose, and other features, composed a face; but the expression of feelings and passions was entirely wanting; and the countenance of the king, whether charging an enemy's phalanx in the heat of battle, or peaceably offering incense in a sombre temple, presented the same outline, and the same inanimate look. The peculiarity of the front view of an eye, introduced in a profile, is thus accounted for; it was the ordinary representation of that feature added to a profile, and no allowance was made for any change in the position of the head. It was the same with drapery. The figure was first drawn, and the drapery was then added, not as a part of the whole, but as an accessory. They had no general conception, no previous idea of the effect required to distinguish the warrior or the priest, beyond the impression received from costume, or from the subject of which they formed a part; and the same figure was dressed according to the character it was intended to perform. Every portion of a picture was conceived by itself, and inserted as it was wanted to complete the scene; and when the walls of a building, where a subject was to be drawn, had been accurately ruled with squares, the figures were introduced, and fitted to this mechanical arrangement. The members were appended to the body, and these squares regulated their form and distribution, in whatever posture they might be placed. In the paintings of the tombs, greater license was allowed in the representation of subjects relating to private life, the trades, or the manners and occupations of the people; and some indications of perspective in the position of the figures may occasionally be observed; but the attempt was imperfect, and, probably, to an Egyptian eye, displeasing; for such is the force of habit, that, even where nature is copied, a conventional style is sometimes preferred to a more accurate representation. In the battle scenes on the temples of Thebes, some of the figures representing the monarch pursuing the flying enemy, despatching a hostile chief with his sword, and drawing his bow, as his horses carry his car over the prostrate bodies of the slain, are drawn with much spirit; but still the same imperfections of style and want of truth are observed: there is action, but no sentiment, no expression of the passions, or life in the features. In the representation of animals they appear not to have been restricted to

the same rigid style; but genius once cramped can scarcely be expected to make any great effort to rise, or to succeed in the attempt; and the same union of parts into a whole, the same preference for profile, are observable in these as in the human figure. It must, however, be allowed, that, in general, the character and form of animals were admirably portrayed; the parts were put together with greater truth; and the same license was not resorted to as in the shoulders and other portions of the human body. (*Wilkinson*, vol. 3, p. 263, *seqq.*)

18. *Egyptian Architecture.*

The earliest inhabitants of Egypt appear to have been of Troglydotic habits, or, in other words, to have inhabited caves. The mountain ranges on either side of the stream would easily supply them with abodes of this kind. From the site of ancient Memphis, until we ascend the Nile beyond Thebes, these mountains are composed of stratified limestone, full of organic remains. Such rocks, it is well known, abound in natural caverns in all eastern countries; and although no cavities are now found in Egypt that do not bear marks of human skill, we have no right to assert that it was not in many cases merely called in for the aid of nature, to smooth and embellish abodes originally provided by her. Much of this rock, too, was of a highly scitile and friable nature, and easily worked, therefore, by the hand of man. When the natural caverns then became insufficient for the growing population, the artificial formation of others would be no difficult task. With the demand, the skill of workmanship would naturally increase; harder limestone would be worked, then the flinty but friable sandstones of the quarries of Selseleh, and, finally, the hard and imperishable rock that still bears the name of the city of Syene. To understand fully the causes which led to the erection of such enormous works by the Egyptians, as still astonish and have for ages astonished the world, we must investigate other circumstances besides those of climate and position. The government of Egypt was monarchical from the very earliest date; and a monarchical and despotic government, if it be only stable, is incontestably more favourable to the execution of magnificent structures than one more free. Hence one cause for the vast structures of Egypt. The population, too, of the country was probably redundant beyond any modern parallel. Considered as a grain country alone, it was capable of supporting a population three times as great as one of equal extent in a less favoured climate. It produces, besides, those tropical plants which yield more fruit on a given space of ground than any of the vegetables of the temperate zone, and which grow where, from the aridity of the soil, the cereal gramina cannot vegetate. Domestic animals, too, multiply with great rapidity, and the prolific influence of the waters of the Nile is said to extend to the human race. With a population created and supported by such causes, we cannot wonder that a government, commanding without fear of accountability the whole resources of the country, could project and execute works, at which the richest and most powerful nations of modern times would hesitate. Many causes must have conspired to induce the abandonment of the cavern habitations of the early inhabitants. Besides the necessity which existed of providing receptacles for the embalmed bodies of the dead, and for which purpose these caverns would admirably answer, a growing and improving people could not long endure to be shut up in rocky grottoes during the inundation, or to pursue their agricultural labours at other seasons, far from a fixed abode. A remedy for these inconveniences was found in the erection of mounds in the plain, and quays upon the banks of the river, exceeding in elevation its utmost rise, and extended with the increase of population until they could contain important

cities. Such artificial mounds are still to be seen forming the basis of all the important ruins that exist. When we consider the remarkable skill exhibited by the Egyptians in the art of stone-cutting, manifested, too, at the most remote period to which we can trace them historically, we cannot but ascribe this characteristic taste to something in their original habits. The first necessities of their ancestors must have given this impulse to the national genius, and determined the character which their architecture manifests, down to the latest period of their existence, not merely as an independent nation, but as a separate people. In the same way that the Tyrians, and the inhabitants of Palestine, owed to their cedar forests their taste and skill in the workmanship of wood, the Egyptians derived from their original mode of life, from their abundant quarries, and from the facility they found in excavating the rocks into dwellings, the taste for the workmanship of stone which distinguishes them; and this taste explains the high degree of perfection they attained in this art. In inquiring into the origin and principles of Egyptian architecture, certain prominent characters strike us at once that cannot be mistaken. The plans and great outlines of their buildings are remarkable for simplicity and sameness, however diversified they may be in decoration and ornament. Openings are extremely rare, and the interior of their temples is as dark as the primitive caverns themselves; so that, when within them, it is difficult to distinguish between an excavation and a building; the pillars are of enormous diameter, and resemble in their proportions the masses left to support the roofs of mines and quarries. Nay, their hypostyle halls are almost similar in appearance to this kind of excavation; the portals, porticoes, and doors are enclosed in masses, in such a way as to present the appearance of the entrance of a cave; and the roofs of vast stones, lying horizontally, could have been imitated from no shelter erected in the open air. All the buildings yet existing between Denderah and Syene are constructed of a kind of sandstone, furnished in abundance by the quarries of the adjacent country. This stone is composed of quartzose grains, usually united by a calcareous cement. Its colours are grayish, yellowish, or even almost white; some have a slight tinge of rose colour, and others various veins of different shades of yellow. But when forming a part of the mass of a building, they produce an almost uniform effect of colour, namely, a light gray. One great advantage connected with this species of stone is the ease with which it can be wrought; and the mode of its aggregation, and the uniformity of its structure, so far from resisting, offer the greatest facilities for the execution of hieroglyphic and symbolic sculptures. The obelisks and statues, on the other hand, which adorned the approaches and entrances of the sandstone structures, were made of a more costly and enduring substance, the granite of Syene, the Cataracts, and Elephantine. The most important of the rocks of this species is the rose-granite, remarkable for the beauty of its colours, the large size of its crystals, its hardness and durability. A part of the monuments which have been made of it have been preserved almost uninjured for many centuries. The mode of building among the Egyptians was very peculiar. They placed in their columns rude stones upon each other, after merely smoothing the surfaces of contact, and the figure of the column, with all its decorations, was finished after it was set up. In their walls, the outer and inner surfaces of the stones were also left unfinished, to be reduced to shape by one general process, after the whole mass had been erected. Of the private architecture of the Egyptians, but few remains have come down to us. It was composed chiefly of perishable materials, namely, of bricks dried in the sun; those burned in a kiln being rarely employed, except in damp situations. The arch appears to have been known to

the Egyptians at a very early period. It consisted of brick, as appears from monuments, as far back as the year 1540 before our era, and of stone in B.C. 600.—Before concluding this head it may not be unimportant to remark, that the Greek orders of architecture, more especially the Doric and Corinthian, can all be traced to Egyptian originals. (*Description de l'Égypte*, t. 1, 2, 3, &c.—*Quatremere de Quincy, de l'Architecture Égyptienne*.—*American Quarterly Rev.* No 9, p. 1, seqq.—*Wilkinson*, vol. 2, p. 95, seqq.; vol. 3, p. 316, seqq.)

ÆLIA, I. *Gens*, a celebrated Plebeian house, of which there were various branches, such as the *Patti*, *Lamii*, *Tuberones*, *Gulii*, &c.—II. The wife of Sylla. (*Plut. Vit. Syll.*)—III. *Pælina*, of the family of the Tuberones, and wife of the Emperor Claudius. She was reputed, in order to make way for Messalina. (*Sueton. Claud.*, 26.)—IV. *Lex*, a law proposed by the tribune Ælius Tuberus, and enacted A.U.C. 559, for sending two colonies into Bruttium. (*Liv.*, 34, 53.)—V. Another, commonly called *Lex Ælia et Fusia*. These were, in fact, two separate laws, though they are sometimes joined by Cicero. The first (*Lex Ælia*) was brought forward by the consul Q. Ælius Pætus, A.U.C. 586, and ordained, that, when the comitia were to be held for passing laws, the magistrates, or the augurs by their authority, might take observations from the heavens, and, if the omens were unfavourable, might prevent or dissolve the assembly. And also, that any other magistrate of equal or greater authority than he who presided, might declare that he had heard thunder or seen lightning, and in this way put off the assembly to some other time.—The second (*Lex Furia or Fusia*), proposed either by the consul Furius, or by one Fufius or Fufius, was passed A.U.C. 617, and ordained that it should not be lawful to enact laws on any *dies fastus*.—VI. *Sentia Lex*, brought forward by the consuls Ælius and Sentius, and enacted A.U.C. 756. It ordained that no slave who had ever, for the sake of a crime, been bound, publicly whipped, tortured, or branded in the face, although freed by his master, should obtain the freedom of the city, but should always remain in the class of the *dedittiti*, who were indeed free, but could not aspire to the advantages of Roman citizens. (*Suet. Aug.*, 40.)—VII. A name given to various cities, either repaired or built by the Emperor Hadrian, whose family name was Ælius.—VIII. *Capitolina*, a name given to Jerusalem by the Emperor Hadrian, when he rebuilt the city, from his own family title Ælius, and also from his erecting within that city a temple to Jupiter Capitolinus. (*Vid. Hierosolyma*.)

ÆLIANUS, I. a Greek writer, who flourished about the middle of the second century of our era. He composed a treatise on military tactics, which he dedicated to the Emperor Hadrian. The best edition is that of Arcecius and Meursius, Lugd. Bat., 1613, 4to.—II. Claudius, a native of Præneste, who flourished during the reigns of Heliogabalus and Alexander Severus (218–235 A.D.). Although born in Italy, and of Latin parents, and almost constantly residing within the limits of his native country, he nevertheless acquired so complete a knowledge of the language of Greece, that Philostratus, if his testimony be worth quoting, makes him worthy of being compared with the purest Atticists, while Suidas states that he obtained the appellations of Μελιόβογος (“Honey-voiced”), and Μετῆγλωσσος (“Honey-tongued”). He appears to have been a man of extensive reading and considerable information. His “Various History,” Ποικίλη Ἱστορία, in fourteen books, is a collection of extracts from different works, themes very probably which he composed for the purpose of exercising himself in the Grecian tongue, and which his heirs very indiscreetly gave to the world. These extracts may be regarded as the earliest on the list of *Ana*. The Various History of Ælian evinces neither taste, judgment, nor powers of critical discrim-

mation. Its chief claim to attention rests on its having preserved from oblivion some fragments of authors, the rest of whose works are lost. It is to be regretted that Ælian, instead of giving these extracts in the language of the writers themselves, has thought fit to array them in a garb of his own. Ælian composed also a pretended history of animals, *Περὶ ζῴων ιδιότητος*, in seventeen books, each of which is subdivided into small chapters. This zoological compilation is full of absurd stories, intermingled occasionally with interesting notices. To this same writer are also ascribed twenty epistles on rural affairs (*Ἀγροικικαὶ ἐπιστολαὶ*) which possess very little interest. Ælian led a life of celibacy, and died at the age of 60 years or over. The best editions of the Various History are, that of Gronovius, Amst., 4to, 1731, 2 vols., and that of Kühnii, Lips., 8vo, 1780, 2 vols. The best edition of the History of Animals is that of F. Jacobs, Lips., 8vo, 1784.—III., IV. (*Vid. Supplement.*)

ÆLIUS, a name common to many Romans, and marking also the plebeian house of the Ælii. (*Vid. Ælia, I.*) The most noted individuals that bore this name were, I. Publius, a quæstor, A.U.C. 346, the first year that the plebeians were admitted to this office. (*Liv.*, 4, 54.)—II. C. Stalenus, a judge, who suffered himself to be corrupted by Statius Albius. (*Cic. pro Sext.*, 81.)—III. Sextus Ælius Catus, an eminent Roman lawyer, who lived in the sixth century from the foundation of the city. He filled in succession the offices of ædile, consul, and censor, and gave his name to a part of the Roman law. When Cneius Flavius, the clerk of Appius Claudius Cæcus, had made known to the people the forms to be observed in prosecuting lawsuits, and the days upon which actions could be brought, the patricians, irritated at this, contrived new forms of process, and, to prevent their being made public, expressed them in writing by certain secret marks. These forms, however, were subsequently published by Ælius Catus, and his book was named *Jus Ælianum*, as that of Flavius was styled *Jus Flavianum*. Ennius calls him, on account of his knowledge of the civil law, *egregie cordatus homo*, “a remarkably wise man.” (*Cic. de Orat.*, 1, 45.) Notwithstanding the opinions of Grotius and Bertrand, Ælius must be regarded as the author of the work entitled *Tripartita Ælii*, which is so styled from its containing, 1st. The text of the law. 2d. Its interpretation. 3d. The *legis actio*, or the forms to be observed in going to law. Ælius Catus, on receiving the consulship, became remarkable for the austere simplicity of his manners, eating from earthen vessels, and refusing the silver ones which the Ætolian deputies offered him. When censor, with M. Cethegus, he assigned to the senate at the public games separate seats from the people.—IV. Lucius, surnamed Lamia, the friend and defender of Cicero, was driven out of the city by Piso and Gabinius. (*Cic. in Pis.*, 27.)—V. Gallus, a Roman knight, and the friend of Strabo, to whom Virgil dedicated his tenth eclogue. (*Vid. Gallus, III.*)—VI. Sejanus. (*vid. Sejanus*).—VII. An engraver on precious stones, who lived in the first century of our era. A gem exhibiting the head of Tiberius, engraved by him, is described by Bracci, *tab. 2.*—VIII. Promotus, an ancient physician. (*Vid. Supplement.*)—IX. Gordianus, an eminent lawyer, in the reign of Alexander Severus.—X. Serenianus, a lawyer, and pupil of Papinian. He flourished during the reign of Severus, and is highly praised by Lampadius. (*Lampr. Vit. Sev.*)

ÆELLO (Ἀέλλω), one of the Harpies. (*Vid. Harpyiæ*.) Her name is derived from *ἄελλα*, a tempest, the rapidity of her course being compared to a stormy wind. Compare *Hesiod, Theog.*, 267, and *Schol. ad loc.*

ÆMATHIA. *Vid. Emathia.*

ÆMATHION. *Vid. Emathion.*

ÆMILIA LEX, I. a law of the dictator Mamercus

Æmilius, A.U.C. 309, ordaining that the censors should be elected as before, every five years, but that their power should continue only a year and a half. (*Liv.*, 4, 24.—*Id.*, 9, 33.)—II. *Sumptuaria, vel cibaria*, a sumptuary law, brought forward by M. Æmilius Lepidus, and enacted A.U.C. 675. It limited the kind and quantity of meats to be used at an entertainment. (*Macrobi. Sat.*, 2, 13.—*Aul. Gell.*, 2, 24.) Pliny ascribes this law to M. Scæurus (8, 57).

ÆMILIA, I. *Gens*, the name of a distinguished Roman family among the patricians, originally written *AIMILIA*. (*Vid. Supplement.*)—II. The third daughter of L. Æmilius Paullus, who fell in the battle of Cannæ. She was the wife of the elder Africanus, and the mother of the celebrated Cornelia. She was of a mild disposition, and long survived her husband. Her property, which was large, was inherited by her adopted grandson Africanus the Younger, who gave it to his own mother Papiria, who had been divorced by his own father L. Æmilius.—III. Lepida. (*Vid. Lepida, I.*)—IV. A part of Italy, extending from Ariminum to Placentia. It formed one of the later subdivisions of the country.—V. *Via Lepidi*, a Roman road. There were two roads, in fact, of this name, both branching off from Mediolanum (*Milan*) to the eastern and southern extremities of the province of Cisalpine Gaul; the one leading to Verona and Aquileia, the latter to Placentia and Ariminum. The same name, however, of *Via Æmilia Lepidi*, was applied to both. They were made by M. Æmilius Lepidus, who was consul A.U.C. 567, in continuation of the *Via Flaminia*, which had been carried from Rome to Ariminum.—VI. *Via Scæuri*, a Roman road, a continuation of the Aurelian way, from Pisa to Dertona. (*Strab.*, 217.)

ÆMILIÂNUS, I. the second agnomen of P. Cornelius Scipio Africanus the younger, which he received as being the son of Paulus Æmilius. His adoption by the elder Africanus united the houses of the Scipios and Æmilii.—II. A native of Mauritania, who was governor of Pannonia and Mæsia under Hostilianus and Gallus. Some successes over the barbarians caused him to be proclaimed emperor by his soldiers. Gallus marched against him, but was murdered, together with his son Volusianus, by his own soldiers, who went over to the side of Æmilianus. The reign of the latter, however, was of short duration. Less than four months intervened between his victory and his fall. Valerian, one of the generals of Gallus, who had been sent by that emperor to bring the legions of Gaul and Germany to his aid, met Æmilianus in the plains of Spoletum, where the latter, like Gallus, was murdered by his own troops, who thereupon went over to Valerian. (*Zosimus*, 21, p. 25, *seqq.*—*Aurel. Vict.*—*Eutrop.*, 9, 6.)—III. A prefect of Egypt, in the reign of Gallienus. He assumed the imperial purple, but was defeated by Theodotus, a general of the emperor's, who sent him prisoner to Rome, where he was strangled. (*Trer. Gall. Tr. Tyr.*, 22.—*Euseb. Hist. Eccles.*, 7.)—IV. *Vid. Supplement.*

ÆMILIUS, I. Censorinus, a cruel tyrant of Sicily. A person named Aruntius Paternulus having given him a brazen horse, intended as a means of torture, was the first that was made to suffer by it. Compare the story of Phalaris and his brazen bull. (*Plut. de Fort. Rom.*, 315.)—II. L., three times consul, and the conqueror of the Volsci, A.U.C. 273. (*Liv.*, 2, 42.)—III. Mamercus, once consul and three times dictator, obtained a triumph over the Fidenates, A.U.C. 329. (*Liv.*, 4, 16.)—IV. Paulus, father of the celebrated Paulus Æmilius. He was one of the consuls slain at Cannæ. (*Liv.*, 23, 49.)—V. Paulus Macedonicus. (*Vid. Paulus I.*)—VI. Scæurus. (*Vid. Scæurus*).—VII. Lepidus, twice consul, once Censor, and six times Pontifex Maximus. He was also Princeps Senatus, and guardian to Ptolemy Epiphanes, in the name of the

Roman people. It was this individual to whom a civic crown was given when a youth of 15, for having saved the life of a citizen, an allusion to which is made on the medals of the Æmilian family. (*Liv.*, 41, 42. —*Ept.* 48.)—VIII. Lepidus, the triumvir. (*Id.* Lepidus.)

ÆMONIA. *Id.* Hæmonia.

ÆNARIA an island off the coast of Campania, at the entrance of the Bay of Naples. Properly speaking, there are two islands, and hence the plural form of the name which the Greeks applied to them, αἱ Πιθηκοῦσαι (*Pithecusæ*). This latter appellation, according to Pliny (3, 6), was not derived from the number of *apes* (πιθήκοι) which the islands were supposed to contain, but from the earthen *casks* or *barrels* (πιθάνιον, *dolium*) which were made there. The Romans called the largest of the two islands *Ænaria*, probably from the copper which they found in it. *Ænaria* was a volcanic island, and Virgil (*Æn.*, 9, 716) gives it the name of *Inarime*, in accordance with the old traditions which made the body of Typhœus to have been placed under this island and the Phlegrean plain. Homer, however (*Il.*, 2, 783), describes Typhœus as lying in Arima (εἰν Ἀρίμοις). The modern name of *Ænaria* is *Ischia*.

ÆNÆA or ÆNEDIA, a town of Macedonia, on the coast of the Sinus Thermaicus, northwest from Olynthus, and almost due south from Thessalonica. It was founded by a colony of Corinthians and Potidæans. The inhabitants themselves, however, affected to believe that Æneas was its founder, and consequently offered to him an annual sacrifice. *Ænea* was a place of some importance in the war between the Macedonians and Romans. Soon afterward, however, it disappeared from history. (*Scynovius*, v. 627.—*Liv.*, 40, 4, 21; 44, 10.—*Strabo*, *epit.* 7.)

ÆNÆADE, I. the companions of Æneas, a name given them in Virgil. (*Æn.*, 1, 157, &c.)—II. The descendants of Æneas, an appellation given by the poets to the whole Roman nation. Hence Venus is called by Lucretius (1, 1), *Æneadum genetrix*.

ÆNEAS, a celebrated Trojan warrior, son of Anchises and Venus, whose wanderings and adventures form the subject of Virgil's *Æneid*, and from whose final settlement in Italy the Romans traced their origin. He was born, according to the poets, on Mount Ida, or, as some legends stated, on the banks of the Simois, and was nurtured by the Dryads until he had reached his fifth year, when he was brought to Anchises. The remainder of his early life was spent under the care of his brother-in-law Alcatous, in the city of Dardanus, his father's place of residence, at the foot of Ida. He first took part in the Trojan war when Achilles had spoiled him of his flocks and herds. Priam, however, gave him a cold reception, either because the great Trojan families were at variance with each other, from the influence of ambitious feelings, or, what is more probable, because an oracle had declared, that Æneas and his posterity should rule over the Trojans. Hence, although he married Creusa, the daughter of Priam, he never lived, according to Homer (*Il.*, 13, 460), on very friendly terms with that monarch. Æneas was regarded as the bravest and boldest of the Trojan leaders after Hector, and is even brought by Homer in contact with Achilles. (*Il.*, 20, 175, *seqq.*) He was also conspicuous for his piety and justice, and was therefore the only Trojan whom the otherwise angry Neptune protected in the fight. The posthumous bards assign him a conspicuous part in the scenes that took place on the capture of Troy, and Virgil, taking these for his guides, has done the same in his *Æneid*. Æneas fought manfully in the midst of the blazing city until all was lost, and then retired with a large number of the inhabitants, accompanied by their wives and children, to the neighbouring mountains of Ida. It was on this occasion that he signalized his piety, by

bearing away on his shoulders his aged parent Anchises. His wife Creusa, however, was lost in the hurried flight. From this period the legends respecting Æneas differ. While, according to one tradition, of which there are traces even in the Homeric poems, he remained in Troas, and ruled over the remnant of the Trojan population, he wandered from his native land according to another account, and settled in Italy. This latter tradition is adopted by the Roman writers, who trace to him the origin of their nation, and it forms the basis of the *Æneid*, in which poem his various wanderings are related, until he is brought to the Italian shores. Following the account of Virgil and the poets from whom he has copied, as far as any remains of these last have come down to us, we find that Æneas, in the second year after the destruction of Troy, set sail, with a newly-constructed fleet of twenty vessels, from the Trojan shores, and visited, first Thrace, and then the island of Sicily. From this latter island he proceeded with his ships for Italy, in the seventh year of his wanderings, but was driven by a storm on the coast of Africa, near Carthage. After a residence of some time at the court of Dido, he set sail for Italy, and reached eventually, after many dangers and adventures, the harbour of Cumæ. From Cumæ he proceeded along the shore and entered the mouth of the Tiber. After a war with the neighbouring nations, in which he proved successful, and slew Turnus, the leader of the foe, Æneas received in marriage Lavinia, the daughter of King Latinus, and built the city of Lavinium. The Trojans and native inhabitants became one people, under the common name of *Latini*. The flourishing state of the new community excited, however, the jealousy of the neighbouring nations, and war was declared by them against the subjects of Æneas, Mezentius, king of Etruria, being placed at the head of the coalition. The arms of Æneas proved successful, but he lost his life in the conflict. According to another account, he was drowned during the action in the river Numicus. Divine honours were paid him after death by his subjects, and the Romans also in a later age regarded him as one of the *Dii Indigetes*. The tale of Æneas and his Trojan colony is utterly rejected by Niebuhr, but he thinks it a question worth discussion, whether it was domestic or transported. Having shown that several Hellenic poets had supposed Æneas to have escaped from Troy, and that Stesichorus had even expressly represented him as having sailed to Hesperia, i. e., the west; and then noticed the general belief among the Greeks, of Trojan colonies in different parts, he still regards all this as quite insufficient to account for the belief in a Trojan descent becoming an article of state-faith, with so proud a people as the Romans. The fancied descent must have been domestic, like that of the Britons from Brute and Troy, the Hungarians from the Huns, &c., all of which have been related with confidence by native writers. The only difficulty is to account for its origin, on which Niebuhr advances the following hypothesis: Everything contained in mythic tales respecting the affinity of nations indicates the affinity between the Trojans and those of the Pelagian stem, as the Arcadians, Epirotes, Cænotrians, and especially the Tyrrhenian Pelasgians. Such tales are those of the wanderings of Dardanus from Corythus to Samothrace and thence to the Simois, the coming of the Trojans to Latium, of the Tyrrhenians to Lemnos. Now, that the Penates at Lavinium, which some of the Lavinians told Timæus were Trojan images, were the Samothracian gods, is acknowledged, and the Romans recognised the affinity of the people of that island. From this national as well as religious unity, and the identity of language, it may have happened that various branches of the nation may have been called Trojans, or have claimed a descent from Troy, and have boasted the

possessions of relics which Æneas was reported to have saved. Long after the original natives of Italy had overcome them, Tyrrhenians may have visited Samothrace; Herodotus may there have heard Cretanians and Placianians conversing together; and Lavinians and Gergithians may have met there, and accounted for their affinity by the story of Æneas. "We have," the Lavinians may have said, "the same language and religion with you, and we have clay images at home, just like these here." "Then," may the others have replied, "you must be descended from Æneas and his followers, who saved the relics in Troy, and sailed, our fathers say, away to the west with them." And it requires but a small knowledge of human nature to perceive how easily such reasoning as this would be embraced and propagated. (*Niebuhr's Rom. Hist.*, 2d ed., vol. 1, p. 150, *seqq.*, *Cambridge transl.*—*Foreign Quarterly Review*, No. 4, p. 533.)—II. Silvius, a son of Æneas and Lavinia, said to have derived his name from the circumstance of his having been brought up in the woods (*in silvis*), whither his mother had retired on the death of Æneas. (*Vid.* Lavinia.) Virgil follows the account which makes him the founder of the Alban line of kings. (*Æn.*, 6, 766.) According to others, he was the son and successor of Ascanius. Others again give a different statement. (Compare *Liv.*, 1, 3.—*Aurel. Vict.*, 16, 17.—*Dion. Hal.*, 1, 70.—*Ovid, Fast.*, 4, 41, and consult *Heugne*, *ad Virg.*, l. c.)—III. An ancient writer, surnamed Tacticus. By some he is supposed to have flourished about 148 B.C.; others, however, make him anterior to Alexander the Great. Casaubon suspects that he is the same with Æneas of Stymphalus, who, according to Xenophon (*Hist. Gr.*, 7, 3), was commander of the Arcadians at the time of the battle of Mantinea, about 360 B.C. (Compare *Sax. Onom.*, 1, p. 73.) Of his writings on the military art (*Στρατηγικά βιβλία*) there remains to us a single book, entitled *Τακτικὸν τε καὶ Πολιορκητικὸν ὑπόμνημα*, &c. This work is not only of great value on account of the number of technical terms which it contains, but serves also to elucidate various points of antiquity, and makes mention of facts which cannot elsewhere be found. The best edition is that of Orellius, *Lips.*, 1818, 8vo, published as a supplement to Schweighæuser's edition of Polybius.—IV. A native of Gaza, a disciple of Hierocles, who flourished during the latter part of the 5th century of our era, or about 480 A.C. He abjured paganism, and was an eyewitness of the persecution which Huneric, king of the Vandals, instituted against the Christians, 484 A.C. Although a Christian, he professed Platonism. We have a dialogue of his remaining, entitled *Θεόδορος*, which treats of the immortality of the soul and the resurrection of the body. The interlocutors are Ægyptus an Alexandrian, Axitheus a Syrian, and Theophrastus an Athenian. Æneas exhibits and illustrates the Christian doctrines in the person of Axitheus, and Theophrastus conducts the argument for the heathen schools, while Ægyptus now and then interrupts the grave discussion by a specimen of Alexandrian levity. Æneas defends the immortality of the soul and the resurrection of the body against the philosophers who deny it. He explains how the soul, although created, may become immortal, and proves that the world, being material, must perish. In conducting this chain of argument, he mingles the Platonic doctrine of the *Logos* and *Animæ mundi* with that of the Christian Trinity. He then refutes the objections urged against the resurrection of the body: this leads him to speak of holy men who have restored dead bodies to life, and to relate as an eyewitness the miracle of the confessors, who, after having had their tongues cut out, were still able to speak distinctly. This piece is entitled to high praise for the excellence of the design, and the general ability with which the argument is sustained;

H

although, as the author was of the school of Plato, there is something in it, of course, that savours of the Academy. (An able analysis of its contents is given in the *N. Y. Churchman*, vol. 9, No. 4, by an anonymous writer.) There also remain of his writings twenty-five letters. These last are contained in the epistolary collections of Aldus and Cujas. The latest edition is that of Bath, *Lips.*, 1655, 4to.

ÆNEÏA. *Vid.* Ænea.

ÆNEÏS, the celebrated epic poem of Virgil, commemorating the wanderings of Æneas after the fall of Troy, and his final settlement in Italy. (*Vid.* Virgilius.)

ÆNESIDĒMUS, a philosopher, born at Gnosus in Crete, but who lived at Alexandria. He flourished, very probably, a short period subsequent to Cicero. Ænesidemus revived the scepticism which had been silenced in the Academy, with the view of making it aid in re-introducing the doctrines of Heraclitus. For, in order to show that everything has its contrary, we must first prove that opposite appearances are presented in one and the same thing to each individual. To strengthen, therefore, the cause of scepticism, he extended its limits to the utmost, admitting and defending the ten Topics attributed to Pyrrho, to justify a suspension of all positive opinion. He wrote eight books on the doctrines of Pyrrho (*Πυρρονίων λογοι ή*), of which extracts are to be found in Photius, *cod.* 212. (*Tennemann, Gesch. Phil.*, ed. Wendt, p. 196.)

ÆNIĀNES, or Enienes, a Thessalian tribe, apparently of great antiquity, but of uncertain origin, whose frequent migrations have been alluded to by more than one writer of antiquity, but by none more than Plutarch in his Greek Questions. He states them to have occupied, in the first instance, the Dotian plain (compare *Gell's Itinerary*, p. 242); after which they wandered to the borders of Epirus, and finally settled in the upper valley of the Sperchius. Their antiquity and importance are attested by the fact of their belonging to the Amphictyonic council. (*Pausan.*, 10, 8.—*Harporat.*, s. v. *Ἀμφικτύονες*.—*Herod.*, 7, 198.) At a later period we find them joining other Grecian states against Macedonia, in the confederacy which gave rise to the Lamiae war. (*Diod. Sic.*, 17, 111.) But in Strabo's time they had nearly disappeared, having been almost exterminated, as that author reports, by the Ætolians and Athamanes, upon whose territories they bordered. (*Strabo*, 427.) Their principal town was Hypata, on the river Sperchius.

ÆNIOCHI. *vid.* Heniochi.

ÆNOBARBUS, or AHENOBARBUS, the surname of L. Domitius. When Castor and Pollux acquainted him with a victory, he discredited them; upon which they touched his chin and beard, which instantly became of a copper colour, whence the surname given to himself and his descendants. This fabulous story is told by Plutarch, in his life of Paulus Æmilius (*c.* 25); by Suetonius, in his biography of Nero (*c.* 1), that emperor being descended from Ænobarbus; by Livy (45, 1); and by Dionysius of Halicarnassus (6, 13). Many of the descendants of Ænobarbus are said to have been marked by beards of a reddish hue. (*Sueton.*, l. c.) The victory mentioned above was that at the Lake Regillus. For an account of the members of this family, *vid.* Supplement.

ÆNOS, a city on the coast of Thrace, at the mouth of the estuary formed by the river Hebrus; and where it communicates by a narrow passage with the sea. Scymnus of Chios ascribes its foundation to Mytilene. (*Scymn.*, v. 696.—Compare *Eustath.*, *ad Dionys. Perieg.*, p. 538, and *Gail, ad Scymn.*, l. c.) Stephanus Byzantinus, however, makes Cumæ to have been the parent-city. Apollodorus (2, 5, 9) and Strabo (319) inform us, that its more ancient name was Polytobria ("City of Poltys"), from a Thracian leader. The adjacent country was occupied by the Cicones, whom

57

Homer enumerates Æneias among the allies of the Trojans. Virgil supposes Æneias have landed on this coast after quitting Troy, and to have discovered here the tomb of the murdered Polydorus (*Æn.*, 3, 22, *seqq.*): he also intimates that he founded a city in this quarter, which was named after himself. Pliny (4, 11) likewise states, that the tomb of Polydorus was at Ænos. But it is certain, that, according to Homer (*Il.*, 4, 520), the city was called Ænos before the siege of Troy. Ænos first makes its appearance in history about the time of the Persian war. It fell under the power of Xerxes, and, after his expulsion from Greece, was always tributary to that state which chanced to have the ascendancy by sea. The Romans declared it a free city. This place is often mentioned by the Byzantine writers. The modern town, or, rather, village of *Eno* occupies the site of the ancient city, but the harbour is now a mere marsh. The climate of Ænos, it seems, was peculiarly ungenial, since it was observed by an ancient writer, that it was cold there during eight months of the year, and that a severe frost prevailed for the other four. (*Athenæus*, 8, 44—*fol.* 3, p. 295, *ed. Schceirigh.*)—II. A small town in Thessaly, near Mount Ossa, situate on a river of the same name. (*Steph. Byz.*, s. v. *Αἰνός*.)

ÆNUS. *Vid.* ENUS.

ÆÖLES, or ÆOLII, one of the main branches of the great Hellenic race (*vid.* Hellenes), who are said to have derived their name from Æolus, the eldest son of Hellen. The father reigned over Phthiotis, and particularly over the city and district then called Hellas. To these dominions Æolus succeeded, and his brothers Dorus and Xuthus were compelled to look for settlements elsewhere. (*Strabo*, 383.—*Conon, Narrat.*, 27.—*Pausan.*, 7, 1.—*Herod.*, 1, 56.) According to Apollodorus (1, 7, 2), Æolus ruled over all Thessaly; this, however, is contradicted by the authority of Herodotus, from whom it appears (1, 56) that the Dorians held Histiotis under their sway. From Æolus, the Hellenes, in Hellas properly so called, and the Phthiotic Pelasgi, who became blended with them into one common race, received the appellation of Æolians. (Compare *Herod.*, 1, 57.—*Id.*, 7, 95.) The sons and later descendants of Æolus spread the name of Æolia beyond these primitive seats of the Æolic tribe. Cretheus, the eldest son of Æolus, reigned at first over the territories of his parents, Phthiotis and Hellas; subsequently, however, he led a colony to Iolcos (*Apollod.*, 1, 9, 11), and from this latter place, Pheres, his son, colonized Pheræ, on the Anaurus. (*Apollod.*, 1, 9, 14.) Magnes, the second son of Æolus, founded Magnesia (*Apollod.*, 1, 9, 6), and his own sons Polydetes and Dictys led a colony to Seriphus. Another son, Pierus, settled in Pieria. (*Apollod.*, l. c.) Sisyphus, the third son of Æolus, founded Corinth (*Apollod.*, 1, 9, 13), whose Æolic population, previous to the irruption of the Dorians into the Peloponnesus, is acknowledged even by Thucydides (4, 42). Athamas led an Æolic colony into Boeotia (*Apollod.*, 1, 9, 1), and, as Pausanias informs us, to Orchomenus, and to the district where Haliartus and Coronea were afterward built. (*Pausan.*, 9, 34.—Compare the scholiast on *Apollonius Rhodius*, 2, 1190, who calls the Orchomenians *Ἀπαικοὶ τῶν Θεσσαλῶν*.) Hence Apollodorus calls Orchomenus an Æolic city, although it existed long before this, in the time of Ægyges, under the name of Athenæ. (*Steph. Byz.*, s. v. *Ἀθῆναι*.) Thucydides mentions the Æolic origin of the Boeotians (*Thucyd.*, 3, 2.—*Id.*, 7, 57), and we see from Pausanias (9, 22), that the language of the Boeotians was more Æolic than Doric. The name of Athamas may be traced in that of the Athamantian field, between Mount Acraephium and the sea (*Pausan.*, 9, 24), and which was called after the Athamantian field, in the primitive Æolic settlements in Thessaly, where Athamas had killed his own son. (*Etym. Mag.*, s. v. *Ἀθαμάντιον*.—*Raoul-*

Rochette, Col. Gr., vol. 2, p. 26, calls this “un canton de la Bœotie” merely, but the words of the etymologist are express: *ἔστι δὲ πεδιάς ἐν Θεσσαλίᾳ καλουμένη Ἀθαμαντία, διὰ τὸ ἐκεῖσε, κ. τ. λ.*) Even Thebes itself, built at the foot of the Phœnician mountain Cadmea, would seem, from the remark of the scholiast on Pindar (*Nem.*, 3, 127), and from the analogy between its name and that of Phthiotic Thebes, to have been an Æolian settlement. From the sons of Athamas the city of Schœnus and Mount Ptous received their appellations. (*Steph. Byz.*, s. v. *Σχοινοῦς*.—*Pausan.*, 9, 23.) The name, too, of the Boeotian national goddess, the Itonian Minerva, at Orchomenus, is, most probably, not to be derived from a fabulous hero Itonus (*Steph. Byz.*, s. v. *Ἀσπλῆδων*.—*Pausan.*, 9, 34), but from the city of Itonus, in the primitive settlements of the Æolic Boeotians. Aspledon also was founded by the same Æolians who had settled in Orchomenus. (*Steph. Byz.*, l. c.) An Æolic colony, according to Apollodorus (1, 9, 4), was also led into Phocis, under Deion, the fifth son of Æolus, and where Phocus, a later descendant of Sisyphus, gave his name to the race. (*Pausan.*, 2, 22.) The sixth son of Æolus, called by Hesiod the “lawless Salmoneus,” remained for a long time in Thessaly (*Apollod.*, 1, 9, 7, and 8), where his daughter Tyro married Cretheus. His departure from this country coincides, very probably, with the expulsion of Cretheus from the primitive settlements of the Hellenes. He migrated to the Peloponnesus, and settled in the district of Elis, which had not, as yet, been occupied by Phrygian colonists. He built Salmonea, and is called by Hesiod the “lawless,” from his attempt to imitate Jove while hurling the thunderbolt. (*Serv. ad Virg.*, 6, 585.) Among his posterity we may name Neleus, who founded Pylos in the adjacent region of Messenia (*Apollod.*, 1, 9, 9.—*Pausan.*, 4, 36), and is said to have renewed, in conjunction with his brother Pelias, the Olympic games. (*Pausan.*, 5, 1, 8.) So also Perieres, king of Messenia, is made a son of Æolus (*Hesiod, fragm.*, v. 75.—*Apollod.*, 1, 9, 3), although the Spartans claimed him as a descendant of the royal line of Laconia, and a son of Cynortas. (*Apollod.*, 1, 9, 3.) Besides these sons of Æolus, respecting whose origin the ancient mythographers in general agree, and who spread the Æolic race over middle Greece, there are also mentioned, as sons of Æolus, Cercaphus (*Demetrius Scæps.*, *ap. Strab.*, 9, p. 438), whose son founded Ormenium, on the Sinus Pagasæus (*Steph. Byz.*, s. v. *Ἰωλκός*), and Macedonius or Macedo (*Hellanicus, ap. Const. Porph. Them.*, 2, 2.—*Eustath.*, *ad Dionys. Perieg.*, v. 427), whose descent from Thyia, a daughter of Deucalion, is alluded to by Hesiod (*Hes.*, *ap. Const. Porph. Them.*, 2, 2). The posterity of Æolus spread the dominion and name of the Æolic race still farther. Ætolus, who was compelled to fly from the court of his father Endymion (a son-in-law of Æolus) at Elis, retired to the land of the Curetes, and gave name to Ætolia. (*Vid.* Acarnania.) His sons Pleuron and Calydon founded there two cities, called after them, and established two petty principalities. (*Apollod.*, 1, 7, 7.) Epeus, another son of Endymion, gave to the Eleans the name of Epei (*Pausan.*, 5, 1, 1), while Pæon, the third son, settled, with his Æolian followers, on the banks of the Axius, and gave to the united race of Æolians and Pelasgi in this quarter, the name of Pæonians. In the Trojan war, these Pæonians fought on the side of the Trojans (*Hom. Il.*, 2, 848); whence we may infer, that, although the tribes around the Axius were Hellenized, yet the Pelasgic population still retained the numerical superiority. During this time Pelops had taken possession of Pisa, and had driven the Epei from Olympia. (*Pausan.*, 5, 1, 1.) Eleus, however, the son-in-law of Endymion, had received the kingdom in place of the fugitive Ætolus, and from him the Epei were now called Elei, or, according to the Æolic mode of writing, Falei,

FAÆIOL. (Compare Böckh, *Corp. Inscript. Græc.*, fasc. 1, p. 28.) Among the sons of Ætolus was Locrus (*Eustath.*, ad *Hom. Il.*, 2, 531), from whom the Locri Ozolæ, on the borders of Ætolia, are supposed to have derived their name. The Æolic branch of Sisyphus, in Corinth, spread itself through Ornythion (*Schol.*, ad *Hom. Il.*, 2, 517, ed. Villos.), and his son Phocus, over Phocis (*Pausan.*, 2, 1), a name first applied to the country around Delphi and Thiborea. The latter of these places was the primitive settlement of Phocus (*Pausan.*, 2, 4), while Hiampolis was the early colony of Ornythion. (*Schol.*, ad *Eurip.*, cited by *Kuhn*, ad *Pausan.*, l. c.) The farther settling of Phocis is ascribed by some to another Phocus, who is said to have led an Æolic colony to this quarter from the island of Ægina. (Compare *Pausan.*, 2, 23.—*Id.*, 10, 1.—*Eustath.*, ad *Il.*, 2, 522.—*Schol.*, ad *Apol. Rhod.*, 1, 507.) Raoul-Rochette, however, correctly remarks, that the murder of the young Phocus by Telamon and Peleus contradicts this tradition. (*Col. Gr.*, vol. 2, p. 56.) The Æolic branch of Cretheus finally spread itself through Amythaon, the son of Cretheus, over Messenia (*Apollod.*, 1, 9, 11), and through Melampus and Bias, sons of Amythaon, over the territory of Argos, and also over Acarnania, through Acarnan, a descendant of Melampus.—From the enumeration through which we have gone, it would appear that the Hellenic-Æolic stem, before the Trojan war, was spread, in northern Greece, over almost all Thessaly, over Pieria, Pæonia, and Athamania: in Middle Greece, over the greater part of Boeotia, Phocis, Locris, Ætolia, and Acarnania: in southern Greece, or the Peloponnesus, over Argos, Elis, and Messenia. It would appear, also, that, during this period, Leleges, Curetes, Pelasgi, Hyantes, and Lapithæ became intermingled with the Hellenic-Æolic tribes, and that a close union was formed likewise between the latter and the Phœnician Cadmæans in Boeotia. The state of things which has here been described, continued until the Trojan war and the subsequent invasion of the Peloponnesus, by the Dorians, produced an entire change of affairs, and sent forth numerous colonies both to the eastern and western quarters of the world. For some account of these movements, consult the following articles: *Achaia*, *Æolia*, *Doris*, *Græcia*, *Hellenes*, and *Ionia*.

ÆOLIA, or ÆOLIS, a region of Asia Minor, deriving its name from the Æolians who settled there. The Æolians were the first great body of Grecian colonists that established themselves in Asia Minor, and, not long after the Trojan war, founded several towns on different points of the Asiatic coast, from Cyzicus to the river Hermus. But it was more especially in Lesbos, which has a right to be considered as the seat of their power, and along the neighbouring shores of the Gulf of Elea, that they finally concentrated their principal cities, and formed a federal union, called the Æolian league, consisting of twelve states, with several inferior towns to the number of thirty. The Æolian colonies, according to Strabo, were anterior to the Ionian migrations by four generations. He states, that Orestes had himself designed to lead the first; but his death preventing the execution of the measure, it was prosecuted by his son Penthius, who advanced with its followers as far as Thrace. This movement was contemporary with the return of the Heraclidæ into the Peloponnesus, and most probably was occasioned by it. After the decease of Penthius, Archelaus, or Echeolatus, his son, crossed over with the colonies into the territory of Cyzicus, and settled in the vicinity of Dascylium. Gras, his youngest son, subsequently advanced with a detachment as far as the Granicus, and not long after crossed over to the island of Lesbos and took possession of it. Some years after these events, another body of adventurers crossed over from Locris, and founded Cyme, and other towns on the Gulf of Elea. They also took possession of Smyrna, which

became one of the twelve states of the league. But this city having been wrested from them by the Ionians, the number was reduced to eleven in the time of Herodotus. These, according to that historian (1, 149), were Cyme, Larissa, Neontichos, Temnus, Cilla, Notium, Ægiroessa, Pitane, Ægææ, Myrina, and Grynea. Æolis extended in the interior from the Hermus on the south, to the Caicus, or perhaps, to speak more correctly, as far as the country around Mount Ida. On the coast it reached from Cyme to Pitane. All the Æolian cities were independent of each other, and had their own constitutions, which underwent many changes. An attempt was frequently made to restore quiet, by electing arbitrary rulers, with the title of Æsymnetæ, for a certain time, even for life, of whom Pittacus, in Mytilene, the contemporary of Sappho and Alcæus, is best known. The Æolians, in common with the other Greek colonies of Asia, excepting those established in the islands, had become subject to Cræsus; but, on the overthrow of the Lydian monarch by Cyrus, they submitted, along with many of the islanders, to the arms of the conqueror, and were thenceforth annexed to the Persian empire. They contributed sixty ships to the fleet of Xerxes. Herodotus observes of Æolis, that its soil was more fertile than that of Ionia, but the climate inferior (1, 149). In the time of Xenophon, Æolis formed part of the Hellespontine satrapy held by Pharnabazus, and it appears to have comprised a considerable portion of the country, that was known at an earlier period by the name of Troas. (*Hell.*, 3, 18.) Wrested by the Romans from Antiochus, it was annexed to the dominions of Eumenes. (*Liv.*, 33, 38, &c.) For an account of the Æolic movements in Lesbos, consult the description of that island, s. v. Lesbos.

ÆOLIS, seven islands, situate off the northern coast of Sicily, and to the west of Italy. According to Mela (2, 7), their names were *Lipara*, *Osteodes*, *Heraclæa*, *Didyme*, *Phœnicusa*, *Hiera*, and *Strongyle*. Pliny (3, 9) and Diodorus (5, 7), however, give them as follows: *Lipara*, *Didyme*, *Phœnicusa*, *Hiera*, *Strongyle*, *Ericusa*, and *Eunymus*. They are the same with Homer's *Παγκταί*, or "wandering islands." (*Od.*, 12, 68, &c.) Other names for the group were *Hephestiades* and *Vulcanic Insula*, from their volcanic character; and *Liparææ*, from Lipara, the largest. The appellation of *Æolie* was given them from their having formed the fabled domain of Æolus, god or ruler of the wind. The island in which he resided is said by some to have been Lipara, but the greater part of the ancient authorities are in favour of Strongyle, the modern *Stromboli*. (*Heyne, Excurs. ad Æn.*, 1, 51.) A passage in Pliny (3, 9, 14) contains the germe of the whole fable respecting Æolus, wherein it is stated that the inhabitants of the adjacent islands could tell from the smoke of Strongyle what winds were going to blow for three days to come. (*Vid.* Lipara, Strongyle, and Æolus.)

ÆOLIDES, a patronymic applied to various individuals. I. Athamas, son of Æolus. (*Or. Met.*, 4, 511.)—II. Cephalus, grandson of Æolus. (*Id. ibid.*, 6, 681.)—III. Sisyphus, son of Æolus. (*Id. ibid.*, 13, 26.)—IV. Ulysses, to whom this patronymic appellation was given, from the circumstance of his mother, Anticlea, having been pregnant by Sisyphus, son of Æolus, when she married Laertes. (*Virg. Æn.*, 6, 529, and *Heyne, in Var. Lect.*, ad *luc.*)—V. Misenus, the trumpeter of Æneas, called Æolides, figuratively, from his skill in blowing on that instrument. Consult, however, *Heyne, Excurs.*, ad *Æn.*, 6, 162.

ÆOLUS, I. the god or ruler of the winds, son of Hippotas and Melanippe daughter of Chiron. He reigned over the Æolian islands, and made his residence at Strongyle, the modern *Stromboli*. (*Vid.* ÆOLIS.) Homer calls him "Æolus Hippotades (i. e., son of Hippotas), dear to the immortal gods," from which passage we might perhaps justly infer, that Æolus was not,

properly speaking, himself a god. (*Od.*, 10, 2.) His island was entirely surrounded by a wall of brass, and by smooth precipitous rocks; and here he dwelt in continual joy and festivity, with his wife and his six sons and as many daughters. The island had no other tenants. The sons and daughters were married to each other, after the fashion set by Jupiter (*καὶ ὁ καὶ ὁ Ζεὺς συνῴκει τῇ Ἥπῃ*, *Eustath.*, *ad loc.*), and are nothing more than a poetic type of the twelve months of the year. (Compare *Eustath.*, *ad loc.*) The office of directing and ruling the winds had been conferred on Æolus by Jupiter (*Od.*, 10, 21, *seqq.*—*Virg. Æn.*, 1, 65); but his great protectress was Juno (*Virg. Æn.*, 1, 78, *seqq.*), which accords very well with the ideas of the earlier poets, who made Juno merely a type of the atmosphere, the movements of which produce the winds.—Ulysses came in the course of his wanderings to the island of Æolus, and was hospitably entertained there for an entire month. On his departure, he received from Æolus all the winds but Zephyrus, tied up in a bag of ox-hide. Zephyrus was favourable for his passage homeward. During nine days and nights the ships ran merrily before the wind: on the tenth they were within sight of Ithaca; when Ulysses, who had hitherto held the helm himself, fell asleep: his comrades, who fancied that Æolus had given him treasure in the bag, opened it: the winds rushed out, and hurried them back to Æolia. Judging, from what had befallen them, that they were hated by the gods, the ruler of the winds drove them with reproaches from his isle. (*Keightley's Mythology*, p. 240.)—The name Æolus has been derived from αἰώλος, “varying,” “unsteady,” as a descriptive epithet of the winds.—II. A son of Hellen, father of Sisypus, Cretheus, and Athamas, and the mythic progenitor of the great Æolic race.—III. A son of Neptune and the nymph Arne. (*Eustath.*, *ad Od.*, 10, 2.)

ÆΩΝΕΣ (αἰῶνες), or Æons, a term occurring frequently in the philosophical speculations of the Gnostics. The Gnostics conceived the emanations from Deity to be divided into two classes; the one comprehended all those substantial powers which are contained within the Divine Essence, and which complete the infinite plenitude of the Divine Nature: the other, existing externally with respect to the Divine Essence, and including all finite and imperfect natures. Within the Divine Essence, they, with wonderful ingenuity, imagined a long series of emanative principles, to which they ascribed a real and substantial existence, connected with the first substance as a branch with its root, or a solar ray with the sun. When they began to unfold the mysteries of this system in the Greek language, these Substantial Powers, which they conceived to be comprehended within the πλήρωμα, or Divine Plenitude, they called αἰῶνες, Æons. (*Enfield's History of Philosophy*, vol. 2, p. 142.)

ÆΡΕΑ, or Æpeia, a town in the island of Cyprus. *Vid.* Soloe.

ÆΡΟΛΙΝΟΣ, an engraver on precious stones, who flourished in the second century of our era. One of his gems, with the head of Marcus Aurelius Antoninus, is still extant. (*Bracci*, P. 1, tab. 3.—*Sillig, Dict. Art.*, s. r.)

ÆΡΥΤΟΣ, I. king of Messenia, and son of Cresphontes. His father and his two brothers were put to death by Polyphontes, who usurped, upon this, the throne of the country. Æpytus, however, was saved by his mother, Merope, who had been compelled to marry the murderer of her husband, and was sent by her to the court of her father Cypselus, king of Arcadia, to be there brought up. On attaining to manhood, he slew Polyphontes, and recovered the throne. His descendants were called Æpytidæ. (*Apollod.*, 2, 8, 5.—*Heyne, ad Apollod.*, l. c.)—II. A king of Arcadia, and son of Elatus. He was killed, in hunting, by a small species of serpent, called σῆψ. (*Pausan.*, 8, 4, 4.)

—III. A king of Arcadia, son of Hippothous, and contemporary with Orestes, son of Agamemnon, who, in obedience to the Delphic oracle, migrated into Arcadia from Mycenæ during this monarch's reign. Æpytus having, on one occasion, boldly entered the temple of Neptune, near Mantinea, which no mortal was allowed to do, is said to have been deprived of sight by a sudden eruption of salt water from the sanctuary, and to have died soon after. (*Pausan.*, 8, 10.) This story, if true, points of course to some artifice on the part of the priests of the temple. The “salt water” was probably some strong acid. (Compare *Salverte, Sciences Occultes*, vol. 1, ch. 15.)—IV. A monarch who ruled in the Southern part of Arcadia, and who brought up Evadne, daughter of Neptune and the Laconian Pitane. (*Pind. Ol.*, 6, 54.—Compare *Bockh, ad loc.*)

ÆQUI or ÆQUICŪLI, a people of Italy, distinguished in history for their early and incessant hostility against Rome, more than for the extent of their territory or their numbers. Livy himself (7, 12) expresses his surprise, that a nation, apparently so small and insignificant, should have had a population adequate to the calls of a constant and harassing warfare, which it carried on against the city of Rome for so many years. But it is plain, from the narrow limits which must be assigned this people, that their contests with Rome cannot be viewed in the light of a regular war, but as a succession of marauding expeditions, made by these hardy but lawless mountaineers on the territory of that city, and which could only be effectually checked by the most entire and rigid subjection. (*Liv.*, 10, 1.) The Æqui are to be placed next to the Sabines, and between them and the Marsi, chiefly in the upper valley of the Anio, which separated them from the Latins. They are said at one time to have been possessed of forty towns; but many of these must certainly have been little more than villages, and some also were subsequently included within the boundaries of Latium. The only cities of note, which all geographers agree in assigning to the Æqui, are Varia and Carsoli, on the Via Valeria. (*Cramer's Anc. Italy*, vol. 1, p. 322.) “Almost inseparable from the Volscians in Roman story,” observes Niebuhr (*Rom. Hist.*, vol. 1, p. 58, *Cambridge transl.*), “we find the Æqui or Æquicūli, who are described as an ancient people, and threatening Rome. They are so often confounded with the Volscians, that the fortress on the Lake Fucinus, which the Romans took in the year of the city 347, may with probability be called Æquian; and when Livy says that the Volscian wars had lasted from the time of Tarquinius Superbus for more than two hundred years, he considers the Volscians and Æqui as one people.” This remark of Niebuhr's, however, admits of some modification, as will appear from what precedes. The Æqui and Volsci should undoubtedly be kept distinct, though originating evidently from the same parent-race.

ÆQUIMELIUM, a place at Rome, in the Vicus Jugarius, at the base of the Capitoline Hill, where once had stood the mansion of Spurius Mælius. This individual, having aspired to supreme power, was slain by Ahala, master of the horse to the dictator Cincinnatus, and his dwelling was razed to the ground. Hence, according to Varro (*L. L.*, 4, 32), the etymology of the term Æquimelum, “quod solo aquata sit Mælii domus.” (Compare *Liv.*, 4, 16.) Cicero and Valerius Maximus, however, assign another, but less correct, derivation, from the just nature of the punishment inflicted upon Mælius (“ex aquo seu justo supplicio Mælii.”—Consult *Cic. pro Dom.*, c. 38, and *Val. Max.*, 6, 3).

ÆΡΙΑΣ, an ancient king of Cyprus, who built the temple of Venus at Paphos. A later tradition made this temple to have been founded by Cinyras. (*Tacit. Hist.*, 2, 3.)

ÆRÔPE, I. daughter of Catreus, king of Crete, and granddaughter, on the father's side, of Minos. She and her sister Clymene, having been guilty of incontinence, were delivered over, by their father, into the hands of Nauplius of Eubœa, to be conveyed by him to foreign lands, and there sold into slavery. Nauplius, however, married Clymene, and sold merely Ærôpe. She was purchased by Plisthenes, son of Atreus, and became by him the mother of Agamemnon and Menelaus. Plisthenes, however, dying young, Atreus, his father, took Ærôpe to wife, and brought up Agamemnon and Menelaus as his own sons. Ærôpe subsequently was seduced by Thyestes, brother of Atreus, an act which was punished so horribly by the injured husband. (*Vid.* Atreus and Thyestes.) According to some authorities, Ærôpe was cast into the sea by Atreus. (*Apollod.*, 3, 2, 3.—*Heyne*, *ad Apollod.*, l. c.—*Schol. in Eurip. Orest.*, 812.—*Brunch*, *ad Soph. Aj.*, 1255.)—II. Daughter of Cepheus, became the mother of Æërops by the god Mars. She died in giving birth to her offspring. (*Pausan.*, 8, 44.)

ÆRÔPUS, I. son of Mars and Ærôpe. (*Vid.* Ærôpe, II.)—II. Son of Temenus, who, with his two brothers, left Argos, and settled in Macedonia. Perdiccas, the youngest of the three, was the founder of the Macedonian royal line. (*Herod.*, 8, 137. Compare *Thucyd.*, 2, 99, and consult the article Macedonia.)—III. A king of Macedonia, who succeeded, while yet an infant, his father Philip the First. The Illyrians having made an inroad into Macedonia, and having proved successful at first, were afterward defeated by the Macedonians, the infant king being placed in his cradle in the rear of their line. (*Justin*, 7, 2.)—IV. A regent of Macedonia during the minority of Orestes, son of Archelaus. He usurped the supreme power, and held it six years, from 400 B.C. to 394 B.C.—V. A mountain of Epirus, now Mount *Trebeeshua*, near the defile anciently called *Stena Aoi*, or "Gorge of the Aous." On one of the precipices of this mountain stands the fortress of Clissura. (Consult *Hughes' Travels*, vol. 2, p. 272.)

ÆSACUS, according to Ovid (*Mét.*, 11, 762, *seqq.*), a son of Priam and Alexirrhœ, who at an early age quitted his father's court and retired to rural scenes. He became enamoured of the nymph Hesperia; but she treated his suit with disdain, and, in endeavouring on one occasion to escape from him, lost her life by the bite of a serpent. Æsacus, in despair, threw himself headlong from a rock into the sea; but Tethys, pitying his fate, suspended his fall, and changed him into a cormorant.—A different account is given by Apollodorus. According to this writer, Æsacus was the son of Priam, by his first wife Arisba, and married Asterope, who did not long survive her union with him. His grief for her loss induced him to put an end to his existence. Æsacus was endued by his grandmother Merope with the gift of prophecy; and he transmitted this art to his brother and sister, Helenus and Cassandra. Priam, having divorced Arisba that he might espouse Hecuba, and the latter having dreamed that she had brought forth a blazing torch, which wrapped in flames the whole city, Æsacus predicted that the offspring of this marriage would occasion the destruction of his family and country. On this account, the infant Paris, immediately after his birth, was exposed on Mount Ida. (*Apollod.*, 3, 12, 5, *seqq.*, and *Heyne*, *ad loc.*)

ÆSAR, an Etrurian word, equivalent to the Latin *Deus*. (*Sueton. Vit. Aug.*, 97.) The lightning, having struck a statue of Augustus at Rome, effaced the letter C from the name CÆSAR on the pedestal. The augurs declared that, as C was the mark of a hundred, and ÆSAR the same as *Deus*, the emperor had only a hundred days to spend on earth, after which he would be taken to the gods. The death of Augustus, soon after, was thought to have verified this prediction.

(*Sueton.*, l. c.—*Dio Cass.*, 56, 29.) Casaubon derives the Etrurian term just referred to from the Greek *Ásca*, "fate;" and Dickinson (*Delph. Phœniciz.*, c. 11) from the Hebrew, comparing it also with the Arabic *asara*, "to create." Lanzi (*Saggio di Ling. Etrusc.*, vol. 3, p. 708), after quoting Casaubon's etymology, suggests the Greek form *αἰοί*, the same with *θεοί*, as the root. The *Asi* (or, more correctly, *Æsir*) of Scandinavian mythology will furnish, however, a more obvious and satisfactory ground of comparison. The term *As* is equivalent to "*Deus*" or "*God*," and the plural form is *Æsir*, "*Gods*." Hence *Asgard*, or *Asa-gard*, the old northern term for "*heaven*." It is curious to observe, that *Os* in Coptic likewise signifies "*God*" or "*Lord*," with which we may compare the Greek *ὁστος*, "*holy*." So, also, the earlier term for "*altar*" in the Latin language was *asa*. (*Terent. Scaur.*, p. 2252, 2258.) In Cerosus, moreover, the gods are termed *Isi*; and good deities or geniuses were called by the ancient Persians *Ized*. (*Müller, Etrusker*, vol. 2, p. 81.—*Kanne, System der Indischen Mythen*, p. 228.)

ÆSIRA. *Vid.* Supplement.

ÆSĀRUS, a river of Bruttium, on which Crotona was situate. It formed a haven, which, however incommensurable compared with those of Tarentum and Brundisium, was long a source of great wealth to this city, as we are assured by Polybius (*Frag.*, 10, 1). The modern name is the *Esaro*. (Compare *Thucritus*, *Il.*, 4, 17.)

ÆSCHINES, I. an Athenian philosopher, of mean birth and indigent circumstances, styled the Socratic (*ὁ Σωκρατικός*) for distinction sake from the orator of the same name mentioned below. He flourished during the fourth century B.C., and obtained instruction from Socrates, who honoured his ardent zeal for knowledge, and held him in high estimation. (*Diog. Laert.*, 2, 60.—*Senec. de Benef.*, 1, 8.) When Æschines addressed himself to the sage for the purpose of becoming his disciple, it was in the following words: "I am poor, but I give myself up entirely to you, which is all I have to give." The reply of Socrates was characteristic: "You know not the value of your present." After the death of his master, he endeavoured to better his worldly condition, and, having borrowed a sum of money, became a perfumer. It appears, however, that he did not succeed in this new vocation; and, not paying the interest of the sum he had borrowed, he was sued for the debt. Athenæus (13, p. 611, d) has preserved for us part of a speech delivered by Lysias on this occasion, in which he handles Æschines with considerable severity, and charges him with never paying his debts, with defrauding a certain individual of his property, corrupting his wife, &c. Not being able to live any longer at Athens, he betook himself to Sicily, and sought to win the favour of the tyrant Dionysius. According to Lucian (*de Parasit.*—*ed. Bip.*, vol. 7, p. 127), he accomplished his object by reading one of his dialogues, entitled *Miltiades*, to the tyrant, who liberally rewarded him. Plutarch (*de Dscr. amic. et adulat.*—*ed. Reiske*, vol. 6, p. 248) informs us, that he had been strongly recommended to Dionysius by Plato, in a conversation which they had together subsequent to the arrival of Æschines, in which Plato complained to the tyrant of his neglecting a man who had come to him with the most friendly intention, that of improving him by philosophy. The statement of Diogenes Laertius, however, is directly opposite to this, for he informs us that Æschines was slighted by Plato, and introduced to the prince by Aristippus. He remained in Sicily till the expulsion of Dionysius, and then returned to Athens. Here, not daring to become a public rival of Plato or Aristippus, he taught philosophy in private, and received payment for his instructions. He also composed orations and pleadings for others. Besides orations and epistles, Æschines wrote seven So-

eratic dialogues in the true spirit of his master, on temperance, moderation, humanity, integrity, and other virtues. Their titles were, *Μιλτιάδης*, *Καλλίας*, *Ἀξιοχός*, *Ἀσπασία*, *Ἀλκιβιάδης*, *Τηλεγαγής*, and *Ρίνων*. Of these none remain. We have, indeed, three dialogues extant, which go under the name of Æschines, but the first and second are not his, and very probably the third also was never composed by him. (*Meiners, Judicium de quibusdam Socraticorum reliquiis. — Comment. Soc. Gott.*, vol. 5, p. 45, 1782. — *Fischer, ad Æsch. Dial.*, p. 23, 49, 107, ed. 1786.) Their titles are: 1. *Περὶ Ἀρετῆς, εἰ διδακτὸν*. "Concerning virtue, and whether it can be communicated by instruction." 2. *Ερυξίας, ἢ περὶ πλούτου*. "Eryxias, or concerning riches." 3. *Ἀξιοχός, ἢ περὶ θανάτου*. "Axiochus, or concerning death." This last is attributed by some to Xenocrates of Chalcædon, and, what makes it extremely probable that Xenocrates was the author of the piece, is the circumstance of its containing the word *ἀλεκτρονοστήριος*, for which Pollux cites the Axiochus of this very philosopher. Diogenes Laertius, moreover, informs us, that Xenocrates wrote a work on death, but the manner in which he speaks of this production does not seem to indicate that it had the form of a dialogue. A letter, ascribed to Æschines, is, in like manner, supposed to be the production of another writer. Æschines pretended to have received his dialogues from Xanthippe, the wife of Socrates; and Diogenes Laertius states that Aristippus, when reading them, called out, *πῶθεν σοί, 2ηστῆ, τὰυτα*; "where did you get these from, you thief?" Little reliance, however, can be placed on either of these accounts. The three dialogues ascribed to Æschines are found in the old editions of Plato, since that of Aldus, 1513. The Axiochus is given by Wolf, in the collection entitled *Doctrina recte vivendi ac monendi*, Basil, 1577 and 1586, 8vo. Le Clerc first published these dialogues separately, at Amsterdam, 1711, in 8vo. Horræus gave a new edition and a new Latin version at Leuward, 1718, in 8vo. Fischer published four editions successively at Leipsic, in 1758, 1766, 1786, and 1788, 8vo. The last contains merely the text with an Index, so that the third is the most useful to the student. Fischer's editions are decidedly the best. The letter mentioned above was published by Sammet, in his edition of the letters of Æschines the orator. — II. An Athenian orator, born 397 B.C., sixteen years before Demosthenes. According to the account which Æschines gives of his own parentage, his father was of a family that had a community of altars with the race of the Eteobutadæ. Having lost his property by the calamities of war, he turned his attention, as the son tells us, to gymnastic exercises; but, being subsequently driven out by the thirty tyrants, he retired to Asia, where he served in a military capacity, and greatly distinguished himself. He contributed afterward to the restoration of the popular power in Athens. One of the orator's brothers served under Iphicrates, and held a command for three years, while another, the youngest, was sent as ambassador from the republic to the King of Persia. Such is the account of Æschines himself (*de male gesta leg.*, p. 47 and 48, ed. Steph.). That given by Demosthenes, however, in his oration for the crown, is widely different. According to the latter, the father of Æschines was originally a slave to a schoolmaster, and his first name was Tromes, which, upon gaining his freedom, he changed to Atroniæus, in accordance with Athenian usage. His mother was at first named Empusa, an appellation which Demosthenes informs us was given to her on account of her habits of life, she being a common courtesan. This name was afterward changed to Glaucothea. (*Demosth. de corona*, p. 270, ed. Reiske.) The statement of Demosthenes, coming as it does from the lips of a rival, might well be suspected of exaggeration; and as Æschines did not reply to the speech of his opponent, we

know not how he might have met these disgraceful charges. If, however, any inference is to be drawn from the feeble manner in which he replies to similar charges, made by the same orator on a different occasion, we should be led to suspect that they were, in some degree, based upon the truth. Nor, indeed, is it probable, that, with all the license allowed the ancient orators, Demosthenes would have ventured to make such assertions in the presence of the Athenian people if unsupported by facts. Suidas calls the mother of Æschines *τελεστρία*, a retainer to the female priesthood in initiations. Photius (*Biblioth.*, vol. 1, p. 20, ed. Bekker) says, that she was *τερεία*, "a priestess;" while another authority (*Lucian, in Somn.*—vol. 1, ed. Bip., p. 13) makes her to have been *τυμπανιστρία*, a kind of minstrel, who beat the tabour in the feasts of Cybele. From all that we can learn of the early life of Æschines, it would appear, that, after having aided his father in the management of a school, he became clerk to one of the lower class of magistrates. Tired of this station, he attached himself to a company of tragedians, but was intrusted merely with third-rate characters. It is said that, on one occasion, when personating Cænomaus, he chanced to fall upon the stage, a circumstance which occasioned his disgraceful dismissal from the troop. Hence the name of Cænomaus, which Demosthenes, in ridicule, applies to him. (*Demosth. de corona*, 307, ed. Reiske.) On the other hand, Æschines himself states, that from early life he followed the profession of arms, served on many occasions with distinction, and had a crown decreed him by the people for his meritorious exertions. It is more than probable that Æschines here selects the fairest parts of his career, and Demosthenes, on the contrary, whatever was calculated to bring him into contempt. Some ancient writers make him to have been a disciple of Isocrates and Plato, but others, with far more probability, assign him Nature alone for an instructress, and affirm that the public tribunals and the theatre were his only places of initiation into the precepts of the oratorical art. Æschines must have possessed strong natural talents to become as eminent as he did, and to be able to contest the prize of eloquence with so powerful a competitor as Demosthenes. It was a long time, however, before he became much known as a public speaker, and he was already advanced in life when he commenced taking part in the politics of the day. (*Recherches sur la vie et sur les ouvrages d'Eschine, par l'Abbé Vauvry. — Mem. Acad. des Insér.*, &c., vol. 14, p. 87.) When Æschines began his public career, the Athenians were engaged in a war with Philip of Macedon. The orator showed himself, at first, one of the most violent opposers of this monarch, and proposed sending ambassadors throughout Greece, in order to raise up enemies against him. He himself went in this capacity to Megalopolis, to confer with the general council of Arcadia. When the Athenians sent ten ambassadors to negotiate a peace with Philip, who had been at war with them on account of Amphipolis, Æschines, who was thought to be devoted to the public good, was one of the number. Demosthenes was a colleague of his on this occasion, and we have the express testimony of the latter, in favour of the correctness and integrity which on this occasion marked the conduct of his rival. A change, however, soon took place. Æschines, on his return, after having at first strenuously opposed the projected peace, on the morrow as earnestly advised it. The gold of Macedon had, beyond a doubt, been instrumental in producing this revolution in his sentiments, and we find him ever afterward a warm partisan of Philip's, and blindly seconding all his ambitious designs. From this period Æschines and Demosthenes became open antagonists. The latter, in concert with Timarchus, having meditated an impeachment of his rival for his conduct on another embassy, when he and four colleagues purpos-

ly wasted time in Macedonia, while Philip was prosecuting his conquests in Thrace, Æschines anticipated their attack by an accusation of Timarchus himself, and spoke with so much energy, that the latter either hung himself in despair, or, according to another authority, was condemned, and deprived of his rights as a citizen. Demosthenes, however, not intimidated by the blow, preferred his original charge against Æschines, and, selected by Photius (*Biblioth.*, vol. 1, p. 20, *ed. Bekker*), came so near accomplishing the object he had in view, that his rival was only saved by the active interference of a wealthy citizen named Eubulus, an open enemy of Demosthenes, and by the judges rising from their seats before the accusation was brought to a close. After many subsequent collisions, Æschines was compelled to yield to the patriotism and eloquence of his adversary. Their most famous controversy was that which related to *the crown*. A little after the battle of Cheronæa, Demosthenes was commissioned to repair the fortifications of Athens. He expended, in the performance of this task, thirteen talents, ten of which he received from the public treasury, while the remaining three were generously given from his own private purse. As a mark of public gratitude for this act of liberality, Ctesiphon proposed to the people to decree a crown of gold to the orator. Æschines immediately preferred an impeachment against Ctesiphon, alleging that such a decree was an infringement of the established laws of the republic, since Demosthenes still held some public offices, and his accounts had not therefore been settled, and besides, since he was not such a friend to the state as Ctesiphon had represented him to be, who had, therefore, put upon record documents of a false and erroneous character. Demosthenes, on whom the attack was virtually made, appeared in defence of the accused. This celebrated cause, after having been delayed for some time in consequence of the troubles attendant on the death of Philip, was at last brought to a hearing. Ability and eloquence was displayed on both sides, but the palm was won by Demosthenes; and his rival, being found guilty of having brought an unjust accusation, was obliged to undergo the punishment he had intended for Ctesiphon, and was banished from his country. It is stated by Photius (*Biblioth.*, vol. 2, p. 493, *ed. Bekker*), that Æschines, when he left Athens, was followed and assisted by Demosthenes, and that, upon the latter's offering him consolation, he replied, "How shall I be able to bear my exile from a city, in which I leave behind me enemies more generous than it is possible to find friends in any other." Plutarch, however, ascribes this very answer to Demosthenes, when his opponents made a similar offer to him as he was departing from Athens into exile. Æschines retired to Asia with the intention of presenting himself before Alexander; but the death of that monarch compelled him to change his views, and take up his residence at Rhodes. Here he opened a school of eloquence, and commenced his lectures by reading the two orations which had been the occasion of his banishment. His hearers loudly applauded his own speech; but when he came to that of Demosthenes, they were thrown into transports of admiration. "What would you have said," exclaimed Æschines, according to the common account, "had you heard Demosthenes himself pronounce this oration?" The statement of Photius, however, is different from this, and certainly more probable. The auditors of Æschines at Rhodes expressed, as he informs us, their surprise that a man of so much ability should have been overcome by Demosthenes: "Had you heard that *wild beast* (τῷ θηρίῳ ἔκεινον)," exclaimed Æschines, "you would have ceased to be at a loss on this head." (εἰ ἤκούσατε τοῦ θηρίου ἔκεινον οὐκ ἂν ἦν τοῦτο ἥσυχον. *Phot. Biblioth.*, vol. 1, p. 20, *ed. Bekker*.) He subsequently transferred his school from Rhodes to Samos, where he died at the age of 75 years. We have only three

orations of Æschines, and it would seem that these were his sole remaining productions, even at an early period, since Photius states, that it was customary to designate these speeches by the name of "the Graces of Æschines." The most celebrated of these harangues is the one ostensibly directed against Ctesiphon, but in reality against Demosthenes. It is remarkable for order, clearness, and precision, and was selected by Cicero to be translated into Latin.—The Abbé Bartheleny makes the eloquence of Æschines to be distinguished by a happy flow of words, by an abundance and clearness of ideas, and by an air of great ease, which arose less from art than nature. The ancient writers appear to agree in this, that the manner of Æschines is softer, more insinuating, and more delicate than that of Demosthenes, but that the latter is more grave, forcible, and convincing. The one has more of address, and the other more of strength and energy. The one endeavours to steal, the other to force, the assent of his auditors. In the harmony and elegance, the strength and beauty of their language, both are deserving of high commendation, but the figures of the one are finer, of the other bolder. In Demosthenes we see a more sustained effort, in Æschines vivid, though momentary, flashes of oratory.—Besides the speeches above mentioned, twelve epistles are attributed to Æschines, which he is supposed to have written from Rhodes. Photius makes the number only nine, and states that they were called, from this circumstance, the Muses of Æschines. One of the best editions of Æschines is that of Wolf, containing also the orations of Demosthenes. It was first printed at Basle by Oporinus, afterward at the same place in 1549 and 1572, at Venice in 1550, and at Frankfort in 1604. The orations of Æschines are also contained in Reiske's excellent edition of the Greek Orators, *Lips.*, 1770, &c., 12 vols. 8vo, and in the valuable London edition, recently published, of the works of Demosthenes and Æschines, 10 vols. 8vo, 1827. To these may be added the edition of Foules and Friend, *Oxon.*, 1696, 8vo, and that of Stock, *Dublin*, 1769, 2 vols. 8vo. These last two editions, however, contain merely the orations of Æschines and Demosthenes respecting the crown. The epistles were published separately by Sammet, *Lips.*, 1771, 8vo.—III. The author of a harangue entitled *Deliaca*, which some have attributed to the orator Æschines. (*Diog. Laert.*)—IV. An Arcadian, a disciple of Isocrates. (*Id.*)—V. A Mytilenean, surnamed the scourge of orators. *ῥητορομαστῆς*. (*Id.*)—VI. A native of Neapolis, and member of the Academic sect, about B.C. 109.—VII. A native of Miletus, and orator, whose style of speaking is represented by Cicero as of the florid and Asiatic kind. (*Cic. Brut.*, c. 95.)—VIII. An Athenian physician who cured the quinsy, affections of the palate, cancers, &c., by employing the cinders of excrements. (*Plin.*, 28, 4.)—IX. A distinguished individual among the Eretrians, who disclosed to the Athenians the treacherous designs of some of his countrymen, when the former had marched to their aid against the Persians. (*Herod.*, 6, 100.)

ÆSCHYLUS, I. A Mytilenean poet, intimate with Aristotle. He accompanied Alexander in his Asiatic expedition. Consult *Vassius de Poet. Græc.*—II. An Iambic poet of Samos. He is mentioned by Athenæus (7, 296, c, and 8, 335, c), and also by Tzetzes, in his scholia on Lycophron (v. 688-9). Some of his verses are preserved by Athenæus and in the Anthology. (Compare *Jacobs, ad Anthol.*, vol. 1, part 1, p. 385.)—III. A physician, preceptor to Galen. (*Id. Supplement.*)—IV. A Greek writer, who composed a work on husbandry, &c., which is cited by Pliny, and also by Varro, *R. R.*, 1, 1.

ÆSCHYLUS, I. A celebrated tragic writer, son of Euphorion, born of a noble family at Eleusis in Attica, in the fourth year of the sixty-third Olympiad, B.C. 525. (Compare *Vit. Anonyma* given in *Stanley's ed.*,

and the *Arundel Marbles*.) Pausanias (1, 14) records a story of his boyhood, professedly on the authority of the poet himself, that, having fallen asleep while watching the clusters of grapes in a vineyard, Bacchus appeared to him, and bade him turn his attention to tragic composition. This account, if true, shows that his mind was, at a very early period, enthusiastically struck with the exhibitions of the infant drama. An impression like this, acting upon his fervid imagination, would naturally produce such a dream as is described. To this same origin must, no doubt, be traced the common account relative to Æschylus, that he was accustomed to write under the influence of wine; and in confirmation of which Lucian (*Demosth. Encom.*—*ed. Bip.*—vol. 9, p. 144) cites the authority of Callisthenes, and Athenæus (10, 33) that of Chameleon. The inspiration of Bacchus, in such a case, can mean nothing more than the true inspiration of poetry. (*Mohrke, Litt. der Gr. und Röm.*, vol. 1, p. 359.) At the age of twenty-five, Æschylus made his first public attempt as a tragic author, in the 70th Olympiad, B.C. 499. (*Suid. in Διοχ.*—*Clinton's Fasti Hellenici*, p. 21, 2d ed.) The next notice which we have of him is in the third year of the 72d Olympiad, B.C. 490, when, along with his two celebrated brothers Cynægius and Aminias, he was graced at Marathon with the praises due to pre-eminent bravery, being then in his 35th year. (*Marm. Arund.*, No. 49.—*Vit. Anonym.*) Six years after that memorable battle, he gained his first tragic victory. Four years after this was fought the battle of Salamis, in which Æschylus took part with his brother Aminias, to whose extraordinary valour the ἀριστεία were decreed. (*Herod.*, 8, 93.—*Ælian, Var. Hist.*, 5, 19.) In the following year he served in the Athenian troops at Plataea. Eight years afterward (*Argument. ad Pers.*) he gained the prize with a tetralogy, composed of the *Persæ*, the *Phineus*, the *Glaucus Potniensis*, and the *Prometheus Igneifer*, a satyric drama (or, to give their Greek titles, the Πέρσαι, Φινεύς, Γλαῦκος Ποτνιεύς, and Προμηθεὺς πυρόφορος). The latter part of the poet's life is involved in much obscurity. (Compare *Blomfield, ad Pers. præf.*, p. xxii.—*Id. ad Arg. in Agamem.*, p. xix. et xx.—*Böckh, de Græc. Trag. Princip.*, c. 4, seqq.) That he quitted Athens and died in Sicily, is agreed on all hands, but the time and cause of his departure are points of doubt and conjecture. It seems that Æschylus had laid himself open to a charge of profanation, by too boldly introducing on the stage something connected with the mysteries. According to Clemens Alexandrinus, he was tried and acquitted of the charge (ἐν Ἀρείῳ πάγῳ κριθεὶς, οὕτως ἀπέστη, ἐπιδείξας αὐτὸν μὴ μνησθέντα.—*Clem. Alex. Strom.*, 2). The more romantic narrative of Ælian (*Var. Hist.*, 5, 19) informs us, that the Athenians stood ready to stone him to death, when his brother Aminias, who interceded for him, dexterously dropped his robe and showed the stump of his own arm lost at the battle of Salamis. This act of fraternal affection and presence of mind had the desired effect on the quick and impulsive temper of the Athenians, and Æschylus was pardoned. But the peril which he had encountered, the dread of a multitude ever merciless in their superstitions, indignation at the treatment which he had received, joined, in all likelihood, to feelings of vexation and jealousy at witnessing the preference occasionally given to young and aspiring rivals, were motives sufficiently powerful to induce the proud-spirited poet to abandon his native city, and seek a retreat in the court of the munificent and literary Hiero, prince of Syracuse. (*Vit. Anonym.*—*Pausan.*, 1, 2.—*Plut. de Exil.*, Op., vol. 8, p. 385, *ed. Ritsche*.) This must have been before the second year of the 78th Olympiad, B.C. 467, for in that year Hiero died. The author of the anonymous life of Æschylus, which has come down to us, mentions, among other reasons for his voluntary banishment, a victory obtained

over him by Simonides, in an elegiac contest; and, what is more probable, the success of Sophocles, who carried off from him the tragic prize, according to the common account, in the 78th Olympiad, B.C. 468. Plutarch, in his life of Cimon, confirms the latter statement. If so, Æschylus could not have been more than a year in Sicily before Hiero's death. The common account, relative to the cause which drove the poet from his country, is grounded upon an obscure allusion in Aristotle's *Ethics*, explained by Clemens Alexandrinus and Ælian. In Sicily, Æschylus composed a drama, entitled *Ætina*, to gratify his royal host, who had recently founded a city of that name. During the remainder of his life, it is doubtful whether he ever returned to Athens. If he did not, those pieces of his, which were composed in the interval, might be exhibited on the Athenian stage under the care of some friend or relation, as was not unfrequently the case. Among these dramas was the Oresteian tetralogy (*Argument. ad Agamem.*—*Schol. ad Aristoph. Ran.*, 1155), which won the prize in the second year of the 80th Olympiad, B.C. 458, two years before his death. At any rate, his residence in Sicily must have been of considerable length, as it was sufficient to affect the purity of his language. We are told by Athenæus, that many Sicilian words are to be found in his later plays. Æschylus certainly has some Sicilian forms in his extant dramas: τὰ πεδάρσιος, πεδαίχχοι, πεδάροσι, μάσσω, μῦ, &c., for μετάρσιος, μεταίχχοι, μετάρσι, μεῖζων, μῆτερ, &c. (*Comp. Blomfield, Prom. Vinct.*, 277, *Gloss.*, and *Böckh, de Trag. Græc.*, c. 5.) The poet died at Gela, in the 69th year of his age, in the 81st Olympiad, B.C. 456. His death, if the common accounts be true, was of a most singular nature. Sitting motionless, in silence and meditation, in the fields, his head, now bald, was mistaken for a stone by an eagle, which happened to be flying over him with a tortoise in her claws. The bird dropped the tortoise to break the shell; and the poet was killed by the blow. It is more than probable, however, that this statement is purely fabulous, and that it was invented in order to meet a supposed prophecy, that he would receive his death from on high. The Gelians, to show their respect for so illustrious a sojourner, interred him with much pomp in the public cemetery.—Æschylus is said to have composed seventy dramas, of which five were satyric, and to have been thirteen times victor. The account of Pausanias, however, would almost imply a larger proportion of satyric dramas. In fact, considerable discrepancy exists respecting the number of plays ascribed to Æschylus. Only seven of his tragedies remain, together with fragments of others preserved in the citations of the grammarians, and two epigrams in the Anthology. The titles of the dramas which have reached us are as follows: 1. Προμηθεὺς δεσμώτης (*Prometheus Vinctus*). 2. Ἐπὶ ὀϊβάς (*Septem contra Thebas*). 3. Πέρσαι (*Persæ*). 4. Ἀγαμέμνων (*Agamemnon*). 5. Χοηφόροι (*Chœphoræ*). 6. Εὐμένηδες (*Eumenides*). 7. Ἰκέτιδες (*Suppliants*). A short account of each of these will be given towards the close of the present article. This great dramatist was the author of the *fifth* form of tragedy. (*Vid. Theatrum*.) He added a second actor to the locutor of Thespis and Phrynichus, and thus introduced the *dialogue*. He abridged the immoderate length of the choral odes, making them more subservient to the main interest of the plot, and expanded the short episodes into scenes of competent extent. To these improvements in the economy of the drama, he added the decorations of art in his exhibition. A regular stage (*Vitrue. Præf.*, lib. 7), with appropriate scenery, was erected; the actors were furnished with becoming dresses, and raised to the stature of the heroes represented by the thick-soled cothurnus (*Horat.*, *Ep. ad Pis.*, 280); while the face was brought to the heroic cast by a mask of proportionate size and strongly-

marked character, which was also so contrived as to give power and distinctness to the voice. He paid great attention to the choral dances, and invented several figure-dances himself. Among his other improvements, is mentioned the introduction of a practice, which subsequently became established as a fixed and essential rule, the removal of all deeds of bloodshed and murder from the public view (*Philostr., Vit. Apollon.*, 6, 11), a rule only violated on one occasion, namely, by Sophocles in his play of the Ajax. In short, so many and so important were the alterations and additions of Æschylus, that he was considered by the Athenians as the *Father of Tragedy* (*Philostr., l. c.*), and, as a mark of distinguished honour paid to his merits, they passed a decree, after his death, that a chorus should be allowed to any poet who chose to re-exhibit the dramas of Æschylus. (*Philostr., l. c.*) Aristophanes alludes to this custom of re-exhibiting the plays of Æschylus in the opening of the *Acharnians* (v. 9, *seqq.*). Quintilian, however (10, 1), assigns a very different reason for this practice, and makes it to have been adopted for the purpose of presenting these dramas in a more correct form than that in which they were left by the author himself. What authority he had for such an assertion, does not now appear. In philosophical sentiments, Æschylus is said to have been a Pythagorean. (*Cic. Tusc. Disp.*, 2, 9.) In his extant dramas the tenets of this sect may occasionally be traced; as, deep veneration in what concerns the gods (*Agamem.*, 371), high regard for the sanctity of an oath and the nuptial bond (*Eumen.*, 217), the immortality of the soul (*Chœph.*, 321), the origin of names from imposition and not from nature (*Agamem.*, 682.—*Prom. Vinct.*, 84, 742), the importance of numbers (*Prom. Vinct.*, 468), the science of physiognomy (*Agamem.*, 797), the sacred character of suppliants (*Suppl.*, 351.—*Eumen.*, 233), &c. Æschylus, observes Schlegel (*Dram. Lit.*, p. 135, *seqq.*), must be considered as the creator of tragedy; it sprang forth from his head in complete armour, like Minerva from the brain of Jove. He clothed it as became its dignity, and not only instructed the chorus in the song and the dance, but came forward himself as an actor. (*Athenæus*, 1, 22.) He sketches characters with a few bold and powerful strokes. His plots are extremely simple. He had not yet arrived at the art of splitting an action into parts numerous and rich, and distributing their complication and denouement into well-proportioned steps. Hence in his writings there often arises a cessation of action, which he makes us feel still more by his unreasonably long choruses. But, on the other hand, all his poetry displays a lofty and grave disposition. No soft emotions, but terror alone remains in him; the head of Medusa is held up before the petrified spectators. His method of considering destiny is extremely harsh; it hovers over mortals in all its gloomy magnificence. The buskin of Æschylus has, as it were, the weight of brass; on it none but gigantic forms stalk before us. It almost seems to cost him an effort to paint mere men; he frequently brings gods on the stage, particularly the Titans, those ancient deities who shadow forth the dark primeval powers of nature, and who had long been driven into Tartarus, beneath a world governed in tranquillity. In conformity with the standard of his dramatic personæ, he seeks to swell out the language which they employ to a colossal size; hence there arise rugged compound words, an over-multitude of epithets, and often an extreme intricacy of syntax in the choruses, which is the cause of great obscurity. He is similar to Dante and Shakspeare in the peculiar strangeness of his imaginations and expressions, yet these images are not deficient in that terrible grace which the ancients particularly praise in Æschylus. The poet flourished exactly when the freedom of Greece, rescued from its enemies, was in its first strength, with a consciousness of which he

seems to be proudly penetrated. He had lived to be an eyewitness of the greatest and most glorious event of which Greece could boast, the defeat and destruction of the enormous hosts of the Persians under Darius and Xerxes, and had fought with distinguished valour in the combats of Marathon and Salamis. In the *Persæ*, and the *Seræ* against *Thebes*, he pours forth a warlike strain; the personal inclination of the poet for the life of a hero beams forth in a manner which cannot be mistaken. The tragedies of Æschylus are, on the whole, one proof among many, that in art, as in nature, gigantic proportions precede those of the ordinary standard, which then grow less and less, till they reach meanness and insignificance; and also that poetry, on its first appearance, is always next to religion in estimation, whatever form the latter may take among the race of men then existing. The tragic style of Æschylus is far from perfect (compare *Porson, Prælect. in Eurip.*, p. 6), and frequently deviates into the Epic and the Lyric, elements not qualified to harmonize with the drama. He is often abrupt, disproportioned, and harsh. It was very possible that more skilful tragic writers might compose after him, but he must always remain unsurpassed in his almost superhuman vastness, since even Sophocles, his more fortunate and more youthful rival, could not equal him in this. The latter uttered a sentiment concerning him by which he showed himself to have reflected on the art in which he excelled. "Æschylus does what is right, but without knowing it." Simple words, which, however, exhaust all that we understand by a genius which produces its effects unconsciously. (*Theatre of the Greeks*, p. 114, *seqq.*, 2d ed.)—It only remains to give a brief account of the tragedies of Æschylus which have reached us entire. 1. *Προμηθεὺς δεσμώτης* ("Prometheus in chains"). All the personages of this tragedy are divinities, and yet the piece, notwithstanding, carries with it an air of general interest, for it involves the well-being of the human race. The subject is Prometheus, punished for having been the benefactor of men in stealing for them the fire from the skies; or, to express the same idea in a moral point of view, it is strength and decision of character struggling against injustice and adversity. In this drama, which stands alone of its kind, we recognise, amid strength and sublimity of conception, a wild and untutored daring, which betrays the rudeness of early tragedy, and the infancy of the art. The scenery is awfully terrific: the lonely rock frowning over the waves, the stern and imperious sons of Pallas and Styx holding up Prometheus to its rifted side while Vulcan fixes his chains, Oceanus on his hippogriff, the fury of the whirlwind, the pealing thunder, and Prometheus himself undismayed amid the warfare of the elements, and bidding defiance even to the monarch of the skies, present a picture pregnant with fearful interest, and worthy the genius of Æschylus. This drama was translated into Latin by the poet Attius, some fragments of whose version are preserved for us by Cicero (*Tusc. Quæst.*, 2, 10). The question relative to the remaining pieces of the Tetralogy, of which this play formed a part, may be seen discussed in Schütz's edition of Æschylus (vol. 5, p. 120, *seqq.*).—2. *Ἑπτὰ ἐπὶ Οἰβῶς* ("The Seven Chiefs against Thebes"). The subject of the piece is the siege of Thebes, by the seven confederate chieftains, who had espoused the cause of Polyneices against his brother Eteocles. It is said that Æschylus particularly valued himself on this tragedy, and certainly not without reason, both as regards the animation of the scenes that are portrayed, the sublimity of the dialogue, and the strong delineations of character which it contains. This drama has the additional merit of having given birth to the Antigone of Sophocles, the Phœnissæ of Euripides, and the Thebaid of Statius. Besides the Siege of Thebes, Æschylus wrote three tragedies also

on the events which preceded it, viz., the "Laius," the "Œdipus," and the "Sphinx." Some critics, however, make the last to have been a satyric drama.—3. Πέρσαι ("The Persians"). This piece is so called because the chorus is composed of aged Persians. The subject is purely an historical one: it is the defeat of the naval armament of Xerxes. This play was performed eight years after the battle of Salamis, and it has been considered by some a defect that so recent an event should have been represented on the stage. But, as Racine has remarked in the preface to Bajazet, distance of place supplies the want of distance of time. The scene is laid at Susa, before the ancient structure appropriated to the great council of state, and near the tomb of Darius. The shade of this monarch comes forth from the sepulchre, for the purpose of counselling Xerxes to cease from the war against a people whom the gods protect. The piece contains great beauties; every instant the trouble of the Persians increases, and the interest augments. By some it has been supposed to have been written with a political intent, the poet endeavouring, by an animated description of the pernicious effects of an obstinate pride, and by filling the spectators with a malignant compassion for the vanquished Xerxes, indirectly disposing them to break off the war which Themistocles wished to prolong.—4. Ἀγαμέμνων ("Agamemnon"). This prince, returning from the siege of Troy with his female captive Cassandra, is assassinated by Clytemnestra and Ægisthus. The part of Cassandra, who predicts the woes that are about to fall upon the house of Agamemnon, forms the chief interest of the piece, and is one of the finest that has ever been conceived. The commencement of this tragedy is somewhat languid, but as the play proceeds all is movement and feeling.—5. Χοηφόροι ("The Choëphoræ"). This drama is so entitled, because the chorus, composed of female Trojan captives, slaves of Clytemnestra, are charged with the office of bringing the liquor for making libations at the tomb of Agamemnon (χοή, a libation, and φέρο, to bring). The subject of the piece is Orestes avenging the death of Agamemnon on Clytemnestra and her paramour. When this horrible deed has been accomplished, the paricide is delivered over to the Furies, who disturb his reason. "The spirit of Æschylus," observes Potter, "shines through this tragedy; but a certain softening of grief hangs over it, and gives it an air of solemn magnificence." The characters of Orestes and Electra are finely supported.—6. Εὐμενίδες ("The Eumenides," or "Furies"). This play derives its name from the circumstance of the chorus being composed of Furies who pursue Orestes. The latter pleads his cause before the Areopagus, and is acquitted by the vote of Minerva. This drama is remarkable for its violation of the unity of place, the scene being first laid at Delphi and afterward at Athens. Müller has written a very able work on the scope and character of this production, in which he discusses incidentally some of the most important points connected with the Greek drama. As regards the object which the poet had in view when composing the piece, he considers it to be a political one. Æschylus was a zealous partisan of Aristides, and opponent of Themistocles, and evident symptoms of this partiality are to be found in some of his plays. As an Athenian citizen and patriot, the poet on every occasion recommends to his countrymen temperance and moderation in their enjoyment of democratic liberty, and in their ambitious schemes against the rest of Greece. The party of Themistocles had made themselves obnoxious, in these respects, to the patriotic feelings of Æschylus; and a demagogue named Ephialtes, having attacked the authority of the venerable court of the Areopagus, the poet in this play of the Eumenides appeared in its defence, and strove to save this excellent institution, though ineffectually,

from the levelling doctrines of the day. Pollux informs us, that the tragic chorus, up to the time when this play was first represented, consisted of fifty persons, but that the terror occasioned by a chorus of fifty furies caused a law to be passed, fixing the tragic chorus, for the time to come, at fifteen, and the comic chorus at twenty-four. (*Jul. Pol.*, 4, 110.) Pollux evidently is in error here. The number of choreutæ for the whole tetralogy consisted of fifty (originally, as Müller thinks, of forty-eight), and these choreutæ it was the poet's business to distribute into choruses for the individual tragedies and satyric drama composing the tetralogy. Pollux, therefore, in all probability, misconceived something which he had learned relative to the number of choreutæ for the whole tetralogy, of which number at least three fourths were on the stage at the end of the Eumenides. But this was done in order to afford the people a splendid and expressive spectacle; neither were the choreutæ thus combined all habited as furies. (*Müller, Eumenides*, p. 52, *seqq.*)—With regard to the number of the tragic chorus in each particular play, it may be remarked, that Sophocles first brought in fifteen, the previous number having been twelve, and that Æschylus employed only twelve in more than one of his dramas, although in others very possibly he adopted the number so extended by Sophocles. (Consult the remarks of *Müller, Eumen.*, p. 58.)—This play did not prove, at first, very successful. It was altered by the poet, and reproduced some years after, during his residence in Sicily, when it carried off the prize.—7. Ἰκέτιδες ("The Female Suppliants"). Danaüs and his daughters solicit and obtain the protection of the Argives against Ægyptus and his sons. This play forms one of the feeblest productions of Æschylus. It possesses one remarkable feature, that the chorus acts the principal part. The scene is near the shore, in an open grove, close to the altar and the images of the gods presiding over the sacred games, with a view of the sea and the ships of Ægyptus on one side, and of the towers of Argos on the other; with hills, and woods, and vales, a river flowing between them.—We have no good edition, as yet, of all the plays of Æschylus. That of Schütz, *Halle*, 1808–21, 5 vols. 8vo, although useful in some respects, is not held in very high estimation; neither is that of Butler, *Cantab.*, 1809, 8 vols. 8vo, regarded with a very favourable eye by European scholars. Wellauer's edition, also, *Lips.*, 1823–1831, 3 vols. 8vo, though highly lauded by some, is far from being satisfactory to all. The edition by Scholfield, *Cantab.*, 1828, 8vo, is a useful one. The best text is that given by W. Dindorf, *Lips.*, 1827. The best editions of the separate plays are those of Blomfield, as far as they extend, comprising, namely, the *Prometheus*, *Septem contra Thebas*, *Agamemnon*, *Persæ*, and *Choëphoræ*. His edition of the *Persæ*, however, was very severely handled by Seidler, in one of the German reviews, though the edge of the critique was in a great measure blunted by the personal feeling visible throughout. The editions of Dr. Blomfield appeared originally from the Cambridge press. There are good editions of the *Agamemnon* and *Choëphoræ* by Klausen and Peile. Müller's edition of the *Eumenides*, appended to the dissertations above alluded to, is an excellent and scholar-like performance, though it provoked the ire of Hermann and his school, having been severely criticised by him and one of his disciples. A translation of it appeared from the Cambridge press in 1835—II., III. (*Vid. Supplement.*)

ÆSCULAPIUS, son of Apollo and the nymph Coronis, and god of the healing art. Pausanias (2, 26) gives three different accounts of his origin, on which our limits forbid us to dwell. The one of these that has been followed by Ovid, makes Coronis to have been unfaithful to Apollo, and to have been, in consequence, put to death by him, the off-spring of her womb having been first taken from her and spared. Apollo received the

information respecting the unfaithfulness of Coronis, from a raven, and the angry deity is said by Apollodorus to have changed the colour of the raven from white to black, as a punishment for his unwelcome officiousness. As Coronis, in Greek, signifies a crow, hence another fable arose that Æsculapius had sprung from an egg of that bird, under the figure of a serpent. The first of the accounts given by Pausanias makes the birthplace of Æsculapius to have been on the borders of the Epidaurian territory; the second lays the scene in Thessaly; the third in Messenia. Æsculapius was placed, at an early age, under the care of the centaur Chiron. Being of a quick and lively genius, he made such progress as soon to become not only a great physician, but at length to be reckoned the god and inventor of medicine, though the Greeks, not very careful of consistency in the history of those early ages, gave to Apis, son of Phoroneus, the glory of having invented the healing art. Æsculapius accompanied Jason in his expedition to Colchis, and in his medical capacity was of great service to the Argonauts. He married Epione, whom some call Lampetia, by whom he had two sons, Machaon and Podalirius, and four daughters, Hygiea, Ægle, Panacea, and Iaso, of whom Hygiea, goddess of health, was the most celebrated. In the fabulous traditions of antiquity, Æsculapius is said to have restored many to life. According to Apollodorus (3, 10, 3), he received from Minerva the blood that flowed from the veins of Medusa, and with that which proceeded from the veins on the left, he operated to the destruction of men, while he used that which was obtained from the veins on the right for the benefit of his fellow-creatures. (Compare *Heyne, ad Apollod., l. c.*) With this last he brought back to the light of day Capaneus and Lycurgus, according to some, or Eriphyle and Hippolytus according to others, or, as other ancient authorities state, Hymenæus, and Glaucus the son of Minos. Jupiter, alarmed at this, and fearing, says Apollodorus, lest men, being put in possession of the means of triumphing over death, might cease to render honour to the gods, struck Æsculapius with thunder. The common account makes this to have been done on the complaint of Pluto. Apollo, enraged at the loss of his son, destroyed the Cyclopes who had forged the thunderbolts of Jove, for which offence the monarch of the skies was about to hurl him into Tartarus, but, on the supplication of Latona, banished him for a season from Olympus, and compelled him to serve with a mortal (*vid.* Admetus and Amphrysus).—Thus far we have traced the Greek accounts respecting Æsculapius. If, however, a careful inquiry be instituted, the result will be a decided conviction that the legend of Æsculapius is one of Oriental origin. According to Sanchoniatho, Æsculapius was the same with the Phenician Esmun, the son of Sydyk, called “the just,” and the brother of the seven Cabiri. (*Sanchon., frag., ap Euseb., Prap. Evang., p. 39.—Cory’s Ancient Fragments, p. 13*) Hence the meaning of Esmun, which signifies “the eighth.” (Compare the *Schmoun*, or *Mendes*, of Egypt.) The seven Cabiri are the seven planets; and, in the Egyptian mythology, Phtha is added to them as the eighth. Phtha and Æsculapius, then, are identical, and the latter, like the former, though added to the number of the Cabiri, becomes in a mysterious sense their parent and guide. (*Creuzer’s Symbolik*, vol. 2, p. 285 and 336.) In Esmun-Æsculapius, then, we have a solar deity, personified in his beauty and his weakness, for he is the same with the youth of Berytus, who mutilated himself and was placed in the number of the gods, and in this quality he receives the name of Pæon or Pæon, “the physician.” He becomes identified also with the beauteous Apollo, for whose son he passes among the Greeks; while, as a mutilated deity, he is the same with the Phrygian Atys, the fair Adonis, and the chained Hercules of the Tyrians, all varied forms of the

same idea. He is the sun, without strength at the close of autumn. In all these different points of view, we find Æsculapius corresponding to the Egyptian divinities; to Horus, to Harpocrates, to Sem, and to the god of the earth, Serapis. Egypt was always famed for the knowledge possessed by its priests of the healing art; and it always represented its great deities, the symbols of the power of nature, as endued with a healing influence. (*Creuzer’s Symbolik, par Guignaut*, vol. 2, p. 337 and 170, *seqq.*) Isis receives, in inscriptions, the epithet of “salutary.” (*Gruter*, p. 83. — *Fabrett.*, p. 470. — *Reines*, vol. 1, n. 132.) Serapis, whose name frequently occurs by the side of that of his spouse, had, at Canopus, a city already famous by its temple of Hercules, a sanctuary no less renowned for the wonderful cures performed within it, and of which a register was carefully preserved. (*Strabo*, 801. — Compare *Creuzer, Dionys.*, 1, p. 122, and *Guignaut’s* dissertation on the god Serapis, “*Sur le Dieu Serapis et son origine*,” p. 20 and 22.) Both of these divinities, in the scenes figured on the monuments, bear serpents, or agathodæmons, as the emblems of health: they carry also the chalice, or salutary cup of nature, surrounded by serpents, and which formed, perhaps, the most ancient idol connected with their worship. (*Creuzer’s Symbolik, par Guignaut*, vol. 1, p. 818, *seqq.*) One thing at least is certain, that these sacred serpents were nourished in their temples as living images of these deities of health. (*Guignaut’s Serapis*, p. 19, *seqq.*) The nurture of these national fetiches consisted in cakes of honey, and such was also the food of the serpents consecrated to the powers beneath the earth, the divinities of the dead. In fact, the god of medicine is, at the same time, a telluric power; and it is he that causes the mineral waters, the sources of health, to spring from the bosom of the earth. Æsculapius, then, is identical, in his essence, with the Canopic Serapis: like him, he has for a symbol a vase surrounded by serpents, and he was originally this same vase, the sacred Canopus. (Compare *Creuzer, Dionys.*, p. 220. — *Symbolik, par Guignaut*, vol. 1, p. 415 and 818, *seqq.*) It is curious to observe the strong analogy that exists between the Oriental worship of Serapis, and the Grecian ideas, rites, and usages in the case of Æsculapius. At Ægium, in Achaia, near the ancient temple of Ithytia, were to be seen the statues of the god and goddess of health, Asclepius (Æsculapius) and Hygiea. (*Pausan.*, 7, 23.) At Titane, a city of Sicily, the first settler of which was, according to tradition, Titan, brother of the Sun, Alexanor, the son of Machaon and grandson of Æsculapius, had erected a temple to this deity. His statue, at this place, was almost entirely enveloped in a tunic of white wool, with a mantle thrown over it, so that the face, and the extremities of the hands and feet, alone appeared to view. Æsculapius was carried, it is said, from Epidaurus to Pergamus; and we are also told that, in this Asiatic city, the Accessus of Epidaurus took the name of Telesphorus. (*Pausan.*, 2, 11.) Now Telesphorus indicates the autumnal season, the sun that has come to his maturity together with the productions of the earth, and, consequently, verging to his decline. Hence the Arcadians gave to Æsculapius a nurse named *Trygon*, an appellation derived probably from the Greek *τρίγῃ* or *τρυγῶ*, and referring to the labours of harvest. Æsculapius, moreover, according to a tradition preserved in Attica, offered himself on the eighth day for admission into the Eleusinian mysteries, and was accordingly initiated. (*Philost., Vit. Apollon.*, 4, 18.) He is, in this point of view, the tardy one, the last comer assisting at the festival of autumn and the harvest. The subterranean powers and the deities of death, are also the divinities of sleep. Such, too, is the case with Æsculapius. He gives slumber and repose, and by their means bestows health. (*Lyd. de Mens.*, p. 78, *ed. Schow.*) Hence the custom of going to his

temple at Epidaurus for the purpose of sleeping therein, and recovering health by the means which the god of health would indicate in a dream to the invalids. (Compare *Sprengel, Gesch. der Medicin*, vol. 1, p. 107, *seqq.*) The ancient Æsculapius, introduced at an early period into the religion of Samothrace, appeared at first in Greece under a form closely assimilated to that of the vase-gods, dwarfs, or pigmies, that were accustomed to be enveloped in garments, and to which was attributed a magic influence. (*Cruzeur's Symbolik, par Guigniaut*, vol. 2, p. 310, *seqq.*) In these mysterious idols, the richness of hidden meaning was as great as the mode of decking the exterior was whimsical. The spirit of the old Pelagic belief would seem, however, to have been continually employed in decomposing, as it were, this body of ideas united in one particular symbol, and in individualizing each for itself. It was thus that, by degrees, there arose round the god of medicine a cortège of genii, of both sexes, regarded either as his wives, or as his sons and daughters, or even as his grandchildren. In the sculptured representations of Æsculapius, to which the development of Grecian art had subsequently given birth, we find the figure of Jove, a little modified, becoming the model of this deity. And yet, though the Grecian perception of the beautiful led them to deviate, in general, from the grosser representations of the Pelagic worship, we find them, in the present case, still retaining an attachment for the ancient, and, at the same time, more significant and mysterious images. Hence, by the side of the new deity is placed one of his personified attributes, under the figure of an enveloped dwarf. In every quarter, where the Aselepiades (*vid.* that article) taught the principles of the healing art, or cured diseases in the temples of their master and renowned father, Æsculapius and his good genii were celebrated as saving divinities, on votive tablets, inscriptions, medals, and gems. The Romans, too, in the year of their city 461, in order to be delivered from a pestilence, sent a solemn embassy to Epidaurus to obtain the sacred serpent nourished at that place in the temple of Æsculapius. A temple was likewise erected to this deity on an island in the Tiber, where the sacred reptile had disappeared among the reeds. (*Val. Max.*, 1, 8, 2.) Not content with this, however, they resolved to have also a family of Aselepiades, and they pretended to have found it in the house of Acilius.—The principal and most ancient temples of Æsculapius (*Ἀσκληπεία*), were those at Titane in Sicilyonia (*Pausan.*, 2, 11); at Tricea in Thessaly (*Strabo*, 438); at Tithorea in Phocis, where he was revered under the name of Archegetes (*Pausan.*, 10, 32); at Epidaurus (*Pausan.*, 2, 26); in the island of Cos (*Strabo*, 657); at Megalopolis (*Pausan.*, 8, 32); at Cyllene in Elis (*Pausan.*, 6, 26); and at Pergamus in Asia Minor (*Pausan.*, 2, 26). Among all these temples, that of Epidaurus was at first the most celebrated, for it was from this city that the worship of Æsculapius was carried into Sicilyonia, and also to Pergamus and Cyllene. (*Pausan.*, 2, 10.) It appears, however, that the temple of Cos became in time the most famous of all, since the Epidaurians, on one occasion, sent deputies thither. (*Pausan.*, 3, 23.) At a more recent period, Ægea, in Cilicia, could boast of a temple of Æsculapius which was held in high repute. It was here that Apollonius of Tyana practised many of his impostures. (*Philostr.*, *Vit. Apollon.*, 1, 7.) Constantine destroyed this temple in his zeal for Christianity. (*Euseb.*, *Vit. Constant.*, ed. *Reading*, 3, 56.) Almost all these edifices were regarded as sanctuaries, which none of the profane could approach except after repeated purifications. Epidaurus was called the sacred country (*Pausan.*, 2, 26), a name which also appears on its medals. (*Eckhel, Doctr. Num. Vet.*, vol. 2, p. 290.—*Villoison, Prolegom.*, p. lii.) The temple at Asopus took the appellation of *Hyperteleanon*, as if it concealed within

its walls the most sacred mysteries. (*Pausan.*, 3, 22.) The statue of Hygiea, at Ægium in Achaia, could only be viewed by the priests. (*Pausan.*, 7, 24.) No female was allowed to be delivered, and no sick persons were permitted to die, within the environs of the temple at Epidaurus. (*Pausan.*, 2, 27.) The temple at Tithorea was surrounded by a hedge, in the vicinity of which no edifice could be erected. The hedge was forty stadia from the building itself. (*Pausan.*, 10, 32.) Most of these temples stood in healthy situations. That of Cyllene, for example, was situate on Cape Hyrmine, in one of the most fertile and smiling countries of the Peloponnesus; while that of Epidaurus, erected, like the former, in the immediate neighbourhood of the sea, was surrounded by hills covered with the thick foliage of groves. (*Pausan.*, 2, 27.—Compare *Villoison, Prolegom.*, p. liii., and *Chandler's Travels*, ch. 53, p. 223.) Others again were built near rivers, or in the vicinity of mineral springs; and it would appear from Xenophon (*Mém.*, 3, 13), that the temple of Æsculapius at Athens contained within it a source of warm water. The worship rendered to Æsculapius had for its object the occupying the imaginations of the sick by the ceremonies of which they were witnesses, and the exciting them to a sufficient degree in order to produce the desired result. For an account of these ceremonies, and the mode of curing that was generally adopted, consult *Sprengel, Hist. de la Médecine*, vol. 1, p. 154, *seqq.*—Æsculapius was sometimes represented either standing, or sitting on a throne, holding in one hand a staff, and grasping with the other the head of a serpent: at his feet a dog lay extended. (*Pausan.*, 2, 27.—Compare *Montfaucon, Antiquité expliquée*, vol. 1, pt. 2, pl. 187, 188.) At Corinth, Megalopolis, and Ladon, the god was represented under the form of an infant, or rather, perhaps, a dwarf, holding in one hand a sceptre, and in the other a pine-cone. (*Pausan.*, 2, 10.) Most generally, however, he appeared as an old man with a flowing beard. (*Pausan.*, 10, 32.) On some ancient monuments we see him with one hand applied to his beard, and having in the other a knotted staff encircled by a serpent. (*Minucius Felix, ed. Elmenhorst*, p. 14.) He oftentimes bears a crown of laurel (*Antichità d'Ercol.*, vol. 5, p. 264, 271.—*Maffei, Gemm. ant.*, 2, n. 55), while at his feet are placed, on one side, a cock, and, on the other, the head of a ram; on other occasions, a vulture or an owl. Frequently a vase of circular form is seen below his statues (*Erizzo, Discorso*, &c., p. 620), or, according to others, a serpent coiled up. (*Buonarroti, Osservazioni*, &c., p. 201.) At other times he has his body encircled by an enormous serpent. (*Theodoret. affect. curat. disp.*—*Op. ed. Schulze*, vol 4 and 8, p. 906.) Among all the symbols with which Æsculapius is adorned, the serpent plays the principal part. The gems, medals, and other monuments of antiquity, connected with the worship of this deity, most commonly bear such an emblem upon them. (*Spanheim, Epist. 4, ad Morell.*, p. 217, 218, ed. *Lips.*, 1695.—Compare *Knight's Inquiry into the Symbolical language of Ancient Art and Mythology*, § 25.—*Class. Journ.*, vol. 23, p. 13.)

ÆSÆPUS, a river of Mysia, in Asia Minor, rising in Mount Cotylus, and falling, after a course of 500 stadia, into the Propontis, to the east of the Granicus. Strabo (582) conceives, that Homer extended the boundaries of Priam's kingdom to this river. Chishull (*Travels in Turkey*, p. 59) makes the modern name to be the *Boklu*, but Gosseling gives it as the *Sataldere* (*French Strabo*, vol. 4, p. 187, *not.*)

ÆSERNTA, a city of Samnium, in the northern part of the country, and not far from the western confines. It was situate about twelve miles northwest of Bovianum, and is mentioned by Livy (*Epit.*, 16) as having been colonized about the beginning of the first Punic war. The same writer (27, 10) speaks of it as one of those colonies which distinguished themselves by

their firm adherence to the Roman power during the war with Hannibal. It was subsequently recolonized by Augustus and Nero (*Front. de Col.*), but Strabo (239 and 249) makes it a very inconsiderable place, having suffered materially in the Marsic war. The modern *Isernia* is supposed to represent Æscernia.

Æsion. *Vid.* Supplement.

Æsion, son of Cretheus and Tyro. He succeeded his father in the kingdom of Iolchos, but was dethroned by his half-brother Pelias. Æsion became the father, by Alcimede, of the celebrated Jason, the leader of the Argonauts. Through fear of the usurper, Jason was intrusted to the care of the centaur Chiron, and brought up at a distance from the court of Pelias. On his arriving at manhood, however, he came to Iolchos, according to one account, to claim his inheritance; but, according to another, he was invited by Pelias to attend a sacrifice to Neptune on the seashore. The result of the interview, whatever may have been the cause of it, was an order from Pelias to go in quest of the golden fleece. (*Vid.* Jason.) During the absence of Jason on this well-known expedition, the tyranny of Pelias, according to one version of the story, drove Æsion and Alcimede to self-destruction; an act of cruelty, to which he was prompted by intelligence having been received, that all the Argonauts had perished, and by a consequent wish on his part to make himself doubly secure, by destroying the parents of Jason. He put to death also their remaining child. (*Apollod.*, 1, 9, 16, *seqq.*—*Diod. Sic.*, 4, 50.—*Hygin.*, 24.) Ovid, however, gives a quite different account of the latter days of Æsion. According to the poet (*Mct.*, 7, 297, *seqq.*), Jason, on his return with Medea, found his father Æsion still alive, but enfeebled by age; and the Colchian enchantress, by drawing the blood from his veins and then filling them with the juices of certain herbs which she had gathered for the purpose, restored him to a manhood of forty years. The daughters of Pelias having entreated Medea to perform the same operation on their aged father, she embraced this opportunity of avenging the wrongs inflicted on Jason and his parents by the death of the usurper. (*Vid.* Pelias.)

Æsionides, a patronymic of Jason, as being descended from Æsion.

Æsopus, 1. a celebrated fabulist, who is supposed to have flourished about 620 B.C. (*Larcher, Hist. d'Herod.*, *Table Chronol.*, vol. 7, p. 539.) Much uncertainty, however, prevails both on this point, as well as in relation to the country that gave him birth. Some ancient writers make him to have been a Thracian. (Compare *Mohnike, Gesch. Litt. Gr. und R.*, vol. 1, p. 291.) Suidas states that he was either of Samos or Sardis; but most authorities are in favour of his having been a Phrygian, and born at Cotyæum. All appear to agree, however, in representing him as of servile origin, and owned in succession by several masters. The first of these was Demarchus, or, according to the reading of the Florence MS., Timarchus, who resided at Athens, where Æsop, consequently, must have had many means of improvement within his reach. From Demarchus he came into the possession of Xanthus, a Samian, who sold him to Iadmon, a philosopher of the same island, under whose roof he had for a fellow-slave the famous courtesan Rhodope. (*Herod.*, 2, 134.) Iadmon subsequently gave him his freedom, on account of the talents which he displayed, and Æsop now turned his attention to foreign travel, partly to extend the sphere of his own knowledge, and partly to communicate instruction to others. The vehicles in which this instruction was conveyed were fables, the peculiar excellence of which has caused his name to be associated with this pleasing branch of composition through every succeeding period. Æsop is said to have visited Persia, Egypt, Asia Minor, and Greece, in the last of which countries

his name was rendered peculiarly famous. The reputation for wisdom which he enjoyed, induced Cræsus, king of Lydia, to invite him to his court. The fabulist obeyed the call, but, after residing some time at Sardis, again journeyed into Greece. At the period of his second visit, the Athenians are said to have been oppressed by the usurpation of Pisistratus, and to console them under this state of things, Æsop is related to have invented for them the fable of the frogs petitioning Jupiter for a king. The residence of Æsop in Greece at this time would seem to have been a long one, if any argument for such an opinion may be drawn from a line of Phædrus (3, 14), in which the epithet of *senex* is applied to the fabulist during the period of his stay at Athens. He returned, however, eventually to the court of the Lydian monarch. Whether the well known conversation between Æsop and Solon occurred after the return of the former from his second journey into Greece, or during his previous residence with Cræsus, cannot be satisfactorily ascertained: the latter opinion is most probably the more correct one, if we can believe that the interview between Solon and Cræsus, as mentioned by Herodotus (1, 30, *seqq.*), ever took place. It seems that Solon had offended Cræsus by the low estimation in which he held riches as an ingredient of happiness, and was, in consequence, treated with cold indifference. (*Herod.*, 1, 33.) Æsop, concerned at the unkind treatment which Solon had encountered, gave him the following advice: "A wise man should resolve either not to converse with kings at all, or to converse with them agreeably." To which Solon replied, "Nay, he should either not converse with them at all, or converse with them usefully." (*Plut., Vit. Sol.*, 28.) The particulars of Æsop's death are stated as follows by Plutarch (*de sera numinis vindicta*, p. 556.—*Op. ed. Reiske*, vol. 8, p. 203.) Cræsus sent him to Delphi with a large amount of gold, in order to offer a magnificent sacrifice to Apollo, and also to present four *minæ* to each inhabitant of the sacred city. Having had some difference, however, with the people of Delphi, he offered the sacrifice, but sent back the money to Sardis, regarding the intended objects of the king's bounty as totally unworthy of it. The irritated Delphians, with one accord, accused him of sacrilege, and he was thrown down the rock Hyampea. Suidas makes him to have been hurled from the rocks called Phædriades, but the remark is an erroneous one, since these rocks were too far from Delphi, and the one from which he was thrown was, according to Lucian, in the neighbourhood of that city. (*Phalaris prior.*—*Op. ed. Bip.*, vol. 5, p. 46.—Compare *Larcher, Hist. d'Herod.*, vol. 7, p. 539.) Apollo, offended at this deed, sent all kinds of maladies upon the Delphians, who, in order to free themselves, caused proclamation to be made at all the great celebrations of Greece, that if there was any one entitled so to do, who would demand satisfaction from them for the death of Æsop, they would render it unto him. In the third generation came a Samian, named Iadmon, a descendant of one of the former masters of the fabulist, and the Delphians, having made atonement, were delivered from the evils under which they had been suffering. Such is the narrative of Plutarch. And we are also informed, that, to evince the sincerity of their repentance, they transferred the punishment of sacrilege, for the time to come, from the rock Hyampea to that named Nauplia. Other accounts, however, inform us, that Æsop offended the people of Delphi by comparing them to floating sticks, which appear at a distance to be something great, but, on a near approach, dwindle away into insignificance, and that he was accused, in consequence, of having carried off one of the vases consecrated to Apollo. The scholiast on Aristophanes (*Vesp.*, 1486) informs us, that Æsop had irritated the Delphians by remarking of them, that they

had no land, like other people, on the produce of which to support themselves, but were compelled to depend for subsistence on the remains of the sacrifices. Determined to be revenged on him, they concealed a consecrated cup amid his baggage, and, when he was some distance from their city, pursued and arrested him. The production of the cup sealed his fate, and he was thrown from the rock Hyampea, as already mentioned. As they were leading him away to execution, he is said to have recited to them the fable of the eagle and beetle, but without producing any effect. The memory of Æsop was highly honoured throughout Greece, and the Athenians erected a statue to him (*Phadrus*, 2, *Epil.*, 2, *seqq.*), the work of the celebrated Lysippus, which was placed opposite those of the seven sages. It must be candidly confessed, however, that little, if anything, is known with certainty respecting the life of the fabulist, and what we have thus detailed of him appears to rest on little more than mere tradition, and the life which Planudes, a monk of the fourteenth century, is supposed to have given to the world; a piece of biography possessing few intrinsic claims to our belief. Hence some writers have doubted whether such an individual as Æsop ever existed. (Compare *Visconti*, *Iconografia Greca*, vol. 1, p. 154, where the common opinion is advocated.) But, whatever we may think on this head, one point at least is certain, that none of the fables which at present go under the name of Æsop were ever written by him. They appear to have been preserved for a long time in oral tradition, and only collected and reduced to writing at a comparatively late period. Plato (*Phædon*.—*Op.*, pt. 2, vol. 3, p. 9, *cd. Bekker*) informs us, that Socrates amused himself in prison, towards the close of his life, with versifying some of these fables. (Compare *Plut. de Aud. Poet.*, p. 16, *c.*, and *Wytttenbach*, *ad loc.*) His example found numerous imitators. A collection of the fables of Æsop, as they were called, was also made by Demetrius Phalereus (*Diog. Laert.*, 5, 80), and another, between 150 and 50 B.C., by a certain Babrius. (Compare *Tyrwhitt*, *Dissert. de Babrio*, *Lond.*, 1776, 8vo.) The former of these was probably in prose; the latter was in choliambic verse (*rid.* Babrius). But the bad taste of the grammarians, in a subsequent age, destroyed the metrical form of the fables of Babrius, and reduced them to prose. To them we owe the loss of a large portion of this collection. Various collections of Æsopian fables have reached our times, among which six have attained to a certain degree of celebrity. Of these the most ancient is not older than the thirteenth century; the author is unknown. It is called the collection of Florence, and contains one hundred and ninety-nine fables, together with a puerile life of the fabulist by Planudes, a Greek monk of the fourteenth century. The second collection was made by an unknown hand in the thirteenth or fourteenth century. The monk Planudes formed the third collection. The fourth, called the Heidelberg collection, together with the fifth and sixth, styled, the former the Augsburg collection, the latter that of the Vatican, are the work of anonymous compilers. These last three contain many of the fables of Babrius reduced to bad prose. Besides the collections which have just been enumerated, we possess one of a character totally distinct from the rest. It is a Greek translation, executed in the fifteenth century by Michael Andreopoulos, from a Syriac original, which would appear itself to have been nothing more than a translation from the Greek, by a Persian named Syntifa. (*Schöll*, *Hist. Litt. Gr.*, vol. 1, p. 253.)—As regards the question, whether the fables of the Arabian Lokman have served as a prototype for those of Æsop, or otherwise, it may be remarked, that, in the opinion of De Saey (*Biographie Universelle*, vol. 24, p. 631, *s. v. Lokman*), the apoloques of the Arabian fabulist are nothing more than

an imitation of some of those ascribed to Æsop, and that they in no respect bear the marks of an Arabian invention. (Compare the observations of Erpenius, in the preface to his edition of *Lokman*, 1615.)—With respect to the person of Æsop, it has been generally supposed that the statement of Planudes, which makes him to have been exceedingly deformed, his head of a conical shape, his belly protuberant, his limbs distorted, &c., was unworthy of credit. Visconti, however, supports the assertions of Planudes in this particular, from the remains of ancient sculpture. (*Iconografia Greca*, vol. 1, p. 155.)—The best editions of Æsop are the following: that of Heusinger, *Lips.*, 1741, 8vo; that of Ernesti, *Lips.*, 1781, 8vo; that of Coray, *Paris*, 1810, 8vo; and that of De Furia, *Lips.*, 1810, 8vo.—II. An eminent Roman tragedian, and the most formidable rival of the celebrated Roscius, though in a different line. Hence Quintilian (11, 3) remarks, "*Roscus citatior, Æsopus gravior fuit, quod ille comœdias, hic tragœdias egit.*" His surname was Clodius, probably from his being a freedman of the Clodian or Claudian family. He is supposed to have been born in the first half of the seventh century of Rome, since Cicero, in a letter written A.U.C. 699 (*Ep. ad Fam.*, 7, 1), speaks of him as advanced in years. Some idea of the energy with which he acted his parts on the stage may be formed from the anecdote related by Plutarch (*Vit. Cic.*, 5), who informs us, that on one occasion, as Æsopus was performing the part of Atreus, at the moment when he is meditating vengeance, he gave so violent a blow with his sceptre to a slave who approached, as to strike him lifeless to the earth. A circumstance mentioned by Valerius Maximus (8, 10, 2), shows with what care Æsopus and Roscius studied the characters which they represented on the stage. Whenever a cause of any importance was to be tried, and an orator of any eminence was to plead therein, these two actors were accustomed to mix with the spectators, and carefully observe the movements of the speakers as well as the expression of their countenances. Æsopus, like Roscius, lived in great intimacy with Cicero, as may be seen in various passages in the correspondence of the latter. He appeared for the last time in public on the day when the theatre of Pompey was dedicated, A.U.C. 699, but his physical powers were unequal to the effort, and his voice failed him at the very beginning of an adjuration, "*Si sciens fallo.*" (*Cic. Ep. ad Fam.*, 7, 1.) He amassed a very large fortune, which his son squandered in a career of the most ridiculous extravagance. It is this son of whom Ilorace (*Sat.*, 2, 3, 239) relates, that he dissolved a costly pearl in vinegar, and drank it off. Compare the statement of Pliny (9, 59).—III. An engraver, most probably of Sigüem. The time when he lived is uncertain. In connexion with some brother-artist, he made a large cup, with a stand and strainer, dedicated by Phanodiceus, son of Hermocrates, in the Prytæneum at Sigüem. (Consult the remarks of *Hermann*, *über Bockh's Behandlung der Griech. Inschrift.*, p. 216–219.)—IV. *Vid.* Supplement.

ÆSTÏ, a nation of Germany, dwelling along the southeastern shores of the Baltic Sea. Hence the origin of their name, from the Teutonic *Est*, "east," as indicating a community dwelling in the eastern part of Germany. (Compare the English *Essex*, *i. e.*, *Æstsexia*.) They carried on a traffic in amber, which was found in great abundance along their shores. This circumstance alone would lead us to place them in a part of modern Prussia, in the country probably beyond *Dantzic*. Tacitus calls their position "the right side of the Suevic" or Baltic "Sea." It is incorrect to assign them to modern *Esthonia*. Either this last is a general name for any country lying to the east, or else the Esthians of Esthonia came originally from what is now Prussia. The Æstii worshipped,

according to Tacitus, the mother of the gods, Hertha, and the symbol of her worship was a wild boar. Now, as this animal was sacred to Freya, the Scandinavian Venus, and as Freya is often confounded with Frigga, the mother of the gods in the Scandinavian mythology, Tacitus evidently fell into a similar error, and misunderstood his informers. (*Tacit., M. G.*, 45.—*Pinkerton, Diss. on Scythians*, &c., p. 163.)

ÆSULÆ, a town of Latium, the site of which remains undiscovered. Horace (*Od.*, 3, 29, 6) speaks of it in the same line with Tibur, whence it is naturally supposed to have stood in the vicinity of that place. Pliny (3, 5) enumerates Æsula among the Latin towns, which no longer existed in his time. Velleius Paterculus (1, 14) calls the place Æsulum, and reckons it among the colonies of Rome. (*Cramer's Anc. Italy*, vol. 2, p. 66.)

ÆSVÈRES, a Trojan prince, supposed by some to have been the parent of Antenor and Ucalegon, while others make him to have been descended from a more ancient Ucalegon, who had married Ilios, the daughter of Laomedon. Homer (*Il.*, 13, 427) mentions Alcathous as the son of Æsyetes, and the son-in-law of Anchises, who had given him his eldest daughter Hippodamia in marriage. (*Heyne, ad Il.*, 2, 793.) The tomb of Æsyetes is alluded to by Homer (*Il.*, 2, 793), and is said by Strabo (599) to have been five stadia distant from Troy, and on the road leading to Alexandria Troas. It afforded a very convenient post of observation in the Trojan war. Dr. Clarke gives the following account of it (*Travels*, &c., vol. 3, p. 92, *seqq.*, *Eng. ed.*): "Coming opposite to the bay, which has been considered as the naval station used by the Greeks during the Trojan war, and which is situate on the eastern side of the embouchure of the *Mender*, the eye of the spectator is attracted by an object predominating over every other, and admirably adapted, by the singularity of its form, as well as by the peculiarity of its situation, to overlook that station, together with the whole of the low coast near the mouth of the river. This object is a conical mound, rising from a line of elevated territory behind the bay and the mouth of the river. It has, therefore, been pointed out as the tomb of Æsyetes, and is now called *Udek Tèpe*. If we had never heard or read a single syllable concerning the war of Troy, or the works of Homer, it would have been impossible not to notice the remarkable appearance presented by this *tumulus*, so peculiarly placed as a post of observation commanding all approach to the harbour and river." In another part (p. 198), the same intelligent traveller observes: "The *tumulus* of Æsyetes is, of all others, the spot most remarkably adapted for viewing the Plain of Troy, and it is visible in almost all parts of Troas. From its top may be traced the course of the Scamander; the whole chain of Ida, stretching towards Lectum; the snowy heights of Gargarus, and all the shores of the Hellespont near the mouth of the river, with Sigæum, and the other tumuli upon the coast." Bryant endeavours to show, that what the Greeks regarded as the tombs of princes and warriors, were not so in reality, but were, for the most part, connected with old religious rites and customs, and used for religious purposes. (*Mythology*, vol. 2, p. 167, *seqq.*) Lechevalier, however, successfully refutes this.

ÆSVMNÈTES. *Vid. Supplement.*

ÆTHALÆ. *vid. Ilva.*

ÆTHALIDES, a son of Mercury, and herald of the Argonauts, who obtained from his father the privilege of being among the dead and the living at stated times. Hence he was called *ἐρεπίμειρος κήρυξ*, from his spending one day in Hades, and the next upon earth, alternately. It is said also that his soul underwent various transmigrations, and that he appeared successively as Euphorbus, son of Panthûs, Pyrus the Cretan, an Elean whose name is not known, and Pythagoras (*Schol.*

ÆTHER (*Αἰθήρ*), a personified idea of the mythical cosmogonies. (*Vid. Supplement.*)

ÆTHICES, a Thessalian tribe of uncertain but ancient origin, since they are mentioned by Homer (*Il.*, 2, 744), who states that the Centaurs, expelled by Pirithous from Mount Pelion, withdrew to the Æthices. Strabo (327 and 434) says, that they inhabited the Thessalian side of Pindus, near the sources of the Peneus, but that their possession of the latter was disputed by the Tymphaei, who were contiguous to them on the Epirotic side of the mountain. Marsyas, a writer cited by Stephanus Byzantinus (*s. v. Αἰθικία*), described the Æthices as a most daring race of barbarians, whose sole object was robbery and plunder. Lycophron (*v.* 802) calls Polyserchon *Αἰθικον πρόμαχος*. Scarcely any trace of this people remained in the time of Strabo.

ÆRNUCUS. *Vid. Supplement.*

ÆTHIOPIA, an extensive country of Africa, to the south of Egypt, lying along the Sinus Arabicus and Mare Erythraum, and extending also far inland. An idea of its actual limits will best be formed from a view of the gradual progress of Grecian discovery in relation to this region. Æthiops (*Αἰθίοψ*) was the expression used by the Greeks for everything which had contracted a dark or swarthy colour from exposure to the heat of the sun (*αἰῶς*, "to burn," and *ὄψ*, "the visage"). The term was applied also to men of a dark complexion, and the early Greeks named all of such a colour Æthiopes, and their country Æthiopia, wherever situated. It is more than probable that the Greeks obtained their knowledge of the existence of such a race of men from the Phenicians and Egyptians, and that this knowledge, founded originally on mere report, was subsequently confirmed by actual inspection, when the Greek colonists along the shores of Asia Minor, in their commercial intercourse with Sidon and Egypt, beheld there the caravans which had come in from Southern Africa. Homer makes express mention of the Æthiopians in many parts of his poems, and speaks of two divisions of them, the Eastern and Western. The explanation given by Eustathius and other Greek writers respecting these two classes of men, as described by the poet, cannot be the true one. They make the Nile to have been the dividing line (*Eustath.*, p. 1386, *ad Hom. Od.*, 1, 23); but this is too refined for Homer's geographical acquaintance with the interior of Africa. By the Eastern Æthiops he means merely the imbrowned natives of Southern Arabia, who brought their wares to Sidon, and who were believed to dwell in the immediate vicinity of the rising sun. The Egyptians were acquainted with another dark-coloured nation, the Libyans. These, although the poet carefully distinguishes their country from that of the Æthiopsians (*Od.*, 4, 84), still become, in opposition to the Eastern, the poet's Western Æthiopsians, the more especially as it remained unknown how far the latter extended to the west and south. This idea, originating thus in early antiquity, respecting the existence of two distinct classes of dark-coloured men, gained new strength at a later period. In the immense army of Xerxes were to be seen men of a swarthy complexion from the Persian provinces in the vicinity of India, and others again, of similar visage, from the countries lying to the south of Egypt. With the exception of colour, they had nothing in common with each other. Their language, manners, physical make, armour, &c., were entirely different. Notwithstanding this, however, they were both regarded as Æthiopsians. (Compare *Herodotus*, 7, 69, *seqq.*, and 3, 94, *seqq.*) The Æthiopsians of the farther east disappeared gradually from remembrance, while a more intimate intercourse with Egypt brought the Æthiopsians of Africa more frequently into view, and it is to these, therefore, that we now turn our attention.—Æthiopia, according to Herodotus, includes the countries above Egypt, the present Nubia and Abyssinia. Immediately above Syene and Elephantine, remarks this writer

(2, 29), the Æthiopian races begin. As far as the town and island of Tachompo, seventy or eighty miles above Syene, these are mixed with Egyptians, and higher up dwell Æthiopians alone. The Æthiopians he distinguishes into the inhabitants of Meroë and the Macrobi. In Strabo (800) and Pliny (6, 29) we find other tribes and towns referred to, but the most careful division is that by Agatharchides, whose work on the Red Sea is unfortunately lost, with the exception of some fragments. Agatharchides divides them according to their way of life. Some carried on agriculture, cultivating the millet; others were herdsmen; while some lived by the chase and on vegetables, and others, again, along the sea-shore, on fish and marine animals. The rude tribes who lived on the coast and fed on fish are called by Agatharchides the *Ichthyophagi*. Along both banks of the Astaboras dwelt another nation, who lived on the roots of reeds growing in the neighbouring swamps: these roots they cut to pieces with stones, formed them into a tenacious mass, and dried them in the sun. Close to these dwelt the *Hylophagi*, who lived on the fruits of trees, vegetables growing in the valleys, &c. To the west of these were the hunting nations, who fed on wild beasts, which they killed with the arrow. There were also other tribes, who lived on the flesh of the elephant and the ostrich, the *Elephantophagi* and *Struthophagi*. Besides these, he mentions another and less populous tribe, who fed on locusts, which came in swarms from the southern and unknown districts. (*Agatharch. de Rubr. Mar.—Geograph. Gr. Min., ed. Hudson, vol. 1, p. 37, seqq.*) The accuracy with which Agatharchides has pointed out the situation of these tribes, does not occasion much difficulty in assimilating them to the modern inhabitants of Æthiopia. According to him, they dwelt along the banks of the Astaboras, which separated them from Meroë; this river is the *Atbar*, or, as it is also called, the *Tacazze*; they must, consequently, have dwelt in the present *Shangalla*. The mode of life with these people has not in the least varied for 2000 years; although cultivated nations are situate around them, they have made no progress in improvement themselves. Their land being unfavourable both to agriculture and the rearing of cattle, they are compelled to remain mere hunters. Most of the different tribes mentioned by Agatharchides subsist in a similar manner. The *Dobenahs*, the most powerful tribe among the *Shangallas*, still live on the elephant and the rhinoceros. The *Baasa*, in the plains of *Syre*, yet eat the flesh of the lion, the wild hog, and even serpents: and farther to the west dwells a tribe, who subsist in the summer on the locust, and at other seasons on the crocodile, hippopotamus, and fish. Diodorus Siculus (3, 28) remarks, that almost all these people die of verminous diseases produced by this food; and Bruce (*Travels, 3d ed., vol. 5, p. 83*) makes the same observation with respect to the *Wanto*, on the Lake *Dambca*, who live on crocodiles and other Nile animals. Besides these inhabitants of the plains, Æthiopia was peopled by a more powerful, and somewhat more civilized, shepherd-nation, who dwelt in the caves of the neighbouring mountains, namely, the *Troglodyte*. A chain of high mountains runs along the African shore of the Arabian Gulf, which in Egypt are composed of granite, marble, and alabaster, but farther south of a softer kind of stone. At the foot of the gulf these mountains turn inward, and bound the southern portion of Abyssinia. This chain was, in the most ancient times, inhabited by these *Troglodyte*, in the holes and grottoes formed by nature but enlarged by human labour. These people were not hunters; they were herdsmen, and had their chiefs or princes of the race. Remains of the *Troglodyte* still exist in the *Shipa*, *Hazorta*, &c., mentioned by Bruce (vol. 4, p. 266). A still more celebrated Æthiopian nation, and one which has been particularly described to us by Herodotus (3, 17, *seqq.*), was the *Macrobi*, for an account of

whom, and of the state and city of Meroë, the student is referred to these articles respectively. Under the latter of these heads some remarks will also be offered respecting the trade of Æthiopia.—The early and curious belief respecting the Æthiopian race, that they stood highest in the favour of the gods, and that the deities of Olympus, at stated seasons, enjoyed among them the festive hospitality of the banquet, would seem to have arisen from the peculiar relation in which Meroë stood to the adjacent countries as the parent city of civilization and religion. Piety and rectitude were the first virtues with a nation whose dominion was founded on religion and commerce, not on oppression. The active imagination, however, of the early Greeks, gave a different turn to this feature in the Æthiopian character, and, losing sight of the true cause, or, perhaps, never having been acquainted with it, they supposed that a race of men, who could endure such intense heat as they were thought to encounter, must be a nobler order of beings than the human family in general; and that they who dwelt so near the rising and setting of the orb of day, could not but be in closer union than the rest of their species with the inhabitants of the skies. (Compare *Mannert*, 10, 103.)—The Æthiopians were intimately connected with the Egyptians in the early ages of their monarchy, and Æthiopian princes, and whole dynasties, occupied the throne of the Pharaohs at various times, even to a late period before the Persian conquest. The Æthiopians had the same religion, the same sacerdotal order, the same hieroglyphic writing, the same rites of sepulture and ceremonies as the Egyptians. Religious pomp and processions were celebrated in common between the two nations. The images of the gods were at certain times conveyed up the Nile, from their Egyptian temples to others in Æthiopia; and, after the conclusion of a festival, were brought back again into Egypt. (*Diod. Sic.*, 1, 33.—*Eustath., ad Il.*, 1, 423.) The ruins of temples found of late in the countries above Egypt (*vid.* Meroë), and which are quite in the Egyptian style, confirm these accounts; they were, doubtless, the temples of the ancient Æthiopians. It is nowhere asserted that the Æthiopians and Egyptians used the same language, but this seems to be implied, and is extremely probable. We learn from Diodorus, that the Æthiopians claimed the first invention of the arts and philosophy of Egypt, and even pretended to have planted the first colonies in Egypt, soon after that country had emerged from the waters of the Nile, or rather of the Mediterranean, by which it was traditionally reported to have been covered. The Æthiopians, in later times, had political relations with the Ptolemies, and Diodorus saw ambassadors of this nation in Egypt in the time of Cæsar, or Augustus. An Æthiopian queen, named Candace, made a treaty with Augustus, and a princess of the same name is mentioned by St. Luke in the Acts of the Apostles. How far the dominion of the Æthiopian princes extended is unknown, but they probably had at one period possessions on the coast of the Red Sea, and relations with Arabia. After this we find no farther mention of the ancient Æthiopian empire. Other names occur in the countries intervening between Egypt and Abyssinia; and when the term Æthiopian is again met with in a later age, it is found to have been transferred to the princes and people of Habesh. Such is the history of Æthiopia among the profane writers. By the Hebrews the same people are mentioned frequently under the name of Cush, which by the Septuagint translators is always rendered *Abiomer*, or Æthiopians. The Hebrew term is, however, applied sometimes to nations dwelling on the eastern shore of the Red Sea, and hence a degree of ambiguity respecting its meaning in some instances. This subject has been amply discussed by Bochart and Michaëlis. Among the Hebrews of later times, the term Cush clearly belongs to

the Æthiopians. The Æthiopians, who were connected with the Egyptians by affinity and intimate political relations, are by the later Hebrew historians termed Cush. Thus Tizhakah, the Cushite invader of Judah, is evidently Tearchon the Æthiopian leader mentioned by Strabo, and the same who is termed Tarakos, and is set down by Manetho, in the well-known tables of dynasties, as an Æthiopian king of Egypt. In the earlier ages the term Cush belonged apparently to the same nation or race; though it would appear that the Cush or Æthiopians of those times occupied both sides of the Red Sea. The Cush mentioned by Moses are pointed out by him to be a nation of kindred origin with the Egyptians. In the Toldoth Beni Noah, or Archives of the sons of Noah, which Michaelis (*Specileg. Geogr. Hebr. Ext.*) has proved to contain a digest of the historical and geographical knowledge of the ancient world, it is said, that the Cush and the Misraim were brothers, which means, as it is generally allowed, nations nearly allied by kindred. It is very probable, that the first people who settled in Arabia were Cushite nations, who were afterward expelled or succeeded by the Beni Yoktan or true Arabs. In the enumeration of the descendants of Cush in the Toldoth Beni Noah, several tribes or settlements are mentioned in Arabia, as Saba and Haila. When the author afterward proceeds to the descendants of Yoktan, the very same places are enumerated among their settlements. That the Cush had in remote times possessions in Asia, is evident from the history of Nimrod, a Cushite chieftain, who is said to have possessed several cities of the Assyrians, among which was Babel, or Babylon, in Shinar. Long after their departure the name of the Cush remained behind them on the coast of the Red Sea. It is probable that the name of Cush continued to be given to tribes which had succeeded the genuine Cushites in the possession of their ancient territories in Arabia, after the whole of that people had passed into Africa, just as the English are termed Britons, and the Dutch race of modern times Belgians. In this way it happened, that people, remote in race from the family of Ham, are yet named Cush, as the Midianites, who were descended from Abraham. The daughter of Jethro, the Midianite, is termed a Cushite woman. Even in this instance, the correspondence of Cush and Æthiopia has been preserved. We find the word rendered *Æthiopissa* by the Septuagint translators, and in the verses of Ezekiel, the Jewish Hellenistic poet, Jethro is placed in Africa, and his people are termed Æthiopians. On the whole, it may be considered as clearly established, that the Cush are the genuine Æthiopian race, and that the country of the Cush is generally in Scripture that part of Africa which lies above Egypt. In support of these positions may be cited, not only the authority of the Septuagint, and the writers already mentioned, but the concurring testimony of the Vulgate, and all other ancient versions, with that of Philo, Josephus, Eupolemus, and all the Jewish commentators and Christian fathers. There is only one writer of antiquity on the other side, and he was probably misled by the facts which we have already considered. This single dissentient is the writer of Jonathan's Targum, and on this authority the learned Bochart, supported by some doubtful passages, maintains that the land of Cush was situated on the eastern side of the Arabian Gulf. It has been satisfactorily shown, however, by the authors of the Universal History, and by Michaelis, that many of these passages require a different version, and prove that the land of Cush was Æthiopia. (*Prichard's Physical History of Man*, 2d ed., vol. 1, p. 289, seqq.)—As regards the physical character of the ancient Æthiopians, it may be remarked, that the Greeks commonly used the term Æthiopian nearly as we use that of negro: they constantly spoke of the Æthiopians, as we speak of the negroes, as if they were the blackest

people known in the world. "To wash the Æthiopian white," was a proverbial expression applied to a hopeless attempt. It may be thought that the term Æthiopian was perhaps used vaguely, to signify all or many African nations of dark colour, and that the genuine Æthiopians may not have been quite so black as others. But it must be observed, that though other black nations may be called by that name when taken in a wider sense, this can only have happened in consequence of their resemblance to those from whom the term originated. It is improbable that the Æthiopians were destitute of a particular character, the possession of which was the very reason why other nations participated in their name, and came to be confounded with them. And the most accurate writers, as Strabo, for example, apply the term Æthiopian in the same way. Strabo, in the 15th book (686), cites the opinion of Theodectes, who attributed to the vicinity of the sun the black colour and woolly hair of the Æthiopians. Herodotus expressly affirms (7, 70), that the Æthiopians of the west, that is, of Africa, have the most woolly hair of all nations: in this respect, he says, they differed from the Indians and Eastern Æthiopians, who were likewise black, but had straight hair. Moreover, the Hebrews, who, in consequence of their intercourse with Egypt under the Pharaohs, could not fail to know the proper application of the national term Cush, seem to have had a proverbial expression similar to that of the Greeks, "Can the Cush change his colour, or the leopard his spots?" (*Jeremiah*, 13, 23.) This is sufficient to prove, that the Æthiopian was the darkest race of people known to the Greeks, and, in earlier times, to the Hebrews. The only way of avoiding the inference, that the Æthiopians were genuine negroes, must be by the supposition, that the ancients, among whom the foregoing expressions were current, were not acquainted with any people exactly resembling the people of Guinea, and therefore applied the terms woolly-haired, flat-nosed, &c., to nations who had these characters in a much less degree than those people whom we now term negroes. It seems possible, that the people termed Æthiopians by the Greeks, and Cush by the Hebrew writers, may either of them have been of the race of the Shangalla, Shilluk, or other negro tribes, who now inhabit the countries bordering on the Nile, to the southward of Sennar: or they may have been the ancestors of the present Noubia or Barabra, or of people resembling them in description. The chief obstacle to our adopting the supposition that these Æthiopians were of the Shangalla race, or of any stock resembling them, is the circumstance, that so near a connexion appears to have subsisted between the former and the Egyptians; and we know that the Egyptians were not genuine negroes. Perhaps, after all, however, we would be more correct in considering the Bedjas, and their descendants the Abadé and Bisharein, as the posterity of the ancient Æthiopians. Both the Abadé and Bisharein belong to the class of red, or copper-coloured people. The former are described by Belzoni (*Travels*, p. 310), and the latter by Burckhardt (*Travels in Nubia*.)

ÆTHIUS. *Vid.* Supplement.

ÆTHRA, daughter of Pitheus, king of Træzene, and mother of Theseus by Ægeus. (*Vid.* Ægeus.) She was betrothed, in the first instance, to Bellerophon; but this individual being compelled to fly, in consequence of having accidentally killed his brother, Æthra remained under her father's roof. When Ægeus came to consult Pitheus respecting an obscure oracle which the former had received from the Delphic shrine, Pitheus managed to intoxicate him, and give him the company of his daughter. From this intercourse sprang Theseus. (*Vid.* Ægeus.) Æthra was afterward taken captive by Castor and Pollux, when these two came in quest of Helen, whom Theseus had carried off, and made themselves masters of Athens. She accompa-

nied Helen to Troy when the latter was abducted by Paris, and, on the fall of Troy, she was restored to her home by Acanus and Demophoon, her grandsons, and the sons of Theseus. (*Apollod.*, 3, 15, 4.—*Id.*, 3, 10, 7.—*Hygic.*, ad *Apollod.*, l. c.)

AETION, I. a famous painter, who lived in the time of Alexander the Great. He executed a painting of the nuptials of Alexander and Roxana; and the piece was so much admired at the Olympic Games, whither the artist had carried it for exhibition, that the president of the games gave him his daughter in marriage. Such is Lucian's account (*Her.*, 5), who saw this painting in Italy. In another passage, likewise, he refers to this production of Aëtion's, and bestows the highest praises on the lups of Roxana. (*Imag.*, 7.) Raphael is said to have traced, from Lucian's description of this work of art, one of his most brilliant compositions.—II. A sculptor, who flourished about the middle of the third century before the Christian era, and who is known from Theocritus (*Epigr.*, 7.) At the request of Nicias, then a celebrated physician at Miletus, he made a statue of Aesculapius out of cedar. (As regards the reading *Ἀετίωνι*, for the common *Ἡετίωνι*, consult *Kießling*, ad loc.)—III. An engraver on precious stones, whose age is uncertain. (*Bracci*, 18.—*Sillig*, *Dict. Art.*, s. v.)

AETIUS, I. an heresiarch of the fourth century, surnamed by his adversaries *the Atheist*. He was the son of a common soldier, and born at Antioch. His poverty compelling him to live by the labour of his hands, he commenced by being a vine-dresser, and was afterward, in succession, a coppersmith and jeweller. Being forced to abandon this latter calling, for having substituted a bracelet of gilt-copper for one of gold, he followed the trade of an empiric, or charlatan, with some success, but was at last driven from Antioch, and went to study logic at Alexandria. As he never attained any great skill in this latter science, and was, at the same time, but little versed in the sacred writings, he easily fell into the new religious errors of the day, to which he added many others of his own. Epiphanius has preserved forty-seven erroneous propositions, selected from his works, which contained more than three hundred. The principal ones consisted in teaching, that the Son of God was not like the Father; in pretending to know God by himself; in regarding the most culpable actions as the wants of nature; in rejecting the authority of the prophets and apostles; in rebaptizing in the name of the uncreated God, and of the Holy Spirit procreated by the created Son; in asserting that faith is sufficient without works, &c. His other errors were nothing more than mere sophisms founded on verbal equivocations. He was ordained deacon by Leontius, an Arian bishop, who was soon compelled to forbid him the exercise of his ministerial functions. After a succession of stormy conflicts, he was exiled by Constantius to Cilicia. Julian recalled him, and assigned him lands near Mytilene, in the island of Lesbos. He was even ordained bishop; and, having escaped punishment, which he was afterward on the point of undergoing for his attachment to the cause of the Emperor Valens, he died at Constantinople A.D. 366, and was honoured with a splendid funeral. (*S. Athanas.*, de *Synod.*—*Socrat.*, *Hist. Eccles.*, 1, 28.—*August. Her.*—*Baron.*, *Annal.*, 356.)—II. A celebrated Roman general, born at Dorostolus, in Mœsia. His father Gaudentius, a Seythian, attained to the highest military employments, and was killed in Gaul during a mutiny of the soldiers. Aëtius, brought up among the imperial body-guards, and given at an early period as a hostage to the formidable Alaric, learned the art of war under this conqueror, and profited by his stay among the barbarians to secure the attachment of a people whom he was destined to have alternately as enemies and allies. In A.D. 424, the usurper John wishing to seize the sceptre of the west,

Aëtius undertook to procure for him the assistance of the Huns. John, however, was conquered, and Aëtius immediately submitted to Valentinian, who reigned in the west under the guardianship of his mother Placidia. Eagerly desirous of the imperial favours, and jealous of the credit of Count Boniface, Aëtius formed a treacherous scheme against him, the result of which was the revolt of Boniface, who invited Genseric and the Vandals into Africa. A subsequent explanation between Boniface and Placidia came too late to save Africa, but it served to expose the intrigues of Aëtius, who at this time was crushing the Franks and Burgundians in Gaul. Placidia did not dare to punish him, but she bestowed new honours upon Boniface. Rendered furious by this, Aëtius flew back to Italy with a few troops, encountered and gave battle to his rival, was conquered, but with his own hand wounded Boniface, who died shortly after, A.D. 432. Placidia was desirous of avenging his death, but Aëtius retired among the Huns, and reappeared subsequently at the head of sixty thousand barbarians to demand his pardon. Placidia restored to him his charges and honours, and Aëtius returned to Gaul to serve the empire, which he defended with great valour as long as his own ambitious views permitted this to be done. His most brilliant feat in this quarter was the overthrow of Attila, who had crossed the Rhine and Seine with his Huns, and laid siege to Orleans. Aëtius marched against him with a powerful army, and met his adversary, who had raised the siege of Orleans and recrossed the Seine, in the Catalaunian plains, near the modern *Châlons*. The contest was bloody but decisive, and three hundred thousand men fell on both sides. Notwithstanding, however, this brilliant achievement, Aëtius, in his turn, became the victim of court intrigue, and being sent for by Valentinian, and having approached him without distrust, was on a sudden stabbed to the heart by that suspicious and cowardly emperor. His death happened A.D. 454. (*Procop.*, de *Reb. Goth.*, 5.—*Jornandes*, de *Regn. Success.*, c. 19.—*Paul Diacon.*, *Hist. Miscell.*, 19, 16.—*Biographie Universelle*, vol. 1, p. 267.)—III. A physician of Amida, in Mesopotamia, who flourished at the close of the fifth century and the beginning of the sixth. The works of Aëtius are a valuable collection of medical facts and opinions, being deficient only in arrangement; since on several subjects their merit is transcendent. For example, the principles of the *Materia Medica* are delivered with admirable precision in the beginning of the first book. Of all the ancient treatises on fever, that contained in the fifth book of Aëtius may be instanced as being the most complete; and it would not be easy perhaps, at the present day, to point out a work so full on all points, and so correct in practice. Of contagion, as an exciting cause of fever, he makes no mention; and as his silence, and that of the other medical authors of antiquity, has often been thought unaccountable, it may be proper to say a few words in explanation. Palladius, who has given a most comprehensive abstract of the doctrines of Galen and his successors on the subject of fever, enumerates the following exciting causes of fevers: 1st. The application of a suitable *material*; as when things of a calciescent nature, such as pepper, mustard, and the like, are taken immoderately by a person of a hot temperament: 2d. Motion; which may be either mental or corporeal: 3d. Constriction of the pores of the skin, occasioned either by the thickness of the humours, or the coldness and dryness of the surrounding atmosphere. (This, by-the-by, accords with Dr. Cullen's Theory of spasm of the extreme vessels): 4th. Putrefaction of the fluids: 5th. The application of heat, such as by exposure of the head to the sun.—Epidemical fevers the ancients considered as being occasioned by a depraved state of the atmosphere, arising from putrid *miasmata*, or similar causes. With-

out doubt, in cases of malignant fevers, they were aware that the effluvia from the bodies of those afflicted with them contaminated the surrounding atmosphere, and that the fevers were propagated in this manner. Hence Galen, Cælius Aurelianus, Rhazes, and Avicenna, rank the plague among those complaints which pass from one person to another: and Isidorus defines the plague thus: "*Pestilentia est contagium, quod, dum unum apprehenderit, celeriter ad plures transit.*" At the same time, as they did not ascribe the origin and propagation of these disorders to a peculiar virus, they did not think it necessary to treat of contagion as a distinct cause of fever, because, in this view of the matter, it is clearly referrible to some one of the general causes enumerated above. Thus, the atmosphere of the ill-ventilated apartment of a patient in fever becoming vitiated, and being inhaled by a person in health, might occasion fever, either by producing constriction of the pores of the skin, or putrefaction of the fluids, and accordingly would be referred either to the 3d or the 4th class of general causes. In a word, the opinions of the ancients upon this subject seem to have corresponded very much with those of the more reasonable Macleanites of the present day, who, although they deny that fever, strictly speaking, is contagious, admit that it is contaminative.—Aëtius is the first medical author who has given a distinct account of the *Dracunculus*, or *Vermis Medicinensis*, now commonly known by the name of Guinea-worm. He treats of this disease so fully, that Rhazes and Avicenna have supplied but little additional information, nor have the moderns, in any considerable degree, improved upon the knowledge of the ancients. The method of treating Aneurism at the elbow-joint is deserving of attention, as being a near approximation to the improved method of operating introduced by John Hunter and Abernethy. He directs the operator to make a longitudinal incision along the inner side of the arm, three or four fingers' breadth below the armpit, and having laid bare the artery, and dissected it from the surrounding parts, to raise it up with a blind hook, and, introducing two threads, to tie them separately and divide the artery in the middle. Had he stopped here, his method would have been a complete anticipation of the plan of proceeding now practised; but, unfortunately, not having sufficient confidence in the absorbing powers of the system, he gives directions to open the tumour and evacuate its contents. Many nice operations upon the eye and surrounding parts are accurately described by him.—On the obstetrical department of surgery he is fuller than any other ancient writer.—He has also given an account of many pharmaceutical preparations which are not noticed elsewhere. The work of Aëtius, divided by the copyists into four *Tetrabiblia*, and each *Tetrabibulus* into four discourses, consisted originally of sixteen books. The first eight only were printed in Greek at Venice, by the heirs of Aldus Manutius, fol., 1534. The others have remained in MS., in the libraries of Vienna and Paris. Various editions have been published of the Latin translation of the entire work by Janus Cornarius, under the title of *Contractæ ex veteribus Medicinæ tetrabiblis*, at Venice, 1543, in 8vo; at Basle, 1542, 1549, in fol.; another at Basle, 1535, fol., of which the first seven and the last three books were translated by Montanus; two at Lyons, 1549, fol., and 1560, 4 vols. 12mo, with notes of but little value, by Hugo de Solerius; and one at Paris, 1567, fol., among the *Medicæ Artis Principes*.—IV. Sicanus, or Sienlus, a physician, and native of Sicily, as is commonly supposed, to whom is ascribed a treatise on *Melancholy*. The truth is, however, that the treatise in question is nothing more than a selection from the second discourse of the second *Tetrabibulus* of Aëtius of Amida; so that Aëtius the Sicilian becomes a mere nonentity. (*Schöll, Hist. Lit. Gr.*, 7, p. 253.)

ÆTNA, I. a celebrated volcano of Sicily, now *Etna*, or *Monte Gibello* (shortened into *Mongibello*), the latter of these modern appellations being adopted from the Arabic *Gibel*, "a mountain," given to Ætina on account of its vast size, and recalling the remembrance of the Arabian conquests in Sicily. (Compare the Map of Southern Italy and Sicily, accompanying the "*Histoire des Conquêtes des Normands*," by D'Arc, where the Arabic names are given.) This volcano, so immense in size, that Vesuvius, in comparison, seems merely a hill, rises on the eastern side of Sicily. It is 180 miles in circumference at the base, and attains by a gradual ascent to the height of 10,954 feet above the level of the sea. From Catana (the ancient Catana), which stands at the foot, to the summit, is 30 miles, and the traveller passes through three distinct zones, called the cultivated, the woody, and the desert. The lowest, or *cultivated zone*, extends through an interval of ascent of 16 miles, and it contains numerous small mountains of a conical form, about 300 or 400 feet high, each having a crater at the top, from which the lava flows over the surrounding country. The fertility of this region is wonderful, and its fruits are the finest in the island. The *woody region* forms a zone of the brightest green all around the mountain, and reaches up the side about eight miles. In the *desert region* vegetation entirely disappears, and the surface presents a dreary expanse of snow and ice. The summit of the mountain consists of a conical hill, containing a crater above two miles in circumference.—The silence of Homer respecting the fires of Ætina has given rise to the opinion, that the mountain in his time was in the same state of repose as Vesuvius in the days of Strabo. The earliest writers who make mention of Ætina, and its eruptions, are the author of the Orphic poems (*Argonaut.*, v. 12), and more particularly Pindar (*Pyth.*, 1, 21, *seqq.*, ed. Boeckh. Compare *Aulus Gellius*, 17, 10), whose description, in its fearful sublimity, bears with it all the marks of truth, and points evidently to some accurate accounts of the volcano, as received by the bard, perhaps from King Hiero. Thucydides (3, 116) is next in order. He speaks of the stream of lava, which, in his time (*Ol.* 88, 3, B C. 426), desolated the territory of Catana; he asserts, that, fifty years before, a similar flow of lava had taken place, and, without any farther chronological reference, makes mention also of a third. These were the only three eruptions with which the Greeks had become acquainted since their settlement in Sicily. That Ætina, however, had, at a much earlier period, given proof of its volcanic character, is evident from the narrative of Diodorus Siculus (5, 6), where we are informed, that the Sicani were compelled to retire to the western parts of the island, by reason of the devastation and terror which the fiery eruptions from the mountain had occasioned. The account which Strabo gives (274) of the state of things on the summit of Ætina, accords pretty accurately with the narratives of modern travellers. The geographer informs us, that those who had lately ascended the mountain found on the top a crater, or, as he terms it, a level plain (*πεδὸν ὁμαλόν*), about twenty stadia in circumference, enclosed by a bank of cinders having the height of a wall. In the middle of the plain was a hill of an ashy colour, like the surface of the plain. Over the hill a column of smoke hung suspended, extending about two hundred feet in height. Two of the party from whom Strabo received his information undertook to descend the banks and enter upon the plain, but the hot and deep sand soon compelled them to retrace their steps. The geographer, after this statement, then proceeds to contradict the common story respecting the fate of Empedocles, the party assuring him that the crater, or opening into the bowels of the mountain, could neither be seen nor approached.—The whole number of eruptions on record, in the

case of Ætna, is said to be eighty-one, of which the following may be regarded as an accurate enumeration. Those mentioned by Thucydides amount to *three*. In 122 B.C. there was *one*. In 44 A.D. *one*. In 252 A.D. *one*. During the 12th century, *two* happened. During the 13th, *one*. During the 14th, *two*. During the 15th, *four*. During the 16th, *four*. During the 17th, *twenty-two*. During the 18th, *thirty-two*. Since the commencement of the 19th, *nine*. (*Malte-Brun, Geogr.*, vol. 4, p. 293, *Brussels ed.*) That the Greeks did not suffer this mountain to remain unemployed in their mythological legends may easily be imagined, and hence the fable that Ætna lay on part of the giant form of Typhon, enemy of the gods. (*Pindar, Pyth.*, l. c.—Compare *Æschylus, Prom. Vincit.* v. 365.—*Hyginus, c.* 152.—*Apollod.*, 1, 6, 3, and *Heyne, ad loc.*, where the different traditions respecting Typhon are collected.) According to Virgil (*Æn.*, 3, 578), Enceladus lay beneath this mountain. Another class of mythographers placed the Cyclopes of Homeric fable on Ætna, though the poet never dreamed of assigning the island Thrinakia as an abode for his giant creations. (*Mannert*, vol. 3, p. 9, *seqq.*) When the Cyclopes were regarded as the aids of Vulcan in the labours of the forge, they were translated, by the wand of fable, from the surface to the bowels of the mountain, though the Lipari islands were more commonly regarded as the scene of Vulcan's art. (*Mannert*, 9, pt. 2, p. 297.)—II. A small city on the southern declivity of Ætna. The first name of the place was Inessa, or Inessos, and Thucydides (6, 94) speaks of the inhabitants under the appellation of Inessæi (Ἰννησαῖοι). The form of the name, therefore, as given by Strabo (268), namely, Inessa (Ἰννησα), as well as that found in Diodorus Siculus (14, 14), Ennesia (Ἐννησία), are clearly erroneous. The name of the place was changed to Ætna by the remains of the colony which Hiero had settled at Catana, and which the Siculi had driven out from that place. Hiero had called Catana by the name of Ætna, and the new-comers applied it to the city which now furnished them with an abode. This migration to Inessa happened *OL.* 79, 4. At a subsequent period (*OL.* 94, 2) we find the elder Dionysius master of the place, a possession of much importance to him, since it commanded the road from Catana to the western parts of the island. The ancient site is now marked by ruins, and the place bears the name of *Castro*. (*Mannert*, 10, pt. 2, p. 291, *seqq.*)

ÆTOLIA, a country of Greece, situate to the east of Acarnania. The most ancient accounts which can be traced respecting this region, represent it as formerly possessed by the Curetes, and from them it first received the name of Curetis. (*Strab.*, 465.) A change was subsequently effected by Ætolus, the son of Endymion, who arrived from Elis in the Peloponnesus, at the head of a band of followers, and, having defeated the Curetes in several actions, forced them to abandon their country (*vid.* Acarnania), and gave the territories which they had left the name of Ætolia. (*Ephor.*, *ap. Strab.*, 463.—*Pausan.*, 5, 1.) Homer represents the Ætolians as a hardy and warlike race, engaged in frequent conflicts with the Curetes. He informs us, also, that they took part in the siege of Troy, under the command of Thoas their chief, and often alludes to their prowess in the field. (*Il.*, 9, 527.—2, 638, &c.) Mythology has conferred a degree of celebrity and interest on this portion of Greece, from the story of the Calydonian boar, and the exploits of Meleager and Tydeus, with those of other Ætolian warriors of the heroic age; but, whatever may have contributed to give renown to this province, Thucydides (1, 5) assures us, that the Ætolians, in general, like most of the northwestern clans of the Grecian continent, long preserved the wild and uncivilized habits of a barbarous age. The more remote tribes

were especially distinguished for the uncouthness of their language and the ferocity of their habits. (*Thucyd.*, 3, 94.) In this historian's time they had as yet made no figure among the leading republics of Greece, and are seldom mentioned in the course of the war which he undertook to narrate. From him we learn that the Ætolians favoured the interests of the Lacedæmonians, probably more from jealousy of the Athenians, whom they wished to dislodge from Naupactus, than from any friendship they bore to the former. The possession of that important place held out inducements to the Athenians, in the sixth year of the war to attempt the occupation, if not the ultimate conquest, of all Ætolia: the expedition, however, though ably planned, and conducted by Demosthenes himself, proved signally disastrous. We scarcely find any subsequent mention of the Ætolians during the more important transactions which, for upward of a century, occupied the different states of Greece. We may collect, however, that they were at that time engaged in perpetual hostilities with their neighbours the Acarnanians. On the death of Philip and the accession of Alexander, the Ætolians exhibited symptoms of hostile feelings towards the young monarch (*Diod. Sic.*, 17, 3), which, together with the assistance they afforded to the confederate Greeks in the Lamia war, drew upon them the vengeance of Antipater and Craterus, who, with a powerful army, invaded their country, which they laid waste with fire and sword. The Ætolians, on this occasion, retired to their mountain-fastnesses, where they intrenched themselves until the ambitious designs of Perdiccas forced the Macedonian generals to evacuate their territory. (*Diod. Sic.*, 18, 25.) If the accounts Pausanias has followed are correct, Greece was afterward mainly indebted to the Ætolians for her deliverance from a formidable irruption of the Gauls, who had penetrated into Phocis and Ætolia. On being at length compelled to retreat, these barbarians were so vigorously pursued by the Ætolians, that scarcely any of them escaped. (*Pausan.*, 10, 23.—*Polyb.*, 9, 30.) From this time we find Ætolia acquiring a degree of importance among the other states of Greece, to which it had never aspired during the brilliant days of Sparta and Athens; but these republics were now on the decline, while northern Greece, after the example of Macedonia, was training up a numerous and hardy population to the practice of war. It is rarely, however, that history has to record achievements or acts of policy honourable to the Ætolians: unjust, rapacious, and without faith or religion, they attached themselves to whatever side the hope of gain and plunder allured them, which they again forsook in favour of a richer prize whenever the temptation presented itself. (*Polyb.*, 2, 45 and 46.—*Id.*, 4, 67.) We thus find them leagued with Alexander of Epirus, the son of Pyrrhus, for the purpose of dismembering Acarnania, and seizing upon its cities and territory. (*Polyb.*, 2, 45.—*Id.*, 9, 34.) Again with Cleomenes, in the hope of overthrowing the Achaean confederacy. (*Polyb.*, 2, 45.) Frustrated, however, in these designs by the able counsels of Aratus, and the judicious and liberal policy of Antigonus Doson, they renewed their attempts on the death of that prince, and carried their arms into the Peloponnesus; which gave rise to the social war, so ably described by Polybius. This seems to have consisted rather in predatory incursions and sudden attacks on both sides, than in a regular and systematic plan of operations. The Ætolians suffered severely; for Philip, the Macedonian king, whose youth they had despised, advanced into the heart of Ætolia at the head of a considerable force, and avenged, by sacking and plundering Thermus, their chief city, the sacrilegious attack made by them on Dodona, and also the capture of Diom in Macedonia. (*Polyb.*, 5, 7, *seqq.*) When the Romans, already hard pressed by the second Pu-

mic war, then raging in Italy, found themselves threatened on the side of Greece by the secret treaty concluded by the King of Macedon with Hannibal, they saw the advantage of an alliance with the Ætolians in order to avert the storm; and, though it might reflect but little credit on their policy, in a moral point of view, to form a league with a people of such questionable character, the soundness of judgment which dictated the measure cannot be doubted; since they were thus enabled, with a small fleet and an army under the command of M. Valerius Lævinus, to keep in check the whole of the Macedonian force, and effectually to preclude Philip from affording aid to the Carthaginians in Italy. (*Livy*, 26, 24.) The Ætolians also proved very useful allies to the Romans in the Macedonian war, during which they displayed much zeal and activity, particularly in the battle of Cynoscephalæ, where their cavalry greatly distinguished itself, and contributed essentially to that decisive victory. (*Liv.*, 33, 7.) On the conclusion of peace, the Ætolians flattered themselves that their exertions in favour of the Romans would be rewarded with a share of the provinces taken from the enemy. But the crafty Romans considered Ætolia already sufficiently powerful to render any considerable addition to its territory impolitic, and even dangerous. The Ætolians were, at this time, no longer confined within the narrow limits which the early history of Greece assigns to them, but had extended their dominions on the west and north-west as far as Epirus, where they were in possession of Ambracia, leaving to Acarnania a few towns only on the coast: towards the north, they occupied the districts of Amphilochia and Aperantia, a great portion of Dolopia, and, from their connexion with Athamantia, their influence in that direction was felt even to the borders of Macedonia. On the side of Thessaly they had made themselves masters of the country of the Ænians, a large portion of Phthiotis, with the cantons of the Melians and Trachinians. On the coast they had gained the whole of the Locrian shore to the Crissean Gulf, including Naupactus. In short, they wanted but little to give them the dominion over the whole of Northern Greece. The Romans, therefore, satisfied with having humbled and weakened the Macedonian prince, still left him power enough to check and curb the arrogant and ambitious projects of this people. The Ætolians appear to have keenly felt the disappointment of their expectations. (*Liv.*, 33, 13 and 31.) They now saw all the consequences of the fault they had committed, in opening for the Romans a way to Greece; but, too weak of themselves to eject these formidable intruders, they turned their thoughts towards Antiochus, king of Syria, whom they induced to come over into that country, this monarch having been already urged to the same course by Hannibal. (*Liv.*, 35, 33.) With the assistance of this new ally, they made a bold attempt to seize at once the three important towns of Demetrias, Lacedæmon, and Chalcis, in which they partly succeeded; and, had Antiochus prosecuted the war as vigorously as it was commenced, Greece, in all probability, would have been saved, and Italy might again have seen Hannibal in her territories at the head of a victorious army; but a single defeat at Thermopylæ crushed the hopes of the coalition, and drove the feeble Antiochus back into Asia. (*Liv.*, 36, 19.) The Ætolians, deserted by their ally, remained alone exposed to the vengeance of the foe. Heraclea, Naupactus, and Ambracia were in turn besieged and taken; and no other resource being left, they were forced to sue for peace. This was granted A.U.C. 563; but on conditions that for ever humbled their pride, crippled their strength, and left them but the semblance of a republic. (*Liv.*, 38, 11.—*Polyb.*, frag., 22, 13.)—The Ætolian polity appears to have consisted of a federal government, somewhat similar to the Achæan league. Deputies from the

several states met in a common assembly, called Pan-ætolum, and formed one republic under the administration of a prætor. This officer was chosen annually; and upon him devolved more especially the direction of military affairs, subject, however, to the authority of the national assembly. Besides this, there was also a more select council called Apocleti. In addition to the chief magistrate, we hear of other officers, such as a general of cavalry and a public secretary. (*Liv.*, 31, 29.—*Polyb.*, 4, 5.—*Id.*, frag., 22, 15.—*Tittmann*, *Griechisch. Staatsverfass.*, p. 386, seqq.)—The following are the limits of Ætolia, according to Strabo (450). To the west it was separated from Acarnania by the Achelous; to the north it bordered on the mountain districts occupied by the Athamans, Dolopes, and Ænians; to the east it was contiguous to the country of the Locri Ozolæ, and, more to the north, to that of the Dorians; on the south it was washed by the Corinthian Gulf. The same geographer informs us, that it was usual to divide the country within these boundaries into Ætolia *Antiqua* and *Epictetus*. The former extended along the coast from the Achelous to Calydon; and included also a considerable tract of rich champaign country along the Achelous as far as Stratus. This appears to have been the situation chosen by Ætolus for his first settlement. The latter, as its name implies, was a territory subsequently acquired, and comprehended the most mountainous and least fertile parts of the province, stretching towards the Athamans on the north side, and the Locri Ozolæ on the eastern. (*Cramer's Ancient Greece*, vol. 2, p. 60, seqq.) Ætolia was, in general, a rough and mountainous country. (Compare *Hobhouse*, *Journey*, &c., *Letter* 16, vol. 1, p. 189, *Am. ed.*—*Pouqueville*, *Voyage*, &c., vol. 3, p. 231.) Some parts, however, were remarkable for their fertility; such as, 1. The large Ætolian field. (*Αἰτωλὸν πεδὶον μέγα*.—*Dionys.*, *Perieg.*, v. 432.) 2. Paracheloitis, or the fruitful region at the mouth of the Achelous, formed from the mud brought down by the river, and drained, or, according to the legend, torn by Hercules from the river-god. (*Vid.* Achelous). 3. The Lætantian field, at the mouth of the Evenus. (*Kruse*, *Hellas*, vol. 2, pt. 2, p. 189, seqq.)

ÆTOLUS, son of Endymion (the founder of Elis), and of Neis, or, according to others, Iphianassa. Having accidentally killed Apis, son of Phoroneus, he fled with a band of followers into the country of the Curetes, which received from him the name of Ætolia. (*Apollod.*, 1, 7, 5.—*Vid.* Ætolia.)

ÆX, I. a rocky island between Tenos and Chios, deriving its name from its resemblance to a goat (*αἶς*). It is said by some to have given the appellation of "Ægean" (*Αἰγαῖον*) to the sea in which it stood. (*Plin.*, 4, 11.)—II. The goat that suckled Jupiter, changed into a constellation.

ÆFER, Cn. Domitius, an orator during the reigns of Tiberius, Caligula, Claudius, and Nero. He was born at Nemausus (*Nîmes*), B.C. 15 or 16, of obscure parents, and not, as some maintain (*Faydit*, *Remarques sur Virgile*), of the Domitian line. After receiving a good education in his native city, he removed, at an early age, to Rome, where he subsequently distinguished himself by his talents at the bar, and rose to high honours under Tiberius. His services as an informer, however, most of all endeared him to the reigning prince, and in this infamous trade he numbered among his victims Claudia Pulchra, the cousin of Agrippina, and Q. Varus, son of the former. A skilful flatterer, he managed to preserve all his favour under the three emperors who came after Tiberius, and finally died of intemperance under the last of the three, Nero, A.D. 59. He was the preceptor of Quintilian, who has left a very favourable account of his oratorical abilities. (*Tacitus*, *Ann.*, 4, 52.—*Id.* *ibid.*, 14, 19.—*Quintil.*, 5, 7.)

AFRANIA. *Vid.* Supplement.

AFRANIUS. *Vid.* Supplement.

AFRANIUS, I. a Latin comic poet, who flourished about 100 B.C. Cicero (*Brut.*, 45) says, that he imitated C. Titius, and praises him for acuteness of perception, as well as for an easy style. ("Homo perargutus, in fulubus quidem etiam, ut scitis, disertus.") Horace speaks of him as an imitator of Menander. (*Epist.*, 2, 1, 57.—Compare *Cic.*, *de Fin.*, 1, 3.) Afranius himself admits, in his *Comptales*, that he derived many even of his plots from Menander and other Greek writers. In other instances, however, he made the manners and customs of his own country the basis of his pieces. Quintilian (10, 1, 100) praises the talents of Afranius, but censures him, at the same time, for his frequent and disgusting obscenities. Of all his works, only some titles, and 266 verses remain, which are to be found in the *Corpus Poëtarum* of Maitaire, and have also been published by Bothe and Neukirch. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 111.—*Schöll, Hist. Lit. Röm.*, vol. 1, p. 139.)—II. Nepos, a commander who had served under Pompey, and was named by him consul, A.U.C. 694, a period when Pompey was beginning to dread the power and ambition of Cæsar. Afranius, however, performed nothing remarkable at this particular time, having a distaste for public affairs. Fourteen years later, when Pompey and Cæsar had come to an open rupture, Afranius was in Spain, as the lieutenant of the former, along with Petreius, who held a similar appointment. Cæsar entered the country at this period, and the two lieutenants, uniting their forces, awaited his approach in an advantageous position near Herda (the modern *Lerida*). Cæsar was defeated in the first action, and two days afterward saw himself blockaded, as it were, in his very camp, by the sudden rise of the two rivers between which it was situate. His genius, however, triumphed over every obstacle, and he eventually compelled the two lieutenants of Pompey to submit without a second encounter. They disbanded their troops and returned to Italy, after having promised never to bear arms against Cæsar for the future. Afranius, however, either forgetful of his word, or having in some way released himself from the obligation he had assumed, took part with Pompey in the battle of Pharsalia, being intrusted with the command of the right wing, although his capitulation in Spain had laid him open to the charge of having betrayed the interests of his chief. After the battle of Thapsus, Afranius and Faustus Sylla moved along the coast of Africa, with a small body of troops, in the design of passing over to Spain, and joining the remains of Pompey's party in that quarter. They were encountered, however, by Sittius, one of the partisans of Cæsar, who defeated and made them prisoners. It was the intention of Sittius to have saved their lives, but they were both massacred by his soldiers. (*Cæs.*, *Bell. Civ.*, 1, 38.—*Cic.*, *ep. ad Att.*, 1, 18.—*Phyl.*, *Vit. Pomp.*—*Sueton.*, *Vit. Cæs.*, 34.—*Florus*, 4, 2.)—III. Potitus, a plebeian, in the reign of Caligula, who, in a spirit of foolish flattery, bound himself by an oath, that he would depart from existence in case the emperor recovered from a dangerous malady under which he was labouring. Caligula was restored to health, and Potitus compelled to fulfil his oath. (*Dio Cass.*, 59, 8.—Compare the remarks of *Reimar*, *ad loc.*, on the belief prevalent throughout the ancient world, that the life of an individual could be prolonged, if another would lay down his own in its stead.)

AFRICA, one of the main divisions of the ancient world, known to history for upward of three thousand years; yet, notwithstanding its ancient celebrity, and notwithstanding its vicinity to Europe, still in a great measure eluding the examination of science. Modern observation and discoveries make it to be a vast peninsula, 5000 miles in length, and almost 4600 in breadth, presenting in an area of nearly 13,430,000 square miles,

few long or easily-navigated rivers.—The Greeks would seem to have been acquainted, from a very early period, with the Mediterranean coast of this country, since every brisk north wind would carry their vessels to its shores. Hence we find Homer already evincing a knowledge of this portion of the continent. (*Od.*, 4, 84.) A tawny-coloured population roamed along this extensive region, to whom the name of *Libyans* (*Λιβύες*) was given by the Greeks, a corruption, probably, of some native term; while the country occupied by them was denominated *Libya* (*ἡ Λιβύη*). To this same coast belonged, in strictness, the lower portion of Egypt; but the name of this latter region had reached the Greeks as early as, if not earlier than, that of Libya, and the two therefore remained always disunited. Egypt, in consequence, was regarded as a separate country, until the now firmly-established idea of three continents superinduced the necessity of attaching it to one of the three. By some, therefore, it was considered as a part of Asia, while others made the Nile the dividing limit, and assigned part of Libya to Egypt, while the portion east of the Nile was made to belong to the Asiatic continent. As regarded the extent of Libya inland, but little was at that time known. Popular belief made the African continent of small dimensions, and supposed it to be washed on the south by the great river Oceanus, which encircled also the whole of what was then supposed to be the flat and circular disk of the earth. In this state, or very nearly so, Herodotus found the geographical knowledge and opinions of his contemporaries. The historian opposes one of the speculations of the day on this subject (4, 36, *seqq.*); he rejects the earth-encompassing Oceanus, as well as the idea that the earth was round as if made by a machine. He condemns also the division into Europe, Asia, and Africa, on account of the great disproportion of these regions. Compelled, however, to acquiesce in the more prevalent opinions of the day, he recognises Libya as distinct from Egypt, or, more properly speaking, makes the Nile the dividing line, though, from his own private conviction, it is easy to perceive that he himself takes for the eastern limit of Africa, what is regarded as such at the present day. None of the later geographers, down to the time of Ptolemy, appear to have disturbed this arrangement. Eratosthenes, Timosthenes, and Artemidorus, all adopt it; Strabo also does the same, though he considers the Arabian Gulf, with the isthmus to the north, as affording the far more natural boundary on the east. As Alexandria, however, was built to the west of the mouths of the Nile, the canal which led off to this city was regarded as a part of the eastern boundary of the continent, and hence we find the city belonging on one side to Libya, and on the other to Asia. (*Hierocles, Bellum Alexandr.*, c. 14.) The Romans, as in most of their other geographical views, followed here also the usages of the Greeks, and hence Mela (1, 1) remarks, "*Quod terrarum jacet a freto ad Nilum, Africanam vocamus.*" As, however, in their subdivisions of territory, the district of Marmarica was added to the government of Africa, they began gradually to contract the limits of Libya, and to consider the Catabathmus Magnus as the dividing point. Hence we find the same Mela remarking (1, 8), "*Catabathmus, vallis decursa in Ægyptum, finit Africanam.*" In consequence of this new arrangement, Egypt on both sides of the Nile began to be reckoned a part of the continent of Asia. ("*Ægyptus Asia prima pars, inter Catabathmum et Arabas.*"—*Mela*, 1, 9.) Ptolemy laid aside, in his day, all these arbitrary points of separation, and, assuming the Arabian Gulf as the true and natural dividing line on the east, made Egypt a part of Africa, and added to the same continent the whole western coast of the same gulf, which had before been regarded as an appendage of Arabia. (*Mannert*, 10, pt. 2, p. 1, *seqq.*)—The name of Africa seems to have been

originally applied by the Romans to the country around Carthage, the first part of the continent with which they became acquainted, and the appellation is said to have been derived from a small Carthaginian district on the northern coast, called *Frige*. (*Ritter, Erdkunde*, 1, p. 955, 2d ed.) Hence, even when the name had become applied to the whole continent, there still remained, in Roman geography, the district of Africa Proper, on the Mediterranean coast, corresponding to the modern kingdom of *Tunis*, with part of that of *Tripoli*. The term *Libya*, on the other hand, though used by the Greeks to designate the entire country, became limited with the Romans to a part merely; and thus we have with the latter, the region of *Libya*, extending along the coast from the Greater Syrtis to Egypt, and stretching inland to the deserts.—The knowledge which Herodotus possessed of this continent was far from extensive. He considered Africa as terminating north of the equinoctial line; and, even in these narrow limits, Egypt alone, ranking it as a part of Africa in fact, is clearly described. If we exclude Egypt, the acquaintance possessed by the historian relative to the other parts of the continent, and which is founded on the information imparted by others, follows merely three lines of direction: one proceeds along the Nile, and reaches probably the limit of modern discoveries in that quarter; another, leaving the temple and Oasis of Ammon, loses itself in the great desert; while a third advances along the Mediterranean coast as far as the environs of Carthage. (*Malte-Brun*, 1, p. 26, *Brussels ed.*) The natives of Africa are divided by Herodotus into two races, the Africans, or, to adopt the Greek phraseology, Libyans, and the Æthiopians; one possessing the northern, the other the southern part (4, 197). By these appear to be meant the Moors, and the Negroes, or the darker-coloured nations of the interior. The common boundary of the Africans and Æthiopians in ancient times may be placed at the southern border of the Great Desert. Hanno found the Æthiopians in possession of the western coast, about the parallel of 19°; and Pliny (5, 31) places them at five journeys beyond Cernæ. At present the negroes are not found higher up than the Senegal river, or about 17°, and that only in the inland parts. (*Rennell, Geography of Herodotus*, p. 427, *seqq.*) Nothing, however, can be more indeterminate than the terms Æthiopia and Æthiopian; and it is certain that many distinct races were included under the latter denomination. (*Vid.* Æthiopia.) The whole of Africa, except where it is joined to Asia, was known by the ancients in general to be surrounded by the sea; but of its general figure and extension towards the south they had no accurate knowledge. There is strong reason, however, to believe, that, at an era anterior to the earliest records of history, the circumnavigation of Africa was accomplished by the Phœnicians in the service of Necho, king of Egypt. Herodotus, to whom we are indebted for the knowledge of this interesting fact, speaking of the peninsular figure of the continent of Africa, says (4, 42): “This discovery was first made by Necho, king of Egypt, as far as we are able to judge. When he had desisted from opening the canal that leads from the Nile to the Arabian Gulf, he sent certain Phœnicians in ships, with orders to pass by the Columns of Hercules into the sea that lies to the north of Africa, and then to return to Egypt. These Phœnicians thereupon set sail from the Red Sea, and entered into the Southern Ocean. On the approach of autumn, they landed in Africa, and planted some grain in the quarter to which they had come; when this was ripe and they had cut it down, they put to sea again. Having spent two years in this way, they in the third passed the Columns of Hercules, and returned to Egypt. Their relation may obtain credit from others, but to me it seems impossible to be believed; for they affirmed, that, as they sailed around

the coast of Africa, they had the sun on their right hand.” The report which Herodotus thought so strange as to throw discredit on the whole narrative, namely, that in passing round Africa the navigators had the sun to the right, affords to us, as has been well remarked, the strongest presumption in favour of its truth, since this never could have been imagined in an age when astronomy was yet in its infancy. The Phœnicians must of course have had the sun on their right after having passed the line. (*Larcher, ad Herod.*, l. c.—vol. 3, p. 458.—Compare *Rennell, Geography of Herodotus*, p. 718.) Many writers, however, have laboured to prove that the voyage, in all probability, never took place; that the time in which it is said to have been performed was too short for such an enterprise at that early day; in a word, that the undertaking was altogether beyond any means which navigation at that era could command. (*Gosselin, Recherches*, &c., vol. 1, p. 199, *seqq.*—*Mannert*, 1, p. 21, *seqq.*—*Malte-Brun*, 1, p. 30.) But the learned arguments of Rennell impart to the tradition a strong aspect of probability. (*Rennell, Geography of Herodotus*, p. 672, *seqq.*—Compare *Larcher, ad Herod.*, l. c., vol. 3, p. 458, *seqq.*—*Murray, Account of discoveries in Africa*, 1, p. 10, *seqq.*) The date of this first circumnavigation of Africa is supposed to be about 600 B.C. In that rude stage of the art of navigation, however, the knowledge of a passage by the Southern Ocean was as unavailable for any mercantile or practical purposes, as the discovery of a north-west passage in modern days. The precarious and tardy nature of the voyage, as well as the great expense attending it, would necessarily preclude its being made the channel of a regular commerce; nor was there any sufficient inducement for repeating the attempt, as the articles of merchandise most in request were to be had much nearer home. Exaggerated representations, moreover, of the frightful coast, and of the stormy and boundless ocean into which it projected, would naturally concur in intimidating future adventurers. Accordingly, we are informed by Herodotus (4, 43), that Sataspes, a Persian nobleman, who was condemned by Xerxes to be impaled, had his sentence commuted for the task of sailing round the African continent. He made the attempt from the west, passing the Columns of Hercules, and sailing southward along the western coast for several months; till baffled probably by the adverse winds and currents, or finding himself carried out into an immense and apparently boundless sea, he in despair abandoned the enterprise as impracticable, and returned by the way of the Straits to Egypt; upon which the monarch ordered the original sentence to be executed upon him. These attempts to circumnavigate Africa were made under the direction of the most powerful monarchs of the age; the next was undertaken by a private adventurer. We are informed by Strabo (98), who cites Posidonius as his authority, that a certain Eudoxus, a native of Cyzicus, having been deputed by his fellow-citizens to convey their solemn offering to the Isthmian celebration at Corinth, went, after having executed this commission, to Egypt, and had several conferences with the reigning monarch, Euergetes II., and also with his ministers, respecting various topics, but particularly concerning the navigation of the Nile in the upper part of its course. This man was an enthusiast in topographical researches, and not wanting in erudition. It happened that, about this same time, the guard-vessels on the coast of the Arabian Gulf picked up an Indian, whom they found alone in a bark and half dead. He was brought to the king; but no one understanding his language, the monarch ordered him to be instructed in Greek; and when he could speak that tongue, the Indian stated that, having set sail from the coast of India, he had lost his way, and had seen all his companions perish through famine. He promised, if the king would send him back, to show

the way to India to those whom the monarch should charge with this commission. Euergetes assented, and Eudoxas was one of those directed to go on this errand. He sailed with a cargo of various articles calculated for presents, and brought back in exchange aromatics and precious stones. He was disappointed, however, in the expectations of profit which he had entertained, since the king appropriated all the return-cargo to himself. After the death of Euergetes, Cleopatra, his widow, assumed the reins of government, and sent Eudoxus on a second voyage to India with a richer supply of merchandise than before. On his return, he was carried by the winds to the coast of Æthiopia, where, landing at several points, he conciliated the natives by distributing among them corn, wine, and dried figs, things of which until then they had been ignorant. He received in exchange water and guides. He noted down also some words of their language; and found, moreover, in this quarter, the extremity of a ship's prow, carved in the shape of a horse's head. This fragment, he was told, had belonged to a shipwrecked vessel that came from the west. Having reached Egypt, he found the son of Cleopatra on the throne, and he was again despoiled of the fruits of his voyage, being charged with having converted many things to his own use. As regards the fragment of the shipwrecked vessel brought home with him, he exposed it in the marketplace for the examination of pilots and masters of vessels, who informed him that it must have belonged to a ship from Gades (*Cádiz*). The grounds of their belief were as follows: the traders of Gades, according to them, had large vessels; but the less wealthy, smaller ones, which they called horses, from the ornament on their prows, and which they used in fishing along the coasts of Mauritania as far as the river Lixus. Some shipmasters even recognised the fragment as having belonged to a certain vessel of this class, which, with many others, had attempted to advance beyond the Lixus, and had never after been heard of. From these statements Eudoxus conceived the possibility of circumnavigating Africa. He returned home, disposed of all his effects, and put to sea again with the money thus obtained, intending to attempt the enterprise in question. Having visited Dicaearchia, Massilia, and other commercial cities, he everywhere announced his project, and collected funds and adventurers. He was at length enabled to equip one large and two small vessels, well-stored with provisions and merchandise, manned chiefly by volunteers, and carrying, moreover, a pompous train of artisans, physicians, and young slaves skilled in music. Having set sail, he was carried on his way at first by favourable breezes from the west. The crews, however, became fatigued, and he was compelled, though reluctantly, to keep nearer the shore, and soon experienced the disaster which he had dreaded, his ship grounding on a sandbank. As the vessel did not immediately go to pieces, he was enabled to save the cargo and great part of her timbers. With the latter he constructed another vessel of the size of one of fifty oars. Resuming his route, he came to a part inhabited by nations who spoke the same language, as he thought, with those on the eastern coast whom he had visited in his second voyage from India, and of whose tongue he had noted down some words. Hence he inferred that these were a part of the great Æthiopian race. The smallness of his vessels, however, induced him at length to return, and he remarked on his way back a deserted island, well supplied with wood and water. Having reached Mauritania, he sold his vessels and repaired to the court of Bocchus, and advised that king to send out a fleet of discovery along the coast of Africa. The monarch's friends, however, inspired him with the fear that his kingdom might, in this way, become gradually exposed to the visits and incursions of strangers. He made fair promises, therefore, to Eudoxus, but secretly intended to have him

left on some desert island; and the latter, having discovered this, escaped into the Roman province, and thence passed over into Spain. Here he constructed two vessels, one intended to keep near the coast, the other to sail in deep water; and, having taken on board agricultural implements, various kinds of grain, and skilful artificers, he set sail on a second voyage, resolving, if the navigation became too long, to winter in the island which he had previously discovered. At this point, unfortunately, the narrative of Posidonius, as detailed by Strabo, stops short, leaving us totally in the dark as to the result. Pomponius Mela (3, 9, 10) tells us, on the alleged authority of Cornelius Nepos, that Eudoxus actually made the circuit of Africa, adding some particulars of the most fabulous description respecting the nations whom he saw. But no dependence can be placed on this doubtful authority; whereas the narrative of Posidonius bears every mark of authenticity. (Compare *Murray*, 1, p. 13, *seqq.*, and *Malte-Brun*, 1, p. 68, where the voyage of Eudoxus is defended against the remarks of Gossellin in his *Recherches*, &c., 1, p. 217, *seqq.*) These are the only instances on record in which the circumnavigation of Africa was either performed or attempted by the ancients. Other voyages were, however, undertaken with a view to the exploration of certain parts of its unknown coasts. The most memorable is that performed along the western coast by Hanno, about 570 years before the Christian era. The Carthaginians fitted out this expedition with a view partly to colonization and partly to discovery. The armament consisted of sixty ships, of fifty oars each, on board of which were embarked persons of both sexes to the number of 30,000. After two days' sail from the Columns of Hercules, they founded, in the midst of an extensive plain, the city of Thytiaterium. In two days more they came to a wooded promontory, and, after sailing round a bay, founded successively four other cities. They then passed the mouth of a great river, called the Lixus, flowing from lofty mountains inhabited by inhospitable Æthiopians, who lived in caves. Thence they proceeded for three days along a desert coast to a small island, to which they gave the name of Cerne, and where they founded another colony; and afterward sailed southward along the coast, till their farther progress was arrested by the failure of provisions. (*Hann. Peripl.*, in *Geogr. Gr. Min.*, ed. *Gail.*, 1, p. 113, *seqq.*) With regard to the extent of coast actually explored by this expedition, the brief and indistinct narrative affords ample room for learned speculation and controversy. According to Rennell (*Geogr. of Herod.*, p. 719, *seqq.*), the island of Cerne is the modern Arguin, the Lixus is the *Senegal*, and the voyage extended a little beyond *Sierra Leone*. M. Gossellin, on the other hand (*Recherches*, &c., 1, p. 61, *seqq.*), contends that the whole course was along the coast of Mauritania; that the Lixus was the modern *Lucos*, Cerne was *Fedala*, and the voyage extended little beyond Cape *Nun*. *Malte-Brun* (1, p. 33, *Brussels ed.*) carries Hanno as far as the bays called the *Gulf des Médains*, and the *Gulf of Gonzalo de Cintra*, on the shore of the desert: and he is induced to assume this distance, in some degree, from the fact of Himilco, another Carthaginian, having advanced in the same direction as far to the north as the coasts of Britain, a voyage much longer and more perilous than that said to have been performed by Hanno along the African coast. (*Plin.*, 7, 67.—*Fest. Avien. Ora Marit.*, v. 80, *seqq.*) A translation of the *Periplus*, however, will be found under the article *Hanno*, from which the student may draw his own conclusions.—At a much later period this part of the coast excited the curiosity of the Roman conquerors. Polybius, the celebrated historian, was sent out by Scipio on an exploratory voyage in the same direction; but, from the meager account preserved by Pliny, M. Gossellin infers that he did not

sail quite so far as the Carthaginian navigator had done.—Let us now turn our attention, for a moment, to the interior of the country. We have already alluded in general terms to the knowledge possessed by Herodotus of Africa. To what we have stated on this subject may be added the following curious narrative, which we receive from the historian himself (2, 32). "I was also informed," says Herodotus, "by some Cyreneans, that in a journey they took to the oracle of Ammon, they had conferred with Etearchus, king of the Ammonians; and that, among other things, discoursing with him concerning the sources of the Nile, as of a thing altogether unknown, Etearchus acquainted them, that certain Nasamones, a nation of Libya inhabiting the Syrtis, and a tract of land of no great extent eastward of the Syrtis, came into his country, and, being asked by him if they had learned anything touching the Libyan deserts, answered that some petulant young men, sons to divers persons of great power among them, had, after many extravagant actions, resolved to send five of their number to the coast of Libya, to see if they could make any farther discoveries than others had done. The young men chosen by their companions to make this expedition, having furnished themselves with water and other necessary provisions, first passed through the inhabited country; and when they had likewise traversed that region which abounds in wild beasts, they entered the deserts, making their way towards the west. After they had travelled many days through the sands, they at length saw some trees growing in a plain, and they approached, and began to gather the fruit which was on them; and while they were gathering, several little men, less than men of middle size, came up, and, having seized them, carried them away. The Nasamones did not at all understand what they said, neither did they understand the speech of the Nasamones. However, they conducted them over vast morasses to a city built on a great river running from the west to the east, and abounding in crocodiles; where the Nasamones found all the inhabitants black, and of no larger size than their guides. To this relation Etearchus added, as the Cyreneans assured me, that the Nasamones returned safe to their own country, and that the men to whom they had thus come were all enchanters." (Compare the remarks under the article Nasamones.) Rennell (*Geogr. of Herod.*, p. 432) observes, that it is extremely probable that the river seen by the Nasamones was that which, according to the present state of our geography, is known to pass by *Tombuctoo*, and thence eastward through the centre of Africa (in effect, the river commonly known by the name of *Niger*). What is called the inhabited country in this narrative, he makes the same with the modern *Fezzan*, in which also he finds the sandy and desert region traversed by the Nasamones. It appears certain to him, as well as to Larcher, that the city in question was the modern *Tombuctoo*. Malte-Brun, however (1, p. 28, *Brussels ed.*), thinks it impossible that *Tombuctoo* can be the place alluded to, since it is separated from the country of the Nasamones by so many deserts, rivers, and mountains.—In the days of Strabo, the knowledge possessed by the ancients of Africa was little, if at all, improved. The Mediterranean coast and the banks of the Nile were the only parts frequented by the Greeks. Their opinion respecting the continent itself was that it formed a trapezium, or else that the coast from the Columns of Hercules to Pelusium might be considered as the base of a right-angled triangle (*Strabo*, 17, p. 825, *ed. Casaub.*), of which the Nile formed the perpendicular side, extending to *Æthiopia* and the ocean, while the hypothesis was the coast comprehended between the extremity of this line and the straits. The apex of the triangle reached beyond the limits of the habitable world, and was consequently regarded as inaccessible: hence Strabo declares his inability to assign any precise

length to the continent in question. His knowledge of the western coast is far from extensive or accurate. In passing the straits, we find, according to him, a mountain called by the Greeks *Atlas*, and by the barbarians *Dyris*: advancing thence towards the west, we see Cape Cotes, and afterward the city of Tinga, situate opposite to Gades in Spain. To the south of Tinga is the *Sinus Emporicus*, where the Phœnicians used to have establishments. After this the coast bends in, and proceeds to meet the extremity of the perpendicular line on the opposite side. We may pardon Strabo for too lightly rejecting the discoveries of the Carthaginians along the western coast, since nothing proves him to have read the periplus of Hanno. An error, however, which cannot be excused, is that of placing Mount *Atlas* directly on the straits, since he might have learned from the account of Polybius, that this mountain was situate far beyond, on the western coast, and giving name to the adjacent ocean. With regard to the eastern shores of Africa, Strabo cites a periplus of Artemidorus, from the Straits of *Dira* (*Bab-el-Mandeb*) to the Southern Horn, which, from a comparison of distances as given by Ptolemy and Marinus of Tyre, answers to Cape *Bandellans*, to the south of Cape *Gardafui*. (*Gossellin, Recherches*, vol. 1, p. 177, *seqq.*) Here a desert coast for a long time arrested the progress of maritime discovery on the part of the Greeks.—The knowledge of the day then, respecting the eastern and western coasts of Africa, appears to have extended no farther than 12° north latitude, or perhaps 12° 30'. The two sides were supposed to approximate, and between the *Hesperii Æthiopes* to the west, and the *Cinnamonifera regio*, to the east, the distance was supposed to be comparatively small. (*Strabo*, 119.) This intervening space was exposed to excessive heats, according to the common belief, and which forbade the traveller's penetrating within its precincts: while, at a little distance beyond, the Atlantic and Indian Oceans were thought to unite. The hypothesis which we have here stated made Africa terminate at about one half of its true length, and represented this continent as much smaller than Europe. (*Plin.*, 2, 108.—*Id.*, 6, 33.—*Pomp. Mela*, 1, 4.) Still it was the one generally adopted by the Alexandrian school. (*Eratosthenes*, *ap. Strab.*, *passim*.—*Crates*, *ap. Gemin.*, *Elem. Astron.*, c. 13.—*Aratus*, *Phœnom.*, v. 537.—*Cleantes*, *ap. Gemin.*, l. c.—*Cleomedes*, *Meteor.*, 1, 6, &c.) On the other hand, the opinion of Hipparchus, which united eastern Africa to India (*Hipp.*, *ap. Strab.*, 6), remained for a long period contemned, until Marinus of Tyre and Ptolemy had adopted it. This adoption, however, did not prevent the previous hypothesis from keeping its ground, in some measure, in the west of Europe (*Macrobius*, *Sonn. Scip.*, 2, 9.—*Isidorus*, *Orig.*, 14, 5), where it contributed to the discovery of the route by the Cape of Good Hope. (*Malte-Brun*, 1, p. 67, *seqq.*, *Brussels ed.*)—Africa, according to Pliny (6, 33), is three thousand six hundred and forty-eight Roman miles from east to west. This measure, estimated in stadia of seven hundred to a degree, would seem to represent the length of the coast from the valley of the *Catabathmus* to Cape *Nun*, which was also the limit of the voyage of Polybius, according to Gossellin. (*Recherches*, 1, p. 117, *seqq.*) The length of the inhabited part of Africa was supposed nowhere to exceed two hundred and fifty Roman miles. In passing, however, from the frontiers of Cyrenaica across the deserts and the country of the Garamantes, Agrippa (*Plin.*, l. c.) gave to this part of the world nine hundred and ten miles of extent. This measure, which we owe, without doubt, to the expedition against the Garamantes, conducts us beyond the *Agades* and *Bornou*, but does not reach the *Niger*. Whatever may be the discussions to which the very corrupt state of the Roman numerals in the pages of Pliny are calculated

to give rise, one thing is sufficiently evident, that the Romans knew only a third part of Africa. Pliny, moreover, gives us an account of two Roman expeditions into the interior of Africa. The first is that of Suetonius Paulinus. (*Plin.*, 5, 1.) This officer, having set out from the river Lixus with some Roman troops, arrived in ten days at Mount Atlas, passed over some miles of the chain, and met, in a desert of black sand, with a river called Ger. This appears to have been the *Gyr* of *Segelmessa*. The second expedition was that of Cornelius Balbus. "We have subdued," says Pliny (5, 5), "the nation of the Phazanii, together with their cities Alele and Cillaba: and likewise Cydamus. From these a chain of mountains, called the Black by reason of their colour, extends in a direction from east to west. Then come deserts, and afterward Matelge, a town of the Garamantes, the celebrated fountain of Debris, whose waters are hot from midday to midnight, and cold from midnight to midday; and also Garama, the capital of the nation. All these countries have been subjugated by the Roman arms, and over them did Cornelius Balbus triumph." Pliny then enumerates a large crowd of cities and tribes, whose names were said to have adorned the triumph. Malte-Brun, after a fair discussion of this subject, is of opinion that Balbus must have penetrated as far as *Bornou* and *Dongala*, which appear to coincide with the Boin and Daunagi of Pliny. The black mountains were probably those of *Tibesti*. (*Malte-Brun*, 1, p. 85, *Brussels ed.*)—Marinus of Tyre, who came before Ptolemy, pretended to have read the itinerary of a Roman expedition under Septimius Flaccus and Julius Maternus. (*Ptol.*, 1, 8, *seqq.*) These officers set out from Leptis Magna for Garama, the capital of the Garamantes, which they found to be 5400 stadia from the former city. Septimius, after this, marched directly south for the space of three months, and came to a country called Agyzimba, inhabited by negroes. Marinus, after some reasoning, fixes the position of this country at 24° south of the equator. A strict application of the laws of historical criticism will consign to the regions of fable this Roman expedition, unknown even to the Romans themselves. How can we possibly admit, that a general executed a march more astonishing than even that of Alexander, and that no contemporary writer has preserved the least mention of it! At what epoch, or under what reign, are we to place this event! How, moreover, could an army, in three months, traverse a space equal to eleven hundred French leagues! (*Malte-Brun*, 1, p. 128, *Brussels ed.*)—The form of Africa was totally changed by Ptolemy. We have seen that Strabo and Pliny regarded this part of the world as an island, terminating within the equinoctial line. The Atlantic Ocean was thought to join the Indian Sea under the torrid zone, the heats of which were regarded as the most powerful barrier to the circumnavigation of Africa. Ptolemy, who did not admit the communication of the Atlantic with the Erythrean or Indian Sea, thought, on the contrary, that the western coast of Africa, after having formed a gulf of moderate depth, which he calls *Hespericus* (*Ἑσπερικὸς*), extended indefinitely between south and west, while he believed that the eastern coast, after Cape Prasum, proceeded to join the coast of Asia below Catigara. (*Ptol.*, 7, 3.) This opinion, which made the Atlantic and Indian Oceans only large basins, separated the one from the other, had been supported by Hipparchus. The interior of Africa presents, in the pages of Ptolemy, a mass of confused notions. And yet he is the first ancient writer that announces with certainty the existence of the Niger, obscurely indicated by Pliny. The most difficult point to explain in the Central Africa of Ptolemy, is to know what river he means by the *Gyr*. (*Ptol.*, 4, 6.) Some are in favour of the river of Bornou, or the *Bahr-el-Gazel*. (*D'Anville, Mem. sur les fleuves de l'inté-*

rieur de l'Afrique, Acad. des Inser., vol. 26, p. 64.) Others declare for the *Bahr-el-Misslad*. (*Kennell, Geogr. of Herod.*, p. 418.) Neither, however, of these rivers suits the description of Claudian (*Laud. Stilich.*, 1, v. 253), reproducing the image of the Nile by the abundance of its waters: "*simili mentitus gurgite Nilum*." In the midst of so many contradictions, and in a region still almost unknown, the boldness of ignorance may hazard any assertion, and pretend to decide any point, while the modesty of true science resigns itself to doubt.

AFRICANUS, I. Sextus Julius, a native of Palestine, belonging to a family that had come originally from Africa. He lived under the Emperor Heliogabalus, and fixed his residence at Emmaüs. This city having been ruined, he was deputed to wait on the emperor and obtain an order for rebuilding it, in which mission he succeeded, and the new city took the name of Nicopolis. (*Chron. Paschale, ann. 223*) About A.D. 231, Julius Africanus visited Alexandria to hear the public discourses of Heraclas. He had been brought up in paganism, but he subsequently embraced the Christian faith, attained the priesthood, and died at an advanced age. He was acquainted with the Hebrew tongue, applied himself to various branches of scientific study, but devoted himself particularly to the perusal and investigation of the sacred writings, on which he published a commentary. The work, however, that most contributed to his reputation, was a *Chronography* in five books (*Περὶ ἀθροῦν χρόνων*), commencing with the Creation, which he fixes at 5499 B.C., and continued down to A.D. 221. This calculation forms the basis of a particular era, of which use is made in the Eastern Church, and which is styled the Historical Era, or that of the Historians of Alexandria. Fragments of this work are preserved by Eusebius, Syncellus, Joannes Malala, Theophanes, Cedrenus, and in the *Chronicon Paschale*. Photinus says of this production, that, though concise, it omits nothing important. (*Biblioth.*, vol. 1, p. 7, *ed. Bekker*.) Eusebius has most profited by it, and, in his *Chronography*, often copies him. He has preserved for us also a letter of Africanus, addressed to Aristides, the object of which is to reconcile the discrepancy between St. Matthew and St. Luke on the question of our Saviour's genealogy. We have also another letter of his, addressed to Origen, in which he contests the authenticity of the story of Susanna. Africanus likewise composed a large work in nine, or, according to others, in fourteen, or even twenty-four books, entitled *Κεστοί*, "Cestuses." This name was given it by the author, because, like the Cestus of Venus, his collection contained a mingled variety of pleasing things selected from numerous works. In it were discussed questions of natural history, medicine, agriculture, chemistry, &c. In the part that principally remains to us, and which appears to have been extracted from the main work in the eighth century, the art of war forms the topic of consideration. It is printed in the *Mathematici veteres*, Paris, 1693, fol., and also in the seventh volume of the works of Meursius, Florence, 1746. It has also been translated by Guichardt in his *Mémoires Militaires des Grecs et des Romains*, 1758, 4to. From some scattered fragments of other portions of the same work, it would appear to have been, in general, of no very valuable character. For example, in order to prevent wine from turning, we are directed to write on the bottom of the vessel the words of the psalmist, "Taste and see how sweet is the Lord!" Again, in order to drink a good deal of wine with impunity, we must repeat, on taking the first glass, the 170th verse of the 8th book of the Iliad, "Jove thundered thrice from the summits of Olympus." He gives us also other precepts for things less useful than curious in their natures, and which may serve to amuse an agriculturist; as, for example, how to force fruits to as

sume the shape of any animal, or even the form of the human visage; how to produce pomegranates without seeds, figs of two colours, &c. (Schöll, *Hist. Lat. Gr.*, vol. 4, p. 205, and 5, 269.—*Biographic Universelle*, vol. 1, p. 274.)—II. The surname of the Scipios, from their victories in Africa over the Carthaginians. (*Vid.* Scipio.)—III., IV., V. (*Vid.* Supplement.)

AGALYŦUS. *Vid.* Supplement.

AGALLIS. *Vid.* Supplement.

AGAMĒDE. *Vid.* Supplement.

AGAMĒDES and TROPHONIUS, two architects and brothers, who built the temple of Apollo at Delphi, when erected for the fourth time. (Böckh, *ad Pind.*, *fragm.*, vol. 3, p. 570.) According to Plutarch, they were informed by the god, when asking him for a recompense, that they would receive one on the seventh day from that time, and were ordered to spend the intervening period in festive indulgence. They did so, and on the seventh night were found dead in their beds. (*Plut.*, *Consol.*, *ad Ap.—Op.*, *ed. Reiske*, vol. 6, p. 413, *seq.*) Cicero relates the same story, but makes the two brothers ask Apollo for that which was best for man (*"quod esset optimum homini,"* where Plutarch merely has αἰτεῖν μισθόν), and also gives the prescribed time as three days. (*Cic.*, *Tusc. Quæst.*, 1, 47.) A very different version, however, is found in Pausanias. This writer informs us, that Agamēdes and Trophonius were the sons of Erginus, monarch of Orchomenus, or rather that Trophonius was the son of Apollo, and Agamēdes of the king. When they had attained to manhood, they became very skilful in building temples for the gods, and palaces for kings. Among other labours, they constructed a temple for Apollo at Delphi, and a treasury for Hyrieus. (*Vid.* Hyrieus.) In the wall of this building they placed a stone in such a manner that they could take it out whenever they pleased; and, in consequence of this, they carried away from time to time portions of the deposited treasure. Agamēdes was at last caught in a trap placed so as to secure the robber, whereupon his brother cut off his head in order to prevent discovery. After this, Trophonius was swallowed up in an opening of the earth, in the grove of Lebedea. The whole story appears to wear a figurative character. Erginus is the protector of labour (ἐργίνος, ἐργον); Trophonius is the "nourisher" (τρέφω, τροφός); and Agamēdes is the "very prudent one" (ἄγαν and μῦθος). Trophonius, even after he has descended to the lower world, makes his voice to be heard from those profound depths. He rules over the powers of the abyss, becomes Jupiter-Trophonius, and gives counsel to those who have the courage to descend into the cave at Lebedea. He is Hades, the wise and good deity, as Plato calls him (*Phædon*, § 68). He is therefore, also, the supreme intelligence that rules in the lower world, which serves as a guide to the souls of the departed, and accompanies them in their migrations. In the name Hyrieus, moreover, we see "a keeper of bees," a "bee-master" (ὑριεύς, from ὑρον, ὑριον, "a beehive"), and the bee was connected with the mysteries of Ceres, and also the transmigration of souls. There is, moreover, a strong analogy between the story as here told, and that related of the Egyptian monarch Rhampsinitus. Both fables appear to be allegorical illustrations, connected with agriculture. (*Creuzer, Symbolik*, vol. 2, p. 381.—*Guigniaut*, vol. 2, p. 330.)

AGAMEMNON, king of Mycenæ and commander of the Grecian forces against Troy. He was brother to Menelaus, and was, according to most authorities, the son of Plisthenes. As, however, Plisthenes died young, and his widow Aërope was taken in marriage by Atreus, the sons of Plisthenes, Agamemnon and Menelaus namely, were brought up by their grandfather, now become their stepfather, and were called Atreidae, as if they had been his own sons. (*Apollod.*, 3, 2, 2.—*Heyne*, *ad loc.*—*Schol.*, *ad Il.*, 2, 249.) On

the murder of Atreus, (*vid.* Atreus, Ægisthus) and the accession of his uncle Thyestes to the vacant throne, Agamemnon fled to Sparta, accompanied by his brother Menelaus, after having previously found an asylum, first with Polyphides, king of Sicyon, and then with Oeneus, king of Calydon. Tyndarus was reigning at Sparta, and had married his daughter Clytemnestra to a son of Thyestes; but, being dissatisfied with the alliance, he stipulated with Agamemnon to aid him in recovering the kingdom of Atreus, provided he would carry off Clytemnestra and make her his queen. This stipulation was agreed to; and the plan having succeeded, Agamemnon married the daughter of Tyndarus, and became the father of Orestes, Iphigenia (or Iphianassa), Laodice (or Electra), and Chrysothemis. Agamemnon was one of the most powerful princes of his time, and on this account was chosen commander-in-chief of the Greeks in their expedition against Troy. The Grecian fleet being detained by contrary winds at Aulis, owing to the wrath of Diana, whom Agamemnon had offended by killing one of her favourite deer, Calchas, the soothsayer, was consulted, and he declared, that, to appease the goddess, Iphigenia, the monarch's eldest daughter, must be sacrificed. She was accordingly led to the altar, and was about to be offered as a victim, when (contrary to the statement of Virgil that she was actually immolated) she is generally said to have suddenly disappeared, and a stag to have been substituted by the goddess herself. (*Vid.* Iphigenia.)—The dispute of Agamemnon with Achilles, before the walls of Troy, respecting the captive Chryseis; the consequent loss to the Greeks of the services of Achilles; his return to the war, in order to avenge the death of Patroclus; and his victory over Hector, form the principal subject of the *Iliad*.—In the division of the captives after the taking of Troy, Cassandra, one of the daughters of Priam, fell to the lot of Agamemnon. She was endued with the gift of prophecy, and warned Agamemnon not to return to Mycenæ; but from the disregard with which her predictions were generally treated (*vid.* Cassandra), he was deaf to her admonitory voice, and was consequently, upon his arrival in the city, assassinated, with her and their two children, by his queen Clytemnestra and her paramour Ægisthus. (*Vid.* Clytemnestra, Ægisthus.) The manner of Agamemnon's death is variously given. According to the Homeric account, the monarch, on his return from Troy, was carried by a storm to that part of the coast of Argolis where Ægisthus, the son of Thyestes, resided. During his absence, Ægisthus had carried on an adulterous intercourse with Clytemnestra, and he had set a watchman, with a promise of a large reward, to give him the earliest tidings of the return of the king. As soon as he learned that he was on the coast, he went out to welcome him, and invited him to his mansion. At the banquet in the evening, however, he placed, with the participation of Clytemnestra, twenty men in concealment, who fell on and slaughtered him, together with Cassandra and all his companions. They did not, however, unavenged, for Ægisthus alone was left alive. (*Od.*, 4, 512, *seqq.*—*Od.*, 11, 405, *seqq.*) The post-homeric account, followed by the Tragic writers, makes Agamemnon to have fallen by the hands of his wife, after he had just come forth from the bath, and while he was endeavouring to put on a garment, the sleeves of which had been sewed together, as well as the opening for the head, and by which, of course, all his movements were obstructed, and, as it were, fettered. (*Schol. ad Eurip.*, *Hec.*, 1277.—Compare *Eurip.*, *Orest.*, 25.—*Æsch.*, *Agam.*, 1353.—*Id.*, *Eumen.*, 631.) His death was avenged by his son Orestes. (*Vid.* Orestes.) Before concluding this article, it may not be amiss to remark, that Homer knows nothing of Plisthenes as the father of Agamemnon and Menelaus: he calls them simply the offspring of Atreus. Accord-

ing to this view of the case, Atreus, who, as eldest son, had succeeded Pelops, left on his deathbed Agamemnon and Menelaus, still under age, to the guardianship of his brother Thyestes, who resigned the kingdom to his nephews when they had reached maturity. The variations introduced into this story, therefore, would seem to be the work of later poets, especially of the Tragic writers, from whom the grammarians and scholiasts borrowed. (*Heyne, ad Il.*, 2, v. 106.—*Suppl. et Emend.*—vol. 4, p. 685.) With respect to the extent of Agamemnon's sway, we are informed by Homer (*Il.*, 2, 108) that he ruled over many islands and over all Argos (πολλῆσι νήσοισι καὶ Ἀργεῖ παντί). By Argos appears to be here meant, not the city of that name, for this was under the sway of Diomedes, but a large portion of the Peloponnesus, including particularly the cities of Mycenæ and Tiryns. (*Heyne, Excurs.* 1, *ad Il.*, 2.) The islands to which the poet alludes can hardly be those of the Sinus Argolicus, which are few in number and small. Homer himself says, that Agamemnon possessed the most powerful fleet, and from this it would appear that he held many islands under his sway, though we are unacquainted with their names. (*Heyne, l. c.*—*Thucyd.*, 1, 9.)—Thus much for Agamemnon, on the supposition that such an individual once actually existed. If we follow, however, the theory advocated by Hermann and others, and make not only the Trojan war itself to have been originally a mere allegory, but the names of the leading personages to be also allegorical, and indicative of their respective stations or characters, Agamemnon becomes the "permanent," or "general leader of the host" (ἄνω and μίμνω), the termination *ων* strengthening the idea implied by the two component words from which the appellation is derived, and denoting collection or aggregation. The name *Agamemnon* is also connected with the early religion of Greece, for we find mention made of a Ζεὺς Ἀγαμέμνων. (*Meurs. Miscell. Lacon.*, 1, 4.—*Eustath.*, *ad Il.*, 2, p. 168.—Consult *Hermann und Creuzer, Briefe über Hom. und Hes.*, p. 20, and *Creuzer, Symbolik*, vol. 2, p. 450.)

AGAMEMNONIUS, an epithet applied to Orestes, a son of Agamemnon. (*Virg., Æn.*, 4, v. 471.)

AGANIPPE, a celebrated fountain of Bœotia, on Mount Helicon. The grove of the Muses stood on the summit of the mountain, and a little below was Aganippe. The source Hippocrene was some distance above. These two springs supplied the small rivers Olmuis and Permessus, which, after uniting their waters, flowed into the Copaic lake near Haliartus. (*Strabo*, 407 and 411.) Pausanias (9, 31) calls the former Lemnus. Aganippe was sacred to the Muses, who from it were called Aganippides. Ovid (*Fast.*, 5, 7) has the expression "*fontes Aganippidos Hippocrenes*," whence some are led to imagine that he makes Aganippe and Hippocrene the same. This, however, is incorrect: the epithet *Aganippis*, as used by the poet, being equivalent here merely to "*Musis sacra*."—II. A nymph of the fountain.

AGAPENOR, the son of Anceus, and grandson of Lycurgus, who led the Arcadian forces in the expedition against Troy, and, after the fall of that city, was carried by a storm, on his return home, to the island of Cyprus, where he founded the city of Paphos.

AGAPETUS. *Vid.* Supplement.

AGAR, a town of Africa Propria, in the district of Byzacium, and probably not far from Zella.

AGAPIUS. *Vid.* Supplement.

AGĀRA, a city of India intra Gangem, on the southern bank of the Iomanes (*Dschumna*), and northwest of Palibothra. It is now *Agra*. (*Bischoff und Moller, Wörterb. der Geogr.*, s. v.)

AGĀRI (Ἀγάρον πόλις, or Ἀργείρον πόλις, *Ptol.*—*Argari Urbis, Tab. Pent.*), a city of India intra Gangem, on the Sinus Argaricus. It is thought to correspond to

the modern *Artingari*. (*Bischoff und Moller, Wörterb. der Geogr.*, s. v.)

AGARISTA, I. a daughter of Hippocrates, who married Xanthippus. She dreamed that she had brought forth a lion, and a few days after was delivered of Pericles.—II. (*Vid.* Supplement.)

AGASĪAS, or HEGESIAS, I. a sculptor of Ephesus, to whose chisel we owe the celebrated work of art called the Borghese Gladiator. This is indicated by an inscription on the pedestal of the statue. This statue was found, together with the Apollo Belvidere, on the site of ancient Antium, the birthplace of Nero, and where that emperor had collected a large number of *chefs-d'œuvre*, which had been carried off from Greece by his freedman Acratus. It is maintained by more recent antiquarians, that the statue in question does not represent a gladiator; it appears to have belonged to a group, and the attention and action of the figure are directed towards some object more elevated than itself, such, for example, as a horseman whose attack it is sustaining. With regard to the form of the name, it may be remarked, that the Æolic and vulgar form was *Agestas*; the Doric, *Agasias*; and the Ionic, *Hegesias*. This Ionic form was adopted by the Attic writers.—II. Another Ephesian sculptor, who exercised his art in the island of Delos, while it was under the Roman sway. (*Sillig, Dict. Art.*, s. v.)

AGASSÆ, a city of Thessaly, supposed by Mannert (7, 470) to be the same with the Ægea of Ptolemy, which he places to the south of Berœa. (*Ptol.*, p. 84.) It was given up to plunder by Paulus Æmilius, for having revolted to Perseus after its surrender. (*Liv.*, 45, 27.) There are ruins near the modern *Cozani*, which, in all probability, mark the site of the ancient place.

AGASUS, a harbour of Apulia, near the Promontorium Garganum. (*Plin.*, 3, 11.) It is supposed to answer to the modern *Porto Greco*. (*Cluver, Ital. Ant.*, vol. 2, p. 1212.)

AGATHARCHĪDES, I. or Agatharchus, a native of Cnidus, in the time of Ptolemy VI. (Philométor) and his successor. Photius states (*Biblioth.*, vol. 1, p. 171, *ed. Bekker*), that he had read or was acquainted with the following geographical productions of this writer.

1. A work on Asia (Τὰ κατὰ τὴν Ἀσίαν), in ten books: 2. A work on Europe (Τὰ κατὰ τὴν Εὐρώπην), in forty books: and, 3. A work on the Erythræan Sea (Περὶ τῆς Ἐρυθρᾶς θαλάσσης). The patriarch adds, that there existed the following other works of the same writer. 1. An abridged description of the Erythræan Sea (Ἐπιτομὴ τῶν περὶ τῆς Ἐρυθρᾶς θαλάσσης), in one book: 2. An account of the Troglodytes (Περὶ Τρωγλοδυτῶν), in five books: 3. An abridgment of the poem of Antimachus, entitled *Lyde* (Ἐπιτομὴ τῆς Ἀντιμάχου Λύδης): 4. An abridgment of a work on extraordinary winds (Ἐπιτομὴ τῶν περὶ συναγωγῆς θαυμασίων ἀνέμων): 5. An abridged history (Ἐκλογαὶ ἱστοριῶν): and, 6. A treatise on the art of living happily with one's friends. Photius passes a high eulogium on this writer, and makes him to have imitated the manner of Thucydides. The patriarch has also preserved for us some extracts from the first and fifth books of the work of Agatharchides on the Erythræan Sea, in which some curious particulars are found respecting the Sabæans and other nations dwelling along the coasts. Here also we have an account of the mode of hunting elephants, of the method employed by the Egyptians in extracting gold from marble, where nature had concealed it; while the whole is intermingled with details appertaining to natural history. The valuable information furnished by Agatharchides respecting the people of Æthiopia, has already been alluded to under that article. The fragments of Agatharchides were published, along with those of Ctesias and Memnon, by H. Stephens, *Paris*, 1557, 8vo. They are given, however, in a more complete form by

Hudson, in his edition of the minor Greek geographers. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 391.)—II. A native of Samos, whose *Περσικά* is cited by Plutarch in his *Parallels*. He is otherwise entirely unknown, and hence some have supposed him to be identical with Agatharchides of Cnidus, and the *Περσικά* to be merely a section of the work on Asia by this writer. (*Schöll, Hist. Lit. Gr.*, l. c.)

AGATHARCHUS, I. an Athenian artist, mentioned by Vitruvius (*lib. 7, præf.*), and said by him to have invented scene-painting. He was contemporary with Æschylus, and prepared the scenery and decorations for his theatre. Sillig (*Dict. Art.*, s. v.) maintains, that the words of Vitruvius, in the passage just referred to, namely, "*scenam fecit*," merely mean, that Agatharchus constructed a stage for Æschylus, since, according to Aristotle (*Poët.*, 4), Sophocles first brought in the decorations of scenery (*σκηνογραφία*). But the language of Vitruvius, taken in connexion with what follows, evidently refers to perspective and scene-painting, and Bentley also understands them in this sense. (*Diss. Phil.*, p. 286.) Nor do the words of Aristotle present any serious obstacle to this opinion, since Sophocles may have completed what Agatharchus began.—II. A painter, a native of Samos, and contemporary with Zeuxis. We have no certain statement respecting the degree of talent which he possessed. Sillig (*Dict. Art.*, s. v.) thinks it was small, and cites in support of his opinion the language of Andocides (*Orat.*, c. *Alcib.*, § 17). Plutarch, however, informs us, that Alcibiades confined Agatharchus in his mansion until he had decorated it with paintings, and then sent him home with a handsome present. (*Vit. Alcib.*, 16.) Andocides charges Alcibiades with detaining Agatharchus three whole months, and compelling him during that period to adorn his mansion with the pencil. And he states that the painter escaped to his house only in the fourth month of his duress. Sillig thinks that this was done in order to cast ridicule upon the artist, an inference far from probable, though it would seem to derive some support from the remark of the scholiast on Demosthenes (c. *Mid.*, p. 360), as to the nature of the provocation which Agatharchus had given to Alcibiades. Bentley makes only one artist of the name of Agatharchus, but is silent as to the difficulty which would then arise in relation to this artist's being contemporaneous with both Æschylus and Zeuxis. Agatharchus prided himself upon his rapidity of execution, and received the famous retort from Zeuxis, that if the former executed his works in a short time, he, Zeuxis, painted "for a long time," i. e., for posterity.

AGATHEMERUS, I. a Greek geographer. The period when he flourished is not known; it is certain, however, that he came after Ptolemy; and very probably he lived during the third century of our era. The only work by which he is known is an abridgment of geography, entitled *Υποτίτωσις τῆς γεωγραφίας, ἐν ἐπιτομῇ*, in two books. This little production appears to have reached us in a very imperfect state. It is a series of lessons dictated to a disciple named Philo, to serve him as an outline for a course of mathematical and physical geography. In the first chapter he gives a sketch of history and geography, and names the most useful writers in these departments. He gives us here some particulars worthy of notice that we might search in vain for in Strabo. In the chapters that follow, Agathemerus treats of the divisions of the earth, of winds, seas, islands, &c. After the sixteenth chapter comes an extract from Ptolemy. The second book is only a confused repetition of the first, and is the work, probably, of some ignorant disciple. The first edition of Agathemerus is that of Tenulius, in Greek and Latin, *Amst.*, 1671, 8vo. It is to be found also in the collection of ancient geographical writers, by Gronovius, *Lugd. Bat.*, 1679 and 1700, 4to, and in Hud-

son's collection. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 324.)—II. A physician. (*Vid. Supplement.*)

AGATHIAS, a poet and historian, born at Myrina, in Æolis, on the coast of Asia Minor, probably about 536 A.D. He studied at Alexandria, and went in the year 554 to Constantinople. He possessed some talent for poetry, and wrote a variety of amorous effusions, which he collected in nine books, under the title of "*Daphniaca*." A collection of epigrams, in seven books, was also made by him, of which a great number are still extant, and to be found in the *Anthology*. His principal production, however, is an historical work, which he probably wrote after the death of the Emperor Justinian. It contains, in five books, an account of his own times, from the wars of Narses to the death of Chosroes, king of Persia. His work is of great importance for the history of Persia. According to his own account, he would appear to have been conversant with the Persian language, since he states that he compiled his narrative from Persian authorities (*ἐκ τῶν παρὰ σφίσιν ἐγγεγραμμένων*, p. 125). He writes, perhaps, with more regard for the truth than poets are wont to do; but his style is pompous and full of affectation, and his narrative continually interspersed with commonplace reflections. The mediocrity of a bastard time is clinging fast to him, and the highest stretch of his ambition seems to have been to imitate the ancient writers. By faith he was undoubtedly a Christian, and probably prided himself upon his orthodoxy; for when he mentions that the Franks were Christians, he adds, *καὶ τῇ ὁρθότητι χρομενοι δόξῃ*. His reminiscences of the Homeric poems supplied him with a large stock of epic words, which swim on the smooth surface of his narrative like heavy logs upon stagnant water. The work of Agathias may be regarded, in point of learning and diction, as a fair specimen of the age in which he lived; few men at Alexandria or Constantinople may have surpassed him as a writer. (*Foreign Review*, No. 2, p. 575.) The best edition is that published in 1828, as Part III. in the collection of Byzantine historians, at present publishing at Bonn.

AGATHINUS. *Vid. Supplement.*

ΑΓΑΘΟ, an Athenian tragic writer, the contemporary and friend of Euripides. At his house Plato lays the scene of his *Symposium*, given in honour of a tragic victory won by the poet. Agatho was no mean dramatist. He is called *Ἀγάθων ὁ κλέωνος* by Aristophanes. (*Thesmoph.*, 29.) The same writer pays a handsome tribute to his memory as a poet and a man, in the *Rana* (v. 84), where Bacchus calls him *ἀγαθὸς ποιητὴς καὶ ποθεινὸς τοῖς ῥήτοισιν*. In the *Thesmophoriazusa*, however, which was exhibited six years before the *Rana*, Agatho, then alive, is introduced as the friend of Euripides, and ridiculed for his effeminacy. His poetry seems to have corresponded with his personal appearance; profuse in trope, inflexion, and metaphor; glittering with sparkling ideas, and flowing softly on with harmonious words and nice construction, but deficient in manly thought and vigour. Agatho may, in some degree, be charged with having begun the decline of true tragedy. It was he who first commenced the practice of inserting choruses between the acts of the drama, which had no reference whatever to the circumstances of the piece; thus infringing the law by which the chorus was made one of the actors. (*Aristot.*, *Poët.*, 18, 22.) He is blamed also by Aristotle (*Poët.*, 18, 17) for want of judgment, in selecting too extensive subjects. He occasionally wrote pieces with fictitious names (a transition towards the new comedy), one of which was called the *Flower*, and was probably, therefore, neither seriously affecting nor terrible, but in the style of the *Idyl*. (*Schlegel, Dram. Litt.*, vol. 1, p. 189.) One of Agatho's tragic victories is recorded, *Orl.* 91, 2, B.C. 416. He too, like Euripides, left Athens for the court of Archelaus.

AGATHOCLEA. *Vid. Supplement.*

AGATHOCLES, I. one of the boldest adventurers of antiquity. His history is principally drawn from Diodorus Siculus (books nineteen and twenty, and fragments of book twenty-one), and from Justin (books twenty-two and twenty-three). They derived their accounts from different sources, and differ, therefore, especially in the history of his youth. Agathocles was the son of Carcinus, who, having been expelled from Rhegium, resided at Therma in Sicily. On account of a mysterious oracle, he was exposed in his infancy, but was secretly brought up by his mother. At the age of seven years the boy was again received by his repentant father, and sent to Syracuse to learn the trade of a potter, where he continued to reside, being admitted by Timoleon into the number of the citizens. He was drawn from obscurity by Damas, a noble Syracusan, to whom his beauty recommended him, and was soon placed at the head of an army sent against Agrigentum. By a marriage with the widow of Damas he became one of the most wealthy men of Syracuse. Under the dominion of Sosistratus, he was obliged to fly to Tarentum, but returned after the death of the latter, usurped the sovereignty, in which he established himself by the murder of several thousand of the principal inhabitants, and conquered the greater part of Sicily (317 B.C.). He maintained his power twenty-eight years, till 289 B.C. To strengthen his authority in his native country, and to give employment to the people, he endeavoured, like Dionysius, to drive the Carthaginians from Sicily. Having been defeated by them, and besieged in Syracuse, he boldly resolved to pass over into Africa with a portion of his army. Here he fought for four years, till 307, generally with success. Disturbances in Sicily compelled him to leave his army twice, and at his second return into Africa he found it in rebellion against his son Archagathus. He appeased the commotion by promising the troops the booty they should win; but, being defeated, he did not hesitate to give up his own sons to the vengeance of his exasperated soldiery, and expose those latter, without a leader, to the enemy. His sons were murdered; the army surrendered to the Carthaginians. He himself restored quiet to Sicily, and concluded a peace 306 B.C., which secured to both parties their former possessions. He then engaged in several hostile expeditions to Italy, where he vanquished the Brutii and sacked Crotona. His latter days were saddened by domestic strife. His intention was, that his youngest son, Agathocles, should inherit the throne. This stimulated his grandson Archagathus to rebellion. He murdered the intended heir, and persuaded Mænon, a favourite of the king's, to poison him. This was done by means of a feather, with which the king cleaned his teeth after a meal. His mouth, and soon his whole body, became a mass of corruption. Before he was entirely dead he was thrown upon a funeral pile. According to some authors, he died at the age of seventy-two years; according to others, at that of ninety-five. Before his death, his wife Texena and two sons were sent to Egypt. His son-in-law, Pyrrhus, king of Epirus, inherited his influence in Sicily and Southern Italy. Agathocles possessed the talents of a general and a sovereign. He was proud of his ignoble descent. His cruelty, luxury, and insatiable ambition, however, accelerated his ruin. (*Justin*, 22, 1, *seqq.*—*Id.*, 23, 1, *seqq.*—*Polyb.*, 12, 15.—*Id.*, 15, 35.—*Id.*, 9, 23, &c.)—II. A son of Lysimachus, taken prisoner by the Getæ. He was ransomed, and married Lysandra, daughter of Ptolemy Lagus. His father, in his old age, married Arsinoë, the eldest sister of Lysandra, who, farrellest her offspring by Lysimachus might, on the death of the latter, come under the power of Agathocles and be destroyed, planned, and succeeded in bringing about, the death of this prince. After the destruction of Agathocles she fled to Seleucus. Another account makes Agathocles to have lost his life

through the resentment of Arsinoë, in consequence of his refusing to listen to certain dishonourable proposals made by her. (*Pausan.*, 1, 9.—*Id.*, 1, 10.)—III. A brother of Agathoclea, and minister of Ptolemy Philopator. (*Vid.* Agathoclea.)—IV. A Greek historian, a native of Samos, who wrote a work on the government of Pessinus. (*Vossius, de Hist. Græc.*, 3, p. 158.—*Ernesti, Clav. Cic. Ind. Hist.*, s. v.)—V. An archon at Athens, Ol. 105, at the period when the Phocians undertook to plunder Delphi.—VI. An historian. (*Vid.* Supplement.)

AGATHODÆMON, or the *Good Genius*, I. a name applied by the Greeks to the Egyptian Cneph, as indicative of the qualities and attributes assigned to him in the mythology of that nation. (*Compare Eusebius, Prep. Ev.*, 1, 10, p. 41.—*Jablonski, Panth. Egypt.*, 1, p. 86.) It is the same with the Νοῦς, and Πάμμενδερ, of the Alexandrian school; and the hieroglyphic which represents this deity is the circle, or disk, having in the centre a serpent with a hawk's head, or else a globe encircled by a serpent, the symbol of the spirit, or eternal principle, male and female, that animates and controls the world, as well as of the light, which illumines all things. (*Crecuer's Symbolik, par Guigniant*, vol. 1, p. 824.)—II. A name applied by the Greeks to the serpent, as an image of Cneph, the good genius. (*Plut., de Is. et Os.*, p. 418.) The serpent here meant is of a harmless kind, and was also called *Uraus* (Ὠφθαίος), or the royal serpent (*Zœga, Num. Egypt.*, p. 400.—*Id.*, de *Obelisc.*, p. 431, n. 41), and hence it is also the symbol of royalty, and appears on the heads of kings as well as of gods. (*Compare remarks under the article Cleopatra.*) The term Agathodæmon is said to be nothing more than a translation of the Egyptian term Cneph. (*Jablonski, Voc.*, p. 112.—*Ouvareff, Essai sur les Myst. d'Eleusis*, p. 106, *seqq.*—*Crecuer's Symbolik*, vol. 1, p. 505, of the German work.—*Champollion, Precis*, &c., p. 91.)—III. A name given by the Greek residents in Egypt to the Canopic arm of the Nile. (*Ptol.*, 4, 5.) The native appellation was *Schœtounouphi*, i. e., "the good arm of the river;" from *Schœt*, "the arm of a river," and *nouphi*, "good," and was used in opposition to the Phatnetic, or evil arm of the Nile. (*Champollion, l'Egypte sous les Pharaons*, vol. 2, p. 23.) The words Cneph (Cnuphi) and Canobus (Canopus) were, in fact, the same; and we have in the following, also, merely different forms of the same appellation; *Chnophi*, *Anubis*, *Mævis*, &c.—III. (*Vid.* Supplement.)

AGATHOTÏCUS. *Vid.* Supplement.

AGATHON, I. (*Vid.* Agatho)—II., III. (*Vid.* Supplement.)

AGATHYRNA, or Agathyrnum, a city of Sicily, on the northern coast, between Tyndaris and Calacta. It appears to have been originally a settlement of the Siculi, and, owing to this circumstance probably, as well as to its remote position, would seem to have escaped the notice of the Greek geographers. Its name appears, for the first time, in the history of the second Punic war, where Livy (26, 40) states, that the Roman consul Lævinus carried away from the place a motley rabble, four thousand in number, consisting of abandoned characters, and brought them to the coast of Italy near Rhegium, the people of which place wanted a band trained to robberies, for the purpose of ravaging Bruttium. Livy writes the name Agathyrna, of the first declension: the more common form is Agathyrnum (Ἀγαθύρνον). The modern *St. Agatha* stands near the site of the ancient city. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 411.)

AGATHYRSI, a nation respecting whom the accounts of ancient writers are greatly at variance. (*Compare Vossius, Annot. in Hudson, Geog. Min.*, vol. 1, p. 79.) Herodotus (4, 49) places them in the vicinity of the Maris, the modern *Marosch*, in what is now *Transylvania*, and most writers agree in placing them

in this country and in upper Hungary. (Compare *Reunell, Geogr. of Herod.*, p. 83, *seqq.*—*Mannert*, 4, p. 192.—*Niebuhr Verm. Schrift.*, 1, p. 377, &c.) Scymnus of Chios, however, makes them to have dwelt on the Palus Mæotis. The name perhaps, after all, is a mere appellative, and may have been applied by different authors to different tribes. What serves to strengthen this opinion is the fact, that the latter half of the term Agathyrsi frequently occurs in other national designations, such as *Idanthyrsi*, *Thyrssagete*, *Thyssagete*, *Thyrsi*, &c. The reference probably is to the god *Tyr*, another name for the sun. What Herodotus (4, 104) states respecting this race, that they were accustomed to array themselves in very handsome attire, to wear a great number of golden ornaments, to have their women in common, and to live, in consequence of this last-mentioned arrangement, like brethren and members of one family, is received with great incredulity by many. (Compare *Valeknaer, Herod.*, ed. *Wessel.*, p. 328, n. 31.) All this, however, clearly shows their Asiatic origin, and connects them with the nations in the interior of the eastern continent. The community of wives seems to have been a remnant, in some degree, of an early Buddhist system. The civilized habits of the Agathyrsi are, at all events, worthy of notice, and favour the theory of those who see in them a fragment of early civilization, emanating from some highly cultivated race, and subsequently shattered by the inroads of the Scythians and other barbarous tribes. (*Ritter, Vorh.*, 286, *seqq.*)

AGAVE (*Ἀγαιή*), or, with the Reuchlinian pronunciation, AGAÏE, I. daughter of Cadmus, and wife of Echion, by whom she had Pentheus. Her son succeeded his grandfather in the government of Thebes. While he was reigning, Bacchus came from the east, and sought to introduce his orgies into his native city. The women all gave enthusiastically into the new religion, and Mount Cithæron rang to the frantic yells of the Bacchantes. Pentheus sought to check their fury; but, deceived by the god, he went secretly and ascended a tree on Cithæron, to be an ocular witness of their revels. While here, he was deserted by his mother and aunts, to whom Bacchus made him appear to be a wild beast, and he was torn to pieces by them. This adventure of Pentheus has furnished the groundwork of one of the finest dramas of Euripides, his *Bacchæ*. (*Apollod.*, 3, 4, 4.—*Id.*, 3, 5, 1.—*Ovid, Met.*, 3, 514, *seqq.*—*Hygin.*, f. 184.—*Knightley's Mythology*, p. 298.)—II. A tragedy of Statius, now lost. (*Juv.*, 7, 87.)—III. A daughter of Danaus. She slew her husband Lycus, in obedience to her father's orders. (*Apollod.*, 2, 1, 5.)—IV. A Nereid. (*Apollod.*, 1, 2, 7.)

AGRESTIS, I. a genius or deity mentioned in the legends of Phrygia, and connected with the myths of Cybele and Atys. An account of his origin, as well as other particulars respecting him, may be obtained from Pausanias (7, 17). He was an androgynous deity, and appears to be the same with the Adagōis of the ancient writers. (*Creezer, Symbolik*, vol. 2, p. 18.—Compare the note of *Griegniaut*.)—II. One of the summits of Mount Dindymus in Phrygia, on which Atys was said to have been buried. (*Pausan.*, 1, 4.)

AGELĀDAS, I. an excellent statuary, and illustrious also as having been the instructor of Phidias, Polyclethus, and Myron. His parents were inhabitants of Argos, according to Pausanias (34, 8), and he himself was born there, probably about B.C. 540. The particular time, however, when he lived, has given rise to much discussion. Sillig, after a long and able argument, comes to the conclusion that Ageladas, the instructor of Phidias, attained the height of his renown about Olymp. 70, or 500 B.C. (*Dict. Art.*, s. v.)—II. Another artist, probably a nephew of the former, assigned by Pliny to Olymp. 87, or 432 B.C., which can hardly be correct. He was thinking, perhaps, of the elder Ageladas. (*Sillig, Dict. Art.*, s. v.)

AGELASTUS (*Ἀγέλαστος*), an appellation given to M. Crassus, father of the celebrated orator, and grandfather of Crassus the rich, from his extraordinary gravity. Lucilius said of him, that he laughed only once in the course of his life, while Pliny informs us that he was reported never to have laughed at all. Hence the name *Ἀγέλαστος*, "one that does not laugh," or "that never laughs." (*Cic., de Fin.*, 5, 30.—*Douza, ad Lucil., fragm.*, p. 20.—*Plin.*, 7, 18.)

AGELĀUS, I. a king of Corinth, son of Ixion.—II. A son of Hercules and Omphale, from whom Cræsus was descended. (*Apollod.*, 2, 7, 8.) Diodorus Siculus (4, 31) gives the name of this son as Lamus. Herodotus, on the other hand, deduces the royal line of Lydia from a son of Hercules and a female slave belonging to Jardan, the father of Omphale. (*Herod.*, 1, 7.) This last is generally considered to be the more correct opinion. (Consult *Bähr, ad Herod.*, l. c.—*Creezer, Hist. Græc. antiquiss.*, &c., p. 186.)—III. A servant of Priam, who preserved Paris when exposed on Mount Ida. (*Vid. Paris.*—*Apollod.*, 3, 12, 5, and *Heyne, ad loc.*, *not. cr.*)

AGEDNICUM, Agedincum, or Agedicum (*Ἀγῆδικον*, *Ptol.*), a city of Gaul, the metropolis of Senonia, or Lugdunensis Quarta. Its later name was Senones, now *Sens*. (*Cæs., B. G.*, 6, *extr.*—*Eutrop.*, 10, 7.—*Amm. Marcell.*, 15, 27.)

AGENOR, I. a son of Neptune and Libya, king of Phœnicia, and twin-brother of Belus (*Apollod.*, 2, 1, 4); he married Telephassa, by whom he became the father of Cadmus, Phoenix, Cylix, Tharsus, Phineus, and, according to some, of Europa also. (*Schol. ad Eurip., Phœn.*, 5.—*Hygin., Fab.*, 178.—*Paus.*, 5, 25, 7.—*Schol., ad Apoll. Rhod.*, 2, 178; 3, 1185.) After his daughter Europa had been carried off by Jupiter, Agenor sent out his sons in search of her, and enjoined on them not to return without their sister. As Europa was not to be found, none of them returned, and all settled in foreign countries. (*Apollod.*, 3, 1, 1.—*Hygin., Fab.*, 178.) Virgil (*Æn.*, 1, 338) calls Carthage the city of Agenor, by which he alludes to the descent of Dido from Agenor. Buttman (*Mytholog.*, 1, p. 232, *seq.*) points out that the genuine Phœnician name of Agenor was Cnas, which is the same as Canaan, and upon these facts he builds the hypothesis, that Agenor or Cnas is the same as the Canaan in the Books of Moses.—II. A son of Iasus, and father of Argos Panoptes, king of Argos. (*Apollod.*, 2, 1, 2.) Hellanicus (*Fragm.*, p. 47, *ed. Sturz.*) states that Agenor was a son of Phoroneus, and brother of Iasus and Pelasgus, and that, after their father's death, the two elder brothers divided his dominions between themselves in such a manner, that Pelasgus received the country about the river Eracinus, and built Larissa, and Iasus the country about Elis. After the death of these two, Agenor, the youngest, invaded their dominions, and thus became King of Argos.—III. The son and successor of Triopas in the kingdom of Argos. He belonged to the house of Phoroneus, and was father of Crotopus. (*Paus.*, 2, 16, 1.—*Hygin., Fab.*, 145.)—IV. A son of Pleuron and Xanthippe, and grandson of Ætolus. Epicaste, the daughter of Calydon, became by him the mother of Porthæon and Demonice. (*Apollod.*, 1, 7, 7.) According to Pausanias (3, 13, 5), Thestius, the father of Leda, is likewise a son of this Agenor.—V. A son of Phægeus, king of Psophis, in Arcadia. He was brother of Pronous and Arsinoë, who was married to Alcæmon, but was abandoned by him. When Alcæmon wanted to give the celebrated necklace and peplus of Harmonia to his second wife, Callirrhœ, the daughter of Achelous, he was slain by Agenor and Pronous at the instigation of Phægeus. But when the two brothers came to Delphi, where they intended to dedicate the necklace and peplus, they were killed by Amphoterus and Acarnan, the sons of Alcæmon and Callirrhœ. (*Apollod.*, 3, 7, 5.) Pausanias

(8, 24, 4), who relates the same story, calls the children of Phœgeus Temenus, Axion, and Alpheisibœa. —VI. A son of the Trojan Antenor, and of Theano, a priestess of Minerva. (*Il.*, 6, 298) He appears as one of the bravest of the Trojans, and as leader in the storming of the Grecian encampment. He hastens with other Trojans to the assistance of Hector when prostrated by Ajax, and, being encouraged by Apollo, he engages in combat with Achilles, whom he wounds. As, however, danger threatened him in this conflict, Apollo assumed Agenor's form, in order that, while Achilles turned against the god, the Trojans might be able to escape to the city. (*Il.*, 21, *sub fin.*—*Hygin., Fab.*, 112.) According to Pausanias (10, 27, 1), Agenor was slain by Neoptolemus, the son of Achilles, and was represented by Polygnotus in the great painting in the Lesche of Delphi.

AGENORIDES, a patronymic of Agenor, designating a descendant of an Agenor, such as Cadmus, Phineus, and Perseus.

AGESANDER, I. or AGESILÆUS, from ἀγερν and ἀνὴρ or λαός, a surname of Pluto or Hades, describing him as the god who carries away all men. (*Callim., Hymn. in Pallad.*, 130.—*Spanh., ad loc.*—*Hesych.*, s. v.—*Æschyl. ap. Athen.*, 3, p. 99) Nicander (*ap. Athen.*, 15, p. 684) uses the form Ἰγείλαος.—II. A sculptor, a native of the island of Rhodes. His name occurs in no author except Pliny (*H. N.*, 36, 5, 4), and we know of but one work which he executed; it is a work, however, which bears the most decisive testimony to his surpassing genius. In conjunction with Apollodorus and Athenodorus, he sculptured the group of Laocoon. (*Vid.* Laocoon) This celebrated group was discovered in the year 1506, near the baths of Titus on the Esquiline Hill: it is now preserved in the Museum of the Vatican. A great deal has been written about the age when Agesander flourished, and various opinions have been formed on the subject. Winckelmann and Müller, forming their judgment from the style of art displayed in the work itself, assign it to the age of Lysippus. Müller thinks the intensity of suffering depicted, and the somewhat theatrical air which pervades the group, show that it belongs to a later age than that of Phidias. Lessing and Thiersch, on the other hand, after subjecting the passage of Pliny to an accurate examination, have come to the conclusion, that Agesander and the other two artists lived in the age of Titus, and sculptured the group expressly for that emperor; and this opinion is pretty generally acquiesced in. Thiersch has written a great deal to show that the plastic art did not decline so early as is generally supposed, but continued to flourish in full vigour from the time of Phidias uninterruptedly down to the reign of Titus. Pliny was deceived in saying that the group was sculptured out of one block, as the lapse of time has discovered a join in it. It appears from an inscription on the pedestal of a statue found at *Nettuno* (the ancient Antium), that Athenodorus was the son of Agesander. This makes it not unlikely that Polydorus also was his son, and that the father executed the figure of Laocoon himself, his two sons the remaining two figures. (*Lessing, Laocoon.*—*Winckelmann, Gesch. de Kunst*, 10, 1, 10.—*Thiersch, Epochen der Bildkunst*, p. 318, &c.—*Müller, Archæol. der Kunst*, p. 152.)

AGESINAX, a Greek poet, of whom a beautiful fragment, descriptive of the moon, is preserved in Plutarch (*De facie in orb. Lunæ*, p. 920). It is uncertain whether the poem to which this fragment belonged was of an epic or didactic character.

AGESIAS, one of the Iambidæ, and an hereditary priest of Jupiter at Olympia. He gained the victory there in the mule-race, and is celebrated on that account by Pindar in the 6th Olympic Ode. Böckh places his victory in the 78th Olympiad.

AGESIDAMUS, son of Archestratus, an Epizephyrian

Loerian, who conquered, when a boy, in boxing in the Olympic games. His victory is celebrated by Pindar in the 10th and 11th Olympic Odes. The scholiast places his victory in the 74th Olympiad. He should not be confounded with Agesidamus the father of Chromius, who is mentioned in the Nemean Odes (1, 42; 9, 99).

AGESILÆUS, I. son of Doryssus, sixth king of the Agid line of Sparta, excluding Aristodemus, according to Apollodorus, reigned 44 years, and died 886 B.C. Pausanias makes his reign a short one, but contemporary with the legislation of Lycurgus. (*Pausan.*, 3, 2, 3.—*Clinton, Fast. Hell.*, 1, p. 335.)—II. Son by his second wife, Eupolia, of Archidamus II., succeeded his half-brother, Agis II., as nineteenth king of the Eurypontid line; excluding, on the ground of spurious birth, and by the interest of Lysander, his nephew, Leotychides. (*Vid.* Leotychides.) His reign extends from 398 to 361 B.C., both inclusive; during most of which time he was, in Plutarch's words, "as good as thought commander and king of all Greece," and was for the whole of it greatly identified with his country's deeds and fortunes. The position of that country, though internally weak, was externally, in Greece, down to 394, one of supremacy acknowledged: the only field of its ambition was Persia; from 394 to 387, the Corinthian or first Theban war, one of supremacy assaulted: in 387 that supremacy was restored over Greece, in the peace of Antalcidas, by the sacrifice of Asiatic prospects; and thus, more confined and more secure, it became also more wanton. After 378, when Thebes regained her freedom, we find it again assailed, and again for one moment restored, though on a lower level, in 371; then overthrown forever at Leuctra, the next nine years being a struggle for existence amid dangers within and without.

Of the youth of Agesilaus we have no detail, beyond the mention of his intimacy with Lysander. On the throne, which he ascended about the age of forty, we first hear of him in the suppression of Cinadon's conspiracy. In his third year (396), he crossed into Asia, and after a short campaign, and a winter of preparation, he in the next overpowered the two satraps, Tissaphernes and Pharnabazus; and in the spring of 394 was encamped in the plain of Thebe, preparing to advance into the heart of the empire, when a message arrived to summon him to the war at home. He calmly and promptly obeyed, expressing, however, to the Asiatic Greeks, and doubtless himself indulging, hopes of a speedy return. Marching rapidly by Xerxes' route, he met and defeated at Coroneia in Bœotia the allied forces. In 393 he was engaged in a ravaging invasion of Argolis; in 392 in one of the Corinthian territory; in 391 he reduced the Acarnanians to submission; but in the remaining years of the war he is not mentioned. In the interval of peace, we find him declining the command in Sparta's aggression on Mantinea; but heading, from motives, it is said, of private friendship, that on Phlius, and openly justifying Phœbidas's seizure of the Cadmeia. Of the next war, the first two years he commanded in Bœotia, more, however, to the enemy's gain in point of experience than loss in any other; from the five remaining he was withdrawn by severe illness. In the congress of 371 an altercation is recorded between him and Epaminondas; and by his advice Thebes was peremptorily excluded from the peace, and orders given for the fatal campaign of Leuctra. In 370 we find him engaged in an embassy to Mantinea, and reassuring the Spartans by an invasion of Arcadia; and in 369 to his skill, courage, and presence of mind, is to be ascribed the maintenance of the unvalled Sparta, amid the attacks of four armies, and revolts and conspiracies of Helots, Peræciæ, and even Spartans. Finally, in 362, he led his countrymen into Arcadia; by fortunate information was enabled to return in time to prevent the surprise of Sparta, and was, it seems,

joint, if not sole commander at the battle of Mantinea. To the ensuing winter must probably be referred his embassy to the coast of Asia, and negotiations for money with the revolted satraps, alluded to in an obscure passage of Xenophon (*Agesilaus*, 2, 26, 27); and, in performance, perhaps, of some stipulation then made, he crossed, in the spring of 361, with a body of Lacedæmonian mercenaries, into Egypt. Here, after displaying much of his ancient skill, he died, while preparing for his voyage home, in the winter of 361-60, after a life of above eighty years, and a reign of thirty-eight. His body was embalmed in wax, and splendidly buried at Sparta.

Referring to our sketch of Spartan history, we find Agesilaus shining most in its first and last period, as commencing and surrendering a glorious career in Asia, and as, in extreme age, maintaining his prostrate country. From Coronæa to Leuctra we see him partly unemployed, at times yielding to weak motives, at times joining in wanton acts of public injustice. No one of Sparta's great defeats, but some of her bad policy belongs to him. In what others do, we miss him; in what he does, we miss the greatness and consistency belonging to unity of purpose and sole command. No doubt he was hampered at home; perhaps, too, from a man withdrawn, when now near fifty, from his chosen career, great action in a new one of any kind could not be looked for. Plutarch gives, among numerous apophthegmata, his letter to the ephors on his recall: "We have reduced most of Asia, driven back the barbarians, made arms abundant in Ionia. But since you bid me, according to the decree, come home, I shall follow my letter, may perhaps be even before it. For my command is not mine, but my country's and her allies'. And a commander then commands truly according to right when he sees his own commander in the laws and ephors, or others holding office in the state." Also, an exclamation on hearing of the battle of Corinthus: "Alas for Greece! she has killed enough of her sons to have conquered all the barbarians." Of his courage, temperance, and hardness, many instances are given: to these he added, even in excess, the less Spartan qualities of kindness and tenderness as a father and a friend. Thus we have the story of his riding across a stick with his children; and, to gratify his son's affection for Cleonymus, son of the culprit, he saved Sphodrias from the punishment due, in right and policy, for his incursion into Attica in 378. So, too, the appointment of Pisander. (*Vid.* Pisander.) A letter of his runs, "If Nicias is innocent, acquit him for that; if guilty, for my sake; in any how, acquit him." From Spartan cupidity and dishonesty, and mostly, even in public life, from ill faith, his character is clear. In person he was small, mean-looking, and lame, on which last ground objection had been made to his accession, an oracle, curiously fulfilled, having warned Sparta of evils awaiting her under a "lame sovereignty." In his reign, indeed, her fall took place, but not through him. Agesilaus himself was Sparta's most perfect citizen and most consummate general; in many ways, perhaps, her greatest man. (*Xen., Hell.*, 3, 3, to the end; *Agesilaus*.—*Diod.*, 14, 15.—*Paus.*, 3, 9, 10.—*Plut.* and *C. Nepos*, in *Vita*.—*Plut.*, *Apophthegm.*)—III. A Greek historian, who wrote a work on the early history of Italy (*Ἰταλική*), fragments of which are preserved in Plutarch (*Parallelæ*, p. 312) and Stobæus. (*Florileg.*, 9, 27, 54, 49, 65, 10, ed. Gaisf.)—IV. A brother of Themistocles, who went into the Persian camp, and stabbed one of the body-guards instead of Xerxes, whom he intended to assassinate, but knew not. Upon being arraigned before Xerxes, he thrust his hand into the fire, and informed the monarch that all his countrymen were prepared to do the same. Plutarch cites this incident on the authority of Agatharchides, in his *Parallels*. (*Op.*, ed. Reiske, vol. 7, p. 217.) If the story be true, it shows the source whence

the Roman fable of Mucius Scævola was borrowed. (*Vid.* Agatharchides, II.)

AGESIPOLIS, I. king of Sparta, the twenty-first of the Agids beginning with Eurysthenes, succeeded his father Pausanias, while yet a minor, in B.C. 391, and reigned fourteen years. He was placed under the guardianship of Aristodemus, his nearest of kin. He came to the crown just about the time that the confederacy (partly brought about by the intrigues of the Persian satrap Tithraustes), which was formed by Thebes, Athens, Corinth, and Argos, against Sparta, rendered it necessary to recall his colleague, Agesilaus II., from Asia; and the first military operation of his reign was the expedition to Corinth, where the forces of the confederates were then assembled. The Spartan army was led by Aristodemus, and gained a signal victory over the allies. (*Xen., Hell.*, 4, 2, § 9.) In the year B.C. 390, Agesipolis, who had now reached his majority, was intrusted with the command of an army for the invasion of Argolis. Having procured the sanction of the Olympic and Delphic gods for disregarding any attempt which the Argives might make to stop his march, on the pretext of a religious truce, he carried his ravages still farther than Agesilaus had done in B.C. 393; but, as he suffered the aspect of the victims to deter him from occupying a permanent post, the expedition yielded no fruit but the plunder. (*Xen., Hell.*, 4, 7, § 2-6.—*Paus.*, 3, 5, § 8.) In B.C. 385 the Spartans, seizing upon some frivolous pretences, sent an expedition against Mantinea, in which Agesipolis undertook the command, after it had been declined by Agesilaus. In this expedition the Spartans were assisted by Thebes, and in a battle with the Mantineans, Epaminondas and Pelopidas, who were fighting side by side, narrowly escaped death. He took the town by diverting the river Ophis, so as to lay the low grounds at the foot of the walls under water. The basements, being made of unbaked bricks, were unable to resist the action of the water. The walls soon began to totter, and the Mantineans were forced to surrender. They were admitted to terms on condition that the population should be dispersed among the four hamlets, out of which it had been collected to form the capital. The democratical leaders were permitted to go into exile. (*Xen., Hell.*, 5, 2, § 1-7.—*Paus.*, 8, 8, § 5.—*Diod.*, 15, 5, &c.—*Plut.*, *Pelop.*, 4.—*Isocr.*, *Paneg.*, p. 67, a, *De Pace*, p. 179, c.)

Early in B.C. 382, an embassy came to Sparta from the cities of Acanthus and Apollonia, requesting assistance against the Olynthians, who were endeavouring to compel them to join their confederacy. The Spartans granted it, but were not at first very successful. After the defeat and death of Teutentius in the second campaign (B.C. 381), Agesipolis took the command. He set out in 381, but did not begin operations till the spring of 380. He then acted with great vigour, and took Torone by storm; but in the midst of his successes he was seized with a fever, which carried him off in seven days. He died at Aphytis, in the peninsula of Pallene. His body was immersed in honey, and conveyed home to Sparta for burial. Though Agesipolis did not share the ambitious views of foreign conquest cherished by Agesilaus, his loss was deeply regretted by that prince, who seems to have had a sincere regard for him. (*Xen., Hell.*, 5, 3, § 8-9, 18-19.—*Diod.*, 15, 22.—*Thirlwall, Hist. of Greece*, 4, p. 405, 428, &c.; 5, p. 5, &c., 20.)—II. Son of Cleombrotus, was the 23d king of the Agid line. He ascended the throne B.C. 371, and reigned one year. (*Paus.*, 3, 6, § 1.—*Diod.*, 15, 60)—III. The 31st of the Agid line, was the son of Agesipolis, and grandson of Cleombrotus II. After the death of Cleomenes he was elected king while still a minor, and placed under the guardianship of his uncle Cleomenes. (*Polyb.*, 4, 35.) He was, however, soon deposed by his colleague Lycurgus, after the death of Cleomenes. We hear of

him next in B.C. 195, when he was at the head of the Lacedæmonian exiles, who joined Flaminius in his attack upon Nabis, the tyrant of Lacedæmon. (*Liv.*, 34, 26.) He formed one of an embassy sent about B.C. 183 to Rome by the Lacedæmonian exiles, and, with his companions, was intercepted by pirates and killed (*Polyb.*, 24, 11.)

AGESISTRATE. *Vid.* Agis, IV.

AGĒTOR (Ἀγήτωρ), a surname given to several gods: for instance, to Jupiter at Lacedæmon (*Stob.*, *Serm.*, 42): the name seems to describe Zeus as the leader and ruler of men; but others think that it is synonymous with Agamemnon (*Vid.* Agamemnon): to Apollo (*Eurip.*, *Med.*, 426), where, however, Elmsley and others prefer ἀγήτωρ: to Mercury, who conducts the souls of men to the lower world. Under this name Mercury had a statue at Megalopolis. (*Paus.*, 8, 31, § 4.)

AGGĒNUS URBICUS, a writer on the science of the Agrimensores. (*Diet of Ant.*, p. 38.) It is uncertain when he lived; but he appears to have been a Christian, and it is not improbable, from some expressions which he uses, that he lived at the latter part of the fourth century of our era. The extant works ascribed to him are: "Aggeni Urbici in Julium Frontinum Commentarius," a commentary upon the work "De Agrorum Qualitate," which is ascribed to Frontinus; "In Julium Frontinum Commentariorum Liber secundus qui Diazographus dicitur;" and "Commentariorum de Controversiis Agrorum Pars prior et altera." The last-named work Niebuhr supposes to have been written by Frontinus, and in the time of Domitian, since the author speaks of "præstantissimus Domitianus;" an expression which would never have been applied to this tyrant after his death. (*Hist. of Rome*, vol. 2, p. 621.)

AGGRAMMES, called XANDRAMES (Ξανδράμης) by Diogenes, the ruler of the Gangaridæ and Prasii in India, was said to be the son of a barber, whom the queen had married. Alexander was preparing to march against him, when he was compelled by his soldiers, who had become tired of the war, to give up farther conquests in India. (*Curt.*, 5, 2.—*Diod.*, 17, 93, 94.—*Arrian.* *Anab.*, 5, 25, &c.—*Plut.*, *Alex.*, 60.)

AGIAS (Ἀγίας), I. a Greek poet, whose name was formerly written Augias, through a mistake of the first editor of the Excerpta of Proclus. It has been corrected by Thiersch in the *Acta Philol. Monac.*, 2, p. 584, from the Codex Monacensis, which in one passage has Agias, and in another Hagias. The name itself does not occur in early Greek writers, unless it be supposed that Egias or Hegias (Ἠγίας) in Clemens Alexandrinus (*Strom.*, 6, p. 622) and Pausanias (1, 2, § 1) are only different forms of the same name. He was a native of Træzen, and the time at which he wrote appears to have been about the year B.C. 740. His poem was celebrated in antiquity, under the name of Νόστροι, ἰ. e., the history of the return of the Achæan heroes from Troy, and consisted of five books. The poem began with the cause of the misfortunes which befell the Achæans on their way home and after their arrival, that is, with the outrage committed upon Cassandra and the Palladium; and the whole poem filled up the space which was left between the work of the poet Arctinus and the *Odyssey*. The ancients themselves appear to have been uncertain about the author of this poem, for they refer to it simply by the name of Νόστροι, and when they mention the author, they only call him ὁ τοῦς Νόστροις γράψας. (*Athen.*, 7, p. 231.—*Paus.*, 10, 28, § 4; 29, § 2. 30, § 2.—*Apollod.*, 2, 1, § 5.—*Schol.*, ad *Odys.*, 4, 12.—*Schol.*, ad *Aristoph.*, *Equit.*, 1332.—*Lucian.*, *De Saltat.*, 46.) Hence some writers attributed the Νόστροι to Homer (*Suid.*, s. v. νόστροι.—*Anthol. Planud.*, 4, 30), while others call its author a Colophonian. (*Eustath.*, ad *Odys.*, 16, 118.) Similar poems, and with the same

title, were written by other poets also, such as Eumelus of Corinth (*Schol.*, ad *Pind.*, *Ol.*, 13, 31), Anticleides of Athens (*Athen.*, 4, p. 157; 9, p. 466), Cleidemus (*Athen.*, 13, p. 609), and Lysimachus. (*Athen.*, 4, p. 158.—*Schol.*, ad *Apollon. Rhod.*, i., 558.) Where the Νόστροι is mentioned without a name, we have generally to understand the work of Agias.—II. A comic writer. (*Pollux.*, 3, 36.—*Meincke.*, *Hist. Comie. Græc.*, p. 404, 416.) He is by some considered as the same person with the writer of the Ἀπολογικά, mentioned below. Casaubon, however, in his remarks on Athenæus, thinks that this is an error. (*Ad Athen.*, 3, 10, p. 169.)—III. The author of a work on Argolis (Ἀπολογικά, *Athen.*, 3, p. 86, f.), mentioned in connexion with Dercylus. Clemens of Alexandria quotes him under the name of Aigias (*Strom.*, 1, p. 236), which is written ten Agis in Eusebius, who has also given Kerkylus incorrectly for Dercylus. (*Casaub.*, ad *Athen.*, lib. 3, c. 10, p. 169.) He is called ὁ μουσικός in another passage of Athenæus (14, p. 626, f.), but the musician may be another person.—IV. Brother of Tisamenus, the renowned seer of the Spartans, who took part in the battle of Platæa. Both of these were of the race of the Iamidæ, and received the right of citizenship at Sparta. Another Agias, son of Agelochus, grandson of Tisamenus, was the seer of Lysander, and predicted the victory of that commander over the Athenians at Ægospotami. (*Paus.*, 3, 11, § 5, 6.)—V. The Arcadian, one of the Grecian commanders in the army of Cyrus the Younger, when he marched against his brother Artaxerxes. He was entrapped, along with the other Grecian leaders, by Tissaphernes, and put to death by that treacherous satrap, together with his fellow-officers. Xenophon praises his courage and fidelity. (*Anab.*, 2, 5, 31; 2, 6, 30.)

AGIATIS. *Vid.* Agis, IV.

AGIDÆ, or Eurysthenidæ, descendants of Agis, king of Sparta and son of Eurysthenes. This family shared the throne of Lacedæmon along with the Proclidæ, or, as they were more commonly called, the Eurypontidæ. According to Pausanias, the line of the Agidæ became extinct in the person of Leonidas, son of Cleomenes. (*Pausan.*, 3, 2.—*Id.*, 3, 6.—*Id.*, 3, 7.)

AGINUM or AGINUM, also written Agenum (*Hieron.*, *De Script. Eccles. in Sabadio*, al. *Phabadio*), a city of the Nitiobriges, who were the same as the Aginenses, in Gallia Aquitania. It lay on the river Garonne, between *Fines* and *Excisum*. (*Ptol.*, *lin.*, p. 461.—*Tab.*, *Pent.*, *Segm.*, 1.—*Auson.*, *Ep.*, 24, 79.) There was a road leading from this city to *Lactura*, which was situated at the distance of 15 miles, mentioned in the *Itiner. Antonini*, for an account of which consult the remarks of *Chaudruc de Crazannes*, l. 1, p. 392. Numerous remains of ancient works of art, inscriptions, &c., have been found at this place, which are described in a dissertation published in the *Mémoires de la Société Royale des Antiq. de France*, tom. 2, p. 368. It was the birthplace of Jos. Scaliger, who has written about it in his *Lect. Auson.*, l. 2, c. 10.

AGIS (Ἀγίς), I. king of Sparta, son of Eurysthenes, began to reign, it is said, about B.C. 1032. (*Müller.*, *Dor.*, vol. 2, p. 511, transl.) According to Eusebius (*Chron.*, 1, p. 166), he reigned only one year; according to Apollodorus, as it appears, about 31 years. During the reign of Eurysthenes, the conquered people were admitted to an equality of political rights with the Dorians. Agis deprived them of these, and reduced them to the condition of subjects to the Spartans. The inhabitants of the town of Helos attempted to shake off the yoke, but they were subdued, and gave rise and name to the class called Helots. (*Ephor.*, ap. *Strab.*, 8, 364.) To his reign was referred the colony which went to Crete under Pollis and Delphus. (*Cænon.*, *Narr.*, 36.) From him the kings of that line were called Ἀγίαι. His colleague was Sous. (*Paus.*, 3, 2, § 1.)—II. The 17th of the Eurypontid line (be-

gunning with Procles), succeeded his father Archidamus B.C. 427, and reigned a little more than 28 years. In the summer of B.C. 426, he led an army of Peloponnesians and their allies as far as the isthmus, with the intention of invading Attica; but they were deterred from advancing farther by a succession of earthquakes which happened when they had got so far. (*Thucyd.*, 3, 89.) In the spring of the following year he led an army into Attica, but quitted it fifteen days after he had entered it. (*Thucyd.*, 4, 2, 6.) In B.C. 419, the Argives, at the instigation of Alcibiades, attacked Epidaurus; and Agis, with the whole force of Lacedæmon, set out at the same time, and marched to the frontier city, Leuctra. No one, Thucydides tells us, knew the purpose of this expedition. It was probably to make a diversion in favour of Epidaurus. (*Thirlwall*, vol. 3, p. 342.) At Leuctra the aspect of the sacrifices deterred him from proceeding. He therefore led his troops back, and sent round notice to the allies to be ready for an expedition at the end of the sacred month of the Carnean festival; and when the Argives repeated their attack on Epidaurus, the Spartans again marched to the frontier town, Caryæ, and again turned back, professedly on account of the aspect of the victims. In the middle of the following summer (B.C. 418), the Epidaurians being still hard pressed by the Argives, the Lacedæmonians, with their whole force and some allies, under the command of Agis, invaded Argolis. By a skilful manœuvre, he succeeded in intercepting the Argives, and posted his army advantageously between them and the city. But just as the battle was about to begin, Thrasyllus, one of the Argive generals, and Alciphron came to Agis, and prevailed on him to conclude a truce for four months. Agis, without disclosing his motives, drew off his army. On his return he was severely censured for having thus thrown away the opportunity of reducing Argos, especially as the Argives had seized the opportunity afforded by his return, and taken Orchomenos. It was proposed to pull down his house, and inflict on him a fine of 100,000 drachmæ. But, on his earnest entreaty, they contented themselves with appointing a council of war, consisting of 10 Spartans, without whom he was not to lead an army out of the city. (*Thucyd.*, 5, 54, 57, &c.) Shortly afterward they received intelligence from Tegea, that, if not promptly succoured, the party favourable to Sparta in that city would be compelled to give way. The Spartans immediately sent their whole force under the command of Agis. He restored tranquillity at Tegea, and then marched to Mantinea. By turning the waters so as to flood the lands of Mantinea, he succeeded in drawing the army of the Mantineans and Athenians down to the level ground. A battle ensued, in which the Spartans were victorious. This was one of the most important battles ever fought between Grecian states. (*Thucyd.*, 5, 71-73.) In B.C. 417, when news reached Sparta of the counter-revolution at Argos, in which the oligarchical and Spartan faction was overthrown, an army was sent there under Agis. He was unable to restore the defeated party, but he destroyed the long walls which the Argives had begun to carry down to the sea, and took Hysie. (*Thucyd.*, 5, 83.) In the spring of B.C. 413, Agis entered Attica with a Peloponnesian army, and fortified Decelæia, a steep eminence about 15 miles northeast of Athens (*Thucyd.*, 7, 19, 27); and in the winter of the same year, after the news of the disastrous fate of the Sicilian expedition had reached Greece, he marched northward to levy contributions on the allies of Sparta, for the purpose of constructing a fleet. While at Decelæia he acted in a great measure independently of the Spartan government, and received embassies as well from the disaffected allies of the Athenians as from the Boeotians and other allies of Sparta. (*Thucyd.*, 8, 3, 5.) He seems to have remained at Decelæia till the end of the Pelopon-

nesian war. In 411, during the administration of the Four Hundred, he made an unsuccessful attempt on Athens itself. (*Thucyd.*, 8, 71.) In B.C. 401, the command of the war against Elis was intrusted to Agis, who in the third year compelled the Eleans to sue for peace. As he was returning from Delphi, whither he had gone to consecrate a tenth of the spoil, he fell sick at Heræa in Arcadia, and died in the course of a few days after he reached Sparta. (*Xen. Hell.*, 3, 2, § 21, &c.; 3, § 1-4.) He left a son, Leotycheides, who, however, was excluded from the throne, as there was some suspicion with regard to his legitimacy. While Alcibiades was at Sparta he made Agis his implacable enemy. Later writers (*Justin*, 5, 2.—*Plut.*, *Alcib.*, 23) assign as a reason, that the latter suspected him of having dishonoured his queen Timæa. It was probably at the suggestion of Agis that orders were sent out to Astyochus to put him to death. Alcibiades, however, received timely notice (according to some accounts, from Timæa herself), and kept out of the reach of the Spartans. (*Thucyd.*, 8, 12, 45.—*Plut.*, *Lysand.*, 22.—*Agesil.*, 3.)—III. The eldest son of Archidamus III., was the 20th king of the Eurypontid line. His reign was short, but eventful. He succeeded his father in B.C. 338. In B.C. 333, we find him going with a single trireme to the Persian commanders in the Ægean, Pharnabazus and Autophradates, to request money and an armament for carrying on hostile operations against Alexander in Greece. They gave him 30 talents and 10 triremes. The news of the battle of Issus, however, put a check upon their plans. He sent the galleys to his brother Agesilaus, with instructions to sail with them to Crete, that he might secure that island for the Spartan interest. In this he seems in a great measure to have succeeded. Two years afterward (B.C. 331), the Greek states which were leagued together against Alexander seized the opportunity of the disaster of Zopyrion and the revolt of the Thracians, to declare war against Macedonia. Agis was invested with the command, and with the Lacedæmonian troops, and a body of 8000 Greek mercenaries, who had been present at the battle of Issus, gained a decisive victory over a Macedonian army under Corragus. Having been joined by the other forces of the league, he laid siege to Megalopolis. The city held out till Antipater came to its relief, when a battle ensued, in which Agis was defeated and killed. It happened about the time of the battle of Arbelæ. (*Arrian*, 2, 13.—*Diod.*, 16, 63, 68; 17, 62.—*Æsch.*, c. *Ctesiph.*, p. 77.—*Curt.*, 6, 1.—*Justin*, 12, 1.)—IV. The elder son of Eudamidas II., was the 24th king of the Eurypontid line. He succeeded his father in B.C. 244, and reigned four years. In B.C. 243, after the liberation of Corinth by Aratus, the general of the Achæan league, Agis led an army against him, but was defeated. (*Paus.*, 2, 8, § 4.) The interest of his reign, however, is derived from events of a different kind. Through the influx of wealth and luxury, with their concomitant vices, the Spartans had greatly degenerated from the ancient simplicity and severity of manners. Not above 700 families of the genuine Spartan stock remained, and, in consequence of the innovation introduced by Epitadeus, who procured a repeal of the law which secured to every Spartan head of a family an equal portion of land, the landed property had passed into the hands of a few individuals, of whom a great number were females, so that not above 100 Spartan families possessed estates, while the poor were burdened with debt. Agis, who from his earliest youth had shown his attachment to the ancient discipline, undertook to reform these abuses, and re-establish the institutions of Lycurgus. For this end he determined to lay before the Spartan senate a proposition for the abolition of all debts and a new partition of the lands. Another part of his plan was to give landed estates to the Periæci. His schemes were warmly

seconded by the poorer classes and the young men, and as strenuously opposed by the wealthy. He succeeded, however, in gaining over three very influential persons—his uncle Agesilaus (a man of large property, but who, being deeply involved in debt, hoped to profit by the innovations of Agis), Lysander, and Mandrocleides. Having procured Lysander to be elected one of the ephors, he laid his plans before the senate. He proposed that the Spartan territory should be divided into two portions, one to consist of 4500 equal lots, to be divided among the Spartans, whose ranks were to be filled up by the admission of the most respectable of the Peræci and strangers; the other to contain 15,000 equal lots, to be divided among the Peræci. The senate could not, at first, come to a decision on the matter. Lysander, therefore, convoked the assembly of the people, to whom Agis submitted his measure, and offered to make the first sacrifice, by giving up his lands and money, telling them that his mother and grandmother, who were possessed of great wealth, with all his relations and friends, would follow his example. His generosity drew down the applauses of the multitude. The opposite party, however, headed by Leonidas, the other king, who had formed his habits at the luxurious court of Seleucus, king of Syria, got the senate to reject the measure, though only by one vote. Agis now determined to rid himself of Leonidas. Lysander, accordingly, accused him of having violated the laws by marrying a stranger and living in a foreign land. Leonidas was deposed, and was succeeded by his son-in-law, Cleombrotus, who co-operated with Agis. Soon afterward, however, Lysander's term of office expired, and the ephors of the following year were opposed to Agis, and designed to restore Leonidas. They brought an accusation against Lysander and Mandrocleides, of attempting to violate the laws. Alarmed at the turn events were taking, the two latter prevailed on the kings to depose the ephors by force, and appoint others in their room. Leonidas, who had returned to the city, fled to Tegea, and in his flight was protected by Agis from the violence meditated against him by Agesilaus. The selfish avarice of the latter frustrated the plans of Agis, when there now seemed nothing to oppose the execution of them. He persuaded his nephew and Lysander that the most effectual way to secure the consent of the wealthy to the distribution of their lands, would be to begin by cancelling the debts. Accordingly, all bonds, registers, and securities were piled up in the market-place and burned. Agesilaus, having secured his own ends, contrived various pretexts for delaying the division of the lands. Meanwhile, the Achæans applied to Sparta for assistance against the Ætolians. Agis was accordingly sent at the head of an army. The cautious movements of Aratus gave Agis no opportunity of distinguishing himself in action, but he gained great credit by the excellent discipline he preserved among his troops. During his absence Agesilaus so incensed the poorer classes by his insolent conduct and the continued postponement of the division of the lands, that they made no opposition when the enemies of Agis openly brought back Leonidas and set him on the throne. Agis and Cleombrotus fled for sanctuary, the former to the temple of Athene Chalciceus, the latter to the temple of Poseidon. Cleombrotus was suffered to go into exile. Agis was entrapped by some treacherous friends and thrown into prison. Leonidas immediately came with a band of mercenaries, and secured the prison without, while the ephors entered it, and went through the mockery of a trial. When asked if he did not repent of what he had attempted, Agis replied that he should never repent of so glorious a design, even in the face of death. He was condemned, and precipitately executed, the ephors fearing a rescue, as a great concourse of people had assembled round the prison gates. Agis, observing that one of his executioners was

moved to tears, said, "Weep not for me: suffering, as I do, unjustly, I am in a happier case than my murderers." His mother, Agesistrate, and his grandmother were strangled on his body. Agis was the first king of Sparta who had been put to death by the ephors. Pausanias, who, however, is undoubtedly wrong, says (8, 10, § 4; 27, § 9) that he fell in battle. His widow, Agiatis, was forcibly married by Leonidas to his son, Cleomenes, but, nevertheless, they entertained for each other a mutual affection and esteem. (*Plutarch, Agis, Cleomenes, Aratus*.—*Paus.*, 7, 7, § 2.)—V. A Greek poet, a native of Argos, and a contemporary of Alexander the Great, whom he accompanied on his Asiatic expedition. Curtius (8, 5), as well as Arrian (*Anab.*, 4, 9) and Plutarch (*De adulat. et amic. discern.*, p. 69), describe him as one of the basest flatterers of the king. Curtius calls him "pessimorum carminum post Chærilum conditor," which probably refers rather to their flattering character than to their worth as poetry. The Greek Anthology (6, 152) contains an epigram, which is probably the work of this flatterer. (*Jacobs, Anthol.*, 3, p. 836.—*Zimmermann, Zeitschrift für die Alterth.*, 1841, p. 164.)

Athenæus (12, p. 516) mentions one Agis as the author of a work on the art of cooking (*ὀψαρτυκία*).

AGISIMBA, a district of Æthiopia, the most southern with which the ancients were acquainted. It is supposed to correspond to *Asben* in Nigritia. (*Bischoff und Müller, Wörterb. der Geogr.*, s. v.) It is sometimes written *Agizymba*.

AGLAIA, I. one of the Graces, called sometimes Pasiphaë. (*Pausan.*, 9, 35.—*Vid. Charites*.)—II. Daughter of Thespius, and mother, by Hercules, of Antiaides. (*Apollod.*, *Biblioth.*, 2, 7, § 8.)—III. The wife of King Charopus, and mother of Nireus, who came with three vessels and a small band of followers from the island of Syme against Troy. (*Hom.*, *Il.*, 2, 671.—*Diod. Sic.*, 5, 53.) Homer says nothing farther about him than that he was the most beautiful man in the Grecian army after Achilles (*vid. Nireus*); his story, however, was related at length in the Cyclic bards. (*Vid. Heynii Annot. ad Hom.*, *Il.*, 2, 671–3.) Lucian has ironically represented him as contesting the palm of personal beauty with Thersites in the lower world. (*Dial. Mort.*, 25.)

AGLACHEME (Ἀγλαφήμη), one of the Sirens. (*Vid. Sirenes*.)

AGLAONICE, a Thessalian female, who prided herself on her skill in predicting eclipses, &c. She boasted even of her power to draw down the moon to earth. Hence the Greek adage, *τὴν σελήνην κατασπᾶ*, "She draws down the moon," applied to a boastful person. (*Erasm. Chil.*, ed., 853.)

AGLĀPHON, I. a painter of the isle of Thasos, who flourished in the 70th Olympiad, 500 B.C. He was the father and master of Polygnotus and Aristophon. Quintilian (12, 10) speaks of his style in common with that of Polygnotus, as indicating, by its simplicity of colouring, the early stages of the art, and yet being preferable, by its air of nature and truth, to the efforts of the great masters that succeeded.—II. A son of Aristophon, and grandson of the preceding, also distinguished as a painter. He celebrated, by his productions, the victories of Alcibiades. (*Sillig, Dict. Art.*, s. v.)

AGLAUROS. *Vid. Agrauros*.

AGLAUS, a native of Psophis, and the poorest man in all Arcadia, but still pronounced, by the Delphic oracle, a happier man than Gyges, monarch of Lydia. (*Val. Max.*, 7, 1.)

AGNA, or Hagna, a female in the time of Horace, who, though troubled with a polypus in the nose, and having her visage, in consequence, greatly deformed, yet found, on this very account, an admirer in one Balbinus. The commentators make her to have been a freed-woman and a native of Greece. (*Horat.*, *Serm.*, 1, 3, 40.)

AGNODICE, an Athenian virgin, who disguised her sex to learn medicine, it being ordained by the Athenian laws, that no slave or female should learn the healing art. She was taught by Hierophilus the art of midwifery, and when employed, always discovered her sex to her patients. This brought her into so much practice, that the males of her profession, who were now out of employment, accused her before the Areopagus of corrupt conduct, "*quod dicerent eum glabrum esse, et corruptorem carum, et illas simulare imbecillitatem.*" Agnodice was about to be condemned, when she discovered her sex to the judges. A law was immediately passed authorizing all freeborn women to learn the healing art. (*Hygén., fab.*, 274.)

AGNON, I. son of Nicias, was present at the taking of Samos by Pericles, having brought re-enforcements from Athens. After the Peloponnesian war had broken out, he and Cleopompus, both colleagues of Pericles, were despatched with the forces which the last-mentioned commander had previously led, to aid in the reduction of Potidaea. The expedition was frustrated, however, by sickness among the troops. Agnon was also the founder of Amphipolis; but the citizens of that place, forgetful of past services, opened their gates to Brasidas, the Spartan general, and when the body of this commander was subsequently interred within Amphipolis, they threw down every memorial of Agnon. (*Thucyd.*, 1, 117.—*Id.*, 2, 58.)—II. *Vid.* Supplement.

AGNONIDES, an orator, and popular leader at Athens, who accused Phocion of treason for not having opposed with more activity the movements of Nicanor. After the death of Phocion, and when the people, repenting of their conduct towards him, were doing everything to honour his memory, Agnonides suffered capital punishment, by a decree passed for that special purpose. (*Plut., Vit. Phoc.*, c. 33, 38.)

AGONALIA and **AGONIA**, a festival at Rome in honour of Janus, celebrated on the ninth of January, the 20th of May, and the 10th of December. (*Vid.* Dictionary of Antiquities.)

AGONIUS (Ἀγώνιος), a surname or epithet of several gods. Æschylus (*Agam.*, 513) and Sophocles (*Trach.*, 26) use it of Apollo and Jupiter, and apparently in the sense of helpers in struggles and contests. But it is more especially used as a surname of Mercury, who presides over all kinds of solemn contests.

AGONES CAPITOLINI, contests instituted by Domitian in honour of Jupiter Capitolinus, and celebrated every fifth year on the Capitoline Hill. According to Suetonius (*Domit.*, 4), they were of a threefold character: musical, which included poetic contests, equestrian, and gymnastic. Prizes were awarded also for the best specimens of Greek and Latin prose composition. Censorinus informs us, that they were instituted in the twelfth consulship of Domitian and Dolabella (A.U.C. 839). It was at these contests that the poet Statius was defeated. (*Cens.*, c. 18.—*Crusius, ad Suet.*, l. c.) Games similar to these had been previously instituted by Nero. (*Suet., Ner.*, 12.)

AGORACRITUS, a statutory of Paros, and the favourite pupil of Phidias, who, according to Pliny (26, 5), carried his attachment so far as even to have inscribed on some of his own works the name of his young disciple. The same writer informs us, that Agoracritus contended with Alcamenes, another pupil of Phidias, and a native of Athens, in making a statue of Venus, and had the mortification to see his rival crowned as victorious, in consequence of the prejudice of the Athenians in favour of their countryman. Full of resentment, he sold his statue to the inhabitants of Rhamnus, a borough of Attica, on condition that it should never re-enter within the walls of Athens. Pliny adds, that Agoracritus named this statue Nemesis, and that Varro regarded it as the finest specimen of sculpture that he had ever seen. Pausanias (1, 33) gives an entirely different account; for, without mentioning the name of Agorac-

ritus, he says that the statue of the Rhamnusian Nemesis was the work of Phidias. Strabo, again, differs from both Pliny and Pausanias, for he asserts that the celebrated statue in question was ascribed to both Agoracritus and Diodotus (the latter of whom is not mentioned in any other passage), and that it was not at all inferior to the works of Phidias. (*Strab.*, 396.) It is difficult to reconcile these conflicting statements. Perhaps the statue was by Phidias, and the name of his favourite pupil was inscribed upon it by the artist. Equally difficult is it to conceive how a statue of Venus could be so modified as to be transformed into one of the goddess of Vengeance, for such was Nemesis. Sillig endeavours to explain this, but with little success. (*Dict. Art.*, s. v.)

AGORANOMI, Ἀγορανόμοι, sometimes called *λογισταί*, ten Athenian magistrates, five of whom officiated in the city, and five in the Piræus. To them a certain toll or tribute was paid by those who brought anything into the market to sell. They had the care of all saleable commodities in the market except corn, and they were employed in maintaining order, and in seeing that no one defrauded another, or took any unreasonable advantage in buying and selling. (*Wachsmuth, Alterthums.*, vol. 2, p. 65.)

AGRÆAS, or **ACRAGAS**, I. a small river of Sicily, running near Agrigentum. It is now the *San Blasio*. (*Mannert*, 9, pt. 2, p. 354.)—II. The Greek name of Agrigentum. (*Vid.* Agrigentum.)

AGRAGIÆNE, or **ACRAGIÆNE**, **PORTÆ**, gates of Syracuse. There were in this quarter a great number of sepulchres, and here Cicero discovered the tomb of Archimedes. (*Tusc. Quæst.*, 5, 23.) The name of these gates has given great trouble to the commentators. Dorville (*ad Charit.*, p. 193) reads *Agraganti-nas* in the passage of Cicero just referred to, because the gates in question looked towards Agrigentum and the south, according to the *Antonin. Itin.*, p. 95. Schütz gives *Achradinas* in his edition of Cicero, which is superior to *Aeradinus*, the reading of H. Stephens and Davis, though the last is adopted by Göller. (*Syracus.*, p. 64.) The argument in its favour turns upon the circumstance of a *porta Achradina* being mentioned among the gates of Syracuse, but not a *porta Agragantina*. Thus we have in Diodorus Siculus, (13, 75), τῷ κατὰ τὴν Ἀχραδίνην πύλῳ, and (13, 113), πρὸς τὴν πύλιν τῆς Ἀχραδίνης. The preferable reading, therefore, in Cicero (*l. c.*) is *portas Achradinas*, as indicating gates in that quarter of Syracuse termed *Achradina*. (*Vid.* Achradina.)

AGRARIÆ LEGES, laws enacted in Rome for the division of public lands. In the valuable work on Roman history by Niebuhr (vol. 2, p. 129, *seqq.*, *Cambr. transl.*), it is satisfactorily shown, that these laws, which have so long been considered as unjust attacks upon private property, had for their object only the distribution of lands which were the property of the state, and that the troubles to which they gave rise were occasioned by the opposition of persons who had settled on these lands without having acquired any title to them. These laws of the Romans were so intimately connected with their system of establishing colonies in the different parts of their territories, that, to attain a proper understanding of them, it is necessary to bestow a moment's consideration on that system.—According to Dionysius of Halicarnassus, their plan of sending out colonies or settlers began as early as the time of Romulus, who generally placed colonists from the city of Rome on the lands taken in war. The same policy was pursued by the kings who succeeded him; and, when the kings were expelled, it was adopted by the senate and the people, and then by the dictators. There were several reasons inducing the Roman government to pursue this policy, which was continued for a long period without any intermission; first, to have a check on the conquered people; secondly, to have

a protection against the incursions of an enemy ; thirdly, to augment their population ; fourthly, to free the city of Rome from an excess of inhabitants ; fifthly, to quiet seditions ; and, sixthly, to reward their veteran soldiers. These reasons abundantly appear in all the best ancient authorities. In the later periods of the republic, a principal motive for establishing colonies was to have the means of disposing of soldiers, and rewarding them with donations of lands ; and such colonies were, on this account, denominated *military* colonies. Now, for whichever of these causes a colony was to be established, it was necessary that some law respecting it should be passed either by the senate or people. This law in either case was called *lex agraria*, an agrarian law, which will now be explained.—An agrarian law contained various provisions ; it described the land which was to be divided, and the classes of people among whom, and their numbers, and by whom, and in what manner, and by what bounds, the territory was to be parcelled out. The mode of dividing the lands, as far as we now understand it, was twofold ; either a Roman population was distributed over the particular territory, without any formal erection of a colony, or general grants of land were made to such citizens as were willing to form a colony there. The lands which were thus distributed were of different descriptions, which we must keep in mind in order to have a just conception of the operation of the agrarian laws. They were either lands taken from an enemy, and not actually treated by the government as public property ; or public lands which had been artfully and clandestinely taken possession of by rich and powerful individuals ; or, lastly, lands which were bought with money from the public treasury, for the purpose of being distributed. Now all such agrarian laws as comprehended either lands of the enemy, or those which were treated and occupied as public property, or those which had been bought with the public money, were carried into effect without any public commotions ; but those which operated to disturb the rich and powerful citizens in the possession of the lands which they unjustly occupied, and to place colonists (or settlers) on them, were never promulgated without creating great disturbances. The first law of this kind was proposed by Spurius Cassius ; and the same measure was afterward attempted by the tribunes of the commons almost every year, but was as constantly defeated by various artifices of the nobles ; it was, however, at length passed. It appears, both from Dionysius and Varro, that, at first, Romulus allotted two *jugera* (about 1½ acres) of the public lands to each man ; then Numa divided the lands which Romulus had taken in war, and also a portion of the other public lands ; afterward Tullus divided those lands which Romulus and Numa had appropriated to the private expenses of the regal government ; then Servius distributed among those who had recently become citizens, certain lands which had been taken from the Veientes, the Caristes and Tarquinii ; and, upon the expulsion of the kings, it appears that the lands of Tarquinii Superbus, with the exception of the Campus Martius, were, by a decree of the senate, granted to the people. After this period, as the republic, by means of its continual wars, received continual accessions of conquered lands, those lands were either occupied by colonists or remained public property, until the period when Spurius Cassius, twenty-four years after the expulsion of the kings, proposed a law (already mentioned) by which one part of the land taken from the Hernici was allotted to the Latins, and the other part to the Roman people ; but as this law comprehended certain lands which he accused private persons of having taken from the public, and as the senate also opposed him, he could not accomplish the passage of it. This, according to Livy, was the first proposal of an agrarian law, of which, he adds, not one was ever proposed, down to the period of his re-

membrance, without very great public commotions. Dionysius informs us, farther, that this public land, by the negligence of the magistrates, had been suffered to fall into the possession of rich men ; but that, notwithstanding this, a division of the lands would have taken place under this law, if Cassius had not included among the receivers of the bounty the Latins and the Hernici, whom he had but a little while before made citizens. After much debate in the senate on this subject, a decree was passed to the following effect : that commissioners, called *decemvirs* (*ten* in number), appointed from among the persons of consular rank, should mark out, by boundaries, the public lands, and should designate how much was to be let out, and how much was to be distributed among the common people ; that, if any land had been acquired by joint services in war, it should be divided, according to treaty, with those allies who had been admitted to citizenship ; and that the choice of the commissioners, the appointment of the lands, and all other things relating to this subject, should be committed to the care of the succeeding consuls. Seventeen years after this, there was a vehement contest about the division, which the tribunes proposed to make, of lands then unjustly occupied by the rich men ; and, three years after that, a similar attempt on the part of the tribunes, would, according to Livy, have produced a ferocious controversy, had it not been for Quintus Fabius. Some years after this, the tribunes proposed another law of the same kind, by which the estates of a great part of the nobles would have been seized to the public use ; but it was stopped in its progress. Appian says, that the nobles and rich men, partly by getting possession of the public lands, partly by buying out the shares of indigent owners, had made themselves owners of all the lands in Italy, and had thus, by degrees, accomplished the removal of the common people from their possessions. This abuse stimulated Tiberius Gracchus to revive the Licinian law, which prohibited any individual from holding more than 500 *jugera*, or about 350 acres of land ; and would, consequently, compel the owners to relinquish all the surplus to the use of the public ; but Gracchus proposed that the owners should be paid the value of the lands relinquished. The law, however, did not operate to any great extent, and, after having cost the Gracchi their lives, was by degrees rendered wholly inoperative. After this period, various other Agrarian laws were attempted, and with various success, according to the nature of their provisions and the temper of the times in which they were proposed. One of the most remarkable was that of Rullus, which gave occasion to the celebrated oration against him by Cicero, who prevailed upon the people to reject the law.—From a careful consideration of these laws, and the others of the same kind, on which we have not commented, it is apparent that the whole object of the Roman agrarian laws was, the lands belonging to the state, the public lands or national domains, which, as already observed, were acquired by conquest or treaty, and, we may add also, by confiscations or direct seizures of private estates by different factions, either for lawful or unlawful causes ; of the last of which we have a well-known example in the time of Sylla's proscriptions. The lands thus claimed by the public became naturally a subject of extensive speculation with the wealthy capitalists, both among the nobles and other classes. In our own times, we have seen, during the revolution in France, the confiscation of the lands belonging to the clergy, the nobility, and emigrants, lead to similar results. The sales and purchases of lands by virtue of the agrarian laws of Rome, under the various complicated circumstances which must ever exist in such cases, and the attempts by the government to resume or regrant such as had been sold, whether by right or by wrong, especially after a purchaser had been long in possession, under a title

which he supposed the existing laws gave him, naturally occasioned great heat and agitation; the subject itself being intrinsically one of great difficulty, even when the passions and interests of the parties concerned would permit a calm and deliberate examination of their respective rights.—From the commotions which usually attended the proposal of agrarian laws, and from a want of exact attention to their true object, there has been a general impression, among readers of the Roman history, that those laws were always a direct and violent infringement of the rights of private property. Even such men, it has been observed, as Machiavelli, Montesquieu, and Adam Smith, have shared in this misconception of them. This erroneous opinion, however, has lately been exposed by the genius and learning of Niebuhr in his Roman history above mentioned, a work which may be said to make an era in that department of learning, and in which he has clearly shown that the original and professed object of the agrarian laws was the distribution of the *public* lands only, and not those of private citizens. Of the Licinian law, enacted about 376 B.C., on which all subsequent agrarian laws were modelled, Niebuhr enumerates the following as among the chief provisions: 1. The limits of the public land shall be accurately defined. Portions of it, which have been encroached on by individuals, shall be restored to the state. 2. Every estate in the public land, not greater than this law allows, which has not been acquired by violence or fraud, and which is not on lease, shall be good against any third person. 3. Every Roman citizen shall be competent to occupy a portion of newly-acquired public land, within the limits prescribed by this law, provided this land be not divided by law among the citizens, nor granted to a colony. 4. No one shall occupy of the public land more than five hundred *jugera*, nor pasture on the public commons more than a hundred head of large, nor more than five hundred head of small, stock. 5. Those who occupy the public land shall pay to the state the tithe of the produce of the field, the fifth of the produce of the fruit-tree and the vineyard, and for every head of large stock, and for every head of small stock yearly. 6. The public lands shall be farmed by the censors to those willing to take them on these terms. The funds hence arising are to be applied to pay the army.—The foregoing were the most important permanent provisions of the Licinian law, and, for its immediate effect, it provided that all the public land occupied by individuals, over five hundred *jugera*, should be divided by lot in portions of seven *jugera* to the plebeians.—But we must not hastily infer, as some readers of Niebuhr's works have done, that these agrarian laws did not in any manner violate private rights. This would be quite as far from the truth as the prevailing opinion already mentioned, which is now exploded. Besides the argument we might derive from the very nature of the case, we have the direct testimony of ancient writers to the injustice of such laws, and their violation of private rights. It will suffice to refer to that of Cicero alone, who says in his *De Officiis* (2. 21), "Those men who wish to make themselves popular, and who, for that purpose, either attempt agrarian laws, in order to drive people from their possessions, or who maintain that creditors ought to forgive debtors what they owe, undermine the foundations of the state; they destroy all concord, which cannot exist when money is taken from one man to be given to another; and they set aside justice, which is always violated when every man is not suffered to retain what is his own;" which reflections would not have been called forth, unless the laws in question had directly and plainly violated private rights. (*Encyclopædia Americana*, vol. 1, p. 100, *seqq.*)

AGRAULIA, a festival celebrated at Athens in honour of Agraulos, the daughter of Cæropus, and priest-

ess of Minerva. The Cyprians also honoured her with an annual festival, in the month Aphrodisius, at which they offered human victims. (*Robinson's Antiquities of Greece*, 2d ed., p. 276.)

AGRAULOS, I. the daughter of Actæus, king of Attica, and the wife of Cæropus. She became by him the mother of Erysichthon, Agraulos, Herse, and Pandrosos.—II. A daughter of Cæropus and Agraulos, and mother of Aleippe by Mars. (*Vid.* Supplement.)

AGRESPHON, a Greek grammarian mentioned by Suidas (s. v. Ἀπολλώνιος). He wrote a work, Περὶ Ὀμωνύμων (*concerning persons of the same name*). He cannot have lived earlier than the reign of Hadrian, as in his work he spoke of an Apollonius who lived in the time of that emperor.

AGREUS, the hunter, an epithet of Pan.

AGRIANES, I. a small river of Thrace, running into the Hebrus. It is now the *Ergene*.—II. A Thracian tribe dwelling in the vicinity of the river Agrianes. (*Herod.* 5, 16.)—III. A people of Illyria, on the frontiers of lower Mæsia. They were originally from Thrace, and very probably a branch of the Thracian Agrianes.

AGRIASPÆ, a nation of Asia, mentioned by Quintus Curtius (7, 3). Some difference of opinion, however, exists with regard to the true reading in this passage. Most editors prefer *Arimaspæ*, while others, and evidently with more correctness, consider *Ariaspæ* the proper lection. (Compare *Schmieder*, *ad Quint. Curt.*, l. c., and *vid.* Ariaspæ.)

AGRICOLA, CNEIUS JULIUS, an eminent Roman commander, born A.D. 40, in the reign of Caligula, by whom his father Julius Græcinus was put to death for nobly refusing to plead against Marcus Silanus. His mother, to whom he owed his excellent education, was Julia Procilla, unhappily murdered on her estate in Liguria by a descent of freebooters from the piratical fleet of Otho. The first military service of Agricola was under Suetonius Paulinus in Britain; and, on his return to Rome, he married a lady of rank, and was made quæstor in Asia, where, in a rich province, peculiarly open to official exactions, he maintained the strictest integrity. He was chosen tribune of the people, and prætor, under Nero, and, unhappily, in the commotion which followed the accession of Galba, lost his mother as above mentioned. By Vespasian, whose cause he espoused, he was made a patrician, and governor of Aquitania, which post he held for three years. The dignity of consul followed, and in the same year he married his daughter to the historian Tacitus. He was soon afterward made governor of Britain, where he subjugated the Ordovices, in *North Wales*, and reduced the island of Mona, or *Anglesea*. He adopted the most wise and generous plans for civilizing the Britons, by inducing the nobles to assume the Roman habit, and have their children instructed in the Latin language. He also gradually adorned the country with magnificent temples, porticoes, baths, and public edifices, of a nature to excite the admiration and emulation of the rude people whom he governed. With these cares, however, he indulged the usual ambition of a Roman commander, to add to the limits of the Roman territory, by extending his arms northward; and in the succeeding three years he passed the river Tmesis, or *Tweed*, subdued the country as far as the Frith of Tay, and erected a chain of protective fortresses from the Clota, or *Clyde*, to the Boderia, *Astunium*, or Frith of Forth. He also stationed troops on the coast of Scotland opposite to Ireland, on which island he entertained views of conquest; and, in an expedition to the eastern part of Scotland, beyond the Frith of Forth, was accompanied by his fleet, which explored the inlets and harbours, and hemmed in the natives on every side. His seventh summer was passed in the same parts of Scotland, and the Grampian Hills became the scene of a decisive en-

gement with the Caledonians under their most able leader Galgacus. The latter made a noble stand, but was at last obliged to yield to Roman valour and discipline; and, having taken hostages, Agricola gradually withdrew his forces into the Roman limits. In the mean time, Domitian had succeeded to the empire, to whose mean and jealous nature the brilliant character and successes of Agricola gave secret uneasiness. Artfully spreading a rumour that he intended to make the latter governor of Syria, he recalled him, received him coldly, and allowed him to descend into private life. The jealousy of the tyrant still pursued him; and as, after he had been induced to resign his pretension to the proconsulship of Asia or Africa, he was soon seized with an illness of which he died, Domitian, possibly without reason, has been suspected of a recourse to poison. Agricola died A.D. 93, in his fifty-fourth year, leaving a widow, and one daughter, the wife of Tacitus. It is this historian who has so admirably written his life, and preserved his high character for the respect of posterity. (*Tac., Vit. Agric.*)

AGRIGENTUM, a celebrated city of Sicily, about three miles from the southern coast, in what is now called the valley of *Mazara*. The Greek form of the name was *Aeragas* (*Ἀεργας*), derived from that of a small stream in the neighbourhood. The primitive name was Camicus, or, to speak more correctly, this was the appellation of an old city of the Sicani, situate on the summit of a mountain, which afterward was regarded merely as the citadel of Agrigentum. The founding of Camicus is ascribed to Dadalus, who is said to have built it, after his flight from Crete, for the Sicanian prince, Cocalus. In the first year of the 56th Olympiad, 556 B.C., a colony was sent from Gela to this quarter, which founded Agrigentum, on a neighbouring height, to the southeast. Its situation was, indeed, peculiarly strong and imposing, standing as it did on a bare and precipitous rock, 1100 feet above the level of the sea. To this advantage the city added others of a commercial nature, being near to the sea, which afforded the means of an easy intercourse with the ports of Africa and the south of Europe. The adjacent country, moreover, was very fertile. From the combined operation of all these causes, Agrigentum soon became a wealthy and powerful city, and was considered inferior to Syracuse alone. According to Diodorus Siculus (13, 81, *seqq.*), it drew on itself the enmity of the Carthaginians (406 B.C.), by refusing to embrace their alliance, or even to remain neutral. It was accordingly besieged by their generals Hannibal and Hamilcar. The former, with many of his troops, died of a pestilential disorder, derived from the putrid effluvia of the tombs, which were opened and destroyed for the sake of the stone. But, from want of timely assistance and scarcity of provisions, the Agrigentines were obliged to abandon their city, and fly for protection to Gela, whence they were transferred to the city of the Leontines, which was allotted to them by the republic of Syracuse. The conqueror Hamilcar despoiled Agrigentum of all its riches, valuable pictures, and statues. Among the trophies sent to Carthage was the celebrated bull of Phalaris, which, two hundred and sixty years afterward, on the destruction of Carthage, was restored to the Agrigentines by Scipio. At a subsequent period, when a general peace had taken place *Ol.* 96, 1. (*Diod. Sic.*, 14, 78), we find the Agrigentines returning to their native city; though, from a passage in Diodorus (13, 113), it would seem that the place had not been entirely destroyed by the foe, and that many of its previous inhabitants might have come back at an earlier date. (*Ol.* 93, 4.) Agrigentum soon recovered its importance, but the tyranny of Phintias having induced the inhabitants to call in the aid of Carthage, the city once more fell under that power. Not long after, it revolted to Pyrrhus (*Diod. Sic.*, 22, *exc.*, 14), but, on his departure from the island, was compelled to

return to its former masters. On the commencement of the Punic wars, Agrigentum was one of the most important strongholds which the Carthaginians possessed in the island. It suffered severely during these conflicts, being alternately in the hands of either party (*Diod. Sic.*, 23, 7.—*Polyb.*, 1, 17, *seqq.*—*Diod. Sic.*, 23, 9.—*Id.*, 23, 14), but it eventually fell under the Roman power, and, notwithstanding its losses, continued for a long period a flourishing place, though it is supposed to have been confined, after it came permanently under the Romans, to the limits of the ancient Camicus, with which the modern *Girgenti* nearly corresponds. Diodorus states the population, in its best days, to have been not less than 120,000 persons. (*Mannert*, 9, pt. 2, p. 353, *seqq.*—*Hoare's Classical Tour*, vol. 2, p. 90, *seqq.*)

AGRIONIA, annual festivals in honour of Bacchus, generally celebrated in the night. They were instituted, as some suppose, because the god was attended with wild beasts. The appellation, however, should rather be viewed as referring back to an early period, when human sacrifices were offered to Bacchus. Hence the terms *Ἀγριότης* and *Ἀγριώτης* applied to this deity. (*Creyer's Symbolik*, vol. 3, p. 334.) Plutarch even speaks of a human sacrifice to this god as late as the days of Themistocles (*Vit.*, 13), when three Persian prisoners were offered up by him to Bacchus, at the instigation of the diviner Eurantides. The same writer elsewhere (*Vit. Ant.*, 24) uses both *Ἀγριότης* and *Ἀγριώτης*, in speaking of Bacchus; where Reiske, without any necessity, proposes *Ἀγριώλιος* (from *ἄλγρυ*) as an emendation.—In celebrating this festival, the Grecian women, being assembled, sought eagerly for Bacchus, who, they pretended, had fled from them; but, finding their labour ineffectual, they said that he had retired to the Muses and concealed himself among them. The ceremony being thus ended, they regaled themselves with an entertainment. (*Plut., Sympos.*, 8, 1.) Has this a figurative reference to the suspension of human sacrifices, and the consequent introduction of a milder form of worship? Castellanus, however (*Syntagm. de Festis Græcor.*, s. v. *Agriaonia*), makes the festival in question to have been a general symbol of the progress of civilization and refinement. (Compare *Rolle, Recherches sur le Culte de Bacchus*, vol. 3, p. 251.)

AGRIPPA (*Ἀγρίππας*), I. a skeptical philosopher, only known to have lived later than Ænesidenus, the contemporary of Cicero, from whom he is said to have been the fifth in descent. He is quoted by Diogenes Laertius, who probably wrote about the time of M. Antoninus. The "five grounds of doubt" (*οἱ πέντε τρόποι*), which are given by Sextus Empiricus as a summary of the later skepticism, are ascribed by Diogenes Laertius (9, 88) to Agrippa.

1. The first of these argues from the uncertainty of the rules of common life, and of the opinions of philosophers. 2. The second from the "rejection ad infinitum;" all proof requires some farther proof, and so on to infinity. 3. All things are changed as their relations become changed, or as we look upon them in different points of view. 4. The truth asserted is merely an hypothesis; or, 5. Involves a vicious circle. (*Sextus Empiricus, Pyrrhon. Hypot.*, 1, 15.)

With reference to these *πέντε τρόποι*, it need only be remarked, that the first and third are a short summary of the ten original grounds of doubt which were the basis of the earlier skepticism. The three additional ones show a progress in the skeptical system, and a transition from the common objections derived from the fallibility of sense and opinion, to more abstract and metaphysical grounds of doubt. They seem to mark a new attempt to systematize the skeptical philosophy, and adapt it to the spirit of a later age. (*Ritter, Geschichte der Philosophie*, 12, 4.)—II. M. Asinius, consul A.D. 25, died A.D. 26, was descended from a family more

illustrious than ancient, and did not disgrace it by his mode of life. (*Tac., Ann.*, 4, 34, 61.)—III. Agrippa Castor, about A.D. 135, praised as an historian by Eusebius, and for his learning by St. Jerome (*de Viris Illust.*, c. 21); lived in the reign of Hadrian. He wrote against the twenty-four books of the Alexandrian Gnostic, Basilides, on the Gospel. Quotations are made from his work by Eusebius. (*Hist. Eccles.*, 4, 7.—See *Gallandi's Bibliotheca Patrum*, vol. 1, p. 330.)—IV. Fonteius, one of the accusers of Libo, A.D. 16, is again mentioned in A.D. 19, as offering his daughter for a vestal virgin. (*Tac., Ann.*, 2, 30, 86.)—V. Probably the son of the preceding, commanded the province of Asia with proconsular power, A.D. 69, and was recalled from thence by Vespasian, and placed over Mœsia in A.D. 70. He was shortly afterward killed in battle by the Sarmatians. (*Tac., Hist.*, 3, 46.—*Joseph.*, *B. Jud.*, 7, 4, § 3.)—VI. Herodes I. (*Ἡρώδης Ἀγρίππας*), called by Josephus (*Ant. Jud.*, 17, 2, § 2) "Agrippa the Great," was the son of Aristobulus and Berenice, and grandson of Herod the Great. Shortly before the death of his grandfather he came to Rome, where he was educated with the future emperor Claudius, and Drusus, the son of Tiberius. He squandered his property in giving sumptuous entertainments to gratify his princely friends, and in bestowing largesses on the freedmen of the emperor, and became so deeply involved in debt that he was compelled to fly from Rome, and betook himself to a fortress at Malatha in Idumæa. Through the mediation of his wife Cypros, with his sister Herodias, the wife of Herodes Antipas, he was allowed to take up his abode at Tiberias, and received the rank of ædile in that city, with a small yearly income. But, having quarrelled with his brother-in-law, he fled to Flaccus, the proconsul of Syria. Soon afterward he was convicted, through the information of his brother Aristobulus, of having received a bribe from the Damascenes, who wished to purchase his influence with the proconsul, and was again compelled to fly. He was arrested, as he was about to sail for Italy, for a sum of money which he owed to the treasury of Cæsar, but made his escape, and reached Alexandria, where his wife succeeded in procuring a supply of money from Alexander the Alabarch. He then set sail, and landed at Puteoli. He was favourably received by Tiberius, who intrusted him with the education of his grandson, Tiberius. He also formed an intimacy with Caius Caligula. Having one day incautiously expressed a wish that the latter might soon succeed to the throne, his words were reported by his freedman Eutyclus to Tiberius, who forthwith threw him into prison. Caligula, on his accession (A.D. 37), set him at liberty, and gave him the tetrarchies of Lysanias (Abilene) and Philippos (Batanæa, Trachonitis, and Auranitis). He also presented him with a golden chain of equal weight with the iron one which he had worn in prison. In the following year Agrippa took possession of his kingdom, and, after the banishment of Herodes Antipas, the tetrarchy of the latter was added to his dominions.

On the death of Caligula, Agrippa, who was at the time in Rome, materially assisted Claudius in gaining possession of the empire. As a reward for his services, Judæa and Samaria were annexed to his dominions, which were now even more extensive than those of Herod the Great. He was also invested with the consular dignity, and a league was publicly made with him by Claudius in the forum. At his request, the kingdom of Chalcis was given to his brother Herodes (A.D. 41). He then went to Jerusalem, where he offered sacrifices, and suspended in the treasury of the temple the golden chain which Caligula had given him. His government was mild and gentle, and he was exceedingly popular among the Jews. In the city of Berytus he built a theatre and amphitheatre, baths and porticoes. The suspicions of Claudius pre-

vented him from finishing the impregnable fortifications with which he had begun to surround Jerusalem. His friendship was courted by many of the neighbouring kings and rulers. It was probably to increase his popularity with the Jews that he caused the apostle James, the brother of John, to be beheaded, and Peter to be cast into prison (A.D. 44.—*Acts*, 12.) It was not, however, merely by such acts that he strove to win their favour, as we see from the way in which, at the risk of his own life, or, at least, of his liberty, he interceded with Caligula on behalf of the Jews, when that emperor was attempting to set up his statue in the Temple at Jerusalem. The manner of his death, which took place at Cæsarea in the same year, as he was exhibiting games in honour of the emperor, is related in *Acts*, 12, and is confirmed in all essential points by Josephus, who repeats Agrippa's words, in which he acknowledged the justice of the punishment thus inflicted on him. After lingering five days, he expired, in the fifty-fourth year of his age.

By his wife Cypros he had a son named Agrippa, and three daughters, Berenice, who first married her uncle Herodes, king of Chalcis, afterward lived with her brother Agrippa, and subsequently married Polamno, king of Cilicia; she is alluded to by Juvenal (*Sat.*, 6, 156); Mariamne and Drusilla, who married Felix, the procurator of Judæa. (*Joseph.*, *Ant. Jud.*, 17, 1, § 2; 18, 5-8; 19, 4-8.—*Bell. Jud.*, 1, 28, § 1; 2, 9, 11.—*Dion Cass.*, 60, 8.—*Euseb.*, *Hist. Eccles.*, 2, 10.)—VII. Herodes II., the son of Agrippa I., was educated at the court of the Emperor Claudius, and at the time of his father's death was only seventeen years old. Claudius, therefore, kept him at Rome, and sent Cuspius Fadus as procurator of the kingdom, which thus again became a Roman province. On the death of Herodes, king of Chalcis (A.D. 48), his little principality, with the right of superintending the Temple and appointing the high-priest, was given to Agrippa, who four years afterward received in its stead the tetrarchies formerly held by Philip and Lysanias, with the title of king. In A.D. 55, Nero added the cities of Tiberias and Taricheæ in Galilee, and Julias, with fourteen villages near it, in Perea. Agrippa expended large sums in beautifying Jerusalem and other cities, especially Berytus. His partiality for the latter rendered him unpopular among his own subjects, and the capricious manner in which he appointed and deposed the high-priests, with some other acts which were distasteful, made him an object of dislike to the Jews. Before the outbreak of the war with the Romans, Agrippa attempted in vain to dissuade the people from rebelling. When the war was begun he sided with the Romans, and was wounded at the siege of Gamala. After the capture of Jerusalem, he went with his sister Berenice to Rome, where he was invested with the dignity of prætor. He died in the seventieth year of his age, in the third year of the reign of Trajan. He was the last prince of the house of the Herods. It was before this Agrippa that the apostle Paul made his defence (A.D. 60.—*Acts*, 25, 26.) He lived on terms of intimacy with the historian Josephus, who has preserved two of the letters he received from him. (*Joseph.*, *Ant. Jud.*, 17, 5, § 4; 19, 9, § 2; 20, 1, § 3, 5; § 2, 7; § 1, 8; § 4 and 11, 9, § 4.—*Bell. Jud.*, 2, 11, § 6, 12; § 1, 16, 17; § 1, 4, 1; § 3.—*Vit.*, s. 54.—*Phot.*, *Cod.*, 33.)—VIII. Menenius. (*Vid.* Menenius.)—IX. Posthūmus, a posthumous son of M. Vipsanius Agrippa, by Julia, the daughter of Augustus, was born in B.C. 12. He was adopted by Augustus, together with Tiberius, in A.D. 4, and he assumed the toga virilis in the following year, A.D. 5. (*Suet.*, *Octav.*, 64, 65.—*Dion Cass.*, liv. 29, 55, 22.) Notwithstanding his adoption, he was afterward banished by Augustus to the island of Planasia, on the coast of Corsica: a disgrace which he incurred on account of his savage and intractable character, but he was not guilty

of any crime. There he was under the surveillance of soldiers, and Augustus obtained a *senatus consultum*, by which the banishment was legally confirmed for the time of his life. The property of Agrippa was assigned by Augustus to the treasury of the army. It is said that during his captivity he received the visit of Augustus, who secretly went to Planasia, accompanied by Fabius Maximus. Augustus and Agrippa, both deeply affected, shed tears when they met, and it was believed that Agrippa would be restored to liberty. But the news of this visit reached Livia, the mother of Tiberius, and Agrippa remained a captive. After the accession of Tiberius, in A.D. 14, Agrippa was murdered by a centurion, who entered his prison and killed him after a long struggle, for Agrippa was a man of great bodily strength. When the centurion afterward went to Tiberius to give him an account of the execution, the emperor denied having given any order for it, and it is very probable that Livia was the secret author of the crime. There was a rumour that Augustus had left an order for the execution of Agrippa, but this is positively contradicted by Tacitus. (*Tac., Ann.*, 1, 3-6.—*Dion Cass.*, 55, 32; 57, 3.—*Suet.*, l. c., *Tib.*, 22.—*Vellei.*, 2, 104, 112.)

After the death of Agrippa, a slave of the name of Clemens, who was not informed of the murder, landed on Planasia with the intention of restoring Agrippa to liberty and carrying him off to the army in Germany. When he heard of what had taken place, he tried to profit by his great resemblance to the murdered captive, and he gave himself out as Agrippa. He landed at Ostia, and found many who believed him, or affected to believe him, but he was seized and put to death by order of Tiberius. (*Tac., Ann.*, 2, 39, 40.)

The name of Agrippa Cæsar is found on a medal of Corinth.—IX. M. Vipsanius, was born in B.C. 63. He was the son of Lucius, and was descended from a very obscure family. At the age of twenty he studied at Apollonia in Illyria, together with young Octavius, afterward Octavianus and Augustus. After the murder of J. Cæsar in B.C. 44, Agrippa was one of those intimate friends of Octavius who advised him to proceed immediately to Rome. Octavius took Agrippa with him, and charged him to receive the oath of fidelity from several legions which had declared in his favour. Having been chosen consul in B.C. 43, Octavius gave to his friend Agrippa the delicate commission of prosecuting C. Cassius, one of the murderers of J. Cæsar. At the outbreak of the Perusian war between Octavius, now Octavianus, and L. Antonius, in B.C. 41, Agrippa, who was then prætor, commanded part of the forces of Octavianus, and, after distinguishing himself by skilful manoeuvres, besieged L. Antonius in Perusia. He took the town in B.C. 40, and towards the end of the same year retook Sipontum, which had fallen into the hands of M. Antonius. In B.C. 38, Agrippa obtained fresh success in Gaul, where he quelled a revolt of the native chiefs; he also penetrated into Germany as far as the country of the Catti, and transplanted the Ubii to the left bank of the Rhine; whereupon he turned his arms against the revolted Aquitani, whom he soon brought to obedience. His victories, especially those in Aquitania, contributed much to securing the power of Octavianus, and he was recalled by him to undertake the command of the war against Sextus Pompeius, which was on the point of breaking out, B.C. 37. Octavianus offered him a triumph, which Agrippa declined, but accepted the consulship, to which he was promoted by Octavianus in B.C. 37. Dion Cassius (48, 49) seems to say that he was consul when he went to Gaul, but the words *ἐπ' αὐτὴν δὲ μετὰ Δουκίου Γάλλου* seem to be suspicious, unless they are to be inserted a little higher, after the passage *τῷ δ' Ἀγρίππῃ τὴν τοῦ ναυτικοῦ παρασκευὴν ἐχειρίσας*, which refer to an event that took place during the consulship of Agrippa. For, imme-

diately after his promotion to this dignity, he was charged by Octavianus with the construction of a fleet, which was the more necessary, as Sextus Pompey was master of the sea.

Agrippa, in whom thoughts and deeds were never separated (*Vellei.*, 2, 79), executed this order with prompt energy. The Lucrine Lake, near Baïæ, was transformed by him into a safe harbour, which he called the Julian port in honour of Octavianus, and where he exercised his sailors and mariners till they were able to encounter the experienced sailors of Pompey. In B.C. 36, Agrippa defeated Sextus Pompey first at Mylæ, and afterward at Naulochus on the coast of Sicily, and the latter of these victories broke the naval supremacy of Pompey. He received, in consequence, the honour of a naval crown, which was first conferred upon him; though, according to other authorities, M. Varro was the first who obtained it from Pompey the Great. (*Vellei.*, 2, 81.—*Liv., Epit.*, 129.—*Dion Cass.*, 49, 14.—*Plin., H. N.*, 16, 3, s. 4.—*Virg., Æn.*, 8, 684.)

In B.C. 35, Agrippa had the command of the war in Illyria, and afterward served under Octavianus, when the latter had proceeded to that country. On his return, he voluntarily accepted the ædileship in B.C. 33, although he had been consul, and expended immense sums of money upon great public works. He restored the Appian, Marican, and Anienian aqueducts, constructed a new one, fifteen miles in length, from the Tepula to Rome, to which he gave the name of the Julian, in honour of Octavianus, and had an immense number of smaller water-works made, to distribute the water within the town. He also had the large cloaca of Tarquinius Priscus entirely cleansed. His various works were adorned with statues by the first artists of Rome. These splendid buildings he augmented in B.C. 27, during his third consulship, by several others; and among these was the Pantheon, on which we still read the inscription, "M. Agrippa L. F. Cos. Tertium fecit." (*Dion Cass.*, 49, 43; 53, 27.—*Plin., H. N.*, 36, 15, s. 24, § 3.—*Strab.*, 5, p. 235.—*Frontin., De Aqued.*, 9.)

When the war broke out between Octavianus and M. Antonius, Agrippa was appointed commander-in-chief of the fleet, B.C. 32. He took Methone in the Peloponnesus, Leucas, Patre, and Corinth; and in the battle of Actium (B.C. 31), where he commanded, the victory was mainly owing to his skill. On his return to Rome in B.C. 30, Octavianus, now Augustus, rewarded him with a "vexillum cæruleum," or sea-green flag.

In B.C. 28, Agrippa became consul for the second time with Augustus, and about this time married Marcella, the niece of Augustus, and the daughter of his sister Octavia. His former wife, Pomponia, the daughter of T. Pomponius Atticus, was either dead or divorced. In the following year, B.C. 27, he was again consul the third time with Augustus.

In B.C. 25, Agrippa accompanied Augustus to the war against the Cantabrians. About this time jealousy arose between him and his brother-in-law, Marcellus, the nephew of Augustus, and who seemed to be destined as his successor. Augustus, anxious to prevent differences that might have had serious consequences for him, sent Agrippa as præconsul to Syria. Agrippa, of course, left Rome, but he stopped at Mytilene in the island of Lesbos, leaving the government of Syria to his legate. The apprehensions of Augustus were removed by the death of Marcellus in B.C. 23, and Agrippa immediately returned to Rome, where he was the more anxiously expected, as troubles had broken out during the election of the consuls in B.C. 21. Augustus resolved to receive his faithful friend into his own family, and, accordingly, induced him to divorce his wife Marcella, and marry Julia, the widow of Marcellus and the daughter of Augustus by his third wife, Scribonia (B.C. 21).

In B.C. 19, Agrippa went into Gaul. He pacified the turbulent natives, and constructed four great public roads and a splendid aqueduct at Nemausus (Nîmes). From thence he proceeded to Spain, and subdued the Cantabrians after a short but bloody and obstinate struggle; but, in accordance with his usual prudence, he neither announced his victories in pompous letters to the senate, nor did he accept a triumph which Augustus offered him. In B.C. 18, he was invested with the tribunician power for five years together with Augustus; and in the following year (B.C. 17), his two sons, Caius and Lucius, were adopted by Augustus. At the close of the year, he accepted an invitation of Herod the Great, and went to Jerusalem. He founded the military colony of Berytus (Beirut); thence he proceeded, in B.C. 16, to the Pontus Euxinus, and compelled the Bosphorani to accept Polemo for their king, and to restore the Roman eagles which had been taken by Mithradates. On his return he stayed some time in Ionia, where he granted privileges to the Jews, whose cause was pleaded by Herod (*Joseph., Antiq. Jud.*, 16, 2), and then proceeded to Rome, where he arrived in B.C. 13. After his tribunician power had been prolonged for five years, he went to Pannonia to restore tranquillity to that province. He returned in B.C. 12, after having been successful as usual, and retired to Campania. There he died unexpectedly, in the month of March, B.C. 12, in his 51st year. His body was carried to Rome, and was buried in the mausoleum of Augustus, who himself pronounced a funeral oration over it.

Dion Cassius tells us (52, 1, &c.), that in the year B.C. 29 Augustus assembled his friends and counsellors, Agrippa and Mæcenas, demanding their opinion as to whether it would be advisable for him to usurp monarchical power, or to restore to the nation its former republican government. This is corroborated by Suetonius (*Octav.*, 28), who says that Augustus twice deliberated upon that subject. The speeches which Agrippa and Mæcenas delivered on this occasion are given by Dion Cassius; but the artificial character of them makes them suspicious. However, it does not seem likely, from the general character of Dion Cassius as an historian, that these speeches are invented by him; and it is not improbable, and such a supposition suits entirely the character of Augustus, that those speeches were really pronounced, though preconcerted between Augustus and his counsellors to make the Roman nation believe that the fate of the Republic was still a matter of discussion, and that Augustus would not assume monarchical power till he had been convinced that it was necessary for the welfare of the nation. Besides, Agrippa, who, according to Dion Cassius, advised Augustus to restore the Republic, was a man whose political opinions had evidently a monarchical tendency.

Agrippa was one of the most distinguished and important men of the age of Augustus. He must be considered as a chief support of the rising monarchical constitution, and without Agrippa Augustus could scarcely have succeeded in making himself the absolute master of the Roman Empire. Dion Cassius (54, 29, &c.), Velleius Paterculus (2, 79), Seneca (*Ep.*, 94), and Horace (*Od.*, 1, 6) speak with equal admiration of his merits.

Pliny constantly refers to the "Commentarii" of Agrippa as an authority (*Elenchus*, 3, 4, 5, 6, comp. 3, 2), which may indicate certain official lists drawn up by him in the measurement of the Roman world under Augustus (*vid. Æthicus*), in which he may have taken part.

Agrippa left several children. By his first wife, Pomponia, he had Vipsania, who was married to Tiberius Cæsar, the successor of Augustus. By his second wife, Marcella, he had several children, who are not mentioned; and by his third wife, Julia, he had

two daughters, Julia, married to L. Æmilius Paullus, and Agrippina, married to Germanicus, and three sons, Caius (*vid. Cæsar, C.*), Lucius (*vid. Cæsar, L.*), and AGRIPPA POSTUMUS. (*Dion Cass.*, lib. 45-54.—*Liv., Epit.*, 117-136.—*Appian, Bell. Civ.*, lib. 5.—*Suet., Octav.*—*Frandsen, M. Vipsanius Agrippa, eine historische Untersuchung über dessen Leben und Wirken*, Altona, 1836.) There are several medals of Agrippa, on one of which he is represented with a naval crown; on the reverse is Neptune indicating his success by sea.

AGRIPPINA, I. the youngest daughter of M. Vipsanius Agrippa and of Julia, the daughter of Augustus, was born some time before B.C. 12. She married Cæsar Germanicus, the son of Drusus Nero Germanicus, by whom she had nine children. Agrippina was gifted with great powers of mind, a noble character, and all the moral and physical qualities that constituted the model of a Roman matron: her love for her husband was sincere and lasting, her chastity was spotless, her fertility was a virtue in the eyes of the Romans, and her attachment to her children was an eminent feature of her character. She yielded to one dangerous passion, ambition. Augustus showed her particular attention and attachment. (*Sueton., Calig.*, 8.)

At the death of Augustus in A.D. 14, she was on the Lower Rhine with Germanicus, who commanded the legions there. Her husband was the idol of the army, and the legions on the Rhine, dissatisfied with the accession of Tiberius, manifested their intention of proclaiming Germanicus master of the state. Tiberius hated and dreaded Germanicus, and he showed as much antipathy to Agrippina as he had love to her elder sister, his first wife. In this perilous situation, Germanicus and Agrippina saved themselves by their prompt energy; he quelled the outbreak, and pursued the war against the Germans. In the ensuing year his lieutenant, Cæcina, after having made an invasion into Germany, returned to the Rhine. The campaign was not inglorious for the Romans, but they were worn out by hardships, and, perhaps, harassed on their march by some bands of Germans. Thus the rumour was spread that the main body of the Germans was approaching to invade Gaul. Germanicus was absent, and it was proposed to destroy the bridge over the Rhine. (Compare *Strab.*, 4, p. 194.) If this had been done, the retreat of Cæcina's army would have been cut off, but it was saved by the firm opposition of Agrippina to such a cowardly measure. When the troops approached, she went to the bridge, acting as a general, and receiving the soldiers as they crossed it; the wounded among them were presented by her with clothes, and they received from her own hands everything necessary for the cure of their wounds. (*Tac., Ann.*, 1, 69.) Germanicus having been recalled by Tiberius, she accompanied her husband to Asia (A.D. 17), and after his death, or, rather, murder (*vid. Germanicus*), she returned to Italy. She stayed some days at the island of Corcyra to recover from her grief, and then landed at Brundisium, accompanied by two of her children, and holding in her arms the urn with the ashes of her husband. At the news of her arrival, the port, the walls, and even the roofs of the houses were occupied by crowds of people who were anxious to see and salute her. She was solemnly received by the officers of two prætorian cohorts, which Tiberius had sent to Brundisium for the purpose of accompanying her to Rome; the urn containing the ashes of Germanicus was borne by tribunes and centurions, and the funeral procession was received on its march by the magistrates of Calabria, Apulia, and Campania; by Drusus, the son of Tiberius; Claudius, the brother of Germanicus; and the other children of Germanicus; and, at last, in the environs of Rome, by the consuls, the senate, and crowds of the Roman people. (*Tac. Ann.*, 3, 1, &c.)

During some years Tiberius disguised his hatred of Agrippina, but she soon became exposed to secret accusations and intrigues. She asked the emperor's permission to choose another husband, but Tiberius neither refused nor consented to the proposition. Sejanus, who exercised an unbounded influence over Tiberius, then a prey to mental disorders, persuaded Agrippina that the emperor intended to poison her. Alarmed at such a report, she refused to eat an apple which the emperor offered her from his table, and Tiberius, in his turn, complained of Agrippina regarding him as a poisoner. According to Suetonius, all this was an intrigue preconceived between the emperor and Sejanus, who, as it seems, had formed the plan of leading Agrippina into false steps. Tiberius was extremely suspicious of Agrippina, and showed his hostile feelings by allusive words or neglectful silence. There were no evidences of ambitious plans formed by Agrippina, but the rumour having been spread that she would fly to the army, he banished her to the island of Pandataria (A.D. 30), where her mother, Julia, had died in exile. Her sons, Nero and Drusus, were likewise banished, and both died an unnatural death. She lived three years on that barren island; at last she refused to take any food, and died, most probably, by voluntary starvation. Her death took place precisely two years after, and on the same date, as the murder of Sejanus, that is, in A.D. 33. Tacitus and Suetonius tell us that Tiberius boasted that he had not strangled her. (*Sueton., Tib., 53.—Tac., Ann., 6, 25.*) The ashes of Agrippina, and those of her son Nero, were afterward brought to Rome by order of her son, the Emperor Caligula, who struck various medals in honour of his mother. In one of these the head of Caligula is on one side, and that of his mother on the other. The words on each side are respectively, C. CÆSAR. AVG. GER. P.M. TR. POT., and AGRIPPINA. MAT. C. CÆS. AVG. GERM. (*Tac., Ann., 1-6.—Sueton., Octav., 64; Tib., l. c.; Calig., l. c.—Dion Cass., 57, 5, 6; 58, 22.*)—II. The daughter of Germanicus and Agrippina the elder, daughter of M. Vipsanius Agrippa. She was born between A.D. 13 and 17, at the Oppidum Ubiorum, afterward called, in honour of her, Colonia Agrippina, now Cologne, and then the headquarters of the legions commanded by her father. In A.D. 28, she married Cn. Domitius Ahenobarbus, a man not unlike her, and whom she lost in A.D. 40. After his death she married Crispus Passienus, who died some years afterward; and she was accused of having poisoned him, either for the purpose of obtaining his great fortune, or for some secret motive of much higher importance. She was already known for her scandalous conduct, for her most perfidious intrigues, and for an unbounded ambition. She was accused of having committed incest with her own brother, the Emperor Caius Caligula, who, under the pretext of having discovered that she had lived in an adulterous intercourse with M. Æmilius Lepidus, the husband of her sister Drusilla, banished her to the island of Pontia, which was situated in the Sinus Syrticus Major, on the coast of Libya. Her sister Drusilla was likewise banished to Pontia, and it seems that their exile was connected with the punishment of Lepidus, who was put to death for having conspired against the emperor. Previously to her exile, Agrippina was compelled by her brother to carry to Rome the ashes of Lepidus. This happened in A.D. 39. Agrippina and her sister were released in A.D. 41, by their uncle, Claudius, immediately after his accession, although his wife, Messalina, was the mortal enemy of Agrippina. Messalina was put to death by order of Claudius in A.D. 48; and in the following year, A.D. 49, Agrippina succeeded in marrying the emperor. Claudius was her uncle, but her marriage was legalized by a senatus consultum, by which the marriage of a man with his brother's daughter was declared valid; this senatus consultum was afterward

abrogated by the Emperors Constantine and Constans. In this intrigue Agrippina displayed the qualities of an accomplished courtesan, and such was the influence of her charms and superior talents over the old emperor, that, in prejudice of his own son, Britannicus, he adopted Domitius, the son of Agrippina by her first husband, Cn. Domitius Ahenobarbus (A.D. 51). Agrippina was assisted in her secret plans by Pallas, the perfidious confidant of Claudius. By her intrigues, L. Junius Silanus, the husband of Octavia, the daughter of Claudius, was put to death, and in A.D. 53 Octavia was married to young Nero. Lollia Paullina, once the rival of Agrippina for the hand of the emperor, was accused of high treason and condemned to death, but she put an end to her own life. Domitia Lepida, the sister of Cn. Domitius Ahenobarbus, met with a similar fate. After having thus removed those whose rivalry she dreaded, or whose virtues she envied, Agrippina resolved to get rid of her husband, and to govern the empire through her ascendancy over her son Nero, his successor. A vague rumour of this reached the emperor; in a state of drunkenness, he forgot prudence, and talked about punishing his ambitious wife. Having no time to lose, Agrippina, assisted by Locusta and Xenophon, a Greek physician, poisoned the old emperor, in A.D. 54, at Sinuessa, a watering-place to which he had retired for the sake of his health. Nero was proclaimed emperor, and presented to the troops by Burrus, whom Agrippina had appointed prefectus prætorii. Narcissus, the rich freedman of Claudius, M. Junius Silanus, proconsul of Asia, the brother of Lucius Junius Silanus, and a great-grandson of Augustus, lost their lives at the instigation of Agrippina, who would have augmented the number of her victims but for the opposition of Burrus and Seneca, recalled by Agrippina from his exile to conduct the education of Nero. Meanwhile the young emperor took some steps to shake off the insupportable ascendancy of his mother. The jealousy of Agrippina rose from her son's passion for Acte, and, after her, for Poppæa Sabina, the wife of M. Salvius Otho. To reconquer his affection, Agrippina employed, but in vain, most daring and most revolting means. She threatened to oppose Britannicus as a rival to the emperor; but Britannicus was poisoned by Nero; and she even solicited her son to an incestuous intercourse. At last her death was resolved upon by Nero, who wished to repudiate Octavia and marry Poppæa, but whose plan was thwarted by his mother. Thus petty feminine intrigues became the cause of Agrippina's ruin. Nero invited her, under the pretext of a reconciliation, to visit him at Baïæ, on the coast of Campania. She went thither by sea. In their conversation hypocrisy was displayed on both sides. She left Baïæ by the same way; but the vessel was so contrived that it was to break to pieces when out at sea. It only partly broke, and Agrippina saved herself by swimming to the shore; her attendant, Accronia, was killed. Agrippina fled to her villa near the Lucrine Lake, and informed her son of her happy escape. Now Nero charged Burrus to murder his mother; but Burrus declining it, Anicetus, the commander of the fleet, who had invented the stratagem of the ship, was compelled by Nero and Burrus to undertake the task. Anicetus went to her villa with a chosen band, and his men surprised her in her bedroom. "Ventrem feri," she cried out, after she was but slightly wounded, and immediately afterward expired under the blows of a centurion (A.D. 60). (*Tac., Ann., 14, 8.*) It was told that Nero went to the villa, and that he admired the beauty of the dead body of his mother: this was believed by some, doubted by others (14, 9). Agrippina left commentaries concerning her history and that of her family, which Tacitus consulted, according to his own statement. (*Ib., 4, 54.—Compare Plin., Hist. Nat., 7, 6, s. 8; Elenchus, 7, &c.*)

There are several medals of Agrippina, which are distinguishable from those of her mother by the title of Augusta, which those of her mother never have. On some of her medals she is represented with her husband Claudius, in others with her son Nero. (*Tac., Ann.*, lib. 12, 13, 14.—*Dion Cass.*, lib. 59-61.—*Sueton.*, *Claud.*, 43, 44; *Nero*, 5, 6.)—III. Vipsania, daughter of M. Vipsanius Agrippa and Pomponia, the daughter of T. Pomponius Atticus, his first wife. She was married to Tiberius, afterward emperor, by whom she had Drusus. Tiberius was much attached to her, and with great reluctance divorced her when commanded by Augustus, that he might marry Julia, the daughter of the emperor. She now married Asinius Gallus, the son of the celebrated Asinius Pollio, and bore him several children. This gave rise to a feeling of hatred in the breast of Tiberius against Asinius, which ultimately proved his ruin. (*Id.* Asinius, II.) The children of Agrippina by Asinius were, C. Asinius Salonicus, Asinius Gallus, Asinius Pollio, consul A.U.C. 776, Asinius Agrippa, consul A.U.C. 778, and Asinius Celer. Agrippina died A.U.C. 773, and, according to Tacitus (*Ann.*, 3, 19), she was the only one of all the children of Agrippa that died a natural death. (*Tac., Ann.*, 1, 12; 3, 19; 3, 75; 4, 1, 34.—*Sueton.*, *Tib.*, ch. 7.—*Id.*, *Claud.*, ch. 13.)—IV. COLONIA, also called Colonia Agrippinensis (*Tac., Hist.*, 1, 57; 4, 55), and on inscriptions *Colonia Claudia Augusta Agrippinensium*, or simply *Agrippina* (*Ann. Marc.*, 15, 8, 11), originally the chief town of the Ubii, and called *Oppidum Ubiorum*. These are mentioned by Cæsar as a German nation, dwelling on the right bank of the Rhine, who were afterward transferred to the left, or Gallic side, by Agrippa. At this town Agrippina, daughter of Germanicus, was born; and, when she had attained to the dignity of empress by marriage with Claudius, she sent hither a military colony, A.C. 50, and caused the place to be named after herself. It soon became large and wealthy, and was adorned with a temple of Mars. The inhabitants received the *jus italicum*. It answers to the modern *Köln* or *Cologne*. (*Tac., Ann.*, 1, 35; 12, 27.—*Id.*, *Hist.*, 4, 28; 1, 57; 4, 55.—*Dion Cassius*, 48, 49.)

AGRIPIŒUS, bishop of Carthage, of venerable memory, but known for being the first to maintain the necessity of rebaptizing all heretics. (*Vincent. Lirin., Commonit.*, 1, 9.) St. Cyprian regarded this opinion as the correction of an error (*St. Augustin., De Baptismo*, 2, 7, vol. 9, p. 102, *ed. Bened.*), and St. Augustine seems to imply he defended his error in writing. (*Epist.*, 93, c. 10.) He held the council of seventy bishops at Carthage, about A.D. 200 (*Vulg. A.D.* 215, *Mans.* A.D. 217), on the subject of Baptism. Though he erred in a matter yet undefined by the Church, St. Augustine notices that neither he nor St. Cyprian thought of separating from the Church. (*De Baptismo*, 3, 2, p. 109.)—II. Pacōnius, whose father was put to death by Tiberius on a charge of treason. (*Suet.*, *Tib.*, 61.) Agrippinus was accused at the same time as Thrasea, A.D. 67, and was banished from Italy. (*Tac., Ann.*, 16, 28, 29, 33.) He was a Stoic philosopher, and is spoken of with praise by Epictetus (*ap. Stob., Serm.*, 7), and Arrian (1, 1).

AGRIUS (Ἀγρίος), I. a son of Porthaon and Euryte, and brother of Ceneus, king of Calydon, in Etolia, Alcaethous, Melas, Leuceopous, and Sterope. He was father of six sons, of whom Thersites was one. These sons of Agrius deprived Ceneus of his kingdom, and gave it to their father; but all of them, with the exception of Thersites, were slain by Diomedes, the grandson of Ceneus. (*Apollod.*, 1, 7, § 10, 8; § 5, &c.) Apollodorus places these events before the expedition of the Greeks against Troy, while Hyginus (*Fab.*, 175: compare 242, and *Antonin. Lib.*, 37) states that Diomedes, when he heard, after the fall of Troy, of the misfortunes of his grandfather Ceneus, hastened back and

expelled Agrius, who then put an end to his own life; according to others, Agrius and his sons were slain by Diomedes. (Compare *Pausan.*, 2, 25, § 2.—*Od.*, *Hæroid.*, 9, 153.) In the mythic history of the Greeks we find several Agrii, and in almost all the allusion appears to be a symbolical one. Thus, for example, in the case of the one first mentioned, Agrius is the "Wild man," the "Man of the fields," while Ceneus, on the other hand, is the "Wine-man," the "cultivator of the vine." (Compare *Crenzer, Symbolik*, vol. 4, p. 372.—*Apollod.*, 1, 8, 6.—*Anton. Lib.*, *Fab.*, 37.—*Victheyk, ad. Anton. Lib.*, *Fab.*, 21, p. 136.) In the case of the father of Thersites, the name *Agrius* may be intended as a figurative allusion to the rude and lawless manners of the son.—II. According to Hesiod (*Theog.*, 1013), a son of Ulysses and Circe, and brother of Latinus and Telegonus, "who, afar in the recess of the Holy Isles, ruled over all the renowned Tyrsenians." He is the same, in all probability, with the god or hero called Agrius by the Arcadians (a term to be derived from Ἀγρός, *ager*), and whose most solemn festival the Parthasii introduced into the island of Ceos, one of the Cyclades. There was a deity of the same name in Thessaly, whence his worship was carried to Cyrene in Africa. There was an Agrius also in Bæotia, whose name appears in the Cadmean genealogy. The mythology connected with this son of Ulysses and Circe appears in Italy under a new form, and he is there to be identified with the Arcadian Evander of the Latins, while his mother, Circe, seems to be the same with Cæmentia, a name equivalent to the Latin *Maga*. (Compare *Livy*, 1, 7.) This Agrius is mentioned also by the scholiast on Apollonius (3, 200), and by Eustathius (*ad Hom.*, *Il.*, p. 1796); nor should it be omitted here that there was among the Romans a gens *Agria*. (*Varro, De Re Rust.*, 1, 2.—*Cic.*, *Flacc.*, 13.) Götting, a recent editor of Hesiod, has a very learned note on the subject of Agrius, in which he appears to favour the reading of Ἰσθακίων τ' ἢ δὲ Λατίνων in place of Ἀγρίων ἢ δὲ Λατίνων as occurring in Hesiod (*Theog.*, 1013).

AGRÆCIUS or AGRÆTIUS, a Roman grammarian, the author of an extant work "De Orthographia et Differentia Sermonis," intended as a supplement to a work on the same subject, by Flavius Caper, and dedicated to a bishop, Eucharius. He is supposed to have lived in the middle of the 5th century of our era. His work is printed in Putschius's "Grammaticæ Latinæ Auctores Antiqui," p. 2266-2275.

AGRETAS (Ἀγροΐτας), a Greek historian, who wrote a work on Scythia (Σκυθικά), from the thirteenth book of which the scholiast on Apollonius (2, 1248) quotes, and one on Libya (Λιβυκά), the fourth book of which is quoted by the same scholiast (4, 1396). He is also mentioned by Stephanus Byz. (*s. v.* Ἀμπελος).

AGROIRA, the early name of Attalea, a city of Lydia, on the Hermus, northeast of Sardis. Major Keppel (*Travels*, vol. 2, p. 335) remarks, "It is on the right bank of the Hermus, which flows at the base of a rocky mountain, through a chasm of which it disappears. The passage here is rather dangerous. The direct road from *Cassaba* to *Adala* (Agroira) is twelve hours. No vestiges of antiquity were observed here: there are coins, however, of Attalea." (*Sestini*, p. 106.—*Cramer's Asia Minor*, v. 1, p. 435.)

AGRON (Ἀγρων), I. the son of Ninus, the first of the Lydian dynasty of the Heraclidae. The tradition was, that this dynasty supplanted a native race of kings, having been originally intrusted with the government as deputies. The names Ninus and Belus, in their genealogy, render it probable that they were either Assyrian governors, or princes of Assyrian origin, and that their accession marks the period of an Assyrian conquest. (*Hærod.*, 1, 7.)—II. The son of Pleuratus, a king of Illyria. In the strength of his land and naval forces he surpassed all the preceding kings of that coun-

try. When the Ætolians attempted to compel the Medonians to join their confederacy, Agron undertook to protect them, having been induced to do so by a large bribe which he received from Demetrius, the father of Philip. He accordingly sent to their assistance a force of 5000 Illyrians, who gained a decisive victory over the Ætolians. Agron, overjoyed at the news of this success, gave himself up to feasting, and, in consequence of his excess, contracted a pleurisy, of which he died (B.C. 231). He was succeeded in the government by his wife Teuta. Just after his death, an embassy arrived from the Romans, who had sent to mediate in behalf of the inhabitants of the island of Issa, who had revolted from Agron, and placed themselves under the protection of the Romans. By his first wife, Triteuta, whom he divorced, he had a son named Pinnus, or Pinnus, who survived him, and was placed under the guardianship of Demetrius Pharius, who married his mother after the death of Teuta. (*Dion Cass.*, 34, 46, 151.—*Polyb.*, 2, 2-4.—*Appian*, *Ill.*, 7.—*Flor.*, 2, 5.—*Plin.*, *H. N.*, 34, 6.)—III. Son of Eumelus, grandson of Merops, lived with his sisters, Byssa and Meropis, in the island of Cos. They worshipped the earth, as the giver of the fruits of harvest, without paying regard to any other deity. When they were invited to the festival of Minerva, the brother replied that the black eyes of his sisters would not please the blue-eyed goddess, and that, for himself, the owl was an object of aversion. If desired to offer sacrifice to Mercury, he declared that he would show no honour to a thief. At the sacrifices of Diana he did not appear, because that goddess roamed abroad the whole night long. Provoked at this conduct, Minerva, Diana, and Mercury came to their dwelling, the latter as a shepherd, the two goddesses as maidens, to invite Eumelus and Agron to a sacrifice to Mercury, and the sisters to the grove of Minerva and Diana. When, however, Meropis reviled Minerva, she and her sisters were changed into birds, together with Agron, who attempted to seize upon the divinities, and Eumelus, who heaped reproaches upon Mercury for the metamorphosis of his son. The legend makes Meropis to have been changed into a small bird of the owl kind: Byssa retained her name, and became, as a species of sea-fowl, the bird of Leucothea: Agron became the bird Charadrius. (*Anton. Lib.*, 15.)

AGROLAS, surrounded the citadel of Athens with walls, except that part which was afterward repaired by Cimon. (*Pausan.*, 1, 28.) We have here one of the old traditions respecting the Pelagic race. Agrolas was aided in the work by his brother Hyperbius, both of them Pelasgi. According to Pausanias (*l. c.*), they came originally from Sicily. It is more than probable, however, that the names in question are those of two leaders or two tribes, and that the work was executed under their orders. The wall erected on this occasion was styled Pelargicon, and the builders of it would seem to have erected also a town or small settlement for themselves, which afterward became part of the Acropolis. (Compare *Siebelis*, *ad Pausan.*, 1, 28.—*Müller*, *Gesch. Hellen. Stämme*, &c., vol. 1, p. 440.)

AGROTÆRA, I. an annual festival, celebrated at Athens to Diana Agrotæra (Ἀγροτῆρα Ἀγροτῆρα). It was instituted by Callimachus the polemarch, in consequence of a vow made by him before the battle of Marathon, that he would sacrifice to the goddess as many yearling she-goats (χρυσάιας) as there might be enemies slain in the approaching conflict. (*Schol.*, *ad Aristoph.*, *Equit.*, 657—*Xen.*, *Anab.*, 3, 2, 11.) The number of the Persians who fell was so great, that a sufficient amount of victims could not be obtained. Every year, therefore, 500 goats were slain, in order to make up the requisite number, until, at last, the whole thing grew into a regular custom. *Ælian* (*V. H.*, 2, 25) makes the vow in question to have been

offered up by Miltiades, and the number of annual victims 300.—II. The name Agrotæra (Ἀγροτῆρα) is also sometimes applied to Diana herself. In this usage it is equivalent to κυνηγετική, θηρευτική, "the huntress." Its primitive meaning, however, is the same as ἡ ὄρεα, "she that frequents the mountains." (Compare *Heyne*, *ad Hom.*, *Il.*, 21, 471.)

AGYREUS, an appellation given to Apollo. The term is of Greek origin (Ἀγυρεύς), and, if the common derivation be correct, denotes "the guardian deity of streets" (from ἀγυία, "a street"), it being the custom at Athens to erect small conical cippi, in honour of Apollo, in the vestibules and before the doors of their houses. Here he was invoked as the Averter of evil (θεὸς ἀποτρόπαιος, "Deus averruncus"), and the worship here offered him consisted in burning perfumes before these pillars, in adorning them with myrtle garlands, hanging fillets upon them, &c. We must not suppose, however, that this custom originated in Athens. It appears to have been borrowed from the Dorians, and introduced into this city in obedience to an oracle. (*Schol.*, in *Aristoph. Vesp.*, 870.—*Pausan.*, 8, 53.—*Müller*, *Gesch. Hellen. Stämme*, &c., vol. 2, p. 299, seqq.) As respects the pillars erected at Athens, the ancients seem to have been at a loss whether to regard them as altars, or as a species of statues. (Compare, on this point, the scholiast on *Aristophanes*, *Vesp.*, 870, and *Thesm.*, 496.—*Harpocration*, s. v.—*Suidas*, s. v.—*Helladius*, *ap. Phot.*, *cod.*, 279, vol. 2, p. 535, *ed. Bekker.*—*Plautus*, *Merc.*, 4, 1, 9.—*Zotga*, *de Obeliseis*, p. 210.) *Miller* states, that this emblem of Apollo appears on coins of Apollonia in Epirus, Apta in Crete, Megara, Byzantium, Oricum, Ambracia, &c. (*Müller*, *Gesch. Hellen. Stämme*, *l. c.*)

AGYLLA. *Vid.* Cære.

AGYRIUM, a city of Sicily, northeast of Enna, and in the vicinity of the river Symathus. It would seem to have been one of the oldest settlements of the Siculi, and was remarkable for the worship of a hero, whom a later age confounded with the Grecian Hercules. (*Diad. Sic.*, 4, 25) The place is noted as having given birth to Diodorus Siculus. The modern town of *San Filippo d'Argiro* is supposed to correspond to the ancient city; the site of the latter, however, would appear to have been two miles farther east. (*Mannert*, vol. 9, pt. 2, p. 418.)

AGYRRHIUS. *Vid.* Supplement.

AHĀLA. *Vid.* Supplement.

AHENOBAREUS. *Vid.* Supplement.

AJAX (Αἴας), I. son of Telamon by Peribœa, daughter of Alethous, was, next to Achilles, the bravest of all the Greeks in the Trojan war, but, like him, of an imperious and ungovernable spirit. In other peculiarities of their history, there was also a striking resemblance. At the birth of Ajax, Hercules is said to have wrapped him in the skin of the Nemean lion, and to have thus rendered him invulnerable in every part of his body, except that which was left exposed by the aperture in the skin, caused by the wound which the animal had received from Hercules. This vulnerable part was in his breast, or, as others say, behind the neck. (*Lycophr.*, 454.—*Tzet.*, *ad loc.*—*Schol.*, *ad Il.*, 23, 821.) To Ajax fell the lot of opposing Hector, when that hero, at the instigation of Apollo and Minerva, had challenged the bravest of the Greeks to single combat. The glory of the antagonists was equal in the engagement; and, at parting, they exchanged arms, the baldrick of Ajax serving, most singularly, as the instrument by which Hector was, after his fall, attached to the car of Achilles. In the games celebrated by Achilles in honour of Patroclus, Ajax (as commentators have remarked) was unsuccessful, although he was a competitor on not less than three occasions: in hurling the quoit; in wrestling; and in single combat with arms. After the death of Achilles,

Ajax and Ulysses disputed their claim to the arms of the hero. When they were given to the latter, Ajax became so infuriated, that, in a fit of delirium, he slaughtered all the sheep in the camp, under the delusion that his rival and the Atreidæ, who had favoured the cause of the former, were the objects of his attack. When reason returned, Ajax, from mortification and despair, put an end to his existence, by stabbing himself to the heart. The sword which he used as the instrument of his death had been received by him from Hector in exchange for the baldric, and thus, by a singular fatality, the present mutually conferred contributed to their mutual destruction. The blood which ran to the ground from the wound produced the flower *hyacinthus*, of a red colour, and on the petal of which may be traced lines, imitating the form of the letters AI, the first and second of the Greek name ΑΙΑΣ (*Ajax*). The flower here meant appears to be identical with the *Lilium Martagon* ("Imperial Martagon"), and not the ordinary hyacinth. (Fée, *Flore de Virgile*, p. lxxvii.)—Some authorities give a different account of the cause of his death, and make the Palladium to have been the subject of dispute between Ajax and Ulysses, and state also that Ulysses, in concert with Agamemnon, caused Ajax to be assassinated. The Greeks erected a tomb over his remains on the promontory of Rhœteum, which was visited in a later age by Alexander the Great. Sophocles has made the death of Ajax the subject of one of his tragedies. According to the plot of this piece, the rites of sepulture are at first refused to the corpse of Ajax, but afterward allowed through the intercession of Ulysses. Ajax is the Homeric type of great valour, unaccompanied by any corresponding powers of intellect. Ulysses, on the other hand, typifies great intellect, unaccompanied by an equal degree of heroic valour, although he is far, at the same time, from being a coward. (*Hom.*, *Il.*, *passim*.—*Apollod.*, 3, 12, 7.—*Ovid.*, *Mét.*, 13, 1, *seqq.*)—II. The son of Oileus, king of Locris, was surnamed *Loerian*, in contradistinction to the son of Telamon. The term *Narycian* was also applied to him from his birthplace, the Loerian town Narycium, or Naryx. He went with 40 ships to the Trojan war, as being one of Helen's suitors. Homer describes him as small of size, particularly dexterous in the use of the lance, but as remarkably for brutality and cruelty. The night that Troy was taken, he offered violence to Cassandra, who had fled into Minerva's temple; and for this offence, as he returned home, the goddess, who had obtained the thunders of Jupiter, and the power of tempests from Neptune, destroyed his ship in a storm. Ajax swam to a rock, and said that he was safe in spite of all the gods. Such impiety offended Neptune, who struck the rock with his trident, and Ajax tumbled into the sea with part of the rock, and was drowned. His body was afterward found by the Greeks, and black sheep offered on his tomb. According to Virgil's account, Minerva seized him in a whirlwind, and dashed him against a rock, where he expired consumed by the flame of the lightning. (*Hom.*, *Il.*, 2, 527, &c.—*Virg.*, *Æn.*, 1, 43, *seqq.*—*Hygin.*, *fab.*, 116, &c.)

Αἰδωνεύς (Αἰδωνεύς), I. a surname of Pluto. It is only another form for Αἰδώς, "the invisible one."—II. A king of the Thesprotians in Epirus, who defeated the forces of Theseus and Pirithous, when the two latter had marched against him for the purpose of carrying off his wife Proserpina. Pirithous was torn to pieces by Cerberus, the monarch's dog, while Theseus was made prisoner and loaded with fetters. Hence, according to Pausanias (1, 17), who relates this story, arose the fable of the descent of Theseus and Pirithous to the lower world. This explanation has met with the approbation of many of the learned, and, among the rest, of Wesseling and Perizonius. But it is quite untenable. (Consult *Creuzer*, *Sym-*

bolik, vol. 4, p. 168.) Plutarch calls Aidoneus king of the Molossians in Epirus. (*Vit. Thes.*, 30.)

Aius Locutius, a deity to whom the Romans erected an altar from the following circumstance: one of the common people, called Ceditius, informed the tribunes, that, as he passed one night through one of the streets of the city, a voice more than human, issuing from above Vesta's temple, told him that Rouse would soon be attacked by the Gauls. His information was neglected, but, as its truth was subsequently confirmed by the event itself, Camillus, after the departure of the Gauls, built a temple to that supernatural voice which had given Rome warning of the approaching calamity, under the name of Aius Locutius. (*Liv.*, 5, 50.—*Plut.*, *Vit. Camill.*, 39.) Thus much for the story itself. We have here an instance of the imposition practised by the patricians, the depositaries of religion, upon the lower orders of the state. The commonly-received narrative respecting the Gallic invasion and the taking of Rome, is abundantly supplied with the decorations of fable, the work of the higher classes. The object of the patricians, in the various legends which they invented on this point, seems to have been a wish to impress on the minds of the people the conviction, that divine vengeance had armed itself against them, for having dared to injure an individual of senatorian rank. It was to avenge the banishment of Camillus that the gods had brought the Gauls to Rome, and to Camillus alone did they assign the honour of removing these formidable visitants. (Compare *Lectesque*, *Hist. Crit. de la Rep. Romaine*, vol. 1, p. 287.)

ALABANDA, a city of Caria, one of the most important of those in the interior of the country. It was situate a short distance to the south of the Mæander. Strabo (14, p. 660, *ed. Casaub.*) describes its position between two hills, and compares the appearance thus presented to that of a loaded ass. He speaks of the inhabitants as addicted to the pleasures of the table and a luxurious life. From Pliny (5, 29) we learn that it was a free city, and the seat also of a *Conventus Juridicus*. Hierocles incorrectly names the place *Alapanda*. This city was said to have obtained its appellation from the hero Alabandus, its founder, who was deified after death, and worshipped within its walls. (*Cic.*, *N. D.*, 3, 19.) Stephanus Byzantinus, however, speaks of another Alabanda, commonly called *Antiochia ad Mæandrum*, and makes this one to have been founded by Alabandus, son of Enippus; while he assigns as a founder to the other city, Car, a son of whose received the name of Hipponicus, from his having conquered in an equestrian conflict; which appellation, according to Stephanus, was the same with *Alabandus* in the Carian tongue, *Ala* denoting "a horse," and *Banda* "a victory." From this son, Alabanda, as he states, took its name. (Compare the remarks of *Berkel*, *ad loc.*, p. 86, and *Adelung*, *Gloss. Man.*, vol. 1, p. 555.) The remains of Alabanda were discovered by Pococke (vol. 3, book 2, c. 5,) and, after him, by Chandler (c. 59), in the neighbourhood of the village of *Karpusler* or *Karpuschi*. The inhabitants of this place were called Αλαβανδείς, and by the Roman writers *Alabandenses*. The name of the city is given by the latter as neuter, but by Strabo and Stephanus as feminine. (*Mannert*, *Geogr.*, vol. 6, pt. 3, p. 278, *seqq.*)

ALABANDUS, I. a son of Enippus, and the founder of *Antiochia ad Mæandrum*. (*Vid.* Alabanda)—II. A son of Car, who was otherwise called Hipponicus, and who gave name to Alabanda. (*Vid.* Alabanda.)

ALÆA (Αλαία or Αλæα), a surname of Minerva, by which she was worshipped at Tegea in Arcadia. There was also a festival celebrated here in honour of the goddess, and called by the same name. (*Pausan.*, 8, 46.) *Creuzer* traces a connexion between the festival termed Alæa and the solar worship. (*Symbolik*, vol. 2, p. 779.)

ALAGŌNIA, a town of Messenia, distant about thirty stadia from Gerenia. Pausanias (3, 26) notices its temples of Bacchus and Diana.

ALALA, an appellation given to Bellona, the goddess of war and sister of Mars. It appears to be nothing more than the battle-cry personified, and occurs in what appears to be a fragment of an old war-song. (*Plut., de Frat. Am.*, p. 483, c.)

ALALOMENEÆ. I. A city of Bœotia, near the Lake Copais, and to the southeast of Charonea. It was celebrated for the worship of Minerva, thence surnamed Alalomeneis. (*Strab.*, 410 and 413.—Compare *Hegele, ad Hom., Il.*, 4, 8, and *Müller, Gesch. Hellen. Stämme*, &c., vol. 1, p. 70.) The temple of the goddess was plundered and stripped of its statues by Sylla. (*Pausan.*, 9, 33.) It is said, that when Thebes was taken by the Epigoni, many of the inhabitants retired to Alalomene, as being held sacred and inviolable. (*Strab.*, 413.—*Steph. Byz.*, s. v. Ἀλαιομένηον.) The ruins of this place, according to Sir W. Gell (*Itin.*, p. 162), are observable near the village of *Sulinara*, on a projecting knoll, on which there is some little appearance of a small ancient establishment or town; and higher up may be discovered a wall or peribolus, of ancient and massive polygons, founded upon the solid rock. This is probably the site of the temple of the Alalomenian Minerva. (*Cramer's Anc. Greece*, vol. 2, p. 236.)—II. A town, situate on a small island off the coast of Acarnania, between Ithaca and Cephallenia. The name of the island was Asteris, and it is the place where Homer describes the suitors as lying in wait for Telemachus on his return from Sparta and Pylos. (*Hom., Od.*, 4, 844.—Compare *Strabo*, 456.) Plutarch, however, speaks of Alalomena; as being in Ithaca. (*Istr. Alex.*, ap. *Plut., Quæst. Græc.*) Stephanus Byzantinus writes it Alcomene.

ALALOMENIA. *Vid.* Supplement.

ALALIA, a city of Corsica. *Vid.* Aleria.

ALAMANNI. *Vid.* Alemanni.

ALANI, a Scythian race, occupying the regions between the Rha and the Tanais. Their name and manners, however, would appear to have been also diffused over the wide extent of their conquests. (Compare *Balbi, Introduction à l'Atlas Ethnographique*, vol. 1, p. 116.) The Agathyrsi and Geloni were numbered among their vassals. Towards the north their power extended into the regions of Siberia, and their southern inroads were pushed as far as the confines of Persia and India. They were conquered eventually by the Huns. A part of the vanquished nation thereupon took refuge in the mountains of Caucasus. Another band advanced towards the shores of the Baltic, associated themselves with the northern tribes of Germany, and shared the spoil of the Roman provinces of Gaul and Spain. But the greatest part of the Alani united with their conquerors, the Huns, and proceeded along with them to invade the limits of the Gothic empire. (*Amm. Marcell.*, 21, 19.—*Id.*, 23, 4.—*Ptol.*, 6, 14.)

ALARICUS, in German *Al-ric*, i. e., *al rich*, king of the Visigoths, remarkable as being the first of the barbarian chiefs who entered and sacked the city of Rome, and the first enemy who had appeared before its walls since the time of Hannibal. His first appearance in history is in A.D. 394, when he was invested by Theodosius with the command of the Gothic auxiliaries in his war with Eugenius. In 396, partly from anger at being refused the command of the armies of the Eastern Empire, partly at the instigation of Rufinus, he invaded and devastated Greece, till by the arrival of Stilicho, in 397, he was compelled to escape to Epirus. He was elected king by his countrymen in 398, having been previously, by the weakness of Arcadius, appointed prefect of Eastern Illyricum. The rest of his life was spent in the two invasions of Italy. The first (400–403), apparently unprovoked, brought him only to Ravenna, and, after a bloody defeat at Pollentia, in

which his wife and treasures were taken, and a masterly retreat to Verona, was ended by the treaty with Stilicho, which transferred his services from Arcadius to Honorius, and made him prefect of the Western instead of the Eastern Illyricum. The second invasion (408–10) was occasioned by delay in fulfilling his demands for pay, and for a western province as the future home of his nation, as, also, by the massacre of the Gothic families in Italy on Stilicho's death. It is marked by the three sieges of Rome, in 408, 409, and 410. The first of these was raised by a ransom; the second ended in the unconditional surrender of the city, and in the disposal of the empire by Alaric to Attalus, till, on discovery of his incapacity, he restored it to Honorius. The third was ended by the treacherous opening of the Salarian Gate, on August 24th, and the sack of the city for six days. It was immediately followed by the occupation of the south of Italy, and the design of invading Sicily and Africa. This intention, however, was frustrated by his death, after a short illness, at Consentia, where he was buried in the bed of the adjacent river Busentinus, and the place of his interment was concealed by the massacre of all the workmen employed on the occasion. The few personal traits that are recorded of him are in the true savage humour of a barbarian conqueror. But the impression left upon us by his general character is of a higher order. The real military skill shown in his escape from Greece, and in his retreat to Verona; the wish at Athens to show that he adopted the use of the bath, and the other external forms of civilized life; the moderation and justice which he observed towards the Romans in time of peace; the humanity which distinguished him during the sack of Rome, indicate something superior to the mere craft and lawless ambition which he seems to have possessed in common with other barbarian chiefs. So, also, his scruples against fighting on Easter-day when attacked at Pollentia, and his reverence for the churches during the sack of the city, imply that the Christian faith had laid some hold at least on his imagination.

ALÏZON, a river of Albania, rising in Mount Caucasus, and flowing into the Cyrus. Now the *Alozon* or *Alason*. (*Plin.*, 6, 10.)

ALBA, I. Sylvius, one of the pretended kings of Alba, said to have succeeded his father Latinus, and to have reigned 36 years.—II. *Longa*, one of the most ancient cities of Latium, the origin of which is lost in conjecture. According to the common account, the place was built by Ascanius, B.C. 1152, on the spot where Æneas found, in conformity with the prediction of Helenus (*Virg., Æn.*, 3, 390. *seqq.*) and of the god of the river (*Æn.*, 8, 43), a white sow with thirty young ones. Many, however, have been led to conjecture, that Alba was founded by the Siculi, and, after the migration of that people, was occupied by the Aborigines and Pelasgi. (Compare *Dion. Hal.*, 2, 2.) The word Alba appears to be of Celtic origin, for we find several places of that name in Liguria and ancient Spain; and it is observed, that all were situated on elevated spots; from which circumstance it is inferred that Alba is derived from *Alp*. (*Bardetti dell. Ling. dei Prim. Abit.*, &c., p. 109.) As Alba was entirely destroyed by Tullus Hostilius (*Liv.*, 1, 29), and no vestiges of it are now remaining, its exact position has been much discussed by modern topographers. If we take Strabo for our guide, we shall look for Alba on the slope of the Mount Albanus, and at a distance of twenty miles from Rome. (*Strab.*, 229.) This position cannot evidently agree with the modern town of *Albano*, which is at the foot of the mountain, and only twelve miles from Rome. Dionysius also informs us (1, 66), that it was situated on the declivity of the Alban Mount, midway between the summit and the lake of the same name, which protected it as a wall. This description and that of Strabo agree sufficiently well with the position of

Palazzolo, a village belonging to the Colonna family, on the eastern side of the lake, and some distance above its margin. (*Cramer's Anc. Italy*, vol. 2, p. 37, *seqq.*) "The site," observes Niebuhr, "where Alba stretched, in a long street, between the upper part of the mountain and the lake, is still distinctly marked: along this whole extent the rock is cut away under it down to the lake. These traces of man's ordering hand are more ancient than Rome. The surface of the lake, as it has been determined by the tunnel, now lies far beyond the ancient city: when Alba was standing, and before the lake swelled to a ruinous height in consequence of obstructions in clefts of the rock, it must have lain yet lower; for in the age of Diodorus and Dionysius, during extraordinary droughts, the remains of spacious buildings might be seen at the bottom, taken by the common people for the palace of an impious king which had been swallowed up." (*Niebuhr's Rom. Hist.*, vol. 1, p. 168, *seqq.*, *Cambridge transl.*)—The line of the Alban kings is given as follows: 1. Ascanius, reigned 8 years; 2. Sylvius Posthumus, 29 years; 3. Æneas Sylvius, 31 years; 4. Latinus, 5 years; 5. Alba Sylvius, 36 years; 6. Atys or Capetus, 26 years; 7. Capys, 28 years; 8. Calpetus, 13 years; 9. Tiberinus, 8 years; 10. Agrippa, 33 years; 11. Remulus, 19 years; 12. Aventinus, 37 years; 13. Procas, 13 years; 14. Numitor and Amulius. The destruction of Alba took place, according to the common account, 665 B.C., when the inhabitants were carried to Rome. "The list of the Alban kings," remarks Niebuhr, "is a very late and extremely clumsy fabrication; a medley of names, in part quite un-Italian, some of them repeated from earlier or later times, others framed out of geographical names; and having scarcely anything of a story connected with them. We are told that Livy took this list from L. Cornelius Alexander the Polyhistor (*Serv., ad Virg., Æn.*, 8, 330); hence it is probable that this client of the dictator Sylla introduced the imposture into history. Even the variations in the lists are not very important, and do not at all prove that there were several ancient sources. Some names may have occurred in older traditions: kings of the Aborigines were also mentioned by name (Stercinius, for instance, unless it be a false reading.—*Serv., ad Virg., Æn.*, 11, 850), entirely different from those of Alba. In the case of the latter, even the years of each reign are numbered; and the number so exactly fills up the interval between the fall of Troy and the founding of Rome, according to the canon of Eratosthenes, as of itself to prove the lateness of the imposture." (*Niebuhr's Rom. Hist.*, vol. 1, p. 170, *Cambridge transl.*)—III. Docilia, a city of Liguria, now *Albizola*.—IV. Fucentia or Fucensis, a city of the Marsi, near the northern shore of the Lake Fucinus, whence its name. It was a strong and secluded place, and appears to have been selected by the Roman senate, after it became a colony of Rome, A.U.C. 450, as a fit place of residence for captives of rank and consequence, as well as for notorious offenders. (*Strab.*, 241.—Compare *Liv.*, 10, 1, and *Vell. Patere.*, 1, 14.) Syphax was long detained here, though finally he was removed to Tibur (*Liv.*, 30, 45); as were also Perses, king of Macedon, and his son Alexander. (*Liv.*, 45, 52.—*Vell. Patere.*, 1, 11.—*Val. Max.*, 5, 1.) At the time of Cæsar's invasion of his country, we find Alba adhering to the cause of Pompey (*Cas., Bell. Civ.*, 1, 15), and subsequently repelling the attack of Antony; on which occasion it obtained a warm and eloquent eulogium from Cicero. (*Phil.*, 3, 3.—*Appian, Bell. Civ.*, 3, 45.) The ruins of this city, which are said to be considerable (*Romanelli*, vol. 3, p. 211), stand about a mile from the modern *Alba* (*Cramer's Anc. Italy*, vol. 1, p. 330).—V. Pompeia, a city of Liguria, on the river Tanarus, now *Alba*. It probably owed its surname to Pompeius Strabo, who colonized several towns in the

north of Italy. It was the birthplace of the Emperor Pertinax. (*Dio Cass.*, 83.—*Zon. Ann.*, 2).—VI. A city of Spain, in the territory of the Varduli, eight geographical miles to the west of Pamplona, and as many to the east of the Iberus. It was about two geographical miles, therefore, to the west of the modern *Estella*. (*Mannert*, vol. 1, p. 375).—VII. Augusta, a city of the Helvii, in Gaul, near the Rhone, and answering to the modern *Aps*. Pliny (14, 3) names the place *Alba Helvorum*, and praises the skill of the inhabitants in the cultivation of the vine.—VIII. Græca, a city of Dacia Ripensis, at the confluence of the Danube and the Saavus, or *Saave*. It is now *Belgrade*.

ALBANIA, a country of Asia, between the Caspian Sea and Iberia, bounded on the north by the chain of Caucasus, and on the south by the Cyrus and an arm of the Araxes. The Romans were best acquainted with the southern part, which Strabo describes as a kind of paradise, and in fertility and mildness of climate gives it the preference to Egypt. Trajan's expeditions made the northern and mountainous part better known. The inhabitants approached nearer a barbarous than a civilized race. They cultivated the soil, it is true, but with great carelessness, and yet it afforded them more than sufficed for their wants. The forces of the nation were respectable, and they brought into the field against Pompey an army of 60,000 infantry and 22,000 horse. As regards the origin of this people, all is uncertainty. The common account is unworthy of a moment's attention, according to which they were from Alba in Latium, having left that place, under the conduct of Hercules, after the defeat of Gerion. (*Dion. Hal.*, 1, 15.—*Justin*, 42, 3, 4.) It is more likely that they belonged to the great race which occupied the whole extent of the Tauric range along the southern shores of the Caspian. Mannert makes them Alani, and progenitors of the European Alani. (Vol. 4, p. 410).—What was ancient Albania is now divided into innumerable cantons, but which modern geography comprehends under two denominations, *Daghestan*, which includes all the declivities of Caucasus towards the Caspian Sea, and *Lesghistan*, containing the more elevated valleys towards Georgia and the country of the Kistes. (*Malte-Brun*, vol. 2, p. 23, *Brussels ed.*) The Lesghians appear to be the same with the *Legæ* of the ancients. (*Malte-Brun*, l. c.—*Reineggs*, 1, 183.)

ALBANÆ PORTÆ. *Vid. PYLÆ*, I.

ALBĀNUS, I. MŌNS, a mountain of Latium, about twelve miles from Rome, on the slope of which stood *Alba Longa*. It is now called *Monte Cavo*. This mountain is celebrated in history, from the circumstance of its being peculiarly dedicated to Jove, under the title of Latialis. (*Lucan*, 1, 198.—*Cic. pro Mil.*, 31.) It was on the Alban Mount that the Feriæ Latiniæ, or holidays kept by all the cities of the Latin name, were celebrated. The Roman generals also occasionally performed sacrifices on this mountain, and received there the honours of a triumph when refused one at home. This appears, however, to have occurred only five times, if we may credit the *Fasti Capitolini*, in which the names of the generals are recorded. (*Vulp. Vct. Lat.*, 12, 4.) Some vestiges of the road which led to the summit of the mountain are still to be traced a little beyond *Albano*.—II. Lacus, a lake at the foot of the Alban Mount. (Compare remarks under the article *Alba*.) This lake, which is doubtless the crater of an extinct volcano, is well known in history from the prodigious rise of its waters, to such an extent, indeed, as to threaten the whole surrounding country, and Rome itself, with an overwhelming inundation. The oracle of Delphi, being consulted on that occasion, declared, that unless the Romans contrived to carry off the waters of the lake, they would never take Veii, the siege of which had already lasted for nearly ten years. This led to the construction of

that wonderful subterranean canal, or *emissario*, as the Italians call it, which is to be seen at this very day, in remarkable preservation, below the town of *Castel Gandolfo*. This channel is said to be carried through the rock for the space of a mile and a half, and the water which it discharges unites with the Tiber about five miles below Rome. (*Cic., de Div.*, 1, 44.—*Liv.*, 5, 15.—*Val. Maz.*, 1, 6.—*Plut., Vit. Camill.*) Near this opening are to be seen considerable ruins and various foundations of buildings, supposed by some to have belonged to the palace of Domitian, to which Martial and Statius frequently allude. (*Cramer's Anc. Italy*, vol. 2, p. 40.)—III. A river of Albania, falling into the Caspian, to the north of the mouth of the Cyrus, or *Kur*. It is supposed by some to be the same with the *Samure*. Mannert, however, is in favour of the *Bilbana*.

ALBICI, a people of Gaul, of warlike character, occupying the mountains above Massilia, or *Marseilles*. Strabo places them to the north of the Salyes, and there Ptolemy also makes them to have resided, on the southeast side of the Druentia, or *Durance*. This latter writer is blamed, without any reason, by those who suppose, that he here means the Helvii, and, consequently, places them too far to the east. Strabo calls the Albici, Ἀλβίαι and Ἀλβίαι, Ptolemy Ἐλίκωκοι, and Pliny *Alebeci*. Their capital, according to Pliny, was named Alebece, now *Riez*. (*Cas., Bell. Civ.*, 1, 57 and 34.—*Strabo*, 203.—*Plin.*, 3, 4.—*Compare Mannert*, vol. 2, p. 105.)

ALBIGAUNUM. *Vid.* Albium Ingaunum.

ALBINOVANUS, I. Celsus, a young Roman, and acquaintance of Horace. He formed one of the retinue of Tiberius Claudius Nero, when the latter was marching to Armenia, under the orders of Augustus, in order to replace Tigranes on the throne. Horace alludes to him in *Epist.*, 1, 3, 15, and addresses to him *Epist.*, 1, 8. He appears to have been of a literary turn, but addicted to habits of plagiarism.—II. Pedo, a Roman poet, the friend of Ovid, who has inscribed to him one of the *Epistles from Pontus* (10th of 4th book). He distinguished himself in heroic versification, but only a few fragments of his labours in this department of poetry have reached our times. In epigram also he would appear to have done something. (*Martial*, 5, 5.) As an elegiac poet, he composed, according to Joseph Scaliger and many others, the three following pieces which have descended to us: 1. "Consolatio ad Liviam Augustam de morte Drusi." (*Fabric., Bibl. Lat.*, 1, 12, § 11, 8, p. 376, *seqq.*) 2. "De Obitu Mæcenatis." (*Fabric., l. c.*, 1, 12, § 11, 7, p. 376.—*Burmman, Anthol. Lat.*, 2, *cp.* 119.—*Lion, Mæcenatiana*, Götting., 1824, c. 1.) 3. "De Mæcenate moribundo." (*Burmman, l. c.*, 2, *cp.* 120.) Of these elegies, the first has been ascribed by many to Ovid, even on MS. authority, and printed in the works of that poet. (*Compare Fabric., l. c.*—*Passerat. in Prefat.*, vol. 4, p. 220, *cd. Burm.*—*Amar, ad Ov. Carm.*, *ed. Lemaire*, vol. 1, p. 399, *seqq.*, and on the opposite side, *Jos. Scaliger*, and *Burmman*, vol. 1, p. 796.) The grounds on which the claim of Pedo rests are not by any means satisfactory: the piece in question, however, would seem to have been the production of the Augustan age. Still weaker are the arguments which seek to establish the claim of Pedo to the other two elegies, which, according to Wernsdorff (*Poet. Lat. Min.*, vol. 3, p. 112, *seqq.*), are unworthy of him, and must be regarded as the productions of some late scholastic poet.—III. P. Tullius. (*Vid.* Supplement.)

ALBINTENIUM. *Vid.* Albium Intemelium.

ALBINUS, I. Decimus Claudius, a Roman general, born at Adrumetum in Africa, and surnamed Albinus from the extreme whiteness of his skin when brought into the world. He made at first some progress in literary pursuits, and wrote a Treatise on Agriculture,

together with some *Tales* after the manner of those denominated Milesian. An invincible attachment to arms, however, caused him to embrace, at an early period, the military profession, in which he soon attained distinction. In the year 175 of the present era, and the 15th of the reign of Marcus Aurelius, he prevented the army, which he commanded in Bithynia, from joining the rebel Avidius Cassius. For this, according to some, he was rewarded with the consulship; though his name does not appear at this epoch in the *Fasti Consulares*. Governor of Gaul under Commodus, he defeated the Frisii, and afterward had intrusted to him the command of Britain. The death of Commodus brought forward Severus, Julian, and Pescennius Niger, as candidates for the vacant throne. The first of these competitors made overtures to Albinus, and offered him the title of Cæsar, which the latter accepted, and declared for his cause. But Severus had only contributed to the elevation of Albinus in order to diminish the number of his own opponents. When he had conquered his other rivals, he resolved to rid himself of Albinus by the aid of assassins. The latter, however, suspected his odious projects, and his suspicions were confirmed by the arrest and confession of Severus's emissaries. Albinus immediately took up arms to dispute the imperial power with his enemy. He gained several successes in Gaul, but was at last defeated in a decisive battle in the same country, near Lugdunum (*Lyons*), A.D. 198. Finding himself on the point of falling into the hands of the foe, he put an end to his own existence. His head was brought to Severus, who ordered it to be cast into the Rhone. The details of this last-mentioned conflict are variously given. The armies are said to have consisted each of 150,000 men; and the victory is reported to have been for a long time doubtful: at last the left wing of Albinus was totally defeated and his camp pillaged; while his right wing, on the other hand, proved so decidedly superior to the foe, that Severus, according to Herodian (3, 7, 7), was compelled to fly, after having thrown aside the badges of his rank. Spartianus (c. 11) adds, that Severus was wounded, and that his army, believing him to have been slain, were on the point of proclaiming a new emperor. Dio Cassius (75, 21) states, that he had his horse killed under him, and that, having thrown himself, sword in hand, into the midst of his flying soldiers, he succeeded in bringing them back to the fight and gaining the day. Some writers inform us that Albinus was slain by his own troops; others relate that he was dragged, mortally wounded, into the presence of Severus, who beheld him expire. The account of his death, which we have given above, is from Dio Cassius, and seems entitled to the most credit. According to Capitolinus (c. 10, *seqq.*), Albinus was severe, gloomy, and unsocial, intemperate in wine, and remarkable for his voracious gluttony. This account, however, must be received with caution. If we form an idea of Albinus from his life and actions, we must pronounce him a brave warrior, a talented man, but deficient in strategem and address. (*Biographie Universelle*, vol. 1, p. 431, *seqq.*—*Compare Crevier, Hist. des Emp. Rom.*, vol. 5, p. 153, *seqq.*)—II. A Platonic philosopher, who resided at Smyrna, in the reign of Antoninus Pius, and was the preceptor of Galen. He is the author of an Introduction to the Dialogues of Plato, which Fabricius has inserted in the second volume of his *Bibliotheca Græca*. It is also given in Etwal's edition of three of the dialogues of Plato, *Oxon.*, 1771, 8vo.—III. The name of Albinus was common to a great number of individuals belonging to the *Gens Posthumia*, for an account of whom *vid.* Supplement.

ALBION, I. a giant, the son of Neptune, who, together with his brother Bergion, endeavoured to prevent Hercules from passing the Rhone. When the weapons of the latter failed him in this conflict, he prayed

to Jove for aid, and that deity destroyed the two brothers by a shower of stones. The battle-ground was called, from the appearance which it presented, the *Campus Lapidicus*, or "Stony plain" (*Mela*, 2, 5), and lay between Massilia and the Rhone. Apollodorus (2, 5, 10) calls the brothers Alebion and Dercynus (*Ἀλεβίων τε καὶ Δέρκυνος*), and lays the scene in Liguria (*Λιγυρία*). This, however, as Vossius (*ad Mel.*, l. c.) remarks, should not have misled Salmasius (Sausmaise), since Liguria and the Ligures once extended even to the Rhone. (Compare *Heyne, ad Apollod.*, l. c.) To Albion is ascribed by some, if indeed so ridiculous an etymology be worth mentioning, one of the names of Britain.—II. The earlier name of the island of Great Britain, called by the Romans Britannia Major, from which they distinguished Britannia Minor, the modern French province of Bretagne. Agathemerus (11, 4), speaking of the British islands, uses the names Hibernia and Albion for the two largest; Ptolemy (2, 3) calls Albion a British island; and Pliny (4, 16), says that the island of Britain was formerly called Albion, the name of Britain being common to all the islands around it. (" *Britannia insula..... Albion ipsi nomen fuit, cum Britannice vocarentur omnes.*") The etymology of the name is uncertain. Some writers derive it from the Greek *ἄλφον* (the neuter of *ἄλφος*), "white," in reference to the chalky cliffs on the coasts; others have recourse to the Hebrew *alben*, "white;" and others again to the Phœnician *alp* or *alpin*, "high," and "high mountain;" from the height of the coast. Sprengel thinks it of Gallic origin, the same with *Albin*, the name of the Scotch highlands. It appears to him the plural of *Alp* or *Ailp*, which signifies "Rocky Mountains," and to have been given to the island, because the shore, which looks towards France, appears like a long row of rocks. The term evidently comes from the same source with the word *Alpes*, and conveys the associate ideas of a high and chalky, or whitish, coast. (*Vid. Alpes*, and compare *Adelung, Mithradates*, vol. 2, p. 42, *seqq.*) The ancient British poets call Britain *Inis Wen*, "the white island." (*Mannert, Geogr.*, vol. 2, p. 32, *seqq.*)

ALBIS, a river of Germany, now the *Elbe*. It is called Albios by Dio Cassius (55, 1). This was the easternmost stream in Germany with which the Romans became acquainted in the course of their expeditions; and they knew it, moreover, only in the northern part of its course. Tacitus learned that the Hermunduri dwelt near its sources. (*Germ.*, 41.) Ptolemy also was acquainted with the quarter where it rose, on the east side of his Sudetes, near the confines of the modern Moravia. The only Roman who passed this stream with an army was L. Domitius Ahenobarbus, A.U.C. 744; and though he made no farther progress, the passage of the Albis was deemed worthy of a triumph. (*Plin.*, 4, 14.—*Vell. Pat.*, 2, 106.—*Tacit.*, *Ann.*, 1, 59.—*Id. ib.*, 13, *sub fin.*—*Flav. Vopisc. Prob.*, 13.)

ALBŪM, 1. Ingaunum, a city of Liguria, on the coast, some distance to the southwest of Genua. It was the capital of the Ingauni, and answers to the modern *Albenga*. (*Strab.*, 202.—*Plin.*, 3, 5).—II. Intemelium, a city of Liguria, on the coast, to the southwest of the preceding. It was the capital of the Intemelii, and corresponds to the modern *Vintimiglia*. (*Strabo*, 202.—*Plin.*, 3, 5.) From Tacitus (*Hist.*, 2, 13), we learn that it was a municipium.

ALBŪLA, the more ancient name of the Tiber. Mannert considers Albula the Latin, and Tiberis the Etrurian, name for the stream; which last became in the course of time the prevailing one. *Vid. Tiberis*. (*Geogr.*, vol. 9, p. 607.)

ALBŪLÆ AQUÆ, a name given to some cold mephitic springs, about sixteen miles from Rome, which issued from a small but deep lake, and flowed into the neighbouring river Anio. They were highly esteemed by

the Romans for their medicinal properties, and were used both for drinking and bathing. (*Vitruv.*, 8, 3.—*Plin.*, 31, 11.)

ALBUNĒA, the largest of the springs or fountains which formed the Albulæ Aquæ. It proceeded, like the rest, from a small but deep lake, and flowed with them into the Anio. In the immediate vicinity of the fountain was a thick grove, in which were a temple and oracle of Faunus. (*Virg.*, *Æn.*, 7, 82, *seqq.*—*Heyne, ad Virg.*, l. c.) Both the grove and fountain were sacred to the nymph or sibyl Albunea, who was worshipped at Tibur, and whose temple still remains on the summit of the cliff, and overhanging the cascade. "This beautiful temple," observes a recent traveller, "which stands on the very spot where the eye of taste would have placed it, and on which it ever reposes with delight, is one of the most attractive features of the scene, and perhaps gives to Tivoli its greatest charm." (*Rome in the Nineteenth Century*, vol. 2, p. 398, *Am. ed.*) Varro, as cited by Lactantius (*de Falsa Rel.*, 1, 6), gives a list of the ancient sibyls, and among them enumerates the one at Tibur, surnamed Albunea, as the tenth and last. Suidas also says, *Δεκάτη ἡ Τιβουρτία, ὀνόματι Ἀλβουναία*. (Compare *Hor.*, *Od.*, 1, 7, 12, and *Mitscherlich and Fœa, ad loc.*—Consult also *Creuzer, Symbolik*, vol. 2, p. 975, and vol. 4, p. 27.)

ALBURNUS, a ridge of mountains in Lucania, near the junction of the Silarus and Tanager, and between the latter river and the Calor. It is now called *Monte di Postiglione*, and sometimes *Alburno*. Near a part of the ridge, and on the shores of the Sinus Pastanus, was a harbour of the same name (Alburnus Portus), where the Silarus emptied into the sea. (*Virg.*, *Georg.*, 3, 146.—*Cramer's Anc. Italy.*, vol. 2, p. 376.)

ALBUS, I. PORTUS, a harbour on the coast of Syria, supposed by Gail to be the harbour of Laodicea to which Aprian alludes (*καὶ ἐς τὸ πέλλαος ἔχουσα ὄρυον*. *Bell. Civ.*, 4, 60), and placed by him to the west of the promontory of *Ziaret*. (*Gail, ad Anon. Stadiasm. Maris Mag.*—*Geogr. Gr. Min.*, vol. 2, p. 538).—II. VICUS (ἡ Λευκὴ Κώμη), a harbour in Arabia, from which Gallus set out on his expedition into the interior. (*Strab.*, 781.) It is supposed by Mannert to be the same with the modern harbour of *Jambo*. (*Geogr.*, vol. 6, pt. 1, p. 50.—Compare *Peripl. Mar. Erythr.*, p. 11.—*Geogr. Gr. Min.*, ed. Hudson, vol. 1.)

ALBUTIUS, I. a wealthy Roman, remarkable for his severity towards his slaves. According to an ancient scholiast, he even punished them sometimes before they had committed any offence, "lest," said he, "I should have no time to punish them when they do offend." (*Horat.*, *Serm.*, 2, 2, 67.—*Schol. ad Horat.*, l. c.) Porphyrio (*ad Hor.*, l. c.) styles him, "*et avarus, et elegans conviviorum apparator*." The epithet *avarus*, however, must evidently be thrown out, as contradicting what follows.—II. T., a Roman of the Epicurean school. He was educated at Athens, and rendered himself ridiculous, on his return home, by his excessive attachment to the language and manners of Greece. About A.U.C. 648, he was sent as prætor to Sardinia. For some unimportant services rendered here, he believed himself entitled to a triumph. The senate, however, rejected his application, and he was accused, on his return, by the augur Mucius Scævola, of extortion in his government. Being condemned, he went into exile at Athens, where he consoled himself, amid his disgrace, by philosophical investigations, and by composing satires in the style of Lucilius. (*Cic.*, *Brut.*, 35.—*Id.*, *de Fin.*, 1, 3.—*Id.*, *Orat.*, 44.—*Id.*, in *Pis.*, 38.—*Id.*, *Brut.*, 2, 6.—*Id.*, *Tusc. Quæst.*, 5, 37).—III. C. SILUS, a rhetorician in the age of Augustus. He was a native of Novaria in Cisalpine Gaul, where he exercised for a time the functions of ædile. Being grossly insulted, however, by some individuals against whom he was pronouncing a

decision, and being dragged by the feet from his tribunal, he left his native city and came to Rome, where he soon attained to distinction as a pleader. A singular adventure induced him to leave the bar. Intending, on one occasion, merely to employ a rhetorical figure, he said to the opposite party, who was accused of impiety towards his parents, "Swear by the ashes of thy father and mother" (and thou shalt gain thy cause). The defendant immediately accepted the condition, and, though Albutius protested that he merely employed a figure of rhetoric, the judges admitted the oath, and the defendant was acquitted. In his old age Albutius returned to Novaria, where he assembled his fellow-citizens, and represented to them that his age and the maladies under which he was labouring rendered life insupportable. When he had finished his harangue he retired to his dwelling, and starved himself.—IV. *Vid. Supplement.*

ALCÆUS, I. a celebrated poet of Mytilene, in Lesbos, and the contemporary of Sappho, Pittacus, and Stesichorus. (*Clinton's Fast. Hell.*, vol. 1, p. 5, 2d ed.) He was famed as well for his resistance to tyranny and his unsettled life, as for his lyric productions. Having aided Pittacus to deliver his country from the tyrants which oppressed it, he quarrelled with this friend, when the people of Mytilene had placed uncontrolled power in the hands of the latter, and some injurious verses, which he composed against Pittacus, caused himself and his adherents to be driven into exile. An endeavour to return by force of arms proved unsuccessful, and Alcæus fell into the power of his former friend, who, forgetting all that had passed, generously granted him both life and freedom. In his odes Alcæus treated of various topics. At one time he inveighed against tyrants; at another he deplored the misfortunes which had attended him, and the pains of exile: while, on other occasions, he celebrated the praises of Bacchus and the goddess of love. He wrote in the Æolic dialect. Dionysius of Halicarnassus speaks in high commendation of the lofty character of his compositions, the conciseness of his style, and the clearness of his images. His productions, indeed, breathed the same spirit with his life. A strong, manly enthusiasm for freedom and justice pervaded even those in which he sang the pleasures of love and wine. But the sublimity of his nature shone brightest when he praised valour, chastised tyrants, described the blessings of liberty, and the misery and hardships of exile. His lyric muse was versed in all the forms and subjects of poetry, and antiquity attributes to him hymns, odes, and songs. A few fragments only are left of all of them, and a distant echo of his poetry reaches us in some of the odes of Horace. Alcæus was the inventor of the metre that bears his name, one of the most beautiful and melodious of all the lyric measures. Horace has employed it in many of his odes. As regards the personal character of the poet, it may be remarked, that the charge of cowardice which some have endeavoured to fasten upon him, for his misfortune in having lost his shield during a conflict between the Mytileneans and Athenians for the possession of Sigæum, would seem to be anything but just. Equally unjust is the same charge, as brought against Horace for his conduct at Philippi. (Consult the work of Van Ommeren, *Horaz als Mensch und Bürger von Rom*, &c., *Aus dem Holländ.*, von L. Walch.)—The fragments that remain to us of the poetry of Alcæus, are to be found in the collections of H. Stephens and Fulvius Ursinus. Jani, one of the editors of Horace, published, from 1780 to 1782, three *Profusiones*, containing those fragments of Alcæus which the Latin poet had imitated. In 1812, Stange united these *opuscula* in a volume which appeared at Halle, under the title of "*Alcæi poetæ lyrici fragmenta*." The most complete and accurate collection, however, is that by Matthiæ, Lips., 1827. A collection

was also made by Blomfield in the *Museum Criticum*, 1, p. 421, &c., Camb., 1826, reprinted in Gaisford's *Poetæ Græci Minores*. Additional fragments have been printed in the *Rhenish Museum* for 1829, 1833, and 1835; in *Jahn's Jahrbuch. für Philolog* for 1830; and in Cramer's *Anecdota Græca*, Oxon., 1835. (*Schöll, Hist. Litt. Gr.*, vol. 1, p. 204.—*Bode, Gesch. der Lyrischen Dichtkunst der Hellenen*, 2, p. 378, seqq.)—II. An epigrammatic poet. (*Vid. Supplement.*)—III. A comic poet of Athens, contemporary with Aristophanes. Some of his contemporaries are cited by Athenæus (3, p. 107.—Vol. 1, p. 418, ed. *Schweigh.*), and others. (Compare *Casaubon, ad Athen.*, l. e.—*Clinton's Fasti Hellenici*, vol. 1, p. 101.)—IV. An Athenian tragic poet, whom some, according to Suidas, made to have been the first writer in tragedy. (Compare *Casaubon, ad Athen.*, 3, p. 107, and the remarks of *Schweighæuser*, vol. 9, p. 14.)—V. A son of Perseus, and father of Amphitryon, from whom Hercules has been called Alcides. (*Apollod.*, 2, 4, 12.—Compare *Heyne, ad loc.*)

ALCÆMENES, I. ninth king of Sparta, and one of the Agidæ (*vid. Agidæ*), succeeded his father A.M. 3235 B.C. 769, and reigned thirty-seven years, in which time there was a rebellion of the Helots. Plutarch cites some of his apophthegms. (*Plut., Apoph. Læcon.*, 32.—*Pausan.*, 3, 2.—*Meursius, de Reg. Læcon.*, 9.)—II. A statuary and sculptor of Athens, who flourished about 448 B.C. He was the pupil of Phidias, and adorned his country with numerous specimens of his superior skill, a skill which almost equalled that of his master. (*Quintil.*, 12, 10.—*Dionys. Hal.*, *de Demosth. Acum.*, pt. 6, p. 1108, ed. *Reiske.*) The most celebrated of his productions was his statue of Venus, commonly styled *ἡ Ἀρποδίτη ἐν τοῖς κήποις*, and sometimes simply *κῆποι*. It is said to have received its last polish from the hand of Phidias himself, and is spoken of in high terms by Lucian and others. (*Luc. Imag.*, 4 et 6.) Whether this was the statue of Venus, by which Alcæmenes obtained his victory over Agoracritus (*vid. Agoracritus*), cannot be determined with certainty from the words of Pliny. If we suppose it to have been the same, we have this difficulty, that all ancient writers pronounce the Venus *ἐν κήποις* of Alcæmenes, one of the highest productions of the art, while Pliny asserts, that the artist was indebted for his success, in the contest just mentioned, not to the superiority of his performance, but to the spirit of party which influenced the umpires. Another highly celebrated work of his was the rear pediment of the temple of Jupiter at Olympia, of which Pausanias has left us a description (5, 10). On it was represented the conflict between the Centaurs and Lapithæ. Cicero (*N. D.*, 1, 30) speaks of a statue of Vulcan by this artist, and Valerius Maximus (8, 11, 3) informs us, that although the god was exhibited as lame, yet the lameness was in a great measure concealed by the drapery and position. The distinguished merit of Alcæmenes obtained for him the honour of being placed in a bas-relief on the temple at Eleusis. (*Plin.*, 34, 8.—*Id. ibid.*, 36, 5.—*Pausan.*, 1, 19.)—III. An artist whose name occurs on some Roman embossed work, described by Zoega. (*Bass. Ant.*, &c., tav. 23.—Consult *Sillig, Dict. Art.*, s. v.) He is called a dumvir, and it has been conjectured that, besides being raised to civil honours in the municipal state to which he belonged, he also obtained his livelihood by exercising the art of modelling. (*Sillig, ubi supra.*)

ALEXANDER, a Lacedæmonian youth, of hasty temper, but not otherwise ill-disposed, who, during a popular tumult, struck out one of the eyes of Lycurgus. The people were so moved with shame and sorrow at the outrage, that they surrendered Alexander into his hands, to do with him as he pleased. Lycurgus took him to his own home, and so won upon him by mild treatment, that Alexander became one of his warmest friends and an excellent citizen. (*Plut., Vit. Lyc.*, 11.)

ALCATHŌS, I. a son of Pelops, who, being suspected of murdering his brother Chrysippus, came to Megara, where he killed a lion, which had destroyed the king's son. The monarch had promised the hand of his daughter, and the succession to the throne, unto him who should succeed in destroying the wild beast. Alcatious, therefore, gained both of these prizes, and succeeded in the course of time to the kingdom of Megara. In commemoration of him, festivals, called Alcatioia, were instituted at Megara. (*Pausan.*, 1, 41, &c.)—II. One of the two citadels of Megara, so called from its founder Alcatious. (*Pausan.*, 1, 40 and 42.)

ALCE, a town of the Celtiberi, in Hispania Tarraconensis, called also Alcaratium. It answers to the modern *Alcaraz*, in New Castile, on the river *Guardamena*. (*Liv.*, 40, 47, *seqq.*)

ALCESOR, an Argive, who, along with Chronius, survived on his side, the battle between 300 of his countrymen and 300 Lacedæmonians. (*Vid.* *Othryades*.—*Herodot.*, 1, 82.)

ALCESTIS, daughter of Pelias and wife of Admetus. Her father had offered to give her in marriage to this prince, on condition of his previously yoking lions and boars to a chariot, and Admetus successfully accomplished this through the aid of Apollo. This same deity, who was then serving with Admetus, in accordance with the sentence that had been passed against him (*vid.* *Æsculapius*, *Amphrysus*, and *Cyclopes*), obtained from the fates, that when Admetus should be about to end his existence, his life would be spared and prolonged, provided another willingly died in his stead. When the day came, Alcestis heroically devoted herself for her husband, but was rescued from the lower world and restored to the regions of day by Hercules. According to another version of the legend, she was sent back again to life by Proserpina. Euripides has founded upon this story of Alcestis one of his most beautiful tragedies. (*Apollod.*, 1, 9, 14.) This same legend is also given in a different and more historical form, as follows: when Medea had prevailed upon the daughters of Pelias to cut their father in pieces, in expectation of seeing him restored to youth, and they were pursued by their brother Acastus, Alcestis fled for protection to her cousin Admetus. This prince refusing to deliver her up, Acastus marched against him, took him prisoner, and threatened to put him to death, when Alcestis heroically surrendered herself into her brother's hands, and saved the life of Admetus. It happened, however, that, just at this time, Hercules came that way with the horses of Diomedes, and was hospitably entertained by Admetus. On learning from him what had taken place, the hero was fired with indignation, attacked Acastus, destroyed his army, and rescued Alcestis, whom he restored in safety to his royal host. (*Eudocia, Ion. ap. Villoison, Anecd. Græc.*, vol. 1, 21, *seqq.*)

ALCETAS, I. a king of Epirus, descended from Pyrrhus, the son of Achilles, and an ancestor of Pyrrhus, king of Epirus. He was driven by his subjects from the throne, but regained his power by the aid of Dionysius the elder, of Syracuse.—II. King of Epirus, son of Arymbas, and grandson of the preceding. His subjects strangled him, together with his two sons, B.C. 312.—III. The eighth king of Macedonia, son of Eropus, and father of Amyntas I. He reigned 29 years, from 576 to 547 B.C.—IV. A general of Alexander the Great, and brother of Perdicas. He slew himself after a defeat by Antigonius, during the contests that ensued after Alexander's decease.—V. An historian who wrote an account of the offerings at Delphi, *περὶ τῶν ἐν Δελφοῖς ἀναθημάτων*. (*Athenæus*, 13, p. 591, c.)

ALCIBIADÆS, a celebrated Athenian commander, son of Clinias, nephew to Pericles, and lineally descended, as was said, from the Telamonian Ajax. He was born B.C. 450. Conspicuous for beauty, and for an

insinuating and graceful demeanour, he made himself still more conspicuous for his extravagant expenditures, his contempt of order, and his dissolute mode of life. The lessons and the example of Socrates, who numbered him for some time amongst his disciples, operated but feebly in checking the vicious propensities of the young Athenian, or in restraining his bold and ambitious designs. He took Pericles as his model in public life, and resolved to tread in the footsteps of that illustrious statesman, and succeed, if possible, to the authority which he had enjoyed. The Athenians, in the time of Pericles, had entertained a strong desire of becoming masters of Sicily, and Alcibiades, after the death of his uncle, succeeded in prevailing upon them to send an armament for that purpose. This was during the Peloponnesian war. The expedition was directed against Syracuse, and Alcibiades, with Nicias and Lamachus, received the command. A short time, however, before the departure of the fleet, the Herms or images of Mercury, placed throughout Athens, were all mutilated in the course of one night, and suspicion fell upon Alcibiades, who was supposed to have been guilty of this act of profanation during a drunken carousal with some of his young friends. After having been allowed to sail with the expedition, he was soon sent for, and summoned to stand trial for this and other alleged acts of impiety. Avoiding, however, a return to Athens, he took refuge, first in Argos, and afterward at Sparta, at which latter place he excited very friendly feelings towards himself by the important advice he gave respecting the future movements of the war, and became an object of wonder by the ease with which he adopted the plain and austere manners of the Spartans, so directly at variance with his previous mode of life. Distrusting, however, at last, the sincerity of the Lacedæmonians, he betook himself to Tissaphernes, satrap of the King of Persia, and soon attained to great favour. Not long after this, he was restored, by a strange turn of fortune, to the good-will of his countrymen; the sentence of banishment that had been passed against him was revoked, he was appointed to a command, and, after a career of brilliant success, returned in triumph to Athens. His popularity, however, was of short continuance. Lysander, the Spartan admiral, defeated the Athenian fleet, and slew Antiochus, to whom Alcibiades had left it in charge, when departing for Caria, in order to raise money for the war; and Alcibiades soon found himself compelled to solicit once more the protection of the Persians. Pharnabazus, the satrap, allowed him for a while a safe residence in Phrygia, but finally, through the sollicitations of Lysander, he caused Alcibiades to be slain, by an armed party, at his place of abode, in a small village. This remarkable man died in his 46th year, B.C. 404. If the Athenians had only known how to retain among them an individual of so rare merit both as a civilian and a soldier, they might easily have given the law to all Greece. And yet impartial history, while it awards him the highest praise for his talents as a statesman, and his skill and intrepidity as a commander, cannot but condemn, in the most unequivocal manner, the licentiousness of his private life, the versatility and chameleon-like character of his principles of action, and his traitorous conduct, on more than one occasion, to the best interests of his country. (*Plut., Vit. Alcib.*—*Corn. Nep., Vit. Alcib.*)

ALCIDAMAS, a Greek rhetorician. (*Vid.* Supplement.)

ALCIDAS, a naval commander of Sparta in the time of the Peloponnesian war, B.C. 428. He, on one occasion, lost, in consequence of his habitual caution, the opportunity of following up a victory gained by him over the Athenians and Corecyreans.

ALCIDES, I. a name of Hercules, either from his strength, *ἀλκίς*, or from his grandfather Alceus.—II. A surname of Minerva in Macedonia. (*Liv.*, 42, 51.)

For *Alcidem* in the passage of Livy here quoted, we should no doubt read, according to Turnebus (*Adcers.*, 30, 57), *Alcidemum*, "the people's strength."

ALCIMACHUS, a painter. (*Vid. Supplement.*)

ALCINÉDON, I. an Arcadian hero. (*Vid. Supplement.*)—II. An embosser or chaser spoken of by Virgil (*Eclóg.*, 3, 37, 44), who mentions some goblets of his workmanship. Sillig thinks he was a contemporary of the poet's.

ALCIMENES. *Vid. Supplement.*

ALCIMUS. *Vid. Supplement.*

ALCINOÛS, I. a son of Nausithous, king of Phæacia, praised for his love of agriculture. He kindly entertained Ulysses, who had been shipwrecked on his coast. The gardens of Alcinoüs are beautifully described by Homer, and have afforded, also, a favourite theme for succeeding poets. The island of the Phæacians is called by Homer *Scheria*. Its more ancient name was *Drepanè*. After the days of Homer it was called *Coreyra*. Now *Corfu*. (*Vid. Coreyra*.—*Homer, Od.*, 7.—*Orph.*, in *Argon.*—*Virg.*, *G.*, 2, 87.—*Stat.*, 1.—*Syle.*, 3, 81.)—II. A Platonic philosopher. (*Vid. Supplement.*)—III. A son of Hippothoon, who, in conjunction with his father and eleven brothers, expelled Icarion and Tyndareus from Lacedæmon, but was afterwards killed, with his father and brothers, by Hercules. (*Apollod.*, 3, 10, 5.)

ALCIPHON, the most distinguished of the Greek epistolary writers. Nothing is known of his life, and even his era is uncertain. Some critics place him between Lucian, whom he has imitated, and Aristænetus, to whom he served as a model; in other words, between the years 170 and 350 of the present era. Others, however, are inclined to transfer him to the fifth century. Neither side have attended to the circumstance of there being among the letters of Aristænetus a kind of correspondence between Lucian and Alciphron. This correspondence, it is true, is fictitious; yet it indicates, at the same time, that Aristænetus regarded these two writers as contemporaries, and we have no good reason to accuse him of any error in this respect. Though a contemporary, Alciphron might still have imitated Lucian: it is much more probable, however, that the passages which appear to us to be imitations are borrowed of these two writers from some ancient comic poets. The letters of Alciphron are 116 in number, forming three books. They are distinguished for purity, clearness, and simplicity, and are important as giving us a representation of Athenian manners, drawn from dramatic poets whose writings are now lost. The best portion of the work is the 2d book, containing the letters of the netære, or courtesans; and, among these, that of Menander to Glycerion, and that of Glycerion to Menander. The principal editions are, that of Bergler, *Lips.*, 1715, 8vo, with an excellent commentary; that of Wagner, *Lips.*, 1778, 2 vols. 8vo, containing a corrected text, a Latin version, the commentary of Bergler, and the editor's own notes; and that of Boissonade, *Paris*, 1822, 8vo. Wagner had been furnished by Bast with the readings of two Vienna MSS., but, according to the Critical Epistle of the last-mentioned scholar, did not make all the use of these collated readings which he might have done. Among the papers of Bast, after his decease, were found various readings of the Letters of Alciphron, derived from four Paris MSS., two of the Vatican, and one of Heidelberg. Many of these were preferable to the received readings. Along with them were found various unedited fragments, and even entire letters, which had never yet been printed. These papers are now in England, and were used by Boissonade in his edition (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 313, *seqq.*—*Wachler, Handbuch der Gesch. der Lit.*, vol. 1, p. 241.)

ALCIPPE, I. a daughter of the god Mars, by Agræolus.—II. The daughter of Cœnomaus.

ALCIS, a surname of Minerva, and the name of a deity among the Naharvali. (*Vid. Supplement.*)

ALCITHOË, a Theban female, who, together with her sisters, contemned and ridiculed the orgies of Bacchus, and, while these rites were getting celebrated without, employed themselves at home with the distaff, and beguiled the time by recounting poetic legends. They were changed into bats, and the spindles and yarn, with which they worked, into vines and ivy. (*Or.*, *Met.*, 4, 1, *seqq.*—*Id.* *ib.*, 389, *seqq.*) As regards the terms *Minyciæ* and *Minyciæ proles*, which Ovid applies to the sisters, consult *Gieryg, ad loc.*

ALCMEON, I. a son of Amphiaræus and Eriphyle, and a native of Argos. When his father went to the Theban war, where he knew he was to perish, Alcmeon was directed by him, when he should hear of his death, to kill Eriphyle who had betrayed him. (*Vid. Eriphyle.*) The son obeyed the father's injunctions, and was pursued, in consequence, by the furies, the avengers of parricide. According to another account, being chosen chief of the seven Æpigonæ, he took and destroyed Thebes, and, after this event, put his mother to death, in obedience to an oracle of Apollo. (*Apollod.*, 3, 7, 5.) While in the state of phrensy which was sent upon him as a punishment for this deed, he came first to Arcadia, to Oicleus, and, from the residence of this his paternal grandfather, went subsequently to the city of Sopolis, to Phegeus, its king. Being purified of the murder by Phegeus, he married Arsinoë, the daughter of the latter, and gave to her, as a bridal present, the fatal collar and robe (*τὸν τε ὄρμιον καὶ τὸν πέπλον*) which his mother Eriphyle had received to be tray his father. The country, however, becoming barren, in consequence of his residing in it (*δὲ αὐτὸν*), he was directed by an oracle, as the only means of escaping the vengeance of the furies, to find, and dwell in, a land which was not in existence when he slew his parent. (*Pausan.*, 8, 24.—Compare *Heyne, ad Apollod.*, l. c.) He at last found rest, for a short time, on an island at the mouth of the Achelous, formed by the alluvial deposite of that stream. (*Vid. Echinades.*) Here he married Callirhoë, the daughter of the river-god, after repudiating his former wife Arsinoë. But he did not long enjoy repose. At the request of his wife, he attempted to recover from his former father-in-law the collar and robe which he had presented to his daughter, and, as a pretext for obtaining them, stated that he had been directed by an oracle, as the only means of freeing himself from the furies, to consecrate the articles in question to Apollo at Delphi. Phegeus gave them up, but the imposition being made known to him by an attendant, he ordered his sons to waylay and destroy Alcmeon, which was accordingly done. Alcmeon's death was avenged by the two sons whom he had by Callirhoë. Their mother entreated of Jupiter that they might speedily attain to manhood, and retaliate on their father's murderers. The prayer was heard; they became on a sudden men in the prime of life, and slew not only the two sons of Phegeus, but the monarch himself and his wife. The sons of Alcmeon by Callirhoë were Amphoterus and Acarnan, and are said to have settled subsequently in Acarnania, the latter giving name to the country. (*Apollod.*, l. c.) Pansaniæ calls Arsinoë by the name of Alpheisibæa (*vid. Alpheisibæa*), and, in other parts of his narrative also, differs from Apollodorus. On these and other variations, consult *Heyne, ad Apollod.*, l. c.—II. The founder of an illustrious family at Athens, called after him Alcmeonide. He was the son of Sillius, and great grandson of Nestor; and, being driven from Messenia, with the rest of Nestor's family, by the Heræclidæ, settled at Athens. (*Pausan.*, 2, 18.—Compare the note of Clinton, *Fest. Hell.*, vol. 1, p. 299, 2d ed., where he disproves the assertion of Larcher, *ad Herod.*, 6, 125, who makes the Alcmeonidæ to have been descended from Melanthus.)—III. A son of Megacles,

Having shown much kindness and attention to the persons whom Cræsus had sent to Delphi for the purpose of consulting the oracle, that monarch invited him to Sardis, and gave him permission to carry from the royal treasury as much gold as he could bear off with him at one visit. Herodotus (6, 125) gives an account of the mode in which he availed himself of the royal offer, filling with gold his arms, the folds of his habit, his large shoes worn expressly for the occasion, and having not only his hair powdered with gold-dust, but his mouth full of it. To these Cræsus even added other valuable presents; and to this source Herodotus traces the wealth of the family. We must not, however, regard this Alcmaeon, II.)—IV. The last of the perpetual archons at Athens, was succeeded by Charops, the son of Æschylus, as decennial archon. Boeckh (*Explic. ad Pind., Pyth.*, 7, p. 301) makes him not to have belonged to the family of the Alcmaeonidæ proper, but to have been reckoned among the Alcmaeonidæ merely because his mother belonged to that house.—V. A natural philosopher. (*Vid.* Supplement.)

ALCMAEONIDÆ, a noble family of Athens, descended from Alcmaeon. (*Vid.* Alcmaeon, II.) When driven from Athens by the tyranny of the Pisistratidæ, they first endeavoured to return by force of arms; but having met with a serious check at Lipsydrium, in the Præmian borough of Attica, they turned their attention to a surer and more pacific mode of operation. The temple at Delphi having been burned, and having remained in ruins for some considerable time, the Alcmaeonidæ, after their defeat, engaged with the Amphictyonic council to rebuild the structure for the sum of 300 talents. They finished the work, however, in a much more splendid manner than the terms of their contract required, and attained, in consequence, to great popularity. By dint of the favour with which they were now regarded, as well as by means of a large sum of money, they prevailed upon the Pythones, whenever application of a public or private nature was made from Lacedæmon to the god at Delphi, to conclude the answer of the oracle, whatever it might be, with an admonition to the Lacedæmonians to give liberty to Athens. This artifice had the desired effect; and, though Sparta was in friendly relations with the Pisistratidæ, it was determined to invade Attica, which was accordingly done, and the result was, that the Spartans expelled Hippias, and restored the Alcmaeonidæ (B.C. 510). The restored family found themselves in an isolated position, between the nobles, who appeared to have been opposed to them, and the popular party, which had been hitherto attached to the Pisistratidæ. Clisthenes, now the head of the Alcmaeonidæ, joined the latter party, and gave a new constitution to Athens. He abolished the four ancient tribes, and made a fresh geographical division of Attica into ten new tribes, each of which bore a name derived from some Attic hero. The ten tribes were subdivided into districts of various extent called *demes* or *boroughs*, each containing a town or village as its chief place. The constitution of Clisthenes had the effect of transforming the commonalty into a new body. The whole frame of the state was reorganized to correspond with the new division of the country. To Clisthenes, also, is ascribed the formal institution of the ostracism.

ALCMAEN. *Vid.* Supplement.

ALCMENA, was daughter of Electryon, king of Mycenæ, and Anaxo, whom Plutarch calls Lysidice, and Diodorus Siculus Eurymede. She was engaged in marriage to her cousin Amphitryon, son of Alcaeus, when an unexpected event caused the nuptials to be deferred. Electryon had undertaken an expedition against the Teleboans, or subjects of Taphius, in order to avenge the death of his sons, whom the sons of Taphius had slain in a combat. Returning victorious,

he was met by Amphitryon, and was killed by an accidental blow. This deed, though involuntary, lost Amphitryon the kingdom, which he would otherwise have enjoyed in right of his wife. Sthenelus, the brother of Alcmena, availing himself of the public odium against Amphitryon, drove him from Argolis, and seized upon the vacant throne, the possession of which devolved, at his death, upon his son Eurystheus. Amphitryon fled to Thebes, where he was purified by Creon; but when he expected that Alcmena, who had accompanied him hither, would have given him her hand, she declined, on the ground that she was not satisfied with the punishment inflicted by her father on the Teleboans, and intended to give her hand to him who should make war upon them. Amphitryon, in consequence of this, made an alliance with Creon and other neighbouring princes, and ravaged the isles of the Teleboans. While Amphitryon was absent on this expedition, Jupiter, who had become enamoured of Alcmena, assumed the form of Amphitryon, related to her all the events of the war, his success over the foe, and finally persuaded her to a union. Amphitryon, on his return, was surprised at the indifference with which he was regarded by Alcmena; but, on coming to an explanation with her, and consulting Tiresias, the famous diviner of Thebes, he discovered that it was no less a personage than Jove himself, who had assumed his form. Alcmena brought forth twins, Hercules the son of Jupiter, and Iphicles the progeny of her mortal lord. According to the ancient poets, Jove retarded the birth of Hercules until the mother of Eurystheus was delivered of a son, unto whom, by reason of a rash oath of Jupiter's, Hercules was made subject. It seems that the day on which Alcmena was to be delivered in Thebes, Jove, in exultation, announced to the gods that a man of his race was that day to see the light, who would rule over all his neighbours. Jove, pretending incredulity, exacted from him an oath that what he had said should be accomplished. Jupiter, unsuspecting of guile, gave it, and Jove hastened down to Argos, where the wife of Sthenelus, the son of Perseus, was seven months gone of a son. The goddess brought on a premature labour, and Eurystheus came to light that day, while she checked the parturition of Alcmena, and kept back Lucina. (*Vid.* Galanthis.) The oath of Jove was not to be recalled, and his son was fated to serve Eurystheus. (*Hom., Il.*, 19, 101, *seqq.*—*Ovid, Met.*, 9, 285, *seqq.*—*Anton. Lib.*, c. 29.—*Keightley's Mythology*, p. 310, *seqq.*) According to Pherecydes (*ap. Anton. Lib.*, c. 33), when Alcmena, who long survived her son, died, and the Heraclidæ were about to bury her at Thebes, Jove directed Mercury to steal her away, and convey her to the islands of the blessed, where she should espouse Rhadamanthus. Mercury obeyed, and placed a stone instead of her in the coffin. When the Heraclidæ went to carry her forth to be buried, they were surprised at the weight, and, on opening the coffin, found the stone, which they took out, and set it up in the grove where her *Heroium* stood at Thebes: *ὁδὲ πρὸ ἐστὶν τὸ ἥρῳον τὸ τῆς Ἀλκμήνης ἐν Θίβαϊς.*

ALCON, I. a statuary, who made an iron statue of Hercules, kept at Thebes. Pliny assigns the reason for the choice of this metal, when he says, "*Laborum dei patientia inductus.*" (35, 14).—II. A surgeon under Claudius. (*Vid.* Supplement.)—III. A son of Erechtheus, king of Athens, and father of Phalerus.

ALCYÖNE, or HALCYÖNE, I. daughter of Æolus, married Ceyx, who was drowned as he was going to consult the oracle. The gods apprized Alcyone in a dream of her husband's fate; and when she found, on the morrow, his body washed on the seashore, she threw herself into the sea. To reward their mutual affection, the gods metamorphosed them into halcyons, and, according to the poets, decreed that the sea should remain calm while these birds built their nests

upon it. The halcyon was, on this account, though a querulous, lamenting bird, regarded by the ancients as a symbol of tranquillity; and, from living principally on the water, was consecrated to Thetis. According to Pliny (10, 47), the halcyons only showed themselves at the setting of the Pleiades and towards the winter-solstice, and even then they were but rarely seen. They made their nests, according to the same writer, during the seven days immediately preceding the winter-solstice, and laid their eggs during the seven days that follow. These fourteen days are the "*dies halcyonii*," or "halcyon-days," of antiquity. He describes their nests as resembling, while they float upon the waters, a kind of ball, a little lengthened out at the top, with a very narrow opening, and the whole not unlike a large sponge. A great deal of this is pure fable. The only bird in modern times at all resembling either of the two kinds of halcyons described by Aristotle (8, 3), is the *Alcedo Ispida*, or what the French call *martin-pêcheur*. All that is said, too, about the nest floating on the water, and the days of calm, is untrue. What the ancients took for a nest of a bird, is in reality a zoophyte, of the class named *halcyonium* by Linnæus, and of the particular species called *gœdic* by Lamarck. The *martin-pêcheur* makes its nest in holes along the shore, or, rather, it deposits its eggs in such holes as it finds there. Moreover, it lays its eggs in the spring, and has no connexion whatever with calm weather. (*G. Cuvier, ad Plin., l. c.*)—II. A daughter of Atlas, and one of the Pleiades. (*Vid. Pleiades.—Apollod., 3, 10.*)—III. An appellation given to Cleopatra, daughter of Idas and Marpessa. The mother had been carried off, in her younger days, by Apollo, but had been rescued by her husband Idas, and from the plaintive cries which she uttered while being abducted, resembling the lament of the halcyon, the appellation *Alcyone* was given as a kind of surname to her daughter Cleopatra. (*Hom., Il., 9, 553, seqq.*)

ALCYONIA, PALUS, a pool in Argolis, not far from the Lernean marsh. Nero attempted to measure it by means of a plummet several stadia in length, but could discover no bottom. (*Pausan., 2, 37.*)

ALCYONIUM MARE, a name given to an arm of the Sinus Corinthiacus, or Gulf of Lepanto, which stretched between the western coast of Bœotia, the northern coast of Megaris, and the northwestern extremity of Corinthia, as far as the promontory of Olmiæ. (*Strab., 336.*)

ALDUBABIS. *Vid. Dubis.*

ALÆA, a town of Arcadia, near the eastern confines, and to the northeast of Orchomenus. It had three famous temples, that of the Ephesian Diana, of Minerva Alca, and of Bacchus. The feast of Bacchus, called *Skiria*, was celebrated here every third year, at which time, according to Pausanias, the women were scourged, in obedience to a command of the oracle at Delphi. (*Pausan., 8, 23.*)

ALÆTION and DERCYNUS, sons of Neptune. (*Vid. Albion, l.*)

ALECTO, one of the Furies. The name is derived from *ἀ, priv.*, and *λήγω, "to cease,"* from her never ceasing to pursue the wicked. (*Vid. Eumenides.*)

ALECTOR. *Vid. Supplement.*

ALECTRYON, a youth whom Mars, during his meeting with Venus, stationed at the door to watch against the approach of the sun. He fell asleep, and Apollo came and discovered the guilty pair. Mars was so incensed that he changed Alectryon into a cock, who, still mindful of his neglect, announces, say the ancient writers, at early dawn, the approach of the sun. (*Lucian, Somn. scu. Gall., 3.*)

ALECTUS, a military prefect and usurper in Britain, who slew Carausius, but was in turn slain by Asclepiodotus, a general under Constantius Chlorus. He died A.D. 296. (*Eumen. paneg. Const. Cæs.—Crevier, Hist. des Emp. Rom., 6, p. 202, seqq.*)

ALÆIUS CAMPUS (Ἀλῆιον πεδῖον), a tract in Cilicia Campestris, to the east of the river Sarus, between Adana and the sea. The poets fabled that Bellerophon wandered and perished here, after having been thrown from the horse Pegasus. The name comes from *ἀλάωμαι, "to wander."* (*Homer, Il., 6, 201.—Dionys. Perieg., 872.—Ovid, Ibis, 259.*)

ALEMANNI, or ALAMANNI, a name assumed by a confederacy of German tribes situate between the Neckar and the Upper Rhine, who united to resist the encroachments of Roman power. According to Mannert (*Geogr., vol. 3, p. 235, seqq.*), the shattered remains of the army of Ariovistus retired, after the defeat and death of their leader, to the mountainous country of the Upper Rhine. (Compare, however, *Pfister, Gesch. der Deutschen., vol. 1, p. 179, seqq.*, where a different account is given of the origin of the Alemanni.) Their descendants in after days, in order to oppose a barrier to the continued advance of the Roman arms, united in a common league with the German tribes which had originally settled on the left bank of the Rhine, but had been driven across by their more powerful opponents. The members of this union styled themselves Alemanni or *all-men*, i. e., men of all tribes, to denote at once their various lineage and their common bravery. They first appeared in a hostile attitude on the banks of the Mayn, but were defeated by Caracalla, who was hence honoured with the surname of *Alemannicus*. In the succeeding reigns, we find them at one time ravaging the Roman territories, at another, defeated and driven back to their native forests. At last, after their overthrow by Clovis, king of the Salian Franks, they ceased to exist as one nation, and were dispersed over Gaul, Switzerland, and northern Italy.

ALERIA, a city of Corsica, on the eastern coast. It was founded by the Phœcæans, under the name of Alalia (Ἀλαλία), and about twenty years after its first settlement, was much enlarged by the addition of those of the inhabitants of Phœcæa, who fled from the sway of Cyrus. (*Vid. Phœcæa*) Its rapid advance in maritime power, subsequent to this increase of numbers, excited the jealousy of the Etrurians and Carthaginians. A naval contest ensued, in which the people of Alalia, though victorious, suffered so severely, as to be convinced of the impossibility of long withstanding the united strength of their foes. They migrated, therefore, once more, and settled on the southwestern coast of Italy (*Herod., 1, 165*), where they founded the city of Hyela, or Velia. A portion of them, however, went to the Phœcean colony of Massilia. (*Seneca, de Consol., ad Helv. matr., 8.*) The history of Alalia, after this event, remains for a long period enveloped in obscurity. The Carthaginians, probably, took possession of the place. In the second Punic war, it fell, together with the whole island, under the Roman sway; at least Zonaras (8, 11) speaks of a place called Valeria as the most important city in the island, and as having been taken by Lucius Scipio. Alalia remained in obscurity under its new masters also, until Sylla sent thither a Roman colony, as Marius had done a short time previous to the same island, founding in it the colony of Mariana. From this period Alalia was known under the name of Aleria, and the earlier appellation fell into disuse. When, and under what circumstances, this city was finally destroyed, is not ascertained. Its ruins are to be found a short distance below the mouth of the river *Tarignano*. (*Mannert, 9, pt. 2, p. 516, seqq.*)

ALES, a small river of Ionia in Asia Minor, which empties into the Ægean near Colophon. (*Pausan., 8, 28.*)

ALÆSA, ALAES, or HALÆSA, a very ancient city of Sicily, built by Archonides, B.C. 403. It stood near the modern city of *Caronia*, on the river *Alæsus*, or *Fiume di Caronia*. The inhabitants were exempted by the Romans from taxes. (*Diad. Sic., 14, 16.*)

ALESIA or **ALEXIA**, a famous and strongly fortified city of the Mandubii, in Gallia Celtica. It was so ancient a city, that Diodorus Siculus (4, 19) ascribes the building of it to Hercules. (Compare the learned and ingenious remarks of Ritter, in his *Vorhalle*, p. 378, on the subject of the Celtic Hercules.) It was situate on a high hill, supposed to be *Mount Auxois*, near the sources of the Sequana or *Seine*, and washed on two sides by the small rivers *Lutosa* and *Ozera*, now *Lose* and *Ozerain*. Alesia was taken and destroyed by Caesar after a famous siege, but was rebuilt, and became a place of considerable consequence under the Roman emperors. It was laid in ruins in the 9th century by the Normans. At the foot of Mount Auxois is a village called *Alise* (Depart. *Côte d'Or*), with several hundred inhabitants. (*Flor.*, 3, 10.—*Cæs.*, B. G., 7, 69.)

ALESÍUM, a mountain in the vicinity of Mantinea, on which was a grove dedicated to Ceres; also the temple of the equestrian Neptune, an edifice of great antiquity, which had been originally built, according to tradition, by Agamemnon and Trophonius, but was afterward enclosed within a new structure by order of Hadrian. The mountain was said to have taken its name from the wanderings of Rhea (τὸ ὄρος τὸ Ἀλῆσιον, διὰ τὴν ἄλγην, ὡς φασί, καλοῦμενον τὴν Πέας. *Pausan.* 8, 10).

ALÉTES (Ἀλήτης), a son of Hippotes, and descendant of Hercules in the fifth degree. He is said to have taken possession of Corinth, and to have expelled the Sisyphidae thirty years after the first invasion of the Peloponnesus by the Heracleidae. His family, sometimes called the Aletidae, maintained themselves at Corinth down to the time of Bacchis. (*Paus.*, 2, 4, 3; 5, 18, 2.—*Strab.*, 8, p. 389.—*Callim.*, *Frags.*, 103.—*Pind.*, *Olym.* 13, 17.) Velleius Paterculus (1, 3) calls him a descendant of Hercules in the sixth degree. He received an oracle promising him the sovereignty of Athens, if during the war which was then going on its kings should remain unjured. This oracle became known at Athens, and Codrus sacrificed himself for his country. (*Vid.* Codrus.—*Conon.*, *Narrat.*, 26.) Other persons of this name are mentioned in *Apollod.*, 3, 10, 6; *Hygin.*, *Fab.*, 122; and *Virgil.*, *Æn.*, 1, 121; 9, 462.

ALEUADÆ. *Vid.* Supplement.

ALBUAS. *Vid.* Supplement.

ALEXAMENUS, I. a native of Teos. (*Vid.* Supplement.)—II. A general of the Ætolians, who, with a body of his countrymen, slew Nabis, tyrant of Sparta. He had been sent at the head of a band of auxiliaries, by the Ætolians, ostensibly to aid Nabis, but in reality to get possession of Lacedæmon. The inhabitants, however, rallied after the fall of the tyrant, defeated the Ætolians, who were scattered throughout the city and plundering it, and slew Alexamenus. (*Liv.*, 35, 34, *seqq.*)

ALEXANDER, a name of very common occurrence, as designating not only kings, but private individuals. We will classify the monarchs by countries, and then come to private or less conspicuous personages.

1. Kings of Macedonia.

ALEXANDER I., son of Amyntas, and tenth king of Macedon. He ascended the throne 497 B.C., and reigned 43 years. It was he who, while still a youth, slew, in company with a party of his young friends, habited in female attire, the Persian ambassadors at his father's court, having been provoked to the act by their immodest behaviour towards the females present at a banquet. With this prince the glory of Macedon may be said to have commenced. He enlarged his territories, partly by conquest, and partly by the gift which Xerxes bestowed upon him, of all the country from Mount Olympus to the range of Hæmus. (*Herod.*, 5, 18, *seqq.*—*Justin.*, 7, 3.)

ALEXANDER II., son of Amyntas II. He was teach-

crously slain by Ptolemy Alorites, after having reigned from B.C. 369 to B.C. 367, and not, according to the common account, for one year merely. Ptolemy Alorites, however, who slew him, was neither king nor the son of Amyntas, although called so by Diodorus (15, 71). It seems probable, from a comparison of Æschines (*de Fals. Leg.*, p. 32) with a fragment in Syncellus (*Dexippus*, ap. *Syncell.*, p. 263, B.), that Ptolemy was appointed regent in a regular way, during the minority of Perdiccas; that he afterward abused his trust, and was, in consequence, cut off by Perdiccas. The duration of his administration, three years, is mentioned by Diodorus (15, 77).

ALEXANDER III., surnamed the Great, son of Philip of Macedon, was born in the city of Pella, B.C. 356. His mother was Olympias, the daughter of Neoptolemus, king of Epirus. Leonnatus, a relation of his mother's, an austere man, and of great severity of manners, was his early governor, and at the age of eight years, Lysimachus, an Acarnanian, became his instructor. Plutarch gives this individual an unfavourable character, and insinuates that he was more desirous of ingratiating himself with the royal family, than of effectually discharging the duties of his office. It was his delight to call Philip, Peleus; Alexander, Achilles; and to claim for himself the honorary name of Phoenix. Early impressions are the strongest, and even the pedantic allusions of the Acarnanian might render the young prince more eager in after life to imitate the Homeric model. In his fifteenth year, Alexander was placed under the immediate tuition of the celebrated Aristotle. The philosopher joined his royal pupil B.C. 342, and did not finally quit him until he came to the throne. The master was worthy of the scholar, and the scholar of his master. The mental stores of Aristotle were vast, and all arranged with admirable accuracy and judgment; while, on the other hand, Alexander was gifted with great quickness of apprehension, an insatiable desire of knowledge, and an ambition not to be satisfied with the second place in any pursuit. At a distance from the court, this great philosopher instructed him in all the branches of human knowledge, especially those necessary for a ruler, and wrote, for his benefit, a work on the art of government, which is unfortunately lost. As Macedon was surrounded by dangerous neighbours, Aristotle sought to cultivate in his pupil the talents and virtues of a military commander. With this view he recommended to him the reading of the Iliad, and revised this poem himself. The poet, as Aristotle emphatically names Homer, was the philosopher's inseparable companion: from him he drew his precepts and maxims; from him he borrowed his models. The preceptor imparted his enthusiasm to his pupil, and the most accurate copy of the great poem was prepared by Aristotle, and placed by Alexander in a precious casket which he found among the spoils of Darius. The frame of the young prince was, at the same time, formed by gymnastic exercises. He gave several proofs of manly skill and courage while very young; one of which, the breaking in of his fiery courser Bucephalus, which had mastered every other rider, is mentioned by all his historians as an incident that convinced his father Philip of his future unconquerable spirit. When he was sixteen years old, Philip, setting out on an expedition against Byzantium, delegated the government to him during his absence. Two years later (B.C. 338), he performed prodigies of valour in the battle at Charonea, where he obtained great reputation by conquering the sacred band of the Thebans. "My son," said Philip, after the battle, embracing him, "seek another empire, for that which I shall leave you is not worthy of you." The father and son, however, quarrelled when Philip repudiated Olympias. Alexander, who took the part of his mother, was obliged to flee to Epirus to escape the ven-

geance of his father, but he soon obtained pardon and returned. He afterward accompanied Philip on an expedition against the Triballi, and saved his life in a battle. Philip, having been elected chief commander of the Greeks, was preparing for a war against Persia, when he was assassinated, B.C. 336. This occurrence, at an eventful crisis, excited some suspicion against Alexander and Olympias; but as it was one of his first acts to execute justice on those of his father's assassins who fell into his hands, several of the nobility being implicated in the plot, this imputation rests on little beyond surmise. It is more than probable that the conspirators were in correspondence with the Persian court, and that ample promises of protection and support were given to men undertaking to deliver the empire from the impending invasion of the captain-general of Greece. Alexander, who succeeded without opposition, was at this time in his twentieth year; and his youth, in the first instance, excited several of the states of Greece to endeavour to set aside the Macedonian ascendancy. By a sudden march into Thessaly he, however, soon overawed the most active; and when, on a report of his death, chiefly at the instigation of Demosthenes and his party, the various states were excited to great commotion, he punished the open revolt of Thebes with a severity which effectually prevented any imitation of its example. Induced to stand a siege, that unhappy city, after being mastered with dreadful slaughter, was razed to the ground, with the ostentatious exception of the house of the poet Pindar alone; while the unfortunate surviving inhabitants were stripped of all their possessions and sold indiscriminately into slavery. Intimidating by this cruel policy, the Macedonian party gained the ascendancy in every state throughout Greece, and Athens particularly disgraced itself by the meanness of its submission. Alexander then proceeded to Corinth, where, in a general assembly of the states, his office of superior commander was recognised and defined; and in the twenty-second year of his age, leaving Antipater, his viceroy, in Macedon, he passed the Hellespont, to overturn the Persian empire, with an army not exceeding four thousand five hundred horse and thirty thousand foot. To secure the protection of Minerva, he sacrificed to her on the plain of Ilium, crowned the tomb of Achilles, and congratulated this hero, from whom he was descended through his mother, on his good fortune in having had such a friend as Patroclus, and such a poet as Homer to celebrate his fame. The rapid movements of Alexander had evidently taken the Persian satraps by surprise. They had, without making a single attempt to molest his passage, allowed him, with a far inferior fleet, to convey his troops into Asia. They now resolved to advance and contest the passage of the river Granicus. A force of twenty thousand cavalry was drawn up on the right bank of the stream, while an equal number of Greek mercenaries crowned the hills in the rear. Unintimidated, however, by this array, Alexander led his army across, and, after a severe conflict, gained a decisive victory. The loss on the Persian side was heavy, on that of their conquerors so extremely slight (only eighty-five horsemen and thirty foot-soldiers) as to lead at once to the belief, that the general, who wrote the account of Alexander's campaigns, mentioned the loss of only the native-born Macedonians. Splendid funeral obsequies were performed in honour of those of his army who had fallen; various privileges were granted to their fathers and children; and as twenty-five of the cavalry that had been slain on the Macedonian side belonged to the royal troop of the "Companions," these were honoured with monumental statues of bronze, the workmanship of the celebrated Lysippus. The immediate consequence of this victory was the freedom and restoration of all the Greek cities in Asia Minor, and its sub-

sequent results were shown in the reduction of almost the whole of that country. A dangerous sickness, however, brought on by bathing in the Cydnus, checked for a time his career. He received a letter from Parmenio, saying that Philip, his physician, had been bribed by Darius to poison him. Alexander gave the letter to the physician, and at the same time drank the potion which the latter had prepared for him. Scarcely was he restored to health when he advanced towards the defiles of Cilicia, whither Darius had imprudently betaken himself with an immense army, instead of awaiting his adversary on the plains of Assyria. The second battle took place near Issus, between the sea and the mountains, and victory again declared for the Macedonian monarch. The Macedonians conquered on this day, not the Persians alone, but the united efforts of southern Greece and Persia; for the army of Darius, besides its eastern troops, contained thirty thousand Greek mercenaries, the largest Greek force of that denomination mentioned in history. It was this galling truth that, among other causes, rendered the republican Greeks so hostile to Alexander. All the active partisans of that faction were at Issus, nor were the survivors dispirited by their defeat. Agis, king of Sparta, gathered eight thousand who had returned to Greece by various ways, and fought with them a bloody battle against Antipater, who with difficulty defeated the Spartans and their allies. Without taking these facts into consideration, it is impossible duly to estimate the difficulties surmounted by Alexander. After the defeat at Issus, the treasures and family of Darius fell into the hands of the conqueror. The latter were treated most magnanimously. Alexander did not pursue the Persian monarch, who fled towards the Euphrates, but, in order to cut him off from the sea, turned towards Cæle-Syria and Phœnicia. Here he received a letter from Darius, proposing peace. Alexander answered, that if he would come to him he would restore, not only his mother, wife, and children, without ransom, but also his empire. This reply produced no effect. The victory at Issus had opened the whole country to the Macedonians. Alexander took possession of Damascus, which contained a large portion of the royal treasures, and secured all the towns along the Mediterranean Sea. Tyre, emboldened by the strength of its insular situation, resisted, but was taken, after seven months of incredible exertion, and destroyed. The capture of Tyre was perhaps the greatest military achievement of the Macedonian monarch; but it was tarnished by his cruel severity towards the conquered, thirty thousand of the inhabitants having been sold by him as slaves. Some excuse, however, may be found in the excited feelings of the Macedonian army, occasioned by numerous insults on the part of the Tyrians; by acts of cruelty towards some of their Macedonian captives; and also by the length and obstinacy of the siege; for more men were slain in winning Tyre, than in achieving the three great victories over Darius. Alexander continued his victorious march through Palestine, where all the towns surrendered except Gaza, which shared the fate of Tyre. Egypt, wearied of the Persian yoke, received him as a deliverer. In order to confirm his power, he restored the former customs and religious rites, and founded Alexandria, which became one of the first cities of ancient times. Hence he went through the desert of Libya, to consult the oracle of Jupiter Ammon, an adventure resembling more the wildness of romance than the soberness of history, and which has on this very account been regarded by some with an eye of incredulity. It rests, however, on too firm a basis to be invalidated. After having been acknowledged, say the ancient writers, as the son of the god (*vid.* Ammon), Alexander, at the return of spring, marched against Darius, who in the mean time had collected an army in Assyria,

and rejected the proposals of Alexander for peace. A battle was fought at Gaugamela, not far from Arbela, B.C. 331. Arrian estimates the army of Darius at 1,000,000 of infantry and 40,000 cavalry; while that of Alexander consisted of only 40,000 infantry and 7000 horse. On the Persian side, moreover, were some of the bravest and hardiest tribes of upper Asia. Notwithstanding the immense numerical superiority of his enemy, Alexander was not a moment doubtful of victory. At the head of his cavalry he attacked the Persians, and routed them after a short conflict. One great object of his ambition was to capture the Persian monarch on the field of battle; and that object was at one time apparently within his grasp, when he received, at the instant, a message from Parmenio that the left wing, which that general commanded, was hard pressed by the Sacæ, Albanians, and Parthians, and he was compelled, of course, to hasten to its relief. Darius fled from the field of battle, leaving his army, baggage, and immense treasures to the victor. Babylon and Susa, where the riches of the East lay accumulated, opened their gates to Alexander, who directed his march to Persepolis, the capital of Persia. The only passage thither was defended by 40,000 men under Ariobarzanes. Alexander attacked them in the rear, routed them, and entered Persepolis triumphant. From this time the glory of Alexander began to decline. Master of the greatest empire in the world, he became a slave to his own passions; gave himself up to arrogance and dissipation; showed himself ungrateful and cruel, and in the arms of pleasure shed the blood of his bravest generals. Hitherto sober and moderate, this hero, who strove to equal the gods, and called himself a god, sunk to the level of vulgar men. Persepolis, the wonder of the world, he burned in a fit of intoxication. Ashamed of this act, he set out with his cavalry to pursue Darius. Learning that Bessus, satrap of Bactriana, kept the king prisoner, he hastened his march with the hope of saving him. But Bessus, when he saw himself closely pursued, caused Darius to be assassinated (B.C. 330), because he was an impediment to his flight. Alexander beheld on the frontiers of Bactriana a dying man, covered with wounds, lying on a chariot. It was Darius. The Macedonian hero could not restrain his tears. After interring him with all the honours usual among the Persians, he took possession of Hyrcania and Bactriana, and caused himself to be proclaimed King of Asia. He was forming still more gigantic plans, when a conspiracy broke out in his own camp. Philotas, the son of Parmenio, was implicated. Alexander, not satisfied with the blood of the son, caused the father also to be put to death. This act of injustice excited general displeasure. At the same time, his power in Greece was threatened; and it required all the energy of Antipater to dissolve, by force of arms, the league formed by the Greeks against the Macedonian authority. In the mean time, Alexander marched in the winter through the north of Asia as far as it was then known, checked neither by Mount Caucasus nor the Oxus, and reached the Caspian Sea, hitherto unknown to the Greeks. Insatiable of glory and thirsting for conquest, he spared not even the hordes of the Scythians. Returning to Bactriana, he hoped to gain the affections of the Persians by assuming their dress and manners; but this hope was not realized. The discontent of the army gave occasion to the scene which ended in the death of Clitus. Alexander, whose pride he had offended, killed him with his own hand at a banquet. Clitus had been one of his most faithful friends and brave officers, and Alexander was afterward a prey to the keenest remorse. In the following year he subdued the whole of Sogdiana. Oxyantes, one of the leaders of the enemy, had secured his family in a castle built on a lofty rock. The Macedonians stormed it. Roxana, the daughter of Oxyantes, one of the most beau-

tiful virgins of Asia, was among the prisoners. Alexander fell in love with and married her. Upon the news of this, Oxyantes thought it best to submit, and came to Bactria, where Alexander received him with distinction. Here a new conspiracy was discovered, at the head of which was Hermodorus, and among the accomplices Callisthenes. All the conspirators were condemned to death except Callisthenes, who was mutilated and carried about with the army in an iron cage, until he terminated his torments by poison. Alexander now formed the idea of conquering India, the name of which was scarcely known. He passed the Indus, and formed an alliance with Taxilus, the ruler of the region beyond this river, who assisted him with troops and 130 elephants. Conducted by Taxilus, he marched towards the river Hydaspes, the passage of which, Porus, another king, defended at the head of his army. Alexander conquered him in a bloody battle, took him prisoner, but restored him to his kingdom. He then marched victoriously on, established Greek colonies, and built, according to Plutarch, seventy towns, one of which he called Bucephala, after his horse, which had been killed on the Hydaspes. Intoxicated by success, he intended to advance as far as the Ganges, and was preparing to pass the Hyphasis, when the discontent of his army obliged him to terminate his progress and return. Previous to turning back, however, he erected on the banks of the Hyphasis twelve towers, in the shape of altars; monuments of the extent of his career, and testimonials of his gratitude towards the gods. On these gigantic altars he offered sacrifices with all due solemnity, and horse-races and gymnastic contests closed the festivities. When he had reached the Hydaspes, he built a fleet, in which he sent a part of his troops down the river, while the rest of the army proceeded along the banks. On his march he encountered several Indian princes, and, during the siege of a town belonging to the Malli, was severely wounded. Having recovered, he continued his course down the Indus, and thus reached the sea. Having entered the Indian Ocean and performed some rites in honour of Neptune, he left his fleet; and, after ordering Nearchus, as soon as the season would permit, to sail to the Persian Gulf, and thence up the Tigris, he himself prepared to march to Babylon. He had to wander through immense deserts, in which the greater part of his army, destitute of water and food, perished in the sand. Only the fourth part of the troops with which he had set out returned to Persia. On his route he quelled several mutinies, and placed governors over various provinces. In Susa he married two Persian princesses, and rewarded those of his Macedonians who had married Persian women; because it was his intention to unite the two nations as closely as possible. He distributed rich rewards among his troops. At Opis, on the Tigris, he declared his intention of sending the invalids home with presents. The rest of the army mutinied; but he persisted, and effected his purpose. Soon after, his favourite, Hephæstion, died. His grief was unbounded, and he buried his body with royal splendour. On his return from Ecbatana to Babylon, the magicians are said to have predicted that this city would be fatal to him. The representations of his friends induced him to despise these warnings. He went to Babylon, where many foreign ambassadors waited for him, and was engaged in extensive plans for the future, when he became suddenly sick after a banquet, and died in a few days, B.C. 323. Such was the end of this conqueror, in his 32d year, after a reign of 12 years and 8 months. He left behind him an immense empire, which became the scene of continual wars. He had designated no heir, and being asked by his friends to whom he left the empire, answered, "To the worthiest." After many disturbances, the generals acknowledged Aridæus, a man of a very weak mind, the son

of Philip and the dancer Philinna, and Alexander the posthumous son of Alexander and Roxana, as kings, and divided the provinces among themselves, under the name of *satrapes*. They appointed Perdicas, to whom Alexander, on his deathbed, had given his ring, prime minister of the two kings. The body of Alexander was interred by Ptolemy in Alexandria, in a golden coffin, and divine honours were paid to him, not only in Egypt, but also in other countries. The sarcophagus in which the coffin was enclosed has been in the British Museum since 1802. The English nation owe the acquisition of this relic to the exertions of Dr. Clarke, the celebrated traveller, who found it in the possession of the French troops in Egypt, and was the means of its being surrendered to the English army. In 1805, the same individual published a dissertation on this sarcophagus, fully establishing its identity.—No character in history has afforded matter for more discussion than that of Alexander; and the exact quality of his ambition is to this day a subject of dispute. By some he is regarded as little more than a heroic madman, actuated by the mere desire of personal glory; others give him the honour of vast and enlightened views of policy, embracing the consolidation and establishment of an empire, in which commerce, learning, and the arts should flourish in common with energy and enterprise of every description. Each class of reasoners find facts to countenance their opinion of the mixed character and actions of Alexander. The former quote the wildness of his personal daring, the barren nature of much of his transient mastery, and his remorseless and unnecessary cruelty to the vanquished on some occasions, and capricious magnanimity and lenity on others. The latter advert to facts like the foundation of Alexandria, and other acts indicative of large and prospective views of true policy; and regard his expeditions rather as schemes of discovery and exploration than mere enterprises for fruitless conquest. The truth appears to embrace a portion of both these opinions. Alexander was too much smitten with military glory, and the common self-engrossment of the mere conqueror, to be a great and consistent politician; while such was the strength of his intellect, and the light opened to him by success, that a glimpse of the genuine sources of lasting greatness could not but break in upon him. The fate of a not very dissimilar character in our days shows the nature of this mixture of lofty intellect and personal ambition, which has seldom effected much permanent good for mankind in any age. The fine qualities and defects of the man were, in Alexander, very similar to those of the ruler. His treatment of Parmenio and of Clitus, and various acts of capricious cruelty and ingratitude, are contrasted by many instances of extraordinary greatness of mind. He was also a lover and favourite of the arts and literature, and carried with him a train of poets, orators, and philosophers, although his choice of his attendants of this description did not always do honour to his judgment. He, however, encouraged and patronised the artists Praxiteles, Lysippus, and Apelles; and his munificent presents to Aristotle, to enable him to pursue his inquiries in natural history, were very serviceable to science. Alexander also exhibited that unequivocal test of strong intellect, a disposition to employ and reward men of talents in every department of knowledge. In person this extraordinary individual was of the middle size, with a neck somewhat awry, but possessed of a fierce and majestic countenance.—It may not be amiss, before concluding this sketch, to consider for a moment the circumstances connected with the death of this celebrated leader. His decease has usually been ascribed either to excess in drinking or to poison. Neither of these suppositions appears to be correct. The fever to which he fell a victim (for the Royal Diary whence Arrian has copied his account of the last illness of Alexander, speaks ex-

pressly of a violent fever having been the cause of his decease) was contracted very probably in his visit to the marshes of Assyria. The thirst which subsequently compelled him, on a public day, to quit his military duties, proves that this fever was raging in his veins before it absolutely overcame him. The carousals in which he afterward indulged must have seriously increased the disease. Strong men like Alexander have often warded off attacks of illness by increased excitement; but, if this fail to produce the desired effect, the reaction is terrible. It is curious to observe, in Arrian's account of Alexander's last illness, that no physician is mentioned. The king seems to have trusted to two simple remedies, abstinence and bathing. His removal to a summer-house, close to the large cold bath, shows how much he confided in the latter remedy. But the extraordinary fatigues which he had undergone, the exposure within the last three years to the rains of the *Pendjab*, the marshes of the Indus, the burning sands of Gedrosia, the hot vapours of Susiana, and the marsh miasma of the Babylonian Lakes, proved too much even for his iron constitution. The numerous wounds by which his body had been perforated, and especially the serious injury done to his lungs by an arrow among the Malli, must in some degree have impaired the vital functions, and enfeebled the powers of healthy reaction. (*Plut., Vit. Alex.—Arrian, Exp. Alex.—Quintus Curtius.—Diod. Sic., 17 et 18—Encyclop. Americ., vol. 1, p. 151, seqq.—Biogr. Univ., vol. 1, p. 195.—Williams's Life of Alexander the Great, p. 346, &c., Am. ed.*)—After many dissensions and bloody wars among themselves, the generals of Alexander laid the foundations of several great empires in the three quarters of the globe. Ptolemy seized Egypt, where he firmly established himself, and where his successors were called Ptolemies, in honour of the founder of their empire, which subsisted till the time of Augustus. Seleucus and his posterity reigned in Babylon and Syria. Antigonus at first established himself in Asia Minor, and Antipater in Macedonia. The descendants of Antipater were conquered by the successors of Antigonus, who reigned in Macedonia till it was reduced by the Romans in the time of King Perseus. Lysimachus made himself master of Thrace; and Leonatus, who had taken possession of Phrygia, meditated for a while to drive Antipater from Macedonia. Eumenes established himself in Cappadocia, but was soon overpowered by his rival Antigonus, and starved to death. During his lifetime, Eumenes appeared so formidable to the successors of Alexander, that none of them dared to assume the title of king.

ALEXANDER IV., son of Alexander the Great and Roxana. He was born after his father's death, and was proclaimed king while yet an infant, along with Philip Arideus, an illegitimate brother of Alexander the Great. Soon after, however, he was put to death, together with Roxana, by Cassander, who thereupon assumed the sovereign power. (*Justin, 15, 2.*)

ALEXANDER V., son of Cassander. He ascended the throne of Macedonia along with his brother Antipater, B.C. 298. Antipater, however, having put to death Thessalonica, their mother, Alexander, in order to avenge his parent, called in the aid of Demetrius, son of Antigonus. A reconciliation, however, having taken place between the brothers, Demetrius, who was apprehensive lest this might thwart his own views on the crown of Macedon, slew Alexander and seized upon the royal authority. (*Justin, 16, 1.*)

2. Kings of Epirus.

ALEXANDER I., surnamed Molossus, was brother of Olympias, and successor to Arybas. He came into Italy to aid the Tarentines against the Romans, and used to say, that while his nephew, Alexander the Great, was warring against women (meaning the ef-

feminate nations of the east), he was fighting against men. (*Justin*, 17, 3.—*Liv.*, 8, 17, et 27.) As regards the circumstances connected with his death, *vid.* Achéron, II.

ALEXANDER II., son of the celebrated Pyrrhus. To avenge the death of his father, who had been slain at Argos, fighting against Antigonus, he seized upon Macedonia, of which the latter was king. He was soon, however, driven out, not only from Macedonia, but also from his own dominions, by Demetrius, son of Antigonus. Taking refuge, on this, among the Acarnanians, he succeeded, by their aid, in regaining the throne of Epirus. (*Justin*, 26, 3.—*Id.*, 28, 1.—*Plut.*, *Vit. Pyrr.*, 34.)

3. Kings of Syria.

ALEXANDER I., surnamed Bala or Balas, a man of low origin, but of great talents and still greater audacity, who claimed to be the son of Antiochus Epiphanes, assumed the name of Alexander, and being acknowledged by Ptolemy Philometor, Ariarathes, and Attalus, seized upon the throne of Syria. He was afterward defeated and driven out by Demetrius Nicator, the lawful heir; and, having taken refuge with an Arabian prince, was put to death by the latter. (*Justin*, 35, 1, *seq.*)

ALEXANDER II., surnamed Zabina the Slave, a usurper of the throne of Syria. He was the son of a petty trader in Alexandria, but claimed, at the instigation of Ptolemy VII., to have been adopted by Antiochus VIII. Ptolemy aided him with troops, and Demetrius Nicator was defeated at Damascus, and driven out of his kingdom. A few years after, however, Alexander was himself defeated by Antiochus Grypus, aided in his turn by the same Ptolemy, and put to death. Grypus was son of Demetrius Nicator. (*Justin*, 39, 1 *seq.*)

4. Princes of Judæa.

ALEXANDER I., JANNÆUS, monarch of Judæa, son of Hyrcanus, and brother of Aristobulus, to whom he succeeded, B.C. 106. He was a warlike prince, and displayed great ability in the different wars in which he was engaged during his reign. Driven from his kingdom by his subjects, who detested him, he took up arms against them, and waged a cruel warfare for the space of six years, slaying upward of 50,000 of his foes. Having at last re-entered Jerusalem, he crucified, for the amusement of his concubines, 800 of his revolted subjects, and at the same time caused their wives and children to be massacred before their eyes. Being re-established on the throne, he made various conquests in Syria, Arabia, and Idumæa, and finally died of intemperance at Jerusalem, B.C. 76, after a reign of 27 years. (*Josephus*, *Ant. Jud.*, 17, 22, &c.)

ALEXANDER II., son of Aristobulus II., was made prisoner, along with his father, by Pompey, but managed to escape while being conducted to Rome, raised an army, and made some conquests. Hyrcanus, son of Alexander Jannæus, being then on the throne, solicited the aid of the Romans, and Marc Antony being sent by Gabinus, defeated Alexander near Jerusalem. After standing a siege for some time in the fortress Alexandreion, he obtained terms of peace; but not long after, having taken up arms for Cæsar, who had released his father, he fell into the hands of Metellus Scipio, and was beheaded at Antioch. (*Josephus*, *Antiq. Jud.*, 14, 13.)

ALEXANDER III., son of Herod the Great, put to death by his father, along with Aristobulus his brother, on false charges brought against them by Pheroras their uncle, and Salome their aunt. (*Josephus*, *Antiq. Jud.*, 16, 17.)

5. Kings of Egypt.

ALEXANDER I., II., III., *vid.* Ptolemæus Ξ, X., XI.

6. Individuals.

ALEXANDER, I. tyrant of Phæræ in Thessaly, who seized upon the sovereign power, B.C. 368. He was of a warlike spirit, but, at the same time, cruel and vindictive, and his oppressed subjects were induced to supplicate the aid of the Thebans, who sent Pelopidas with an army. The tyrant was compelled to yield; but, having subsequently escaped from the power of the Theban commander, he reassembled an army, and Pelopidas having been imprudent enough to come to him without an escort, the tyrant seized and threw him into prison, where he was only released on the appearance of Epaminondas at the head of an armed force. By dint of negotiation, he now obtained a truce, but renewed his acts of violence and cruelty as soon as the Thebans had departed. Pelopidas marched against and defeated him, but lost his own life in the action. Stripped upon this of all his conquests, and restricted to the city of Phæræ, he no longer dared to carry on war by land, but turned his attention to piracy, and had even the audacity to pillage the Piræus or main harbour of Athens. He was assassinated at last by his wife Thebe. (*Val. Max.*, 9, 13.—*Corn. Nep.*, *Vit. Pelop.*—*Pausan.*, 6, 5.)—II. Lyncestes, was accused of being one of the conspirators in the plot against Philip of Macedon, which resulted in the death of that monarch. He was pardoned on account of his having been the first to salute Alexander, Philip's son, as king. Not long after, however, he was detected in a treacherous correspondence with Darius, and put to death. (*Justin*, 11, 2.)—III. Son of Polysperchon, at first a general on the side of Antigonus, after the death of Alexander the Great, and very active in driving out for him, from the Peloponnesus, the garrisons of Cassander. He afterward went over to Cassander, but was assassinated by some Sicyonians, after no long interval of time, at the siege of Dymæ.—IV. A famous impostor of Paphlagonia, who lived in the time of Lucian, under the Emperor Marcus Aurelius. By his artifices he succeeded in passing himself for a person sent by Æsculapius, and prevailed upon the Paphlagonians to erect a temple to this deity. As the priest and prophet of the god, he ran a long career of deception, a full account of which is given in the Supplement.—V. Severus, a Roman emperor. (*Vid.* Severus.)—VI. An Athenian painter, whose portrait appears on a marble tablet found at Resina in 1746, and stating the name and country of the artist. The age in which he lived is not known.—VII. A native of Acarnania. (*Vid.* Supplement.)—VIII. Ætolus. (*Vid.* Supplement.)—IX. A commander of horse in the army of Antigonus Doson. (*Vid.* Supplement.)—X. A son of Marc Antony and Cleopatra. (*Vid.* Supplement.)—XI. Brother of Molo. (*Vid.* Supplement.)—XII. A native of Cotyæum, in Phrygia, or, according to Suidas, of Miletus, who flourished in the second century of our era. He took the name of Cornelius Alexander, from his having been a slave of Cornelius Lentulus, who gave him his freedom, and made him the instructor to his children. He was surnamed Polyhistor, from the variety and multiplicity of his knowledge. The ancient writers cite one of his works in forty books, each one of which appears to have contained the description of some particular country, and to have had a separate title, such as *Διγενειακά*, *Καριακά*, &c. Pliny often refers to him. It is probable that he was the author of a work entitled *Θαυμασίων αναγωγή*, "A collection of wonderful things," of which Photius speaks as the production of an individual named Alexander, without designating him any farther. This work contained accounts of animals, plants, rivers, &c. (*Schöll, Hist. Litt. Gr.*, vol. 5, p. 276, *seq.*)—XIII. A native of Ægæ in Achaia, the disciple of Xenocrates, and, as is thought, of Sosigenes. He was one of the instructors of the Emperor Nero. Some critics regard him as the author of the

commentary on Aristotle, which commonly passes under the name of Alexander of Aphrodisia. (*Schöll, Hist. Lat. Gr.*, vol. 5, p. 156.)—XIV. A native of Aphrodisia in Caria, who flourished in the beginning of the third century. He is regarded as the restorer of the true doctrine of Aristotle, and he is the principal peripatetic, after the founder of this school, who adopted the system of the latter in all its purity, without intermingling along with it, as Alexander of Ægæ and his disciples did, the precepts of other schools. He was surnamed, by way of compliment, Ἑρμηνεύτης, *Exegetes* ("the interpreter," or "expounder"), and became the head of a particular class of Aristotelian commentators, styled "Alexandreans." He wrote, 1. A treatise on Destiny and Free Agency (*Περὶ Εἰκαυμένης καὶ τοῦ ἐξ ἑαυτοῦ*), a work held in high estimation, and which the author addressed to the emperors Septimius Severus and Antoninus Caracalla. In it he combats the Stoic dogma, as hostile to free agency, and destructive, in consequence, of all morality. The best edition of this work is that printed at London, in 1658, 12mo. It is inserted also, with new corrections, in the 3d vol. of Grotius's Theological Works, *Amst.*, 1679, fol. 2. A commentary on the first book of the first Analytics of Aristotle, Gr., fol., *Venet.*, 1489, and 4to., *Florent.*, 1521. Translated into Latin by Felicianus, fol., *Venet.*, 1542, 1546, and 1560. 3. A commentary on the eight books of the Topica, fol., *Venet.*, 1513 and 1526. A Latin translation by Dorotheus, which appeared for the first time in 1524, fol., *Venet.*, has been often reprinted. In 1563, a translation by Rasarius appeared, fol., *Venet.*, which is preferable to the other. 4. Commentaries on the Elenchi sophistici of Aristotle, Gr., fol., *Venet.*, 1520, and 4to., *Florent.*, 1552. Translated into Latin by Rasarius, *Venet.*, 1557. 5. A commentary on the twelve books of the metaphysics of Aristotle. The Greek text has never been printed, although there are many MS. copies in the Royal Library at Paris, and other libraries. A Latin translation, however, by Sepulveda, appeared at Rome, 1527, in fol., and has been often reprinted. 6. A commentary on Aristotle's work *De Sensu*, &c., Gr., at the end of Simplicius's commentary on the work of Aristotle respecting the Soul, fol., *Venet.*, 1527. 7. A commentary on the Meteorologica of Aristotle, Gr., fol., *Venet.*, 1527, and in the Latin of Alex. Piccolomini, fol., 1540, 1548, 1575. 8. A treatise *περὶ αἰσῆος* (*De Mistione*), directed against the dogma of the Stoics respecting the penetrability of bodies, Gr., with the preceding. Two Latin translations have appeared, one by Caninius, *Venet.*, 1555, fol., and the other by Schegk, *Tubing.*, 1540, 4to. 9. A treatise on the Soul, in two books, or, more correctly speaking, two treatises on this subject, since there is little if any connexion between these books. Gr., at the end of Themistius; and in Latin by Donati, *Venet.*, 1502, fol. 10. *Physica Scholia*, &c. (*Φυσικῶν σχολίων, ἀποριῶν, καὶ λύσεων, βιβλία δ'*). Gr., fol., *Venet.*, 1536, and in Latin by Bagolinus, *Venet.*, 1541, 1549, 1555, 1589. 11. *Problemata Medica*, &c., the best Greek edition of which is in Sylburgius's works of Aristotle; this is attributed by some to Alexander Trallianus. 12. A treatise on Fevers; never published in Greek, but translated by Valla, and inserted in a collection of various works, *Venet.*, 1488. For medical works *Vid. Supplement.*—XV. A native of Myndus, quoted by Athenæus. (*Compare Meurs., Bibl., in Thes. Gronov.*, vol. 10, p. 1208, *seqq.*) He is supposed by some to be the same with the writer mentioned by Athenæus under the name of Alexon. (*Schweigh., Index Auct. ad Athen.*—*Op.*, vol. 9, p. 24, *seqq.*)—XVI. A native of Tralles, who lived in the sixth century, and distinguished himself as a physician. He wrote several treatises on medicine, some of which are extant, and have been published at different times; namely, a Greek edition, fol., *Paris*,

1548; a Latin edition among the "*Medicæ artis Principes*," fol., *Paris*, 1567, &c. Alexander Trallianus is a most judicious, elegant, and original author. No medical writer, whether of ancient or modern times, has treated of diseases more methodically than he has done; for, after all the Nosological systems which have been proposed and tried, we can name none more advantageous to the student than the method adopted by him, of treating of diseases according to the part of the body which they affect, beginning with the head and proceeding downward. The same plan is pursued in the third book of Paulus Ægineta, who has copied freely from Alexander. Of the ancient medical writers subsequent to Galen, Alexander shows the least of that blind deference to his authority for which all have been censured: nay, in many instances he ventures to differ from him; not, however, apparently from a spirit of rivalry, but from a commendable love of truth. In his eleventh book, he has given the fullest account of the causes, symptoms, and treatment of gout which is to be met with in any ancient writer; and as it contains many things not to be met with elsewhere, it deserves to be carefully studied. He judiciously suits the treatment to the circumstances of the case, but his general plan of cure appears to have consisted in the administration of purgative medicines, either cathartic salts or drastic purgatives, such as scammony, aloes, and hermodactylus. The last-mentioned medicine was most probably a species of *Colchicum Autumnale*, which forms the active ingredient of a French patent medicine called *L'Eau Medicinale d'Hyssop*, much celebrated some years ago for the cure of gout and rheumatism. Dr. Haden lately published a small pamphlet, wherein *Colchicum* was strongly recommended as an antiphlogistic remedy of great powers. The writers, both Greek and Arabian, subsequent to Alexander Trallianus, repeat the praises bestowed by him upon the virtues of hermodactylus. Demetrius Pepagomenos has written a professed treatise to recommend this medicine in gout.—The style of Alexander, although less pointed than that of Celsus, and less brilliant than that of Aretæus, is remarkable for perspicuity and elegance. It must be mentioned with regret, however, as a lamentable instance of a sound judgment being blinded by superstition, that our author had great confidence in charms and amulets. Such weakness is to be bewailed, but need not be wondered at, when we recollect that Wiseman, one of the best English authorities on surgery, had great confidence in the royal touch for the cure of Scrofula.—XVII. Isus. (*Vid. Supplement.*)—XVIII. Lychnus. (*Vid. Supplement.*)—XIX. Myndius. (*Vid. Supplement.*)—XX. Noumenus. (*Vid. Supplement.*)—XXI. A Greek rhetorician. (*Vid. Supplement.*)—XXII. Philalethes. (*Vid. Supplement.*)—XXIII. A Roman usurper. (*Vid. Supplement.*)—XXIV. Tiberius. (*Vid. Supplement.*)

ALEXANDREA (less correctly Alexandria, *Burmamn, ad Propert.*, 3, 9, 33—*Ursin., ad Cic., Ep. ad Fam.*, 4, 2, 10.—*Fea, ad Horat., Od.*, 4, 14, 35), the name of eighteen cities, founded by Alexander during his conquests in Asia, among which the most deserving of mention are the following: I. The capital of Egypt, under the Ptolemies, built B.C. 332. It was situate about 12 miles to the west of the Canopic mouth of the Nile, between the Lake Mareotis and the beautiful harbour formed by the Isle of Pharos. It was the intention of its founder to make Alexandria at once the seat of empire and the first commercial city in the world. The latter of these plans completely succeeded; and for a long period of years, from the time of the Ptolemies to the discovery of the Cape of Good Hope, the capital of Egypt was the link of connexion between the commerce of the east and west. The goods and other articles of traffic were brought up the Red Sea, and landed at one of three different points

Of these, the first was at the head of the western gulf of the Red Sea, where the canal of Neco commenced, and where stood the city of Arsinoë or Cleopatris. This route, however, was not much used, on account of the dangerous navigation of the higher parts of the Red Sea. The second point was the harbour of Myos Hormus, in latitude 27°. The third was Berenice, south of Myos Hormus, in latitude 23° 30'. What the ships deposited at either of the last two places, the caravans brought to Coptos on the Nile, whence they were conveyed to Alexandria by a canal connecting this capital with the Canopic branch. Between Coptos and Berenice a road was constructed by Ptolemy Philadelphus, 258 miles in length. Ptolemy, the son of Lagus, who received Egypt in the general division, improved what Alexander had begun. On the long, narrow island of Pharos, which is very near the coast, and formed a port with a double entrance, a magnificent tower of white marble was erected, to serve as a beacon and guide for navigators. The architect was Sostratus of Cnidus.—The first inhabitants of Alexandria were a mixture of Egyptians and Greeks, to whom must be added numerous colonies of Jews, transplanted thither in 336, 320, and 312 B.C., to increase the population of the city. It was they who made the well-known Greek translation of the Old Testament, under the name of Septuaginta, or the Septuagint.—The most beautiful part of the city, near the great harbour, where stood the royal palaces, magnificently built, was called *Bruchion*. There was the large and splendid edifice, belonging to the academy and Museum, where the greater portion of the royal library (400,000 volumes) was placed; the rest, amounting to 300,000, were in the Serapion, or temple of Jupiter Serapis. The larger portion was burned during the siege of Alexandria by Julius Cæsar, but was afterward in part replaced by the library of Pergamus, which Antony presented to Cleopatra. The Museum, where many scholars lived and were supported, ate together, studied, and instructed others, remained unhurt till the reign of Aurelian, when it was destroyed in a period of civil commotion. The library in the Serapion was preserved to the time of Theodosius the Great. He caused all the heathen temples throughout the Roman empire to be destroyed; and even the splendid temple of Jupiter Serapis was not spared. A crowd of fanatic Christians, headed by their archbishop, Theodosius, stormed and destroyed it. At that time, the library, it is said, was partly burned, partly dispersed; and the historian Orosius, towards the close of the fourth century, saw only the empty shelves. The common account, therefore, is an erroneous one, which makes the library in question to have been destroyed by the Saracens, at the command of the Calif Omar, A.D. 642, and to have furnished fuel during six months to the 4000 baths of Alexandria. This narrative rests merely on the authority of the historian Abulpharagius, and has no other proof at all to support it. But, whatever may have been the cause of this disastrous event, the loss resulting to science was irreparable. The Alexandrian library, called by Livy "*Elegantia regum curaque egregium opus*," embraced the whole Greek and Latin literature, of which we possess but single fragments.—In the division of the Roman dominions, Alexandria, with the rest of Egypt, was comprehended in the Eastern empire. The Arabs possessed themselves of it in 640; the Calif Motawakel, in 845, restored the library and academy; but the Turks took the city in 868, and it declined more and more, retaining, however, a flourishing commerce, until, as has already been remarked, the Portuguese, at the end of the 15th century, discovered a way to the East Indies by sea.—The modern city, called in Turkish *Scanderia*, does not occupy the site of the old town, of which nothing remains except a portico in the vicinity of the gate lead-

ing to Rosetta, the southwestern amphitheatre, the obelisk, or needle of Cleopatra, and Pompey's pillar, 88 feet 6 inches high, which, according to an English writer (*Walpole's Collection*, vol. 1, p. 380), was erected by Pompeius, governor of part of Lower Egypt, in honour of the Emperor Dioclesian. The equestrian statue on the top is no longer standing. (*Mannert*, 10, pt. 1, p. 611, *seqq.*—*Encyclop. Americ.*, vol. 1, p. 162, *seqq.*)—II. A city of Sogdiana, on the river Iaxartes, to the east of Cyropolis. It was founded by Alexander on the farthest limits of his Scythian expedition, and hence it was also called *Alexandreschata* (*Ἀλεξανδρόσχητα*, i. e., *Ἀλεξάνδρεια ἐσχάτη*: Alexandria Ultima).—III. A city of Arachosia, near the confines of India; now *Scanderie of Arokhage*, or *Vahend*.—IV. A city of India, at the junction of the Indus and Acesines; now, according to some, *Lahor*, but, according to others, *Veh*.—V. A city in the vicinity of the range of Paropamisus, on the east side of the Coas.—VI. A city of Aria, at the mouth of the river Arius; now *Corra*.—VII. A city of Carmania, near Sabis.—VIII. A city of Gedrosia; now *Hormoz*, or *Houz*.—There were several other cities of the same name, called after Alexander, though not founded by him. Among these may be mentioned the following.—IX. *Troas* (*Ἀλεξάνδρεια ἡ Τρωάς*), a city on the western coast of Mysia, above the promontory of Lectum. It was more commonly called *Alexandrea*; sometimes, however, *Troas*. (*Act. Apost.*, 16, 8.—*Ilin. Ant.*, p. 334.) The place owed its origin to Antigonus, who gave it the name of Antigonia Troas. After the fall of Antigonus, the appellation was changed to Alexandria Troas by Lysimachus, in honour of Alexander. Antigonus had already increased its population by sending thither the inhabitants of Cebrene, Neandria, and other towns; and it received a farther increase under Lysimachus. Under the Romans it acquired still greater prosperity, and became one of the most flourishing of their Asiatic colonies. (*Strab.*, 593.—*Pliny*, 5, 30.) In the Acts of the Apostles it is simply called Troas, and it was from its port that St. Paul and St. Luke set sail for Macedonia (16, 11). We are informed by Suetonius (*Vit. Cæs.*, 79), that Julius Cæsar once had it in contemplation to transfer the seat of empire to this quarter; a plan far from happy, since the port was not large, and the fertility of the surrounding country not at all such as to warrant the attempt. The same idea, however, is said to have been entertained by Augustus. (*Faber, Epist.*, 2, 43.—Compare the commentators on Horace, *Od.*, 3, 3.) In a later age, Constantine actually commenced building a new capital here, but the superior situation of Byzantium soon induced him to abandon the undertaking. (*Zosimus*, 2, 30, p. 151, *seqq.*, *ed. Reitemeier*.—Compare *Zonaras*, 13, 3.) Augustus, when he gave over the design just alluded to, still sent a Roman colony to this place, and hence the language used by Strabo (13, p. 594, *ed. Casaub.*), *τῇ δὲ καὶ Ῥωμαίων ἀποικίαν δέδεκται*. (Compare *Plin.*, 5, 30.—*Cælius*, in *leg.* 7, *dig.* de *Cens.*) The ruins of this city are called by the Turks *Eski* (Old) *Stamboul*. (*Mannert*, 6, pt. 3, p. 473, *seqq.*)—X. *Ad Issum* (*κατὰ Ἴσσον*), a city of Syria, on the coast of the Sinus Issicus, about sixteen miles from Issus in Cilicia. The founder is unknown. The *Ilin. Hieros.* (p. 580) gives it the name of *Alexandrea Scabiosa*. (Compare *Chron. Alexandr.*, p. 170, where the appellation is given as *Gabiosa*.) The modern *Scanderoon*, or *Alexandretta*, occupies the site of the ancient city.

ALEXANDREA ULTIMA. *Vid.* Alexandria, II.

ALEXANDRIARÆ, according to some, the limits of Alexander's victories near the Tanais. This, however, is all a mere fable of the ancients, who made Alexander to have crossed the Tanais, and approached what they considered the limits of the world in that quarter.

(*Mannert*, 4, p. 159 and 256.) For the true Alexandri Aræ, *vid.* Hyphasis.

ALEXANDRI CASTRA (ἡ Ἀλεξανδρῶν παρεμβολή), a place in Marmarica, at the Oasis of Ammon, where the Macedonian forces were encamped while Alexander was consulting the oracle. (*Ptol.*)

ALEXANDRI INSULA, an island in the Sinus Persicus, on the Persian coast. (*Ptol.—Plin.*, 6, 25.)

ALEXANDRI PORTUS, a harbour of Gedrosia, where the fleet of Nearchus was detained four weeks by adverse winds. (*Arrian, Indic.*, 22.) It was in the immediate vicinity of Eirus Promontorium, or Cape Monce. (Compare *Vincent's Commerce of the Ancients*, vol. 1, p. 197.)

ALEXANDRINÆ AQUÆ, baths in Rome, built by the Emperor Alexander Severus.

ALEXANDRINA SCHOLA. When the flourishing period of Greek poetry was past, study was called in to supply what nature no longer furnished: Alexandria in Egypt was made the seat of learning by the Ptolemies, admirers of the arts, whence this age of literature took the name of the *Alexandrian*. Ptolemy Philadelphus founded the famous library of Alexandria, the largest and most valuable one of antiquity, which attracted many scholars from all countries; and also the Museum, which may justly be considered the first academy of sciences and arts. (*Vid.* Alexandria.) The grammarians and poets are the most important among the scholars of Alexandria. These grammarians were philologists and literati, who explained things as well as words, and may be considered a kind of encyclopedists. Such were Zenodotus the Ephesian, who established the first grammar-school in Alexandria, Eratosthenes of Cyrene, Aristophanes of Byzantium, Aristarchus of Samothrace, Crates of Mallus, Dionysius the Thracian, Apollonius the Sophist, and Zoilus. Their merit is to have collected, examined, reviewed, and preserved the existing monuments of intellectual culture. To them we are indebted for what is called the *Alexandrian Canon*, a list of the authors whose works were to be regarded as models in the respective departments of Grecian literature. The names composing this *Canon*, with some remarks upon its claims to attention, will be given at the close of the present article.—To the poets of the Alexandrian age belong Apollonius the Rhodian, Lycophron, Aratus, Nicander, Euphorion, Callimachus, Theocritus, Philetas, Phanocles, Timon the Phliasian, Scymnus, Dionysius, and seven tragic poets, who were called the Alexandrian Pliades. The Alexandrian age of literature differed entirely, in spirit and character, from the one that preceded. Great attention was paid to the study of language; correctness, purity, and elegance were cultivated; and several writers of this period excel in these respects. But that which no study can give, the spirit which filled the earlier poetry of the Greeks, is not to be found in most of their works. Greater art in composition took its place; criticism was now to perform what genius had accomplished before. But this was impossible. Genius was the gift of only a few, and they soared far above their contemporaries. The rest did what may be done by criticism and study; but their works are tame, without soul and life, and those of their disciples, of course, still more so. Perceiving the want of originality, but appreciating its value, and striving after it, they arrived the sooner at the point where poetry is lost. Their criticism degenerated into a disposition to find fault, and their art into subtlety. They seized on what was strange and new, and endeavoured to adorn it with learning. The larger part of the Alexandrians, commonly grammarians and poets at the same time, are stiff and laborious versifiers, without genius.—Besides the Alexandrian school of poetry, one of philosophy is also spoken of, but the expression is not to be understood too strictly. Their dis-

tinguishing character arises from this circumstance, that, in Alexandria, the eastern and western philosophy met, and an effort took place to unite the two systems; for which reason the Alexandrian philosophers have often been called Eclectics. This name, however, is not applicable to all. The New Platonists form a distinguished series of philosophers, who, renouncing the skepticism of the New Academy, endeavoured to reconcile the philosophy of Plato with that of the East. The Jew Philo, of Alexandria, belongs to the earlier New Platonists. Plato and Aristotle were diligently interpreted and compared in the 1st and 2d centuries after Christ. Ammonius the Peripatetic belongs here, the teacher of Plutarch. But the real New Platonic school of Alexandria was established at the close of the 2d century after Christ by Ammonius of Alexandria (about 193 A. D.), whose disciples were Plotinus and Origen. Being for the most part Orientals, formed by the study of Greek learning, their writings are strikingly characterized, e. g., those of Ammonius Saccas, Plotinus, Iamblicus, Porphyrius, by a strange mixture of Asiatic and European elements, which had become amalgamated in Alexandria, owing to the mingling of the eastern and western race in its population, as well as to its situation and commercial intercourse. Their philosophy had a great influence on the manner in which Christianity was received and taught in Egypt. The principal Gnostic systems had their origin in Alexandria. The leading teachers of the Christian catechetical schools, which had risen and flourished together with the eclectic philosophy, had imbibed the spirit of this philosophy. The most violent religious controversies disturbed the Alexandrian church, until the orthodox tenets were established in it by Athanasius in the controversy with the Arians.—Among the scholars of Alexandria are to be found great mathematicians, as Euclid, the father of scientific geometry; Apollonius of Perga in Pamphylia, whose work on Conic Sections still exists; Nicomachus, the first scientific arithmetician; astronomers, who employed the Egyptian hieroglyphics for marking the northern hemisphere, and fixed the images and names (still in use) of the constellations; who left astronomical writings (e. g., the *Phænomena* of Aratus, a didactic poem, the *Sphærica* of Menelaus, the astronomical works of Eratosthenes, and especially the *Magna Syntaxis* of the geographer Ptolemy), and made improvements in the theory of the calendar, which were afterward adopted into the Julian calendar: natural philosophers, anatomists, as Herophilus and Erasistratus; physicians and surgeons, as Demosthenes Philalethes, who wrote the first work on diseases of the eye; Zopyrus and Cratevas, who improved the art of pharmacy and invented antidotes; instructors in the art of medicine, to whom Asclepiades, Soranus, and Galen owed their education: medical theorists and empirics, of the sect founded by Philirus. All these belonged to the numerous associations of scholars continuing under the Roman dominion, and favoured by the Roman emperors, which rendered Alexandria one of the most renowned and influential seats of science in antiquity.—The best work on the learning of Alexandria is the prize-essay of Jacob Matter; *Essai Historique sur l'Ecole d'Alexandrie*, Paris, 1819, 2 vols. (*Encyclop. Americ.*, vol. 1, p. 164, *seqq.*)—We alluded, near the commencement of the present article, to the literary *Canon*, settled by the grammarians of Alexandria. We will now proceed to give its details, after some prefatory remarks respecting its merits. The canon of classical authors, as it has been called, was arranged by Aristophanes of Byzantium, curator of the Alexandrian library, in the reign of Ptolemy Evergetes; and his celebrated disciple Aristarchus. The daily increasing multitude of books of every kind had now become so great, that there was no expression, however faulty,

for which precedent might not be found; and as there were far more bad than good writers, the authority and weight of numbers was likely to prevail; and the language, consequently, to grow more and more corrupt. It was thought necessary, therefore, to draw a line between those classic writers, to whose authority an appeal in matter of language might be made, and the common herd of inferior authors. In the most cultivated modern tongues, it seems to have been found expedient to erect some such barrier against the inroads of corruption; and to this preservative caution are we indebted for the vocabulary of the Academicians della Crusca, and the list of authors therein cited as affording "*testi di lingua*." To this we owe the Dictionaries of the Royal Academies of France and Spain, of their respective languages; and Johnson's Dictionary of our own. But, as for the example first set in this matter by the Alexandrian critics, its effects upon their own literature have been of a doubtful nature. In so far as the canon has contributed to preserve to us some of the best authors included in it, we cannot but rejoice. On the other hand, there is reason to believe, that the comparative neglect into which those not received into it were sure to fall, has been the occasion of the loss of a vast number of writers, who would have been, if not for their language, yet for their matter, very precious; and who, perhaps, in many cases, were not easily to be distinguished, even on the score of style, from those that were preferred. (*Moore's Lectures*, p. 55, *seqq.*) The details of the canon are as follows: 1. *Epic Poets*. Homer, Hesiod, Pisanter, Panyasis, Antimachus. 2. *Iambic Poets*. Archilochus, Simonides, Hipponax. 3. *Lyric Poets*. Aleman, Alcæus, Sappho, Stesichorus, Pindar, Bacchylides, Ibycus, Anacreon, Simonides. 4. *Elegiac Poets*. Callinus, Mimnermus, Philetas, Callimachus. 5. *Tragic Poets*. (First Class): Æschylus, Sophocles, Euripides, Ion, Achæus, Agathon. (Second Class, or Tragic Pleiades): Alexander the Ætolian, Philiscus of Coreyra, Sosithesus, Homer the younger, Æantides, Sosiphanes or Sosicles, Lycophron. 6. *Comic Poets*. (Old Comedy): Epicharmus, Cratinus, Epholus, Aristophanes, Pherecrates, Plato. (Middle Comedy): Antiphanes, Alexis. (New Comedy): Menander, Philpides, Diphilus, Philemon, Apollodorus. 7. *Historians*. Herodotus, Thucydides, Xenophon, Theopompus, Ephorus, Philistus, Anaximenes, Calhisthenes. 8. *Orators*. (The ten Attic Orators) Antiphon, Andocides, Lysias, Isocrates, Isæus, Æschines, Lycurgus, Demosthenes, Hyperides, Dinarchus. 9. *Philosophers*. Plato, Xenophon, Æschines, Aristotle, Theophrastus. 10. *Poetic Pleiades*. (Seven poets of the same epoch with one another) Apollonius the Rhodian, Aratus, Philiscus, Homer the younger, Lycophron, Nicander, Theocritus. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 186, *seqq.*)

ALEXANDROPOLIS, a city of Parthia, probably east of Nisæa, built by Alexander the Great. (*Plin.*, 6, 25.)

ALEXARCHUS, a Greek historian, *vid.* SUPPLEMENT.

ALEXICÆUS, an epithet applied to various deities, particularly to Jupiter, Apollo, Hercules, &c. It means "an averter of evil," and is derived from ἀλεξέω, "to avert," or "ward off," and κακόν, "evil." Another Greek term of the same import is ἀποτροπαῖος, and analogous to both is the Latin *averruncus*. (Consult *Fischer*, ad *Aristoph.*, *Plut.*, 359.)

ALEXIAS, a Greek physician, *vid.* SUPPLEMENT.

ALEXINUS, a native of Elis, the disciple of Eubulides, and a member of the Megaric sect. He set himself in array against almost all of his contemporaries that were in any way distinguished for talent, such as Aristotle, Zeno, Menedemus, Stilpo, and the historian Ephorus, and from his habit of finding fault with others was nicknamed *Elexinus* (Ἐλέγξινος), or "the fault-finder." In particular, he vented the most calumnious imputations against Aristotle, and wrote a work

containing pretended conversations between Philip and Alexander of Macedon, in which the character of the Stagirite was very rudely assailed. Full of vanity and self-conceit, he retired to Olympia for the purpose, as he gave out, of establishing a sect to which he wished to give the appellation of *Olympiac*; the unhealthy state of the neighbourhood, and its deserted condition, except at the period of the games, caused his disciples to abandon him. He died in consequence of being wounded in the foot by the point of a reed, as he was bathing in the Alpheus. (*Diog. Laert.*) Alexinus and his preceptor Eubulides are only known as the authors of certain captious questions (ἀλυστα) which they levelled at their antagonists. (*Diog. Laert.*, 2, 108, *seqq.*—*Cic.*, *Acad.*, 4, 29.)

ALEXION, a physician, intimate with Cicero. (*Cic.*, ad *Att.*, 13, ep. 25.)

ALEXIS, I. a comic poet of Thurium, uncle on the father's side to Menander, and his instructor in the drama. (*Proleg. Aristoph.*, p. xxx.) He flourished in the time of Alexander the Great, and, according to Suidas, wrote 245 pieces for the stage (ἰδιόαγε δράματα σπέ). Athenæus calls him ὁ χαριεύς, "the gracefully sportive," and the extracts which he as well as Stobæus give from the productions of the poet appear to justify the appellation. If he did not invent the character of the *parasite*, he at least introduced it more frequently into his comedies, or portrayed it more successfully than any of his predecessors. The titles of several of his pieces have been preserved, besides the extracts which are given by Athenæus and Stobæus. (*Athen.*, 2, 59, f—*Schweigh.*, ad *Athen.*, l. c.) The remains of this poet are also to be found in the *Excerpta ex Trag. et Comœd. Gr.* of Grotius, Paris, 1626, 4to.—II. An artist mentioned by Pliny as one of the pupils of Polyclethus, but without any statement of his country or the works which he executed. (*Plin.*, 34, 8.)

ALFÊNUS, or PUBLIUS ALFÊNUS VARUS, a barber of Cremona, who, growing out of conceit with his line of business, quitted it and came to Rome. Here he attended the lectures of Servius Sulpicius, a celebrated lawyer of the day, and made so great proficiency in his studies as to become eventually the ablest lawyer of his time. His name often occurs in the Pandects. He was advanced to some of the highest offices in the empire, and was at last made consul, A.U.C. 755. (Compare the commentators on Horace, *Serm.*, 1, 3, 130.) In some editions of Horace, Alfenus is styled *Sutor*, "a shoemaker." Bentley, however, on the authority of two MSS., one of them a MS. copy of Aeron, changes the lection to *tensor*, "a barber. His emendation has been very generally adopted.

ALGIDUM, a town of Latium, on the Via Latina, situate in a hollow about twelve miles from Rome. Antiquaries seem to agree in fixing its position at l'Osteria dell' Aglio. (*Holstein, Adnot.*, p. 158.—*Vulp. Lat. Vet.*, 15, 1, p. 248.—*Nibby, Viag. Antiq.*, vol. 2, p. 62.)

ALGIDUS, a chain of mountains in Latium, stretching from the rear of the Alban Mount, and running parallel to the Tusculan Hills, being separated from them by the valley along which ran the Via Latina. The neighbourhood is remarkable for the numberless conflicts between the Roman armies and their unwearied antagonists the Æqui and Volsci. Mount Algidus, in fact, was advantageously placed for making inroads on the Roman territory, either by the Via Latina or the Via Laviniana. The woods of the bleak Algidus are a favourite theme with Horace. (*Od.*, 1, 21, 6—3, 23, 9—4, 4, 58.—*Cramer's Anct. Italy.*, vol. 2, p. 48.) This mountainous range was sacred to Diana (*Hor. Carm. Sec.*, 69) and to Fortune. (*Liv.*, 21, 62.)

ALIAMON. *vid.* IALIAMON.

ALIARTUS. *vid.* HALIARTUS.

ALIËNUS CÆCINA. *vid.* CÆCINA.

ALIMENTUS, C., a Roman historian, who flourished during the period of the second Punic war, of which he wrote an account in Greek. He was the author also of a biographical sketch, in Latin, of the Sicilian rhetorician Gorgias of Leontini, and of a work *De Re Militari*. This last-mentioned production is cited by Aulus Gellius, and is acknowledged by Vegetius as the foundation of his more elaborate commentaries on the same subject. (*Dunlop's Roman Lat.*, vol. 2, p. 25, in notis.)

ALINDA, a city of Caria, southeast of Stratonicea. It was a place of some note and strength, and was held by Ada, queen of Caria, at the time that Alexander undertook the siege of Halicarnassus. (*Arrian, Exp. Al.*, 1, 23.—*Strab.*, 657.) The site has been identified by many antiquaries with the modern *Moglah*, the principal town of modern Caria, but on what authority is not apparent. Another traveller, from the similarity of names, places it at *Alcina*, between *Moglah* and *Tshina*. (*Rennell's Geogr. of Western Asia*, vol. 2, p. 53.—*Cramer's Asia Minor*, vol. 2, p. 208.)

ALIPÍUS. *Vid.* Alypius.

ALIROTHIUS. *Vid.* Halirrothius.

ALLECTUS, a prætorian prefect, who slew Carausius in Britain, and took possession of his throne, holding it for three years, from 294 to 297 A.D. He was at last defeated and slain by Asclepiodotus, a general of Constantius Chlorus, who landed on the coast of the island with an army. (*Aurel. Vict.*, 39.)

ALLIA, a river of Italy, running down, according to Livy, from the mountains of Crustumium, at the eleventh milestone, and flowing into the Tiber. It was crossed by the Via Salaria, about four miles beyond the modern *Marigliano*, and is now the *Aia*. Cluverius (*Ital. Ant.*, vol. 1, p. 707) is mistaken when he identifies the Allia with the *Rio di Mosso*, as that rivulet is much beyond the given distance from Rome. (*Nibby, delle Vie degli Antichi*, p. 87.) On its banks the Romans were defeated by the Gauls under Brennus, July 17th, B.C. 387. Forty thousand Romans were either killed or put to flight. Hence in the Roman calendar, "Alliensis dies" was marked as a most unlucky day. (*Liv.*, 5, 37.—*Flor.*, 1, 13.—*Plut.*, *Vit. Cam.*) The true name of the river is Alia, with the first vowel short. Our mode of pronouncing and writing the name is derived from the poets, who lengthened the initial vowel by the duplication of the consonant. (*Niebuhr, Rom. Hist.*, vol. 2, p. 291, *Walzer's transl.*, in notis.)

ALLIENI FORUM. *Vid.* Forum, II.

ALLIFÉ, a town of Sannium, northwest of the Volturnus, the name of which often occurs in Livy. It was taken, according to that historian, by the consul Petilius, A.U.C. 429; and again by Rutilius. (*Liv.*, 8, 25.—*Id.*, 9, 38.) This place was famous for the large-sized drinking-cups made there. (*Horat.*, *Serm.*, 2, 8, 39.) The ancient site is occupied by the modern *Allife*. For a description of the numerous antiquities existing at *Allife*, consult *Trutta, Diss. sopr. le Antich. Alif.* (*Cramer's Anc. Italy*, vol. 2, p. 233.)

ALLOBRŒGES, a people of Gallia, between the Isara or *Isere*, and the Rhodanus or *Rhone*, in the country answering to *Dauphiné*, *Piedmont*, and *Savoie*. Their chief city was Vienna, now *Vienne*, on the left bank of the Rhodanus, thirteen miles below Lugdunum or *Lyon*. They were finally reduced beneath the Roman power by Fabius Maximus, who hence was honoured with the surname of Allobrogicus. (For the particulars of this war, consult *Thierry, Histoire des Gaulois*, vol. 2, p. 168, *seqq.*, and the authorities there cited.) At a later day we find the ambassadors of this nation at Rome, tampered with by Catiline, but eventually remaining firm in their allegiance. (*Sallust, Cat.*, 40, *seqq.*—*Cic.*, in *Cat.*, 3, 3, *seqq.*) The name *Allobroges* means "Highlanders," and is formed from *Al*,

"high," and *Broga*, "land." (*Adelung's Mithridates*, vol. 2, p. 50.)

ALLUCÍUS, a prince of the Celtiberi in Spain, whose affianced bride having fallen into the hands of Scipio Africanus, was restored to him uninjured by the Roman commander; an act of self-control rendered still more illustrious by reason of the surpassing beauty of the maiden. (*Liv.*, 26, 50.)

ALMO, a small river near Rome, falling into the Tiber. It is now the *Dachia*, a corruption of *Aqua d'Acio*. At the junction of this stream with the Tiber, the priests of Cybele, every year, on the 25th March, washed the statue and sacred things of the goddess. *Vid.* Lara. (*Ovid, Fast.*, 4, 337.—*Lucan*, 1, 600. Compare *Vales. et Lindetbr., ad Ammian. Marcell.*, 23, 3.—*Lucan*, ed. *Cort. et Weber*, vol. 1, p. 157, *seqq.*)

ALŌA, a festival at Athens, in the month Posideon (a month including one third of December and two thirds of January), in honour of Ceres and Bacchus. These deities were propitiated on this occasion, as by their blessing the husbandmen received the recompense of their toil and labour. The oblations, therefore, consisted of nothing but the productions of the earth. Hence Ceres was called *Alōas* (Ἀλωάς), *Alōis* (Ἀλωίς), and *Eualosia* (Εὐαλωσία). All these names are derived from the Greek ἄλωγ, "a threshing-floor." According to Philochorus (p. 86, *Fragm.*), the Aloa was a united festival in honour of Bacchus, Ceres, and Proserpina. (Compare *Corsini, Fast. Att.*, 2, p. 302.) We have written Ἀλωάς, &c., with the lenis in place of the aspirate, although the root be ἄλωγ. The un-aspirated form is, in fact, the earlier of the two, and the more likely, therefore, to be retained as a religious appellation. (Compare the remarks of *Bergler, ad Alcephron*, 1, ep. 33.) Reitz, however, favours the opposite form, though less correctly. (*Ad Luc.*, *Dial. Meretr.*, 1.) Creuzer gives Ἀλῶα for the name of the festival, as we have done. (*Symbolik*, vol. 4, p. 308.)

ALOËUS, I. son of Apollo and Circe. From him, through his son Epepus, was descended the Marathon, after whom the famous plain in Attica was named. (*Suid.*, s. v. *Μαραθῶν*.) Callimachus applied to this same Marathon, son of Apollo, the epithets of δῶνρογ, "all humid," and ἐνδρῶγ, "dwelling in the water" (*Suid.*, l. c.), a remark that will serve as an introduction to the explanation given by Creuzer to the fable of the Aloidae. *Vid.* Aloidae.—II. Son of Neptune and Canace. He married Iphimedia, the daughter of his brother Triops; but Iphimedia having a stronger attachment for Neptune than for her own husband, became by the former the mother of two sons, Otus and Ephialtes, whom Aloeus, however, brought up as his own (Homer makes them to have been nurtured by Earth), and who were hence called *Aloidae*. *Vid.* Aloidae. (*Hom.*, *Od.*, 11, 304, *seqq.*)

ALOÏDÆ (Ἀλωειδῶν), sons of Aloeus in name, but in reality the offspring of Neptune and Canace. (*Vid.* Aloeus, II.) They were two in number, Otus and Ephialtes, and, according to Homer (*Od.*, 11, 310, *seqq.*), were, in their ninth year, nine cubits in width and nine fathoms in height. At this early age, they undertook to make war upon heaven, with the intention of dethroning Jupiter; and, in order to reach the heavens, they strove to place Mount Ossa upon Olympus, and Pelion upon Ossa; but they were destroyed by Apollo before, to use the graphic language of Homer, "the dawn had bloomed beneath their temples, and had thickly covered their chin with a well-flowering beard." According to the animated narrative of the same bard, they would have accomplished their object had they made the attempt, not in childhood, but after having "reached the measure of youth." (*Od.*, l. c.) Such is the Homeric legend respecting the Aloidae, as given in the *Odyssey*. In the *Iliad* (5, 385) they are said to have bound Mars, and kept him captive for the

space of thirteen months, until Mercury "stole him away" (ἔξελκυσεν). Later writers add, of course, many other particulars. Apollodorus makes Ephialtes to have aspired to a union with Juno, and Otus with Diana. (Compare Nonnus, *Dionys.*, 48, 402.—*Hygin.*, *fab.*, 28.) He farther states, that Diana effected their destruction in the island of Naxos. She changed herself, it seems, into a hind, and bounded between the two brothers, who, in their eagerness each to slay the animal, pierced one another with their weapons (ἐφ' αὐτοὺς ἡκόντισαν). Diodorus Siculus (5, 51) gives an historical air to the narrative, making the two brothers to have held sway in Naxos, and to have fallen in a quarrel by each other's hand. (Compare *Pind.*, *Pyth.*, 4, 88, *ed. Böckh*, and the scholiast, *ad loc.*) Virgil assigns the Aloidae a place of punishment in Tartarus (*Æn.*, 6, 582), and some of the ancient fabulists make them to have been hurled thither by Jupiter, others by Apollo. So in the *Odyssey* (*l. c.*) they are spoken of as inhabiting the lower world, though no reason is assigned by the poet for their being there, except what we may infer from the legend itself, that they were cut off in early life, lest, if they had been allowed to attain their full growth, they might have obtained the empire of the skies. (*Heyne*, *ad Apollod.*, *l. c.*) Pausanias makes the Aloidae to have founded Ascrea in Bœotia, and to have been the first that sacrificed to the Muses on Mount Helicon (9, 29). Müller regards the Aloidae as the mythic leaders of the old Thracian colonies, heroes by land and sea. They appear in Pieria (at Aloum, near Tempe) and at Mount Helicon, and in both quarters have reference to the digging of canals and the draining of mountain- dales. (*Orchomenus*, p. 387.) Creuzer, on the other hand, sees in the fable of the Aloidae a figurative allusion to a contest, as it were, between the water and the land. Aloeus is "the man of the threshing-floor" (ἄλωρ), whose efforts are all useless on account of the infidelity of his spouse (the Earth, "the very wise one," ἰσὴ and μῆδορ). She unites against him with Neptune, and the sea thereupon begets the mighty energies of the tempests (Otus and Ephialtes), which darken the day (ἔστος, from ὥστος, "the horned owl," the bird of night), which brood heavily over the earth, and cause the waves of ocean to leap and dash upon the cultivated regions along the shore (Ἐοῦλάτης, from ἐπὶ, and ἄλλομαι, "to leap," as indicating "the one that attacks" or "leaps upon," the spirit that oppresses and torments, "the nightmare"). At last the god of day (Apollo) comes forth, and the storm ceases, first along the mountain-tops, and at last even on the shore. (*Creuzer*, *Symbolik*, vol. 2, p. 386.) If we adopt the other version of the fable, that the Aloidae were destroyed by Diana, the storm will then be hushed by the influence and changing of the moon.

ALOÏUM, a town of Thessaly, near Tempe. (*Steph. Byz.*, s. v. Ἀλώϊον.)

ALÖPE, I. daughter of Cercyon, king of Eleusis, and mother of Hippothoon by Neptune. She was put to death by her father, and her tomb is spoken of by Pausanias (1, 29). Hyginus says that Neptune, not being able to save her life, changed her corpse into a fountain (*fab.*, 187). The son, on having been exposed by order of his mother, was at first suckled by a mare (πῖπτος), whence his name Hippothoon; and was afterward taken care of and brought up by some shepherds. When he had attained to manhood, he was placed on his grandfather's throne by Theseus, who had slain Cercyon. (*Pausan.*, 1, 5, *ed. 39*.—*Hygin.*, *l. c.*)—II. A town of Thessaly, situate, according to *Steph. Byz.* (*s. v.* Ἀλόπη), between Larissa Cremaste and Echinus. (Compare *Strabo*, 432.—*Pomp. Mel.*, 2, 3.) It is probably the same with the Alitrope noticed by Seylax (p. 24), and retains its name on the shore of the Melian Gulf, below *Makalla*.—III. A town of the Locri Ozolæ, according to *Strabo* (427). It is, perhaps, no other than

the Olpæ of Thucydides (3, 101).—IV. A town of the Locri Opuntii, above Daphnus. It was here that, according to Thucydides, the Athenians obtained some advantages over the Locrians in a descent they made on this coast during the Peloponnesian war. (*Thucyd.*, 2, 26.)

ALOPEË, I. an island in the Palus Mæotis, near the mouth of the Tanais. *Strabo* and *Ptolemy* call it Alopecia (Ἀλωπεκία), but *Pliny* (4, 26) names it Alopece.—II. An island in the Cimærian Bosphorus, near Panticapæum. *Constantine Porphyrogenitus* (*de adm. imp.*, c. 42) calls it Atech (Ἀτέχ).—III. A borough of Attica, north of Hymettus, and near the Cynosarges, consequently close to Athens. According to *Herodotus* (5, 63), it contained the tomb of Anchemolius, a Spartan chief, who fell in the first expedition undertaken by the Spartans to expel the Pisistratidæ. According to *Æschines* (*in Timarch.*, p. 119), it was not more than eleven or twelve stadia from the walls of the city. This was the borough or demus of Socrates and Aristides. It was enrolled in the tribe Antiochis. (*Steph. Byz.*, s. v. Ἀλωπέκη). *Chandler* thought that he passed some vestiges belonging to it in his journey from Athens to Hymettus. (*Travels*, vol. 2, c. 30.)

ALOPECONNËSUS, a town on the northern coast of the Thracian Chersonese. It was an Æolian colony, according to *Scymnus* (p. 705), and it is mentioned as one of the chief towns of the Chersonese by *Demosthenes* (*de Cor.*, p. 256). It was taken by Philip, king of Macedon, towards the commencement of his wars with the Romans (*Liv.*, 31, 16). According to *Athenæus* (2, 60), truffles of excellent quality grew near it. The site of the ancient town still retains the name of *Alexi*. (*Mannert*, 7, p. 197.)

ALOS, or Halos, I. a city in Thessaly, situate near the sea, on the river Amphrysus. It was founded by Athamas, whose memory was here held in the highest veneration. (*Strab.*, 432.—*Herodot.*, 7, 197.) This place was called the "Phthiotic" or "Achaean" Alos, to distinguish it from another city of the same name among the Locri.—II. A city of the Locri Opuntii.

ALPËXUS, a town of the Locri Epicnemidii, south of Thermopylæ, whence, as *Herodotus* (7, 229) informs us, Leonidas and his little band drew their supplies. It is also called Alpeni (Ἀλπηνοί). This is probably the same town which *Æschines* names Alponus, since he describes it as being close to Thermopylæ. (*Æsch.*, *de Fals. Leg.*, p. 46.)

ALPES, a chain of mountains, separating Italia from Gallia, Helvetia, and Germania. Their name is derived from their height, *Alp* being the old Celtic appellation for a lofty mountain. (*Adelung*, *Mithridates*, vol. 2, p. 42.—Compare remarks under the article *Albion*, II.) They extend from the Sinus Planaticus, or *Gulf of Carnaro*, at the top of the Gulf of Venice, and the sources of the river Colapis, or *Kulpe*, to Vada Sabatia, or *Sarona*, on the Gulf of Genoa. The whole extent, which is in a crescent form, *Livy* makes only 250 miles, *Pliny* 700 miles. The true amount is nearly 600 British miles. They have been divided by both ancient and modern geographers into various portions, of which the principal are, 1. The Maritime Alps (Alpes Maritimæ), beginning from the environs of *Nice* (Nicaea), and extending to Mons Vesulus, *Monte Viso*. 2. The Cottian Alps (Alpes Cottiae), reaching from the last-mentioned point to *Mont Cenis*. (*Vid.* Cottius.) 3. The Graian Alps (Alpes Graiæ), lying between *Mont Isèran* and the *Little St. Bernard* inclusively. The name *Graiæ* is said to refer to the tradition of *Hercules* having crossed over them on his return from Spain into Italy and Greece. 4. The Pennine Alps (Alpes Penninæ), extending from the *Great St. Bernard* to the sources of the Rhone and Rhine. The name is derived from the Celtic *Penn*, "a summit," and not, as *Livy* and other ancient writers, together with some modern ones, pretend, from *Hannibal* having crossed

into Italy by this path, and who, therefore, make the orthography *Pocinæ*, from *Pocnus*. 5. The Rhetic or Tridentine Alps (Alpes Rheticae sive Tridentinae), from the *St. Gothard*, whose numerous peaks bore the name of Adula, to *Mont Brenner* in the *Tyrol*. 6. The Noric Alps (Alpes Noricae), from the latter point to the head of the river *Plavis*, or *la Piave*. 7. The Carnic or Julian Alps (Alpes Carnicae sive Juliae), terminating in the Mons Albus in the confines of Illyricum.—It was not till the reign of Augustus that the Alps became well known. That emperor finally subdued the numerous and savage clans which inhabited the Alpine valleys, and cleared the passes of the banditti that infested them. He improved the old roads and constructed new ones; and finally succeeded in establishing a free and easy communication through these mountains. (*Strab.*, 204.) It was then that the whole of this great chain was divided into the seven portions which have just been mentioned. Among the Pennine Alps is *Mont Blanc*, 14,676 feet high. The principal passes at the present day are, that over the Great St. Bernard, that over *Mont Simplicon*, and that over *Mont St. Gothard*. The manner in which Hannibal is said to have effected his passage over these mountains is now generally regarded as a fiction. (*Vid.* Hannibal, under which article some remarks will also be offered upon the route of the Carthaginian commander in crossing the Alps.) Besides the divisions of the Alps already mentioned, we sometimes meet with others, such as the Lepontine Alps (Alpes Lepontinae), between the sources of the Rhine and the Lacus Verbanus (*Lago Maggiore*); the Alps Summae (*Cæs.*, *B. G.*, 3, 1, and 4, 10), running off from the Pennine Alps, and reaching as far as the Lake Verbanus, &c.

ALPHESIBŒA, daughter of Phyeus, or Phegeus, king of Psophis in Arcadia, married Alcmaeon, son of Amphiaraus, who had fled to her father's court after the murder of his mother. She received, as a bridal present, the fatal collar and robe which had been given to Eriphyle, to induce her to betray her husband Amphiaraus. The ground, however, becoming barren on his account, Alcmaeon left Arcadia and his newly-married wife, in obedience to an oracle, and came, first to Calydon unto king Ceneus, then to the Thesprotii, and finally to the Achelous. Here he was purified by the river-god from the stain of his mother's blood, and married Callirhoë, the daughter of the stream. Callirhoë had two sons by him, and begged of him, as a present, the collar and robe, which were then in the hands of Alpheisbœa. He endeavoured to obtain them, under the pretence that he wished to consecrate them at Delphi; but the deception being discovered, he was slain by the two brothers of Alpheisbœa, who had lain in wait for him. Alpheisbœa, showing too much sorrow for the loss of her former husband, was conveyed by her brothers to Tegea, and given into the hands of Agapenor. The more usual name by which Alpheisbœa is known among the ancient fabulists, is Arsinœ. (*Apollod.*, 3, 7.—*Hyg.*, ad loc.)

ALPHEUS and ALPHEÏUS (Ἀλφειός and Ἀλφειός, the short penult marking the earlier, the long one the later and more usual, pronunciation), I, a river of Peloponnesus, flowing through Arcadia and Elis. It rose in the Laconian border of Arcadia, about five stadia from Asea, and mingled its waters, at its source, with those of the Eurotas. The united streams continued their course for the space of twenty stadia, when they disappeared in a chasm. The Alpheus was seen to rise again at a place called Pégæ (πηγαί) or "the sources," in the territory of Megalopolis, and the Eurotas in that of Belmina, in Laconia. Flowing onward from this quarter, the Alpheus passes through the intervening part of Arcadia, enters Elis, passes through the plain of Olympia, and discharges its waters, now swelled by numerous tributary streams, into the Sicilian Sea.

The modern name of the river is the *Rouphia*.—There are few streams so celebrated in antiquity as the Alpheus. Its proximity to the scene of the Olympic contests connects its name continually with the mention of those memorable games, on the part of the ancient poets, and gives it, in particular, a conspicuous place in the verses of Pindar. There is also a pleasing legend connected with the stream. According to the poets, the god of the Alpheus became enamoured of and pursued the nymph Arethusa, who was only saved from him by the intervention of Diana, and changed for that purpose into a fountain. This fountain she placed in the island of Ortygia, near the coast of Sicily, and forming in a later age one of the quarters of the city of Syracuse. The ardent river-god, however, did not even then desist, but worked a passage for his stream amid the intervening ocean, and, rising up again in the Ortygian island, commingled its waters with those of the fountain of Arethusa. Hence, according to popular belief, if anything were thrown upon the Alpheus in Elis, it was sure to reappear, after a certain lapse of time, upon the bosom of the Ortygian fountain. (*Pausan.*, 5, 7.—*Id.*, 8, 51.—*Strab.*, 269. et 343.—*Pind.*, *Nem.*, 1, 1, *scqq.*—*Moschus*, *Id.*, 8.—*Virg.*, *Æn.*, 3, 692, *scqq.*—*Id.*, *Georg.*, 3, 180.—*Nonnus*, in *Creux.*, *Melet.*, 1, p. 78.) According to another version, however, of the same legend, it was Diana herself, and not the nymph Arethusa, whom the river-god of the Alpheus pursued, and, when this pursuit had ended in the island of Ortygia, the fountain of Arethusa arose there. (*Schol.* ad *Pind.*, *Nem.*, 1, 3.—vol. 2, p. 428, ed. Böckh.) The account last given will afford us a clew to the true meaning of the entire fable. The goddess Diana had, it seems, a common altar at Olympia with the god of the Alpheus. (*Herodotus*, in *Schol.* ad *Pind.*, *Olymp.*, 5, 10.—*Pausan.*, 5, 14.) To the same Diana water was ¹old sacred. (*Böckh*, ad *Pind.*, *Nem.*, 1.—*Creux's Symbolik*, vol. 2, p. 182.) This part of the worship of Diana having passed from the Peloponnesus into Sicily, the worship of the Alpheus accompanied it; or, in other words, a common altar for the two divinities was erected by the Syracusans in Ortygia, similar in its attendant rites and ceremonies to the altar at Olympia. For in the island of Ortygia all water was held sacred. (*Schol.* ad *Pind.*, *Nem.*, 1, 1.—2, p. 428, ed. Böckh), and Diana, besides, was worshipped at the fountain of Arethusa, under the titles of ποταμία and Ἀλφειώα. From this commingling of rites arose, therefore, the poetic legend, that the Alpheus had passed through the ocean to Ortygia, and blended its waters with those of Arethusa, or, in other words, its rites with those of Diana. (*Böckh*, ad *Pind.*, *Nem.*, l. c.)—II. An engraver on gems, who executed many works in connexion with Arethusa, one of his contemporaries. A head of Caligula, engraved by him when a young man, is still extant. (*Bracci*, pt. 1, tab. 16.)

ALPHIUS AVITUS, a Roman poet, who wrote an account of illustrious men, in two volumes. Terentianus Maurus has cited some verses of the work, having reference to the story of Camillus and the schoolmaster of Falisci. (Compare *Burm.*, *Anthol. Lat.*, vol. 1, p. 452.)

ALPINUS (CORNELIUS), a wretched poet, ridiculed by Horace (*Serm.*, 1, 10, 36, *scqq.*). In describing Memnon slain by Achilles, he kills him, as it were, according to Horace, by the miserable character of his own description. So also the same poet is represented by the Venusian bard as giving the Rhine a head of mud. Who this Alpinus actually was cannot be exactly ascertained, and no wonder, since it would have been strange if any particulars of so contemptible a poet had escaped oblivion. Cruquius, without any authority, discovers in Alpinus the poet Cornelius Gallus, the friend of Virgil. Nor is Bentley's supposition of any great value. According to this latter critic, Horace

alludes, under the name of Alpinus, to Furius Bibaculus; and Bentley thinks that the appellation was given him by Horace, either on account of his being a native of Gaul, or because he described in verse the Gallic war, or else, and what Bentley considers most probable, in allusion to a foolish line of his composition, "*Jupiter hibernas cana nire conspuat Alpes.*" (*Bentl., ad Horat.*, 1, 10, 36.)

ALPIS, a river falling into the Danube. Mannert (*Geogr.*, vol. 3, p. 510) supposes this to have been the same with the Ænus, or *Iua*. It is mentioned by Herodotus (4, 29).

ALSUM, a maritime town of Etruria, southeast from Cære, now *Palo*. (*Sil. Ital.*, 8, 475.)

ALTHÆA, daughter of Thestius and Eurythemis, married Ceneus, king of Calydon, by whom she had many children, among whom was Meleager, considered by some to be the son of Mars. Seven days after the birth of Meleager, the Destinies came unto Althæa, and announced, that the life of Meleager depended upon a brand then burning on the hearth, and that he would die when it was consumed. The mother saved the brand from the flames, and kept it very carefully; but when Meleager killed his two uncles, Althæa's brothers, Althæa, to revenge their death, threw the piece of wood into the fire, and, as soon as it was burned, Meleager expired. She was afterward so deeply grieved for the loss of her son, that she made away with her own existence. (*Apollod.*, 1, 8, 1.—*Ovid, Met.*, 8, 446, *seqq.*) Another version of the story is also given (*Apollod.*, l. c.), which appears to have been derived from Homer (*Il.*, 9, 551.—Compare with this *Anton. Lib.*, c. 2, and *Heyne, ad Apollod.*, l. c.)

ALTHEMENES (Ἀλθήμενής, more correct than Althæmenes, Ἀλθαμένης, the common form. *Heyne, ad Apollod.*, 3, 2, 1, *not. erit.*), son of Catreus, king of Crete. Hearing that either he or his brothers were to be their father's murderer, he fled to Rhodes, where he made a settlement, to avoid becoming a parricide, and built, on Mount Atabyrus, the famous temple of Jupiter Atabyrius. After the death of all his other sons, Catreus went after his son Althemenes: when he landed in Rhodes, the inhabitants attacked him, supposing him to be an enemy, and he was killed by the hand of his own son. When Althemenes knew that he had killed his father, he entreated the gods to remove him; and the earth immediately opened, and swallowed him up. (*Apollod.*, 3, 2.) According to Diodorus Siculus, however, he shunned the society of men after the fatal deed, and died eventually of grief. (*Diod. Sic.*, 5, 59.)

ALFINUM, a flourishing city near Aquileia. According to Cluverius, the precise site of the ancient Altinum seems uncertain. D'Anville, however, asserts (*Anal. Geogr. de l'Ital.*, p. 84) that its place is yet marked by the name of *Altino*, on the right bank of the river Silis (*Sile*), and near its mouth. According to Strabo (214), the situation of Altinum bore much resemblance to that of Ravenna. The earliest mention of it is in Velleius Paterculus (2, 76). At a later period of the Roman empire it must have become a place of considerable note, since Martial compares the appearance of its shore, lined with villas, to that of Baïæ. (*Ep.*, 4, 25.) It was also celebrated for its wool. (*Martial, Ep.*, 14, 153.)

ALTIS, the sacred grove of Olympia, on the banks of the Alpheus, in the centre of which stood the temple of Jupiter. It was composed of olive and plane-trees, and was surrounded by an enclosure. Besides the temple just mentioned, the grove contained those of Juno and Lucina, the theatre, and the prytæneum. In front of it, or, if we follow Strabo, within its precincts, was the stadium, together with the race-ground or hippodromus. The whole grove was filled with monuments and statues, erected in honour of gods, heroes, and conquerors. Pausanias mentions more than

two hundred and thirty statues; of Jupiter alone he describes twenty-three, and these were, for the most part, works of the first artists. (*Pausan.*, 5, 13.) Pliny (34, 17) estimates the whole number of these statues, in his time, at three thousand. The Altis contained also numerous treasures, belonging to different Grecian cities, similar to those at Delphi. These were situated on a basement of Porine stone, to the north of the temple of Juno. (*Vid. Olympia.*)

ALUNTUM, a town of Sicily, on the northern coast, not far from Calacta. Now *Aluntio*. Cicero (*in Verr.*, 4, 29) calls the place Haluntium.

ALYATTES, a king of Lydia, father of Cræsus, succeeded Sadyattes. He drove the Cimmerians from Asia, and made war against Cyaxares, king of the Medes, the grandson of Deioceus. He died after a reign of 57 years, and after having brought to a close a war against the Milesians. An immense barrow or mound was raised upon his grave, composed of stones and earth. This is still visible within about five miles of Sardis or *Sart*. For some curious remarks on the resemblance between this tomb, as described by Herodotus, and that said to have been erected in memory of Porsenna (*Varro, ap. Plin.*, 36, 13), and which affords a new argument in favour of the Lydian origin of Etrurian civilization, consult the *Excursus of Creuzer, ad Herod.*, 1, 93 (*ed. Bähr*, vol. 1, p. 924).—It is also related that an eclipse of the sun terminated a battle between this monarch and Cyaxares, and that this eclipse had been predicted by Thales. (*Herod.*, 1, 74.—*Bähr, ad loc.*) Modern investigations make it to have been a total one. (*Oltmann, Act. Soc. Berlin. Mathemat.*, 1812.) It is worthy of notice, too, that this same eclipse is mentioned in the Persian poem *Schahnámeh*, as having taken place under king Keikawus, who is thought to have been the Cyaxares of the Greek writers. (*Von Hammer, Wiener Jahrbuch.*, 9, p. 13.) For remarks on the chronology of this reign, consult *Clinton's Fasti Hellenici*, vol. 1, 2d ed., p. 296 et 298, and also *Larcher, Histoire d'Herodote*, vol. 7, p. 537. (*Table Chronol.*)

ALYPIUS, I. a philosopher of Alexandria in Egypt, contemporary with Jamblichus. He was remarkably small of size, but possessed, according to Eunapius, a very subtle turn of mind, and was very skilful in dialectics. Alypius wrote nothing; all his instruction was given orally. Jamblichus composed a life of this philosopher. (*Biogr. Univ.*, vol. 1, p. 657).—II. A native of Alexandria, who wrote a work on music, entitled, *Εἰσαγωγή μουσική*, or "Introduction to Music." He divides the whole musical art into seven portions: 1. Sounds. 2. Intervals. 3. Systems. 4. Kinds. 5. Tones. 6. Changes. 7. Compositions. He treats, however, of only one of these, the fifth; whence Meibomius concludes, that only a fragment of his work has reached us. There is some difference of opinion as to the period when Alypius flourished. Cassiodorus (*De Musica, sub fin.*) believes, that he was anterior to Ptolemy, and even to Euclid. De la Borde (*Essai sur la Musique*, vol. 3, p. 133) places him in the latter half of the fourth century after Christ. Of all the ancient writers on music that have come down to us, he is the only one through whom we are made acquainted with the notes employed by the Greeks; so that, without him, our knowledge of the ancient music would be greatly circumscribed. (*Schöll, Hist. Lit. Gr.*, vol. 8, p. 270).—III. A native of Antioch, an architect and engineer, who lived in the reign of Julian the apostate, to whom he dedicated a geographical description of the ancient world. This production is considered by some to be the same with the short abridgment, first published by Godefroy (Gothofredus), in Greek and Latin, at Geneva, 1628, in 4to. There is, however, no good reason whatever to suppose this work to have been written by Alypius. The Greek text published by Godefroy appears rather to have been forged after the

Latin version, which is very old and very badly done. We perceive, from the letters of Julian that have come down to us, that Alypius was also a poet; and that he had commanded, moreover, in Britain, where his mildness and firmness combined had gained him great praise. It was Alypius whom Julian charged with the execution of his order for rebuilding the temple of Jerusalem; a work that was broken off, in so remarkable a manner, by globes of fire bursting forth from the ground, and wounding and putting to flight the workmen. (*Biogr. Univ.*, vol. 1, p. 657.—Consult *Salverte, des Sciences Occultes*, vol. 2, p. 224.)

ALYPIUS, a statue of Sicyon, pupil of Naucydes, the Argive. He cast in brass the statues of certain Lacedæmonians who fought with Lysander in the battle of Ægospotamos. (*Pausan.*, 10, 9.)

ALYZIA (Ἀλυσία), a town of Acarnania, about fifteen stadia from the sea, and, as Cicero informs us in one of his letters (*ad Fam.*, 16, 2), one hundred and twenty stadia from Leucas. It appears to have been a place of some note, as it is noticed by several writers. The earliest of these are Scylax (*Peripl.*, p. 13) and Thucydides (7, 31). A naval action was fought in its vicinity, between the Athenians under Timotheus, and the Lacedæmonians, not long before the battle of Leuctra. (*Xen., Hist. Gr.*, 5, 4, 65.) Belonging to Alyzia was a port consecrated to Hercules, with a grove, where was at one time a celebrated group, the work of Lysippus, representing the labours of Hercules; but a Roman general caused it to be removed to Rome, as more worthy to possess such a chef-d'œuvre. (*Strabo*, 459.) This port appears to answer to the modern *Porto Candili*. (*Cramer's Anct. Græcæ*, vol. 2, p. 18, *seqq.*)

AMAGETOBRIA. *Vid.* Magetobria.

AMALTHEA, I. the name of the goat that suckled Jupiter. The monarch of Olympus, as a reward for his act of kindness, translated her to the skies, along with her two young ones, whom she had put aside in order to accommodate the infant deity, and he made them stars in the northern hemisphere, on the arm of Auriga. The whole legend appears to be of a mixed character, and to have a simple origin, adapted to the rude ideas of an early race, to have gradually assumed an astronomical character. Thus, according to the legend, the infant Jove was nurtured by the milk of the goat, while the wild-bees deposited their honey on his lips. We have here the milk and the honey that play so conspicuous a part in Oriental imagery, as typifying the highest degree of human felicity and abundance, and, therefore, well worthy to be the food of an infant deity appearing in human form. From the milk and honey, moreover, of early fable, come the ambrosia and nectar of a later age, since nectar was regarded as a quintessence of honey, and ambrosia as an extract from the purest milk. (*Böttiger, Amalthæa*, vol. 1, p. 22.) The early legend goes on to state, that the infant Jove, when playing with his four-footed foster parent, accidentally broke off one of her horns. This was made at first to serve as a drinking cup, and thus recalls the custom of a primitive age, when the horns of animals were generally employed for this purpose; the horn-cup appearing as well in the earliest symposia and the Bacchanalian orgies of the Greeks, as in the legends of the Scandinavian Edda and in the halls of Odin. With the progress of ideas, a new feature was added to the fable. The horn of Amalthæa is no longer a mere cup. This one has ended, and Jupiter now ordains, that it shall be ever full to overflowing with whatever its possessor shall wish. (*Apocritus, Cent.*, 2, 86, p. 30.—Compare *Fischer, ad Palaphat.*, 46, p. 179.) Hence arose the beautiful fiction of the horn of plenty, the *Cornu Copiæ*, one of the happiest and most prolific allegories of the plastic art. Jove was said, in this later version of the fable, to have broken off the horn, filled it with all the richest fruits, and flow-

ers, and teeming productions of earth, and to have given it to a nymph, Adrastea, who had charge, with others, of his earlier years.—A change had also been made in another part of the primitive legend. The goat Amalthæa, though so kind to the infant deity, and though all white and beautiful of form, was said, nevertheless, to have had a look so fearful and terror-inspiring, that the Titans, unable to endure it, entreated the earth to hide the animal from view. (*Eratosithenes, Cataster.*, 13, p. 10, *seqq.*, ed. *Schaub.*—*Hygin.*, *Poet. Astron.*, 2, 13.) We have here a clew to the origin of the whole fable. The ancient navigators had observed that the constellations of the *She-Goat* and the *Kids* (*Capella* and *Hadi*) brought stormy and rainy weather, and they were therefore regarded as inauspicious for mariners and dangerous for ships. (*Arat. Phæn.*, 156, *seqq.*—*Schol. ad Arat.*, p. 46, ed. *Buhle.*—*Voss.*, *ad Virg.*, *Georg.*, 1, 205.) Hence probably the name αἰς was applied to the constellation of the *She-Goat*, in its primitive meaning of a *tempest*, a primitive meaning which afterward disappeared from use, while the secondary one of a *she-goat* usurped its place. (*Buttmann, ad Ideler, Sternnamen*, p. 309.) With this earlier meaning of αἰς is connected that of αἰγίς, “a storm” or “tempest,” subsequently indicative of the *Ægis* of Jupiter, which he was believed to wield amid the warfare of the elements. From all this arose the early legend. The bright stars in the constellation of *Capella* become the fair, white *she-goat Amalthæa*. The storms and clouds which the constellation brings with it, become the fear-inspiring look on the part of the animal, and, by the rude simplicity of early times, the *she-goat* is made the foster-parent of Jove. (Compare *Höck, Creta*, vol. 1, p. 177, *seqq.*—*Creuzer, Symbolik*, vol. 2, p. 424, *seqq.*—II. A daughter of Melisseus, king of Crete. She and her sister Melissa had charge of the infant Jupiter, and fed him with goat's milk and honey. This is merely a later version of the early fable mentioned under Amalthæa I. The *she-goat* and bees are now two females. (*Diad. Sic.*, 5, 70.—Compare *Böttiger, Amalthæa*, vol. 1, p. 24.)—III. A sibyl of Cumæ, called also Hierophile and Demophile. She is supposed to be the same who brought nine books of prophecies to Tarquin, king of Rome. (*Vid.* Sibyllæ.)

AMALTHEUM, a gymnasium, or, rather, gymnasium and study combined, which Atticus had arranged in his villa in Epirus. It was replete with all that could amuse or instruct, and here, too, were placed the statues of all the illustrious men by whom the glory of the Roman state had been advanced to its proud elevation, just as Jupiter had been nurtured by the goat Amalthæa. Hence its name Amaltheum (Ἀμαλθεῖον). (*Cic., Ep. ad Att.*, 1, 16.—Compare *Ernsti, Clav. Cic., Ind. Græcæ-Lat.*)—Cicero appears to have had something of the kind in his villa at Arpinum, and which he calls his *Amalthæa*, in the singular (fem.). (*Ep. ad Att.*, 2, 1.)

AMANIUS, I. a continuation of the chain of Mount Taurus, stretching to the north as far as Melitene and the Euphrates. It is situate at the eastern extremity of the Mediterranean, near the Gulf of Issus, and separates Cilicia from Syria. The defile or pass in these mountains was called *Portus Amanicus*, or *Pylæ Syriæ*. Its valleys and recesses were inhabited by wild and fierce tribes, who lived chiefly by plundering their neighbours, though they boasted of their freedom under the sonorous name of Eleuthero-Cilices, or Free Cilicians. The modern name of the chain is, according to Mannert, *Almadag*; but, according to D'Anville, *Al-Lukan*. (*Strab.*, 521.—*Lucan*, 8, 244.—*Cic., Ep. ad Att.*, 5, 20.—*Plin.*, 5, 27.)—II. A deity worshipped in Pontus and Cappadocia, and also called Omanus and Anandatus. (Compare *Tschucke, ad Strab.*, 11, p. 512, ed. *Casaub.*—vol. 4, p. 478.) Bochart identifies him with the sun (*Geogr. Sacr.*, p. 277), and others with the Persian *Hom*, a type of the

same luminary. (*Crenzer, Symbolik*, vol. 2, p. 164.) Mount Amanus thus becomes the mountain of the sun, even as Lebanon appears in the Phœnician Cosmogony of Sanchoniathon.

AMARĀCUS, a son of Cynaras, king of Cyprus, who, having fallen and broken a vase of perfumes which he was carrying, pined away, being either overpowered by the strong fragrance, or struck with grief at the loss he had sustained. The gods, out of compassion, changed him into the *amaracus*, or sweet-marjoram. Servius (*ad Virg., Æn.*, 1, 693), gives a somewhat different account, and makes Amarcus, not a son, but an attendant, of the king's. As regards the plant *amaracus* itself, and its identity with the *ἀμάρυλλον* of the Greeks, consult *Fée, Flore de Virgile*, p. clxxxv.

AMARDI, a nation of Asia. Ptolemy (5, 13) places them in the greater Armenia, on the borders of Media; Nearchus, Pliny (6, 17), and Strabo, in the mountains of Elymais, in Persia. Others assign Margiana as the country in which they lived. It is possible that there were several tribes of this same name spread over different countries, or perhaps several colonies of this people. Vossius thinks that all robbers and fugitives inhabiting the mountains were called Amardi by the Persians. (*Voss., ad Pomp. Mel. B.*, 5.—Compare *Pomp. Mel., French transl.*, vol. 1, p. 202.)

AMARYLLIS, the name of a female in Virgil's eclogues. Some commentators have supposed that the poet spoke of Rome under this fictitious appellation, but this supposition is a very improbable one. (Consult *Heyne, ad Virg., Eclog.*, 1, 28, towards the conclusion of the note.)

AMARYNTHUS, a town of Eubœa, seven stadia from Eretria, celebrated for the temple and worship of Diana Amarynthia. (*Strab.*, 448.—*Liv.*, 35, 38.—*Pausan.*, 1, 31.)

AMASĒNUS, a small river of Latium, crossing the Pontine Marshes, and falling into the Tyrrhenian Sea, now *La Toppia*. (*Virg., Æn.*, 7, 685.)

AMASIA, or AMASĒA (Ἀμασία, by the later Greeks Ἀμασία), a city of Pontus, on the river Iris, the origin of which is not ascertained. It was the birthplace of Mithradates the Great and of Strabo the geographer. At a later period, when under the Roman sway, it became the capital of Pontus Galaticus (*Hierocles*, p. 701), and bore upon its coins the title of Metropolis. Strabo (560) gives us a particular description of his native city. The modern *Amasyah* or *Amassia* is supposed to occupy the site of the ancient Amasea. (*Mannert*, 6, pt. 2, p. 461, *seqq.*)

AMĀSIS, I. a king of Egypt, of one of the earlier dynasties. He rendered himself odious to his subjects by his violent and tyrannical conduct, and, on the invasion of Egypt by Actisanes, king of Æthiopia, the greater part of the inhabitants went over to the latter. Such is the account given by Diodorus Siculus (1, 60), where many think we should read Amōsis for Amasis. (Consult *Steph. and Wesseling, ad Diad. l. c.*) Justin Martyr (*Parænes.*, p. 10) makes him to have been the first Pharaoh of the 18th dynasty. Eusebius (*Chron.*) asserts that he was the same king during whose reign Jacob died. Olearius (*ad Philostr., Vit. Apoll.*, 42) maintains that he was monarch of Egypt in the time of the Exodus. All is uncertainty respecting him.—II. An Egyptian, who, from having been a common soldier, became king of Egypt. He succeeded in gaining the favour of king Apries, and was despatched by that monarch to quell a sedition which had broken out. As he was endeavouring to dissuade those who had revolted from the step they had taken, one of them came behind him and put a helmet on his head, saying that he put it on him to make him a king. Amasis was thereupon proclaimed king by the insurgents, and immediately marched against and defeated his former master, B.C. 569. He governed with pru-

dence and energy. Under his reign Egypt enjoyed for many years uninterrupted prosperity. To prevent those offences which an idle and overflowing population might commit, he ordained that every one of his subjects should yearly give an account, to the ruler of the nome or district in which he resided, of the means of subsistence which he enjoyed, and the manner in which he lived. He showed also an enlightened spirit in the permission which he granted to strangers, and particularly to the Greeks, to visit Egypt; he gave them settlements along his coasts, and permitted them to erect temples there for the performance of their national worship. Solon was one of those who visited Egypt during the reign of this prince. Amasis espoused a Grecian female, a native of Cyrene; he displayed his attachment to the Greeks in various ways, and contributed liberally, not only to the rebuilding of the temple at Delphi, but to the improvement and embellishment of many cities and temples of Greece. In his own country he constructed numerous magnificent works, in the massy and gigantic style so peculiar to Egypt. He subjected also the isle of Cyprus, and made it tributary to his crown. The prosperity of Amasis, however, was disturbed, at last, by the preparations which Cambyzes, king of Persia, made to attack his kingdom. The Persian monarch had demanded the daughter of Amasis in marriage; but the father, knowing that Cambyzes meant to make her, not his wife, but his concubine, endeavoured to deceive him by sending in her stead the daughter of Apries. The female herself disclosed the imposition to Cambyzes, and the latter, in great wrath, resolved to march against Egypt. The defection of Phanes, moreover, an officer among the Greek auxiliaries, who fled to Cambyzes on account of some dissatisfaction with Amasis, proved a serious injury to the Egyptian prince. The Greek informed Cambyzes how he might pass the intervening deserts, and gave him also very important information respecting the kingdom he was about to invade. Amasis escaped by death the perils which threatened his country. He died B.C. 525, after a reign of 44 years, and the whole fury of the storm fell upon his son Psammeticus. Cambyzes, however, determined not to be disappointed of his revenge, caused the body of the deceased monarch to be taken from the royal sepulchre at Sais; and, after having practised various indignities upon it, commanded it to be burned, an order equally revolting to the religious feelings of both the Persians and Egyptians. The story of Amasis and Polycrates is well known (*vid. Polycrates*), though the reason commonly assigned for the former's refusing to continue the alliance is perhaps less worthy of credit than that given by Diodorus Siculus, 1, 15. (*Herodot.*, 2, 162, *seqq.*—*Id.*, 3, 1, *seqq.*) Athenæus (15, 25.—vol. 5, p. 479, *cd. Schweigh.*) informs us, that Amasis first insinuated himself into the good graces of Apries by a chaplet of flowers which he presented to him on his birthday. The king, enchanted with the beauty of the chaplet, invited him to a feast which he gave on that occasion, and received him among the number of his friends.

AMASTRIS, I. a daughter of the brother of Darius Codomannus. Alexander intended giving her in marriage to Craterus, but, in the confusion and political changes which followed the death of the conqueror, the plan, of course, fell to the ground, and she became the wife of Dionysius, tyrant of Heraclea in Pontus. (*Memnon*, c. 5.) Dionysius, at his death, left her as the guardian of his children, on account of the influence she enjoyed among the Macedonians. She was subsequently married to Lysimachus, and, though some time after separated from him by reason of the political movements of the day, continued to enjoy high consideration and respect. She founded a city at this period, and called it after her name. She was murdered by her own sons, who were punished by Lysima-

ehus for the unnatural deed.—II. A city on the coast of Paphlagonia, near the mouth of the Parthenius. It was founded by Amastris, the niece of Darius Codomannus, and wife of Dionysius, tyrant of Heraclea, who gave her name to the new settlement. The earlier town of Sesamus, mentioned by Homer (*Il.*, 2, 853), served for its citadel. It is praised as a beautiful city by both the younger Pliny (*Ep.*, 10, 99) and the later ecclesiastical writers. (Compare *Niceta Paph. Or.*, in *S. Hyacinth.*, 17.) Amastris, like Sinope, was built on a small peninsula, and had, in consequence, a double harbour. (*Strabo*, 514.) The modern name is *Amastra*. (*Mannert*, 6, pt. 3, p. 25.)

ΑΜΑΤΡΑ, the wife of King Latinus, and mother of Lavinia. She hung herself in despair, on finding that she could not prevent the marriage of her daughter with Æneas. (*Virg.*, *Æn.*, 12, 603.)

ΑΜΑΤΗΟΣ (gen. *untis*), a city on the southern side of the island of Cyprus, and of great antiquity. Adonis was worshipped here as well as Venus. Scylax affirms that the Amathusians were autochthonous (*Periplus*, p. 41); and it appears from Hesychius that they had a peculiar dialect (*s. v.* Ἐρδζαί, Κὺβάδδα, Μά-λιστα). Amathus was celebrated as a favourite residence of Venus. (*En.*, 10, 51.—*Catull.*, *Ep.*, 36.) The goddess, as an author, who wrote a history of Amathus, and is quoted by Hesychius (*s. v.* Ἀρρόδι-ρος), reported, was represented with a beard. Amathus was the see of a Christian bishop under the Byzantine emperors. (*Hierocl.*, p. 706.) Its ruins are to be seen near the little town of *Limeson* or *Limmersol*, somewhat to the north of *Cape Gallo*. (*Cramer's Asia Minor*, vol. 2, p. 377, seqq.)

ΑΜΑΖΩΝΕΣ, a name given by the ancient writers to certain female warriors, and derived, according to the popular opinion, from *a. priv.*, and *μαζος*, “a female breast,” because it was believed, that they burned off the right breast in order to handle the bow more conveniently. The men among them were held in an inferior, and, as it were, servile condition, attending to all the employments which occupy the time and care of females in other nations, while the Amazons themselves took charge of all things relating to government and warfare. (*Diod. Sic.*, 2, 45.—*Id.*, 3, 52.) The Greek writers speak of *African* and *Asiatic* Amazons. (*Diod. Sic.*, l. c.) The Amazons of Africa were the more ancient, and were also the more remarkable for the number and splendour of their warlike achievements. They dwelt in the western regions of Africa, occupying an island in a lake called Tritonis, and which was near the main ocean. Diodorus describes this island as beautiful and productive, and names it *Hesperia*. Under the guidance of a warlike queen, whom he calls Myrina, they conquered the people of Atlantis, their neighbours, traversed a large portion of Africa, established friendly relations with Horns, son of Isis, then on the throne of Egypt, subdued Arabia, Syria, various parts of Asia Minor, and penetrated even into Thrace. After this long career of conquest they returned to Africa, and were annihilated by Hercules. At this same time, too, the Lake Tritonis disappeared as such, and became part of the ocean, the intervening land having been swallowed up. (*Diod. Sic.*, 3, 51.)—The Amazons of Asia are described by the same writer (2, 45) as having dwelt originally on the banks of the Thermodon in Pontus, and with this statement the ancient poets all agree. Herodotus also (9, 27) places the Amazons on this same river, and he affirms that it was from thence they advanced into Greece and invaded Attica. He likewise speaks of an expedition undertaken by the Greeks against these warlike females, in which the latter were defeated near the Thermodon and led away captive. A part of them, however, escaped to Scythia, and became the mothers of the Sauromate (4, 110). The same historian adds, that the Scythian term, which answered

to the Greek word Ἀμάζων, was *Oiorpata*, or “man slayer.” We have here what are sometimes called the *Scythian* Amazons, making, in fact, a third class.—Diodorus gives an account of the victories of the Asiatic Amazons, as he had done in the case of the African. He makes them to have conquered a large portion of Asia, extending their victorious arms from the regions beyond the Tanais (or *Don*) as far as Syria (2, 46). Other accounts tell of their invasion of Attica, in order to recover their queen Antiope, who had been carried off by Theseus (*Plut.*, *Vit. These.*, c. 26, seqq.); of their previous wars with Hercules; and still more anciently of their contest with Bacchus. (*Pausan.*, 1, 15.—*Id.*, 7, 2.—*Plut.*, *Quæst. Gr.*, p. 541.—*Justin.*, 2, 4.) They are also mentioned by Homer, who speaks of their wars with the kings of Phrygia (*Il.*, 3, 184), and of their defeat by Bellerophon (*Il.*, 6, 186). They are said also to have been among the allies of the Trojans in the war with the Greeks, and their queen Penthesilea was slain by Achilles. (*Hygin.*, *fab.*, 112.—*Diet. Crit.*, 4, 2, 3.—*Tzet.*, *ad Lycophron*, 999.—*Diod. Sic.*, 2, 46.) They make their appearance again, in a later age, in the history of Alexander's expedition into Asia, and their queen Thalestris is said to have paid a visit to the victorious monarch, having come for that purpose from the vicinity of Hyrcania; but Quintus Curtius, who gives us this information, deals, as usual, in the marvellous, and with his wonted ignorance of geography, places the plains of Themiscyra, and the river Thermodon which waters them, contiguous to the country of the Hyrcanians. (*Q. Curt.*, 6, 5, 25.—Compare *Freinshem.*, *ad loc.*)—The Amazons are described as armed with bow and arrows, and as having also battle-axes and crescent shields (“*pelta lunata*.”—*Virg.*, *Æn.*, 1, 490). Some writers, differing from Diodorus, as cited above, make the Amazons to have had no males among them, but to have merely visited, at stated times, the neighbouring communities, for the purpose of a temporary union and the obtaining of offspring. They farther state, that the female children thus born to them were carefully reared, after having the right breast seared with a red-hot iron, but that all the male ones were destroyed immediately after birth. Diodorus, however, informs us, in speaking of the Asiatic Amazons, that they merely mutilated (ἐνῆ-πονν) the legs and arms of the male children, in order to render them unfit for war. About the treatment of the male offspring among the African Amazons he is altogether silent.—Thus much for the Amazons, as they have been described or referred to by the ancient writers. Various explanations, as may well be supposed, have been given of this curious legend. Some see in it an old tradition, founded, in a measure, on historical truth, of a community of women, who actually formed themselves into a regular state, after getting rid of, or subjugating their husbands. This is too improbable to need any serious refutation. R. P. Knight thinks that “the fable” of the Amazons (for so he terms it) “arose from some symbolical composition of an androgynous character, and which sought to express the blending of the two sexes into one shape; the full, prominent form of the female breast being given on one side, and the flat form of the male on the other.” (*Inquiry into the Symbol. Lang.*, &c., § 50.—*Class. Journ.*, vol. 23, p. 238.) Cruzer agrees with Knight in making the legend a religious one, but he sees in the story of the Amazons evident traces of some accounts that must have reached the early Greeks, respecting a female priesthood of a warlike character, connected with the worship of the great powers of nature, and on whom, as a part of that worship, either a periodical or perpetual continence was enjoined. The change of vestments and of characters, so common in this same class of Asiatic religions, was indicated, according to this same writer, by the removal of one of the breasts. The Amazons, therefore, according

to this explanation, will be a band of warlike priestesses or Hierodulæ, who, in renouncing maternity, and in giving themselves up to martial exercises, sought to imitate the periodical sterility of the great powers of light, the sun and moon, and the combats in which these were from time to time engaged, against the gloomy energies of night and winter. (*Cruzer, Symbole, par Guignaut*, vol. 2, p. 90, *seqq.*)—That the legend of the Amazons rests on a religious basis, we readily admit, but that any Amazons ever existed, even as warlike priestesses, we do not at all believe. The first source of error respecting them is the etymology commonly assigned to the name. To derive this from the negative *a* and *μῦζος*, and to make it indicate the loss of one of the breasts, is, we think, altogether erroneous. If a Greek derivation is to be assigned to the term Amazon, it is far more correct to deduce the word from the intensive *a*, and *μῦζος*, and to regard it as denoting, not the absence of one breast, but the presence of many. The name Ἀμύζων (*Amazon*) then becomes equivalent to the Greek Πολυμῆστος (*Polymastus*) and the Latin *Multimamma*, both of which epithets are applied by the ancient mythologists to the Ephesian Diana, with her numerous breasts, as typifying the great mother and nurse of all created beings. It is curious to connect with this the well-known tradition, that the Amazons founded the city of Ephesus, and at a remote period sacrificed to the goddess there. (*Callim., H. in Dian.*, 238.—*Dionys. Perieg.*, 828.) But how does the view which we have just taken of the erroneous nature of the common etymology, in the case of the name *Amazon*, harmonize with the remains of ancient sculpture! In the most satisfactory manner. No monument of antiquity represents the Amazons with a mutilated bosom, but, wherever their figures are given, they have both breasts fully and plainly developed. Thus, for example, the Amazons on the Phigalican frieze have both breasts entire, one being generally exposed, while the other is concealed by drapery, but still in the latter the roundness of form is very perceptible. Both breasts appear also in the fine figure of the Amazon belonging to the Lansdowne collection; and so again in the basso-relievo described by Winckelmann in his *Monumenti Inediti*. The authorities, indeed, on this head are altogether incontrovertible. (*Winckelmann, Gesch. der Kunst des Alterthums*, vol. 2, p. 131.—*Id., Mon. Ined.*, pt. 2, c. 18, p. 184.—*Müller, Archæologie der Kunst*, p. 530.—*Elgin and Phigalican Marbles*, vol. 2, p. 179.—*Heune, ad Apollod.*, 2, 5, 9.) The first Greek writer that made mention of females who removed their right breast was Hippocrates (*Περὶ αἵρων*, κ. τ. λ., § 43). His remarks, however, were meant to apply merely to the females of the Sauromatæ, a Scythian tribe; but subsequent writers made them extend to the fabled race of the Amazons.—It appears to us, then, from a careful examination of the subject, that the term *Amazon* originally indicated, neither a warlike female, nor a race of such females, but was merely an epithet applied to the Ephesian Diana, the great parent and source of nurture, and was intended to express the most striking of her attributes. The victories and conquests of the Amazonian race are nothing more, then, than a figurative allusion to the spread of her worship over a large portion of the globe, and the contests with Bacchus, Hercules, and Theseus refer in reality to the struggles of this worship with other rival systems of faith, for Bacchus, Hercules, and Theseus are nothing more than mythic types of three different forms of belief. Hence we see why the conflict of the Amazons with Theseus, who was nothing more than the symbol of the establishment of the Ionic worship, became a most appropriate ornament for the frieze of the Parthenon, the temple of the great national goddess Minerva. It was, in fact, a delineation of the downfall of a rival sys-

tem of belief.—Before we conclude, it may not be amiss to examine more closely into the etymology of the term *Amazon*. We have thus far regarded the word as of Grecian origin. What if, after all, it be of Oriental birth, and have reference to the far-famed *Asi* of Oriental and Scandinavian mythology? Salvette sees in them a class of female divinities, the spouses of the *Asi*, and he traces the first part of the name to the Pehliv *am*, denoting “a mother,” or “a female” generally. (*Essai sur les Noms*, &c., vol. 2, p. 178.) Ritter also detects in the name an allusion to the *Asi* (*Vorhalle*, p. 465, *seqq.*); and, in connexion with this view of the subject, we may state that the name of *Asia* (the land of the *Asi*) was first given to a small district near the Cayster, and in the very vicinity of Ephesus, the city which the Amazons had founded. Ephesus, moreover, first bore, it is said, the name of *Smyrna*, an appellation afterward bestowed on the city of Smyrna, which was founded by an Ephesian colony. This term Smyrna is said to have been originally the name of an Amazonian leader. Would it be too fanciful to deduce it from *Asa-Myrina*, and thus blend together the name of the African Amazon Myrina with the sacred appellation of the *Asi*!

AMAZONIUS, a surname of Apollo at Pyrrhicus, in Laconia, from the protection he is said to have afforded to the inhabitants when attacked by the Amazons. (*Pausan.*, 3, 25.)

AMBARRI, a people of Gallia Celtica, situate between the Ædui and Allobroges, along either bank of the Arar or Saône. Following D’Anville’s authority, we would place them in the present *Département de l’Ain*. Livy enumerates them among the Gallic tribes that crossed the Alps in the time of Tarquinius Priscus. (*Liv.*, 5, 34.—*Cæs.*, *B. G.*, 1, 11, et 14.)

AMBARVALIA, sacred rites in honour of Ceres, previous to the commencement of reaping, which were called *sacra ambarvalia*, because the victim was carried around the fields (*aræa ambiebat*.—*Vid. Arvales*).

AMBIANI, a people of Gallia Belgica, whose capital was Samarobriua, afterward called Ambiani or Ambianum, now *Amiens*. Their territory corresponds to what is now the *Département de la Somme*. (*Cæs.*, *B. G.*, 2, 4.—*Id. ib.*, 7, 75.)

AMBIATINUS VICUS, a village of Germany, where the Emperor Caligula was born. It was situate between Confluentes and Baudobriga, and is supposed by some to be now *Capelle*, on the Rhine, by others *Königstuhl*. Mannert, without fixing the modern site, thinks it lay on the *Moselle*. (*Geogr.*, 2, p. 210.—*Sueton., Vit. Calig.*, 8.)

AMBIGATUS, a king of the Celtæ, in the time of Tarquinius Priscus. According to the account given by Livy (5, 34), he sent his two nephews, Sigovesus and Bellovesus, in quest of new settlements, with the view of diminishing the overflowing numbers at home. The two chieftains drew lots respecting their course, and Sigovesus obtained the route that led towards the Hercynian forest, Bellovesus the road to Italy. What is here stated, however, appears to be a mere fable, owing its origin to the simultaneous emigrations of two hordes of Gallic warriors. (Compare *Thierry, Histoire des Gaulois*, vol. 1, p. 39.)

AMBIGRIX, a king of one half of the Eburones in Gaul, Cativoleus being king of the other half. He was an inveterate foe to the Romans, and after inflicting several serious losses upon, narrowly escaped the pursuit of, Cæsar’s men, on being defeated by that commander. (*Cæs.*, *B. G.*, 5, 24, et 26.—*Id.*, 6, 30.)

AMBIARËTI and AMBIVARËTI (for we have, in the Greek Paraphrase of Cæsar, b. 7, c. 75, Ἀμβιβαρέτων, and at c. 90, Ἀμβιβαρήτων), a Gallic tribe, ranked among the clients of the Ædui, whence Glareanus and Ciacconius suspect them to be the same with the Ambarri. Almost all the MSS. of Cæsar call them

Ambluareti. The ancient geographical writers are silent respecting them.

AMBIVARITI, a tribe of Gallia Belgica, a short distance beyond the Mosa or *Meuse*. (*Cæs.*, *B. G.*, 4, 9.)

AMBRACIA, a celebrated city of Epirus, the capital of the country, and the royal residence of Pyrrhus and his descendants. It was situate on the banks of the Aractus or Arethon, a short distance from the waters of the Ambracian Gulf. The founders of the place were said to have been a colony of Corinthians, headed by Tolgus or Torgus, 650 B.C., who was either the brother or the son of Cypselus, chief of Corinth. (*Strabo*, 325.—*Seymn.*, *Ch.*, v. 452.) It early acquired some maritime celebrity, by reason of its advantageous position, and was a powerful and independent city towards the commencement of the Peloponnesian war, in which it espoused the cause of Corinth and Sparta. At a later period we find its independence threatened by Philip, who seems to have entertained the project of annexing it to the dominions of his brother-in-law, Alexander, king of the Molossians. (*Demosth.*, *Phil.*, 3, 85.) Whether it actually fell into the possession of that monarch is uncertain, but there can be no doubt of its having been in the occupation of Philip, since Diodorus Siculus (17, 3) asserts, that the Ambraciots, on the accession of Alexander the Great to the throne, ejected the Macedonian garrison stationed in their city. Ambracia, however, did not long enjoy the freedom which it thus regained, for, having fallen into the hands of Pyrrhus, we are told that it was selected by that prince as his usual place of residence. (*Strabo*, 325.—*Liv.*, 38, 9.) Ovid (*Ibis*, v. 306) seems to imply that he was interred there. Many years after, being under the dominion of the Ætolians, who were at that time involved in hostilities with the Romans, this city sustained a siege against the latter, almost unequalled in the annals of ancient warfare; the gallantry and perseverance displayed in defence of the place. (*Polyb.*, *frag.*, 22, 13.) Ambracia, at last, opened its gates to the foe, on a truce being concluded, and was stripped by the Roman consul, M. Fulvius Nobilior, of all the statues and pictures with which it had been so richly adorned by Pyrrhus. From this time Ambracia began to sink into a state of insignificance, and Augustus, by transferring its inhabitants to Nicopolis, completed its desolation. (*Strabo*, 325.—*Pausan.*, 5, 23.) In regard to the topography of this ancient city, most travellers and antiquaries are of opinion, that it must have stood near the town of *Arta*, which now gives its name to the gulf. (*Cramer's Ancient Greece*, vol. 1, p. 145, *seqq.*)

AMBRACIUS SINUS, a gulf of the Ionian Sea, between Epirus and Acarnania. Scylax (*Peripl.*, p. 13) calls it the Bay of Anactorium, and observes, that the distance from its mouth to the farthest extremity was one hundred and twenty stadia, while the entrance was scarcely four stadia broad. Strabo (325) makes the whole circuit three hundred stadia. (*Cramer's Ancient Greece*, vol. 1, p. 153.)

AMRŌNES, a Gallic horde, who invaded the Roman territories along with the Teutones and Cimbri, and were defeated with great slaughter by Marius. The name is thought to mean, "dwellers on the Rhone" (*Amb-rones*). So Ambidravii, "dwellers on the Draave;" Sigambri, "dwellers on the Sieg," &c. (Compare Pfister, *Gesch. der Deutschen*, vol. 1, p. 35.)

AMBROSIA, the celestial food on which the gods were supposed to subsist, and to which, along with nectar, they were believed to owe their immortality. The name is derived from *ἀμβροτος*, "immortal." {Compare *Heyne, Excurs.* 9, ad *Il.*, 1.—*Id.*, *Obs. ad Hom.*, *Il.*, 1, 190.) There is a striking resemblance between the Grecian and Hindoo mythology in this respect. The *Anrita*, or water of life, recalls imme-

diately to mind the Ambrosia of Olympus. (Compare *Hom.*, *Od.*, 1, 359, where ambrosia and nectar appear to be used as synonymous terms.—*Heyne, Excurs.* 9, ad *Il.*, 1, and consult the remarks of Buttmann in his *Lexilogus*, s. v. *Ἀμβρόσιος*, &c.)

AMBROSIVS, bishop of Milan in the fourth century, and one of the latest and most distinguished of what are denominated the Fathers of the Christian Church. He was born at Arelate (*Arles*), then the metropolis of Gallia Narbonensis, according to some authorities A.D. 333, according to others, 340. His father was the emperor's lieutenant in that district, and, after his death, Ambrose, who was the youngest of three children, returned with the widow and family to Rome. Here, under the instructions of his mother and his sister Marcellina, who had vowed virginity, he received a highly religious education, and that bias in favour of Catholic orthodoxy by which he was subsequently so much distinguished. Having studied law, he pleaded causes in the court of the prætorian prefect, and was in due time appointed proconsul of Liguria. He thereupon took up his residence at Milan, where a circumstance occurred which produced a sudden change in his fortunes, and transformed him from a civil governor into a bishop. Auxentius, bishop of Milan, the Arian leader in the west, died, and left that see vacant, when a warm contest for the succession ensued between the Arians and Catholics. In the midst of a tumultuous dispute, Ambrose appeared in the midst of the assembly, and exhorted them to conduct the election peaceably. At the conclusion of his address, a child in the crowd exclaimed, "Ambrose is bishop!" and, whether accidentally or by management, the result throws a curious light upon the nature of the times; for the superstitious multitude, regarding the exclamation as a providential and miraculous suggestion, by general acclamation declared Ambrose to be elected. After various attempts to decline the episcopal office, Ambrose at length entered upon the discharge of its duties, and rendered himself conspicuous by his decided and unremitting opposition to the tenets of Arianism. To his zealous endeavours also was owing the failure of the attempt made by the remains of a pagan party to re-establish the worship of paganism. The strength and ability of Ambrose were such, that, although opposed to him on ecclesiastical points, Valentinian and his mother respected his talents, and in moments of political exigency required his assistance. The most conspicuous act on the part of Ambrose was his treatment of Theodosius for the massacre at Thessalonica. The emperor was consigned to a retirement of eight months, and not absolved even then until he had signed an edict, which ordained that an interval of thirty days should pass before any sentence of death, or even of confiscation, should be executed. After having paid the funeral honours to Theodosius, who died soon after obtaining peaceable possession of the entire Roman empire, the bishop departed from this world with a composure worthy of his firm character, in the year 397. It is evident, that Ambrose was one of those men of great energy of mind and temperament, who, in the adoption of a theory or a party, hold no middle course, but act with determination towards the fulfilment of their purposes. Regarded within their own circles, there is generally something in such characters to admire; and, beyond that, as certainly much to condemn. It must be conceded, however, that men resembling Ambrose effected much to advance the Roman Catholic Church to the power to which it afterward attained, and, by necessary sequence, to the abuse of it which produced the Reformation. The writings of this father are numerous, and the great object of almost all of them was to maintain the faith and discipline of the Catholic Church, while some of them are written to recommend celibacy as the summit of Christian perfection. His

best work is "*De Officiis*," intended to explain the duties of Christian ministers. The most accurate edition of his works is that of the Benedictines, *Paris*, 2 vols. fol., 1682-90. (*Gorton's Biogr. Dict.*, vol. 1, p. 67.)

AMBRYSSUS, a city of Phocis, said to have been founded by the hero Ambryssus, situate between two chains of mountains, west of Lebedea, and north-west of Anticyra. It was destroyed by the Amphictyons, but rebuilt and fortified by the Thebans before the battle of Cheronæa. (*Pausan.*, 10, 3, and 36.) Its ruins were first discovered by Chandler, near the village of *Dystomo*. (*Cramer's Ancient Greece*, vol. 2, p. 159.)

AMBRUALÆ, female minstrels, of Syrian origin, who exercised their vocation at Rome, and were also of dissolute lives. (*Acron, ad Horat.*, *Serm.*, 1, 2, 1.—*Nork, Etymol. Handwörterbuch*, vol. 1, p. 45, seq.) The name is supposed to be derived from the Syriac *anub* or *anubh*, "a flute."

AMBŪLI, a surname of Castor and Pollux, in Sparta, and also of Jupiter and Minerva. They were so named, it is said, from ἀμβολή, *delay*, because it was thought that they could delay the approach of death. Some, on the other hand, consider the term in question to be of Latin origin, and derived from *ambulare*. (Compare the remarks of *Vollmer, Wörterb. der Mythol.*, s. v.)

AMĒLES, a river of the lower world, according to Plato, whose waters no vessel could contain: τὸν Ἀμέλητα ποταμὸν, οὗ τὸ ὕδωρ ἄγγεῖον οὐδὲν στέγειν. (*De Rep.*, 10, vol. 7, p. 229, ed Bekk.)

AMENANUS, a river of Sicily, near Catania. It is now the *Judicello*. (*Strabo*, 360.—*Ovid, Met.*, 15, 279.)

AMERIA, one of the most considerable and ancient cities of Umbria. It lay south of Tuder, and in the vicinity of the Tiber. According to Cato, who is quoted by Pliny (3, 14), Ameria could boast of an origin greatly anterior to that of Rome, having been founded, it is said, 964 years before the war with Perseus, or 1045 years before the Christian era. Cicero, in his defence of the celebrated Roscius, who was a native of Ameria, has frequent occasion to speak of this town. From him we learn its municipal rank, and from Frontinus, that it became a colony under Augustus. (Compare *Strabo*, 228.—*Festus*, s. v. *Ameria*.) The small episcopal town of *Amelia* now represents this ancient city. (*Cramer's Anc. Italy*, vol. 1, p. 273.)

AMESTRATUS, a town of Sicily, near the Halesus. The Romans besieged it for seven months when in the hands of the Carthaginians, but without success. It was taken, however, after a third siege, and razed to the ground, the surviving inhabitants being sold as slaves. Steph. Byz. calls the place *Amestratas*; Diogenes Siculus, *Mystratum*; and Polybius, *Mytistratum*. (*Diod. Sic.*, 23, ecl. 9.—*Polyb.*, 1, 24.) It is now *Mistretta*, in the *Val de Demona*.

AMESTRIS, queen of Persia, and wife to Xerxes. Having discovered an intrigue between her husband and Artaynta, and imputing all the blame solely to the mother of the latter, she requested her from the king at a royal festival; and, when she had her in her power, cut off her breasts, nose, ears, lips, and tongue, and sent her home in this shocking condition. She also, on another occasion, sacrificed fourteen Persian children of noble birth, "to propitiate," says Herodotus, "the deity who is said to dwell beneath the earth." (*Herodot.*, 9, 110, seqq.—*Id.*, 7, 114.)

AMĪA, a city of Mesopotamia, taken and destroyed by Sapor, king of Persia. It was reoccupied by the inhabitants of Nisibis, after Jovian's treaty with the Persians, and by a new colony which was sent to it. It was called also *Constantia*, taken and destroyed by Emperor Constantius. Its ancient walls, constructed with black

stones, have caused it to be termed by the Turks *Kara-Amid*, ("black Amid"), although it is more commonly denominated *Diar-Bekir*, from the name of its district. (*Amnian. Marcell.*, 18, 22.—*Procop.*, *de Bell. Pers.*, 1, 8.—*Salmas.*, *Exercit. Plin.*, p. 488.)

AMILCAR. *Vid.* Hamilcar.

AMINEI, a people of Campania, mentioned by Macrobius (*Sat.*, 2, 16) as having occupied the spot, where was afterward the Falernus Ager. The Aminean wine is thought to have derived its name from them. (Consult, however, the remarks of *Heyne, ad Virg.*, *Georg.*, 2, 97, *Var. Lect.*) The more correct opinion appears to be, that the Aminean wine was so called, because made from a grape transplanted into Italy from Amineum, a place in Thessaly. Macrobius, however, asserts, that the Falernian wine was more anciently called Aminean. (Compare *Heyne, ad Virg.*, *Georg.*, 2, 97.)

AMISENUS SINUS, a gulf of the Euxine, east of the mouth of the Halys, on the coast of Pontus, so called from the town of Amisus.

AMISIA, now the *Ems*, a river of Germany, falling into the German Ocean. Strabo (201) calls it *Amasia* ('*Ἀμασία*), and Pliny (4, 14) *Amasis*.

AMISUS, a city of Pontus, on the coast of the Euxine, northwest from the mouth of the Iris. It was founded by a colony of Milesians, was the largest city in Pontus next to Sinope, and was made by Pharnaces the metropolis of his kingdom. It is now called *Sam-soun*. (*Strabo*, 547.—*Polyb.*, *Exc. de legat.*, 55.—*Mannert*, 6, pt. 2, p. 448, seqq.)

AMITERNUM, a city in the territory of the Sabines, the birthplace of Sallust the historian. It was situate a short distance below the southern boundary of the Prætutii, and its ruins are to be seen near *S. Vittorino*, a few miles to the north of *Aquila*. From Livy (10, 39) we learn, that this town, having fallen into the hands of the Samnites, was recovered by the consul Sp. Carvilius (A.U.C. 459). Under the Romans it became successively a *prefectura* and a colony, as we are informed by Frontinus and several inscriptions. (*Romanelli*, vol. 3, p. 330.) In Ptolemy's time, *Amiternum* seems to have been included among the cities of the Vestini. (*Cramer's Ancient Italy*, vol. 1, p. 319.)

AMMIANUS. *Vid.* Marcellinus.

AMMOCHOSTUS, a promontory of Cyprus, whence by corruption comes the modern name *Famagosta*, or, more properly, *Amgoste*: now the principal place in the island. (*Ptol.*—*Cramer's Asia Minor*, vol. 2, p. 381.)

AMMON, or HAMMON, a name given to Jupiter, as worshipped in Libya. When Bacchus was conquering Africa, he is said to have come with his army to a spot called, from the vast quantity of sand lying around, by the name of Hammodes (Ἀμμώδης, i. e., *sandy*, from ἄμμος, "*sand*," and εἶδος, "*aspect*" or "*appearance*"). Here his forces were in great danger of perishing from want of water, when a ram on a sudden appeared, and guided them to a verdant spot, or oasis, in the midst of the desert. When they reached this place, the ram disappeared, and they found an abundant supply of water. Bacchus, therefore, out of gratitude, erected on the spot a temple to Jupiter, giving him, at the same time, the surname of *Ammon* or *Hammon*, from the Greek ἄμμος or ἄμμος, "*sand*," in allusion to the circumstances connected with his appearance; and the statue of the deity had the head and horns of a ram. (*Hygin.*, *Poet. Astron.*, 2, 20.) According to another version of the fable, Bacchus, in his extremity, prayed to Jupiter for aid, and the god, appearing under the form of a ram, indicated the place of the fountain with his foot, the water, before unseen, immediately bubbling up through the sand.—The spot to which the fable points is the Oasis of Ammon (*vid.* Oasis), and the fountain is the famous Fons Solis, or fountain of the Sun, which, according to Herodotus (4, 181), was

tepid at dawn, cool as the day advanced, very cool at noon, diminishing in coolness as the day declined, warm at sunset, and boiling hot at midnight. Here also was the celebrated oracle of Ammon, which Alexander the Great visited, in order to obtain an answer respecting the divinity of his origin. An account of the expedition is given by Plutarch (*Vit. Alex.*, c. 26), and, as may well be expected, the answer of the oracle was altogether acceptable to the royal visitant, though the credit previously attached to its answers was seriously impaired by the gross flattery which it had on this occasion displayed. The temple of Ammon, like that of Delphi, was famed for its treasures, the varied offerings of the pious; and these, in the time of the Persian invasion of Egypt, excited so far the cupidity of Cambyses as to induce him to send a large body of forces across the desert to seize upon the place. The expedition, however, proved a signal failure; no accounts of it were ever received, and it is probable, therefore, that the Persian troops were purposely misled on their route by the Egyptian guides, and that all perished in the desert. (*Vid.* Cambyses.)—Herodotus (2, 54, *seqq.*) gives us two accounts respecting the origin of the temple of Ammon. One, which he heard from the priests of Jupiter in Thebes, stated, that two priestesses had been carried off by some Phenicians from Thebes, and that one of them had been conveyed to Libya and there sold as a slave, and the other to Greece. These two females, according to them, had founded oracles in each of these countries. According to the other story, which he heard from the priestesses at Dodona, two black pigeons had flown from Thebes in Egypt; one of these had passed into Libya, the other had come to Dodona in Greece, and both had spoken with a human voice, and directed the establishment of oracles in each of these places.—Thus much for the ordinary narrative. Ammon, says Plutarch (*de Is. et Os.*, p. 354), is the Egyptian name for Jupiter. This god was particularly worshipped at Thebes, called in the sacred books *Hammon*, "the possession of Hammon," and in the Septuagint version (*Ezek.*, c. 20) the city of Ammon. Jablonski derives the word Ammon from *Am-oein*, "shining." According, however, to Champollion the younger, the term in question (*Amon* or *Amen*) denoted, in the Egyptian language, "secret," "concealed," or "he who reveals his secret powers." It is sometimes also, as the same writer informs us, united with the word *Kneph*, another appellation of the Supreme Being, and from this results the compound *Amenebis* (Amen-Neb) which is found on a Greek inscription in the greater Oasis. (*Lefrançois, Rech. sur l'Égypt.*, p. 237, *seqq.*) The Greek etymology of the name Ammon, from *ἄμμος* or *ψάμμος*, "sand," is fanciful and visionary, and only affords another proof of the constant habit in which that nation indulged, of referring so many things to themselves, with which they had not, in truth, the slightest connexion. From all that has been said by the ancient writers, it would appear very clearly, that the allusion in the legend of Ammon is an astronomical one. This is very apparent from the story told by Herodotus (2, 42), and which he received from the priests of Thebes. According to this narrative, Hercules was very desirous of seeing Jupiter, whereas the god was unwilling to be seen; until, at last, Jupiter, yielding to his importunity, contrived the following artifice. Having separated the head from the body of a ram, and flayed the whole carcass, he put on the skin with the wool, and in that form showed himself to Hercules. Now, if Hercules denote the sun, and *aries* the first sign of the zodiac, the whole may be an allegory illustrative of the opening of the year.—As regards the establishment of the oracle of Ammon, it may be observed, that the account respecting the two doves or pigeons, which is given by Herodotus, and has already been alluded to, came, as that historian informs us, from the priestesses

of Dodona; whereas the priests of Thebes ascribed the origin of the oracles at Dodona and in the Oasis of Ammon to the two Egyptian females connected with the service of the temple at Thebes, and who had been carried away and sold into slavery by certain Phenicians. Herodotus, with no little plausibility, seeks to reconcile these two statements, by conjecturing that the Dodonians gave the name of doves or pigeons to the females carried off, because they used a foreign tongue, and their speech resembled the chattering of birds; and the remark of the same Dodonians, that the pigeons were of a black colour, he explains by the circumstance of these females being, like the other Egyptians, of a dark complexion. It is very evident that we have here some allusion to Egyptian colonies, and to the influence which prophetic females would exercise in such colonies recently established. The only difficulty, however, is how to connect the Pelasgic shrine of Dodona with anything of an Egyptian character. (Consult the remarks of *Cruizer, Symbolik*, vol. 4, p. 151, and of *Heeren, Ideen*, vol. 2, pt. 1, p. 486.)—Browne, an English traveller, discovered in 1792 the site of the temple of Ammon, in a fertile spot called the Oasis of *Siveh*, situated in the midst of deserts, five degrees nearly west of *Cairo*. In 1798, Horneman discovered the Fons Solis. In 1816 Belzoni visited the spot, and found the fountain situated in the midst of a beautiful grove of palms. He visited the fountain at noon, evening, midnight, and morning. He had unfortunately no thermometer with him. But, judging from his feelings at those several periods, it might be 100° at midnight, 80° in the morning early, and at noon about 40°. The truth appears to be, that no change takes place in the temperature of the water, but in that of the surrounding atmosphere; for the well is deeply shaded, and about 60 feet deep. The account of Herodotus, who was never on the spot, is evidently incorrect. He must have misunderstood his informer. (Compare *Rennell's Geogr. of Herod.*, p. 593, *seqq.*)

AMMONI, a people of Africa, occupying what is now the Oasis of *Siveh*. According to Herodotus (2, 42), the Ammonians were a colony of Egyptians and Ethiopians, speaking a language composed of words taken from both those nations.—The arable territory of the Oasis of *Siveh* is about six miles long and four broad. The chief plantation consists of date-trees; there are also pomegranates, fig-trees, olives, apricots, and bananas. A considerable quantity of a reddish-grained rice is cultivated here, being a different variety from that which is grown in the Egyptian Delta. It also produces wheat for the consumption of the inhabitants. Abundance of water, both fresh and salt, is found. The fresh-water springs are mostly warm, and are accused of giving rise to dangerous fevers when used by strangers. The population of *Siveh* is capable of furnishing about 1500 armed men. (*Malte-Brun, Geogr.*, vol. 4, p. 173, *Am. ed.*) For remarks on the celebrated *Fons Solis*, consult preceding article towards its close.

AMMONIUS, I. the preceptor of Plutarch. He taught philosophy and mathematics at Delphi, and lived during the first century of the Christian era, in the reign of Nero, to whom he acted as interpreter when that monarch visited the temple at Delphi. Plutarch makes frequent mention of him in his writings, and particularly in his treatise on the inscription of the Delphic temple.—II. Saccas, or Saccophorus (so called because in early life he had been a sack-bearer), a celebrated philosopher, who flourished about the beginning of the third century. He was born at Alexandria, of Christian parents, and was early instructed in the catechetical schools established in that city. Here, under the Christian preceptors, Athenagoras, Pantoenus, and Clemens Alexandrinus, he acquired a strong propensity towards philosophical studies, and became exceedingly desirous of reconciling the different opinions

which at that time subsisted among philosophers. Porphyry (*ap. Euseb., Hist. Eccl.*, 6, 19) relates, that Ammonius passed over to the legal establishment, that is, apostatized to the pagan religion. Eusebius (*l. c.*, p. 221) and Jerome (*De S. E.*, c. 55, p. 132), on the contrary, assert that Ammonius continued in the Christian faith until the end of his life. But it is probable that these Christian fathers refer to another Ammonius, who, in the third century, wrote a Harmony of the Gospels, or to some other person of this name; for they refer to the sacred books of Ammonius: whereas Ammonius Saccas, as his pupil Longinus attests, wrote nothing. (Compare *Fabrieus, Bibl. Gr.*, vol. 4, p. 160, 172.) It is not easy, indeed, to account for the particulars related of this philosopher, but upon the supposition of his having renounced the Christian faith. According to Hierocles (*De Fato, ap. Phot., Bibl.*, vol. 2, p. 461, *ed. Bekker*), Ammonius was induced to adopt the plan of a distinct eclectic school, by a desire of putting an end to those contentions which had so long distracted the philosophical world. Ammonius had many eminent followers and hearers, both pagan and Christian, who all, doubtless, promised themselves much illumination from a preceptor that undertook to collect into a focus all the rays of ancient wisdom. He taught his select disciples certain sublime doctrines and mystical practices, and was called *θεοδιδάκτος*, "the heaven-taught philosopher." These mysteries were communicated to them under a solemn injunction of secrecy. Porphyry relates, that Plotinus, with the rest of the disciples of Ammonius, promised not to divulge certain dogmas which they learned in his school, but to lodge them safely in their purified minds. This circumstance accounts for the fact mentioned on the authority of Longinus, that he left nothing in writing. Ammonius probably died about the year 243. (*Enfield's History of Philosophy*, vol. 2, p. 58, *seqq.*)—Compare *Schöll, Hist. Lit. Gr.*, vol. 5, p. 119, *seqq.*)

—III. A Christian writer, a native of Alexandria, who lived about 250 A.D. He wrote a Harmony of the Gospels, which Jerome cites with commendation.—IV. The son of Hermias, so called for distinction' sake from other individuals of the name, was a native of Alexandria, and a disciple of Proclus. He taught philosophy at Alexandria about the beginning of the sixth century. His system was an eclectic one, embracing principles derived both from Aristotle and Plato. He cannot be regarded as an original thinker: he was very strong, however, in mathematics, and in the study of the exact sciences, which rectified his judgment, and preserved him, no doubt, from the extravagances of the New Platonism. Ammonius has left commentaries on the Introduction of Porphyry; on the Categories of Aristotle, together with a life of that philosopher; on his treatise of Interpretation; and scholia on the first seven books of the Metaphysics. Of the commentaries on the Introduction of Porphyry we have the following editions: *Venice*, 1500, fol., *Gr.*; *Venice*, 1516, 8vo, *ap. Ald.*, *Gr.*; *Venice*, 1569, fol., *Lat. transl.*—Of the commentary on the Categories, and of that on the treatise of Interpretation, *Venice*, 1503, fol.; *Venice*, 1516, *ap. Ald.*, 8vo. Of the commentary on the treatise of Interpretation alone, *Venice*, 1549, 8vo, *Gr. et Lat.* The scholia on the Metaphysics have never been edited. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 123, *seqq.*)—V. A priest of one of the Egyptian temples. He was one of the literary men who fled from Alexandria to Constantinople after the destruction of the pagan temples. There he became, together with Helladius, one of the masters of Socrates, the ecclesiastical writer: this is a fact which appears firmly established, and the reasons alleged by Valckenaer for placing him in the first or second century have been generally considered insufficient. Ammonius has left us a work on Greek synonyms, &c., under the title *Περὶ ὁμοίων καὶ διαφόρων λέξεων*. It is a production

of very inferior merit. The best edition is that of Valckenaer, *Lugd. Bat.*, 1739, 4to. An abridgment of this edition was published at *Erlang*, in 1787, 8vo, under the care of Ammon. Valckenaer's edition has also been reprinted entire, but in a more portable form, at *Leipzig*, 1822, 8vo, under the care of Schæffer, who has added the inedited notes of Kulencamp, and the critical letter of Segaar, addressed to Valckenaer and published at *Utrecht* in 1776, 8vo. We have also a treatise of Ammonius, *Περὶ ἀκυρολογίας*, "On the improper use of words," which has never been printed.—VI. A physician of Alexandria, surnamed the *Lithotomist*, from his skill in cutting for the stone; an operation which, according to some, he first introduced. He invented an instrument for crushing the larger calculi while in the bladder. He was accustomed also to make use of caustic applications, especially red arsenic, in hemorrhages. (*Sprengel, Hist. Med.*, vol. 1, § 465.)

AMNĪSUS, a port of Gossus in Crete, southeast from Gossus, with a small river of the same name in its vicinity. (*Hom., Od.*, 19, 188.—*Apoll. Rhod.*, 3, 877.)

AMOR, the son of Venus, was the god of love. (*Vid. Cupido.*)

AMORGOS, now *Amorgo*, one of the Cyclades, and situate to the east of Niciasia. According to Scylax (*Peripl.*, p. 22) and Stephanus Byzantinus (*s. v. Ἀμοργος*), it contained three towns, Arcesine, Ægialus, and Minoa. The former yet preserves its name, and stands on the northern extremity of the island. Ægialus is perhaps *Porto S. Anna*. Minoa was the birth place of Simonides, an iambic poet, mentioned by Strabo (487) and others. Amorgus gave its name to a peculiar linen dress manufactured in the island. (*Steph. Byz.*, *s. v. Ἀμοργος*.—*Cramer's Anc. Greece*, vol. 3, p. 416.)

AMPELIUS, Lucius, the author of a work that has reached us, entitled *Liber Memorialis*. The particular period when he lived is unknown. Bähr makes him to have flourished after Trajan, and before Theodosius. His work is divided into fifty small chapters, and is addressed to a certain Macrinus. It contains a brief account of the world, the elements, the earth, history, &c., and appears to be compiled from previous writers. Marks of declining Latinity are visible in it. The best editions are that of Tzschucke, *Lips.*, 1793, 8vo, and that of Beck, *Lips.*, 1826, 8vo. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 454, *seqq.*)

AMPĒLUS, I. a promontory of Crete, on the eastern coast, south of the promontory of Samnionum. It is now Cape *Sacro*. (*Ptol.*, p. 91.) Pliny (4, 12) assigns to Crete a town of this same name; and there are, in fact, some ruins between the mouth of the river *Sacro* and the promontory. (*Cramer's Ancient Greece*, vol. 3, p. 372.)—II. A promontory of Macedonia, at the eastern extremity of the peninsula of Sithonia, and forming the lower termination of the Sinus Singiticus. Livy calls it the Toronian promontory (31, 45).

AMPELUSĪA, called also *Cote* and *Soloë*, a promontory of Africa, on the coast of Mauritania, and forming the point of separation between the *Fretum Herculeum* (*Straits of Gibraltar*) and the shore of the Western Ocean. It is now Cape *Spartel*. The ancient name *Ampelusius* refers to its abounding in vines, a signification which *Cote* is said to have had in the Punic or Phœnician tongue. (Compare the remarks of *Hamaker, Miscell. Phœnic.*, p. 247, *Lugd. Bat.*, 1824, 4to.)

AMPHIARĀIDES, a patronymic of Alcmaeon, as being son of Amphiaraius. (*Orid, Fast.*, 2, 43.)

AMPHIARĀUS, a famous soothsayer and warrior, according to some a son of Oicleus, according to others of Apollo. So, also, one account makes his mother to have been named Clytæmnestra; another, Hypermnestra, daughter of the Ætolian king Thestius. He appears

to have been a descendant of a distinguished augur family, his grandfather having been Antiphates, and his great-grandfather Melampus. From various scattered accounts respecting him in the ancient writers, the following particulars may be gleaned. He was, in his youth, at the famous hunt of the Calydonian boar; he afterward returned to Argos, his native city, and, with the aid of his brother, drove Adrastus from the throne. A reconciliation, however, taking place, the monarch was restored to his kingdom, and gave Amphiarus his sister Eriphyle in marriage. The offspring of this union were two sons, Alcmaeon and Amphilocheus. When Adrastus, at the request of Polynices, resolved to march against Thebes, Amphiarus was unwilling to accompany him, for he knew that the expedition would prove fatal to himself, and he endeavoured also to dissuade the other chieftains from going. Polynices thereupon presented Eriphyle with the famous necklace of Harmonia, to induce her to overcome her husband's scruples, and she not only, in consequence, made known his place of concealment, but prevailed upon him to accompany the army. Amphiarus thereupon, previous to his departure, knowing what was about to befall him, charged his son Alcmaeon to kill his mother the moment he should hear of his father's death. The Theban war proved fatal to the Argives, and Amphiarus, while engaged in dangerous conflict with Periclymenes, was swallowed up by the earth, Jupiter having caused the ground to open for the purpose of receiving his favourite prophet, and saving him from the dishonour of being overcome by his antagonist. The news of his death was brought to Alcmaeon, who immediately executed his father's command, and murdered Eriphyle. Amphiarus received divine honours after death, and had a celebrated temple and oracle at Oropos in Attica. His statue was made of white marble, and near his temple was a fountain, whose waters were held sacred. They only who had consulted his oracle, or had been delivered from a disease, were permitted to bathe in it, after which they threw pieces of gold and silver into the stream. Those who consulted the oracle of Amphiarus, sacrificed a ram to the prophet, and spread the skin upon the ground, upon which they slept, in expectation of receiving in a dream the answer of which they were in quest. (*Apollod.*, 3, 6, 2.—*Hom.*, *Od.*, 15, 243, &c.—*Æsch.*, *Sept. c. Theb.*—*Hygin.*, *fab.*, 70, 73, &c.—*Pausan.*, 1, 34.)

AMPHICRÆTES, I. a biographer, who, according to Diogenes Laërtius (*Vit. Aristip.*), was condemned to die by poison. (Compare *Athenæus*, 13, 5.)—II. An Athenian orator, who, being banished from his country, retired to Seleucia on the Tigris, and took up his residence there under the protection of Cleopatra, daughter of Mithradates. He starved himself to death, because suspected by this princess of treason. Jonsius (*de Script. Hist. Phil.*, 2, 15) thinks that this is the same with the preceding.—III. An artist, mentioned by Pliny (34, 8), according to a new reading proposed by Sillig (*Dict. Art.*, s. v.).

AMPHICTYON, a mythic personage, son of Deucalion, who is said to have reigned in Attica after driving out Cranaus, his father-in-law, and to have been himself expelled by Erichthonius. (*Apollod.*, 3, 14, 6.) The establishment of the Amphictyonic council is ascribed to him by some. (Compare *Heyne*, *ad loc.*)

AMPHICTYONES, the deputies of the cities and people of Greece, who represented their respective nations in a general assembly called the Amphictyonic Council. The most authentic list of the communities thus represented is as follows: Thessalians, Boeotians, Dorians, Ionians, Perrhæbians, Magnetes, Locrians, Cetrans or Ænianians, Phthiotæ or Achæans of Phthia, Melians or Malians, and Phocians. The orator Æschines, who furnishes this list, shows, by mentioning the number twelve, that one name is wanting. The other lists

supply two names to fill up the vacant place; the Dolopes and the Delphians. It seems not improbable, that the former were finally supplanted by the Delphians, who appear to have been a distinct race from the Phocians. After the return of the Heraclidæ, the number of the Amphictyonic tribes, then perhaps already hallowed by time, continued the same; but the geographical compass of the league was increased by all that part of the Peloponnesus which was occupied by the new Doric states. It would be wrong to regard this council as a kind of national confederation. The causes which prevented it from acquiring this character will be evident, when we consider the mode in which the council was constituted, and the nature of its ordinary functions. The constitution of the Amphictyonic Council rested on the supposition, once, perhaps, not very inconsistent with the fact, of a perfect equality among the tribes represented by it. Each tribe, however feeble, had two votes in the deliberation of the congress: none, however powerful, had more. The order in which the right of sending representatives to the council was exercised by the various states included in one Amphictyonic tribe was, perhaps, regulated by private agreement; but, unless one state usurped the whole right of its tribe, it is manifest that a petty tribe, which formed but one community, had greatly the advantage over Sparta or Argos, which could only be represented in their turn, the more rarely in proportion to the magnitude of the tribe to which they belonged.—With regard to other details less affecting the general character of the institution, it will be sufficient here to observe, that the council was composed of two classes of representatives, called *Pylagōra* and *Hieromnemones*, whose functions are not accurately distinguished. It seems, however, that the former were intrusted with the power of voting; while the office of the latter consisted in preparing and directing their deliberations, and carrying their decrees into effect. At Athens, three *Pylagora* were annually elected, while one *Hieromnemon* was appointed by lot: we do not know the practice in other states. One peculiar feature of the Amphictyonic Council was, that its meetings were held at two different places. There were two regularly convened every year; one in the spring, at Delphi, the other in the autumn, near the little town of Anthela, within the pass of Thermopylæ, at a temple of Ceres. It has been supposed, in attempting to account for this, that there were originally two distinct confederations; one formed of inland, the other of maritime tribes; and that when these were united by the growing influence of Delphi, the ancient places of meeting were retained, as a necessary concession to the dignity of each sanctuary. A constitution such as the Amphictyonic Council appears to have possessed, could not have been suffered to last if any important political interests had depended on the decision of this assembly. The truth is, the ordinary functions of the Amphictyonic Congress were chiefly, if not altogether, connected with religion, and it was only by accident that it was ever made subservient to political ends. The original objects, or, at least, the essential character, of the institution, seem to be faithfully expressed in the terms of the oath preserved by Æschines, which bound the members of the league to refrain from utterly destroying any Amphictyonic city, and from cutting off its supply of water, even in war, and to defend the sanctuary and the treasures of the Delphic god from sacrilege. In this ancient and half-symbolical form we perceive two main functions assigned to the council; to guard the temple, and to restrain the violence of hostility among Amphictyonic states. There is no intimation of any confederacy against foreign enemies, except for the protection of the temple; nor of any right of interposing between members of the league, unless where one threatens the existence of another. A review, then, of the history

of this council shows that it was almost powerless for good, except, perhaps, as a passive instrument, and that it was only active for purposes that were either unimportant or pernicious. Its most legitimate sphere of action lay in cases where the honour and safety of the Delphic sanctuary were concerned, and in these it might safely reckon on general co-operation from all the Greeks. A remarkable instance is afforded by the Sacred or Crissæan war. (*Vid.* Crissa and Phocis.) The origin of the Amphictyonic Council is altogether uncertain. Acrisius is said to have founded the one at Delphi, Amphictyon the other at Thermopylæ, a tradition in favour of the opinion above advanced, that the great council was a union of two. Independently, however, of these two, it is probable that many Amphictyonies (so to call them) once existed in Greece, all trace of which has been lost. (*Thirlwall's History of Greece*, vol. 1, p. 374, *seqq.*)—The name of this confederation, if we give credit to Androtion, as cited by Pausanias (10, 8), was originally *Amphictiones* (*Ἀμφικτιόνες*), and referred to its being composed of the tribes that dwelt round about. An alteration took place when *Amphictyon*, the son of Deucalion, founded a temple of Ceres at Thermopylæ, one of the places of assembling. From this time, we are informed, the confederation took the name of *Amphictyonies* (*Ἀμφικτιόνες*).

AMPHIDROMĒA, a festival observed by private families at Athens, the fifth day after the birth of every child. It was customary to *run round* the fire with a child in their arms; thereby, as it were, making it a member of the family, and putting it under the protection of the household deities, to whom the hearth served as an altar. Hence the name of the festival, from *ἀμφιδραμεῖν*, “to run around.” (*Potter, Gr. Ant.*, 4, 14.)

AMPHIGENTĀ, a town of Messenia, near the river Hypsoeis. According to Homer (*Il.*, 2, 593), it belonged to Nestor. Some critics assigned it to Triphylia. (*Strabo*, 349.)

AMPHILOCHUS, I. son of Amphiaræus and Eriphyle. After the Trojan war he left Argos, his native country, retired to Acarnania, and built there Argos Amphilocheium. This is the account of Thucydides (2, 68); but *vid.* Argos, IV.—II. An Athenian philosopher who wrote upon agriculture. (*Varro, de R. R.*, 1.)

AMPHILOCHUS and ANAPUS, two brothers, who, when Catana and the neighbouring cities were in flames by an eruption from Mount Vesuvius, saved their parents upon their shoulders. The fire, as it is said, spared them while it consumed others by their side; and Pluto, to reward their uncommon piety, placed them after death in the island of Lence. They received divine honours in Sicily. (*Val. Max.*, 5, 4.—*Sil. Ital.*, 14, 197.—*Claud.*, *Idyll.*, 7, 41.)

AMPHION, I. a Theban prince, son of Antiope and Jupiter, or, rather, of Epopeus, king of Sicyon. Antiope, the niece of Lycus, king of Thebes, having become the mother of twins, Amphion and Zethus, exposed them on Mount Cithæron, where they were found and brought up by shepherds. Having learned, on reaching manhood, the cruelties inflicted upon their mother by Lycus and Dirce (*vid.* Antiope), the twin brothers avenged her wrongs by the death of both the offending parties (*vid.* Lycus and Dirce), and made themselves masters of Thebes, where they reigned conjointly. Under their rule the kingdom of Thebes acquired new splendour, and the arts of peace flourished. Amphion cultivated music with the greatest success, having received lessons in this art from Mercury himself, who gave him a lyre of gold, with which, it is said, he built the walls of Thebes, causing the stones to take their respective places in obedience to the tones of his instrument. The meaning of this legend is supposed to be, that Amphion, by his mild and persuasive manners, prevailed upon his rude subjects to build walls around Thebes. Muller, however, sees in it an allu-

sion to the old Dorian and Æolian custom of erecting the walls of cities to the sound of musical instruments.—Amphion, after this, married Niobe, daughter of Tantalus, and became by her the father of seven sons and seven daughters, who were all slain by Apollo and Diana. (*Vid.* Niobe.) According to one account, he destroyed himself after this cruel loss, while another version of the story makes him to have fallen in a sedition. (*Hom.*, *Od.*, 11, 262, *seqq.*—*Apollod.*, 3, 5, 4, *seqq.*—*Müller, Gesch. Hellen. Stämme*, &c., vol. 1, p. 267.)—II. A painter, contemporary with Apelles, by whom he was highly respected as an artist, and who yielded to him in the grouping of his pictures. (*Plin.*, 35, 10.)—III. A statuary of Cnossus, and pupil of Ptochichus. (*Pausan.*, 10, 15.) He flourished about Olymp. 88.

AMPHIPŌLIS, a city of Thrace, near the mouth of the Strymon. It was founded by the Athenians in the immediate vicinity of what was termed *Ἐννέα Ὀδοί*, or “the Nine Ways,” a spot so called from the number of roads which met here from different parts of Thrace and Macedon. The occupation of the Nine Ways seems to have excited the jealousy of the Thracians, which led to frequent rencounters between them and the Athenian colonists, in one of which the latter sustained a severe defeat. (*Thucyd.*, 1, 100.) After a lapse of twenty-nine years, a fresh colony was sent out under the command of Agnon, son of Nicias, which succeeded in subduing the Edoni. Agnon gave the name of Amphipolis to the new city, from its being surrounded by the waters of the Strymon. (*Thucyd.*, 4, 102.—*Scylax*, p. 27.) Amphipolis soon became one of the most flourishing cities of Thrace; and at the time of the expedition of Brasidas into that country, it was already a large and populous place. Its surrender to that general was a severe blow to the prosperity and good fortune of the Athenians; and we may estimate the importance they attached to its possession, from their displeasure against Thucydides, who arrived too late to prevent its falling into the hands of the enemy (*Thucyd.*, 4, 106); and also from the exertions they afterward made, under Cleon, to repair the loss. The attempt proved unsuccessful, through the ignorance and rashness of the Athenian general, who was slain in an engagement. Brasidas fell in the same battle, and the Amphipolitans paid the highest honours to his memory, resolving thenceforth to revere him as the true founder of their city; and with this view they threw down the statues of Agnon, and erected those of Brasidas in their stead. Athens never regained possession of this important city; for though it was agreed, by the terms of the peace soon after concluded with Sparta, that this colony should be restored, that stipulation was never fulfilled, the Amphipolitans themselves refusing to accede to it, and the Spartans expressing their inability to compel them. The Athenians, in the twelfth year of the war, sent an expedition under Eucleon to attempt the reconquest of the place, but without success. (*Thucyd.*, 7, 9.) Mitford, in his history of Greece, affirms, that Amphipolis was restored to the Athenians; but there is no proof of this fact. Amphipolis, at a later period, fell into the hands of Philip of Macedon, after a siege of some duration. It became from that time a Macedonian town, and, on the subjugation of this country by the Romans, it was constituted the chief town of the first region of the conquered territory. (*Dexipp.*, *ap. Syncell.*, *Chron.*, p. 268.—*Liv.*, 45, 29.) During the continuance of the Byzantine empire, it seems to have exchanged its name for that of Chrysopolis, if we may believe an anonymous geographer, in Hudson's *Geogr. Min.*, vol. 4, p. 42. The spot on which the ruins of Amphipolis are still to be traced, bears the name of *Jenikeri*. The position of Amphipolis, observes Col. Leake (*Walpole's Collection*, p. 510), is one of the most important in Greece. It stands in a pass which traverses the mountains border-

ing the Strymonic Gulf; and it commands the only easy communication from the coast of that gulf into the great Macedonian plains, which extend for sixty miles from beyond *Meleniko* to *Philippi*. (*Cramer's Ancient Greece*, vol. 1, p. 292, *seqq.*)

AMPHIS, a Greek comic poet of Athens, contemporary with Plato. His works are lost, though some of the titles of his pieces have reached us. (Consult *Schweigh.*, *ad Athen.*, vol. 9, *Index Auct.*, s. v.)

AMPHISSA, I. a daughter of *Macareus*, fabled to have given her name to the city of *Amphissa*.—II. The chief city of the *Locri Ozolæ*. We find, from *Strabo*, that it stood at the head of the *Crissæan Gulf*, and *Æschines* (*in Ctes.*, p. 71) informs us, that its distance from *Delphi* was sixty stadia: *Pausanias* reckons one hundred and twenty. *Amphissa* was said to have derived its name from the circumstance of its being surrounded on every side by mountains. (*Aristot.*, *ap. Harpocrat. Lex.*—*Steph. Byz.*, s. v. Ἀμφίσσα.) *Amphissa* was destroyed by order of the *Amphictyons*, for having dared to restore the walls of *Crissa*, and to cultivate the ground, which was held to be sacred; and lastly, on account of the manner in which they molested travellers who had occasion to pass through their territory. (*Strabo*, 419.—*Æschin. in Ctes.*, p. 71, *seqq.*) At a later period, however, it appears to have somewhat recovered from this ruined state when under the dominion of the *Ætoliens*. In the war carried on by the Romans against this people, they besieged *Amphissa*, when the inhabitants abandoned the town and retired into the citadel, which was deemed impregnable. (*Liv.*, 37, 5.) It is generally agreed, that the modern town of *Salona* represents the ancient *Amphissa*. Sir William Gell (*Itinerary*, p. 196) observes, that the real distance between *Delphi* and *Amphissa* is seven miles. (*Cramer's Anc. Greece*, vol. 2, p. 111.)

AMPHITHEATRUM, an edifice of an elliptical form, used for exhibiting combats of gladiators, wild beasts, and other spectacles. The word is derived from ἀμφὶ and θέατρον, from the spectators being so ranged as to see equally well from every side. The first durable amphitheatre of stone was built by *Statilius Taurus*, at the desire of *Augustus*. The largest one was begun by *Vespasian*, and completed by *Titus*, now called *Colisæum*, from the *Colossus*, or large statue of *Nero*, of which *Vespasian* transported to the square in front of it. It is said to have contained 87,000 spectators, to have been 5 years in building, and to have cost a sum equal to 10 millions of crowns. 12,000 Jews were employed upon it, who were made slaves at the conquest of *Jerusalem*. Its magnificent ruins still remain.—There are amphitheatres still standing, in various degrees of perfection, at several other places besides *Rome*. At *Pola* in *Istria*, at *Nismes*, at *Arles*, *Bourdeaux*, and particularly at *Verona*.—The place where the gladiators fought was called the arena, because it was covered with sand or sawdust, to prevent the gladiators from sliding, and to absorb the blood.

AMPHITRITE, a daughter of *Nereus* and *Doris*, and the spouse of *Neptune*. She for a long time shunned the addresses of this deity; but her place of concealment was discovered to *Neptune* by a dolphin, and the god, out of gratitude, placed this fish among the stars. *Amphitrite* had, by *Neptune*, *Triton*, one of the sea-deities. (*Ovid, Metamorph.*, 1, 14.—*Hesiod, Theog.*)

AMPHITRYON, a Theban prince, son of *Alcæus* and *Hipponome*. His sister *Anaxo* had married *Electryon*, king of *Mycenæ*, whose sons were killed in a battle by the *Teleboans*. (*Vid. Alcmena*.)

AMPHITRYONIÆDES, a surname of *Hercules*, as the supposed son of *Amphitryon*. (*Virg.*, *Æn.*, 8, 103.)

AMPHRYSUS, a river of *Thessaly*, flowing into the *Sinnus Pagasæus*, above *Phthiotic Thebes*. Near this stream, *Apollo*, when banished from heaven, fed the flocks of *King Admetus*. Hence, among the Latin

poets, the epithet *Amphrysus* becomes equivalent to *Apollineus*. (*Lucan.*, 6, 367.—*Virg.*, *Æn.*, 6, 398.)

AMPSAGAS, a river of *Africa*, forming the boundary between *Mauritania Cæsariensis* and *Numidia*, and falling into the sea to the east of *Igilghis*, or *Jigel*. On a branch of it stood *Cirta*, the capital of *Numidia*. The modern name is *Wad-el-Kibir*, i. e., the Great River. (*Ptol.*, *Mela*, 1, 6.—*Plin.*, 5, 3.)

AMSANCTUS, or **AMSANCTI VALLIS ET LACUS**, a celebrated valley and lake of *Italy*, in *Sannium*, to the southwest of *Trivium*. *Virgil* (*Æn.*, 7, 563) has left us a fine description of the place. The waters of the lake were remarkable for their sulphureous properties and exhalations. Some antiquaries have confounded this spot with the *Lake of Cutilis*, near *Reate*; but *Servius*, in his commentary on the passage of *Virgil* just referred to, distinctly tells us that it was situated in the country of the *Hirpini*, which is also confirmed by *Cicero* (*de Div.*, 1) and *Pliny* (*H. N.*, 2, 93). The latter writer mentions a temple consecrated to the goddess *Mephitis*, on the banks of this sulphureous lake, of which a good description is given by *Romanelli*, taken from a work of *Leonardo di Capoa*. (*Romanelli*, vol. 2, p. 351.) The lake is now called *Mufiti*, and is close to the little town of *Frisento*. (*Cramer's Ancient Italy*, vol. 2, p. 251.)

AMULIUS, son of *Procas*, king of *Alba*, and younger brother of *Numitor*. The crown belonged of right to the latter, but *Amulius*, dispossessed him of it, put to death his son *Lausus*, and fearing lest he might be dethroned by a nephew, compelled *Rhea Sylvia*, the daughter of *Numitor*, to become a vestal, which priesthood bound her to perpetual virginity. Notwithstanding, however, all these precautions, *Rhea* became the mother of *Romulus* and *Remus* by the god *Mars*. *Amulius* thereupon ordered her to be buried alive for having violated her vow as a priestess of *Vesta*, and the two children to be thrown into the *Tiber*. They were providentially saved, however, by some shepherds, or, as others say, by a she-wolf; and, when they attained to manhood, they put to death the usurper *Amulius*, and restored the crown to their grandfather *Numitor*. (*Ovid, Fast.*, 3, 67.—*Lav.*, 1, 3, *seqq.*—*Plut.*, *Vit. Rom.*, &c.)

AMYCI PORTUS, a harbour on the *Thracian Bosphorus*, north of *Nicopolis*, and south of the temple of *Jupiter Urius*. Here *Amycus*, an ancient king of the *Bebruces*, was slain in combat with *Pollux*. His tomb was covered, according to some, with a laurel, and hence they maintain that the harbour was also called *Daphnes Portus*. *Arrian*, however, speaks of a harbour of the insane *Daphne* near this, which no doubt has given rise to the mistake. (*Arrian, Peripl. Eux.*, p. 25.—*Plin.*, 5, 43.)

AMYCLÆ, I. a city of *Italy*, in *Latium*, in the vicinity of *Fundi* and the *Cæcubus Ager*. It was said to have been of Greek origin, being colonized from the town of *Amyclæ* in *Laconia*. Concerning the destruction of *Amyclæ*, in *Italy*, strange tales were related. According to some accounts, it was infested and finally rendered desolate by serpents. (*Plin.*, 3, 5, who also quotes *Varro* to the same effect.—*Isigon.*, *ap. Sol.*, *de Mir. Font.*, &c.) Another tradition represented the fall of *Amyclæ* as having been the result of the silence enjoined by law on its inhabitants, in order to put a stop to the false rumours of hostile attacks which had been so frequently circulated. The enemy at last, however, really appeared; and, finding the town in a defenceless state, it was destroyed. This account is in general acception with the poets. (*Virg.*, *Æn.*, 10, 563.—*Sil. Ital.*, 8, 528.—*Cramer's Anc. Italy*, vol. 2, p. 123.)—II. One of the most ancient cities of *Laconia*, a short distance to the southwest of *Sparta*. It was founded long before the arrival of the *Dorians* and *Heraclidæ*, who conquered and reduced it to the condition of a small town. It

was, however, conspicuous, even in Pausanias's time, for the number of its temples and other edifices, many of which were richly adorned with sculptures and other works of art. Its most celebrated structure was the temple of the Amyclean Apollo. (*Polyb.*, 4, 9, 3.) Amyclæ is mentioned by Homer (*Il.*, 2, 584) and Pindar (*Pyth.*, 1, 122.—*Isthm.*, 7, 18). Polybius states that Amyclæ was only twenty stadia from Sparta (*Polyb.*, 5, 18); but Dodwell observes, that *Scelavo-Chorio*, which occupies its ancient site, is nearly double that distance. (*Classical Tour*, vol. 2, p. 413.—*Cramer's Ancient Greece*, vol. 3, p. 213.) Polybius describes the country around Amyclæ as most beautifully wooded and of great fertility; which account is corroborated by Dodwell, who says, "it luxuriates in fertility, and abounds in mulberries, olives, and all the fruit-trees which grow in Greece."

AMŶCLAS, I. son of Lacedæmon and Sparta, built the city of Amyclæ. (*Pausan.*, 3, 1).—II. The name which Lucan gives to the master of the small twelve-oared vessel in which Cæsar had embarked in disguise, for the purpose of sailing to Brundisium, and bringing from that place over into Greece the remainder of his forces. A violent wind producing a rough sea, the pilot despaired of making good his passage, and ordered the mariners to turn back. Cæsar, perceiving this, rose up, and showing himself to the pilot according to Plutarch, but, according to Lucan, to Amyclas the master of the vessel, exclaimed, "Go forward, my friend, and fear nothing; thou carriest Cæsar and Cæsar's fortunes in thy vessel." The effect of this speech was instantaneous; the mariners forgot the storm and made new efforts; but they were at length permitted to turn about by Cæsar himself. (*Plut.*, *Vit. Cæs.*) The noble simplicity of Cæsar's reply, as given above by Plutarch, has been amplified by Lucan into timid declamation. (*Pharsal.*, 5, 578, *seqq.*)

AMŶCUS, son of Neptune by Melia, was king of the Bebrycæ. He was famous for his skill in boxing with the cestus or gauntlets, and challenged all strangers to a trial of strength. After destroying many persons in this way, he was himself slain in a contest with Polux, whom he had defied to the combat, when the Argonauts, in their expedition, had stopped for a season on his coasts. (*Apoll. Rhod.*, 2, 1, *seqq.*—*Virg.*, *Æn.*, 5, 373.)

AMŶMONE, I. one of the Danaides, and mother of Nauplius by Neptune. The god produced a fountain, by striking the ground with his trident, on the spot where he had first seen her. *Vid.* Amymone, II. (*Propert.*, 2, 26, 46.—*Hygin.*, *fab.*, 169).—II. A fountain of Argolis, called after Anymone the daughter of Danaus. It was the most famous among the streams which contributed to form the Lernean Lake. (*Eurip.*, *Phœn.*, 195.—*Pausan.*, 2, 37.)

AMYNAS, I. was king of Macedonia, and succeeded his father Aleetas, B.C. 547. His son Alexander murdered the ambassadors of Megabyzus, for their improper behaviour to the ladies of his father's court. Bubares, a Persian general, was sent with an army to revenge the death of the ambassadors; but he was gained over by rich presents, and by receiving in marriage the hand of a daughter of Amyntas, to whom he had been previously attached. (*Herod.*, 5, 19.—*Justin.*, 7, 3).—II. Successor to Archelaus, B.C. 399. He reigned only one year, and performed nothing remarkable.—III. The third of the name, ascended the throne of Macedonia B.C. 397, after having dispossessed Pausanias of the regal dignity. He was expelled by the Illyrians, but restored by the Thessalians and Spartans. He made war against the Illyrians and Olympians, with the assistance of the Lacedæmonians, and lived to a great age. His wife Eurydice conspired against his life; but her snares were seasonally discovered by one of his daughters by a former wife. He had Alexander, Perdiccas, and Philip (father of

Alexander the Great) by his first wife; and by the other he had Archelaus, Aridaus, and Menelaus. He reigned 24 years. (*Justin.*, 7, 4 et 9).—IV. Grandson of Amyntas III. He was yet an infant, when Perdiccas his father and his uncle Alexander were slain by the orders of Eurydice their mother. He was, of course, the lawful heir to the crown; but Philip, having in his favour the wishes of the nation, ascended the throne in preference to him. He afterward served in the armies of both Philip and Alexander. Having conspired against the latter, he was put to death. (*Justin.*, 7, 4, *seqq.*—*Id.*, 12, 7).—V. One of the deputies sent by Philip of Macedon to the Thebans, B.C. 339, to induce them to remain faithful to his interests.—VI. A general of Alexander's, B.C. 331, sent back to Macedonia to make new levies. (*Quint. Curt.*, 4, 6.—*Id.*, 5, 1).—VII. Another officer of Alexander's, who went over to Darius, and was slain in attempting to seize upon Egypt. (*Quint. Curt.*, 3, 9).—VIII. Son of Arrhabeus, commanded a squadron of cavalry in Alexander's army. He was implicated in the conspiracy of Philotas, but acquitted. (*Quint. Curt.*, 4, 15, &c.).—IX. A king of Galatia, who succeeded Dejotarus. He was the last ruler of this country, which was added to the Roman empire, after his death, by Augustus.—X. A geographical writer, author of a work entitled *Σταθμοί*, or the Encampments of Alexander in his conquest of Asia. (*Athen.*, 10, 422, *b.*, &c.) It has not come down to us.

AMYNOR, king of Ormenium, a city of the Dolopians. He put out the eyes of his son Phœnix on a false charge of having corrupted one of the royal concubines. He was slain by Hercules on attempting to oppose the passage of that hero through his territories. (*Apollod.*, 2, 7.—*Id.*, 3, 13.—Compare *Homer.*, *Il.*, 9, 448.)

AMŶRÏCUS CAMPUS, a plain of Thessaly, in the district of Magnesia, near the town and river of Amyrus. It was famed for its wines. (*Polyb.*, 5, 99.)

AMŶRTEUS, an Egyptian leader during the revolution under Inarus. He succeeded the latter. (*Herod.*, 2, 140, and 3, 15.—*Thucyd.*, 1, 110.—*Diod. Sic.*, 11, 74.) Ctesias, however, makes him to have been a king of Egypt in the time of Cambyzes, whereas the other account places him in the reign of Artaxerxes Longimanus. As regards this discrepancy, consult *Bähr*, *ad Ctes.*, p. 121.

AMŶRUS, I. a river of Thessaly, in the upper part of the district of Magnesia, and near the town of Melibœa. (*Apoll. Rhod.*, 1, 595).—II. A city of Thessaly, near the river of the same name. (*Schol.* in *Apoll. Rhod.*, l. c.)

AMŶSTIS, a river of India falling into the Ganges. Mannert makes it to be the same with the *Patterea*, near the modern city of *Hurdwar*. (*Geogr.*, vol. 5, p. 93.)

AMŶTHÏON, a son of Cretheus, king of Iolchos, by Tyro. He married Idomene, by whom he had Bias and Melampus. After his father's death, he established himself in Messenia. He is said to have given a more regular form to the Olympic games. (*Apollod.*, 1, 9.—*Heyne*, *ad loc.*)—Melampus is called *Amythaonius*, from his father Amythaon. (*Virg.*, *G.*, 3, 550.)

AMŶTIS, I. a daughter of Astyages, whom Cyrus married. (*Ctesias*, p. 91.—Consult *Bähr*, *ad loc.*)—II. A daughter of Xerxes, who married Megabyzus, and disgraced herself by her licentious conduct.

ANACES or ANACTES, a name given to Castor and Pollux. Their festivals were called *Anaceia* (*Ἀνακεία*). The Athenians applied the term *Anaces* (*Ἀνακες*) in a general sense to all those deities who were believed to watch over the interests, as well public as private, of the city of Athens: in a special sense, however, the appellation was given to the Dioscuri, on account of the peculiar advantages which the capital

of Attica had derived from them. (Compare *Tzetz., ad Il.*, p. 69.) Spanheim (*ad Callim., Hymn. in Jov.*, 79) and Schelling (*Samothr. Goetheit.*, p. 95) derive the form *Ἀνακτες* from the Hebrew *Enakim*. (*Deuteron.*, 1, 28.) The Greek grammarians, on the other hand, have sought for an etymology in their own language, and make the term in question come from *ἄνω*, "above," as expressive of the idea of superiority and dominion. They attach to this name the triple sense of *θεός, βασιλεύς, and οικοδεσπότης*. Hence also the adverb *ἄνωκός* (*Herodot.*, 1, 24.—*Thucyd.*, 8, 102), which the scholiasts explain by *προνοητικὸς καὶ ὀνολακτικὸς*. (Compare *Eustath., ad Od.*, 1, 397.—*Creuzer's Symbolik*, par Guignaut, vol. 2, p. 305, in *notis*.)

ANACHARSIS, a Scythian philosopher, who flourished nearly six centuries before the Christian era. He was the son of a Scythian prince, who had married a native of Greece. Early instructed by his mother in the Greek language, he became desirous of acquiring a portion of Greek wisdom, and obtained from the king of Scythia an embassy to Athens, where he arrived in the year 592 B.C., and was introduced to Solon by his countryman Toxaris. On sending in word that a Scythian was at the door, and requested his friendship, Solon replied that friends were best made at home. "Then let Solon, who is at home, make me his friend," was the smart retort of Anacharsis; and, struck by its readiness, Solon not only admitted him, but, finding him worthy of his confidence, favoured him with his advice and friendship. He accordingly resided some years at Athens, and was the first stranger whom the Athenians admitted to the honours of citizenship. He then travelled into other countries, and finally returned to Scythia, with a view to communicate to his countrymen the information he had received, and to introduce among them the laws and religion of Greece. The attempt was, however, unsuccessful; for the Scythians were not only indisposed to receive them, but it is said that Anacharsis was killed by an arrow, from the king, his brother's, own hand, who detected him performing certain rites in a wood, before an image of Cybele. Great respect, however, was paid to him after death, which is not unusual. Anacharsis was famous for a manly and nervous kind of language, which was called, from his country, Scythian eloquence. The apophthegms attributed to him are shrewd, and better worth quoting than many of the ancient saws, which are often indebted for their celebrity much more to their antiquity than to their wisdom. His repartee to an Athenian, who reproached him with the barbarism of his country, is well known: "My country is a disgrace to me, but you are a disgrace to your country." Strabo tells us, from an old historian, that Anacharsis invented the bellows, the anchor, and the potter's wheel: but this account is very doubtful, as Pliny, Seneca (*Epist.*, 90), Diogenes Laertius, and Suidas, who likewise speak of the inventions ascribed to that philosopher, mention only the last two: while Strabo, moreover, remarks that the potter's wheel is noticed in Homer. (*Beckman's History of Inventions*, vol. 1, p. 104.—Compare *Ritter's Vorhalle*, p. 237 and 262.) The epistles which bear the name of Anacharsis, and which were published in Greek and Latin, at Paris, 1552, are unequivocally spurious. They are supposed to have been produced at a later period, in the school of the sophists. (*Gorton's Biogr. Dict.*, vol. 1, p. 72.—*Enfield's History of Philosophy*, vol. 1, p. 116, *seqq.*)

ANACIUM (*Ἀνακίων*), a temple at Athens, sacred to Castor and Pollux, and standing at the foot of the Acropolis. It was a building of great antiquity, and contained paintings of Polygnotus and Micon. (*Pausan.*, 1, 18.—*Harpoer.*, s. v. *Ἀνακίων*.)

ANACREON, a celebrated Greek poet, of whose life little is actually known. It is, however, generally ad-

mitted that he was born at Teos, a city of Ionia, in the early part of the sixth century before the Christian era, and that he flourished in the sixtieth Olympiad. From Abdera, to which city his parents had fled from the dominion of Croesus, the young Anacreon betook himself to the court of Polycrates, tyrant of Samos. Here he was received with great distinction, but subsequently retired to Athens, where he remained in great favour with Hipparchus, who then possessed the power which Pisistratus had usurped. The death of his patron caused him to return to his native city, whence he retired to Abdera on the breaking out of the disturbances under Histæus. He attained the age of eighty-five years. The time and manner of his death are uncertain, and variously reported: the most popular opinion is, that he died from suffocation, in consequence of swallowing a grape-stone while in the act of drinking. The bacchanalian turn of his poetry is, however, and not without some appearance of reason, supposed by many to be the sole foundation for this tradition. In the poetry generally attributed to him, a great difference, as to quality, is easily discernible, a circumstance which has contributed not a little to strengthen the supposition that the whole is not genuine. Indeed, some critics have not hesitated to affirm, that very few of the compositions which go under his name are to be ascribed to Anacreon. The fragments collected by Ursinus, with a few others, seem, according to them, to be his most genuine productions. To decide from the internal evidence contained in his writings, as well as from the general tenour of the meager accounts handed down to us, he was himself an amusing voluptuary and an elegant profligate. Few Grecian poets have obtained greater popularity in modern times, for which in England he is indebted to some excellent translations, in part by Cowley, and altogether by Fawkes, not to mention the point and elegance of the more paraphrastic version of Moore.—Of the editions in the original Greek, the most celebrated is the quarto, printed at Rome in 1781, by Spaletti: the most learned and useful is that of Fischer, *Lips.*, 1754 (reprinted in 1776 and 1793 with additions), in 8vo. Other editions worthy of notice are, that of Brunck, *Argent.*, 1778, 16mo (reprinted in 1786, in 32mo and 16mo); that of Gail, *Paris*, 1799, 4to, with a French version, dissertations, music, &c.; that of Mæbius, *Halle*, 1810, 8vo, and that of Mehlhorn, *Glogau*, 1825, 8vo.

ANACTORIUM, the first town on the northern coast of Acarnania, situate on a low neck of land opposite Nicopolis, of which it was the emporium. (*Strabo*, 450.) The site is now called *Punta*, which many antiquaries, however, have identified with Actium: but this is evidently an error. Thucydides reports (1, 55), that Anactorium had been colonized jointly by the Coreyreans and Corinthians. These were subsequently ejected by the Acarnanians, who occupied the place in conjunction with the Athenians. (*Thucyd.*, 4, 49, and 7, 31.—Compare *Scymnus*, *Ch.*, v. 459.) Anactorium ceased to exist as a town when Augustus transferred its inhabitants to Nicopolis. (*Pausan.*, 7, 23.)

ANADYOMÈNE (*Ἀναδυομένη scil. Ἀφροδίτη*), a celebrated picture of Venus, painted by Apelles, which originally adorned the temple of Æsculapius at Cos. It represented the goddess rising out of the sea (*ἀναδυομένην*) and wringing her hair. Augustus transferred it to the temple of Julius Cæsar, and remitted to the inhabitants of Cos a tribute of one hundred talents in return. The lower part of the figure having been injured, no Roman painter could be found to supply it. (*Plin.*, 35, 10.)

ANAGNIA, the principal town of the Hernici, situate about thirty-six miles to the east of Rome. It is now *Anagni*. The fertility of the surrounding country is much commended by Silius Italicus (8, 392).

Anagnia was colonized by Drusus. (*Front. de Col.*) From Tacitus (*Hist.*, 3, 62) we learn, that it was the birthplace of Valens, a general of Vitellius, and the chief supporter of his party. The Latin way was joined near this city by the Via Prænestina, which from that circumstance was called Compitum Anagninum. (*Cramer's Ancient Italy*, vol. 2, p. 79, *seqq.*)

ANAITIS, a goddess of Armenia, who appears to be the same with the Venus of the western nations. She is identical also with the goddess of Nature, worshipped among the Persians. (*Creuzer, Symbolik*, vol. 2, p. 27.) The temple of Anaitis, in Armenia, stood in the district of Acilisene, in the angle between the northern and southern branches of the Euphrates. She was worshipped also in Zela, a city of Pontus, and in Comana. (*Creuzer, l. c.*) As regards the origin of the name itself, much difference of opinion exists. Von Hammer (*Fundgr. des Or.*, vol. 3, p. 275) derives it from the Persian *Anahid*, the name of the morning star, and of the female genius that directs with her lyre the harmony of the spheres. Ackerblad, on the other hand (*Lettre au Cheval. Italinski, &c., Rom.*, 1817), referring to Clemens Alexandrinus, (*Protrept.*, 5, p. 57) and Eustathius (*ad Dionys. Perieg.*, v. 845), where mention is made of an Ἀναΐτις Ταυρίτις, and a Ταυρίτις, and also to the Phœnician *Tavár*, asserts, that the true name of the goddess in question was Ταυρίτις (corrupted in most passages of the ancient writers into Ἀναΐτις), and that the root is *Tanat*, the appellation of an Asiatic goddess, who is at one time confounded with Diana, and at another with Minerva. (Compare also the Egyptian *Neith* with the article prefixed, *A-neith*, and Ἀνεΐτις, another form of the name Anaitis, as appearing in Plutarch, *Vit. Artaxerx.*, c. 27.) Silvestre de Sacy, however (*Journal. d. Sav. Juillet*, 1817, p. 439), in opposition to Ackerblad, remarks, that the Persians, most indubitably, call the planet Venus *Anahid* or *Nahid*, and that the name *Anaitis* is evidently derived from this source; he observes, moreover, that Ταυρίτις is itself a false reading.—The temple of the goddess Anaitis had a large tract of land set apart for its use, and a great number of male and female slaves to cultivate it (τερόδονοι). It was famed for its riches, and it was from this sacred edifice that Antony, in his Parthian expedition, carried off a statue of the goddess of solid gold. (*Plin.*, 33, 4.) The commercial relations which subsisted between the Armenians and other countries, caused the worship of Anaitis to be spread over other lands, and hence we read of its having been introduced into Persia, Media, Bactria, &c. (Compare *Strabo*, 535, and *Heyne, de Sacerdotio Comanensi*, in *Noe. Comment. Soc. Scient. Gotting.*, 16, p. 117, *seqq.*) Artaxerxes Mnemon is said to have been the first that introduced the worship of Anaitis into Susa, Babylon, and Ecbatana. (*Clemens Alexandr.*, *Protrept.*, p. 57, ed. Potter.—*Creuzer's Symbolik*, vol. 2, p. 26, *seqq.*)

ANAMÆRES, a Gallic tribe, in Gallia Cispadana, to the south of the Po, and at the foot of the Apennines. They occupied what is now a part of the modern Duchy of Parma. (*Polyb.*, 2, 32.)

ANÁTHE, one of the Sporades, northeast of Thera. It was said to have been made to rise by thunder from the bottom of the sea, in order to receive the Argonauts during a storm, on their return from Colchis. The meaning of the fable evidently is, that the island was of volcanic origin. Apollonius Rhodius, however (4, 1717), gives a different account, according to which the island received its name from Apollo's having appeared there to the Argonauts in a storm. A temple was in consequence erected to him, under the name of Ægletes (Ἀγλῆτις), in the island. (*Strabo*, 484.) The modern name of the island is *Amphio*.

ANÁPUS, I. a river of Epirus, near the town of Stratos, mentioned by Thucydides (2, 82).—II. A river

of Sicily, near Syracuse, now *Alfeo*. It was a small stream, but is frequently mentioned by the poets. They fabled that the deity of the stream fell in love with the nymph Cyane, who was changed into a fountain. (*Ovid, Pont.*, 2, 10, 26.—*Met.*, 5, *fab.*, 5, &c.)

ANAS, a river of Spain, now the *Guadiana*. The modern name is a corruption from the Arabic, *Wadi-Ana*, i. e., the river Ana. (*Plin.*, 3, 1.)

ANAUROS, a small river of Thessaly, near the foot of Pelion, and running into the Onchestus. In this stream Jason, according to the poets, lost his sandal. (*Apollon. Rhod.*, 1, 48.)

ANAXAGÓRAS, I. a monarch of Argos, son of Argeus, and grandson of Megapenthes. He shared the sovereign power with Bias and Melampus, who had cured the women of Argos of madness. (*Pausan.*, 2, 18).—II. A Grecian philosopher, born at Clazomenæ, Olymp. 70, according to Apollodorus (*Diog. Laert.*, 2, 7), a date, however, that is inconsistent with his reputed friendship with Pericles. The statement commonly received makes him a scholar of Anaximenes, which the widely fluctuating date assigned to the latter renders impossible to refute on chronological grounds: however, the philosophical directions they respectively followed were so opposite, that they cannot consistently be referred to the same school. From Clazomenæ he removed to Athens, and here we find him living in the strictest intimacy with Pericles, to the formation of whose eloquence his precepts are said to have greatly contributed. As scholars of Anaxagoras, several highly distinguished individuals have been mentioned, most of them on the sole authority of a very dubious tradition; and only of Euripides the tragedian, and Archelaus the naturalist, is it certain that they stood with him in the closest relation of intimacy. His connexion with the most powerful Athenians, however, profited him but little; for not only does he seem to have passed his old age in poverty, but he was not even safe from the persecution which assailed the friends of Pericles on the decline of his ascendancy. He was accused of impiety towards the gods, thrown into prison, and eventually forced to fly to Lampsacus. Some foundation for the charge of impiety was probably found in his general views, which undoubtedly were far from according with the popular notions of religion, since he regarded the sun and moon as consisting of earth and stone, and miraculous indications at sacrifices as ordinary appearances of nature. He also gave a moral exposition of the myths of Homer, and an allegorical explanation of the names of the gods. Anaxagoras was an old man when he arrived at Lampsacus, and died there soon after his arrival, in the eighty-eighth Olympiad, or thereabout. His memory was honoured by the people of Lampsacus with a yearly festival. In addition to his philosophical labours, Anaxagoras is said to have been well acquainted with several other branches of knowledge. He occupied himself much with mathematics and the kindred sciences, especially astronomy, as the character of the discoveries attributed to him sufficiently shows. He is represented as having conjectured the right explanation of the moon's light, and of the solar and lunar eclipses. His work on nature, of which several fragments have been preserved, especially by Simplicius, was much known and celebrated in ancient times. A full analysis of his doctrines, as far as they have reached us, is given by Ritter, in his *History of Ancient Philosophy*, vol. 1, p. 281, *seqq.*, Oxford transl.

ANAXANDER, son of Eurycrates, and king of Sparta. He was of the family of the Agidæ. The second Messenian war began in his reign. (*Herodot.*, 7, 204.—*Pausan.*, 3, 3.)

ANAXANDRIDES, I. son of Leon, was king of Sparta. Being directed by the Ephori to put away his wife on account of her barrenness, he only so far obeyed as to

take a second wife, retaining also the first. By his second spouse he became the father of Cleomenes, while the first one, hitherto sterile, bore to him, after this, Dorieus, Leonidas, and Cleombrotus. (*Pausan.*, 3, 3.)—II. A comic writer, born at Camirus in Rhodes. He was the author of sixty-five comedies. Endowed by nature with a handsome person and fine talents, Anaxandrides, though studiously elegant and effeminate in dress and manners, was yet the slave of passion. It is said (*Athenæus*, 9, 16) that he used to tear his unsuccessful dramas into pieces, or send them as waste paper to the perfumers' shops. He introduced upon the stage scenes of gross intrigue and debauchery; and not only ridiculed Plato and the Academy, but proceeded to lampoon the magistracy of Athens. For this attack he is reported by some to have been tried and condemned to die by starvation. (*Theatre of the Greeks*, 2d ed., p. 183.)

ANAXARCHUS, a philosopher of Abdera, from the school of Democritus, who flourished about the 110th Olympiad. He is chiefly celebrated for having lived with Alexander and enjoyed his confidence. (*Ælian*, *Var. Hist.*, 9, 3.—*Arrian*, *Exp. Alex.*, 4, p. 84.—*Plut.*, *ad Princ. induct.*) It reflects no credit, however, upon his philosophy, that, when the mind of the monarch was torn with regret for having killed his faithful Clitus, he administered the balm of flattery, saying, "that kings, like the gods, could do no wrong." This philosopher addicted himself to pleasure; and it was on this account, and not, as some supposed, on account of the apathy and tranquillity of his life, that he obtained the surname of *Εὐδαιμονικός*, "the Fortunatus." A marvellous story is related of his having been pounded in an iron mortar by Nicoreon, king of Cyprus, in revenge for the advice which he had given to Alexander, to serve up the head of that prince at an entertainment; and of his enduring the torture with invincible hardness. But the tale, for which there is no authority prior to the time of Cicero, is wholly inconsistent with the character of a man who had through his life been softened by effeminate pleasures. The same story is also related of Zeno the Eleatic. (*Enfield's History of Philosophy*, vol. 1, p. 435.)

ANAXARÊTE, a young female of Salamis, beloved by Iphis, a youth of humble birth. She slighted his addresses, and he hung himself in despair. Gazing on the funeral procession as it passed near her dwelling, and evincing little emotion at the sight, she was changed into a stone. (*Ovid*, *Mét.*, 14, 698, *seqq.*)

ANAXIBIA, a daughter of Bias, brother to the physician Melampus. She married Pelias, king of Iolchos, by whom she had Acastus, and four daughters, Pisdice, Pelopea, Hippothoe, and Alcestis. (*Apollod.*, 1, 9.)

ANAXIDAMUS, succeeded his father Zeuxidamus on the throne of Sparta. (*Pausan.*, 3, 7.)

ANAXILAUS, a Messenian, tyrant of Rhegium. He was so mild and popular during his reign, that when he died, 476 B.C., he left his infant sons to the care of one of his slaves, named Micythus, of tried integrity, and the citizens chose rather to obey a slave than revolt from their benevolent sovereign's children. Micythus, after completing his guardianship, retired to Tegea in Arcadia, loaded with presents and encomiums from the inhabitants of Rhegium. (*Justin*, 4, 2.—*Diod. Sic.*, 11, 66.—*Herod.*, 7, 170.—*Justin*, 3, 2.—*Pausan.*, 4, 23.—*Thucyd.*, 6, 5.—*Herod.*, 6, 23.)

ANAXIMANDER, a native of Miletus, who first taught philosophy in a public school, and is therefore often spoken of as the founder of the Ionic sect. He was born in the third year of the 42d Olympiad (B.C. 610), and was the first who laid aside the defective method of oral tradition, and committed the principles of natural science to writing. It is related of him that he predicted an earthquake: but that he should have been able, in

the infancy of knowledge, to do what is at this day beyond the reach of philosophy, is incredible. He lived 64 years. (*Diog. Laert.*, 2, 1.—*Cic.*, *Acad. Quæst.*, 4, 37.) The general doctrine of Anaximander concerning nature and the origin of things, was, that infinity, *τὸ ἀπειρον*, is the first principle of all things; that the universe, though variable in its parts, as one whole is immutable; and that all things are produced from infinity and terminate in it. What this philosopher meant by "infinity" has been a subject of much controversy. If we follow the testimony of Aristotle and Theophrastus, it will appear that he understood by the term in question a mixture of multifarious elementary parts, out of which individual things issued by separation. Mathematics and astronomy were greatly indebted to him. He framed connected series of geometrical truths, and wrote a summary of his doctrine. He was the first who undertook to delineate the surface of the earth, and mark the divisions of land and water upon an artificial globe. The invention of the sundial is also ascribed to him. This, however, has been controverted; but even if the invention has been wrongfully ascribed to him, he nevertheless seems to have been the first among the Greeks who pointed out the use of the dial. He is said also to have been the first that made calculations upon the size and distance of the heavenly bodies. He believed that the stars are globular collections of air and fire, borne about in their respective spheres, and animated by portions of the divinity; that the earth is a globe in the midst of the universe, and stationary, and that the sun is 28 times larger than the earth. (*Enfield's History of Philosophy*, vol. 1, p. 154, *seqq.*—*Ritter*, *Hist. Anc. Phil.*, vol. 1, p. 265, *seqq.*, *Oxford trans.*)

ANAXIMENES, I. a native of Miletus, born about the 56th Olympiad (B.C. 556). He is usually regarded as the pupil of Anaximander, but this is controverted by Ritter, who sees a striking resemblance between his doctrines and those of Thales. This same writer rejects the birth-date commonly assigned to Anaximenes, and receives that given by Apollodorus, namely, Olymp. 63. Anaximenes taught that the first principle of all things is air, which he held to be infinite or immense. "Anaximenes," says Simplicius (*ad Physic.*, 1, 2), "taught the unity and immensity of matter, but under a more definite term than Anaximander, calling it air. He held air to be God, because it is diffused through all nature, and is perpetually active." The air of Anaximenes is, then, a subtle ether, animated with a divine principle, whence it becomes the origin of all beings. In this sense Lactantius (1, 5) understood his doctrine; for, speaking of Cleanthes as adopting the doctrine of Anaximenes, he adds, "the poet assents to it when he sings, 'Tum pater omnipotens fecundis imbribus æther,' &c. (*Virg.*, *Georg.*, 2, 325.) Anaximenes is said to have taught, that all minds are air; that fire, water, and earth, proceed from it, by rarefaction or condensation; that the sun and moon are fiery bodies, whose form is that of a circular plate; that the stars, which also are fiery substances, are fixed in the heavens, as nails in a crystalline plane; and that the earth is a plane tablet resting upon the air. (*Plut.*, *Plac. Phil.*, 1, 17, and 2, 11.—*Cic.*, *N. D.*, 1, 10.—*Enfield's History of Philosophy*, vol. 1, p. 156.—*Ritter*, *Hist. Anc. Phil.*, vol. 1, p. 203, *seqq.*, *Oxford trans.*)—II. A native of Lampsacus, and son of Aristoteles. He was celebrated for his skill in rhetoric, and was the disciple both of Zoilus, notorious for his hypercriticisms on Homer, and of Diogenes the Cynic. Anaximenes was one of the preceptors of Alexander the Great. He accompanied his illustrious pupil through most of his campaigns, and afterward wrote the history of his reign and that of his father Philip. It is recorded that, during the Persian war, his native city having espoused the cause of Darius, Alexander expressed his determination of punishing the inhabitants

by laying it in ashes. Anaximenes was deputed by his countrymen as a mediator; but the conqueror, guessing his intention, when he saw him entering the royal tent as a suppliant, cut short his anticipated petition by declaring that he was determined to refuse his request, whatever it might be. Of this hasty expression the philosopher availed himself, and immediately implored that Jampsacus might be utterly destroyed, and a pardon refused to its citizens. The stratagem was successful; Alexander was unwilling to break his promise; and the presence of mind exhibited by its advocate saved the town. Anaximenes was also the author of a history of Greece. (*Pausan.*, 6, 18.—*Val. Max.*, 7, 3, 4.)

ANAZARBUS, a city of Cilicia Campestris, situate on the river Pyramus, at some distance from the sea, and taking its name apparently from a mountain called Anazarbus, at the foot of which it was situate. The adjacent territory was famed for its fertility. It afterward took the appellation of Cæsarea ad Anazarbum, but from what Roman emperor is not known, though prior to the time of Pliny (5, 27). The original appellation, however, finally prevailed, as we find it so designated in Hierocles and the imperial Notitiæ, at which period it had become the chief town of Cilicia Secunda. It was nearly destroyed by a terrible earthquake under Justinian. Anazarbus was the birthplace of Dioscorides and Oppian. The Turks call it, at the present day, *Ain-Zerbeh*. (*Cramer's Asia Minor*, vol. 2, p. 354.)

ANCÆUS, I. the son of Lycurgus and Cleophile, or, according to others, Astypalæa, was in the expedition of the Argonauts. He was also at the chase of the Calydonian boar, in which he perished. (*Apollod.*, 3, 9.—*Id.*, 1, 8.—*Hygin.*, *fab.*, 173 et 248.)—II. King of Samos, and son of Neptune and Astypalæa. He went with the Argonauts, and succeeded Tiphys as pilot of the ship *Argo*. He reigned in Ionia, where he married Samia, daughter of the Mæander, by whom he had four sons, Perilas, Enudus, Samus, Alithersus, and one daughter called Parthenope. He paid particular attention to the culture of the vine, and on one occasion was told by a slave, whom he was pressing with hard labour in his vineyard, that he would never taste of its produce. After the vintage had been gathered in and the wine made, Ancæus, in order to falsify the prediction, was about to raise a cup of the liquor to his lips, deriding, at the same time, the pretended prophet (who, however, merely told him, in reply, that there were many things between the cup and the lip), when tidings came that a boar had broken into his vineyard. Throwing down the cup, with the untasted liquor, Ancæus rushed forth to meet the animal, and lost his life in the encounter. Hence arose the Greek proverb.

Πολλὰ μεταῦ πίνει κύλικος καὶ χεῖλος ἄκρου.

Multa cadunt inter calicem supremaque labra.

The Latin translation is by Erasmus, who, as Dacier thinks, read *πέτει* for *πέλει*, a supposition not at all probable, since "*cadunt*" gives the spirit, though not the literal meaning, of *πέλει*.—The story just given is related somewhat differently by other writers, but the point in all is the same. (*Eustath.*, ad *Il.*, p. 77, ed. *Rom.*—*Festus*, s. v. *Manum*—*Aul. Gell.*, 13, 17.—*Dacier*, ad *Fest.*, l. c.)

ANCALITES, a people of Britain, near the Atrebatii, and probably a clan of that nation. Baxter supposes them to have been the herdsmen and shepherds of the Atrebatii, and to have possessed those parts of *Oxfordshire* and *Buckinghamshire* most proper for pasturage. Horsley, on the other hand, makes their country correspond to the modern *Berkshire*. But it is all uncertainty. (*Cæs.*, *Bell. G.*, 5, 21.)

ANCHEMOLUS, son of Rhetus, king of the Marrubii in Italy, was expelled by his father for criminal conduct towards his stepmother. He fled to Turnus, and

was killed by Pallas, son of Evander, in the wars of Æneas against the Latins. (*Virg.*, *Æn.*, 10, 389.)

ANCHESMUS, a mountain of Attica, where Jupiter *Anchesmius* had a statue. It is now *Agios Georgios*, taking its modern name from a church of St. George, which has displaced the statue. (*Leake's Topogr. of Athens*, p. 69.)

ANCHIÆLE, a city of Cilicia, west of the mouth of the Cydnus, and a short distance from the coast. It was a place of great antiquity, and the Greek writers assign its origin to Sardanapalus, king of Assyria. The authority, however, from which they derive their information, is Aristobulus, who is entitled to but little credit in general. The founder was said by them to have been buried here, and they speak of his tomb's still existing in the time of Alexander the Great. On the tomb was the statue of a man in the act of clapping his hands, with an Assyrian inscription to this effect, "Sardanapalus, the son of Anacyndaraxes, built Anchiæle and Tarsus in one day; but do thou, oh stranger, eat, drink, and sport, since the rest of human things are not worth this," i. e., a clap of the hands. (*Arrian*, *Exp. Alex.*, 2, 5.) It is more than probable, supposing that a Sardanapalus did found the place, that we are to regard him, not as the last king of that name, but some earlier monarch of Assyria, who had pushed his conquests into the western part of Asia. The situation of Anchiæle was bad; it had no harbour, no river, no great road, in its immediate vicinity. It disappeared, therefore, at last from history, while Tarsus, more favourably placed, continued to flourish. Pliny calls the name Anchiæles; and Arrian, Anchiælos. (*Mannert*, 6, pt. 2, p. 66.)

ANCHIÆLUS, a term occurring in one of Martial's epigrams (11, 94), about which the learned are greatly divided in opinion. Scaliger thinks that it comes from the Hebrew *Chai* and *Alah*, and is equivalent to *Vivens Deus*.

ANCHIÆ PORTUS, according to Dionysius of Halicarnassus (*Ant. Rom.*, 1, 32), the real name of Onchesmus in Epirus.

ANCHISES, son of Capys, by Themis, daughter of Ilus, and the father of Æneas. Venus was so struck with his beauty, that she introduced herself to his notice in the form of a nymph, on Mount Ida, and urged him to a union. Anchises no sooner discovered that he had been in the company of a celestial being, than he dreaded the vengeance of the gods. Venus quieted his apprehensions; but, for his imprudence subsequently in boasting of the partiality of the goddess, Jupiter struck him with blindness, or, according to some, enfeebled and maimed him by a stroke of thunder. The offspring of his union with Venus was the celebrated Æneas. When Troy was in flames, he was saved from the victorious Greeks by his son, who bore him away on his shoulders from the burning city. He afterward accompanied Æneas in his voyage to Italy, but died before that land was reached, in the island of Sicily, at the harbour of Drepanum, and was buried on Mount Eryx. (*Virg.*, *Æn.*, 2, 647.—*Id.*, *ib.*, 3, 707.—*Heyne*, *Excurs.*, 17, ad *Virg.*, *Æn.*, 2, &c.)

ANCHISIA, a mountain of Arcadia, on which, according to Pausanias, was the tomb of Anchises. This, of course, is different from the common account, followed by Virgil, which makes Anchises to have been buried on Mount Eryx in Sicily. At the foot of Mount Anchisia there was a road leading to Orchomenus, which city lay to the northwest. (*Pausan.*, 8, 12.)

ANCHISIÆDES, a patronymic of Æneas, as being son of Anchises. (*Virg.*, *Æn.*, 6, 348, &c.)

ANCHŌE, a place in Boeotia, where the Cephissus, or rather the Lake Copais, issued from under ground. It was near Larymna, and on the coast. (*Strabo*, 404.)

ANCHŌRA. *Vid.* NICÆA, II.

ANCHŌRUS, a son of Midas, king of Phrygia, who

sacrificed himself for the good of his country, when the earth had opened and swallowed up many buildings. The oracle had been consulted, and gave for answer, that the gulf would never close if Midas did not throw into it whatever he had most precious. Though the king cast in much gold and silver, yet the gulf continued open, till Anchurus, thinking nothing more precious than life, and regarding himself, therefore, as the most valuable of his father's possessions, took a tender leave of his wife and family, and leaped into the earth, which closed immediately over his head. Midas erected there an altar of stone to Jupiter, and that altar was the first object which he turned into gold when he had received his fatal gift from the gods. Every year, when the day came round on which the chasm had been first formed, the altar became one of stone again; but, when this day had passed by, it once more changed to gold. (*Plut., Parall., p. 306.*)

ANCILE, a sacred shield, which fell from heaven in the reign of Numa, when the Roman people laboured under a pestilence. Upon the preservation of this shield depended the fate of the Roman empire, according to the admonition given to Numa by the nymph Egeria, and the monarch therefore ordered eleven of the same size and form to be made, that if ever any attempt was made to carry them away, the plunderer might find it difficult to distinguish the true one. They were made with such exactness, that the king promised Veturius Mamurius, the artist, whatever reward he desired. (*Vid. Mamurius.*) They were kept in the temple of Vesta, and an order of priests was chosen to watch over their safety. These priests were called Salii, and were twelve in number; they carried every year, on the first of March, the shields in a solemn procession through the streets of Rome, dancing and singing praises to the god Mars. (*Vid. Salii.*) This sacred festival continued three days, during which every important business was stopped. It was deemed unfortunate to be married on those days, or to undertake any expedition. Hence Suetonius (*Oth., 8*) states, that Otho marched from Rome, on his unsuccessful expedition against Vitellius, during the festival of the Ancilia, "*nulla religionum cura*," without any regard for sacred ceremonies, and Tacitus (*Hist., 1, 89*) remarks, that many ascribed to this circumstance the unfortunate issue of the campaign. The form of the ancile occurs in ancient coins. Representations of it are also given by modern writers on Roman Antiquities. (Consult *Lipsius, Mil. Rom.; Anal., lib. 3, dial. 1.*) Plutarch, in explaining their shape, remarks, "they are neither circular, nor yet, like the pelta, semicircular, but fashioned in two crooked indented lines, the extremities of which, meeting close, form a curve (*ἄγκυλον*)." According to this etymology, the name should be written in Latin *Ancyle*. Ovid says the shield was called ancile, "*quod ab omni parte recisum est*," a derivation much worse than Plutarch's. The name is very probably of Etrurian origin, and the whole legend would appear to be a myth, turning on the division of the Roman year into twelve months by the fabulous Numa. (*Plut., Vit. Num., c. 13.—Ovid, Fast., 3, 377.*)

ANCONA, a city of Italy, on the coast of Picenum, which still retains its name. The appellation is supposed to be of Greek origin, and to express the angular form of the promontory on which the city is placed. (*Mela, 2, 4.—Procop., Rer. Got., 2.*) This bold headland was called Cumerium Promontorium; its modern name is *Monte Comero*, and sometimes *Monte Guasco*. The foundation of Ancona is ascribed by Strabo (241) to some Syracusans, who were fleeing from the tyranny of Dionysius. These Syracusans of Strabo are by many critics supposed to be same with the Siculi of Pliny, to whom that writer attributes the origin of this city. (*Plin., 3, 13.—Compare Solin., 8.*) But, on the other hand, it is contended, that the foundation of

Ancona must be anterior to the reign of Dionysius, since it is noticed in the Periplus of Scylax (p. 12) as belonging to the Umbri; and, therefore, that the Siculi of Pliny must be that ancient race who settled in Italy at a very remote period, and afterward passed over into Sicily. (*Bardetti, pt. 2, c. 10.—Oliveri, della fond. di Pesaro dissert., p. 13.—Gius. Colucci, Delle Antichità Picene, vol. 1, diss. 1.*) Ancona is spoken of by Livy (41, 1) as a naval station of great importance in the wars of Rome with the Illyrians. (Compare *Tacit., Ann., 3, 9.*) It was occupied by Cæsar soon after his passage of the Rubicon. (*Bell. Civ., 1, 11.—Cic., Ep. ad Fam., 16, 12.*) It continued to be a port of consequence in Trajan's time, if we may judge from the works erected by that emperor, which are still extant there. (*Cramer's Ancient Italy, vol 1, p. 280, seqq.*)

ANCUS MARCIUS, the fourth king of Rome, was grandson to Numa by his daughter. His name Ancus was said to be derived from the Greek *ἄγκυρ*, because he had a crooked arm, which he could not stretch out to its full length; an etymology of no value whatever, the term in question being very probably Etrurian. Like his ancestors, he first turned his attention to the re-establishment of religion, and had the ritual law transcribed on tables, that all might read it. He then directed his arms against the Latins with success, and carried away several thousand of this nation to Rome, whom he settled on the Aventine. He extended his conquests into Etruria, and along both banks of the Tiber to the seacoast, where he founded Ostia, the oldest of the Roman colonies, as the harbour of Rome. He built the first bridge over the Tiber, and annexed additional defences to the city. The oldest remaining monument in Rome, the prison formed out of a stone quarry in the Capitoline Hill, is called the work of Ancus. It was on the side of the hill above the forum (the place of meeting for the plebeians); and until an equality of laws was introduced, it served only to keep the plebeians and those who were below them in custody. The original common law of the *plebs* was regarded as the fruit of his legislation, in the same manner as the rights of the three ancient tribes were looked upon to be the laws of the first three kings. And because all landed property, by the principles of the Roman law, proceeded from the state, and, on the incorporation of new communities, was surrendered by them, and conferred back on them by the state, the assignment of public lands is attributed to Ancus. This act, being viewed as a parcelling out of public territories, was probably the cause which led the plebeians to bestow the epithet of "good" upon him in the old poems. The new subjects could not be admitted into a new tribe, as the Luceres had been, since the number of tribes was completed. They constituted a community, which stood side by side with the people formed by the members of the thirty *curiæ*, as the body of the Latin towns had stood in relation to Alba. This was the beginning of the plebs, which was the strength and the life of Rome, the people of Ancus as distinguished from that of Romulus; and this is a fresh reason for Ancus being placed in the middle of the Roman kings. (*Nicbuhr, Rom. Hist., p. 86, Twiss's abridgment.*) Ancus reigned, according to the fabulous Roman chronology, twenty-four years. (*Liv., 1, 32, seqq.—Florus, 1, 4.—Dion. Hal., 3, 9, &c.*)

ANCYRA, I. a city of Galatia, west of the Halys. According to Pansanias (2, 4), it was founded by Midas, and the name was derived from an anchor (*ἄγκυρα*) which was found here and preserved in the temple of Jupiter. This city was greatly enlarged by Augustus, whence the grammarian Tzetzes is led to style him the founder of the city, and under Nero it was styled the metropolis of Galatia. Its situation was extremely well adapted for inland trade, and Ancyra became a kind of staple-place for the commodities of the East. It is famous also as having been the spot where the *Monumentum*

Ancyranum was found in modern times, a spurious inscription on a temple erected in honour of Augustus, which gives a history of the several actions and public merits of Augustus, and which shows also that he had been a great patron of the Ancyran. Ancyra is now called by the Turks *Angouri*, and by the Europeans *Angora*, and is the place whence the celebrated shawls and hosiery made of goats' hair were originally brought. Near this place, Bajazet was conquered and made prisoner by Timur, or, as the name is commonly, though incorrectly, written, Tamerlane. (*Mannert*, vol. 6, pt. 3, p. 46, *seqq.*)—II. A town of Phrygia, on the confines of Mysia. Strabo (576) places it in the district of Abasitis, near the sources of the river Mækestus, which flows into the Rhyndacus. (*Mannert*, vol. 6, pt. 3, p. 111.)

ANDABATÆ, gladiators who fought blindfolded, whence the proverb *Andabatarum more pugnare*, to denote rash and inconsiderate measures. The name comes from the Greek *ἀνὰ βάτα*, because they fought in chariots or on horseback. (Consult *Erasmus*, *Chil.*, p. 461.)

ANDANIA, a city of Messenia, situate according to Pausanias (4, 33), at the distance of eight stadia from Carnasium. It had been the capital of Messenia before the domination of the Heraclidæ. (*Pausan.*, 4, 3.) Strabo (360) places it on the road from Messene to Megalopolis. It is also mentioned by Livy (36, 31) as situated between these two cities. Sir W. Gell (*Itin.*, p. 69) observed its ruins between *Sakona* and *Krano*, on a hill formed by the foot of Mount *Tetrage*. (*Cramer's Ancient Greece*, vol. 3, p. 147.)

ANDECAVI or ANDES, a people of Gaul, east of the Nannetes, and lying along the northern bank of the Liger or *Loire*. Their capital was Juliomagus, now *Angers*, and their territory corresponded in part to what is now the department of *la Mayenne*. (*Cæs.*, *B. G.*, 2, 35.)

ANDES, I. a people of Gaul. *Vid.* Andecavi.—II. A village near Mantua, where Virgil was born. (Compare *Hieron.*, *Chron. Euseb.*, 2, and *Sil. Ital.*, 8, 594.) Tradition has long assigned to a small place, now named *Pietola*, the honour of representing this birthplace of Virgil; but as this opinion appears to derive no support from the passages in which the poet is supposed to speak of his own farm, the prevailing notion among the learned seems to contradict the popular report which identifies Andes with *Pietola*. (*Maffei*, *Verona Illustr.*, vol. 2, p. 1.—*Viso*, *Memorie storiche*, vol. 1, p. 31.—*Bonelli*, *Mem. Mantov.*, vol. 1, p. 120.) It may be observed, however, that Virgil's birthplace and his farm may not necessarily have been one and the same: in this case it would seem that no argument could be objected to a local but very ancient and well-established tradition. (*Cramer's Ancient Italy*, vol. 1, p. 69, *seqq.*)

ANDOCIDES, an Athenian orator, son of Leogoras, and born in the first year of the 78th Olympiad, B.C. 468. He commanded the Athenian fleet in the war between the Corinthians and Corcyreans, and was afterward accused of having been concerned in mutilating the *Hermæ*, or statues of Mercury, a crime of which Alcibiades was regarded as one of the authors. Andocides, having been arrested for this sacrilege, escaped punishment by denouncing his real or pretended accomplices. Photius informs us, that among these was Leogoras, but that Andocides found the means of obtaining his father's pardon. (*Phot.*, *Bibl.*, vol. 2, p. 488, *ed. Bekker.*) The same author mentions various other incidents in the life of this orator, which compelled him at last to quit Athens. He returned during the government of the four hundred, and was cast into prison, whence, however, he succeeded in escaping. He returned a second time to his native country after the fall of the thirty tyrants. Having failed in an embassy to Sparta, which had been confided to him, he

no longer dared to show himself in Athens, but died in exile. Andocides employed his abilities as an orator merely in his own affairs. The four discourses of his which have come down to us are important for the history of Greece. The first has reference to the Mysteries of Eleusis, which he had been accused of violating (*Περὶ Μυστηρίων*). The second (*Περὶ καθόδου*), treats of his (second) return to Athens. The third (*Περὶ Εἰρήνης*), "*Concerning Peace*," was pronounced in the fourth year of the 95th Olympiad, on occasion of the peace with Sparta; the fourth is directed against Alcibiades (*Κατὰ Ἀλκιβιάδου*). Taylor, led into an error by a passage of Plutarch (*Vit. Alcib.*, 13.—*Ed. Reiske*, vol. 2, p. 21), thinks that this discourse was delivered by Phæax, one of the antagonists of Alcibiades; but Ruhnken has shown this opinion to be incorrect. (*Hist. Crit. Orat. Gr.*—p. 54, of the edition of Rutilius Lupus.—*Schöll*, *Hist. Lit. Gr.*, vol. 2, p. 205, *seqq.*) The discourses of Andocides are given in Reiske's edition of the Greek orators; in that of Bekker, and in the edition of Dobson, *London*, 1828, 16 vols. 8vo.

ANDOMATIS, a river of India, falling into the Ganges. According to D'Anville, the modern *Sonn-sou*. (*Vid.* *Sonus*.)

ANDRICLUS, a mountain of Cilicia Trachea, north of the promontory Anemurium. (*Strab.*, 670.)

ANDRISCUS, an obscure individual, a native of Adramyttium in Asia Minor, who, from his strong resemblance to Philip, son of Perseus, the last king of Macedonia, was induced to pass himself off for that prince, and hence received the name of Pseudophilippus, or "the false Philip." Having deceived the Macedonians, he induced them to revolt against the Roman power, and gained at first some advantages, but was at length defeated by Cæcilius Metellus, and led in triumph B.C. 148. (*Flor.*, 2, 14.—*Vell. Patere.*, 1, 11.)

ANDROCŶDES, I. a painter of Cyzicus, contemporary with Pelopidas and Zeuxis, the latter of whom he attempted to rival. Two of his productions are mentioned by the ancient writers, a painting of a battle and a portrait of Scylla, the latter being celebrated for the accuracy with which the fish accompanying the monster were represented. (*Plut.*, *Vit. Pelop.*, 25.—*Plin.*, 35, 10.—*Sillig.*, *Dict. Art.*, s. v.)—II. A physician in the time of Alexander the Great, who, in writing to the king, in condemnation of the use of wine, observed, to quote the Latin version of Pliny, "*Vinum poturus rex, memento te bibere sanguinem terre: cicuta hominum venenum est, cicuta vinum.*" (*Plin.*, 14, 5.)

ANDROGEÛS, son of Minos and Pasiphaë. He was famous for his skill in wrestling, and overcame every antagonist at Athens during the contest at the Pan-athenaic festival, and Ægeus, through envy, sent him against the Marathonian bull, by which animal he was destroyed. According to another account, he was waylaid and assassinated while proceeding to Thebes to attend the games of Laïus, and his murderers were the combatants whom he had conquered at Athens, and who were led by envy to perpetrate the deed. Minos declared war against Athens to revenge the death of his son, and peace was at last re-established on condition that Ægeus sent yearly seven boys and seven girls from Athens to Crete, to be devoured by the Minotaur. (*Vid.* *Minotaurus*) The Athenians established festivals, by order of Minos, in honour of his son, and called them Androgeia. (*Apollod.*, 3, 15.—*Hygin.*, *fab.*, 41.—*Virg.*, *Æn.*, 6, 20.) The whole story of Androgeus is an allegorical one, and has an agricultural reference. Androgeus is the man of the earth, the cultivator (*Ἀνδρόγειος*). The Marathonian bull, by whose fire, according to one account (*Serv.*, *ad Virg.*, *Æn.*, 6, 20), he was injured in the conflict, recalls to mind the fire-breathing bulls of Colchis, the land of Ætës, the first man of the earth. A new field of exertion now opens on the son of

Minos, and a new name is given him; Eurygyes (*Εὐρύγυς*), "the far-plougher," or "the possessor of wide-extended acres" (*εὐρύς* and *γῆ*), and it is worth noticing, that, after having been slain, and previous to his new appellation, he was reawakened to life by Æsculapius, or the sun. (Compare *Hesych.*, vol. 1, p. 1332, *ed. Alberti*, and *Creuzer's Symbolik*, vol. 4, p. 107.)

ANDROMĀCHE, a daughter of Eëtion, king of Hyppolæian Thebe, in Mysia, married Hector, son of Priam, and became the mother of Astyanax. She was equally remarkable for her domestic virtues, and for attachment to her husband. In the division of the prisoners by the Greeks, after the taking of Troy, Andromache fell to the share of Pyrrhus, who carried her to Epirus, where she became the mother of three sons, Molossus, Pielus, and Pergamus. Pyrrhus subsequently conceded her to Helenus, the brother of Hector, who had also been among the captives of the prince. She reigned with Helenus over part of Epirus, and became by him the mother of Cestrinus. (*Homer, Il.*, 6, 22 *et* 24.—*Virg., Æn.*, 3, 485.—*Hygin., fab.*, 123.)

ANDROMĀCHUS, I. an opulent Sicilian, father of the historian Timæus. He collected together the inhabitants of the city of Naxos, which Dionysius the tyrant had destroyed, and founded with them Tauromenium. Andromachus, as prefect of the new city, subsequently aided Timoleon in restoring liberty to Syracuse. (*Diod. Sic.*, 16, 7 *et* 68.)—II. A general of Alexander, to whom Parmenio gave the government of Syria. He was burned alive by the Samaritans, but his death was avenged by Alexander. (*Quint. Curt.*, 4, 5.)—III. A brother-in-law of Seleucus Callinicus.—IV. A traitor, who discovered to the Parthians all the measures of Crassus, and, on being chosen guide, led the Roman army into a situation whence there was no mode of escape.—V. A physician of Crete in the age of Nero: he was physician to the emperor, and inventor of the famous medicine, called after him, *Theriaca Andromachi*. It was intended at first as an antidote against poisons, but became afterward a kind of panacea. This medicine enjoyed so high a reputation among the Romans, that the Emperor Antoninus, at a later period, took some of it every day, and had it prepared every year in his palace. It consisted of 61 ingredients, the principal of which were squills, opium, pepper, and *dried vipers*! This absurd compound was in vogue even in modern times, as late as 1787, in Paris. (*Galen, de Theriac.*, p. 470.—*Id. de antidot.*, lib. 1, p. 4333.—*Sprengel, Hist. Med.*, vol. 2, p. 56.)

ANDROMEDA, a daughter of Cepheus, King of Æthiopia, by Cassiope. She was promised in marriage to Phineus, her uncle, when Neptune inundated the coasts of the country, and sent a sea-monster to ravage the land, because Cassiope had boasted herself fairer than Juno and the Nereides. The oracle of Jupiter Ammon being consulted, returned for answer that the calamity could only be removed by exposing Andromeda to the monster. She was accordingly secured to a rock, and expected every moment to be destroyed, when Perseus, who was returning through the air from the conquest of the Gorgons, saw her, and was captivated with her beauty. He promised to deliver her and destroy the monster if he received her in marriage as a reward. Cepheus consented, and Perseus changed the sea-monster into a rock, by showing him Medusa's head, and unbound Andromeda. The marriage of Andromeda with Perseus was opposed by Phineus, but, in the contest that ensued, he and his followers were changed to stone by the head of the Gorgon. Andromeda was made a constellation in the heavens after her death. Consult remarks under the article Perseus. (*Apollod.*, 2, 4.—*Hygin., fab.*, 64.—*Manil.*, 5, 533.)

ANDRONICUS LIVIUS. *Vid.* Livius.

ANDRONICUS, I. a peripatetic philosopher, a native of Rhodes, who flourished about 80 B.C. He arranged and published the writings of Aristotle, which had been brought to Rome with the library of Apellicon. He commented on many parts of these writings; but no portion of his works has reached us, for the treatise *περί παθῶν*, and the Paraphrase of the Nicomachean ethics, which have been published under his name, are the productions of another. The treatise *περί παθῶν* was published by Hoesschel in 1593, in 8vo, and was afterward printed conjointly with the Paraphrase, in 1617, 1679, and 1809. The Paraphrase was published by Heinsius in 1607, 4to, at *Leyden*, as an anonymous work (*Incerti Auctoris Paraphrasis*, &c.), and afterward under the name of Andronicus of Rhodes, by the same scholar, in 1617, 8vo, with the treatise *περί παθῶν* added to it. The two works were reprinted in this form at *Cambridge*, in 1679, 8vo, and at *Oxford*, 1809, 8vo.—II. Cvrhrestes, an astronomer of Athens, who erected, B.C. 159, an octagonal marble tower in that city to the eight winds. On every side of the octagon he caused to be wrought a figure in relieve, representing the wind which blew against that side. The top of the tower was finished with a conical marble, on which he placed a brazen Triton, holding a wand in his right hand. This Triton was so contrived that he turned round with the wind, and always stopped when he directly faced it, pointing with his wand over the figure of the wind at that time blowing. Within the structure was a water-clock, supplied from the fountain of Clepsydra. Beneath the eight figures of the winds lines were traced on the walls of the tower, which, by the shadows cast upon them by styles fixed above, indicated the hour of the day, as the Triton's wand did the quarter of the wind. When the sun did not shine, recourse was had to the water-clock within the tower, which building thus supplied both a vane and a chronometer. The structure still stands, though in a damaged state. To the correctness of the sundials, the celebrated Delambre bears testimony, and he describes the series as "the most curious existing monument of the practical gnomonics of antiquity." There are two entrances, facing respectively to the northeast and northwest: each of these openings has a portico supported by two columns. When Stuart explored this building, the lower part of the interior was covered to a considerable depth by rubbish; and the dervishes who had taken possession of the building performed their religious rites on a wooden platform which had been thrown over the fragments. All this, however, he was permitted to remove, and he found manifest traces of a clepsydra or water-clock carefully channelled in the original floor. (*Stuart and Revett's Athens Abridged*, p. 8, *seqq.*—*Wordsworth's Greece*, p. 146.)

ANDROS, an island in the Ægean Sea, one of the Cyclades, lying to the southeast of the lower extremity of Eubœa. It bore also several other appellations, enumerated by Pliny (4, 12). According to this writer, it is ten miles from the promontory of Geræstus, and thirty-nine from Ceos. The Andrians, as we learn from Herodotus (8, 111 and 121), were compelled to join the armament of Xerxes; and, after the battle of Salamis, they were called upon by Themistocles, at the head of an Athenian squadron, to pay a large sum of money as a contribution: with this demand they declared themselves unable to comply, observing that they were closely beset by the two deities, Poverty and Want, which never quitted the island, and Themistocles, after a fruitless attempt to reduce them by force, withdrew to Eubœa. We learn, however, from Thucydides (2, 55, and 4, 42), that the island was subsequently reduced and rendered tributary to the Athenians. In the Macedonian war, Livy relates (31, 45), that the town of Andros was taken by Atta-

lus and the Romans. The modern name of the island is the same with the ancient, or else varies from it only in dropping the final letter. (*Cramer's Anc. Greece*, vol. 3, p. 410.)

ANEMOREÆ, a town of Phocis, mentioned by Homer (*Il.*, 2, 521) in conjunction with Hyampolis, and doubtless in the immediate vicinity of that city, with which it was even sometimes confounded. (Compare the *French Strabo*, *Ecclæsiæ*, No. 34, vol. 3, *Append.*, p. 154.) Strabo affirms, that it obtained its name from the violent gusts of wind which blew from Mount Catopterius, a peak belonging to the chain of Parnassus. He adds that it was named by some authors Anemolea. (*Strabo*, 423.—*Cramer's Ancient Greece*, vol. 2, p. 186.)

ANGELON, an artist, invariably named in connexion with Tectæus, as his constant associate. It is uncertain whether they excelled chiefly in casting brass or in carving marble. They are supposed by Sillig to have flourished about 548 B.C. Mention is made in particular, by the ancient writers, of a statue of Apollo by these artists. According to Müller, they imitated a very ancient statue of the Delian Apollo, made, as Plutarch states, in the time of Hercules. (*Sillig, Dict. Art.*, s. v.)

ANGEL, a people of Germany at the base of the Chersonesus Cimbrica, in the country answering now to the northeastern part of the *Duchy of Holstein*. From them the English have derived their name. There is still, at the present day, in that quarter, a district called *Angeln*. (*Tacit., Germ.*, 40.—*Vid. Saxones*.)

ANGRUS, a river of Illyricum, pursuing a northern course, according to Herodotus, and joining the Brongus, which flows into the Danube. (*Herodot.*, 4, 49.)

ANGUITIA, or ANGITIA, a grove in the country of the Marsi, to the west of the Lacus Fucinus. The name is derived, according to Solinus, from a sister of Circe, who dwelt in the vicinity. It is now *Silva d'Albi*. (*Solin.*, 8.—*Serv.*, *ad Virg.*, *Æn.*, 7, 759.)

ANICERUS, I. a son of Hercules by Hebe, the goddess of youth. (*Apollod.*, 2, 7.)—II. A freedman who directed the education of Nero, and became the instrument of his crimes. It was he who encouraged the emperor to destroy his mother Agrippina, and who gave the first idea of the galley, which, by falling on a sudden to pieces, through secret mechanism, was to have accomplished this horrid purpose. (*Suet.*, *Vit. Ner.*)

ANICIA, *Gens*, a family at Rome, which, in the flourishing times of the republic, produced many brave and illustrious citizens.

ANICIUS GALLUS, I. triumphed over the Illyrians and their king Gentius, and obtained the honours of a triumph A.U.C. 585. He obtained the consulship A.U.C. 594, B.C. 150.—II. Probus, a Roman consul, A.D. 371, celebrated for his humanity.

ANIGRUS, a river of Elis, in the district of Triphylia, to the north of Lepreum. This stream formed into marshes at its mouth, from the want of a fall to carry off the water. The stagnant pool thus created exhaled an odour so fetid as to be perceptible at the distance of twenty stadia, and the fish caught there were so tainted with the infection that they could not be eaten. (*Strabo*, 346.) Pausanias, however, affirms (5, 5) that this miasma was not confined to the marshes, but could be traced to the very source of the river. It was ascribed to the centaur's having washed the wounds inflicted by Hercules's envenomed shafts in the stream. The Anigrus received the water of a fountain said to possess the property of curing cutaneous disorders. This source issued from a cavern sacred to the Nymphs, called Anigriades. (*Cramer's Anc. Greece*, vol. 3, p. 114.)

ANIO, a river of Italy, the earlier name of which was *Anien*, whence comes the genitive *Anienis*, which is

joined in inflection with the later nominative *Anio*.—It rose in the Apennines, near the Sabine town of Treba, and pursued its course at first to the northwest; it then turned to the southeast, and joined the Tiber three miles north of Rome. It is not so full a stream as the Nar, but was considered, however, by the Romans as the most important among the tributaries of the Tiber, and hence received also the appellation of Tiberinus, whence comes by corruption the modern name *Trerone*. The Anio was regarded as the boundary between Latium and the country of the Sabines; not, however, in a very strict sense, for on the left bank lay Antemnæ and Collatia, two Sabine towns, while the Albani and other Latins had founded Fidenæ, on the right bank of the Anio, in the Sabine territory. (*Mannert*, vol. 9, p. 517.) The Anio, in its course, passed by the town of Tibur, the modern *Tivoli*, where it formed some beautiful cascades, the admiration of the present as well as of former times. Of late, however, the scenery has been marred by an earthquake. It has been doubted by some writers whether there was always a fall of the Anio at Tibur. But, without pretending to examine what change the bed of the river may have undergone in remote ages, we may affirm that, since the days of Strabo, no alteration of consequence has taken place; for that geographer (238) talks of the cataract which the Anio, then navigable, formed there: so also Dionysius of Halicarnassus (5, 37) and several of the poets. (*Cramer's Ancient Italy*, vol. 2, p. 64.)

ANISTORGIS, a city of Spain, in the southern part of Lusitania, near Pax Julia, called also Conistorgis. (*Mannert*, vol. 1, p. 343.) Some have doubted, however, whether these two cities were the same. (*Celarius, Geogr. Ant.*, vol. 1, p. 77.—*Ukert, Geogr.*, vol. 2, p. 389.)

ANĪUS, son of Apollo and Rhœo or Rhoio. He was high-priest of Apollo, and gave Æneas a hospitable reception when the Trojan prince touched at his island. He had by Dorippe three daughters, CENO, SPERMO, and ELAIA, to whom Bacchus had given the power of changing whatever they pleased into wine, corn, and oil. When Agamemnon went to the Trojan war, he wished to carry them with him to supply his army with provisions; but they complained to Bacchus, who changed them into doves. Thus far we have given Ovid's account. (*Mét.*, 13, 642.—Compare *Virg.*, *Æn.*, 3, 80.) Tzetzes, however, states, that Anius endeavoured to prevail upon the forces of Agamemnon to remain with him nine years, and told them that, in the tenth year, they would take Troy. He promised to nurture them also by the aid of his daughters. Tzetzes cites as his authority the author of the Cyprian epic (*ad Lycoph.*, 570). Creuzer sees in all this an agricultural myth, Rhœo being the pomegranate, or, in other words, a new Proserpina, and her three children the daughters of the seed. (*Symbolik*, vol. 4, p. 379.)

ANNA, a goddess, in whose honour the Romans instituted a festival. She was, according to the common account, Anna, the daughter of Belus, and sister of Dido, who, after her sister's death, gave up Carthage to Iarbas, king of Gætulia, who had besieged the place, and fled to Melita, now *Malta*. From Melita she proceeded to Italy, and was there kindly received by Æneas. Lavinia, however, conceived so violent a jealousy against her, that Anna, warned in a dream, by Dido, of her danger, took flight during the night, and threw herself into the Numicius, where she was transformed into a Naiad. The Romans instituted a festival, which was always celebrated on the 15th of March, in her honour, and generally invoked her aid to obtain a long and happy life; thence, according to some, the explanation of the epithet *Anna Perenna* assigned to her after deification. (*Ovid, Fast.*, 3, 653.—*Sil. Ital.*, 8, 79, &c.) The key to the different legends relative to Anna Perenna is to be found in the rites and cere-

monies attending her festival. It was a feast commemorative of the year and the spring, and the hymns sung on this occasion bore the free and joyous character of orgiastic strains. In them Anna Perenna was entreated to make the entire year roll away in health and prosperity (" *Ut annare perennareque commode liceat.*"—*Macrob.*, *Sat.*, 1, 12). Now, this new year, this year full of freshness and of benefits invoked, is no other than Anna herself, a personification of the old lunar year. (Compare *Hermann und Creuzer, Briefe*, &c., p. 135.) *Anna* is the same word, in fact, as *annus*, or *annus* according to the primitive Roman orthography; in Greek *ἔτος* or *ἔρος*, whence the expression *ἔτη καὶ ῥέα*, proving that the word carries with it the accessory idea of antiquity, just as *ἔτος* appears analogous to *vetus*. (Compare *Lennep, Etymol. Gr.*, p. 210, *seqq.*—*Valckenacr, ad Ammon.*, p. 196, 197.) Anna Perenna is called the moon, *κατ' ἑξοχὴν*, and it is she that conducts the moons her sisters, and who at the same time directs and governs the humid sphere: thus she reposes for ever in the river Numicius, and runs on for ever with it. She is the course of the moons, of the years, of time in general. It is she that gives the flowers and fruits, and causes the harvest to ripen: the annual produce of the seasons (*annona*) is placed under her protecting care.—The *Anna Perenna* of the Romans has been compared with the *Anna Purna Devi*, or *Annada*, of the Hindu mythology; the goddess of abundance and nourishment, a beneficent form of Bhavani. The characteristic traits appear to be the same. (Compare the remarks of *Paterson and Colebrooke*, in the *Asiatic Researches*, vol. 8, p. 69, *seqq.*, and p. 85.—*Creuzer's Symbolik*, par Guignaut, vol. 2, p. 501, *seqq.*)

ANNA COMNENA, a Greek princess, daughter of Alexius Comnenes I., emperor of the East. She was born A.D. 1083, and was originally betrothed to Constantine Ducas; but his death preventing the engagement from being ratified, she subsequently married Nicephorus Bryennius. On the decease of her father, she conspired against her brother John (Calo-Johannes), who had succeeded him in the empire, and when the design was prevented by the fears or scruples of her husband, she passionately exclaimed that nature had mistaken the two sexes, and had endowed Bryennius with the soul of a woman. After the discovery of her treason, the life and fortune of Anna were forfeited to the laws; the former, however, was spared by the clemency of the emperor. After the death of her husband she retired to a convent, where, at the age of sixty years, she sought to relieve the disappointment of her ambitious feelings by writing a life of her father. The character of this history does not stand very high, either for authenticity or beauty of composition: the historian is lost in the daughter; and instead of that simplicity of style and narrative which wins our belief, an elaborate affectation of rhetoric and science betrays in every page the vanity of a female author. (*Gibbon's Decline and Fall*, c. 48.) And yet, at the same time, her work forms a useful contrast to the degrading and partial statements of the Latin historians of that period. The details, moreover, which she gives respecting the first crusaders on their arrival at Constantinople, are peculiarly interesting; and we may there see the impression produced by the simple and rude manners of the heroes of Tasso on a polished, enlightened, and effeminate court. The work of Anna is entitled *Alexias*, and is divided into fifteen books. It commences with A.D. 1069, and terminates with A.D. 1118. The first edition of the *Alexias* appeared in 1610, 4to, by Hoerschæ, *Argent.* It contains only the first eight books. Some copies bear the date of 1618. A complete edition was published in 1651, *Paris*. The best edition, however, will be the one intended to form part of the Byzantine Historians (*Corpus Scriptorum Historiæ Byzantinæ*), at present in a course of publi-

cation in Germany. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 389, *seqq.*)

ANNALES, a chronological history which gives an account of all the important events of every year in a state, without entering into the causes which produced them. The annals of Tacitus may be considered in this light. The Romans had journalists or annalists from the very beginning of the state. The Annals of the Pontiffs were of the same date, if we may believe Cicero (*de Orat.*, 2, 13), as the foundation of the city; but others have placed their commencement in the reign of Numa (*Vopiscus, Vit. Tacit.*), and Niebuhr not till after the battle of Regillus, which terminated the hopes of Tarquin. (*Römische Gesch.*, vol. 1, p. 367.) In order to preserve the memory of public transactions, the Pontifex Maximus, who was the official historian of the republic, annually committed to writing, on wooden tablets, the leading events of each year, and then set them up at his own house for the instruction of the people. (*Cic.*, *de Orat.*, 2, 13.) The Pontifex Maximus was aided in this task by his four colleagues, down to A.U.C. 453, and after that period by four additional pontiffs, created by the Ogulnian law. (*Cic.*, *de Rep.*, 2, 14.) These annals were continued to the pontificate of Mucius, A.U.C. 629, and were called *Annales Maximi*, as being periodically compiled and kept by the *Pontifex Maximus*, or *Publici*, as recording public transactions. Having been inscribed on wooden tablets, they would necessarily be short, and destitute of all circumstantial detail; and being annually formed by successive pontiffs, could have no appearance of a continued history, their contents would resemble the epitome prefixed to the books of Livy, or the Register of Remarkable Occurrences in modern almanacs. But though short, jejune, and unadorned, still, as records of facts, these annals, if spared, would have formed an inestimable treasure of early history. Besides, the method which, Cicero informs us, was observed in preparing these annals, and the care that was taken to insert no fact of which the truth had not been attested by as many witnesses as there were citizens at Rome, who were all entitled to judge and make their remarks on what ought either to be added or retrenched, must have formed the most authentic body of history that could be desired. The memory of transactions which were yet recent, and whose concomitant circumstances every one could remember, was therein transmitted to posterity. By this means they were proof against falsification, and their veracity was incontestably fixed. These valuable records, however, were, for the most part, consumed in the conflagration of the city consequent on its capture by the Gauls; an event which was, to the early history of Rome, what the English invasion by Edward I. proved to the history of Scotland. The practice of the Pontifex Maximus in preserving such records was discontinued after that eventful period. A feeble attempt was made to revive it towards the end of the second Punic war; and from that time the custom was not entirely dropped till the Pontificate of Mucius, in the year 629. It is to this second series of Annals, or to some other late and ineffectual attempt to revive the ancient Roman history, that Cicero must allude when he talks of the Great Annals in his work *De Legibus* (1, 2), since it is undoubted, that the pontifical records of events previous to the capture of Rome by the Gauls almost entirely perished in the conflagration of the city. (*Livy*, 6, 1.) Accordingly, Livy never cites these records, and there is no appearance that he had any opportunity of consulting them; nor are they mentioned by Dionysius of Halicarnassus in the long catalogue of records and memorials which he had employed in the composition of his *Historical Antiquities*. The books of the pontiffs, some of which were recovered in the search after what the flames had spared, are, indeed, occasionally mentioned. But these were

works explaining the mysteries of religion, with instructions as to the ceremonies to be observed in its practical exercise, and could have been of no more service to Roman, than a collection of breviaries or missals to modern, history. (*Dunlop's Rom. Lit.*, vol. 2, p. 97, *seqq.*, *Lond. ed.*—*Le Clerc, des Journaux chez les Romains, Introd.*)

ANNALIS LEX, settled the age at which, among the Romans, a citizen could be admitted to exercise the offices of the state. Originally there was no certain age fixed for enjoying the different offices. A law was first made for this purpose (*Lex Annalis*) by L. Villius or L. Julius, a tribune of the commons, A.U.C. 573, whence his family got the surname of *Annales*. (*Liv.*, 40, 43.) What was the year fixed for enjoying each office is not ascertained. It is certain that the prætorship used to be enjoyed two years after the ædileship (*Cic., Ep. ad Fam.*, 10, 25), and that the forty-third was the year fixed for the consulship. (*Cic., Phil.*, 5, 17.) If we are to judge from Cicero, who frequently boasts that he had enjoyed every office in its proper year, the years appointed for the different offices by the *Lex Villia* were, for the quæstorship thirty-one, for the ædileship thirty-seven, for the prætorship forty, and for the consulship forty-three. But even under the republic popular citizens were freed from these restrictions, and the emperors, too, granted that indulgence to whomsoever they pleased.

ANNIBAL. *Vid.* Hannibal.

ANNICERIS, a philosopher of the Cyrenaic sect, and a follower of Aristippus. He so far receded from the doctrine of his master as to acknowledge the merit of filial piety, friendship, and patriotism, and to allow that a wise man might retain the possession of himself in the midst of external troubles; but he inherited so much of his frivolous taste as to value himself upon the most trivial accomplishments, particularly upon his dexterity in being able to drive a chariot twice round a course in the same ring. (*Diog. Laert.*, 2, 87.—*Suidas, s. v.*—*Enfield's History of Philosophy*, vol. 1, p. 196.)

ANNO. *Vid.* HANNO.

ANOPÆA, a mountain of Greece, part of the chain of Cæta. A small pass in this mountain, called by the same name, formed a communication between Thessaly and the country of the Epicnemidian Locri. (*Herodot.*, 7, 216.)

ANSER, a Roman poet, intimate with the triumvir Antony, and one of the detractors of Virgil. (Compare *Virg., Eclog.*, 9, 36.—*Servius, ad Virg., l. c.*) Ovid (*Trist.*, 2, 435) calls him "prociac."

ANSIBARII, a people of Germany, mentioned by Tacitus (*Ann.*, 13, 55) as having made an irruption, during the reign of Nero, into the Roman territories along the Rhine. Mannert makes them to have been a branch of the Cherusci. The same writer alludes to the hypothesis which would consider their name as denoting "dwellers along the Ems," and as marking this for their original place of settlement. He views it, however, as untenable. (*Geogr.*, vol. 6, p. 156, *seqq.*)

ANTÆOPOLIS, a city of Egypt on the eastern bank of the Nile, and the capital of the nome Antæopolites. It derived its name from Antæus, whom Osiris, according to Diodorus Siculus (1, 17), left as governor of his Libyan and Æthiopian possessions, and whom Hercules destroyed. It was a place of no great importance. The modern village of *Kau* (Qau) stands near the ruins of the ancient city. (*Mannert*, vol. 10, pt. 2, p. 388, *seqq.*—Compare *Description de l'Égypte*, vol. 4, p. 111.)

ANTÆUS, I., a monarch of Libya, of gigantic dimensions, son of Neptune and Terra. He was famed for his strength and his skill in wrestling, and engaged in a contest with Hercules. As he received new strength from his mother as often as he touched the ground, the

hero lifted him up in the air, and squeezed him to death in his arms. (*Apollod.*, 2, 5).—II. A governor of Libya and Æthiopia under Osiris. (*Diad. Sic.*, 1, 17).—Both these accounts are, in fact, fabulous, and refer to one and the same thing. The legend of Hercules and Antæus is nothing more than the triumph of art and labour over the encroaching sands of the desert. Hercules, stifling his adversary, is, in fact, the Nile divided into a thousand canals, and preventing the arid sand from returning to its native deserts, whence again to come forth with the winds and cover with its waves the fertile valley. (*Constant, de la Religion*, vol. 2, p. 416.) The very position of Antæopolis, indeed, has reference to the identity of Antæus with the sands of the desert; for the place was situate in a long and deep valley of the Arabian chain, where the most fearful hurricanes and sand-winds were accustomed to blow. (Compare *Ritter, Erdkunde*, 2d ed., vol. 1, p. 779.)

ANTAGÓRAS, a Rhodian poet, who lived at the court of Antigonus Gonatas, where he acquired the reputation of a gourmand. He composed a poem entitled *Thebais*; and the Bæotians, to whom he read it, heard him with yawns. (*Mich. Apost. Proverb. Cent.*, 5, 82.) We have one of his epigrams remaining. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 128.)

ANTALCIDAS, of Sparta, son of Leon, was sent into Persia, where he made the well-known peace with Artaxerxes Mnemon. The terms of this peace were as follows: that all the Greek cities of Asia should belong to the Persian king, together with the island of Clazomenæ (as it was called) and that of Cyprus; that all other Grecian cities, small and great, should be independent, except the islands of Lemnos, Imbros, and Scyros, which were to remain subject to the Athenians. (*Xen., Hist. Gr.*, 5, 1.—Consult *Schneider, ad loc.*) Polybius (1, 6) fixes the year of this celebrated peace, and Aristides (vol. 2, p. 286) the name of the archon (Θρόδοτος ἐπ' οὗ ἡ εἰρήνη ἐγένετο). The treaty seems to have been concluded in the beginning of the year of Theodotus, about autumn; because the Mantinea war, which was carried on in the archonship of Mystichides, was in the second year after the peace; and because the restoration of Plataea, accomplished after the treaty, took place nevertheless in the year of the treaty, as Pausanias implies. (*Clinton's Fasti Hellenici*, 2d ed., p. 102.)

ANTANDRUS, a city of Troas, on the northern side of the Gulf of Adramyttium. According to Thucydides (8, 108), it was founded by an Æolian colony, which had probably dispossessed a body of the Pelasgi in this quarter, since Herodotus (7, 42) names the place the Pelasgic Antandrus. If we follow the ancient mythology, however, we will find different accounts of its origin. These are given by Mela (1, 18), who states that the city was called Antandrus according to some, because Ascanius, the son of Æneas, having fallen into the hands of the Pelasgi, gave them up this city as a ransom; and hence Antandrus, i. e., ἀντ' ἀνδρός ("in the stead," or "place, of a man"); while others maintain that it was founded by certain inhabitants of Andros, who had been driven from home by civil dissensions, and that hence the city was called Antandrus, i. e., "instead of Andros," implying that it was to them a second country. Pliny (5, 30), on the other hand, believes that its first name was *Edonis*, and that it was subsequently styled *Cimmeris*. During the Persian times, Antandrus, like many other parts of this coast, was subject to Mytilene, in the island of Lesbos. The Persians, however, held the ciadel, which would seem to have stood on a mountain near the city. This mountain is probably the same with the one called Alexandria, and on which, according to Strabo (606), the controversy between Juno, Minerva, and Venus was decided by Paris. (*Mannert*, vol. 6, pt. 3, p. 418.)

ANTEMNÆ, a city of Italy, in the territory of the Sabines, at the confluence of the Anio and Tiber. It is said to have been more ancient than Rome itself. We are told by Dionysius of Halicarnassus (2, 36), that Antemnæ belonged at first to the Siculi, but that afterward it was conquered by the Aborigines, to whom, probably, it owes its Latin name. (*Varro, de Ling. Lat.*, 4.—*Festus*, s. v. *Antemna*.) That it afterward formed a part of the Sabine confederacy is evident from its being one of the first cities which resisted the outrage offered to that nation by the rape of their women. (*Lib.*, 1, 10.—*Strabo*, 226.—*Cramer's Ancient Italy*, vol. 1, p. 301.)

ANTÉNOR, I. a Trojan prince related to Priam. He was the husband of Theano, daughter of Cisseus, king of Thrace, and father of nineteen sons, of whom the most known were Polybus (*Il.*, 11, 59), Acamas (*Il.*, 2, 823), Agenor (*Il.*, 4, 533), Polydamas, Helicaon, Archilochus (*Il.*, 2, 823), and Laodocus (*Il.*, 4, 87). He is accused by some of having betrayed his country, not only because he gave a favourable reception to Diomedes, Ulysses, and Menelaus, when they came to Troy, as ambassadors from the Greeks, to demand the restitution of Helen, but also because he withheld the fact of his recognising Ulysses, at the time that hero visited the city under the guise of a mendicant. (*Od.*, 4, 335.) After the conclusion of the war, Antenor, according to some, migrated with a party of followers into Italy, and built Patavium. According to others, he went with a colony of the Heneti from Paphlagonia to the shores of the Hadriatic, where the new settlers established themselves in the district called by them Venetia. Both accounts are fabulous. (*Lib.*, 1, 1.—*Plin.*, 3, 13.—*Virg.*, *Æn.*, 1, 242.—*Tacit.*, 16, 21.)—II. A statuarius, known only as the maker of the original statues of Harmodius and Aristogiton, which were carried off by Xerxes, and restored by Alexander. (*Pausan.*, 1, 8.—*Arrian*, *Exp. Al.*, 3, 16.—*Plin.*, 34, 8.)

ANTENORIDES, a patronymic given to the sons of Antenor.

ANTÉROS. The original meaning of the name Anteros is the deity who avenges slighted love. By later writers it is applied to a brother of Cupid, but in constant opposition to him; and in the palestra at Elis he was represented contending with him. The signification of mutual love is given to the word only by later writers, according to Böttiger. (*Schneider*, *Wörterb.*, s. v.—*Pausan.*, 1, 30.—*Id.*, 6, 23.—*Plutarch*, *Erot.*, 20.)

ANTHÆA, one of the three towns on the site of which the city of Patræ, in Achaia, is said to have been built. The other two were Aroë and Messatis. These three were founded by the Ionians when they held possession of the country. (*Cramer's Ancient Greece*, vol. 3, p. 66.)

ANTHEDON, I. a city of Bœotia, on the shore of the Euripus, and according to Dicæarchus, about seventy stadia to the north of Salgameus. (*Stat. Græc.*, p. 19.) The same writer informs us, that from Thebes to Anthedon the distance was 160 stadia by a cross-road open to carriages. The inhabitants were, for the most part, mariners and shipwrights; at least, so says Dicæarchus; and the fisheries of the place were very important. The wine of Anthedon was celebrated. (*Athenæus*, 1, 56.) Pausanias states (9, 22) that the Cabiri were worshipped here; there was also a temple of Proserpina in the town, and one of Bacchus without the walls. Near the sea was a spot called the leap of Glaucus. (*Strabo*, 404.—*Steph. Byz.*, s. v. *Ἀνθηδών*.—*Pliny*, *Hist. Nat.*, 4, 7.) Sir W. Gell reports, that the ruins of this city are under Mount Kityra, about seven miles from *Portumadi*, and six from *Egripo*. (*Itin.*, p. 147.—*Cramer's Ancient Greece*, vol. 2, p. 254.)—II. A town of Palestine, called also Agrippias, on the seacoast, to the south-

west of Gaza. Herod gave it the second name in honour of Agrippa. It is now *Daron*. (*Plin.*, 4, 7.)

ANTHÈLE, a small town of Thessaly, in the interval between the river Phoenix and the Straits of Thermopyla; and near the spot where the Asopus flows into the sea. In the immediate vicinity were the temples of Ceres Amphictyonia, that of Amphictyon, and the seats of the Amphictyons. It was one of the two places where the Amphictyonic council used to meet, the other being Delphi. The place for holding the assembly here was the temple of Ceres. (*Vid.* Amphictyones.—*Herodot.*, 7, 200.—*Strabo*, 428.)

ANTHÈMUS, a town of Macedonia, to the northeast of Thessalonica, and which Thucydides seems to comprise within Mygdonia. (*Thucyd.*, 2, 99.)

ANTHEMUSIA, I. a district in the northern part of Mesopotamia, which was subsequently incorporated into Osroene. (*Amm. Marcell.*, 14, 9.—*Eutrop.*, 8, 2.)—II. The capital of the district just mentioned, lying east of the Euphrates and west of the city of Edessa. It is also called Anthemus. The name was derived from the Macedonian city of Anthemus. (*Plin.*, 6, 26.—*Strab.*, 514.)

ANTHÈNE, a town of Cynuria in Argolis, once occupied by the Æginetæ together with Thyrea. (*Pausan.*, 2, 38.) It was restored to the Argives after the battle of Amphipolis. (*Thucyd.*, 5, 41.)

ANTHERNUS, a Chian sculptor, son of Micciades, and grandson to Malas. He flourished about Olymp. 50, and was the father of the two artists Bupalus and Athenis. (*Vid.* Bupalus.) As the name Anthernus is not Greek, Brotier reads *Archennus*, which Sillig follows. (*Plin.*, 36, 5.—*Sillig*, *Dict. Art.*, s. v.)

ANTHESPHORIA, a festival celebrated by the people of Syracuse in honour of Proserpina, who was carried away by Pluto as she was gathering flowers. The word is derived from *ἀνθὸν φέρειν ἄνθεα*, i. e., *from carrying flowers*. The Syracusans showed, near their city, the spot where Proserpina was carried off, and from which a lake had immediately proceeded. Around this the festival was celebrated. The lake in question is formed by the sources of the Cyane, whose waters join the Anapus. (Compare *Münter*, *Nachricht von Neap. und Sicil.*, p. 374.)—Festivals of the same name were also observed at Argos in honour of Juno, who was called Anthæia. (*Pollux*, *Onom.*, 1, 1.)

ANTIESTERIA, festivals in honour of Bacchus among the Greeks. They were celebrated in the month of February, called Anthesterion, whence the name is derived, and continued three days. The first day was called *Πιθόγυα*, *ἀπὸ τοῦ πίθους αἶνευ*, because they *tapped their barrels of liquor*. The second day was called *Χοῖς*, from the measure *χοῖ*, because every individual drank of his own vessel, in commemoration of the arrival of Orestes, who, after the murder of his mother, came, without being purified, to Demophoön, or Pandion, king of Athens, and was obliged, with all the Athenians, to drink by himself for fear of polluting the people by drinking with them before he was purified of the parricide. It was usual on that day to ride out in chariots, and ridicule those that passed by. The best drinker was rewarded with a crown of leaves, or rather of gold, and with a cask of wine. The third day was called *Χύτρα*, from *χύτρα*, a vessel brought out full of all sorts of seed and herbs, deemed sacred to Mercury, and therefore not touched. The slaves had the permission of being merry and free during these festivals; and at the end of the solemnity a herald proclaimed, *Θυράζε, Κάρε, οὐκ ἔρ' Ἀθεστίρια*, i. e., *Depart, ye Carian slaves, the festivals are at an end*. (*Ælian*, V. II., 2, 41.—*Potter*, *Gr. Antiq.*, vol. 1, p. 422, *seqq.*) Ruhnken (*Auct. Emend.*, ad *Hesych.*, vol. 2, s. v. *Διονύς*) makes the Athenians to have celebrated three festivals in honour of Bacchus: 1. Those of the country, in the month Poseideon: 2. Those of the city, or the greater festivals, in the month Ela-

phobolion; and, 3. The Anthesteria or Lenæa, in the month Anthesterion. These last were celebrated within a large enclosure called Lenæum, and in a quarter of the city termed Limnæ, or "the pools." Meursius had before distinguished the Lenæa from the Anthesteria. (*Græc. Fer.*, vol. 3, *Op. col.*, 917 and 918.) Böckh also regards the Lenæa as a distinct festival from the Anthesteria. (*Vom Unterscheide der Attischen Lenæen*, &c., *Jahrg.*, 1816, 1817, p. 47, *seqq.*) Both the latter opinions, however, are incorrect. (Compare *Creuzer*, *Symbolik*, vol. 3, p. 319, *seqq.*)

ANTHEUS, I. a son of Antenor.—II. One of the companions of Æneas. (*Virg.*, *Æn.*, 1, 514.)—III. A statuary mentioned by Pliny (34, 8) as having flourished in Olymp. 155, and as approved among the artists of his own time. In some editions of Pliny the name is written Anteus. (*Sillig.*, *Dict. Art.*, s. v.)

ANTIUM, a town of Thrace, afterward called Apollonia. The name was subsequently changed to Sozopolis, and is now pronounced *Sizeboli*. (*Plin.*, 4, 11.)

ANTHÖRES, a companion of Hercules, who followed Evander, and settled in Italy. He was killed in the war of Turnus against Æneas. (*Virg.*, *Æn.*, 10, 778.)

ANTHROPHAGI, a people of Scythia that fed on human flesh. Herodotus (4, 106) calls them the Androphagi, and states that they lived in a more savage manner than any other nation, having no public distribution of justice nor established laws. He informs us also that they applied themselves to the breeding of cattle, clothed themselves like the Scythians, and spoke a peculiar language. Rennell thinks that they must have occupied Polish Russia, and both banks of the river *Prypecz*, the western head of the Borysthenes. (*Rennell*, *Geogr. of Herod.*, p. 86, 4to ed.)

ANTHYLLA, a city of Egypt about west from the Canopic branch of the Nile, and northwest from Naucratis. It is supposed by Larcher to have been the same with Gynæcopolis. (Compare *Mannert*, *Geogr.*, vol. 10, p. 596.) According to Herodotus, it furnished sandals to the wife of the Persian satrap, who was viceroy, for the time being, over Egypt. This was in imitation of the royal custom at home, in the case of the queens of Persia. (*Herod.*, 2, 98.—Consult *Bähr*, *ad loc.*) Athenæus says it supplied girdles (1, p. 33.—Compare *Bähr*, *ad Ctes.*, p. 209.)

ANTIA LEX, was made for the suppression of luxury at Rome. Its particulars are not known, but it could not be enforced. The enactress was Antius Resto, who afterward never supped abroad for fear of being himself a witness of the profusion and extravagance which his law meant to destroy, but without effect. (*Macrobi.*, 3, 17.)

ANTIAS, a name given to the goddess Fortune, from her splendid temple at Antium, where she was particularly worshipped. (*Vid.* *Antium*.)

ANTICLEA, a daughter of Antolycus and Amphithea. She was the mother of Ulysses, but not, it is said, by Laertes. This individual was only the reputed father of the chieftain of Ithaca, and the actual paternity belonged to Sisyphus. It is said that Anticlea killed herself when she heard a false report of her son's death. (*Homer*, *Od.*, 11, 19.—*Hygin.*, *fab.*, 201, 243.—*Pausan.*, 10, 29.)

ANTICLIDES, a Greek historian, a native of Athens, whose works are lost. (Consult *Athenæus*, ed. *Schw.*—*Ind. Auct.*, s. v., vol. 9.)

ANTICRÆGUS, a detached chain of the ridge of Mount Crægus in Lycia, running in a northeast direction along the coast of the Sinus Glaucus. It is now called *Soumbourlou*. Captain Beaufort estimates the height at not less than 6000 feet. (*Cramer's Asia Minor*, vol. 2, p. 245.)

ANTICRATES, a Spartan, who, according to Plutarch, stabbed Epaminondas, the Theban general, at the battle of Mantinea. Great honours and rewards were decreed to him by the Spartans, and an exemption

from taxes to his posterity. (*Plut.*, *Vit. Ages.*, c. 35.) There were, however, other claimants for this honour. The Mantinæans asserted that one of their citizens, by name Machæon, gave the fatal blow. The Athenians, on the other hand, make Epaminondas to have fallen by the hand of Gryllus, son of Xenophon. (Compare *Pausan.*, 8, 11.—*Id.*, 9, 15; and *Wesseling*, *ad Diod. Sic.*, 15, 87.)

ANTICYRA, I. a town of Thessaly, at the mouth of the Sperchius. (*Herodot.*, 7, 198.—*Strabo*, 428.) It was said to produce the genuine hellebore, so much recommended by ancient physicians as a cure for insanity. (*Steph. Byz.*, s. v. Ἀντίκυρα).—II. A town of Phocis, on the isthmus of a small peninsula in the Sinus Corinthiacus. It was celebrated, in common with the one already mentioned, for its hellebore. (*Scylax*, p. 14.—*Theophr.*, 9, 10.—*Strabo*, 418.) Pausanias affirms (10, 36) that the inhabitants of Anticyra were driven from their town by Philip, the son of Amyntas, on the termination of the Sacred War. At a later period it was besieged and taken by Lævinus, the Roman prætor, who delivered it up to the Ætolians. (*Liv.*, 26, 26.) And subsequently, in the Macedonian war, it was occupied by Titus Q. Flaminius, on account of the facilities which its harbour presented for the operations of the Roman fleet in the Corinthian Gulf. (*Liv.*, 32, 18.—*Pausan.*, 10, 36.—*Polyb.*, 18, 28.—*Id.*, 27, 14.) The site of Anticyra corresponds, as is generally believed, with that of *Aspropiti*, in a bay of some extent, parallel to that of *Salona*. "Here is a good port," says Sir W. Gell (*Itin.*, p. 174), "and some remains of antiquity." Chandler remarks, that "the site is now called *Asprospitia*, or the white houses; and some traces of the buildings, from which it was so named, remain. The port is land-locked, and frequented by vessels for corn." (*Travels*, vol. 2, p. 301.)—The ancients had a proverb, *Naviget Anticyram*, applied to a person that was regarded as insane, and alluding to the hellebore produced at either Anticyra. (Compare *Erasmus*, *Chil.*, 1, cent. 8, 52.—*Naviget Anticyras*, ἡλεώσεων εἰς Ἀντίκυραν.) Horace has been supposed by some to allude to three places of this name, but this is a mistake; the poet merely speaks of a head so insane as not to be cured by the produce of three Anticyras, if there even were three, and not merely two. (*Ep.*, *ad Pis.*, 300.)

ANTIDÖTUS, a Greek painter, a pupil of Euphranor. He flourished about 364 B.C. His colouring was severe, and his productions were remarkable for their careful execution rather than their number. His principal pieces were a Wrestler and a Flute-player. He was the instructor of Nicias of Athens. (*Plin.*, *H. N.*, 35, 11.—*Biogr. Univ.*, vol. 2, p. 249.)

ANTIGÈNES, one of Alexander's generals, publicly rewarded for his valour. (*Quint. Curt.*, 5, 14.)

ANTIGENIDAS, a famous musician of Thebes, disciple to Philoxenus. He introduced certain innovations in the construction of the flute, and in the art of playing upon it. (*Cic.*, *Brut.*, 97.)

ANTIGÖNE, a daughter of Ædipus, king of Thebes, by his mother Jocasta. After the death of Ædipus and his sons Eteocles and Polynices, Antigone repaired to Thebes, in order to effect the sepulture of her brother Polynices. Creon, monarch of Thebes, her maternal uncle, had forbidden the interment of the young prince under the penalty of death, on account of the war which the latter had waged against his own country. Antigone, however, disregarding all personal considerations, succeeded in sprinkling dust three times on her brother's remains, which was equivalent to sepulture, but was subsequently seized by the guards who had been placed to watch the corpse and prevent its interment. For this she was immured alive in a tomb, where she hung herself. Hæmon, the son of Creon, to whom she had been betrothed.

effected an entrance and killed himself by her corpse, and his mother Eurydice likewise put an end to her existence. This sad story forms the basis of one of the tragedies of Sophocles. (*Vid.* Sophocles.)

ANTIGONĒA, I. a city of Epirus, southwest of Apollonia. (*Plin.*, 4, 1.)—II. One of Macedonia, in the district of Mygdonia, founded by Antigonus, son of Gonatas. (*Id.*, 4, 10.)—III. One in Syria, on the borders of the Orontes, built by Antigonus, and intended as the residence of the governors of Egypt and Syria, but destroyed by him when Seleucia was built, and the inhabitants removed to the latter city.—IV. Another in Asia Minor. (*Vid.* Alexandria, IX.)

ANTIGŌNUS, I. a general of Alexander's, and one of those who played the most important part after the death of that monarch. In the division of the provinces after the king's death, he received Pamphylia, Lycia, and Phrygia. Two years after the decease of Alexander, he united with Antipater and Ptolemy against Perdiccas, who aimed at the supremacy. Perdiccas having died this same year (B.C. 322), and Antipater being placed at the head of the government, Antigonus was named commander of all the forces of the empire, and marched against Eumenes. After various conflicts, during a war of three years, he succeeded in getting Eumenes into his power by treachery, and starved him to death. Become now all powerful by the death of this formidable rival, he ruled as king, but without assuming the title, over all Asia Minor and Syria; but his conduct eventually excited against him a formidable league, in which Seleucus, Ptolemy, Lysimachus, and Cassander arrayed themselves against Antigonus, and the celebrated Demetrius, his son. After varied success, the confederates made a treaty with him, and surrendered to him the possession of the whole of Asia, upon condition that the Grecian cities should remain free. This treaty was soon broken, and Ptolemy made a descent into Lesser Asia and on some of the Greek isles, which was at first successful, but he was defeated in a seafight by Demetrius, the son of Antigonus, who took the island of Cyprus, made 16,000 prisoners, and sunk 200 of his ships. After this famous naval battle, which happened 26 years after Alexander's death, Antigonus and his son assumed the title of kings, and their example was followed by all the rest of Alexander's generals. From this period, B.C. 306, his own reign in Asia, that of Ptolemy in Egypt, and those of the other captains of Alexander in their respective territories, properly commence. Antigonus now formed the design of driving Ptolemy from Egypt, but failed. His power soon became so formidable that a new confederacy was formed against him by Cassander, Lysimachus, Seleucus, and Ptolemy. The contending parties met in the plain of Ipsus in Phrygia, B.C. 301. Antigonus was defeated, and died of his wounds; and his son Demetrius fled from the field. Antigonus was 84 years old when he died. (*Vid.* Demetrius.—*Pausan.*, 1, 6, &c.—*Justin*, 13, 14, et 15.—*C. Nep.*, *Vit. Eumen.*—*Plut.*, *Vit. Demetr.*—*Eumen. et Arat.*)—II. Gonatas, so called from Gonni in Thessaly, the place of his birth, was the son of Demetrius, and grandson of Antigonus. He made himself master of Macedonia B.C. 277, and assumed the title of king. In the course of his reign, he defeated, with great slaughter, the Gauls, who had made an irruption into his kingdom. Having refused succours to Pyrrhus of Epirus, he was driven from his throne by that warlike monarch. He afterward recovered a great part of Macedonia, and followed Pyrrhus to the neighbourhood of Argos. In a conflict that ensued there, Pyrrhus was slain. After the death of Pyrrhus, he recovered the remainder of Macedonia, and died after a reign of 34 years, leaving his son, Demetrius the Second, to succeed, B.C. 243. (*Justin*, 21 et 25.)—III. The guardian of his nephew, Philip, the son of Demetrius, who married the widow of De-

metrius, and usurped the kingdom. He was called *Doson* (δόσων, "about to give," i. e., always promising), for his promising much and giving nothing. He conquered Cleomenes, king of Sparta, and obliged him to retire into Egypt, because he favoured the Ætolians against the Greeks. He died B.C. 222, after a reign of 11 years, leaving his crown to the lawful possessor, Philip, who became conspicuous by his cruelties and the war he made against the Romans. (*Justin*, 28 et 29.—*Plut.*, *Vit. Cleom.*)—IV. Son of Echeocrates, and nephew of Philip, the father of Perseus. He was the only one of the Macedonian nobles who remained faithful when Perseus conspired against his parents; and to him, moreover, Philip owed the discovery of the plot. Charmed with his virtuous and upright character, the monarch intended to make him his successor, but the death of Philip prevented this being done. Perseus succeeded his father, and, a few days after, put Antigonus to death, B.C. 179. (*Liv.*, 40, 54, &c.)—V. Son of Aristobulus II., king of Judea, was conducted to Rome along with his father, after the capture of Jerusalem by Pompey. When Cæsar became dictator, Antigonus endeavoured, but in vain, to get himself re-established in his hereditary dominions, and at last was compelled to apply to Pæcorus, king of the Parthians. Pæcorus, on the promise of 1000 talents, marched into Judea at the head of a large army, and replaced Antigonus on the throne; but Marc Antony, at the solicitation of Herod, sent Gabinius against him, who took Jerusalem, and put Antigonus to an ignominious death. He reigned 3 years and 3 months. (*Justin*, 20, 29, &c.)—VI. Carylus, an historian in the age of Ptolemy Philadelphus, who wrote the lives of some of the ancient philosophers: also a heroic poem, entitled "Antipater," mentioned by Athenæus; and other works. The only remains we have of them are his "Collections of wonderful Stories" concerning animals and other natural bodies. This work was first published at Basle, 1568, and was afterward reprinted at Leyden by Meursius, 1619, in 4to. It forms a part also of the volume entitled *Historiarum Mirabilium Auctores Greci*, printed at Leyden in 1622, in 4to.

ANTILIBĀNUS, a ridge of mountains in Syria, east of, and running parallel with, the ridge of Libanus. (*Vid.* Libanus.—*Plin.*, 5, 20.)

ANTILŌCHUS, I. the eldest son of Nestor by Eurydice. He went to the Trojan war with his father, and was killed by Memnon, the son of Aurora, according to Homer (*Od.*, 4, 187), who is followed by Pindar (*Pyth.*, 6, 28), and by Hyginus (*fab.*, 113). Ovid, on the contrary, makes him to have been slain by Hector (*Her.*, 1, 15). We must therefore alter the text of the latter, and for *Antilochum* read either *Anchilum* with Muncker (from *Hom.*, *Il.*, 18, 185), or *Amphimachum* with Scoppa (from *Dares Phrygius*, c. 20).—II. A poet, who wrote some verses in praise of Lysander, and received a cap full of silver in return. (*Plut.*, *Vit. Lysandr.*, c. 18.)

ANTIMĀCHUS, I. a poet of Colophon, and pupil of Panyasis. He was the contemporary of Chærilus, and flourished between 460 and 431 B.C. With Antimachus would have commenced a new era in the history of epic verse, if that department of poetry had been capable of resuming its former lustre. In common with Chærilus, he perceived that the period of the Homeric epic had irrevocably passed; but in place of substituting the historic epic, as the former did, he returned to mythological subjects; merely treating them, however, in a manner more in accordance with the taste of the day. The success which he obtained, and the admiration which was subsequently testified for his productions by the Alexandrian school, prove that he was not mistaken in the judgment he had formed of the spirit of the age, and that he augured well respecting the opinion of posterity. The Alexandrian

critics (according to Quintilian, 10, 1) cited his *Thebais* as a work worthy of being compared with the poems of Homer, and of terminating the list of epic poems of the first class. They extolled the grandeur of his ideas and the energy of his style, but they confessed, at the same time, that he was deficient in elegance and grace. Antimachus was also the author of an elegy entitled *Lyde*, which the ancients regarded as a chef-d'œuvre. It is now entirely lost. The Anthology has preserved for us one of his epigrams. The fragments of Antimachus have been collected and published by Schellenberg, under the title "*Antimachi Colophonii fragmenta, nunc primum conquisita*," &c., Halæ, 1786, 8vo. (Schöll, *Hist. Lit. Gr.*, vol. 1, p. 245, and 2, p. 126.)—II. A Trojan, whom Paris bribed to oppose the restoring of Helen to Menelaus and Ulysses, who had come as ambassadors to recover her. He recommended to put them to death. His sons, Hippolochus and Pisander, were killed by Agamemnon. (*Il.*, 11, 122, *seqq.*)

ANTINOËA, annual sacrifices and quinquennial games in honour of Antinous, instituted by the Emperor Hadrian at Mantinea, where Antinous was worshipped as a divinity. They were celebrated also at Argos. (*Potter, Gr. Antiq.*, vol. 1, p. 424.)

ANTINOÖPOLIS or ANTINOË, a town of Egypt, built in honour of Antinous, opposite Hermopolis Magna, on the eastern bank of the Nile. It was previously an obscure place called Besa, but became a magnificent city. (*Vid.* Antinous.) It is now called *Ensené*, and a revered sepulchre has also caused it to receive the name of *Shek-Abadé*. (*Ammian. Marcellin.*, 19, 12.—*Dio Cass.*, 69, 11.—*Spartian.*, *Vit. Hadr.*, 14.—*Description de l'Egypte*, vol. 4, p. 197, *seqq.*)

ANTINÖUS, I. a youth of Bithynia, of whom the Emperor Hadrian was so extremely fond, that at his death he erected temples to him, established a priesthood for the new divinity, built a city in honour of him (*vid.* Antinopolis), and caused a constellation in the heavens to be called by his name. According to one account, Antinous was drowned in the Nile, while another and more correct statement gives the occasion of his death as follows: Hadrian, consulting an oracle at Besa, was informed that he was threatened with great danger, unless a person that was dear to him was immolated for his preservation. Upon hearing this, Antinous threw himself from a rock into the Nile, as an offering for the safety of the emperor, who built Antinopolis on the spot. Nor was this all. The artists of the empire were ordered to immortalize by their skill the grief of the monarch and the memory of his favourite. Painters and statuary vied with each other, and some of the master-pieces of the latter have descended to our own times. The absurd and disgusting conduct of Hadrian needs no comment.

—II. A native of Ithaca, son of Eupheides, and one of Penelope's suitors. He was brutal and cruel in his manners, and was the first of the suiters that was slain by Ulysses on his return. (*Od.*, 22, 8, &c.)

ANTIOCHIA, I. a city of Syria, once the third city of the world for beauty, greatness, and population. It was built by Seleucus Nicator, in memory of his father Antiochus, on the river Orontes, about 20 miles from its mouth, and was equidistant from Constantinople and Alexandria, being about 700 miles from each. Here the disciples of our Saviour were first called Christians, and the chief patriarch of Asia resided. It was afterward known by the name of Tetrapolis, being divided, as it were, into four cities, each having its separate wall, besides a common one enclosing all. The first was built by Seleucus Nicator, the second by those who repaired thither on its being made the capital of the Syro-Macedonian empire, the third by Seleucus Callinicus, and the fourth by Antiochus Epiphanes. (*Strabo*, 750.—Compare *Mannert*, vol. 6, part 1, p. 468, *seqq.*) It is now called

Antakia, and has suffered severely by a late earthquake. At the distance of four or five miles below was a celebrated grove, called Daphne; whence, for the sake of distinction, it has been called Antiochia near Daphne, or Antiochia Epidaphnes (*Ἀντιόχεια ἡ πρὸς Δάφνην*. *Hierocl. Synecdem.*, p. 711.—*Plin.*, 5, 21.—*Antiochia Epidaphnes, vid.* Daphne.)—II. A city of Lycaonia, near the northern confines of Pisidia, sometimes called Antiochia of Pisidia (*Ἀντιόχεια Πισιδίας*). According to Strabo, it was founded by a colony from Magnesia on the Mæander. This probably took place under the auspices of Antiochus, from whom the place derived its name. It became, under the Romans, the chief city of their province of Pisidia, which extended farther to the north than Pisidia proper. (*Hierocles*, p. 672.)—III. A city of Cilicia Trachea, situate on a rocky projection of the coast termed Cragus, whence the place, for distinction's sake, was called *Ἀντιόχεια ἐπὶ Κράγῳ*. (*Strabo*, 669.) The Byzantine writers call it the *Isaurian Antiochia*. Hierocles makes mention of it (*Synecdem.*, p. 708), as also the writers on the Crusades, under the name of *Antiocta*. (*Savuti, secretæ fidelium*, l. 2, p. 4, c. 26.—*Mannert*, vol. 6, pt. 2, p. 84.)—IV. A city at the foot of Mount Taurus, in Comagene, a province of Syria. (*Mannert*, vol. 6, pt. 1, p. 497.)—V. A city of Caria, on the river Mæander, where that stream was joined by the Orsinus or Massinus. (*Plin.*, 5, 29.) Steph. Byz. states, that it was founded by Antiochus, son of Seleucus, in honour of his mother. It had been previously called Pythopolis. The environs abounded in fruit of every kind, but especially in the fig called "triphylia." The ancient site corresponds with *Jenisher*. (*Cramer's Asia Minor*, vol. 2, p. 209.)—VI. A city of Cilicia Trachea, in the district of Lamotis (*Ptol.*, p. 129.)

ANTIOCHUS, I. the name of the mother of Antiochus, the son of Seleucus.—II. A tribe of Athens.

ANTIOCHUS, I. surnamed *Soter*, was the eldest son of Seleucus, the first king of Syria and Babylonia. He succeeded his father B.C. 280. When still young, he fell into a lingering disease, which none of his father's physicians could cure for some time, till it was discovered that his pulse was more irregular than usual when Stratonice, his stepmother, entered his room, and that love for her was the cause of his illness. This was told to the father, who willingly gave Stratonice to save a son on whom he founded all his hopes. When Antiochus came to the throne, he displayed, at the head of his forces, talents worthy of his sire, and gained many battles over the Bithynians, Macedonians, and Galatians. He attacked also Ptolemy Philadelphus, king of Egypt, at the instigation of Magas, who had revolted against this prince, but without success. He failed also in an expedition which he undertook after the death of Phileterus, king of Pergamus, with a view of seizing on his kingdom, and he was vanquished near Sardis by Eumenes, the successor of that prince. He returned after this to Antioch, and died not long subsequently, having occupied the throne for nineteen years. He was called *Soter* (*Σωτήρ*) or "Preserver," for having preserved his subjects from an irruption of the Galatians or Gauls, whom he defeated in battle. His successor was Antiochus Theos. (*Justin*, 17, 2, &c.)—II. Son of Antiochus Soter, and surnamed *Theos* (*Θεός*), "God," by the Milesians, because he put to death their tyrant Timarchus. He succeeded his father B.C. 261, and at the instigation of his sister Apamea, the widow of Magas, renewed the war with Ptolemy Philadelphus, king of Egypt. He was as unsuccessful, however, as his father had been; and, being compelled to sue for peace, only obtained it on condition of repudiating his wife Laodice, and espousing Berenice the sister of Ptolemy. The male issue, moreover, of this latter marriage were to inherit the crown. It was during this war that he lost all his

provinces beyond the Euphrates by a revolt of the Parthians and Bactrians. Ptolemy dying two years after this, Antiochus repudiated Berenice and restored Laodice. The latter, resolving to secure the succession to her son, poisoned Antiochus and suborned Artemon, whose features were similar to his, to represent him as king. Artemon, subservient to her will, pretended to be indisposed, and, as king, recommended to them Seleucus, surnamed Callinicus, son of Laodice, as his successor. After this ridiculous imposture, it was made public that the king had died a natural death, and Laodice placed her son on the throne, and despatched Berenice and her son, B.C. 246. (*Justin*, 27, 1.—*Appian*).—III. Surnamed *Hierax* (Ἱέραξ), "bird of prey," son of Antiochus Theos and Laodice, was the brother of Seleucus Callinicus. From his early years this prince was devoured by ambition. In order to attain to power, no crime or evil act deterred him; his thirst for rule, as well as his wicked and turbulent spirit, obtained for him the appellation, so characteristic of his movements, which we have mentioned above. Under pretext of aiding his brother against Ptolemy Evergetes, he attempted to dethrone him. Seleucus having marched against him for the purpose of counteracting his ambitious designs, Hierax defeated him near Ancyra. He could not, however, derive any advantage from this victory, since the Gauls, who formed the principal part of his army, revolted and declared themselves independent; and it was only by paying a large sum of money that Hierax could save his life. Eumenes, king of Pergamus, took advantage of this circumstance to rid himself of an unquiet and troublesome neighbour. He attacked Hierax, defeated him, and compelled him to take refuge with his brother-in-law Ariarathes, king of Cappadocia. Ariarathes soon became tired of him, and formed the design of putting him to death; but Hierax, informed of his design, fled into Egypt. He was thrown into prison by Ptolemy, and perished a few years after in attempting to make his escape.—IV. The *Great*, as he was surnamed, was the third of the name that actually reigned, and the son of Seleucus Ceraunus, and succeeded his father 223 B.C. He passed the first years of his reign in regulating the affairs of his kingdom, and in bringing back to their duty several of his officers who had made themselves independent. Desirous after this of regaining Syria, which had been wrested from Seleucus Callinicus by Ptolemy Evergetes of Egypt, he was met at Raphia and defeated by Ptolemy Philopater, 218 B.C., and was compelled to surrender the whole of his conquests in Syria which he had thus far made. He was more successful, however, in Upper Asia, where he recovered possession of Media, and made treaties with the kings of Parthia and Bactria, who agreed to aid him in regaining other of his former provinces, if their respective kingdoms were secured to them. He crossed over also into India, and renewed his alliance with the king of that country. After the death of Philopater, he resumed his plans of conquest, and Ptolemy Epiphanes being yet quite young, he seized upon the whole of Syria. He granted, however, peace to Ptolemy, and even gave him his daughter Cleopatra in marriage, with Syria for her dowry. Antiochus then turned his arms against the cities of Asia Minor and Greece; but these cities having implored the aid of Rome, the senate sent to Antiochus to summon him to surrender his conquests. Excited, however, by Hannibal, to whom he had given an asylum, he took no notice of this order, and a war ensued. The plan, however, which Hannibal traced out for him, was not followed. Defeated at Thermopylæ by Glabrio, he fled into Asia, where a second and more complete defeat, by Scipio Asiaticus, at Magnesia, compelled him to sue for peace, which he obtained only on the hardest conditions. He was obliged to retire beyond Mount Taurus. All his territories on this side of Taurus became Roman

provinces, and he had also to pay a yearly tribute of 2000 talents. His revenues being insufficient for this heavy demand, he attempted to plunder the treasures of the temple of Belus in Susiana; but the inhabitants of the country were so irritated at this sacrilege, that they slew him, together with his escort, B.C. 187. He had reigned thirty-six years. In his character of king, Antiochus was humane and liberal, the patron of learning, and the friend of merit. He had three sons, Seleucus Philopater, Antiochus Epiphanes, and Demetrius. The first succeeded him, and the two others were kept as hostages by the Romans. (*Justin*, 31 et 32.—*Liv.*, 34, 59.—*Flor.*, 2, 1.—*Appian*, *Bell. Syr.*)—V. Surnamed *Epiphanes*, or *Illustrious*, was king of Syria after the death of his brother Seleucus Philopater, having ascended the throne 175 B.C. He was the fourth of the name, and was surnamed *Epiphanes* (Ἐπιφανής), "*the Illustrious*," and reigned eleven years. Taking advantage of the infancy of Ptolemy Philometor, he seized upon Cœlosyria, and even penetrated into Egypt, where he took Memphis, and obtained possession of the person of the young king, whom he kept prisoner for many years. The guardians of the young Ptolemy, however, having applied for aid to the Romans, the senate sent Popilius Lænas unto Epiphanes, who compelled him to renounce his conquests and set the Egyptian monarch at liberty. The Jews having revolted during the reign of Epiphanes, he marched against Jerusalem, deposed the high-priest Onias, profaned the temple by sacrifices to Jupiter Olympius, plundered all the sacred vessels, and slaughtered, it is said, 80,000 inhabitants of this ill-fated city. After this he proceeded into Persia, and, while traversing Elymais, wished to plunder the temples that were there; but the inhabitants having revolted, he was compelled to retreat to Babylon. There he learned that the Jews, commanded by Matathias and Judas Maccabrus, had gained several victories over the generals whom he had left in Judæa. Transported with fury at the intelligence, he assembled a new army, and swore to destroy Jerusalem; but, at the moment of his departure, he fell from his chariot, was subsequently seized with a disgusting malady, and died in the most agonizing sufferings. The Persians attributed the manner of his death to his impious enterprise against the temple of Elymais; the Jews saw in it the anger of Heaven, for his having profaned the temple of Jerusalem. He died B.C. 164. Epiphanes was not without some good qualities. He was generous, loved the arts, and displayed considerable ability in the wars in which he was engaged; but his vices and follies tarnished his character. (*Justin*, 34, 5.—*Macchab.*, 1, 1, &c.)—VI. Eupator, son of the preceding (from εὖ and πατήρ, "*born of an illustrious sire*"), succeeded to the throne at the age of nine years. The generals of this prince continued the war against the Jews, and Jerusalem was on the point of becoming, for the second time, the prey of the Syrians, when Demetrius Soter, the cousin-german of Eupator, by a sudden invasion, seized upon the capital of Syria. The generals of Eupator made peace with the Jews, and marched against Demetrius; but the soldiers, ashamed of serving a mere child, went over to the invader, who put Eupator to death after a reign of about eighteen months.—VII. (the sixth of the name) Son of Alexander Bala, took the surname of *Theos* ("God"), claiming descent, like his father, from Antiochus Theos already mentioned. To this surname he afterward added that of *Epiphanes* ("*the illustrious*"). Demetrius Nicator having disbanded his army, and being entirely without apprehension of any foe, Tryphon took advantage of this, and having brought Antiochus from Arabia, still young in years, caused him to be proclaimed king, about 144 B.C. The attempt succeeded. Demetrius was defeated, and Antiochus ascended the throne. He reigned, however, only in name.

The actual monarch was Tryphon, who had him put to death at the end of about two years, and caused himself to be proclaimed in his stead. (*Justin*, 36, 1.)—VIII. Surnamed *Sidetes* (Σιδήτης), "the hunter," son of Demetrius Soter, ascended the throne 139 B.C. He drove from Syria the usurper Tryphon, made war on the Jews, besieged Jerusalem, and compelled it to pay a tribute. He then marched against Phraates, king of Parthia, who menaced his kingdom, gained three victories over him, and obtained possession of Babylon. The following year he was vanquished in turn by the Parthian king, and lost his life in the conflict. He was a prince of many virtues, but he tarnished all by his habits of intemperance.—IX. The eighth of the name, surnamed Grypus (Γρυπός) from his *aquiline nose*, was son of Demetrius Nicator and Cleopatra. He was raised to the throne B.C. 123, to the prejudice of his brothers, by the intrigues of his mother, who hoped to reign in his name. When he was declared king, the throne of Syria was occupied by Alexander Zebinas. He marched against this impostor, defeated, and put him to death. He then married Tryphena, daughter of Ptolemy Euergetes II., which ensured peaceable relations between Syria and Egypt. After having for some time yielded to the authority of his mother, he resolved at last to reign in his own name, a step which nearly cost him his life. His mother prepared a poisoned draught for her son, but, being suspected by him, was compelled to drink it herself. A bloody war soon after broke out between this prince and Antiochus the Cyzicenean, his brother, in which the latter compelled Grypus to cede to him Cœlosyria. They thus reigned conjointly for some time. Grypus was at last assassinated by one of his subjects, B.C. 96. (*Justin*, 39, 1.—*Joseph.*, *Ant. Jud.*)—X. Surnamed Cyziceneus, from his having been brought up in the city of Cyzicus, was the ninth of the name. He was son of Antiochus Sidetes, and succeeded his brother Grypus, after having reigned over Cœlosyria, which he had previously compelled his brother to yield to him. He was a dissolute and indolent prince, and possessed of considerable mechanical talent. His nephew Seleucus, son of Grypus, de-throned him, B.C. 95.—XI. The tenth of the name, ironically surnamed *Pius*, because he married Selena, the wife of his father and of his uncle. He was the son of Antiochus IX., and he expelled Seleucus, the son of Grypus, from Syria; but he could not prevent two other sons of Grypus, namely, Philip and Demetrius, from seizing on a part of Syria. He perished soon after by their hands. (*Appian.*—*Joseph.*, *Ant. Jud.*, 13, 21.)—After his death, the kingdom of Syria was torn to pieces by the factions of the royal family or usurpers, who, under a good or false title, under the name of Antiochus or his relations, established themselves for a little time either as sovereigns of Syria, or Damascus, or other dependant provinces. At last Antiochus, surnamed *Asiaticus*, the son of Antiochus the ninth, was restored to his paternal throne by the influence of Lucullus, the Roman general, on the expulsion of Tigranes, king of Armenia, from the Syrian dominions; but four years after, Pompey deposed him, and observed that he who hid himself while a usurper sat upon his throne, ought not to be a king. From that time, B.C. 65, Syria became a Roman province, and the race of Antiochus was extinguished.—There were also other individuals of the same name, among whom the most deserving of mention are the following: I. A native of Syracuse, descended from an ancient monarch of the Sicani. He wrote a history of Sicily, which was brought down to the 98th Olympiad, and which Diodorus Siculus cites among the sources whence he derived aid for his compilation. He composed also what appears to have been a very curious history of Italy, some fragments of which are preserved by Dionysius of Halicarnassus. (Compare

Heyne, de Fontibus Hist. Diod.—vol. 1, p. lxxxv., *ed. Bip.*)—II. A rhetorician and sophist of *Ægæa*, the pupil of Dionysius of Miletus. Dio Cassius (77, p. 878) relates, that, in order to rouse the spirits of the Roman army, who were worn out with fatiguing marches, he assumed the character of a cynic, and rolled about in the snow. This conduct gained for him the favour of Septimius Severus and Caracalla. He afterward went over to Tiberides, king of the Parthians, whence Suidas styles him *Ἀντρώμολος*, or "the deserter."—III. A native of Ascalon, the last preceptor of the Platonic school in Greece. He was the disciple of Philo, and one of the philosophers whose lectures Varro, Cicero, and Brutus attended, for he taught, at different times, at Athens, Alexandria, and Rome. He attempted to reconcile the tenets of the different sects, and maintained that the doctrines of the Stoics were to be found in the writings of Plato. Cicero greatly admired his eloquence and the politeness of his manners, and Lucullus took him as his companion into Asia. He resigned the academic chair in the 175th Olympiad. After his time the professors of the Academic philosophy were dispersed by the tumults of war, and the school itself was transferred to Rome. (*Schöll, Hist. Lat. Gr.*, vol. 5, p. 199, *seqq.*—*Enfield's History of Philosophy*, vol. 1, p. 258, *seqq.*)

ANTIOPE, I. daughter of Nycteus, who was a son of Neptune and king of Thebes, received the addresses of Jupiter, the god having appeared to her under the form of a satyr. Terrified at the threats of her father, on the consequences of her fault becoming apparent, Antiope fled to Sicyon, where she married Epopeus. Nycteus, out of grief, put an end to himself, having previously charged his brother Lycus to punish Epopeus and Antiope. Lycus accordingly marched an army against Sicyon, took it, slew Epopeus, and led away Antiope captive. On the way to Thebes, she brought forth twins at Eleutheræ. The unhappy babes were exposed on a mountain; but a shepherd having found them, reared them both, calling the one Zethus, the other Amphion. The former devoted himself to the care of cattle, while Amphion passed his time in the cultivation of music, having been presented with a lyre by Mercury. Meanwhile, Lycus had put Antiope in bonds, and she was treated with the utmost cruelty by him and his wife Dirce. But her chains became loosed of themselves, and she fled to the dwelling of her sons in search of shelter and protection. Having recognised her, they resolved to avenge her wrongs. Accordingly, they attacked and slew Lycus, and tying Dirce by the hair to a wild bull, let the animal drag her until she was dead. (*Virg.* Dirce, Amphion, Zethus. — *Apollod.*, 3, 5.—*Keightley's Mythology*, p. 299.)—II. A queen of the Amazons. According to one account, Hercules, having taken her prisoner, gave her to Theseus as a reward of his valour. The more common tradition, however, made her to have been taken captive and carried off by Theseus himself, when he made an expedition with his own fleet against the Amazonian race. She is also called Hippolyta. Justin says that Hercules gave Hippolyta to Theseus, and kept Antiope for himself. (*Plut.*, *Vit. Thes.*, 27—*Justin*, 2, 4.)

ANTIPAROS, a small island in the *Ægean*, ranked by Artemidorus among the Cyclades, but excluded from them by Strabo (10, p. 484, *ed. Casaub.*). It lay opposite to Paros, and was separated from this latter island, according to Heraclides of Pontus (*Steph. Byz.*, s. v. Ὠλιαρος), by a strait eighteen stadia wide. The same writer affirms (*Plin.*, *H. N.*, 4, 12), that it had been colonized by Sidonians. Its more ancient name was Oliarus. It is now *Antiparo*. This island is famed for its grotto, which is of great depth, and was believed by the ancient Greeks to communicate, beneath the waters, with some of the neighbouring islands.

ANTIPÄTER, I. son of Iolaus, a Macedonian, was first an officer under Philip, and was afterward raised to the rank of a general under Alexander the Great. When the latter invaded Asia, Antipater was appointed governor of Macedonia; and in this station he served his prince with the greatest fidelity. He reduced the Spartans, who had formed a confederacy against the Macedonians; and, having thus secured the tranquillity of Greece, he marched into Asia, with a powerful reinforcement for Alexander. After that monarch's death, the government of Macedonia and of the other European provinces was allotted to Antipater. He was soon involved in a severe contest with the Grecian states; was defeated by the Athenians, who came against him with an army of 30,000 men and a fleet of 200 ships, and was closely besieged in Lamia, a town of Thessaly. But Leosthenes, the Athenian commander, having been mortally wounded under the walls of the city, and Antipater having received assistance from Craterus, his son-in-law, the fortune of the war was completely changed. The Athenians were routed at Cranon, and compelled to submit at discretion. They were allowed to retain their rights and privileges, but were obliged to deliver up the orators Demosthenes and Hyperides, who had instigated the war, and to receive a Macedonian garrison into the Munychia. Antipater was equally successful in reducing the other states of Greece, who were making a noble struggle for their freedom; but he settled their respective governments with much moderation. In conjunction with Craterus, he was the first who attempted to control the growing power of Perdiccas; and after the death of that commander he was invested with all his authority. He exercised this jurisdiction over the other governors with unusual fidelity, integrity, and impartiality, and died in the 80th year of his age, B.C. 319. At his death, he left his son Cassander in a subordinate station; appointed Polyperchon his own immediate successor; and recommended him to the other generals as the fittest person to preside in their councils. Antipater received a learned education, and was the friend and disciple of Aristotle. He appears to have possessed very eminent abilities, and was peculiarly distinguished for his vigilance and fidelity in every trust. It was a saying of Philip, father of Alexander, "I have slept soundly, for Antipater has been awake." (*Justin*, 11, 12, 13, &c.—*Diod.*, 17, 18, &c.)—II. The Idumæan, was the father of Herod the Great, and was the second son of Antipas, governor of Idumæa. He embraced the party of Hyrcanus against Aristobulus, and took a very active part in the contest between the two brothers respecting the office of high-priest in Judæa. Aristobulus at first, however, succeeded; but when Pompey had deposed him and restored Hyrcanus to the pontifical dignity, Antipater soon became the chief director of affairs in Judæa, ingratiated himself with the Romans, and used every effort to aggrandize his own family. He gave very effectual aid to Cæsar in the Alexandrian war, and the latter, in return, made him a Roman citizen and procurator of Judæa. In this latter capacity he exerted himself to restore the ancient Jewish form of government, but was cut off by a conspiracy, the brother of the high-priest having been bribed to give him a cup of poisoned wine. Josephus makes him to have been distinguished for piety, justice, and love of country. (*Joseph. Ant. Jud.*, 14, 3.)—III. A son of Cassander, ascended the throne of Macedonia B.C. 298. He disputed the crown with his brother Philip IV., and caused his mother Thessalonica to be put to death for favouring Philip's side. The two brothers, however, reigned conjointly, notwithstanding this, for three years, when they were de-throned by Demetrius Polioretetes. Antipater thereupon retired to the court of Lysimachus, his father-in-law, where he ended his days. (*Justin*, 26, 1.)—IV.

A native of Tarsus, the disciple and successor of Diogenes the Babylonian, in the Stoic school. He flourished about 80 B.C., and is applauded by both Cicero and Seneca as an able supporter of that sect. His chief opponent was Carneades. (*Cic. de Off.*, 3, 12.—*Sen.*, *Ep.*, 92.)—V. A native of Cyrene, and one of the Cyrenaic sect. He was a disciple of the first Aristippus, and the preceptor of Epitimidēs.—VI. A philosopher of Tyre, who wrote a work on Duty. He is supposed to have been of the Stoic sect. Cicero (*de Orat.*, 3, 50) speaks of him as an improvisator. Crassus, into whose mouth the Roman orator puts this remark, might have known the poet when he was quæstor in Macedonia, the same year in which Cicero was born (106 B.C.). Pliny relates (7, 51) that he had every year a fever on the day of his birth, and that, without ever experiencing any other complaint, he attained to a very advanced age. Some of his epigrams remain, the greater part of which fall under the class of epitaphs (*ἐπιτύβια*). Boivin (*Mém. de l'Acad. des Inscri.*, &c., vol. 3) states, that the epigrams of this poet are written in the Doric dialect; the remark, however, is an incorrect one, since some are in Ionic. (*Schöell, Hist. Lit. Gr.*, vol. 4, p. 45)—VII. A poet of Thessalonica, who flourished towards the end of the last century preceding the Christian era. We have thirty-six of his epigrams remaining.—VIII. A native of Hierapolis. He was the secretary of Septimius Severus, and Prefect of Bithynia. He was the preceptor also of Caracalla and Geta, and reproached the former with the murder of his brother.

ANTIPATRIA, a town of Illyricum, on the borders of Macedonia. It was taken and sacked by L. Apustius, a Roman officer detached by the consul Sulpicius to ravage the territory of Philip, in the breaking out of the war against that prince. (*Liv.*, 31, 27.)

ANTIPATRIA, or CAPHARSABA, a town of Palestine, situate in Samaria, near the coast, southeast of Apollonias. It was rebuilt by Herod the Great, and called Antipatris, in honour of his father Antipater. (*Joseph*, *B. J.*, 16, 1, 4.—*Id.*, *Ant.*, 16, 5, and 3, 15.) The city still existed, though in a dilapidated state, in the time of Theophanes (8th century). Its site is at present unknown: the modern *Arsuf* does not coincide with this place, but rather with Apollonias. (*Mannert*, vol. 6, pt. 1, p. 271, *seqq.*)

ANTIPHANES, I. a comic poet of Rhodes, Smyrna, or Carystus, was born B.C. 408, of parents in the low condition of slaves. This most prolific writer (he is said to have composed upward of three hundred dramas), notwithstanding the meanness of his origin, was so popular in Athens, that on his decease a decree was passed to remove his remains from Chios to that city, where they were interred with public honours. (*Suidas*, s. v.—*Theatre of the Greeks*, 2d ed., p. 183.)—II. A statuary of Argos, the pupil of Pericletus, one of those who had studied under Polyclætus. He flourished about 400 B.C. Several works of this artist are mentioned by Pausanias (10, 9). He formed statues of the Dioscuri and other heroes; and he made also a brazen horse, in imitation of the horse said to have been constructed by the Greeks before Troy. The inhabitants of Argos sent it as a present to Delphi. Other imitations performed by this artist are enumerated by Heyne. (*Excurs.*, 3, ad *Æn.*, 11.—*Sillig, Dict. Art.*, s. v.)—III. A poet of Macedonia, nine of whose epigrams are preserved in the *Anthology*. He flourished between 100 B.C. and the reign of Augustus. (Consult *Jacobs, Catal. Poet. Epig.*, s. v.)

ANTIPHATES, a king of the Læstrygones, descended from Lamus. Ulysses, returning from Troy, came upon his coasts, and sent three men to examine the country. Antiphates devoured one of them, and pursued the others, and sunk the fleet of Ulysses with stones, except the ship in which the hero himself was. (*Od.*, 10, 81, *seqq.*)

ANTIPHILI (OPPIDUM), a town and harbour, according to Ptolemy, on the Sinus Arabicus, in Ægyptus Inferior. Others, however, place it in Æthiopia, to the north of Saba. (*Bisch. und Möll., Wörterb., &c., s. v.*)

ANTIPHILUS, I. a painter, born in Egypt, and mentioned by Quintilian (12, 10) as possessing the greatest readiness in his profession, and compared by many to the most eminent artists, Apelles, Protogenes, and Lysippus. He is twice alluded to in Pliny, with an enumeration of his most remarkable productions (35, 10 and 11). One of his pictures represented a boy blowing the fire, with the effect of the light on the boy's countenance and the surrounding objects strikingly delineated. The subject of another and very famous piece was a satyr, arrayed in a panther's skin. He flourished during the ages of Alexander the Great and Ptolemy I. of Egypt. This makes him a contemporary of Apelles, whom, according to Lucian, he endeavoured to rival. (*Sillig, Dict. Art. s. v.*)—II. An architect, whose age and country are uncertain. In connexion with Pothæus and Megacles, he constructed, at Olympia, for the Carthaginians, a repository for their presents. (*Pausan., 6, 19.—Sillig, Dict. Art., s. v.*)

ANTIPHON, I. a tragic poet, who lived at the court of Dionysius the elder, and was eventually put to death by the tyrant. Aristotle cites his *Melæager*, *Andromache*, and *Jason*.—II. A native of Attica, born at Rhamnus about 479 B.C. (Compare *Spann, de Antiphont., Lugd. Bat., 1765, 4to.* and *Ruhnken, Dissert. de Antiph.—Orat. Gr., ed. Reiske, vol. 7, p. 795.*) He was the son of the orator Sophilus, who was also his preceptor in the rhetorical art. He was a pupil also of Gorgias. According to the ancient writers, he was himself the inventor of rhetoric. Their meaning, however, in making this assertion, is simply as follows: Before his time, the Sicilian school had taught and practised the art of speaking; but Antiphon was the first who knew how to apply this art to judiciary eloquence, and to matters that were treated before the assemblies of the people. Thus, Hermogenes (*de Form. Or., 2, p. 498*) says, that he was the inventor *τοῦ γένους πολιτικοῦ*. Antiphon exercised his art with great success, and gave instructions also in a school of rhetoric which he opened, and in which Thucydides formed himself. If reliance is to be placed on the statement of Photius, Antiphon put up over the entrance of his abode the following inscription: "Here consolation is given to the afflicted." He composed, for many, speeches to be delivered by accused persons, which the latter got by heart; and also harangues for demagogues. This practice, which he was the first to follow, exposed him to the satire of the poets of the day. He himself only spoke once in public, and this was for the purpose of defending himself against a charge of treason. Antiphon, during the Peloponnesian war, frequently commanded bodies of Athenian troops; he equipped, also, at his own expense, sixty triremes. He had, moreover, the principal share in the revolution which established at Athens the government of the four hundred, of which he was a member. During the short duration of this oligarchy, Antiphon was sent to Sparta for the purpose of negotiating a peace. The ill-success of this embassy overthrew the government at home, and Antiphon was accused of treason and condemned to death. According to another account, given by Photius (*Biblioth., 2, p. 486, ed. Bekker*), which, however, is wholly incorrect, Antiphon was put to death by Dionysius of Syracuse, either for having criticised the tragedies of the tyrant, or else for having hazarded an unlucky *bonmot* in his presence. Some one having asked Antiphon what was the best kind of brass, he replied, that of which the statues of Harmodius and Aristogiton were made.—The ancient writers cite a

work of Antiphon on the Rhetorical Art, *Τέχνη ῥητορική*, and they remark that it was the oldest work of the kind; which means merely that Antiphon, as has already been remarked, was the first that applied the art in question to the business of the bar. They make mention also of thirty-five, and even sixty, of his discourses, that is, discourses held before the assembly of the people (*λόγοι δημογόμοι*); judiciary discourses (*δικάνικοι*), &c. We have fifteen harangues of Antiphon remaining, which are all of the class termed by Hermogenes *λόγοι φόνικοι*, that is, having reference to criminal proceedings. Twelve of them, however, are rather to be regarded as so many studies, than discourses actually completed and pronounced. Hermogenes passes the following judgment upon Antiphon: "He is clear in his expositions, true in his delineation of sentiment, faithful to nature, and, consequently, persuasive; but he possesses not these qualities to the extent to which they were carried by the orators who came after him. His diction, though often swelling, is nevertheless polished: in general, it wants vivacity and energy." The remains of Antiphon are given in Reiske's edition of the Greek Orators, in that of Bekker, *Berol., 1823, 5 vols. 8vo.* and in that of Dobson, *Lond., 1828, 16 vols. 8vo.* Three of his discourses, 1. *Κατηγορία φαρμακείας, κατὰ τῆς μητρίδας*; 2. *Περὶ τοῦ Ἡρώδου φόνου*; 3. *Περὶ τοῦ χορευτοῦ*, deserve the attention of scholars, as giving an idea of the form of proceeding in Athens in criminal prosecutions. (*Schöll, Hist. Lit. Gr., vol. 2, p. 202, seqq.*)—II. A sophist of Athens. Plutarch and Photius, in speaking of the conversation which Socrates had with this individual, and of which Xenophon (*Mém. Socr., 1, 6*) has preserved an account, confound him with the orator of the same name. Hermogenes ascribes to him a work on truth (*περὶ Ἀληθείας*), of which Suidas cites a fragment (*s. v. Ἀδελφός*), wherein the sophist speaks of the Deity. (*Schöll, Hist. Lit. Gr., vol. 2, p. 332.*)

ANTIPHON, brother of Ctenus, and son of Ganyctor the Nampactian. He and Ctenus slew the poet Hesiod, for a supposed connivance in an outrage perpetrated upon their sister. (*Vid. Hesiodus.*)

ANTIPOLIS, a city of Gaul, on the coast of the Mediterranean, southeast of the river Varus, built and colonized by the Massilians. It is now *Antibes*. (*Strabo, 180.—Id. ibid., p. 184.*)

ANTIRRHÏUM, a promontory of Ætolia, so called from its being opposite to Rhium, another point of Æolia. It was sometimes surnamed Molycrium, from its vicinity to the town of Molycrium (*Thucyd., 2, 86*), and was also called Rhium Ætolicum (*Polyb., 5, 94*). Here the Crissæan, or, as Scylax terms it, the Delphic, Gulf properly commenced. (*Peripl., p. 14.*) Thucydides states that the interval between the two capes was barely seven stadia; the geographer just quoted says ten stadia. The narrowness of the strait rendered this point of great importance for the passage of troops to and from Ætolia and the Peloponnesus. (*Polyb., 4, 10 and 19.*) On Antirrhium was a temple sacred to Neptune. The Turkish fortress, which now occupies the site of Antirrhium, is known by the name of *Roumelia*. (*Gell's Itiner., p. 293.*)

ANTISSA, a city of Lesbos, between the promontory Sigeum and Methymne. Having offended the Romans, it was depopulated by Labco, and the inhabitants were removed to Methymne. It was afterward rebuilt, and is supposed to have been insulated by an arm of the sea from the rest of the island. Hence the name Antissa, it being opposite to Lesbos, whose more ancient name was Issa. (*Plin., 5, 31.—Id., 2, 91.—Liv., 45, 31.—Lycophron, v. 219.—Eustath., ad Hom., Il., 2, 129.*)

ANTISTHÈNES, an Athenian philosopher, founder of the Cynic sect, born about 420 B.C., of a Phrygian or

Thracian mother. In his youth he was engaged in military exploits, and acquired fame by the valour which he displayed in the battle of Tanagra. His first studies were under the direction of the sophist Gorgias, who instructed him in the art of rhetoric. Soon growing dissatisfied with the futile labours of this school, he sought for more substantial wisdom from Socrates. Captivated by the doctrine and the manner of his new master, he prevailed upon many young men, who had been his fellow-students under Gorgias, to accompany him. So great was his ardour for moral wisdom, that, though he lived at the Piræus, he came daily to Athens to attend upon Socrates. Despising the pursuits of avarice, vanity, and ambition, Socrates sought the reward of virtue in virtue itself, and declined no labour or suffering which virtue required. This noble consistency of mind was the part of the character of Socrates which Antisthenes chiefly admired; and he resolved to make it the object of his diligent imitation. While he was a disciple of Socrates, he discovered his propensity towards severity of manners by the meanness of his dress. He frequently appeared in a threadbare and ragged cloak. Socrates, who had great penetration in discovering the characters of men, remarking that Antisthenes took pains to expose, rather than to conceal, the tattered state of his dress, said to him, "Why so ostentatious? Through your rags I see your vanity." While Plato and other disciples of Socrates were, after his death, forming schools in Athens, Antisthenes chose for his school a public place of exercise without the walls of the city, called the Cynosarges, whence some writers derive the name of the sect of which he was the founder. Others suppose that his followers were called Cynics from the habits of the school, which, to the more refined Athenians, appeared those of dogs rather than of men. Here he inculcated, both by precept and example, a rigorous discipline. In order to accommodate his own manners to his doctrine, he wore no other garment than a coarse cloak, suffered his beard to grow, and carried a wallet and staff like a wandering beggar. Undoubtedly this was nothing more than an expression of opposition to the gradually increasing luxury of the age; his wish and object being to bring men back to their original simplicity in life and manners. Thus he set himself directly against the tendency and civilization of his age, as is clear from many of his sayings, which are tinged at once with bitterness and wit. And although this was scarcely more than a negative resistance, yet, as he obstinately placed himself in opposition to the circumstances in which he lived, and to the advancing progress of science, his position must naturally have reacted upon the feelings of his contemporaries towards himself. We consequently find that his school met with little encouragement, and this so annoyed him that he drove away the few scholars he had. Diogenes of Sinope, who resembled him in character, is said to have been the only one that remained with him to his death. The doctrine of Antisthenes was mainly confined to morals; but, even in this portion of philosophy, it is exceedingly meager and deficient, scarcely furnishing anything beyond a general defence of the olden simplicity and moral energy, against the luxurious indulgence and effeminacy of later times. Instead, however, of being duly tempered by the Socratic moderation, Antisthenes appears to have been carried to excess in his virtuous zeal against the luxury of the age; unless we suppose, what may perhaps be true, that in many of the accounts which have come down to us respecting him, his doctrine is painted in somewhat exaggerated colours. With regard to his religious tenets, it may be observed that Antisthenes, in accordance with the Socratic doctrine, maintained that, in the universe, all is regulated by a divine intelligence, from design, so as to benefit the good man, who is the friend of God. For the sage shall possess

all things. This doctrine of God, therefore, was connected with his ethical opinions, by indicating the physical conditions of a happy life. It led him, however, to deviate from Socrates, and to declare that, in opposition to the vulgar polytheism, there is but one natural God, but many popular deities; that God cannot be known or recognised in any form or figure, since he is like to nothing on earth. Hence undoubtedly arose his allegorical explanation of mythology, and his doubts respecting the demoniac intimations of Socrates. Towards the close of his life, the gloomy cast of his mind and the moroseness of his temper increased to such a degree, as to render him troublesome to his friends, and an object of ridicule to his enemies. Antisthenes wrote many books, of which none are extant except two declamations under the names of Ajax and Ulysses. These were published in the collection of ancient orators by Aldus, in 1513; by H. Stephens, in 1575; and by Canter, as an appendix to his edition of Aristides, printed at Basle in 1566.—For some remarks on the Cynic sect, *vid.* the article Diogenes. (*Enfield's History of Philosophy*, vol. 1, p. 299, *seqq.*—*Ritter's Hist. Anc. Phil.*, vol. 2, p. 108, *seqq.*, *Oxford trans.*)

ANTISTIVS LABEO, a distinguished lawyer in the reign of Augustus, who, in the spirit of liberty, frequently spoke and acted with great freedom against the emperor. According to most commentators, Horace (*Serm.* 1, 3, 82), in order to pay his court to the monarch, salutes Labeo with the appellation of mad (*Labeone insanior*, &c.). But it has been well observed, in opposition to this, that, whatever respect the poet had for his emperor, we never find that he treats the patrons of liberty with outrage. Nor can we well imagine that he would dare thus cruelly to brand a man of Labeo's abilities, riches, power, and employments in the state, and to whom Augustus himself had offered the consulship. Bentley, Wieland, Wetzel, and other critics are of opinion, therefore, that this individual cannot be the one to whom Horace alludes, but that he refers to some other personage of the day, whose history has not come down to us. Bentley even goes so far as to suggest *Labeio* for *Labeone* in the text of Horace, and cites Seneca in support of his conjecture (*Prof.*, *ad lib.*, 5, *Controv.*), according to whom, Labienus was a public speaker of the day, so noted for the freedom of his tongue as to have received the name of *Rubienus* in derision. Heindorf, however, thinks that Horace may here actually refer to Antistivus Labeo, not for the reason given by some of the commentators, but in allusion to his earlier years, and to a violent and impetuous temperament which he may have at that time possessed (*ad Horat.*, l. c.).

ANTITAVRUS, a chain of mountains, running from Armenia through Cappadocia to the west and south-west. It connects itself with the chain of Mount Taurus, between Cataonia and Lycæonia. (*Vid.* Taurus and Parvadres.—*Mannert*, vol. 6, pt. 2, p. 5.)

ANTIUM, a city of Italy, on the coast of Latium, about 32 miles below Ostia. According to Xenagoras, a Greek writer quoted by Dionysius of Halicarnassus (1, 73), the foundation of Antium is to be ascribed to Anthias, a son of Circe. Solinus (c. 8) attributes it to Ascanius. But, whatever may have been its origin, there can be no doubt that Antium was, at an early period, a maritime place of considerable note, since we find it comprised in the first treaty made by Rome with Carthage (*Polyb.*, 3, 22); and Strabo remarks (232) that complaints were made to the Romans by Alexander and Demetrius, of the piracies exercised by the Antiates, in conjunction with the Tyrrhenians, on their subjects; intimating that it was done with the connivance of Rome. Antium appears also to have been the most considerable city of the Volsci; it was to this place, according to Plutarch, that Coriolanus retired after he had been banished from his coun-

try, and was here enabled to form his plans of vengeance in conjunction with the Volscian chief Tullus Aufidius. It was here, too, that, after his failure, he met his death from the hands of his discontented allies. Antium was taken for the first time by the consul T. Quintius Capitolinus, A.U.C. 286, and the year following it received a Roman colony. This circumstance, however, did not prevent the Antiates from revolting frequently, and joining in the Volscian and Latin wars (*Liv.*, 6, 6.—*Dion. Hal.*, 10, 21), till they were finally conquered in a battle near the river Astura, with many Latin confederates. In consequence of this defeat, Antium fell into the hands of the victors, when most of its ships were destroyed, and the rest removed to Rome by Camillus. The beaks of the former were reserved to ornament the elevated seat in the Forum of that city, from which orators addressed the people, and which, from that circumstance, was thenceforth designated by the term *rostra*. (*Liv.*, 8, 14.—*Flor.*, 1, 11.—*Plin.*, 34, 5) Antium now received a fresh supply of colonists, to whom the rights of Roman citizens were granted. From that period it seems to have enjoyed a state of quiet till the civil wars of Marius and Sylla, when it was nearly destroyed by the former. But it rose again from its ruins during the empire, and attained to a high degree of prosperity and splendour; since Strabo reports, that in his time it was the favourite resort of the emperors and their court (*Strab.*, 232), and we know it was here that Augustus received from the senate the title of Father of his Country. (*Suet.*, *Aug.*, 50.) Antium became successively the residence of Tiberius and Caligula; it was also the birthplace of Nero (*Suet.*, *Ner.*, 6), who, having reconquered it, built a port there, and bestowed upon it various other marks of his favour. Hadrian is also said to have been particularly fond of this town. (*Philostrat.*, *Vit. Apoll. Tyan.*, 8, 8.) There were two temples of celebrity at Antium; one sacred to Fortune, the other to Æsculapius. (*Horat.*, *Od.*, 1, 35, 1.—*Martial*, *Ep.*, 5, 1.—*Val. Max.*, 1, 8.) The famous Apollo Belvidere, the fighting gladiator, as it is termed, and many other statues discovered at Antium, attest also its former magnificence. The site of the ancient city is sufficiently marked by the name of *Porto d'Anco* attached to its ruins. But the city must have reached as far as the modern town of *Nettuno*, which derives its name probably from some ancient temple dedicated to Neptune. (*Cramer's Ancient Italy*, vol. 2, p. 86, *seqq.*)

ANTONIA LEX, I. was enacted by Marc Antony, when consul, A.U.C. 708. It abrogated the *lex Atia*, and renewed the *lex Cornelia*, by taking away from the people the privilege of choosing priests, and restoring it to the college of priests, to which it originally belonged. (*Cic.*, *Phil.*, 1, 9.)—II. Another by the same, A.U.C. 703. It ordained that a new decuria of judges should be added to the two former, and that they should be chosen from the centurions.—III. Another by the same. It allowed an appeal to the people, to those who were condemned *de majestate*, or of perfidious measures against the state. Cicero calls this the destruction of all laws.—IV. Another by the same, during his triumvirate. It made it a capital offence to propose, ever after, the election of a dictator, and for any person to accept of the office. (*Appian*, *de Bell. Civ.*, 3.)

ANTONIA, I. the name of two celebrated Roman families, the one patrician, the other plebeian. They both pretended to be descendants of Hercules.—II. A daughter of Marc Antony, by Octavia. She married Domitius Ænobarbus, and was mother of Nero and two daughters. (*Tacit.*, *Ann.*, 4, 44.)—III. A daughter of Claudius and Ælia Petina. She was of the family of the Tuberos, and was repudiated for her levity. Nero wished after this to marry her, but, on her refusal, caused her to be put to death. (*Suet.*, *Vit.*

Ner., 35.)—IV. A daughter of Marc Antony, and the wife of Drusus, who was the son of Livia and brother of Tiberius. She became mother of three children, Germanicus, Caligula's father; Claudius the emperor; and Livia Drusilla. Her husband died very early, and she never would marry again, but spent her time in the education of her children. Caligula conferred on her the same honours that Tiberius had bestowed upon Livia, but is thought to have cut her off subsequently by poison. (*Suet.*, *Cal.*, 15 et 23.)—V. (*Turris*) a fortress of Jerusalem, founded by Hyrcanus, and enlarged and strengthened by Herod, who called it *Antonia*, in honour of Marc Antony. It stood alone on a high and precipitous rock, at the northwest angle of the temple. The whole face of the rock was fronted with smooth stone for ornament, and to make the ascent so slippery as to be impracticable. Round the top of the rock there was first a low wall, rather more than five feet high. The fortress itself was 70 feet in height; the rock on which it stood, 90 feet. It had every luxury and convenience of a sumptuous palace, or even of a city; spacious halls, courts, and baths. It appeared like a vast square tower, with four other towers at the corner: three of them between 80 and 90 feet high: that at the corner next to the temple, above 120. This famous structure was taken by Titus, and its fall was the prelude to the capture of the city and temple. (*Joseph.*, *Bell. Jud.*, 5, 15.—*Milman's History of the Jews*, vol. 3, p. 21.)

ANTONINUS, I. PIUS (or TITUS AURELIUS FULVIUS BOIONIVS ANTONINUS), was born at Lanuvium in Italy, A.D. 86, of a highly respectable family. He was first made proconsul of Asia, then governor of Italy, and in A.D. 120, consul; in all which employments he displayed the same virtue and moderation that afterward distinguished him on the imperial throne. When Hadrian, after the death of Verus, determined upon the adoption of Antoninus, he found some difficulty in persuading him to accept of so great a charge as the administration of the Roman empire. This reluctance being overcome, his adoption was declared in a council of senators; and in a few months afterward he succeeded by the death of his benefactor, who had caused him, in his turn, to adopt the son of Verus, then seven years of age, and Marcus Annius, afterward Aurelius, a kinsman to Hadrian, at that time of the age of seventeen. The tranquillity enjoyed by the Roman empire under the sway of Antoninus affords few topics for history; and, in respect to the emperor himself, his whole reign was one display of moderation, talents, and virtues. The few disturbances which arose in different parts of the empire were easily subdued by his lieutenants; and in Britain, the boundaries of the Roman province were extended by building a new wall to the north of that of Hadrian, from the mouth of the Esk to that of the Tweed. On the whole, the reign of Antoninus was uncommonly pacific; and he was left at leisure fully to protect the Roman people and advance their welfare. Under his reign the race of informers was altogether abolished, and, in consequence, condemnation and confiscation were proportionably rare. Though distinguished for economy in the distribution of the public revenues, he was conscious, at the same time, of the necessity of adequately promoting public works of magnificence and utility; and it is thought that Nismes, whence his family originally came, was indebted to him for the amphitheatre and aqueduct, the remains of which so amply testify their original grandeur. His new decrees were all distinguished for their morality and equity; and if his rescript in favour of the Christians, addressed to the people of Asia Minor, be authentic (and there is much argument in its favour), no better proof of his philosophy and justice, on the great point of religious toleration, can well be afforded. The high reputation acquired by Antoninus for virtue and wisdom gave

him great influence, even beyond the bounds of the Roman empire; and neighbouring monarchs spontaneously made him the arbiter of their differences. His private life was frugal and modest, and in his mode of living and conversing he adopted that air of equality and of popular manners which, in men of high station, is at once so rare and attractive. Too much indulgence to an unworthy wife (Faustina) is the only weakness attributed to him, unless we include a small share of ridicule thrown upon his minute exactness by those who are ignorant of its value in complicated business. He died A.D. 161, aged seventy-three, having previously married Marcus Aurelius to his daughter Faustina, and associated him with himself in the cares of government. His ashes were deposited in the tomb of Hadrian, and his death was lamented throughout the empire as a public calamity. The sculptured pillar erected by Marcus Aurelius and the senate to his memory, under the name of the Antonine column, is still one of the principal ornaments of Rome. (*Gorton's Biogr. Dict.*, vol. 4, p. 87, *seqq.*)

—H. MARCUS ANNIUS AURELIUS, was born at Rome A.D. 121. Upon the death of Ceionius Commodus, the Emperor Hadrian turned his attention towards Marcus Aurelius; but he being then too young for an early assumption of the cares of empire, Hadrian adopted Antoninus Pius, on condition that he in his turn should adopt Marcus Aurelius. His father dying early, the care of his education devolved on his paternal grandfather, Annianus Verus, who caused him to receive a general education; but philosophy so early became the object of his ambition, that he assumed the philosophic mantle when only twelve years old. The species of philosophy to which he attached himself was the stoic, as being most connected with morals and the conduct of life; and such was the natural sweetness of his temper, that he exhibited none of the pride which sometimes attended the artificial elevation of the stoic character. This was the more remarkable, as all the honour and power that Antoninus could bestow upon him became his own at an early period, since he was practically associated with him in the administration of the empire for many years. On his formal accession to the sovereignty, his first act was of a kind which at once proved his great disinterestedness, for he immediately took Lucius Verus as his colleague, who had indeed been associated with him by adoption, but who, owing to his defects and vices, had been excluded by Antoninus from the succession, which, at his instigation, the senate had confined to Marcus Aurelius alone. Notwithstanding their dissimilarity of character, the two emperors reigned conjointly without any disagreement. Verus took the nominal guidance of the war against the Parthians, which was successfully carried on by the lieutenants under him, and, during the campaign, married Lueilla, the daughter of his colleague. The reign of Marcus Aurelius was more eventful than that of Antoninus. Before the termination of the Parthian war, the Marcomanni and other German tribes began those disturbances which more or less annoyed him for the rest of his life. Against these foes, after the termination of hostilities with Parthia, the two emperors marched; but what was effected during three years' war and negotiation, until the death of Verus, is little known. The sudden decease of that unsuitable colleague, by an apoplexy, restored to Marcus Aurelius the sole dominion; and for the next five years he carried on the Pannonian war in person, without ever returning to Rome. During these fatiguing campaigns he endured all the hardships incident to a rigorous climate and a military life, with a patience and serenity which did the highest honour to his philosophy. Few of the particular actions of this tedious warfare have been fully described; although, owing to conflicting religious zeal, one of them has been exceedingly celebrated. This was

the deliverance of the emperor and his army from imminent danger, by a victory over the Quadi, in consequence of an extraordinary storm of rain, hail, and lightning, which disconcerted the barbarians, and was, by the conquerors, regarded as miraculous. The emperor and the Romans attributed the timely event to Jupiter Tonans; but the Christians affirmed that God granted this favour on the supplications of the Christian soldiers in the Roman army, who are said to have composed the twelfth or Meletine legion; and, as a mark of distinction, we are informed by Eusebius that they received from an emperor who persecuted Christianity the title of the "Thundering Legion." Yet this account, not of a fact, but of the cause of one, and that of such a nature as no human testimony can ever determine, was made the subject of a controversy, in the early part of the last century, between Moyle and the eccentric Whiston, the latter of whom elaborately supported the genuineness of the miracle. The date of this event is fixed by Tillemont in A.D. 174. The general issue of the war was, that the barbarians were repressed, but admitted to settle in the territories of the empire as colonists; and a complete subjugation of the Marcomanni might have followed, had not the emperor been called off by the conspiracy of Avidius Cassius, who assumed the purple in Syria. This usurper was quickly destroyed by a conspiracy among his own officers; and the clemency shown by the emperor to his family was most exemplary. After the suppression of this revolt, he made a progress through the East, in which journey he lost his wife Faustina, daughter of Antoninus Pius, a woman as dissolute as she was beautiful, but whose irregularities he never seems to have noticed; a blindness or insensibility that has made him the theme of frequent ridicule. While on this tour he visited Athens, added greatly to its privileges, and, like Hadrian, was initiated in the Eleusian Mysteries. His return to Rome did not take place until after an absence of eight years, and his reception was in the highest degree popular and splendid. After remaining in the capital for nearly two years, and effecting several popular reforms, he was once more called away by the necessity of checking the Marcomanni, and was again successful, but fell ill, at the expiration of two years, at Vindobona, now Vienna. His illness arose from a pestilential disease which prevailed in the army; and it cut him off in the 59th year of his age, and 19th of his reign. His death occasioned universal mourning throughout the empire. Without waiting for the usual decree on the occasion, the Roman senate and people voted him a god by acclamation; and his image was long afterwards regarded with peculiar veneration. Marcus Aurelius, however, was no friend to the Christians, who were persecuted during the greater part of his reign; an anomaly in a character so universally merciful and clement, that may be attributed to an excess of pagan devotion on his part, and still more to the influence of the sophists by whom he was surrounded. In all other points of policy and conduct he was one of the most excellent princes on record, both in respect to the salutary regulations he adopted and the temper with which he carried them into practice. Compared with Trajan or Antoninus Pius, he possibly fell short of the manly sense of the one, and the simple and unostentatious virtue of the other; philosophy or scholarship on a throne always more or less assuming the appearance of pedantry. The emperor was also himself a writer, and his "Meditations," composed in the Greek language, have descended to posterity. They are a collection of maxims and thoughts in the spirit of the stoic philosophy, which, without much connexion or skill in composition, breathe the purest sentiments of piety and benevolence. Marcus Aurelius left one son, the brutal Commodus, and three daughters. Among the weaknesses of this good emperor,

his too great consideration for his son is deemed one of the most striking; for although he was unremitting in his endeavours to reclaim him, they were accompanied by much erroneous indulgence, and especially by an early and ill-judged elevation to titles and honours, which uniformly operate injuriously upon a base and dissolute character. The best edition of the *Meditations of Antoninus* is that of Gataker, *Cantab.*, 1652, 4to. (*Gorton's Biogr. Dict.*, vol. 1, p. 88.)—III. Bassianus Caracalla. *Vid.* Caracalla.—IV. Two works have come down to us, styled *Itineraria Antonini*, which may be compared to our modern books of routes. They give merely the distances between places, unaccompanied by any geographical remarks. One gives the routes by land, the other those by sea. They have been supposed by some to be the productions of the Emperor Marcus Aurelius, while others assign them to a geographical writer named Antoninus, whose age is unknown. Both these opinions are evidently incorrect. It is more than probable, that the works in question were originally compiled in the cabinet of some one of the Roman emperors, perhaps that of Augustus, and were enlarged by various additions made during successive reigns, according as new routes or stations were established. Some critics, however, dissatisfied with this mode of solving the question, have sought for an ancient writer, occupied with pursuits of an analogous nature, to whom the authorship of these works might be assigned. They find two; and their suffrages, consequently, are divided between them. The first of these is Julius Honorius, a contemporary of Julius Cæsar's, of whose productions we have a few leaves remaining, entitled, "*Excerpta, quæ ad Cosmographiam pertinent.*" The other writer is a certain Æthicus, surnamed Ister, a Christian of the fourth century, to whom is attributed a work called "*Cosmographia*," which still exists. Mannert declares himself unconditionally in favour of Æthicus. (*Introductio ad Tab. Peut.*, p. 8, seqq.) Wesseling is undecided. The best edition of the *Itineraries* is that of Wesseling, *Amst.*, 1735, 4to. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 258, seqq.)—V. Liberalis, a mythological writer, supposed to have lived in the age of the Antonines, and to have been a freedman of one of them. He has left us a work entitled *Μεταμορφώσεων Συμψαφή*, "A Collection of Metamorphoses," in forty-one chapters; a production of considerable interest, from the fragments of ancient poets contained in it. An idea of the nature of the work may perhaps be formed from the following titles of some of the chapters: *Ctesylla*, the *Melagrides*, *Cragaleus*, *Lamia*, the *Emathides*, and many others drawn from the *Heteraumena* of Nicander; *Hierax*, *Ægyptius*, *Anthus*, *Ædon*, &c., from the *Ornithogonia* of Bæus; *Clinis* from Simmias; *Battus* from the *Eoæ* of Hesiod; *Metiocha* and *Menippa* from Corinna, &c. There exists but a single MS. of Antoninus Liberalis, which, after various migrations, has returned to the library of Heidelberg. It has been decried by Bast, in his Critical Epistle. The best edition of this writer is that of Verheyk, *Lugd. Bat.*, 1774, 8vo. It does not, however, supply all the wants of the scholar; and some future editor, by ascending to the sources whence Antoninus drew his materials, and taking for his model the labour bestowed by Heyne and Clavier on Apollodorus, may have it in his power to supply us with an *editio optima*. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 44.)

ANTONINOPOLIS, a city of Mesopotamia, placed by D'Anville on the northern confines of the country, but more correctly, by Mannert, in the vicinity, and to the northeast, of Charræ and Edessa. (*Mannert, Geogr.*, vol. 5, p. 304.) It is supposed to have been founded by Severus or Caracalla, and named after the emperor Antoninus. It was subsequently called Constantia, from Constantine, who enlarged and strengthened it.

Mannert supposes it to be the same with the ruined city of *Uran Schar*, mentioned by Niebuhr (vol. 2, p. 390).

ANTONIUS, I. M. Antonius Gniphio, a native of Gaul, instructed in Greek literature at Alexandria, where he was educated, and in Latin literature at Rome. He first gave instruction in grammar at this latter city, in the paternal mansion of Julius Cæsar, who was then very young. Afterward he opened a school at his own residence, where he also professed rhetoric. Cicero attended his lectures when prætor. Gniphio left a work on the Latin tongue, in two volumes. According to Suetonius (*de Illustr. Gramm.*, 7), he never stipulated with his pupils for any fixed compensation, and hence obtained the more from their liberality. The same writer informs us that he did not live beyond his 50th year.—II. Marcus Antonius, a Roman orator, and the most truly illustrious of the Antonian family, flourished about the middle of the seventh century of Rome. After rising successively through the various offices of the commonwealth, he was made consul in the year of the city 655, and then governor of Cilicia, in quality of proconsul, where he performed so many valorous exploits that a public triumph was decreed to him. In order to improve his talent for eloquence, he became a scholar to the most able men in Rhodes and Athens. He was one of the greatest orators among the Romans; and, according to Cicero, who in the early part of his life was a contemporary, it was owing to him that Rome became a rival in eloquence to Greece. The same great authority has given us the character of his oratory, from which it appears that earnestness, acuteness, copiousness, and variety formed his distinguishing qualities; and that he excelled as much in action as in language. By his worth and abilities he had rendered himself dear to the most illustrious characters of Rome, when he fell a sacrifice in the midst of the bloody confusion excited by Marius and Cinna. Taking refuge at the house of a friend from their relentless proscription, he was accidentally discovered and betrayed to Marius, who immediately sent an officer, with a band of soldiers, to bring him the orator's head. It was brought accordingly; and that sanguinary leader, after making it the subject of his brutal ridicule, ordered it to be stuck upon a pole before the rostra, and, on the whole, treated it as Marc Antony, the worthless grandson of Antonius, treated the head of Cicero. This event occurred B.C. 87. He left two sons, Marcus, surnamed Creticus, and Caius, both of whom discredited their parentage. (*Cic., de Orat.*, 1, 24.—*Id. ibid.*, 2, 1.—*Gorton's Biogr. Dict.*, vol. 1, p. 90.—*Ernesti, Clar. Cic. Index Hist.*, s. v.)—III. Marcus, surnamed Creticus, elder son of the orator. He was guilty, while prætor, of great extortions in Sicily and other quarters, having received the same commission which Pompey afterward obtained, for importing corn and exterminating the pirates. He afterward invaded Crete, without any declaration of war, but was deservedly and shamefully defeated, whence he obtained, in derision, the surname of Creticus.—IV. Caius, brother of the preceding, and son of the orator. He bore arms under Sylla, in the war against Mithradates, and raised such disturbances in Greece, that for this and other malpractices he was afterward expelled from the senate by the censors. Obtaining, however, the consulship with Cicero, at a subsequent period, through the aid of Crassus and Cæsar, he was appointed to head the forces sent against Catiline. A pretended attack of the gout, however, caused him to confide the army of the republic, on the day of battle, to his lieutenant Petreus. He was afraid, it seems, of meeting Catiline, with whom he had at first been concerned in the conspiracy, lest the latter might taunt him with unpleasant reminiscences. He received, as proconsul, the province of Macedonia, by yielding which unto

him, Cicero had induced him to prove faithful to the state; but he governed it with such extortion and violence, that he was tried, convicted, and sent into banishment.—V. Marcus, son of Antonius Creticus, grandson of the orator, and well known by the historical title of the *Trumeir*. Losing his father when young, he led a very dissipated and extravagant life, and wasted his whole patrimony before he had assumed the manly gown. He afterward went abroad to learn the art of war under Gabinus, who gave him the command of his cavalry in Syria, where he signalized his courage and ability in the restoration of Ptolemy, king of Egypt. He also distinguished himself on other occasions, and obtained high reputation as a commander. From Egypt he proceeded to Gaul, where he remained some time with Cæsar, and the latter having furnished him with money and credit, he returned upon this to Rome, and succeeded in obtaining first the quaestorship, and afterward the office of tribune. In this latter office he was very active for Cæsar, but finding the senate exasperated against this commander, he pretended to be alarmed for his own safety, and fled in disguise to Cæsar's camp. Cæsar, upon this, marched immediately into Italy, the flight of the tribunes giving him a plausible pretext for commencing operations. Cæsar, having made himself master of Rome, gave Antony the government of Italy. During the civil contest, the latter proved himself on several occasions a most valuable auxiliary, and, after the battle of Pharsalia, was appointed by Cæsar his master of the horse. After the death of Cæsar Antony delivered a very powerful address over his corpse in the forum, and inflamed to such a degree the soldiers and populace, that Brutus and Cassius were compelled to depart from the city. Antony now soon became powerful, and began to tread in Cæsar's footsteps, and govern with absolute sway. The arrival of Octavius at Rome thwarted, however, his ambitious views. The latter soon raised a formidable party in the senate, and was strengthened by the accession of Cicero to his cause. Violent quarrels then ensued between Octavius and Antony. Endeavours were made to reconcile them, but in vain. Antony, in order to have a pretence of sending for the legions from Macedonia, prevailed on the people to grant him the government of Cisalpine Gaul, which the senate had before conferred on Decimus Brutus, one of the conspirators against Cæsar. Matters soon came to an open rupture. Octavius offered his aid to the senate, who accepted it, and passed a decree, approving of his conduct and that of Brutus, who, at the head of three legions, was preparing to oppose Antony, then on his march to seize Cisalpine Gaul. Brutus, not being strong enough to keep the field against Antony, shut himself up in Mutina, where his opponent besieged him. The senate declared Antony an enemy to his country. The consuls Hirtius and Pansa took the field against him along with Octavius, and advanced to Mutina in order to raise the siege. In the first engagement, Antony had the advantage, and Pansa was mortally wounded, but he was defeated the same day by Hirtius as he was returning to his camp. In a subsequent engagement, Antony was again vanquished, his lines were forced, and Octavius had an opportunity of distinguishing himself, Hirtius being slain in the action, and the whole command devolving on the former. Antony, after this check, abandoned the siege of Mutina, and crossed the Alps, in hopes of receiving succours from his friends. This was all that Octavius wanted; his intent was to humble Antony, not to destroy him, foreseeing plainly that the republican party would be uppermost, and his own ruin must soon ensue. A reconciliation was soon effected between him and Antony, who had already gained an accession of strength by the junction of Lepidus. These three leaders had an interview near Bononia, in a small

island of the river Rhenus, where they came to an agreement to divide all the provinces of the empire, and the supreme authority, among themselves for five years, under the name of triumvirs, and as reformers of the republic with consular power. Thus was formed the second triumvirate. The most horrid part of the transaction was the cold-blooded proscription of many of their friends and relatives, and Cicero's head was given in exchange by Octavius for Antony's uncle and for the uncle of Lepidus. Octavius and Antony then passed into Macedonia, and defeated Brutus and Cassius at Philippi. After this, the latter passed over to the eastern provinces, where he lived for a time in great dissipation and luxury with the famous Cleopatra, at Alexandria. Upon the death of his wife Fulvia, he became reconciled to Octavius, against whom Fulvia had raised an army in Italy, for the purpose, it is supposed, of drawing her husband away from Cleopatra, and inducing him to come to the latter country. Octavius gave Antony his sister Octavia in marriage, and a new division was made of the empire. Octavius had Dalmatia, Italy, the two Gauls, Spain, and Sardinia; Antony all the provinces east of Codropolis in Illyricum, as far as the Euphrates; while Lepidus received Africa. On returning to the east, Antony once more became enslaved by the charms of Cleopatra. An unsuccessful expedition against the Parthians ensued, and at last the repudiation of Octavia involved him in a new war with Octavius. The battle of Actium put an end to this contest and to all the hopes of Antony. It was fought at sea, contrary to the advice of Antony's best officers, and chiefly through the persuasion of Cleopatra, who was proud of her naval force. She abandoned him in the midst of the fight with her fifty galleys, and took to flight. This drew Antony from the battle and ruined his cause. Besieged, after this, in Alexandria, by the conqueror, abandoned by all his followers, and betrayed, as he thought, even by Cleopatra herself, he fell by his own hand, in the 56th year of his age, B.C. 30. The peculiar events connected with the life of Marc Antony have given him a celebrity which one would never have expected from his character. Gifted with some brilliant qualities, he possessed neither sufficient genius nor sufficient strength of soul to entitle him to be ranked among great men. Neither can he be ranked among men of worth, since he was always without principle, immoderately attached to pleasure, and often cruel. And yet few men had more devoted friends and partisans, for many of his actions announced a generosity of disposition far preferable to the cautious prudence and cold policy of his rival Octavius. (*Plut., Vit. Ant.*)—VI. Iulus, a son of Marc Antony and Fulvia. He stood high in the favour of Augustus, and received from him his sister's daughter in marriage. After having filled, however, some of the most important offices in the state, he engaged in an intrigue with Julia, the daughter of the emperor, and was put to death by order of the latter. According to Velleius Paterculus (2, 100), he fell by his own hand. It would appear that he had formed a plot, along with the notorious female just mentioned, against the life of Augustus. (Compare *Lips., ad Tacit., Ann.* 1, 10.) Aeron informs us, in his scholia to Horace (*Od.* 4, 2, 33), that Antonius had distinguished himself by an epic poem, in twelve books, entitled *Diomedes*.—VII. Caius, a brother of Marc Antony. Having fallen into the hands of Brutus, his life was spared until that commander heard of Cicero's end, when he was put to death on the principle of retaliation. (Consult *Ernesti, Clav. Cie., s. r.*)—Lucius, another brother of Marc Antony, who was consul A.U.C. 713. Having quarrelled with Octavius during his continuance in this office, he was besieged in Perusia, and compelled to surrender. The conqueror spared his life, and he passed the rest of his days in obscurity. (*Vell. Patere., 2*

74)—IX. Felix, a freedman of the Emperor Claudius, appointed governor of Judæa. (*Vid.* Felix.)—X. Musa, a celebrated physician in the time of Augustus. (*Vid.* Musa.)—XI. Prinus, a Roman commander whose efforts were very influential in gaining the crown for Vespasian. He was also an able public speaker, and had a turn likewise for poetic composition, having written numerous epigrams. He was a friend of the poet Martial. (*Tac., Ann.*, 14, 40.—*Id.*, *Hist.*, 11, 86.)

ANTORIDES, a painter, who flourished, according to Pliny (35, 10), about Olympiad 110. (*Sillig, Dict. Art.*, s. v.)

ANUBIS, an Egyptian deity, the offspring of Osiris, and of Nephthys the sister and spouse of Typhon. He inherited all the wisdom and goodness of his father, but possessed the nature of the dog, and had also the head of that animal. He accompanied Isis in her search after the remains of Osiris. Jablonski (*Panth. Egypt.*, p. 19) derives the name from the Coptic *Noub*, "gold." In this he is opposed by Champollion (*Précis*, p. 101, *seqq.*), who denies also the propriety of confounding Anubis with Hermes. Plutarch says (*de Is. et Os.*, p. 368 et 380), that some of the Egyptian writers understood by Anubis the horizontal circle which divides the invisible from the visible part of the world. Other writers tell us that Anubis presided at the two solstitial points, and that two dogs (or, rather, two jackals), living images of this god, were supposed to guard the tropics along which the sun rises towards the north or descends towards the south. If this be correct, we must suppose two deities, an *Anubis*, properly so called, the guardian of the lower hemisphere and of the darker portion of the year, and a *Hermanubis*, the guardian of the luminous portion and of the upper hemisphere. On the whole subject of Anubis, however, and particularly on his non-identity with Thoth and Sirius, consult the learned annotations of Guigniaut to *Crenzer's Symbolik* (vol. 2, pt. 2, p. 851, *seqq.*).

ANXUR, the Volscian name of Terracina. (*Vid.* Terracina.) La Cerda and others contend for the Greek derivation of the name, which makes Jupiter *ἄνυρος*, or "the beardless," to have been worshipped here; and they maintain that, in conformity with this, the name of the place should be written *Anxur*, as it is found on some old coins. Heyne, however, supposes the letter *n* to have been sometimes omitted, in consequence of its slight sound. (*Heyne, ad Virg., Æn.*, 9, 799, in *Var. Lect.*).

ANŶTA, a poetess of Tegea, who flourished about 300 B.C. She exercised the calling of *Χρησμοποιός*, "maker of oracles," that is to say, she versified the oracles of Æsculapius at Epidaurus. We have only a few remains of her productions, namely, twenty epigrams, remarkable for their great simplicity. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 70.)

ANŶTES, an Athenian demagogue, who, in conjunction with Melitus and Lycon, preferred the charges against Socrates which occasioned that philosopher's condemnation and death. After the sentence had been inflicted on Socrates, the fickle populace repented of what had been done; Melitus was condemned to death, and Anytus, to escape a similar fate, went into exile. (*Ælian, V. H.*, 2, 13.)

AON, a son of Neptune, who first collected together into cities, as is said, the scattered inhabitants of Eubœa and Bœotia. Hence the name Aonians given to the earlier inhabitants of Bœotia. (*Vid.* Aones.)

AONES, the earlier inhabitants of Bœotia. They, jointly with the Hyantes, succeeded the Ectenes. On the arrival of Cadmus, the Hyantes took up arms to oppose him, but were routed, and left the country on the ensuing night. The Aones, however, submitted, and were incorporated with the Phœnicians. The Muses were called *Aonia*, from Mount Helicon in Bœ-

otia. (*Pausan.*, 9, 5.—*Ovid, Met.*, 3, 7, 10, 13.—*Virg., G.*, 3, 11.)

ΑΟΝΙÆ, an epithet applied to the Muses, from Mount Helicon in Bœotia, the earlier name of this country having been Aonia.

AORNOS, or AORNIS, a lofty rock in India, taken by Alexander. It was situate on the Suastus, or *Sarat*. The Macedonians gave it the name of Aornos (*ἄοπρος*) on account of its great height; the appellation implying that it was so high that no bird could fly over it (*a priv. et ὄπις*.—*Curt.*, 8, 11.—*Arrian*, 4, 28.—*Plut., Vit. Alex.*)—II. Another in Bactriana, east of Zariaspa Bactria. It is now *Telckan*, situate on a high mountain called *Nork-Koh*, or the mountain of silver.

AÏOS, or AEAS, a river of Illyria, now *Voïoussa*, which flowed close to Apollonia. It was said by the ancients to rise in that part of the chain of Pindus to which the name of Mount Laemon was given. (*Hærod.*, 9, 94.—*Strab.*, 316.) According to Polybius and Livy, it was navigable from its mouth to Apollonia. (*Polyb.*, 5, 109.—*Liv.*, 24, 40.)

ΑΡΑΜΑ, I. wife of Seleucus Nicator, and mother of Antiochus Soter. (*Strab.*, 578.)—II. Sister of Antiochus Theos, married to Magas. After her husband's death, she prevailed upon Antiochus to make war against Ptolemy Philadelphus.—III. Wife of Prusias, king of Bithynia, and mother of Nicomedes. (*Strab.*, 563.)

ΑΡΑΜΕΑ, I. a city of Phrygia, built by Antiochus Soter on the site of the ancient Cibôtus, and called, after his mother, Apamea. The name of the earlier place, Cibôtus, is thought to have been derived from *κιβωτός*, an ark or coffer, because it was the mart or common treasury of those who traded from Italy and Greece to Asia Minor. This name was afterward added, for a similar reason, to Apamea. It was situate above the junction of the Orgas and Mæander, and, according to Mannert, is now called *Aphum Kara-Hisar*, or the black castle of opium, which drug is collected in its environs. (*Mannert*, vol. 6, pt. 3, p. 120, *seqq.*) The more correct opinion, however, would seem to be in favour of *Dinglare* or *Decenare*. (*Pococke, Trav.*, vol. 3, p. 2, c. 15.—*Arundell, Visit.*, &c., p. 107, *seqq.*—*Cramer's Asia Minor*, vol. 2, p. 51, *seqq.*)—II. Another in Bithynia, near the coast of the Sinus Cicus. It was originally called Myrlea, and flourished under this name, as an independent city, for several years, until it was taken and destroyed by Philip, father of Perses, who ceded the territory to Prusias, sovereign of Bithynia, his ally. This prince rebuilt the town, and called it Apamea, after his queen. (*Strab.*, 563.) The ruins of Apamea are near the site now called *Modania*, about six hours north of *Broussa*. (*Wheeler*, vol. 1, p. 209.—*Pococke*, vol. 3, b. 2, c. 25.)—III. Another in Syria, at the confluence of the Orontes and Marsyas, which form here a small lake. It was founded by Seleucus Nicator, and called after his wife. It is now *Famieh*. Seleucus is said to have kept in the adjacent pastures 500 war-elephants. (*Mannert*, vol. 6, pt. 1, p. 463.)—IV. Another in Mesopotamia, on the Tigris, in a district which lay between the canal and the river, whence the epithet *Messene* applied to this city, because it was in the *must* of that small territory which is now called *Digel*. (*Mannert*, vol. 5, pt. 2, p. 271.)—V. Another on the confines of Media and Parthia, not far from Ragæ. It was surnamed Raphane. (*Mannert*, vol. 5, pt. 2, p. 179.)—VI. Another at the confluence of the Tigris and Euphrates, now *Koma*. (*Mannert*, vol. 5, pt. 2, p. 361.)

ΑΡΑΤΗΡΙΑ, a festival at Athens, which received its name, according to the common, but erroneous account, from *ἀράτην*, *deceit*, because it was instituted (say the etymologists who favour this derivation) in memory of a stratagem by which Xanthus, king of Bœotia, was

killed by Melanthus, king of Athens, upon the following occasion : when a war arose between the Boeotians and Athenians about a piece of ground which divided their territories, Xanthus made a proposal to the Athenian king to decide the point by single combat. Thymætes, who was then on the throne of Athens, refused, and his successor Melanthus accepted the challenge. When they began the engagement, Melanthus exclaimed that his antagonist had some person behind him to support him ; upon which Xanthus looked behind, and was killed by Melanthus. From this success, Jupiter was called ἀπατήνωρ, *deceiver* ; and Bacchus, who was supposed to be behind Xanthus, was called Μελανταγίς, clothed in the skin of a *black goat*.—Thus much for the commonly received derivation of the term Ἀπατούρια. It is evident, however, that the word is compounded of either πατήρ or πάτρα, which expression varies, in its signification, between γένος and φρατρία, and with the Ionians coincided rather with the latter word. Whether it was formed immediately from πατήρ or πάτρα, is difficult to determine on etymological grounds, on account of the antiquity of the word : reasoning, however, from the analogy of φρατήρ or φράτωρ, φρατορία and φράτωρ, the most natural transition appears to be πατήρ (in composition πατῶρ), πατῶρος (whence πατούριος, πατούρια), πάτρα ; and, accordingly, the Ἀπατούρια means a festival of the paternal unions, of the πατορίαί, of the πάτραι. (Müller, *Dorians*, vol. 1, p. 95.)—The Apaturia was peculiar to the great Ionic race. The festival lasted three days ; the first day was called δόρτεια, because *suppers* (δόρποι) were prepared for all those who belonged to the same φρατρία. The second day was called ἀνάρθρωσις (ἀπὸ τοῦ ἀνα ἐρέειν), because sacrifices were offered to Jupiter and Minerva, and the head of the victim was generally turned up towards the heavens. The third was called Κουάδεωσις, from κούρος, a *youth*, because on that day it was usual to enrol the names of young persons of both sexes on the registers of their respective φρατρίαι ; the enrolment of δημοποιοῖται proceeded no farther than that of assignment to a tribe and a borough, and, consequently, precluded them from holding certain offices both in the state and priesthood. (Consult Wachsmuth, *Gr. Ant.*, vol. 1, § 44.)—The Ionians in Asia had also their Apaturia, from which, however, Colophon and Ephesus were excluded ; but exclusions of this nature rested no more on strictly political grounds, than did the right to partake in them, and the celebration of festivals in general. A religious stigma was, for the most part, the ground of exclusion. (Wachsmuth, vol. 1, § 22—Compare Herodotus, 1, 147.—The authorities in favour of the erroneous etymology from ἀπάτη may be found by consulting Fischer, *Ind. ad Thucophrast. Charact.*, s. v. Ἀπατούρια.—Larcher, *ad Herod.*, Vit. Hom., c. 29.—Schol., Plat., *ad Tim.*, p. 201, ed. Ruhken.—Schol., Aristid., p. 118, seqq., ed. Jebb.—Ephori fragm., p. 120, ed. Marx.)

APELLA, a word occurring in one of the satires of Horace (1, 5, 100), and about the meaning of which a great difference of opinion has existed. Scaliger is undoubtedly right in considering it a more proper name of some well-known and superstitious Jew of the day. Wieland adopts the same idea in his German version of Horace's satires : "Das glaub' Apella der Jud, ich nicht !" Bentley's explanation appears rather forced. It is as follows : "*Judæi habitabant trans Tiberim, et multo maximam partem erant libertini, ut fateretur Philo in legatione ad Caium. Apella autem libertinorum est nomen satis frequens in inscriptionibus rusticis. Itaque credat Judæus Apella, quasi tu dicas, credat superstitiosus aliquis Judæus Transtiberinus.*" (*Ep. ad Mill.*, p. 520, ed. Lips.) As regards the opinion of those who make Apella a contemptuous allusion to the rite of circumcision, it is sufficient to observe, that such a mode of forming com-

pounds (i. e., half Greek and half Latin—a *priv. et pellis*) is at variance with every principle of analogy, and cannot for a moment be admitted.

APELLES, a painter in the age of Alexander the Great, exalted by the united testimony of all antiquity to the very highest rank in his profession, so that the art of painting was sometimes termed "*ars Apellæ*," as by Martial (11, 9) and Statius (*Syle.*, 1, 1, 100). Ancient writers differ as to the country of Apelles. Pliny (35, 10) and Ovid (*A. A.*, 3, 401) mention the island of Cos ; Suidas contends for Colophon ; while Strabo (642) and Lucian (*Calim. non tem cred.*, 2) notice him as an Ephesian. The origin of this last opinion, however, is sufficiently accounted for in the remark of Suidas, who makes him to have been an Ephesian by adoption merely. Another reason for his being called by some an Ephesian, may be found in the circumstance of his having been instructed at Ephesus. (Tolken, *ap. Böttig. Analth.*, 3, 123.) And so, in modern times, Titian is sometimes styled a Venetian, though born at Cadore in Friuli ; and Raphael a Roman, though his native place was Urbino. There can be no question, however, as to the period in which Apelles flourished, because it is universally admitted that Alexander the Great would not suffer his portrait to be taken by any other artist. Apelles must have been engaged in his profession, according to the most exact calculation, from about Olymp. 107 to Olymp. 118. His instructors were Ephorus the Ephesian, Pamphilus of Amphipolis, and Melanthius ; and when he became the pupil of these artists, he had himself acquired some distinction by his paintings. (*Plut.*, Vit. Arat., 13.) Athenæus assigns him a fourth instructor, named Arcesilaus (10, p. 420). The most important passage respecting Apelles occurs in Pliny (35, 10), and this passage contains an enumeration of nearly all his productions. One of the most celebrated of these was the *Venus Anadyomēnē*, or Venus rising from the waves, i. e., the sea-born. This famous painting was subsequently placed by Augustus in the temple of Julius Cæsar. The lower part of the picture becoming injured by time, no artist was found who would venture to retouch it. When it was at last quite destroyed by age, the Emperor Nero substituted for it another Venus from the pencil of Dorotheus. The Venus Anadyomene was universally regarded as the masterpiece of Apelles. (*Propert.*, *El.*, 3, 7, 11) A description of it is given in several Greek epigrams (*Antip. Sidon.*, in *Anthol. Planud.*, 4, 12, 178, &c.—Compare *Ilgén. Opusc.*, 1, 15, 34.) Apelles commenced another Venus, represented in a sleeping state, for the Coans, which he meant should surpass his previous effort ; but he died before completing it, having painted merely the head and neck of the figure, which, according to Cicero, were executed with the utmost skill. (*Cic.*, *Ep. ad Fam.*, 1, 9.—*Plin.*, 35, 11.) Another famous painting of this artist's represented Alexander holding a thunderbolt ; and Pliny says that the fingers which grasped the bolt, as well as the bolt itself, appeared to project from the canvass. This picture was purchased for twenty talents of gold, about \$211,000, and hung up in the temple of Diana at Ephesus. He painted also a horse ; and, finding that his rivals in the art, who contested the palm with him on this occasion, were about to prevail through unfair means, he caused his own piece and those of the rest to be shown to some horses, and these animals, fairer critics in this case than men had proved to be, neighed at his painting alone. The name of Apelles, indeed, in Pliny, is the synonyme of unrivalled and unattainable excellence ; but the enumeration of his works points out the modification which we ought to apply to that superiority. It neither comprises exclusive sublimity of invention, the most acute discrimination of character, the widest sphere of comprehension, the most judicious

and best-balanced composition, nor the deepest pathos of expression; his great prerogative consisted more in the union than in the extent of his powers; he knew better what he could do, what ought to be done, at what point he could arrive, and what lay beyond his reach, than any other artist. Grace of conception and refinement of taste were his elements, and went hand in hand with grace of execution and taste in finish; powerful and seldom possessed singly, irresistible when united: that he built both on the firm basis of the former system, not on its subversion, his well-known contest of lines with Protagenes irrefragably proves. (*Vid. Protagenes.*) What those lines were, drawn with nearly miraculous subtlety in different colours, one upon the other, or, rather, within each other, it would be equally unavailing and useless to inquire; but the corollaries we may deduce from the contest are obviously these, that the schools of Greece recognised all one elemental principle; that acuteness and fidelity of eye, and obedience of hand, form precision; precision, proportion; proportion, beauty: that it is the "little more or less," imperceptible to vulgar eyes, which constitutes grace, and establishes the superiority of one artist over another; that the knowledge of the degrees of things or taste presupposes a perfect knowledge of the things themselves; that colour, grace, and taste are ornaments, not substitutes, of form, expression, and character, and, when they usurp that title, degenerate into splendid faults. Such were the principles on which Apelles formed his *Venus*, or, rather, the personification of Female Grace, the wonder of art, the despair of artists; whose outline baffled every attempt at emendation, while imitation shrunk from the purity, the force, the brilliancy, the evanescent gradations of her tints. (*Fuseli's Lectures*, i., p. 62, *seqq.*) Apelles, indeed, used to say of his contemporaries, that they possessed, as artists, all the requisite qualities except one, namely, grace, and that this was his alone. On one occasion, when contemplating a picture by Protagenes, a work of immense labour, and in which exactness of detail had been carried to excess, he remarked, "Protagenes equals or surpasses me in all things but one, the knowing when to remove his hand from a painting." Apelles was also, as is supposed, the inventor of what artists call glazing. Such, at least, is the opinion of Sir Joshua Reynolds and others. (*Reynolds on Du Fresnoy*, note 37, vol. 3.) The ingredients probably employed by him for this purpose are given by Jahn, in his *Malerei der Alten*, p. 150.—The modesty of Apelles, says Pliny, equalled his talents. He acknowledged the superiority of Melanthius in the art of grouping, and that of Asclepiodorus in adjusting on canvass the relative distances of objects. Apelles never allowed a day to pass, however much he might be occupied by other matters, without drawing one line at least in the exercise of his art; and from this circumstance arose the proverb, "*nulla dies sine linea*," or, as it is sometimes given, "*nullum hodie lineam duxi*," in Greek, *τίποτεον οὐδέμην γραμμὴν ἤγαγον*. He was accustomed also, when he had completed any one of his pieces, to expose it to the view of passengers, and to hide himself behind it in order to hear the remarks of the spectators. On one of these occasions, a shoemaker censured the painter for having given one of the slippers of a figure a less number of ties, by one, than it ought to have had. The next day the shoemaker, emboldened by the success of his previous criticism, began to find fault with a leg, when Apelles indignantly put forth his head, and desired him to confine his decisions to the slipper, "*ne supra crepidam iudicaret*." Hence arose another common saying, "*ne sutor ultra crepidam*." (*Erasmus, Chil.*, p. 196.) Apelles is said to have possessed great suavity of manners, and to have been, in consequence, a favourite of Alexander the Great; and the monarch, on one occasion, paid a remarkable

homage to the talents of the artist. Having desired the latter to paint a likeness of Campaspe, one of his concubines, and distinguished for her beauty, the artist became enamoured of her, and, on the monarch's discovering this, received her as a present from his hands. This same Campaspe, according to Pliny, served as the prototype for the *Venus Anadyomene*.—11. An engraver on precious stones. (*Bracci, tab. 27.—Silig, Diet. Art., s. v.*)

APELLICON, a peripatetic philosopher, born at Teos, in Asia Minor, and one of those to whom we owe the preservation of many of the works of Aristotle. The Stagirate, on his deathbed, confided his works to Theophrastus, his favourite pupil; and Theophrastus, by his will, left them to Neleus, who had them conveyed to Scepsis, in Troas, his native city. After the death of Neleus, his heirs, illiterate persons, fearing lest they might fall into the hands of the King of Pergamus, who was enriching, in every way, his newly-established library, concealed the writings of Aristotle in a cave, where they remained for more than 130 years, and suffered greatly from worms and dampness. At the end of this period Apellicon purchased them for a high price. His wish was to arrange them in proper order, and to fill up the lacunæ that were now of frequent occurrence in the manuscripts, in consequence of their neglected state. Being, however, but little versed in philosophy, and possessing still less judgment, he acquitted himself ill in this difficult task, and published the works of the Stagirate full of faults. Subsequently, the library of Apellicon fell, among the spoils of Athens, into the hands of Sylla, and was carried to Rome, where the grammarian Tyrannion had access to them. From him copies were obtained by Andronicus of Rhodes, which served for the basis of his arrangement of the works of Aristotle.—Ritter thinks that too much has been built upon this story. On its authority it has even been pretended that the works of Aristotle have reached us in a more broken and ill-arranged shape than any other productions of antiquity. He thinks the story arose out of some laudatory commendations of the edition of Aristotle by Andronicus, and that it is probable, not to say certain, that there were other editions, of the respective merits of which it was possible to make a comparison. At any rate, according to him, the acroasmatic works of Aristotle have not reached us solely from the library of Neleus, and, consequently, it was not necessary to have recourse merely to the restoration by Apellicon, either to complete or retain the chasms resulting from the deterioration of the manuscripts.—To return to Apellicon, it is said that his large fortune, indeed, supplied him abundantly with the means of gratifying his passion for books; but that, when they could not be obtained in this way, he made no scruple of getting possession of them by what deserves in plainness the name of theft. Thus, he carried off from the archives of the Athenians the original decrees of the people, and was compelled to flee for the act. Apellicon is said to have written a work in defence of Aristotle. Probably some needy author wrote it, and Apellicon purchased the paternity of the work. (*Ritter, Hist. Anc. Phil.*, vol. 3, p. 24, *seqq.*)

APENNINUS, a great chain of mountains, branching off from the Maritime Alps, in the neighbourhood of Genoa, running diagonally from the Ligurian Gulf to the Adriatic, in the vicinity of Ancona; from thence continuing nearly parallel with the latter gulf, as far as the promontory of Garganus, and again inclining to the Mare Inferum, till it finally terminates in the promontory of Leucopetra near Rhegium. (*Polyb.*, 2, 16.—*Strabo*, 211.—*Cramer's Ancient Italy*, vol. 1, p. 5.—Compare also the following poetic authorities: *Lucan*, 2, 396.—*Rutil.*, *Itin.*, 2, 27.—*Claudian.*, *Paneg.*, 6.—*Id. Cons. Hon.*, 285.—*Sil. Ital.*, 4, 742.—*Virg.*, *Æn.*, 12, 703.) The Apennines may be equal in length to

670 miles. They are divided by modern geographers into three parts; the Northern Apennines extend from the neighbourhood of *Urbino* to the Adriatic; the Central Apennines terminate near the banks of the *Sangro*; the Southern Apennines, situated at an equal distance from the two seas, form two branches near *Muro*; the least important separates the territory of *Barri* from that of *Otranto*; the other, composed of lofty mountains, traverses both Calabrias, and terminates near *Aspromonte*.—The etymology of the name given to these mountains must be traced to the Celtic, and appears to combine two terms of that language nearly synonymous, *Alp* or *Ap*, "a high mountain," and *Penn*, "a summit." Some write the name *Apenninus* (i. e., *Alpes Pœninae*), as if derived from the circumstance of Hannibal's having led his army over them, *Pœnus* meaning "Carthaginian." This etymology, however, is altogether erroneous; nor is it at all more tenable when applied to the Pennine Alps.

APER, I. Marcus, a Roman orator, who flourished during the latter half of the first century of our era. He was a native of Gaul, but distinguished himself at Rome by his eloquence and general ability. Aper is one of the interlocutors in the dialogue on the causes of the decline of oratory, which some ascribe to Tacitus, others to Quintilian, and others again to Aper himself. He died A.D. 85. (*Schulze, Prolegg.*, c. 2, p. xxi., *seqq.*)—II. Flavius, supposed by some to have been the son of the preceding. He was consul A.D. 130, under Hadrian. (*Oberlin., ad Dial. de caus. corr. eloq.*, c. 2.)—III. Arrius, a prefect of the Prætorian guards under Carus, and afterward under his successor Numerianus. Aspiring to the purple, he took advantage of a violent thunder-storm that arose, assassinated Carus, who was lying sick at the time, set fire to the royal tent, and ascribed the death of the prince and the conflagration to lightning. The corpse was so much burnt that no traces of the murder were perceptible. Numerianus, son of Carus, and son-in-law of Aper, having succeeded to the empire, continued the latter in the office of prefect; but the only return that Aper made was to poison the young monarch, after he had reigned about eight or nine months. Suspicion immediately fell upon Aper, and he was slain by Dioclesian, whom the army had elected emperor. (*Aurel. Vict.*, c. 38.—*Vopiscus, Car.*, c. 8.—*Id., Numer.*, c. 12, *seq.*—Compare the remarks of *Crevier, Hist. Emp. Rom.*, vol. 6, p. 140.)

APĒSAS, a mountain of Argolis, near Nemea, on which, according to Pausanias (2, 16), Perseus first sacrificed to Jupiter Apesantius. It is a remarkable mountain, with a flat summit, which can be seen, as we are assured by modern travellers, from Argos and Corinth. (*Chandler*, vol. 2, ch. 56.—*Dodwell, Class. Tour*, vol. 2, p. 210.)

APHĀCA, a town of Syria, between Heliopolis and Byblus, where Venus was worshipped. The temple is said to have been a school of wickedness, and was razed to the ground by Constantine the Great. (*Euseb., Vit. Const. Mag.*, 3, 55.)

APHĒA, a name of Diana, who had a temple in Ægina. (*Pausan.*, 2, 30.—Consult *Heyne, Excurs. ad Virg., Cir.* 220.—*Müller, Ægineica*, p. 163, *seqq.*)

APHAR, a city of Arabia, situate on the coast of the Red Sea, not far north from the Promontorium Aromatum. It was the capital of the Homeritæ, and is supposed to correspond to *Al-Fara*, between Mecca and Medina. The ancient name is more commonly given as Suphar. (*Plin.*, 6, 23.—*Ptol.*—*Arrian, Peripl. Mar. Erythr.*, p. 154, *ed. Blancard.*)

APHĀNEUS, I. a king of Messenia, who married Arene, daughter of Œbalus, by whom he had three sons. (*Pausan.*, 3, 1.)—II. A step-son of Isocrates, who produced thirty-five or thirty-seven tragedies, and was four times victor. He began to exhibit B.C. 341. (*Theatre of the Greeks*, 2d ed., p. 158.)

APHAS, a river of Greece, which falls into the bay of Ambracia. D'Anville calls it the Avas. It is now the *Vuro*. (*Plin.*, 4, 1.)

APHĒSAS, a mountain of Argolis, near Nemea, said to have been the one on which Perseus first sacrificed to Jupiter Apesantius. The more correct form of the name is Apesas. (*Vid.* Apesas.)

APHĒTĒ, a city of Thessaly at the entrance of the Sinus Pelasgius, or *Gulf of Volo*, from which the ship Argo is said to have taken her departure for Colchis. (*Apoll. Rhod.*, 1, 591.) Herodotus informs us (7, 193 and 196) that the fleet of Xerxes was stationed here previous to the engagement off Artemisium. The same writer makes the distance between Aphetæ and Artemisium about eighty stadia. Aphetæ is supposed to correspond to the modern *Fetio*. (*Cramer's Anc. Greece*, vol. 1, p. 411.)

APHIDNA, a borough of Attica, belonging to the tribe Leontis, where Theseus is said to have secreted Helen. (*Herodot.*, 9, 73.—*Plut., Vit. Thes.*) Demosthenes reports that Aphidna was more than 120 stadia from Athens. (*De Cor.*, p. 238.)

APHRODISIA, festivals in honour of Venus, celebrated in different parts of Greece, but chiefly in Cyprus.

APHRODISĪAS, I. a city of Laconia, to the west of Nymbæum, the same as Beæ. (*Strabo*, 251.—*Pliny*, 4, 5.—*Polybius*, 5, 19.)—II. A city in the Thracian Chersonese, between Heraclea to the east and Cardia to the west. (*Procopius, Edific.*, 4, 10.)—III. A city of Caria, lying south of the Mæander and west of Cibyra. In the time of Hierocles it was the capital of the country (p. 688). Stephanus informs us, that it was founded by the Pelasgi Leleges, and was successively called, city of the Leleges, Megalopolis, Nimoe, and Aphrodisias. In Strabo's time it appears to have belonged to Phrygia; Pliny, however, assigns it to Caria, and styles it a free city (5, 29.—Compare *Tacit., Ann.*, 3, 62, and *Broetier, ad loc.*). The site of the ancient city at *Geyra*, about two hours from Antiochia on the Mæander, was discovered by Pococke. (Vol. 2, p. 2, c. 12.—*Cramer's Asia Minor*, vol. 2, p. 210.)—IV. A city and promontory of Cilicia Trachea, east of Celenderis. According to Livy, it was a place of some consequence in the reign of Antiochus the Great. (*Liv.*, 33, 20.—Compare *Diod. Sic.*, 19, 61.) The ruins found by Capt. Beaufort, at the northeast corner of a bay west of Cape *Cavaliere*, appear to mark the site of the ancient city. (*Cramer's Asia Minor*, vol. 2, p. 329.)—V. Another name for the Isle of Erythra.—VI. An island sacred to Venus and Mercury, on the coast of Carmania. It is thought by some to have been identical with the Cataa of Arrian. (*Plin.*, 6, 25.)—VII. An island on the coast of Cyrenaica, in the vicinity of Apollonia. (*Herodot.*, 4, 168.)

APHRODISĪUM, I. a city on the eastern parts of Cyprus, and in the narrowest part of the island, being only nine miles from Salamis. (*Strabo*, 682.)—II. One of the three minor harbours into which the Piræus was subdivided. It seems to have been the middle one of the three. (*Cramer's Anc. Gr.*, vol. 2, p. 350.)

APHRONĒTĒ, the Grecian name of Venus, from ἀφρός, "foam," because Venus is said to have been born from the froth of the ocean. This is the account given by Hesiod (*Theog.*, 196). Homer, however, as well as the Cretan system (*Apollod.*, 1, 3, 1, and *Heyne, ad loc.*), made her the daughter of Dione. (*Vid.* Venus, where some remarks will be offered on the origin of the Greek name.)

APHRODITOÛLIS, I. a city of Egypt, the capital of the 36th nome, now *Alfieh*.—II. Another in the same country, the capital of the 42d nome, now *Ifu*.—III. Another in the same country, belonging to the nome Hermonthis, now *Asf-un*. (*Strab.*, 566.—*Steph. Byz.*, s. v.)

APHTHONIUS, a rhetorician of Antioch, who lived

in the third or fourth century of our era. We have from him a work entitled *Progymnasmata*, consisting of Rhetorical Exercises, adapted to the precepts of Hermogenes; and also forty fables. Aphthonius, according to Suidas, labours under the defect of having neglected to treat of the first elements of rhetoric, and of having nowhere attempted to form the style of those whom he wished to instruct. We find in his treatise nothing more than oratorical rules, and the application of these rules to different subjects. The *Progymnasmata*, having been long used in the schools, has gone through numerous editions, the best of which are that of Scobarius (Escobar), 1597, 8vo, with the fables added; and that of D. Heinsius, *Lugd. Bat.*, 1626, 8vo. The treatise has been translated into Latin with most ability by Escobar, and the version has been also separately printed. Another Latin translation was also made by Rodolph Agricola. The version of Escobar was first published at *Barcelona*, 1611, in 8vo, and that of Agricola was given from the Elzevir press, at Amsterdam, 1642–1665, in 12mo, with notes by Loricinus. (*Biog. Univ.*, vol. 2, p. 305, *seqq.*)

APHÏTĒ, or APHYTIS, a city of Thrace, in the peninsula of Pallene, on the Sinus Thermaicus. Here was a celebrated temple of Bacchus, to which Agesipolis, king of Sparta, who commanded the troops before Olynthus, desired to be removed shortly before his death, and near which he breathed his last. (*Xen., Hist. Gr.*, 5, 3, 19.) According to Plutarch, in his life of Lysander, there was here an oracle of Jupiter Ammon; and it appears that Lysander, when besieging Aphytis, was warned by the god to desist from the attempt. Theophrastus (3, 20) speaks of the wine of Aphytis. (*Cramer's Anc. Gr.*, vol. 1, p. 246.)

APIX, an ancient name of Peloponnesus, which it is said to have received from King Apis. The origin of the name Apia (Ἀπία γῆ), as applied to the Peloponnesus, was a subject of controversy even among the ancient writers. (Compare *Wassenberg, ad Paraphr.*, p. 42.) According to Heyne (*ad Hom.*, Il., 1, 270), it does not appear to have been a geographical, but a poetical, appellation; and the meaning would seem to be merely, "a far-distant land" (Ἀπία from ἀπό), as used by the Greeks at Troy in speaking of their native land, far away over the waters. In this, however, he is successfully combated by Buttman (*Lexil.*, § 24, s. v.), who shows that this is contrary to the express testimony of the geographers and grammarians, and even of Æschylus himself. Poetical names, particularly all the oldest ones, are purely and really most ancient names, which poetry has preserved to us. If any opinion may be formed on this subject, it would be, that there were two forms of the same name in use among the Greeks: one the appellative Ἀπία, derived from ἀπό, and meaning merely "distant;" the other a geographical name, deduced from that of the mythic Apis. It is worthy of notice, that the appellative Ἀπία, in Homer, has the initial vowel short, whereas, in the geographical name, it is always long. (Compare *Soph., Œd. Col.*, 1303.—*Æsch.*, *Suppl.*, 275, &c.) The former, then, of these will be a Homeric word, the latter a term found first in the Tragic writers, and based on an old legend alluded to by Æschylus in his *Supplixes* (v. 275). Those grammarians, therefore, who explain Ἀπία γαῖα (Il., 1, 270; 3, 49) as the old name of the Peloponnesus, are in error, for the two passages of the *Odyssey* (7, 25.—16, 18), where the term alone occurs, and where nothing is said of the Peloponnesus, plainly show, that Ἀπία is, as above stated, an old adjective, from ἀπό, like ἀντίος from ἀντί. There are many traces to prove, that in the words *Apis* and *Apia* lie the original name of a most ancient people, who inhabited the European coasts of the Mediterranean. Vid. remarks under the article *Opici*. (*Buttmann, Lexil.*, l. c.—p. 154, *Fishlake's trans.*)

APICATA, wife of Sejanus, by whom she had three

children. She was repudiated by him. Vid. Sejanus. (*Tacit., Ann.*, 4, 3.)

APICIUS. There were three patricians of this name at Rome, in different eras, all noted for their gluttony, to which the second of the three added almost every other vice.—1. The first lived in the time of the dictator Sylla. According to Athenæus (4, p. 168, d.), he was the cause of Rutilius Rufus being driven into exile. (Compare *Casaubon, ad loc.*—*Ernesti, Clav. Cic. Ind. Hist.*, s. v. *Rutilius*.)—11. The second lived during the reigns of Augustus and Tiberius. Athenæus (1, p. 7, a.) speaks of his having spent immense sums on the luxuries of the table, and also of various kinds of cake that were called after his name (Ἀπικία). He passed most of his time, according to the same writer, at Minturnæ, on account of the excellent shellfish found there. He even went on a voyage to Africa, having learned that the shellfish obtained along that coast were superior to all others; but when, as he approached the land, numerous fishermen came off to the vessel with what they declared to be their finest fish, perceiving these to be inferior to the Italian, he ordered the pilot to put about immediately and return home, without having so much as landed on the shores of Africa. Seneca (*Ep.*, 95—*De Vit. Beat.*, c. 11), Juvenal (4, 23), Martial (*Ep.*, 2, 69, and 10, 63), as well as other ancient writers, frequently allude to his epicurism, of which he formed a kind of school. Falling, at length, into comparative poverty and merited contempt, he is reported to have put an end to his life by poison, through fear of ultimate starvation.—III. The third lived under Trajan, and was in possession of a secret for preserving oysters; he sent some of them perfectly fresh to the Emperor Trajan as far as Parthia. (*Athen.*, 1, p. 7, d.)—To which of these three we are to ascribe the work which has come down to us, on the culinary art (*De Re Culinaris*), is undetermined. Most assign it to the second of the name, M. Gavius Apicius, but without any satisfactory reason for so doing. It is more than probable that the work in question was written by none of the three. The compiler of this collection of receipts, wishing to give his labours an imposing name, would seem to have entitled his book as follows: "*Apicius, sive de Re Culinaris, a Cælio*," and not "*Cælius Apicius, sive de Re Culinaris*." This Cælius, of course, is some unknown person. The work is divided into ten books, each of which has a Greek title that indicates, in a symbolical manner, the subjects treated of in that particular division. These are as follows: Ἐπιμελής, "*the careful one*." Σαρκόπηγς, "*the carcer*." Κηπουρικά, "*things appertaining to gardening*." Παρδεκτήρ, "*the all-recipient*." Ὅσπριος, "*appertaining to pulse*." Ἀεροπετής, "*of flying things*." Πομπητής, "*the sumptuous*." Τετράπους, "*the quadruped*." Θάλασσα, "*the sea*." Ἀλιεύς, "*the fisherman*." Our modern gourmands would form no very high idea of the state of gastronomic science among the Romans from the perusal of this work. The style, moreover, is very incorrect, and replete with barbarisms. The best edition is that of Almeloveen, *Amst.*, 1709, 12mo. We have also, among others, the edition of Bernhold, *Ansbae.*, 1787 (1800), and that of Lister, 1705, *Lond.*, 8vo. (*Scholl, Hist. Lit. Rom.*, vol. 3, p. 242.—*Buhr, Gesch. Röm. Lit.*, 522.—*Funck, de immün. L. L. senect.*, 10, 29, *seqq.*)

APIANUS, one of the chief rivers of Thessaly, rising in Mount Othrys, and, after receiving the Enipeus near Pharsalus, falling into the Peneüs a little to the west of Larissa. It is now the *Salampra*. (*Plin.*, 4, 8.—*Strab.*, 297.)

APINA, a city of Apulia, destroyed with Trica, in its neighbourhood, by Diomedes on his arrival in this part of Italy, after the Trojan war. (*Plin.*, 3, 11.) Freret supposes that the towns here mentioned were, together with the tribes that occupied them (the Monades and

Dardi), of Illyrian origin. (*Mem. de l'Acad. des Insér.*, &c., vol. 18, p. 75.)

APION, I. a surname of Ptolemy, one of the descendants of Ptolemy Lagus. (Vid. Ptolemæus, XIV.)
 --II. A grammarian and historical writer, born at Oasis Magna in Egypt, during the first century of the Christian era. He was surnamed Plistonices (Πλιστονίκης), from his frequent successes over his literary opponents, but called himself the Alexandrian, from his having passed a part of his life in the ancient capital of the Ptolemies. Apion subsequently travelled into Greece, and finally established himself at Rome, where he taught grammar, or philological science, during the reigns of Tiberius and Claudius. He attained to great celebrity. Although unquestionably a man of learning and research, he was in many respects an arrogant boaster, and in others a mere pretender; and it was in allusion, no doubt, to his vanity and noisy assumption of merit, that the Emperor Tiberius gave him in derision the name of *Cymbalum mundi*. He is renowned for much trifling on the subject of Homer, in order to trace whose family and country he had recourse even to magic, asserting that he had successfully invoked the appearance of shades to satisfy his curiosity, whose answers he was not allowed to make public. (*Plin.*, 30, 2.—Compare *Aulus Gellius*, *Noct. Att.*, 5, 14.) These pretensions, silly as they were, made him very popular in Greece, although something might be owing to his commentaries on the same great poet, which are mentioned by Eustathius and Hesychius. Pliny makes particular mention of the ostentatious character of this critic, who used to boast that he bestowed immortality on those to whom he dedicated his works; whereas it is only by the mention of others that these works are now known to have actually existed. One of the chief of them was, "*On the Antiquity of the Jews*," to which people he opposed himself with the hereditary resentment of an Egyptian. The reply of Josephus, "*Against Apion*," has survived the attack, the author of which attack showed his enmity to the Jewish people by other means besides writing against them; for he was employed by his fellow-citizens of Alexandria to head a deputation to the Emperor Caligula, complaining of the Jews who inhabited that city. Apion also wrote an account of the antiquities of Egypt, in which work he is supposed to have treated largely on the Pyramids, Pliny quoting him as the principal authority on the subject. After having ridiculed the rite of circumcision, he was compelled by a malady to submit to it, and, by a divine punishment, says Josephus, died soon after from the consequences of the operation. It is in allusion to Apion that Bayle observes, "how easily the generality of people may be deceived by a man of some learning, with a great share of vanity and impudence." Extracts from Apion's commentary on Homer are given in the Etymologicum Gudianum, published by Sturz. (*Joseph.*, *contr. Ap.*—*Scholl.*, *Hist. Lit. Gr.*, vol. 5, p. 16, *seqq.*)

APIS, I. one of the earliest kings of the Peloponnese, son of Phoroneus and Laodice, and grandson of Inachus. He is said to have reigned in Argos, after the death of his father, about 1800 B.C. Others make him to have been the son of Apollo, and king of Sicyon. He chased the Telchines from the Peloponnese, according to a third statement, governed tyrannically, and lost his life in consequence. From him some have derived the old name, supposed to have been given at one time to the Peloponnese, namely "Apian land." (Vid. *Apia*.) Apis, in fact, is one of those mythological personages, to whose earlier legend each succeeding age adds its quota of the marvellous, until the whole becomes one mass of hopeless absurdity. Hence we find Varro and St. Augustine gravely maintaining, that the Grecian monarch Apis led a colony into Egypt, gave laws and civilization to that country, was deified after death under the form of an ox, and was, of course,

identical with the Apis of Egyptian worship. (*Pausan.*, 2, 5.—*Apollod.*, 2, 1.—*Augustin.*, *Civ. D.*, 18, 5.) And yet there is reason to believe, that the name Apis is connected with that of a very early people, who dwelt along the European shores of the Mediterranean, and of whom the Italian Opici formed a part. (Vid. *Apia*.)—II. The same with Epaphus, the fabled son of Jupiter and Io. Such at least is the statement of Herodotus, ὁ δὲ Ἄπις κατὰ τὴν Ἑλληνικὴν γλῶσσάν ἐστι Ἐπαφός (2, 153). Wesseling is inclined to regard the passage as spurious, but consult *Ælian* (*Hist. An.*, 11, 10), where the same thing is stated. Jablonski makes Epaphus mean "giant" (*Voc. Ægypt.*, p. 65). Zocga, on the other hand, gives it the force of "*bos pater*" (*Num. Ægypt.*, p. 81), and De Rossi, that of "*taurus præcipuus*." (*Etymol. Ægypt.*, p. 15.) It is more than probable, however, that the name Epaphus was confounded by the Greeks with *Apophis*, one of the Egyptian appellations for Typhon, the evil genius, and hence may have arisen the legend which made the Grecian Apis a cruel tyrant. (Vid. *Epaphus*.)—III. A sacred bull, worshipped by the Egyptians. Its abode was at Memphis, near the temple of Phtha, or Vulcan, and it was in this city that peculiar honours were rendered it, an account of which is given by Herodotus, Strabo, Pliny, Diodorus Siculus, Plutarch, and other ancient writers. The Apis was distinguished from other animals of the same kind by the following characteristics. He was supposed to be generated, not in the ordinary course of nature, but by a flashing from on high (ἀέλας ἐκ τοῦ οὐρανοῦ.—*Herod.*, 3, 27), or, according to others, by the contact of the moon (ἐπαφὴ τῆς σελήνης.—*Plut.*, *Sympos.*, 8, p. 718). As, however, this evidence of his divinity was rather dubious, several external marks were superadded, to satisfy his votaries of his claims to adoration. His colour was black, in order that the distinctive marks might the more clearly appear; these were a square white spot on the forehead, the figure of an eagle on the back, a white crescent on the right side, the mark of a beetle on the tongue, and double hair on the tail. (*Herod.*, 3, 28.—*Strab.*, 806.—*Plin.*, 8, 46.—*Creuzer*, *Comment. Herod.*, p. 132, *seqq.*) The marks in question, which thus stamped his claims to divinity, were of course the contrivance of the priests, though of this the people were kept profoundly ignorant. This animal was regarded with the highest veneration, and more than regal honours were rendered him. He was waited upon, also, by numerous attendants, a particular priesthood were set apart for him, stalls were provided, furnished with every convenience, and his food was presented to him in vessels of gold. He was frequently displayed to the view of the people, while strangers could also behold him in a species of enclosed court, or through a kind of window. (*Strab.*, l. c.) He also gave oracles, and the mode of giving them was as follows. The priests, having led him forth from his abode, caused food to be offered him by the person who had come for a response. If he received what was thus offered, it was a favourable omen; if otherwise, an unfavourable one. So also, after the food had been offered him, he was allowed to go into one or the other of two stalls, according as he might feel inclined. His going into one of these was looked upon as a good omen, into the other the reverse. Germanicus, when in Egypt, consulted in this way the sacred Apis; and as the animal refused the food which was offered him by the Roman prince, this circumstance was regarded as an omen of evil, that was subsequently verified by the death of the latter. (*Plin.*, 8, 46.—*Amm. Marcell.*, 22, 14.) The annual festival of Apis was celebrated with the utmost splendour. It always began with the rising of the Nile, and presented, for seven successive days, a scene of uninterrupted rejoicing and festivity. The Greeks called this celebration Theophaia, because during its continuance

the god Apis was displayed to the view of the people arrayed in festal attire, his head surmounted with a kind of tiara, and his body adorned with embroidered coverings, while a troop of boys accompanied him singing hymns in his praise. These boys, becoming on a sudden inspired, predicted future events. During the continuance of this festival, the crocodiles in the Nile were harmless, but regained their ferocity at its close! (*Plin., l. c.*) Sacrifices were seldom offered unto Apis; when this, however, was done, red cattle were always selected, red being the colour of Typhon, the enemy of Osiris. So also, when Apis died, a red steer, and two or three other animals that were deemed sacred to Typhon, were buried along with him, in order to thwart the joy which the evil spirits would otherwise have felt at the death of the sacred Apis. When Apis died a natural death, the whole of Egypt was plunged in mourning, from the king to the peasant; and this mourning continued until a new Apis was found. The deceased animal was embalmed in the most costly manner, and the priests after this traversed the whole land in quest of his successor. When a calf was found with the requisite marks, all sorrow instantly ceased, and the most unbounded joy prevailed. Herodotus alludes to one of these scenes in his account of the Persian Cambyses (3, 27). When that monarch returned to Memphis, from his unsuccessful expedition against the Ethiopians, he found the Egyptians giving loose to their joy on account of the reappearance of Apis. Irritated at this, and fancying that they were rejoicing at his ill success, he ordered the sacred animal to be brought before him, wounded it in the thigh with his dagger (of which wound it afterward died), caused the priests to be scourged, and commanded the proper officers to kill all the Egyptians they should find making public demonstrations of joy.—Whenever a new Apis was obtained, the priests conducted him first to Nilotopolis, where they fed him forty days. He was then transported in a magnificent vessel to Memphis. During the forty days spent at Nilotopolis, women only were allowed to see him; but after this the sight of the god was forbidden them. (*Diad. Sic., 1, 85.*)—It is worthy of remark, that although so much joy prevailed on the finding of a new Apis, and so much sorrow when he died a natural death, yet, whenever one of these animals reached the age of 25 years, the period prescribed by the sacred books, the priests drowned him as a matter of course, in a sacred fountain, and there was no mourning whatever for his loss.—According to an Egyptian legend, the soul of Osiris passed on his death into the body of Apis, and as often as the sacred animal died, it passed into the body of its successor. So that, according to this dogma, Apis was the perfect image of the soul of Osiris. (*Plut., de Is. et Os., p. 472, ed. Wytttenb.*) It is very easy, however, to see in the worship of the sacred Apis the connexion of Egyptian mythology with astronomy and the great movements of nature. The Egyptians believed that the moon, making her total revolution in 309 lunations, and in 9125 days, returned consequently, at the end of 25 years, to the same point of Sothis or Sirius. Hence the life of Apis was limited to 25 years, and hence the cycle known as the period of Apis, with reference, no doubt, to the passage of the moon into the celestial bull, which it would have to traverse in order to arrive at Sothis. In worshipping Apis, therefore, the Egyptian priesthood worshipped, in fact, the great fertilizing principle in nature, and hence we see why females alone were allowed to view the Apis at Nilotopolis, that the sight of the sacred animal might bless them with a numerous progeny. (Compare *Guignaut, 1, 905.*—*Vollmer, Wörterb. der Mythol., p. 279.*)

APIRITUS GALBA, a celebrated buffoon in the time of Tiberius. (*Schol. ad Jur., 5, 4.*—Compare *Spalding, ad Quintil., 6, 3, 27.*—*Wernsdorf, in Poet. Lat. Min., vol. 6, p. 418, seq.*)

APOLLINÆRES LUDI. *Vid.* LUDI APOLLINÆRES.

APOLLINÆRIS, I. Sidonius, a Christian poet. *Vid.* SIDONIUS.—II. Sulpitius, a grammarian. *Vid.* SULPITIUS.

APOLLINIS PROMONTORIUM, was situate on the coast of Africa, east of Utica, and north of Carthage. It is now *Ras-Zebid*. (*Plin., 5, 4.*—*Mela, 1, 7.*—*Liv., 30, 24.*)

APOLLINOPOLIS MAGNA, the capital of the 52d Egyptian nome, in the southern part of Upper Egypt, about twenty-five miles nearly north of the great cataracts. It is now *Edfou*. (*Ptol.—Steph. Byz., s. v.*—*Anton. Itin.*—*Elhan, Hist. An., 10, 21.*) There are two temples at *Edfou*, in a state of great preservation. One of them consists of high pyramidal propylæa, a pronaos, portico, and sekos, the form most generally used in Egypt; the other is peripteral, and is, at the same time, distinguished by having on its several columns the appalling figure of Typhon, the emblem of the Evil Principle. The pyramidal propylon, which forms the principal entrance to the greater temple, is one of the most imposing monuments extant of Egyptian architecture. (*Russell's Egypt, p. 201.*)

APOLLINOPOLIS PARVA, a city of Egypt in the Nome of Coptos, northwest of Thebes. It was a celebrated place of trade, and lay on the commercial road by which the products of the east were conveyed to Alexandria. It is now *Kous*, and displays the ruins of a temple. (*Ptol.—Steph. Byz.—Strabo, 561.*)

APOLLO, the son of Jupiter and Latona. In Homer he is the god of archery, prophecy, and music. His arrows were not merely directed against the enemies of the gods, such as Otus and Ephialtes (*Hom., Od., 11, 318*): all sudden deaths of men were ascribed to his darts; sometimes as a reward (*vid.* Agamedes), at other times as a punishment (*vid.* Niobe). He was, by his shafts, the god of pestilence, and he removed it when duly propitiated. At the banquets of the gods on Olympus, Apollo played on his lyre (φάρμακ), while the Muses sang. (*Hom., Il., 1, 601.*) Eminent bards, as Demodocus, were held to have derived their skill from the teaching of Apollo or the Muses. (*Od., 8, 488.*) Prophets in like manner were taught by him. At Delphi he himself revealed the future. (*Od., 8, 80.*) According to the Homeric hymn to the Delian Apollo, the birth of the god took place in this manner: Latona, persecuted by Juno, besought all the islands of the Ægean Sea to afford her a place of rest; but all feared too much the potent queen of heaven to assist her rival. Delos alone consented to become the birthplace of the future god, provided Latona would pledge herself that he would not condemn her humble isle, and would erect there the temple vowed by his mother. Latona assented with the oath most binding on the gods, namely, by the Styx, and the friendly isle received her. (*H. in Apoll., 83.*) All the goddesses save Juno and Lucina (whom the art of Juno kept in ignorance of this great event) were assembled in the floating isle to attend the delivery of Latona, whose labour continued for nine days and nights. Moved with compassion for her sufferings, they despatched Iris to Olympus, who brought Lucina secretly to Delos. Here then Apollo sprang to light, Earth smiled around, and all the goddesses shouted aloud to celebrate his birth. They washed and swathed the infant deity, and Themis gave him nectar and ambrosia. As soon as he had tasted the divine food, his bands and swaddling-clothes no longer retained him: he sprang up, and called to the goddesses to give him a lyre and a bow, adding that he would thenceforth declare to men the will of Jove. He then, to the amazement of the assembled goddesses, walked firmly on the ground; and Delos, exulting with joy, became covered with golden flowers. A somewhat different account of the birth of Apollo is given by Callimachus. (*Hymn. in Apoll.*)—In the Homeric hymn to Apollo, the man-

ner of his first getting possession of Delphi (Πυθώ) is thus related : When Apollo resolved to choose the site of his first temple, he came down from Olympus into Pieria ; he sought throughout all Thessaly ; thence went to Eubœa, Attica, and Boeotia ; but could find no place to his mind. The situation of Tilphussa, near Lake Copais, in Boeotia, pleased him ; and he was about to lay the foundations of his temple there, when the nymph of the stream, afraid of having her own fame eclipsed by the vicinity of the oracle of Apollo, dissuaded him, by representing how much his oracle would be disturbed by the noise of the horses and mules coming to water at her stream. She recommends to him Crissa, beneath Mount Parnassus, as a quiet, sequestered spot, where no unseemly sounds would disturb the holy silence demanded by an oracle. Arrived at Crissa, the solitude and sublimity of the scene charm the god. He forthwith sets about erecting a temple, which the hands of numerous workmen speedily raise, under the direction of the brothers Trophœus and Agamœdes. Meanwhile Apollo slays with his arrows the monstrous serpent which abode there and destroyed the people and cattle of the vicinity. As it lay expiring, the exulting victor cried, "Now *rai* (πύθει) there on the man-feeding earth ;" and hence the place and oracle received the appellation of Pytho. The fane was now erected, but priests were wanting. The god, as he stood on the lofty area of the temple, cast his eyes over the sea, and beheld far south of Peloponnesus a Cretan ship sailing for Pylos. He plunged into the sea, and, in the form of a dolphin, sprang on board the ship. The crew sat in terror and amazement ; a south wind carried the vessel rapidly along ; in vain they sought to land at Tænarus ; the ship would not obey the helm. When they came to the bay of Crissa, a west wind sprang up and speedily brought the vessel into port ; and the god, in the form of a blazing star, left the boat, and descended into his temple. Then, quick as thought, he came as a handsome youth, with long locks waving on his shoulders, and accosted the strangers, inquiring who they were and whence they came. To their question in return, of what that place was to which they were come, he replies by informing them who he is and what his purpose was in bringing them thither. He invites them to land, and says that, as he had met them in the form of a dolphin (δελφίν), they should worship him as Apollo Delphinus ; and hence, according to the fanciful etymology of the earlier poetry, Delphi in Phocis derived its name. They now disembark : the god, playing on his lyre, precedes them, and leads them to his temple, where they become his priests and ministers.—A god so beautiful and accomplished as Apollo could not well be supposed to be free from the influence of the gentler emotions ; yet it is observable that he was not remarkably happy in his love, either meeting with a repulse, or having his amour attended with a fatal termination. (*Vid.* Daphne, Coronis, &c.) After the death of Æsculapius his son, who fell by the thunderbolt of Jove for having extended his skill in the healing art so far as to bring even the dead to life, Apollo, incensed at the fate of his offspring, slew the Cyclopes, the forgers of the thunderbolts, and was for this deed exiled from heaven. Coming down to earth, he took service as a herdsman with Admetus, king of Phœræ in Thessaly, and pastured his herds on the banks of the Amphrysus. The kindness bestowed by him on Admetus have been mentioned elsewhere. (*Vid.* Admetus, and Alceſtis).—Apollo, it is said, was taught divination by Pan. For his lyre he was indebted to the invention of his half-brother Mercury, and the triumph of this instrument over the tones of the reed is recorded in the legend of Marsyas. (*Vid.* Marsyas.) The Homeric Apollo is a personage totally distinct from Helios (Ἡλιος) or the Sun, though, in all likelihood, originally the same. When mysteries and secret doctrines

were introduced into Greece, these deities were united, or, perhaps we might say, reunited. Apollo, at the same period, also usurped the place of Pæon, and became the god of the healing art.—This god was a favourite object of Grecian worship, and his temples were numerous. Of these the most celebrated were, that of Delphi in Phocis, of Delos, of Patara in Lycia, Claros in Ionia, Grynium in Æolis, and Didymæ in Miletus ; in all of which his oracles gave revelations of the future.—The favourite animals of Apollo were the hawk, the swan, the cicada, &c. His tree was the bay. He himself was represented in the perfection of united manly strength and beauty. His long curling hair hangs loose, and is bound behind with the strophium ; his brows are wreathed with bay ; in his hands he bears his bow or lyre. The wonderful Apollo Belvidere shows at the same time the conception which the ancients had of this benign deity, and the high degree of perfection to which they had attained in sculpture.—Few deities had more appellations than the son of Latona. He was called Delian, Delphian, Patærean, Clarian, &c., from the places of his worship. He was also styled : 1. *The Loxian* god, from the ambiguity of many of his predictions ; 2. *Herdling*, as keeping the flocks and herds of Admetus ; 3. *Silver-bowed* ; 4. *Far-shooter* ; 5. *Light-producer* ; 6. *Well-haired* ; 7. *Gold-haired* ; 8. *Gold-sworded*, &c. (*Keightley's Mythology*, p. 87, *seqq.*)—Proclus assures us, that the Orphic doctrine recognised the identity of Apollo and the Sun. (*Orph. Hymn.*, 8.—*Id.*, 12.—*Id.*, 34.—*Fragm.*, 28, *ed. Herm.*—*Æschyl.*, in *Eratoſth. Cataſt.*, p. 19, *ed. Schaub.*) The Oriental origin of the god is clearly shown even in his very name, for which the Greeks so often and so vainly sought an etymology in their own language. The Cretan form for *Helios* (Ἡλιος) was *Abelios* (Ἀβελίος), i. e., 'Ἀέλιος, with the digamma inserted. (*Maitt., Dial.*, p. 185, *ed. Sturz.*)—Compare the Doric 'Ἀπὲλλων for 'Ἀπὸλλων, *Maitt.*, p. 206, and the form *Apellinæm* for *Apollinæm*, cited by Festus.) We have here the Asiatic root, *Bel* or *Hel*, an appellation for the sun in the Semitic languages. (*Cruzer's Symbolik*, par *Gugniat*, vol. 2, p. 131.—Compare *Selden*, *de D. S.*, 2, 1, p. 144.—*Buttmann, Mythologus*, vol. 1, p. 167.)—A very striking analogy exists between the Apollo of the Greeks and the Crishna of the Hindus. Both are inventors of the flute. (Compare *Asiatic Researches*, vol. 8, p. 65.) Crishna is deceived by the nymph Tulasi, as Apollo is by Daphne, and the two maidens are each changed into trees, of which the tulasi is sacred to Crishna, as the bay-tree is to Apollo. The victory of Crishna over the serpent Caliya-naga, on the borders of the Yamuna, recalls to mind that of Apollo over the serpent Python : and it is worthy of remark, that the vanquished reptiles respectively participate in the homage that is rendered to the victors. Nor does the legend of Apollo betray a resemblance merely with the fables of India. A very strong affinity exists, in this respect, between the religious systems also of Egypt and Greece. We find the same animal, the wolf, which, by its oblique course, typified the path of the star of day, consecrated to the sun, both at Iyeopolis and Delphi. This emblem transports into the Greek traditions the fables relative to the combats of Osiris. The Egyptian deity comes to the aid of his son Horus, under the figure of a wolf, and Latona disguises herself under the form of this same animal, when she quits the Hyperborean regions to take refuge in Delos. (Compare *Pausanias*, 2, 10.—*Diod. Sic.*, 1, 88.—*Synœs. de Provid.*, 1, 116.—*Euseb., Præp. Ev.*, 1, 50.—*Aristot., Hist. An.*, 6, 35.—*Ælian, Hist. An.*, 4, 4.) In the festival of the Daphnephoria, which the Thebans celebrated every ninth year in honour of Apollo, it is impossible to avoid seeing an astronomical character. It took its name from the bay-tree, which the fairest youths of the city carried round

in solemn procession, and which was adorned with flowers and branches of olive. To an olive-tree, decorated in its turn with branches of bay and flowers intertwined, and covered with a veil of purple, were suspended globes of different sizes, types of the sun and planets, and ornamented with garlands, the number of which was a symbol of the year. On the altar, too, burned a flame, the agitation, colour, and crackling of which served to reveal the future, a species of divination peculiar to the sacerdotal order, and which prevailed also at Olympia in Elis, the centre of most of the sacerdotal usages of the day.—The god of the sun became also the god of music, by a natural allusion to the movements of the planets and the mysterious harmony of the spheres; and the hawk, the universal type of the divine essence among the Egyptians, is, with the Greeks, the sacred bird of Apollo. (*Ælian, Hist. An.*, 10, 14.)—As soon, however, as this Apollo, whether his origin is to be traced to the banks of the Nile or to the plains of India, assumes a marked station in the Grecian mythology, the national spirit labours to disengage him of his astronomical attributes. Henceforward every mysterious or scientific idea disappears from the Daphnephoria, and they now become only commemorative of the passion of the god for a young female, who turns a deaf ear to his suit. A new deity, Helios (Ἥλιος), discharges all the functions of the sun. This god, in his quality of son of Uranus and Terra, is placed among the cosmogonical personifications; he has no part to play in the fables of the poets, and he is only twice named in Homer, once as the father of Circe, and again as revealing to Vulcan the infidelity of his spouse. He has no priests, no worship; no solemn festival is celebrated in his praise. Thereupon, freed from every attribute of an abstract nature, Apollo appears in the halls of Olympus, participates in the celestial banquets, interferes in the quarrels of earth, becomes the tutelary god of the Trojans, the protector of Paris and Æneas, the slave of Admetus, and the lover of Daphne. So true is it, that all these changes in the character of this divinity were effected by the transmuting power of the Grecian spirit, that we see Apollo preserve in the mysteries, which formed so many deposits of the sacerdotal traditions, the astronomical attributes of which the public worship had deprived him; and at a later period we find the New Platonists endeavouring to restore to him these same attributes, when they wished to form an allegorical system of religious science and philosophy out of the absurdities of polytheism. But, in the popular religion, instead of being the god from whom emanate fecundity and increase, he is a simple shepherd, conducting the herds of another. Instead of dying and arising again to life, he is ever young. Instead of scorching the earth and its inhabitants with his devouring rays, he darts his fearful arrows from a quiver of gold. Instead of announcing the future in the mysterious language of the planets, he prophesies in his own name. Nor does he any longer direct the harmony of the spheres by the notes of his mystic lyre; he has now an instrument, invented by Mercury and perfected by himself. The dances, too, of the stars cease to be conducted by him; for he now moves at the head of the nine Muses (the nine strings of his divine *cithara*), the divinities who each preside over one of the liberal arts. (*Constant, De la Religion*, vol. 2, p. 93.)

APOLLONORUS, I. a native of Phalærum, one of the intimate friends of Socrates. (*Plat., Phæd.*)—II. A celebrated painter of Athens, who brought the art to a high degree of perfection, and handed it in this state to his pupil Zeuxis. Two of his celebrated productions are noticed by Pliny (35, 9). One of these was a priest at the altar; the other an Ajax struck by a thunderbolt. These two chefs-d'œuvre still existed in Pliny's time at Pergamus, and were highly admired. Apollodorus first discovered the art of softening and degra-

ding, as it is technically termed, the colours of a painting, and of imitating the exact effect of shades. Pliny speaks of him with enthusiasm. He became at last so arrogant as to style himself the prince of painters, and never to go forth into public without wearing a kind of tiara, after the fashion of the Medes. His fame, however, was eventually eclipsed by Zeuxis, who perfected all his discoveries. (*Plin., l. c.—Sillig, Dict. Art., s. v.*)—III. A famous sculptor, whose country is uncertain, but who flourished about Olymp. 114. He possessed great acuteness of judgment, but exhibited also, on many occasions, great violence of temper; so much so as frequently to break to pieces his own works when they chanced not to please him. Silanion, another artist, represented him in bronze during one of these fits of anger, and the work resembled, according to Pliny, not a human being, but choler itself personified. (*Plin.*, 34, 8.)—IV. A comic poet of Athens, who flourished about 300 B.C. He was a writer of much repute among the poets of the New Comedy. Terence copied the *Hecyra* and *Phormio* from two of his dramas; all his productions, though very numerous, are now lost, except the titles of eight, with a few fragments. He was one of the six writers whom the ancient critics selected as the models of the New Comedy. The other five were Philpides, Philemon, Menander, Diphilus, and Posidippus. (*Theatre of the Greeks*, 2d ed., p. 188.)—V. A comic poet of Carystus in Eubœa. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 80.)—VI. A comic poet of Gela in Sicily, contemporary with Menander. (*Suidas, s. v. Ἀπολλύδω.*—*Clinton's Fasti Hellenici*, 2d ed., p. xlv.)—VII. A native of Athens, and disciple of Aristarchus, Parnætus, and Diogenes the Babylonian. He flourished about 146 B.C., and was celebrated for his numerous productions, both in prose and verse. Of the former, we have, with the exception of a few fragments, only the work entitled *Βιβλιοθήκη* (*Bibliotheca*), being a collection of the fables of antiquity, drawn from the poets and other writers, and related in a clear and simple style. It has not reached us, however, in a perfect state, since it breaks off with the history of Theseus; whereas it would seem, from citations made from it, that the work was originally carried down to the return of the Greeks from the Trojan war. Faber (Le Fevre), one of the editors of the *Bibliotheca*, pretends that we merely have an extract from the original work of Apollodorus; while another editor, Clavier, maintains that Apollodorus never wrote a work of this kind, but that what has come down to us is nothing more than a mere abridgment, extracted most probably from several of his works, especially that on the gods (*περὶ θεῶν*), which consisted of at least 20 books. The best edition of the *Bibliotheca* is that of Heyne, *Götting.*, 2 vols. 8vo, 1803. The edition of Clavier, *Paris*, 1805, 2 vols. 8vo, is also worthy of notice.—Of the poetical works of Apollodorus, the most remarkable was the *Χρονικά*, or poetical Chronicle, which is unfortunately lost. It was divided into four books, and contained, according to Scymnus (v. 16–35, and 45–49), a statement of all the remarkable events, famous sieges, migrations, establishments of colonies, treaties, exploits, &c., from the fall of Troy, which Apollodorus fixed at 1184 B.C., down to 144 B.C. It was written in a brief style, in iambic trimeters. We are indebted to this work, through the citations of other writers, for the knowledge of various important dates, such as the fall of Troy, the invasion of the Heraclidæ, the Ionian emigration, the first Olympiad, &c. That part of the Chronicle which gave the dates when the various great men of antiquity lived, served as a basis for the Chronicle composed by Cornelius Nepos, but which is also lost. Apollodorus composed also a Description of the Earth (Ἦς περίοδος), in iambic verse, which gave Scymnus of Chios and Dionysius of Charax the idea of their respective Periægeses. (*Schöll, Hist. Lit. Gr.*,

vol. 4, p. 57, *seqq.*—*Id.*, 5, 36.—*Clavier*, in *Biogr. Univ.*, vol. 2, p. 313.)—VIII. An Epicurean philosopher, supposed to have been contemporary with Cicero. He governed, as chief, the school of Epicurus, and the severity of his administration caused him to receive the appellation of *Κηποτύραννος* (*tyrant of the garden*). According to Diogenes Laertius, he wrote more than 400 works, and among them a life of Epicurus. (*Diog. Laert.*, 10, 2, et 25.—Consult *Ménage*, *ad loc.*, where Gassendi's explanation of the term *Κηποτύραννος* is given.)—IX. A native of Damascus, and an architect of great ability in the reigns of Trajan and Hadrian, by the former of whom he was employed in constructing the famous stone bridge over the Ister or Danube, A.D. 104. Various other bold and magnificent works, both at Rome and in the provinces, contributed to his high reputation. The principal of these were the Forum of Trajan, in the middle of which arose the Trajan Column, an immense library, an odeum, the Ulpian basilica, thermæ, aqueducts, &c. Falling into disgrace with Hadrian, he lost his life through that emperor's caprice. The occasion is variously related; by some it has been ascribed to an old grudge, which originated in the time of Trajan, when Hadrian, giving an ignorant opinion, in presence of the then emperor, respecting some architectural designs, was so seriously mortified by a sarcastic rebuke from Apollodorus, that he never forgave him. This old offence was heightened by another on the part of Apollodorus, when Hadrian had ascended the imperial throne. The emperor pretended to submit to him, for his opinion, the design of a recently-built temple of Venus. The plainness of speaking, for which the architect was famed, got the better of his policy, and drew from him an observation, in allusion to the want of proportion between the edifice and the statue it contained, that if "the goddess wished to rise and go out" of her temple, it would be impossible for her to accomplish her intention. The anger of the monarch knew no bounds. Apollodorus was banished; and finally, after having been accused of various crimes, was put to death. (*Xiph.*, *Vit. Hadr.*)—X. A name common to several medical writers. The most distinguished of these was a physician and naturalist, born at Lemnos, about a century before the Christian era. He lived under Ptolemy Soter and Lagus, to one of whom, according to Strabo, he dedicated his works. The scholiast to Nicander states that he wrote also on plants. He is mentioned by Pliny, who says that he boasted of the juice of cabbage and of horseradish as a remedy against poisonous mushrooms. Athenæus often cites him. He wrote also on venomous animals, and there is reason to believe that it was from this work that Galen derived his antidote against the bite of vipers. (*Plin.*, 14, 9.—*Athen.*, 15, p. 675, c.)

APOLLONIA, I. a festival at Sicyon, in honour of Apollo and Diana. It arose from the following circumstance. These two deities came to the river Sythas, in the vicinity of Sicyon, which city was then called *Ægialea*, intending to purify themselves from the slaughter of the serpent Python. They were frightened away, however, and fled to Crete. *Ægialea* being visited by a pestilence soon after this, the inhabitants, by the advice of soothsayers, sent seven boys and the same number of girls to the Sythas, to entreat the offspring of Latona to return. Their prayer was granted, and the two deities came to the citadel. In commemoration of this event, a temple was erected on the banks of the river to the goddess of Persuasion, *Πειθώ*, and every year, on the festival of Apollo, a band of boys conveyed the statues of Apollo and Diana to the temple of Persuasion, and afterward brought them back again to the temple of Apollo. (*Pausan.*, 2, 7.)—II. A celebrated city of Illyricum, near the mouth of the river Aous, or Aeas, and the ruins of which still retain the name of *Pollina*. It was found-

ed by a colony from Corinth and Coreyra, and, according to Strabo, was renowned for the wisdom of its laws, which appear to have been framed, however, rather on the Spartan than the Corinthian model. *Ælian* states, that decrees to the exclusion of foreigners were enforced here as at Lacedæmon; and *Aristotle* affirms, that none could aspire to the offices of the republic but the principal families, and those descended from the first colonists. (*Æl.*, V. H., 13, 6.—*Arist.*, *Polit.*, 4, 4.) Apollonia was exposed to frequent attacks from the Illyrians, and it was probably the dread of these neighbours, and also of the Macedonians, that induced the city to place itself under the protection of the Romans on the first appearance of that people on their coast. (*Polyb.*, 2, 11.) Throughout the war with Macedon they remained faithful to the interest of their new allies. From its proximity to Brundisium and Hydruntum in Italy, Apollonia was always deemed an important station by the Romans; and among the extravagant projects of Pyrrhus, it is said he had contemplated the idea of throwing over a bridge to connect it with the last-mentioned place; a distance not less than fifty miles! (*Plin.*, 3, 11.) Augustus spent many years of his early life in Apollonia, which were devoted to the study of literature and philosophy. (*Suet.*, *Aug.*, 10.—*Cramer's Anc. Gr.*, vol. 1, p. 56, *seqq.*)—III. A town in the interior of Chalcidice, on the Egnatian way. (*Scylax*, p. 27.—*Xen.*, *Hist. Gr.*, 5, 2.) Mention is made of it in the Acts of the Apostles (17, 1), St. Paul having passed through it on his way from Philippi to Thessalonica. The ruins are called *Pollina*. (*Cramer's Anc. Gr.*, vol. 1, p. 264.)—IV. A city of Thrace, at the mouth of the river Nestus. (*Mela*, 3, 2.—*Liv.*, 38, 41.) It was called, in a later age, Sozopolis, and is now *Szebol*.—V. A city of Assyria, to the northwest of Ctesiphon. (*Amm. Marcell.*, 23, 20.) Hardouin and others make it the same with Antiochia Assyria, mentioned by Pliny (6, 27).—VI. A city of Palestine, in Samaria, on the Mediterranean coast. It lay northwest of Sichem. (*Plin.*, 5, 13.—*Joseph.*, *Antiq. Jud.*, 13, 23.—*Id.*, *Bell.*, 1, 6.)—VII. A city of Phrygia, to the southeast of Apania, on the road to Antioch in Pisidia. Its earlier name was Margium. (*Strab.*, 576.—*Steph. Byz.*) Colonel Leake is inclined to place it at *Ketsi Bourlou*, not far from the Lake *Boudour*.—VIII. A city of Lydia, called also Apollonis, about 300 stadia from Pergamus, and the same distance from Sardis. It was named after the wife of Attalus. Cicero often alludes to it. (*Cic.*, *Orat. pro Flacc.*, c. 21 et 32.—*Ep. ad Quint.*, 1, 2, &c.) Some ruins are visible near a small hamlet called *Bullene*.—IX. A city of Mysia, at the northern extremity of the Lake Apolloniatis, and near the point where the Rhyndacus issues from it. Its site is now occupied by the Turkish town of *Abulliona*. (*Strab.*, 575.)—X. A city of Cyrenaica, regarded as the harbour of Cyrene. It was the birthplace of the geographer Eratosthenes. Under the lower empire this place took the name of *Sozusa*, and it is now called *Marza Susu*, or *Sosush*. (*Mela*, 1, 8.—*Ptol.*)

APOLLŌNIS, wife of Attalus of Pergamus. She was a native of Cyzicus, and of obscure family. Apollonis became the mother of Eumenes, Attalus, Philætærus, and Athenæus, who were remarkable for fraternal attachment as well as for filial piety. After the death of their mother they erected a temple to her at Cyzicus, on the columns of which were placed nineteen tablets, sculptured in relief, and displaying the most touching incidents in history and mythology relative to filial attachment. At the bottom of these tablets were inscriptions in verse, which have been preserved for us in the Vatican manuscript of the Greek Anthology. These are given by Jacobs, at the end of his edition of the Anthology (*Paralipomena ex codice Vaticano*), and were previously published by

him in the 2d vol. of a work entitled *Exercitationes Criticæ in Scriptores Veteres*, Lips., 1797, 8vo.

APOLLONIUS, I. a native of Perga in Pamphylia, who flourished principally under Ptolemy Philopator, towards the close of the second century before the Christian era. He is one of the four writers whom we ought to regard as the fathers of mathematical science, since it was from their works that the moderns first derived an accurate acquaintance with this department of knowledge. These authors are, to give them in chronological order, Euclid, Archimedes, Apollonius, and Diophantus. We learn from Pappus, that Apollonius studied at Alexandria under the successors of Euclid, and that it was here he acquired the superior skill in geometrical science which rendered his name so famous. The same author gives no very favourable account of his other qualities. He represents him (*Coll. Math.*, l. 7, *pref.*) as a vain man, jealous of the merit of others, and eagerly seizing every occasion to depreciate them. Apollonius was one of the most prolific and profound writers in mathematical science. His works alone formed a considerable part of those which the ancients regarded as the source of the true geometrical spirit. His treatise on Conics, however, is the most remarkable, and the one that contributed most to his celebrity. It had many commentators among the ancients, such as Pappus of Alexandria, Hypatia daughter of Theon, Eutocius of Ascalon, &c. The West was acquainted, for a long period, in modern times, with only the first four books of the Conics of Apollonius; and it was not till about the middle of the 17th century that the fifth, sixth, and seventh books were recovered from Arabic versions. A magnificent edition of the whole eight books was published by Dr. Halley, at Oxford, in 1710, the eighth book being in a measure restored by him from the indications given by Pappus. (*Montucla, Hist. des Math.*, vol. 1, p. 245, *seqq.*—*Lacroix, in Biogr. Univ.*, vol. 2, p. 316, *seqq.*)—II. A poet of Alexandria, generally called Apollonius of Rhodes, from his having lived for some time there. He was a pupil of Callimachus, but renouncing the erudite style of his master, he endeavoured to follow the track of Homer. It appears that Callimachus was offended with this act of rebellion against his authority, and that it was the cause of the enmity which subsisted between the two poets until the death of the former. Apollonius, having read at Alexandria his Homeric poem on the expedition of the Argonauts, was hissed by a party which had been formed against him by the cabals of his master. Mortified at this treatment, he retired to Rhodes, where he taught rhetoric, and obtained the rights of citizenship. At a subsequent period, under Ptolemy V. (Epiphanes), he succeeded as librarian at Alexandria in the place of Eratosthenes, who had become enfeebled by age. His principal production, the poem on the Argonautic expedition, is the only one of his works that has come down to us. It is divided into four books. The subject of the poem is the departure of Jason and his companions in quest of the golden fleece, and the return of these adventurers to their native shores after long and perilous wanderings. The plan is very simple: it is that of an historian, and is not adapted to poetic composition. There is no unity of interest in the poem; for Jason is not the only hero of the piece, and even if he were, his character is not sufficiently sustained for such an end. The poet places him in scenes where he acts without probity and without honour. The characters of Orpheus and Hercules are better drawn. That of Medea is a complete failure: the passion that sways her breast is at variance with both modesty and filial piety. In other respects, the poem contains many pleasing descriptions. Apollonius also deserves praise for not yielding to the spirit of the age, and indulging in those learned digressions that were then popular, and for

which the nature of his subject allowed him so many opportunities. The Argonautics of Apollonius are remarkable for the purity of the diction, and, with some exceptions, the beauty of the versification: they are, in this respect, a happy imitation of the Iliad and Odyssey. Longinus (*de Subl.*, 33) calls Apollonius ἀπώροτος, an expression that is well elucidated by the remarks of Quintilian (10, 1, 54) on the same writer: "Non contemnendum edidit opus, æquali quodam mediocritate." He never rises to the sublime, but, at the same time, never descends to the vulgar and lowly. The Romans appear to have entertained a high opinion of the Argonautics of Apollonius. The poem was freely translated by Varro Atacinus, and was imitated by Virgil in the fourth book of the Æneid. It has been still more followed by Valerius Flaccus, who borrowed from it the fable of his own poem; but it must be confessed that the Roman poet has surpassed his model. The best edition of Apollonius is that of Wellauer, Lips., 1828, 2 vols. 8vo. Previous to the appearance of this, the best edition was that of Brunck, Lips., 1810, 2 vols. 8vo, with the additional Greek scholia, curâ G. H. Schaeffer. Brunck's first edition appeared in 1780, 2 vols. 8vo, from the Strasburg press.—III. A sophist, son of the grammarian Archibius, lived at Alexandria in the time of Augustus, according to the common opinion, and had Apion in the number of his disciples. Ruhnken, however (*Pref. ad Hesych.*, vol. 2, p. 5), believes him to have been much later, and that Apion lived long before him. He is known by his Homeric Lexicon (Ἀέσεις Ὅμηρικαί), containing a list of the principal words used by Homer, with their explanations. It is a very useful work, though much interpolated. Villosion published the first edition of this Lexicon in 1773, Paris, 2 vols. 4to, from a MS., which he supposed to be of the tenth century. The commentary and prolegomena of Villosion are full of erudition, and yet he was but twenty-one years of age when he appeared as the editor of Apollonius. Tollius produced a reprint of Villosion's edition, at Leyden, in 1788, 8vo. This re-impression is considered superior to the original, as far as the excellent notes added by Tollius are concerned. It is injured, however, by the retrenchment of Villosion's prolegomena.—IV. A grammarian of Alexandria, surnamed Dyscolus (Δυσκολος), "ill-humoured," or "Morose," on account of his unpleasant disposition; or else, as some suppose, from the difficult questions he was accustomed to propose to the *savans* of Alexandria. He flourished about the middle of the second century of the Christian era, and passed his days in the Bruchium, a quarter of the city where many learned men were supported at the royal expense. (*Vid. Alexandria.*) He is the first that reduced the subject of grammar to a systematic form. Of his numerous writings in this department, we have only four treatises remaining. *Περὶ Συντάξεως τῶν τοῦ λόγου μερών*, "Of the Syntax of parts of speech;" in four books: *Περὶ Ἀντωνυμίας*, "Of the Pronoun;" *Περὶ Συνδέσμων*, "Of Conjunctions;" and *Περὶ Ἐπιρρήματων*, "Of Adverbs." To him is also ascribed a compilation, entitled *Ἱστοριῶν θαυμασίων βιβλίον*, "A collection of Wonderful Histories," which has only the accidental merit of containing some fragments of lost writers. This last-mentioned work is found in the editions of Phlegon given by Nylander and Meursius. Teucher produced a separate edition of it in 1792, 8vo, from the Leipzig press. The treatise on Syntax was first printed by the elder Aldus, in his *Thesaurus Cornuopie*, Venet., 1495, fol.; and was reprinted by Junta, in 1515, 8vo, *Florent.* Both these editions are inaccurate. Sylburg published a new edition in 1590, 4to, *Francof.*, with the text corrected from MSS. The best, however, is that of Bekker, *Berolin.*, 1817, 8vo. To Bekker we also owe editions of three other works of Apollo-

nias, which had previously remained unedited. The treatise on the Pronoun was first published by him in Wolf and Buttmann's *Museum Antiq. Stud.*, vol. 2, *Berol.*, 1811, and the treatises on Conjunctions and Adverbs in the second volume of his *Anecdota Græca.* (*Scholl, Hist. Lit. Gr.*, vol. 5, p. 27).—V. A native of Alabanda in Caria. He taught rhetoric at Rhodes, and his school enjoyed a high reputation. Cicero and Julius Cæsar were among the number of his pupils. He was remarkable for sending away those who he was convinced could not become orators, instead of letting them waste their time in attending on his instructions. His surname was Molo, or, according to others, Molonis (*son of Molo*). Cicero often alludes to him, sometimes under the name of Apollonius, on other occasions under that of Molo. (*Cic., de Orat.*, 1, 28.—*Id., Brut.*, 89).—VI. A native of Tyana in Cappadocia, of an ancient and wealthy family, born about the commencement of the Christian era, and famous in the annals of ancient imposture. Wonderful stories were told of the annunciation made to his mother during her pregnancy, as well as of the circumstances under which his birth took place. (*Philostr., Vit. Apoll.*, 1, 4.) His early education was received at Ægæ, a town of Cilicia, on the Sinus Issicus, where he attached himself to the tenets and discipline of the Pythagorean philosophy, refraining from animal food, living entirely upon fruits and herbs, wearing no article of clothing made from any animal substance, going barefoot, and suffering his hair to grow to its full length. He spent much of his time in the temple of Æsculapius at Ægæ, a temple rendered famous by the wonderful cures which were effected there; and the priests, finding him possessed of talents and docility, initiated him into the mysteries of the healing art. His medical knowledge proved subsequently a valuable auxiliary to him in imparting force to his moral precepts. After having acquired great reputation at Ægæ, Apollonius determined to qualify himself for the office of a preceptor in philosophy by passing through the Pythagorean discipline of silence. Accordingly, he is said to have remained five years without once exercising the faculty of speech. During this time he chiefly resided in Pamphylia and Cilicia. When his term of silence was expired, he visited Antioch, Ephesus, and other cities, declining the society of the rude and illiterate, and conversing chiefly with the priests. At sunrise he performed certain religious rites, which he disclosed only to those who passed through the discipline of silence. He spent the morning in instructing his disciples, whom he encouraged to ask whatever questions they pleased. At noon he held a public assembly for popular discourse. His style was neither turgid nor abstruse, but truly Attic, and marked by great force and persuasion. Apollonius, that he might still more perfectly resemble Pythagoras, determined to travel through distant nations. He proposed his design to his disciples, who were seven in number, but they refused to accompany him. He therefore entered upon his expedition, attended only by two servants. At Nimus he took, as his associate, Damis, an inhabitant of that city, to whom he boasted that he was skilled in all languages, though he had never learned them, and that he even understood the language of beasts and birds. The ignorant Assyrian worshipped him as a god; and, resigning himself implicitly to his direction, accompanied him wherever he went. At Babylon he conversed with the magi, and, by his sage discourses, obtained the favour and admiration of the king, who furnished him with camels and provisions for his journey over Caucasus. He was equally patronised by Phraotes, an Indian king, and after four months' residence with the Indian sages, returned to Babylon, and thence into Ionia. Various miracles of his performance in the cities of Greece are gravely related. Among other feats, he pretended that he had raised the shade

of Achilles. At Athens he is said to have cast out a demon, which at its departure threw down a statue; at the Isthmus of Corinth, to have predicted the attempt of Nero to cut through it; and in the island of Crete, during an earthquake, to have exclaimed that the sea was bringing forth land at the time that an island was rising out of the sea between Crete and Thera. From Crete he repaired to Rome. Just before this time, however, Nero had ordered all who practised magic to be driven from the city. The friends of Apollonius apprized him of the hazard which was likely to attend his purposed visit to Rome; and the alarm was so great, that out of thirty-four persons who were his stated companions, only eight chose to accompany him thither. He nevertheless persevered in his resolution, and, under the protection of the sacred habit, obtained admission into the city. The next day he was conducted to the consul Telesinus, who was inclined to favour philosophers of every class, and obtained permission to visit the temples and converse with the priests. From Rome Apollonius travelled westward to Spain. Here he made an unsuccessful attempt to incite the procurator of the province of Bætica to a conspiracy against Nero. After the death of that tyrant he returned into Italy on his way to Greece; whence he proceeded to Egypt, where Vespasian was making use of every expedient to establish his power. That prince early perceived that nothing would give greater credit with the Egyptian populace than to have his cause espoused by one who was esteemed a favoured minister of the gods, and, therefore, did not fail to show him every kind of attention and respect. The philosopher, in return, adapted his measures to the views of the new emperor, and used all his influence among the people in support of Vespasian's authority. Upon the accession of Domitian, Apollonius was no sooner informed of the tyrannical proceedings of that emperor, and particularly of his proscriptions of philosophers, than he assisted in raising a sedition against him, and in favour of Nerva, among the Egyptians; so that Domitian thought it necessary to issue an order that he should be seized and brought to Rome. Apollonius, being informed of the order, set out immediately, of his own accord, for that city. Upon his arrival he was brought to trial; but his judge, the prætor Elian, who had formerly known him in Egypt, was desirous of favouring him, and so conducted the process that it terminated in his acquittal. Apollonius now passed over into Greece, and visited various parts of the country, gaining new followers wherever he went. He finally settled at Ephesus in Asia Minor, where he established a school and had many disciples. Here a story is related of him, which, if true, implies that he was acquainted with the conspiracy against Domitian. At the moment when that tyrant was cut off at Rome, Apollonius is said to have made a sudden pause in the midst of a public disputation at Ephesus, and, changing his tone, to have exclaimed, "Well done, Stephen! take heart: kill the tyrant; kill him;" and then, after a short pause, to have added, "the tyrant is dead; he is killed this very hour." After this we hear little of him, except that Nerva wrote to him on his accession; but it is very probable that he died at Ephesus during the short reign of that emperor, at the very advanced age of ninety-seven. The sources of information concerning this extraordinary man are very uncertain. His life by Philostratus, from which the foregoing sketch is principally selected, was compiled two hundred years after his death, by order of the Empress Julia, widow of Severus, which prince regarded Apollonius as a divinely-inspired personage, and is said to have associated his image in a temple with those of Orpheus, Abraham, and our Saviour. Philostratus, a mere sophist, received as materials the journal of Damis, his companion and disciple, who was ignorant and credulous, and a short and imperfect

memoir by Maxentius of *Ægæ*, now lost. All sorts of fables and traditionary tales are mixed up with the account of Philostratus, who only merits attention for a mere outline of the facts upon which he must necessarily have formed his marvellous superstructure. The claim of the whole to notice rests chiefly on the disposition of the pagans, when Christianity began to gain ground, to assimilate the character and merits of Apollonius with those of the Divine Founder of the rising religion. Something is also due to a life so singular as that of Apollonius, who certainly contrived to pass for a divinely-favoured person, not only in his own days, but as long as paganism prevailed. The inhabitants of Tyana dedicated a temple to his name; the Ephesians erected a statue to him under the name of Hercules Alexicacus, for delivering them from the plague; Hadrian collected his letters; the Emperor Severus honoured him as already described; Caracalla erected a temple to him; Aurelian, out of regard to his memory, refrained from sacking Tyana; lastly, Ammianus Marcellinus ranks him among the eminent men, who, like Socrates and Numa, were visited by a demon. All these prove nothing of the supernatural attributes of Apollonius, but they are decisive of the opinion entertained of him. At the same time, Dr. Lardner clearly shows that the life of Philostratus was composed with a reference to the history of Pythagoras rather than to that of our Saviour. (Compare the remarks of Mitchell, in the Introduction to his edition of the *Clouds of Aristophanes*, p. viii., *seqq.*, *Lond.*, 1838.) On the whole, as his correct doctrines appear to have been extremely moral and pure, it may be the fairest way to rank him among that less obnoxious class of impostors, who pretend to be divinely gifted, with a view to secure attention and obedience to precepts, which, delivered in the usual way, would be generally neglected. Of the writings of Apollonius, there remain only his Apology to Domitian, and eighty-four epistles, the brevity of which is in favour of their authenticity. They were edited by Comelin in 1601, 8vo. and by Stephens, in his *Epistolæ*, 1577. His life by Philostratus is found in the writings of that sophist, the best edition of which is that of Olearius, *Lips.*, 1709, fol. (*Enfield's History of Philosophy*, vol. 2, p. 39, *seqq.*—*Michaud, Biogr. Univ.*, vol. 2, p. 320, *seqq.*)—VII. A stoic philosopher, born at Chalcis in Eubœa, or, according to some, at Chalecedon in Bithynia. His high reputation induced the Emperor Antoninus Pius to send for him to come to Rome in order to take charge of the education of Marcus Aurelius. On his arrival at the capital, the emperor sent him an eager invitation to repair to the palace; but the philosopher declined to come, observing that the pupil ought to come to the master, not the master to the pupil. The emperor, on receiving this answer, observed, with a smile, "It was then easier, it seems, for Apollonius to come from Chalcis to Rome, than from his residence in Rome to the palace in the same city!" Antoninus, however, hastened to send his royal pupil to him, and Aurelius profited in no small degree by the lessons of his instructor. The *Meditations of Aurelius* contain a eulogium on his stoic preceptor. (*Biogr. Univ.*, vol. 2, p. 323.)—VIII. A sculptor, distinguished by a statue of Hercules, the extant part of which is preserved in the Vatican Museum at Rome, and is known by the name of the *Belvidere torso*. He was a native of Athens, and, according to Winckelmann, flourished a short time subsequent to Alexander the Great. This opinion is founded principally upon the form of the letters composing the Greek inscription sculptured on the marble. A conjecture of this kind, however, can at best be only approximative. The famous torso of the Belvidere Hercules has been the admiration of all artists. Michael Angelo sketched it from every possible point of view; and when, in his old age, he was deprived of sight,

the enthusiastic painter caused himself to be conducted to this chef-d'œuvre of art, and, by passing his hands over it, sought in this way to enjoy those feelings of delight which his loss of vision seemed to deny him. (*La Salle, in Biogr. Univ.*, vol. 2, p. 325.)—IX. A sculptor, who made the head of a young satyr, now preserved at Egremont House, Petworth. (Consult *O. Müller, Amalth.*, 3, 252.)—X. A sculptor, who, in connexion with his brother Tauriscus, constructed a celebrated image of a bull, formerly the property of Asinius Pollio. This image is generally supposed to be that now known as the *Farnese Bull*, though artists have observed several things in the latter performance which argue it to be of a later date. (*Plin.*, 36, 5.—*Sillig, Diet. Art.*, s. v.)

APONIANA, an island near Lilybæum. (*Hort., B. Afric.*, 2.) Cleverius thinks that one of the *Ægusæ* or *Ægades* is here meant. Others suppose it to be the same with Paconia of Ptolemy. In one MS. the name is given as Apononia. (*Cluv., Sicil.*, 2, 15.)

APŌNUS FONs, a fountain, or, more correctly, warm mineral springs about six miles to the south of Patavium. They were celebrated for their healing properties, and hence their name, from *a*, *not*, and *πόνος*, *the anguish or pain of a malady*, as indicating their property of lulling or removing the pains of sickness. There was also a species of divination connected with them, by throwing articles into the fountain. (*Lucan, Phars.*, 7, 193.—*Suet.*, *Vit. Tib.*, c. 14, and *Cras.*, *ad loc.*) The Aponus Fons was the principal source of what were denominated the *Acque Patavinæ*. The name of *Bagni d'Abano*, by which these waters are at present known, has evidently been formed by corruption from Aponus. (*Plin.*, 2, 103.—*Id.*, 31, 6.)

APOTHEŌSIS, a ceremony observed by some ancient nations, by which they raised their kings, heroes, and great men to the rank of deities. Neither the Egyptians nor Persians seem to have adopted this custom. The Greeks were the first who admitted it. The Romans borrowed it from them. Herodian (4, 2) has left us an account of the apotheosis of a Roman emperor. After the body of the deceased was burned, a waxen image of it was placed upon a tall ivory couch in the vestibule of the palace, the couch being decked with the most sumptuous coverings. The image represented the emperor as pale and suffering under sickness. This continued for seven days. The city meanwhile was in sorrow. For the greater part of each day the senate sat ranged on the left side of the bed, dressed in robes of mourning, the ladies of the first rank sitting on the right side in white robes, without any ornaments. During the seven days the physicians paid regular visits to the sick person, and always reported that he grew worse, until at length they gave out that he was dead. When the death was announced, a band consisting of the noblest members of the equestrian order, and the most distinguished youths of senatorial rank, carried the couch and image, first to the Forum, where hymns and dirges were sung, and then to the Campus Martius. In this latter place a large pyramidal edifice of wood had been previously constructed, the interior being filled with combustibles of all kinds. The couch was placed on this, with abundance of aromatics and spices. The equestrian order then moved in solemn array around the pile, imitating by their evolutions the pyrrhic dance; and chariots were also driven around, having the persons standing in them arrayed in their prætexas, and wearing masks which recalled the features of the most celebrated Romans of former days. The new emperor then applied a torch to the pile, and fire was also communicated to it by the rest. Meanwhile, an eagle was let fly from the summit of the structure, which was to ascend with the flames to the heavens, and was supposed to bear with it from earth the soul of the deceased emperor. If the deified person was a female, a peacock, not an eagle, was

sent from the funeral pile. (*Lydius, de Re Mil.*, p. 93.—*Irmsch, ad Herodian.*, l. c.)—Some writers, misled by the language of Diodorus Siculus, have ascribed the introduction of the apotheosis into Greece to Egyptian colonies. Diodorus, however, a partisan of the theory of Euhemerus, only saw in the gods of every religion mere deified mortals. Leibnitz commits, with regard to the Persians, an error similar to that of Diodorus, when he sees in the myth of Arimanes nothing more than the apotheosis of the chief of a Nomadic tribe. Mosheim also (*Annot. ad. Cudworth*, p. 238) pretends that Mithras was only a deified hunter, because, upon the monuments that have reached us, he is represented as killing a bull, and being followed by a dog! (Consult *Constant, de la Religion*, vol. 2, p. 446, *in not.*)

ΑΡΡΙΑ ΒΙΑ, the most celebrated of the Roman roads, both on account of its length, and the difficulties which it was necessary to overcome in its construction, hence called the "Queen of the Roman Ways," *Regina Viarum*. (*Stat.*, *Sylv.*, 2, 2.) It was made, as Livy informs us (9, 29), by the censor Appius Cæcilius, A.U.C. 442, and in the first instance was only laid down as far as Capua, a distance of about a thousand stadia, or a hundred and twenty-five miles; but even this portion of the work, according to the account of Diodorus Siculus, was executed in so expensive a manner, that it exhausted the public treasury (20, 36). From Capua it was subsequently carried on to Beneventum, and finally to Brundisium, when this port became the great place of resort for those who were desirous of crossing over into Greece and Asia Minor. (*Strabo*, 283.) This latter part of the Appian Way is supposed to have been constructed by the consul Appius Claudius Pulcher, grandson of Cæcilius, A.U.C. 504, and to have been completed by another consul of the same family thirty-six years after. We find frequent mention made of repairs done to this road by the Roman emperors, and more particularly by Trajan, both in the histories of the time, and also in ancient inscriptions. This road seems to have been still in excellent order in the time of Procopius, who gives a very good account of the manner in which it was constructed. He says, "An expeditious traveller might very well perform the journey from Rome to Capua in five days. Its breadth is such as to admit of two carriages passing each other. Above all others, this way is worthy of notice: for the stones which were employed on it are of an extremely hard nature, and were doubtless conveyed by Appius from some distant quarry, as the adjoining country furnishes none of that kind. These, when they had been cut smooth and squared, he fitted together closely, without using iron or any other substance; and they adhere so firmly to each other, that they appear to have been thus formed by nature, and not cemented by art. And though they have been travelled over by so many beasts of burden and carriages for ages, yet they do not seem to have been any wise moved from their place, or broken, nor to have lost any part of their original smoothness." (*Procop.*, *Bell. Got.*, 3.) According to Eustace, such parts of the Appian Way as have escaped destruction, as at *Fondi* and *Mola*, show few traces of wear and decay after a duration of two thousand years. (*Classical Tour*, vol. 3, p. 177.) The same writer states the average breadth of the Appian Way at from eighteen to twenty-two feet.

ΑΡΡΙΑΔΕΣ, a name given to the five deities, Venns, Pallas, Vesta, Concord, and Peace. A temple was erected to them near the Appiæ Aquæ, in the vicinity of Julius Cæsar's forum. Such at least is the explanation commonly given to the expression *Appiades Deæ*, as occurring in Ovid (*A. A.*, 3, 452). Burmann, however, thinks that the poet refers merely to the nymphs of the adjacent fountain, while Heinsius, altering the common lection of *Deæ* to *sua*, under-

stands females of loose character, remarking as follows: "*Extra urbem plebs submaniana et meretricula habitabant, maxime Via Appia.*" (Heins., *ad Ov.*, l. c.)

ΑΡΡΙΑΝΟΣ, a native of Alexandria, who flourished at Rome under Trajan, Hadrian, and Antoninus Pius. Here he distinguished himself by his forensic abilities, and acquired the post of a procurator of the empire, and, according to some authorities, the government of the province of Egypt. His Roman History (*Ῥωμαϊκὰ*, or *Ἱστορία Ῥωμαϊκή*), in twenty-four books, no longer exists entire. It embraced the history of the Republic to the time of Augustus, in an order which Appian himself explains in his preface. He states, that in reading the works which treated of Roman History, he was wearied with being compelled to transport his attention every moment from one province to another, according as the scene of events changed: to pass from Carthage to Spain, from Spain to Sicily, from Sicily to Macedonia, and from this latter country again to Carthage. To remedy this inconvenience, inseparable from synchronism, he collects together in his history the events that have passed in each particular country: it is thus that the several books of his history arose, in which the facts are stated, not in a chronological order, nor by principal epochs, but with reference to the country in which they took place. This method, which has been sometimes imitated in modern times, and especially by Gibbon, presents certainly some advantages. It labours under the serious objection, however, of turning away the attention of the reader, in too great a degree, from the main subject of the narrative. It is difficult, therefore, to follow, in Appian, the progressive greatness and downfall of the state of which he treats. Still, however, his work abounds with valuable information respecting the history of those times, and on many points of ancient geography. Though evidently a compilation, it is not the less important, however, on this account, since many of the sources whence he derived his information are completely lost to us, while for some epochs of Roman history he is the only authority we possess. The details into which he enters, on the events of the wars of which he treats, render his work a very interesting one for military readers. Setting aside the defective nature of the plan, Appian's history is, in other respects, wanting neither in critical views of the subject, nor in discernment. The gravest reproach, however, to which he is exposed, is his partiality for the Romans, which makes it necessary to read him with caution. His style is formed on that of Polybius, but he is inferior to his model.—Of the first five books of Appian's History we possess merely fragments. The first book, which was entitled *Ῥωμαϊκῶν βασιλική*, contained the history of the seven Roman kings: the succeeding four were entitled respectively, *Ἰταλική*, *Σαρωνική*, *Κελτική*, and *Σκελική καὶ Νησιωτική*, that is, the wars of the Romans in *Italy*, with the *Sannites*, with the *Gauls*, and in *Sicily* and the other *isles*. We have then the 6th, 7th, and 8th entire. The sixth book, entitled *Ἰσπανική*, contains the history of the wars in *Spain*; the seventh, *Ἀντιβατική*, that of the wars with *Hannibal*; the eighth, *Αἰθιοπική*, *Καρχηδονική* καὶ *Νομβική*, the *Punic Wars*; of the ninth, *Μακεδονική*, which contained the wars with *Macedonia*, we have only fragments remaining; the tenth, *Ἑλληνική καὶ Ἰωνική*, containing the wars in *Greece* and *Asia Minor*, is entirely lost; of the eleventh, *Συριακή καὶ Παρθική*, the first part, the history of the wars in *Syria*, alone remains; the second part, the wars with the *Parthians*, is lost: this lacuna, in truth, is supplied in the MSS.; the part, however, thus supplied, was not written by Appian, but is a mere compilation from Plutarch's *Lives* of Crassus and Antony. Indeed, there is some reason to think that a history of the wars with the *Parthians*

was never written by Appian. (Consult *Schweigh., ad Hist. Parth. Appiano tem. trib.*, p. 921, vol. 3.) The twelfth book, *Μεθοδωτική*, contains the history of the wars with *Mithradates*. In the nine succeeding books (from the 13th to the 21st inclusive), Appian gave the history of the civil wars, from the time of Marius and Sylla to the battle of Actium and the conquest of Egypt. Of these nine, the first five remain: they contain, in the form of an introduction, the history of all the troubles that disturbed the Roman republic from the secession to the Mons Sacer down to the defeat of Sextus Pompeius. The twenty-second book, entitled *Ἑκατονταετία*, contained the history of the first hundred years of the dominion of the Cæsars. From the account given of its contents, however, by Appian himself (*Præf.*, 15), as well as from other sources (*Phot., Cod.*, 57), it appears to have contained what we should call at the present day a statistical account of the Roman empire; the loss of this is much to be regretted. The twenty-third book, *Ἰλλυρικὴ*, or, as Photius calls it, *Δακικὴ*, contains the wars of *Illyria*: the twenty-fourth book, *Ἀραβικὴ*, treating of the wars of *Arabia*, is lost. From this list it results, that, regarding the eleventh as complete, we have ten books remaining of the History of Appian.—The best edition of Appian is that of Schweighæuser, *Lips.*, 1785, 3 vols. 8vo. (*Muschaud, in Biogr. Univ.*, vol. 2, p. 329, *seqq.*—*Schweigh.*, *ad App.*—*Schöll, Hist. Lit. Gr.*, vol. 4, p. 173, *seqq.*)

APPII FORUM, a small place on the Appian Way, about sixteen miles from the Tres Tabernæ. It is mentioned by St. Paul (*Acts*, 28, 15), and is also well known as Horace's second resting-place in his journey to Brundisium. Holstenius (*Adnot.*, p. 210) and Corradini (*Vet. Lat.*, 11, p. 94) agree in fixing the position of Forum Appii at *Casarrillo di Santa Maria*. But D'Anville, from an exact computation of distances and relative positions, inclines to place it at *Borgo Luongo*, near *Trepointe*, on the present road. (*Anal. Geogr. de l'Italie*, p. 186.) It would appear, that this opinion of D'Anville's is the more correct one, especially as it is clear from Horace (*Serm.*, 1, 5), that from hence it was usual to embark on a canal, which ran parallel to the Appian Way, and which was called *Decennovium*, its length being *nineteen* miles. (*Procop., Rer. Got.*, 1, 2.) Vestiges of this canal may still be traced a little beyond *Borgo Luongo*. (*Cramer's Ancient Italy*, vol. 2, p. 93.) As regards the ancient name, it may be remarked, that the term *Forum* was applied to places in the country where markets were held and courts of justice convened.

APIOLÆ, a city of Latium, in the territory of Setia (*Corradini, Vet. Lat.*, 2, 2), taken and burnt by Tarchinius Priscus. It is said to have furnished from its spoils the sums necessary for the construction of the Circus Maximus. (*Dion. Hal.*, 3, 49.—*Liv.*, 1, 35.—*Strabo*, 231.) According to Corradini (*l. c.*), the name of *Valle Apiole* is given in old writings to a tract of country situated between *Secza* and *Piperno*. (*Cramer's Anc. Italy*, vol. 2, p. 108.)

APPIUS CLAUDIUS, I. the founder of the Appian family at Rome. He was a Sabine by birth, a native of Regillum, and his original name is said to have been Attus Clausus. In the year of the city 260, the last portion of what Niebuhr considers the mythical age of Roman History, Attus is said to have migrated to Rome, with the members and clients of his house to the number of 5000. This powerful accession of strength ensured him, of course, a favourable reception; he was classed among the patricians, enrolled in the senate, and assumed the more Roman name of Appius Claudius. His motive for leaving his native country is said to have been a wish to live on friendly terms with the Romans, with whom his fellow-citizens, notwithstanding his advice, were bent on making war. Lands were assigned to him and his followers

across the Anio, and the nucleus was thus formed of what afterward became the Claudian tribe. Appius was a man of harsh and stern character, and frequently brought, on this account, into collision with the lower orders, especially in the controversies between creditors and debtors. His zeal for the cause of the patricians knew no bounds; and so much, in fact, was he dreaded by the plebeians, that when the latter had refused on one occasion to enrol themselves for the war against the Veientes, the mere rumour, spread by the nobility, that Appius was about to be appointed dictator, induced the multitude immediately to yield. (*Liv.*, 2, 16, *seqq.*)—II. Sabinus, son of the preceding, rendered himself still more odious to the people than even his father had been, by his inflexible and despotic character. Being elected consul A.U.C. 283, he opposed with the utmost violence the passage of the Publilian law, which ordained that the plebeian magistrates should be chosen at the Comitia Tributa, and the prudence of his colleague Quintinius alone prevented bloodshed. Some time after this he was sent against the Volsci; but his soldiers, indignant at his haughtiness and severity, refused to fight, when drawn up for action, and fled to their camp. The next day, on his marching back to the Roman territory, his army was attacked by the foe, and disgracefully put to flight. After punishing his troops by decimation he returned to the city; but the next year he was cited for trial, on account of his disgraceful return from the Volsci, and more particularly for his violation of the tribunitian privileges, and his opposition to the Agrarian law. After pleading his cause in person, and daunting his opponents so much that they were compelled to adjourn the case, he was carried off by a malady before a second hearing could be had. (*Liv.*, 2, 56, *seqq.*—*Flor.*, 1, 22.)—III. Crassinus, a member of the patrician family of the Claudii. Though cruel and arrogant like his ancestors, he was hardly appointed consul, B.C. 401, when, to gain the favours of the people, he supported the law proposed by the tribune Terentilius or Terentius, which had for its object a change in the form of government. Instead of the usual magistrates, decemvirs were appointed to compose a code of laws for Rome, and to possess sovereign power for a year. (*Vid. Decemviri.*) He was himself chosen decemvir; and when, after the first year, this office was prolonged for a year more, he was the only one who, by his influence over the chief men among the people, succeeded in being again chosen. He resolved never again to give up his power, and conspired with his colleagues for the accomplishment of this plan, but the affair of Virginia put an end to their odious tyranny. (*Vid. Virginia.*) The decemviral office was abolished, and the previous forms of magistracy immediately restored. Appius was accused and thrown into prison, where, according to Livy (3, 58) he died by his own hand. Dionysius of Halicarnassus, however, leads us to suppose that another account was credited by some, which made him to have been put to death in prison by the tribunes. (*Ant. Rom.*, 11, 49.) As regards the imprisonment of Appius, consult the remarks of Niebuhr. (*Rom. Hist.*, vol. 2, p. 369, *seqq.*)—IV. Cæcus, a distinguished Roman of the Appian family, who received his surname from his blindness. When censor, he constructed that part of the Appian Way which extended from Rome to Capua. (*Vid. Appia Via.*) He built also the first aqueduct at Rome. It was through his advice that the Potitian family committed the charge of the rites of Hercules to public slaves; the consequence of this was, as Livy relates (9, 29), that the family in question were all cut off within the year, and Appius himself was deprived of sight, whence his cognomen of *Cæcus*, "the Blind." He was afterward consul, and also interrex, and was very successful in his operations against the Samnites. (*Liv.*, 10, 31.)—V. Herdonius seized the capitol, with 4000

slaves and exiles, A.U.C. 292, and was soon after overthrown. (*Liv.*, 3, 15.—*Flor.*, 3, 19.)—The name of Appius was common in Rome, particularly to many consuls whose history is not marked by any uncommon event.

APRIES, a king of Egypt, of the 26th dynasty, and called, in Jeremiah and Ezekiel, Pharaoh Hophra. He ascended the throne after his father Psammetichus, B.C. 594. Apries distinguished himself by foreign conquest; he took Sidon, conquered the island of Cyprus, and enjoyed for a long period great prosperity. After a reign, however, of twenty-six years, his subjects revolted in favour of Amasis, by whom he was overcome and put to death. The immediate cause of the revolt was an unsuccessful expedition against the people of Cyrene, in which many lives were lost; and from this circumstance we may readily infer, that the extravagant projects of their kings were but little in unison with the feelings and wishes of the Egyptian people. (*Herod.*, 2, 161, seq.—Compare *Heeren, Ideen.*, vol. 2, pt. 2, p. 404.)

APRISINUS, a Greek rhetorician of Gadara, in Phœnicia, who flourished during the reign of Maximian, about 236 B.C. We have from him a treatise on Rhetoric, and also a work on the questions discussed in the schools of the rhetoricians. They are contained in the *Rhetores Græci* of Aldus, Venice, 1508, fol.

APSYNTHI, or APSYNTHI, a people of Thrace, named by Herodotus (6, 34, and 9, 119) as bordering on the Thracian Chersonese, and having overpowered the Dolonci. (*Vid.* Mithradates.) Dionysius Periegetes (577) speaks of the river Apsynthus.

APUS, a river of Macedonia, falling into the Ionian Sea between Dyrrhachium and Apollonia, and dividing their respective territories. It has been rendered memorable from the military operations of Cæsar and Pompey on its banks. The present name of the stream is *Ergent* or *Beralino*. (*Cæs.*, B. Civ., 4, 13.—*Lucan.*, 5, 461.)

APTËRA, a Cretan city, to the east of Polyrrhenia, and eighty stadia from Cydonia. (*Strabo*, 479.) Its name was supposed to be derived from a contest waged by the Sirens and Muses in its vicinity, when the former, being vanquished in the trial of musical excellence, were so overcome with grief that their wings dropped from their shoulders. (*Steph. Byz.*, s. v. Ἀπτερά.) Strabo informs us that Kisamus was the naval station of Aptera. The vestiges of Aptera were observed by Pococke to the south of *Kisamos*, and they are laid down in Lapie's map between that place and *Jerami* or Cydonia. (*Cramer's Ancient Greece*, vol. 3, p. 378.)

APULEIÆ LEGES, proposed by L. Apuleius Saturninus, A.U.C. 653, tribune of the commons; about dividing the public lands among the veteran soldiers, settling colonies, punishing crimes against the state, and furnishing corn to the poor at 10-12ths of an *as* a *modius*. (*Cic.*, *pro Balb.*, 21.—*Id.*, *de leg.*, 2, 6.—*Flor.*, 3, 16.)

APULEIUS, a Platonic philosopher of the second century, was a native of Madaura, an African city on the borders of Numidia and Gætulia. His family was respectable, both in station and property, his father being chief magistrate of Madaura. He received the early part of his education at Carthage, where he imbibed his first knowledge of the Platonic philosophy, and thence removed in succession to Athens and Rome. Apuleius, who inherited a handsome fortune, began life with that contempt for riches which in the ancient world in particular so frequently distinguished aspirants after learning and philosophy. He liberally rewarded all those who had any share in his instruction, and was otherwise so generous and profuse, that, on his return home after his travels, he found his patrimony exhausted; and, being exceedingly desirous of entering into

the fraternity of Osiris, was obliged to part with his clothes to pay the necessary expenses of the inaugural ceremonies. He now began to acquire a more prudent estimate of the value of property, and undertook the profession of a pleader, in which he obtained considerable fame and emolument. Not only so, he embraced also an opportunity which offered of improving his condition by marrying Pudentilla, an elderly widow of considerable property, to whom his youth and agreeable qualities had strongly recommended him. This union exceedingly exasperated the relations of the lady; and Æmilianus, the brother of her former husband, instituted a suit against Apuleius, before the proconsul of Africa, for employing magical arts to obtain her love. The apology which he delivered on this occasion is still extant, and it is regarded as a performance of considerable merit. It was, of course, successful; for it was not very difficult to convince a sensible magistrate, that a widow of thirteen years' standing may be induced to marry a handsome, eloquent, and accomplished young man, without being moved thereto by filters or magic. Of the remainder of the life of Apuleius nothing is known, except that several cities honoured him with statues for his eloquence, and that he wrote much both in prose and verse. Like Apollonius of Tyana, miracles have been ascribed to him, which have been placed in comparison with those of the gospel. The origin of these reports, which did not circulate until after his death, is by no means ascertained; as, with the exception of the foregoing foolish accusation, he does not appear to have been charged with the practice of magic in his lifetime; although it is not improbable that his anxiety, while on his travels, to get initiated in the secret mysteries and religious ceremonies of the different places which he visited, might have laid a foundation for the opinion entertained after his death of his supernatural acquirements. Be this as it may, Marcellinus, in the fifth century, requested of St. Augustin to exert his utmost efforts to refute the assertions of those who falsely declared "that Christ did nothing more than what was done by other men, and who produced their Apollonius, Apuleius, and other masters of the magical art, whose miracles they assert to have been greater than his." Perhaps this notion has been grounded on a misapprehension of his story of "The Golden Ass," in which a Milesian fable, invented by Lucius of Patrae, and abridged from him by Lucian, is enlarged and embellished. This humorous production was by many believed to be a true history, and among the rest St. Augustin entertained his doubts, while Bishop Warburton deems it a work written in opposition to Christianity, and with a view to recommend the Pagan religion "as a cure for all vices." The same learned author also explains the beautiful allegory of Cupid and Psyche, which makes a long episode in the "Golden Ass," upon the same principles. Dr. Lardner is of a different opinion; and probably Bayle comes nearest the truth, who regards this eccentric production as a mere satire on the frauds of the dealers in magical delusion, and on the tricks of priests, and other crimes, both of a violent and deceptive character, which are so frequently committed with impunity. Apuleius, indeed, appears, from the greater part of his writings, to have been more of a wit than a philosopher, in the ancient acceptance of the character; his productions, with the exception of his view of the doctrines of Plato, being too florid, oratorical, sportive, and sometimes even wanton, for the gravity of philosophy. His style is a very peculiar one, abounding in far-fetched, tumid, and unusual forms of expression, and by no means remarkable for purity. We must not, however, suppose, as some have done, that the terms thus employed by him are of his own coining, since the greater part of them are found in the old grammarians, and he does not seem, therefore, to have employed any of them

without sufficient authority. (*Ruhnken, Pref. ad edit. Oudendorp*, p. 111, *seq.*) In his apology, however, which was intended for the atmosphere of the forum, he is free from much of this affectation of manner, and what Ruhnken calls his "*tumor Africanus*," and expresses himself, for the most part, with clearness and precision. His printed works have gone through upward of forty-three editions. The first, which was mutilated by the Inquisition, is very rare; it was printed at Rome, by order of Cardinal Bessarion, 1647. Among those which succeeded may be mentioned the editions of H. Stephens, 8vo, 1585; of Elmenhorst, 8vo, 1621; of Scriverius, 12mo, 1624; that in Usum Delphini, 2 vols. 4to, 1688. The best edition, however, is that of Oudendorp, *Lugd. Bat.*, 1786-1823, 2 vols. 4to, with prefaces by Ruhnken and Boscha. The "*Golden Ass*," or, to give its Latin title, *Metamorphoscôn, sive de Asino Auro*, libri xi., has been translated into almost all the modern European languages; and of the episode of Psyche there have been many separate editions and translations. Möller published a dissertation on the life and writings of Apuleius, Altdorff, 8vo, 1681. A list of all his productions is given in the *Biogr. Univ.*, vol. 2, p. 343, *seqq.*—Compare Bähr, *Gesch. Röm. Lit.*, vol. 1, p. 582.

APULIA, a country of Magna Græcia, lying along the coast of the Adriatic. We are led to infer, from Strabo's account of the ancient coast of Italy, that the name of Apulia was originally applied to a small tract of country situate immediately to the south of the Fren-tani. (*Strabo*, 283.) But whatever may have been the narrow confines of the portion of the country occupied by the Apuli, properly so called, we know that in the reign of Augustus the term Apulia was employed in a far more extended sense, including indeed the territories of several people much more celebrated in history than the obscure tribe above mentioned, but who sunk in proportion as this common name was brought into general use. It may be remarked, indeed, as a singular circumstance, that whereas, under the Romans, all former appellations peculiar to the different people who inhabit this part of the peninsula were lost in that of Apulia, the Greeks, to whom this name was unknown, should have given the same extension to that of Iapygia, with which the Romans, on the other hand, were entirely unacquainted. The term Iapygia appears to have been confined at first to that peninsula which closes the Gulf of Tarentum to the southeast, and to which the name of Messapia was likewise sometimes applied; but we find, at a later period, that Polybius gives to Iapygia the same extensions which the Roman historians and geographers assign to Apulia. The boundaries under which Apulia, in its greatest extent, seems to have been comprehended, were as follows: to the north this province was separated from the Ager Fren-tanus by the River Tifernus; to the west it may be conceived as divided from Samnium by a line drawn from that river to the Aufidus, and the chain of Mount Vultur; to the south, and on the side of Lucania, it was bordered by the river Bradanus. (*Cluver., Ital. Ant.*, 2, p. 1219.) Within these limits then we must place, with Polybius, Strabo, and the Latin geographers, the several portions of country occupied by the Daunii, Peucetii, and Messapii. In describing the boundaries of *Apulia Proper*, we must follow the authority of Strabo, as he is the only writer who has noticed the existence of a district under this specific name. He evidently conceives it to have been contiguous to the Ager Fren-tanus on the one side, and to Daunia on the other. (*Strabo*, 283.) Pliny likewise seems to confirm this arrangement, when he tells us (3, 11) that the Apulian Daunii extended from the river Tifernus to the Cerebus; though it must be observed, that Strabo appears to limit these Apuli to the south by the Lacus Urianus, now *Lago Varano*.

At this point, therefore, we may fix the confines of the Apuli and Daunii, and trace those of the latter and the Peucetii by a line drawn from the mouth of the Aufidus to Silvium, now *Guragnone*, in the Apennines, so as to include Cannæ and Canusium within the Daunian territory.—Apulia was famous for the excellence of its wool, and particularly the district of Luceria. (*Strabo*, 284.—*Hor.*, *Od.*, 3, 15.—*Plin.*, 3, 11.—*Ptol.*, p. 6.)—The old Latin traditions speak of Daunus, a king of the Apulians, who was expelled from Illyria, and retired to this part of Italy. According to the tradition which conducts the wandering heroes of the Trojan war to Italy, Diomedes settled in Apulia, was supported by Daunus in a war with the Messapians, whom he subdued, and was afterward treacherously killed by his ally, who desired to monopolize the fruits of the victory. Roman history informs us of no other Apulian kings, but mentions Arpi, Luceria, and Arpinum, as important cities. The Aufidus, a river of Apulia, has been celebrated by Horace, who was born at Venusia, a city in this territory. The second Punic war was carried on for a considerable period in Apulia. *Puglia*, the modern name, is only a melancholy relic of the ancient splendour which poets and historians have celebrated. It now supports more sheep than men. As regards the early settlement of Apulia, compare *Niebuhr, Rom. Hist.*, vol. 1, p. 122, *seqq.*, *Cambridge transl.*—*Wachsmuth's Rom. Hist.*, § 61.—*Micali, Storia degli Antichi Popoli Italiani*, vol. 1, p. 339.—*Cramer's Ancient Italy*, vol. 2, p. 264, *seqq.*

AQUA, a term joined to a large number of proper names, and serving to indicate the sources of rivers, small streams, water-courses, aqueducts, &c. The following are most worthy of mention:—I. Antiqua, near the modern village of *Altewasser* in *Silesia*. It was famed for its chalybeate properties.—II. Belletta, now *Aigubellette*, or *Aigubelle*, in Savoy, on the *Arco*.—III. Claudia, an aqueduct built by the Emperor Claudius, A.U.C. 880, and conveying water from the Anio to Rome.—IV. Crabra, a small river running from Tusculum to Rome, and emptying into the Tiber, to the east of the Palatine Hill.—V. Marcia, an aqueduct commenced by the prætor Marcus Titius, about 608 A.U.C., and finished by Marcus Rex in 610. It passed near Tibur, and through the country of the Peligni and Marsi, and supplied Rome with its best water. (*Plin.*, 31, 3).—VI. Tepula, springs near Tusculum, ten miles southeast of Rome. Their water was conveyed by an aqueduct to the Capitoline Hill, about 627 A.U.C., and in 719 was united with the Aqua Julia, a small river near the modern *Marino*, by Agrippa.—The plural form *Aquæ* is also frequently joined to proper names, to indicate places in the neighbourhood of warm springs, &c. Thus we have, I. *Aquæ Badenæ*, a city in Germany, now *Baden*, on the Rhine.—II. *Pannoniæ*, a city in Pannonia Superior, now *Baden* in Austria, on the river *Schwöchat*, three miles southeast of Vienna.—III. *Allobrogum*, a city of the Allobroges in Gallia Narbonensis, now *Aiz*, in the department of Mont Blanc, two miles and a half to the north of *Chambery*.—IV. *Bilbitanorum*, a city of Hispania Tarraconensis, to the west of Bilbilis. It is now *Alhama*, on the *Xalon*, in Aragon.—V. *Calentes*, a town of the Arverni in Gaul, now *Chaudes Aigues*.—VI. *Calidæ*, a city of the Belge, in Britain, now *Bath* in Somersetshire.—VII. *Flavia*, a town in Hispania Tarraconensis, supposed to have been situate among the Callaici Bracarii. It is now the Portuguese *Villa Chaves*, twelve miles from *Braganza*.—VIII. *Mattiacæ*, a town of the Mattiaci in Germany, now *Wirs-baden*, the chief city of the Duchy of Nassau.—IX. *Sextia*, a city of the Salysæ, in Gallia Narbonensis, to the north of Massilia, founded by the consul Sextius Calvinus, about A.U.C. 630. It was also called *Colonia Julia*, after Julius Cæsar, and *Colonia Julia Au-*

gusta, after Augustus. It is now *Aix*, eight miles southeast of Avignon. In its vicinity Marius defeated the Ambrones and the Teutones.

AQUEDUCTUS, an aqueduct. Mention of these is frequently made in the Roman writers. Some of them brought water to the capital from more than the distance of sixty miles, through rocks and mountains, and over valleys, supported on arches, in some places above 109 feet high, one row being placed above another. The care of them originally belonged to the censors and aediles. Afterward certain officers were appointed for that purpose by the emperors, called *curatores aquarum*, with 720 men paid by the public, to keep them in repair. These persons were divided into two bodies; the one called *Familia Publica*, first instituted by Agrippa, under Augustus, consisting of 260 men; the other *Familia Caesaris*, of 460, instituted by the Emperor Claudius. The slaves employed in taking care of the waters were called *Aquarii*. The construction of aqueducts is treated of by Vitruvius and Pliny, and their description is curious, not only as giving the methods used by the ancients in those stupendous works, but as indicating a knowledge of some hydrodynamical laws, the discovery of which is usually assigned to a much later period. Frontinus, also, a Roman author, who had the superintendence of the aqueducts in the reign of Nerva, has left a treatise on these erections. From his enumeration, there were nine aqueducts which brought water to Rome in his time. The water of these varied in its qualities, that of some being preferred for drinking, of others for bathing, for irrigating the gardens, or cleansing the sewers. The best drinking-water they brought into Rome was the *Aqua Marcia*, being most highly prized, according to Pliny, for its coldness and salubrity. The aqueduct at Nemasus, the modern *Nismes*, is probably one of the earliest constructed by the Romans out of Italy. Its origin is attributed to Agrippa. Aqueducts, however, became eventually common throughout the whole Roman empire, and many stupendous remains still exist to attest their former magnificence. (Consult *Stuart's Dictionary of Architecture*, vol. 1, s. v.)

AQUILA, a native of Sinope in Asia Minor. He first applied himself to the study of mathematics and architecture, and the Emperor Hadrian, according to Saint Epiphanius, made him a superintendent of public buildings, and gave him in charge the restoration and enlargement of Jerusalem, under its new name of *Ælia Capitolina*. This commission afforded him an opportunity of becoming acquainted with Christianity, which he accordingly embraced, and received the rite of baptism. Becoming subsequently addicted, however, to judicial astrology, he was excommunicated, and then attached himself to Judaism. Aquila is rendered famous by his *Greek version of the Old Testament*, which he published A.D. 138. It is the first that was made after the Septuagint translation, and appears to have been executed with great care, notwithstanding what Buxtorf urges against it, who denies to its author, on very feeble grounds, a thorough acquaintance with the Hebrew tongue. Aquila's method was to translate word for word, and to express, as far as this could conveniently be done, even the etymological meaning of terms. Although his version was undertaken with the view of opposing and superseding that of the Septuagint, of which last the churches made use after the example of the apostles, still the ancient fathers found it in general so exact, that they often, in preference, drew their texts from it. St. Jerome, who had at first censured it, afterward praised its exactness. The Hellenistic Jews preferred it also for the use of their synagogues. Some fragments of it are preserved in the Hexapla of Origen. Aquila joined to a second edition of his version some Jewish traditions which he had obtained from the Rabbi Akiba, his preceptor. This edition was still more fa-

vourably received by the Hellenistic Jews than the previous one had been. The Emperor Justinian, however, interdicted the reading of it, because it only made the Jews more stubborn in their error. (*Biogr. Univ.*, vol. 2, p. 345, seq.)

AQUILEIA, I. a celebrated city of Italy, in the territory of Venetia, between the Alsa and Natiso, and about seven miles from the sea. It appears to have been first founded by some Transalpine Gauls about 187 B.C.; but being soon after taken possession of by the Romans, it was made a Latin colony five years after its establishment. (*Liv.*, 39, 22; 45, 54.—*Id.*, 40, 54.) The earliest author that mentions Aquileia is Polybius, who, in a fragment preserved by Strabo (208), speaks of it as having some valuable gold-mines in its neighbourhood. Eustathius, in his commentary on Dionys. Perieg., asserts that its name was derived from the Latin word *Aquila*, as denoting the legionary standard of the Romans, who had been encamped here. Aquileia soon became the bulwark of Italy on its north-eastern frontier. It was already an important military post in the time of Cæsar (*B. Civ.*, 1, 2), and continued to increase in prosperity and consequence till the fall of the Roman empire. In Strabo's time it had become the great emporium of all the trade of Italy with the nations of Illyria and Pannonia; these were furnished with wine, oil, and salt provisions, in exchange for slaves, cattle, and hides. The passage of Mount Oera, the lowest point of the Julian or Carnic Alps, was easy for land-carriage; and at Nauportus on the other side, a navigable stream conveyed vessels to the *Saave*, and from that river into the *Danube*. (*Strabo*, 214.—*Id.*, 207.—*Mela*, 2, 4.—*Sueton.*, Aug., 20.—*Id.*, Tib., 7.—*Id.*, *Vesp.*, 6.—*Tac.*, *Hist.*, 2, 46, and 85, &c.) Ausonius assigns to Aquileia the ninth place among the great cities of the empire. It withstood successfully a severe siege against Maximinus, who, being unable to take the place, was slain by his own soldiers. (*Herodian*, 8.) But it could not hold out against the fury of Attila; its resistance served only to increase the savage ferocity of the conqueror, who caused it to be sacked and razed to the ground. (*Cassiodor.*, *Chron.—Procop.*, *Vand. Rer.*, 1.—*Freulif.*, *Chron.*) The port of Aquileia was situate at the mouth of the Natiso (*Plin.*, 3, 18), and is now called *Porto di Grado*. The modern *Aquileia* stands near the ruins of the ancient city. (*Cramer's Ancient Italy*, vol. 1, p. 128.)—II. A town of Etruria, marked in the ancient Itineraries as the first stage from Florentia or Florence. It is supposed to have been in the immediate vicinity of Incisa. (*Cluv.*, *Ital. Ant.*, 1, 570.—*Cramer's Ancient Italy*, vol. 1, p. 214.)

AQUILIUS, I. **NEPOS**, Manius, a Roman consul, and colleague of Marius, who was intrusted with the war against the slaves in Sicily. This war was continued during the succeeding year, when Aquilius, as proconsul, still held the command. In a conflict with the foe, the two commanders, it is said, agreed to decide the affair by single combat. Aquilius, being a man of great strength, laid his antagonist dead at his feet by a single blow; and the Romans thereupon rushing in, gained the victory after a severe conflict. Aquilius was honoured with an ovation. After this he was accused of extortion, but acquitted on account of his successful operations in Sicily. Being subsequently sent into Asia against Mithradates, he was defeated by that monarch in Bithynia, and, having been afterward treacherously delivered into his hands, was put to death with every circumstance of ignominy. Mithradates is said to have even poured melted gold down his throat in token of, and as a punishment for, his cupidity. (*Liv.*, *Epit.*, 77.—*Appian*, *Bell. Mithrad.*, 21.—*Cic.*, *Agrar.*, 2, 30.)—II. Gallus, a Roman lawyer, who flourished about 65 B.C. He was a pupil of Scævola's, and was intimate with Cicero, having been a colleague of his in the quaestorship. Cicero represents him as a man of

acuteness, and of ready talent in replying to an opponent. He wrote a treatise, "*de dolo malo*," which Cicero eulogizes very highly; another, "*de postumorum institutione*;" a third, "*de stipulatione*," &c. (*Cic., Brut.*, 42.—*Id.*, *de Off.*, 3, 14, &c.)—III. Sabinus, a Roman lawyer, who flourished in the third century of our era. His wisdom and acquirements gained for him the appellation of *Cato*. He was elected consul A.U.C. 214, and again in 216. According to some, he was the father or brother of Aquila Severa, the vestal virgin whom Heliogabalus compelled to become his wife. None of his works have reached us. (*Lamprid., Vit. Heliogab.—Cassiod., Chron.—Rutil., in Vit. Juriscons.*)

AQUILONIA, I. a city of Samnium, on the Volscian frontier, about 20 miles from Coninium, and the same distance from Bovianum. Its site is now occupied by the little town of *Agnone*, near the source of the *Trigno*. (*Cramer's Anc. Italy*, vol. 2, p. 229.)—II. Another city of Samnium, in the territory of the Hirpini, nearly midway between Beneventum and Venusia. Its site corresponds to that of the modern *Lacedogna*. (*Plin.*, 3, 11.—*Ptol.*, p. 67.)

AQUINUM, I. a town of Cisalpine Gaul, south of Mutina, or *Modena*. (*Plin.*, 3, 15.) It is placed by Cluverius at the modern *Acquario*.—II. A city of Latium, on the Latin Way, a little beyond the place where the road crosses the Liris and Melfis. It is now *Aquino*. Both Strabo (237) and Silius Italicus (8, 404) describe it as a large city. Aquinum was the birthplace of Juvenal, as that poet himself informs us. (*Sat.*, 3, 318.) Here also was born the Emperor Pescennius Niger, and in modern times the celebrated Thomas Aquinas. The place was famous for its purple dye. (*Horat., Ep.*, 10, 26.)

AQUITANIA, a country of Gaul between the Garumna or *Garonne*, and the Pyrenees. As it was less than either of the other two divisions of Gaul, Augustus extended it to the Ligeris or *Loire*. (*Vid Gallia*.) The Aquitani, according to Strabo (190), differed from the Gallic race both in physical constitution and in language. They resembled, he tells us, the Iberians rather than the Gauls. According to Cæsar, the Aquitani, besides a peculiar idiom of their own, had also peculiar institutions. Now, historical facts inform us that these institutions bore, for the most part, the Iberian character; that the national attire was Iberian; that there were the strongest ties of amity and alliance between the Aquitanic and Iberian tribes. We find, then, an accordance between historical proofs and those deduced from an examination of languages, to warrant the belief that the Aquitani were of Iberian extraction. (Consult *Thierry, Hist. des Gaul.*, vol. 1, p. xxiii., *Introd.*—*Id.*, vol. 2, p. 11, *seqq.*)

ARA LUGDUNENSIS, an altar erected to Augustus, at the confluence of the Arar and Rhone, near the city of Lugdunum or *Lyons*, by sixty Gallic communities. It was reared after the tumult excited in Gaul by the proclaiming of the census had been quelled by Drusus. (*Luc., Epit.*, 137.—*Strab.*, 192.) The spot became famous under Caligula for the literary contests which took place there. A crowd of orators and poets flocked to the scene from the remotest quarters of the empire, notwithstanding the severity of the regulations which are said to have prevailed here. The vanquished were compelled to bestow rewards upon the victors, and compose pieces in their praise; while those whose productions showed least talent were obliged to efface their own writings with a sponge or with the tongue, or else, as an alternative, to submit to be scourged, and then cast into the neighbouring stream. (*Sueton., Calig.*, 20.—*Dio Cass.*, 54, 32.—*Juv., Sat.*, 1, 44.) The spot was called by the writers of the middle ages *Atlanacum*, and is now the point of *Annai*. (*Lemaire, ad Juv. l. c.*)

ARABIA, a large country of Asia, forming a peninsula

between the Arabian and Persian Gulfs. Its length, from the Cape of *Babelmandeb* to the extreme angle on the Euphrates, is about 1800 British miles, and its mean breadth 800. The Arabians recognise for their ancestors Joktan, or Khatan, the son of Eber, and Ishmael, the son of Abraham. Arabia was called by the inhabitants of Palestine, the Eastern, and by the Babylonians, the Western, country. Hence the Arabians were sometimes denominated Orientals, and sometimes the people of the West. (2 *Chron.*, 9, 14.—*Jer.*, 3, 2.) The derivation, moreover, commonly assigned to the term *Arab* is in accordance with this latter idea, making it signify an inhabitant of the West, as Arabia lay to the west of Upper Asia. (Consult, however, *Wahl, Vorder und Mittel Asien*, vol. 1, p. 327, *in not.*, where other explanations are given.)—The Arabs anciently denominated themselves, and do to this day, by either of these names. Megasthenes and Ptolemy divided the country into the Happy, *Petræa*, and the Deserted; an arrangement unknown, however, to the inhabitants of the east. Arabia Felix, or the Happy, derived this appellation from its rich produce. This tract is a peninsula, which is so bordered by the Red Sea (more properly called the Arabian Gulf), by the Mare Erythræum, and by the Persian Gulf, that it would be perfectly surrounded, were a line drawn from the inland extremity of the Persian Gulf to port Ailan or *Ælan*, situate near the eastern extremity of the Red Sea. Arabia Petræa was so called, either from its stony character (*πέτρα*, "a rock" or "stone"), or, what is far more probable, from an ancient fortified emporium, called *Petra*. It was bounded on the east by Arabia Deserta, on the west by Egypt and the Mediterranean, on the south by the Red Sea, which here divides and runs north in two branches, and on the north by Palestine. Idumæa, otherwise called *Seir*, is the northeastern part of Arabia Petræa. Arabia Deserta is that tract which has Arabia Felix on the south, Babylonia and the Euphrates on the east, the Euphrates and Syria on the north, and Gilead on the west. Instead, however, of the division just given, the more natural one is that which distinguishes the coast, covered with aloes, manna, myrrh, frankincense, indigo, nutmegs, and especially coffee, from the interior, consisting of a desert of moving sand, with thorns and saline herbs. The climate is very various. Regions where it rains half the year alternate with others where dew supplies the place of rain for the whole season. The greatest cold prevails on high places, and the most oppressive heat in the plains. Damp winds succeed to the dry simoom, which is as dangerous to life as the harmattan and khamseen in Africa. The soil consists of sandy deserts and the most fruitful fields. Wheat, millet, rice, kitchen vegetables, coffee (which grows on trees in Arabia, its home, and on bushes in America, the plants being kept low for the sake of gathering their fruit more easily), manna, sugar-cane, cotton, tropical fruits, senna-leaves, gums, aloes, myrrh, tobacco, indigo, odorous woods, balsam, &c., are the rich products of Arabia. There are also precious stones, iron, and other metals (gold excepted, which the ancients, however, seem to have found pure in rivers and in the earth). The animals are mules, asses, camels, buffaloes, horned cattle, goats, noble horses, lions, hyænas, antelopes, foxes, apes, jerboas; birds of all sorts, pelicans, ostriches, &c.; esculent locusts, scorpions, &c.—The Arabians are still, as in the most ancient times, Nomades, of patriarchal simplicity. The older Arabian historians understand by Arabia only *Yemen* (Arabia Felix). *Hedsjaz* (the rocky) they regard as belonging partly to Egypt, partly to Syria; and the rest of the country they call the *Syrian Desert*. The princes (*tobtai*) of this land were anciently entirely of the race of Khatan, to which belonged the family of the Homeyrites, who ruled over Yemen two thousand years. The Arabians of

Yemen and a part of the desert of Arabia lived in cities, and practised agriculture: they had commerce also with the East Indies, Persia, Syria, and Abyssinia. The rest of the population then, as now, led a wandering life in the deserts.—The religion of the Arabians, in the time of their ignorance (as they call the period before Mohammed), was, in general, adoration of the heavenly bodies, or Sabaism; varying much, however, in the different tribes, each of whom selected a different constellation as the highest object of worship.—For a thousand years the Arabians manfully defended the freedom, faith, and manners of their fathers against all the attacks of the Eastern conquerors, protected by deserts and seas, as well as by their own arms. Neither the Babylonian and Assyrian, nor the Egyptian and Persian kings, could bring them under their yoke. At last they were overcome by Alexander the Great; but immediately after his death, they took advantage of the disunion of his generals and successors to recover their independence. At this period the northern provinces of the country were bold enough to extend their dominion beyond the limits of Arabia. The Arabian Nomades, especially in winter, made deep inroads into the fertile *Irak* or Chaldæa. They finally conquered a portion of it, which is hence still called *Irak Araby*. Thence the tribe of Hareth advanced into Syria, and settled in the country of Gassan, whence they received the appellation of Gassanides. Three centuries after Alexander, the Romans approached these limits. The divided Arabians could not resist the Roman arms everywhere successfully; their country, however, was not completely reduced to a province; the northern princes, at least, maintaining a virtual independence of the emperors. The old Homeyrites in Yemen, against whom an unsuccessful war was carried on in the time of Augustus, preserved their liberty. Their chief city, Saba, was destroyed by a flood. With the weakness of the Roman government, the struggle for absolute independence increased, which a union of all the Arabian tribes would have easily gained; but, weakened and scattered as they were, they spent several centuries in this contest, during which the mountainous country of the interior (Nedschid) became the theatre of those chivalrous deeds so often sung by Arabian poets, till a man of extraordinary energy united them by communicating to them his own ardour, and union was followed by augmented force.—Christianity early found many adherents here, and there were even several bishops who acknowledged as their metropolis Bosro in Palestine, on the borders of Arabia. Yet the original worship of the stars could not be entirely abolished. The former opposition of the Arabians to the despotism of Rome drew to them a multitude of heretics, who had been persecuted in the orthodox empire of the East, especially the Monophysites and the Nestorians, who were scattered through all the East; and the religious enthusiasm of those exiles rekindled the flame of opposition. The Jews also, after the destruction of Jerusalem, became very numerous in this country, and made many proselytes, particularly in Yemen. The last king of the Homeyrites (Hamjarites) was of the Jewish faith, and his persecutions of the Christians, A. D. 502, involved him in a war with the King of Ethiopia, which cost him his life and his throne. To the indifference excited by so great a variety of sects is to be referred the quick success of Mohammed in establishing a new religion. He raised the Arabians to importance in the history of the world, and with him begins a new epoch in the history of this people. (*Jahn's Bibl. Archaeol.*, p. 8, *Upham's transl.*—*Encyclop. Americ.*, vol. 1, p. 316, *seqq.*).

ARABICUS SINUS, that part or branch of the Mare Erythraum which interposes itself between Egypt and Arabia. It is now called the *Red Sea*. The meaning of this modern appellation must be looked for, not in

any colour of its waters or sands, but in the name of Idumea (or the land of Edom), whose coasts this sea touches on the north. Edom, in the Hebrew tongue, signifies *red*, and was the name given to Esau for selling his birthright for a mess of *red* pottage. This country, which his posterity possessed, was called after his name, and so was the sea which adjoined it. The Greeks, however, not understanding the reason of the appellation, translated what is in Hebrew the Sea of Edom, by ἐρυθρὰ θάλασσα. Thence comes the Latin form *Mare rubrum*, and the modern name *Red Sea*. It is otherwise called *Golfo di Mecca*. (Compare *Well's Sacred Geogr.*, No. 160.—*Calmet's Dict.*, vol. 5, p. 63, *Eng. transl.*—*Bähr, ad Ctes.*, p. 359.) The shores of this gulf consist principally of limestone rocks. The bottom is covered with a carpet of greenish coral, and, in calm weather, when it comes into view, is not unlike a series of verdant submarine forests and meadows. The coral, however, is inferior in quality to that of the Mediterranean. (*Plin.*, 32, 2.) The beautiful *fuci* attracted the admiration of antiquity (*Artemid.*, *ap. Strab.*, 766), and procured for the Arabian Gulf in Hebrew the name of *Bahr Sooph*, i. e., "the sea of algae." (*Malte-Brun*, 2, 84, *Brussels ed.*)

ARABUS, ARÆBIS, or ARBIS, a river of Gedrosia, near its eastern boundary, running into the Indian Ocean, now the *Araba* or *Il-Mend*. (*Arrian*, 6, 21.)

ARACCA and ARECCA, a city of Susiana, east of the Tigris, now *Wasit*. It has attracted the attention of the learned by reason of the affinity of its name with that of *Erech*, mentioned in the Old Testament among the cities constructed by Nimrod. (*Ammian. Marcell.*, 23, 21.—*Bochart, Geogr. Sacr.*, col. 236.—*Michælis, Spielg.*, vol. 1, p. 220, *seqq.*)

ARACHNÆUS MONS, a chain of mountains in Argolis, running along the upper coast in a southeastern direction. In the time of Inachus it was called Sappysclaton. (*Pausan.*, 2, 25.—Compare *Siebelis, ad loc.*) Hesy chius reports that it also bore the name of Hyssclinius (*s. v.* Ὑσσέλιον.—Compare *Steph. Byz.*, *s. v.* Ἀραχναίων). Mount Arachnæus is mentioned by Æschylus (*Agam.*, 299) as the last station of the telegraphic fire by which the news of the capture of Troy was transmitted to Mycenæ. The modern name is *Sophico*, according to the latest maps. Part of this chain, communicating with the mountains of Nemea and Phlius, bore the name of Celossa. (*Strabo*, 382.—*Cramer's Ancient Greece*, vol. 3, p. 282.)

ARACHNE, a Mæonian maiden, who was so proud of her skill in weaving and embroidering, in which arts Minerva had instructed her, that she ventured to deny her obligations to the goddess, and even challenged her to a trial of skill. Minerva, assuming the form of an old woman, warned her to desist from her boasting; but, when she found that her admonitions were vain, she resumed her proper form, and accepted the challenge. The skill of Arachne was such, and the subjects she chose (the love-transformations of the gods) were so offensive to Minerva, that she struck her several times in the forehead with the shuttle. The high-spirited maiden, unable to endure this affront, hung herself, and the goddess, relenting, changed her into a spider (ἀράχνη).—The name of this insect, most probably, gave rise to the fable, though the story itself would seem to be of Oriental origin, the art of embroidering having come into Western Asia from Babylonia and the countries adjacent. (*Orid.*, 6, 1, *seqq.*—*Keightley's Mythology*, p. 122.—*Creuzer, Symbolik*, vol. 2, p. 749.)

ARACHOSIA, a province of the Persian empire, lying to the west of the river Indus, and north of Gedrosia. The Greek writers usually call the inhabitants *Arachoti* (Ἀραχωῖται), sometimes *Arachotæ* (Ἀραχωτᾶι *Dion. Perieg.*, 1096). Arachosia was of considerable importance as a frontier province, and had always, therefore, a satrap or governor of its own, both

before and after the time of Alexander. Through this country, moreover, lay the nearest and safest route to India. Syburtius, the Greek governor after Alexander's death, cultivated friendly relations with the Indian monarch Sandrocottus, and Megasthenes was often sent by him to the court of the latter. (*Arrian*, 5, 6.) The ancient Arachosia answers to the modern *Arokhage*. (*Mannert*, 5, pt. 2, p. 76.)

ARACHŌTÆ and ARACHŌTĪ, the inhabitants of Arachosia. (*Vid.* Arachosia.) They are styled Ἀραχῳταῖοι, for their linen attire. (*Dionys. Perieg.*, 1096.—Compare *Eustath.*, ad loc.—*Arrian*, 3, 23.)

ARACHŌRUS, I. or Arachosia, the chief city of Arachosia, called also Cophe (Κωφή), and said to have been built by Semiramis. It did not lie, as some remark, on the river Arachotus, but a considerable distance east of it, on a road leading in a northern direction towards the modern *Candahar*. (*Mannert*, 5, pt. 2, p. 80.)—II. A river of Arachosia, rising in the hills northeast of the modern *Gazni*, and losing itself in a marsh about four miles to the south of *Candahar*. Its modern name, according to Wahl, is *Naodah*. D'Anville, however, makes it *Kare*. (*Isid.*, *Charac. ap. Geogr. Gr. Min.*, vol. 2, p. 8.—*Plin.*, 6, 23.)

ARACHTHUS, ARÆTHUS, or ARÆTHON, a river of Epirus, flowing from that part of the chain of Pindus which belonged to the ancient Tymphæi, and running by Ambracia into the Ambracian Gulf. Lycophron (v. 409), who calls it Aræthos (Ἀραθός), speaks of it as the boundary of Greece on this side. Ambracia, therefore, being always accounted a city of Greece Proper, must have stood on its left bank. We cannot, therefore, admit, with Pouqueville, that this city occupied the site of *Regous*, since that ruined fortress is situated on the right bank of the *Laro* river, which that writer considers to be the Arachthus. That the Arachthus is a considerable stream, may be inferred from Livy, who relates (43, 21) that Perseus, king of Macedonia, was detained on its banks by high floods, on his way to Acamania. (*Cramer's Ancient Greece*, vol. 1, p. 151, *seqq.*)

ARACYNTHUS, I. a chain of mountains in Ætolia, running in a southeasterly direction from the Achelous to the Evenus. Its present name is Mount *Zygos*. Pliny (4, 1) and other writers, with less propriety, ascribe Aracynthus to Acamania.—II. A mountain of Ætolia, sacred to Minerva, whence this goddess received the appellation of Aracynthia. (*Rhian.*, *ap. Steph. Byz.*, s. v. Ἀράκυνθος.) It was situate not far from Thebes.

ARADUS, I. a city on an island of the same name, on the coast of Phœnicia. According to Strabo, it was founded by a band of exiles from Sidon. The island on which it stood was a mere rock, not quite seven stadia in circumference; and hence, as the population of the city increased, they were compelled to erect edifices many stories in height, to make amends for the limited area of the place. The position of Aradus was well adapted for commerce. The modern name of the island is *Ruad*, according to Pococke (vol. 2, p. 294), and traces still remain of the cisterns anciently cut in the rock to hold the rain-water for the use of the inhabitants. (*Mannert*, *Geogr.*, vol. 6, pt. 1, p. 398, *seqq.*)—II. An island, according to some, on the coast of Arabia, in the Persian Gulf. It is supposed to mark, in part, the original settlements of the Phœnicians previous to their establishing themselves on the coast of the Mediterranean. Much doubt exists, however, with regard to the accuracy of this statement; and Mannert, among others, thinks that the name Aradus, as designating an island in this quarter, is indebted for its existence to the love of theory alone. (*Mannert*, *Geogr.*, vol. 6, pt. 1, p. 154.—Compare, however, *Michælis*, *Spicileg.*, vol. 1, p. 166, *seqq.*, and *vid.* *Vidæa*.)

ARÆ. *Vid.* Ægimurus.

ARÆ PHILÆNORUM. *Vid.* Philænî.

ARAR, a very slow, smooth-running river of Gaul. It rises near Mons Vogesus, and, after a southern course, falls into the Rhodanus at Lugdunum. (*Cæs.*, *B. G.*, 1, 12.—*Plin.*, 3, 4.) Ammianus Marcellinus, who flourished towards the close of the fourth century of our era, first calls the Arar by the name of Saucona, speaking of this latter as a common appellation on the part of the inhabitants in that quarter, "*Ararim, quem Sauconam appellant*" (15, 11). Gregory of Tours, at a later period, styles it *Saugona*; and from this comes the modern French appellation *Saône*. (Compare *Le-maire*, *Index Geogr.*, ad *Cæs. Comm.*, p. 190.)

ARATĒA, a festival celebrated at Sicyon, upon the birthday of Aratus, and in memory of that distinguished patriot. (*Plut.*, *Vit. Arat.*, 53.)

ARĀTUS, I. a Greek poet, born at Soli (Pompeiiopolis) in Cilicia. He flourished about 270 B.C., was a favourite of Ptolemy Philadelphus, and a firm friend to Antigonus Gonatas, son of Demetrius Poliorcetes. He was also a contemporary of Theocritus, who makes mention of him in the sixth and seventh Idyls, and was on very friendly terms with him. At the instance of Antigonus, Aratus composed an astronomical poem, entitled *Φαινόμενα*, "*Appearances*," and treating of the heavenly bodies, their names, movements, &c. The materials for this production he is said to have principally derived from the works of Eudoxus of Cnidus, who wrote two treatises on the celestial bodies and phenomena, one entitled Ἑνοπτρον, or "*the Mirror*," and the other *Φαινόμενα*. (*Buhle*, *de Arat. Script. Comment.*, p. 466.) What other writers he followed besides Eudoxus, cannot now be ascertained. Salmassius, indeed, insists that he did not follow Eudoxus at all, but Phamus or Meton (*Salm.*, ad *Solin.*, p. 822); this opinion, however, is refuted by Petavius. (*Doctr. Temp.*, 6, 9.) Aratus was the author also of another poem, entitled *Διοσκειῖα*, or "*Signs from Jove*," the materials for which he borrowed from Hesiod, the meteorological writings of Aristotle, and Theophrastus on the signs of the winds. Some of the ancients, and several of the moderns, too, have united the *Φαινόμενα* and *Διοσκειῖα* into one poem, probably because, in the latter, he draws his signs indicative of changes in the atmosphere from the relative positions of the sun, moon, and constellations of the zodiac as regards the earth. They are, however, distinct productions, and are regarded as such by the best ancient and modern authorities. (*Schol. ad Diosc. inat.*—*Schol. ad Aristoph. Pac.*, 1086.—*Vitrur.*, 9, 7.—*Buhle*, *ibid.*, p. 462.)—In the two poems just referred to, Aratus gives us, in correct and rather elegant verse, a general view of what was then known of the heavens, with their signs, appearances, &c., although it is evident, both from ancient authority as well as from the poem itself, that he was not a professed astronomer, or even very accurately acquainted with the principles of the science. (*Cic.*, *de Orat.*, 1, 16.—*Buhle*, p. 467.) Ovid passes a high eulogium on Aratus, "*cum sole et luna semper Aratus erit*" (*Amor.*, 1, 15); but this exaggerated compliment, and the admiration of Ovid, were very probably owing to the circumstance of no other poet's having taken the astronomic sphere for his theme prior to Aratus. (*Buhle*, p. 471.) The truth is, the subject matter of both poems is far from being congenial to poetry, as is well remarked by Quintilian, who adds of Aratus himself, "*sufficit tamen operi, cui se parem credidit*" (10, 1, 55). As one proof of the consideration which Aratus enjoyed, we may cite the monument which his compatriots erected to his memory, and which became famous by reason of a physical phenomenon that Mela mentions. ("*Iusta in parvo tumulo Arati poeta monumentum, ideo referendum quia, ignotum quam ex causam, jacta in id saxa dissiliant*," 1, 13.) Aratus, moreover, is the writer to whom St. Paul refers in his speech before the Are-

opagus (*Acts*, 17, 28), a circumstance which entitled the poet to great favour among the fathers of the church, although it is evident that the Apostle makes no allusion to his poetic merit. M. Delambre remarks, in speaking of Aratus, that he "has transmitted to us almost all that Greece at that time knew of the heavens, or, at least, all that could be put into verse. The perusal of Autolyeus or Euclid gives more information on the subject to him who wishes to become an astronomer. Their notions are more precise and more geometrical. The principal merit of Aratus is the description he has left us of the constellations; and yet, even with this description to aid us, one would be much puzzled to construct a celestial chart or globe." (*Delambre, Hist. de l'Astronomie Ancienne*, vol. 1, p. 74.)—The two poems of Aratus were thrice translated into Latin verse, first by Cicero, secondly by Germanicus, of the line of the Cæsars, and thirdly by Avienus. Cicero's translation is lost, with the exception of some fragments. The translation, or, rather, imitation of the *Phænomena* by Germanicus, and his commencement of the *Dioscena*, as well as the version of Avienus, remain to us. Virgil, also, in his *Georgics*, is under many obligations to our poet. Although Aratus has been accused of possessing but a slight acquaintance with the subject on which he treats, still a number of mathematicians united themselves with the grammarians in commenting on his work. Many of these commentaries are lost: we still have, however, four remaining; one by Hipparchus of Nicæa, another by Achilles Tatius; the other two are anonymous, for those are in error who attribute one of them to Eratosthenes. Aratus wrote many other works, which have not come down to us. They treated of physical, astronomical, grammatical, critical, and poetic themes, and a list of them is given by one of his editors, Buhle (vol. 2, p. 455, *seqq.*).—The best editions of this poet are, that of Buhle, *Lips.*, 1793–1801, 2 vols. 8vo, and that of Matthiæ, *Francf.*, 1817–1818. We have also a German version by J. H. Voss, *Heidelb.*, 1824, published with the Greek text and illustrations.—II. A celebrated Grecian patriot, born at Sicyon, B.C. 273. When he was but seven years of age, his father Clinias, who held the government of Sicyon, was assassinated by Abantidas, who succeeded in making himself absolute. Aratus took refuge in Argos, where he was concealed by the friends of the family, and where he devoted himself with great success to physical exercises, gaining the prize in the five exercises of the pentathlon. After some revolutions and changes of rulers at Sicyon, the government came into the hands of Nicocles, when Aratus, then hardly twenty years of age, formed the project of freeing his country, and, having assembled some exiles, surprised the city of Sicyon. The tyrant having fled, Aratus gave liberty to his fellow-citizens, and induced them to join the Achean league, still as yet feeble, and only in the twenty-fourth year of its existence. The return of the exiles, however, occasioned much trouble at Sicyon; those who had purchased their property refused to restore it, and Aratus was compelled to have recourse to Ptolemy Philadelphus, to whom he had rendered some services, and who gave him 150 talents, with which he indemnified the new possessors, and restored their property to his fellow-exiles. Being chosen, for the second time, Prætor of the Achæans, 244 B.C., he seized by surprise on the citadel of Corinth, which Antigonus had guarded with great care as one of the keys of the Peloponnesus, and prevailed upon the Corinthians to join the confederacy. Similar success attended his efforts in other quarters, and many of the most important states and cities of southern Greece became through his means members of the league. Some time after, the Ætolians, jealous of the prosperity of the Achæans, and reckoning on the aid of Antigonus, the

guardian of Philip, formed an alliance with the Lacedæmonians, the natural enemies of the Achæan league. Aratus marched to the aid of those cities of Arcadia which belonged to the confederacy, and which were menaced by Cleomenes, king of Sparta; but he was defeated in three successive engagements, and found himself obliged to have recourse to Antigonus. In order to induce this prince to lend aid, he surrendered to him, on his expressly requiring it, the citadel of Corinth; and Antigonus, on having come with an army, was appointed generalissimo of the Achæan troops. Plutarch pretends that Cleomenes had offered peace to the Achæans, on condition of being appointed commander of their forces, and that Aratus opposed him through jealousy; and he even reproaches him for preferring a barbarian to a descendant of Hercules. But the truth was, Aratus could not hesitate between Antigonus, a humane prince, and a religious observer of his oaths, and Cleomenes, who had now become a tyrant over his own country, to which he wished to make all the Peloponnesus subject. The aid of Antigonus changed entirely the aspect of affairs; and this prince having eventually entered into Laconia, compelled Cleomenes, after a defeat at Sellasia, to flee from the country, took Sparta, and restored to it the laws which Cleomenes had abrogated. Antigonus always showed great consideration for Aratus, and governed himself by his counsels in what related to the affairs of Greece. Philip, his nephew and successor, did the same during the early part of his reign; but in process of time a less friendly feeling arose between the latter and Aratus, as the evil qualities of Philip began to display themselves, and the Grecian patriot eventually fell a victim to the unprincipled monarch, who had caused a slow poison to be given to him. Some time before his death, Aratus was observed by one of his friends to spit blood, and, when the latter expressed his surprise at this, he merely exclaimed, "*Such, Cephala, are the fruits of royal friendship!*" He was buried with distinguished honours by his countrymen, and a festival, called *Aratea*, was celebrated every year in memory of him. Aratus wrote *Memoirs*, now lost, which Polybius cites with eulogiums. His character may be summed up in a few words. He was a pure and ardent patriot, and, in addition to this, a statesman of no small degree of merit, but not very conspicuous for military abilities. Aratus died in the 62d year of his age, B.C. 213. (*Plut., Vit. Arat.*)—III. A son of the preceding, nearly of the same age with Philip, king of Macedonia. He was on intimate terms with this monarch, a circumstance, however, which did not prevent the latter from administering a potion, that threw him into a deplorable state of idioey, so that his friends regarded his death, which occurred in the flower of his age, as a blessing rather than a misfortune. (*Plut., Vit. Arat. ult.*)

ARAUUS, the chief city of the Cavares, in Gallia Narbonensis, to the north of Avenio. It is now *Orange*, in the department of *Vaucluse*. In the vicinity are some remains of a triumphal arch, erected in commemoration of the victory of Marius over the Cimbri and Teutones. (*Plin.*, 3, 4.)

ARAXES, I. a river of Armenia Major, issuing from Mons Abus, on the side opposite to that whence the southern arm of the Euphrates flows. It runs east until it meets the mountains which separate Armenia from northern Media, when it turns to the north, and, after receiving the Cyrus, falls into the Caspian Sea. It is now the *Arras*. (*Plin.*, 6, 9.—*Strab.*, 363.—*Ptol.*, 5, 13)—II. Another in Persia, running by Persepolis, and falling into the Medius, now *Beut-Emir*.—Xenophon calls the Chaboras by the name of Araxes (*vid. Chaboras*), and gives the name of Phasis to the Armenian Araxes. (*Xen., Anab.*, 1, 4, 19.—Compare the *Index Nom.* to the edition of Zeune, and the remarks of Krüger, *ad Xen., Anab.*, 4, 6, 4.)—III. A

river of Upper Asia, mentioned by Herodotus (1, 202), and supposed by the most recent inquirers into this subject to be the same with the modern *Volga*. (*Baehr, ad Herod., l. c.*—Compare the remarks of the same editor, in the note to the *Index Rerum*, vol. 4, p. 454, *seqq.*)—The name Araxes appears to have been originally an appellative term for a river, in the earlier language of the East, and hence we find it applied to several streams in ancient Oriental geography. (Compare *Heeren, Ideen*, vol. 1, p. 55.—*Ritter, Erdkunde*, vol. 2, p. 658.)

ARBACES, a Median officer, who conspired with Belesis, the most distinguished member of the Chaldean sacerdotal college, against Sardanapalus, king of Assyria. After several reverses, he finally succeeded in his object, defeated Sardanapalus near Nineveh, took this city, and reigned in it for the space of twenty-eight years. With him commenced a dynasty of eight kings, of whom Aspadas or Astyages was the last. The empire which Arbaces founded was a federative one, composed of several sovereignties which had arisen from the ruins of the Assyrian monarchy. The kingly power, though hereditary, was not absolute, the monarch not having the power to change any of the laws enacted by the confederate princes. Chronologists are not agreed as to the period of the revolt of Arbaces. Most place it under or about the archonship of Aripbron, the 9th perpetual archon of Athens; but they differ again about the precise period of this archonship, some assigning it to 917 B.C., others to 898 B.C. (*Diod. Sic.*, 2, 24.—*Vell., Patere.*, 1, 6.—*Justin*, 1, 1.—*Petau., Doctr. Temp.*, l. 9.)

ARBELA, a city of Assyria, in the province of Adiabene, east of Ninus, near the Zabatus, or *Zab*. On the opposite side of this river, near *Isbil*, was fought the decisive battle of Arbela, between Alexander and Darius, October 2, B.C. 331. The field of battle was the plain of Gaugamela. The latter, however, being an obscure place, this conflict was named after Arbela. (*Strabo*, 399.—*Diod. Sic.*, 17, 53.—*Arrian*, 3, 6.)

ARBUSCULA, an actress on the Roman stage, who, being hissed, on one occasion, by the lower orders of the people, observed, with great spirit, that she cared nothing for the rabble, as long as she pleased the more enlightened part of her audience among the equestrian ranks. (*Horat., Sermon.*, 1, 10, 77.)

ARCADIA, a country in the centre of the Peloponnesus, and, next to Laconia, the largest of its six provinces. It was a mountainous region, and contained the sources of most of the considerable rivers which flow into the seas surrounding the Peloponnesus. From its elevated situation, and the broken face of the country, intersected by small streams, it had a cold and foggy climate during some seasons; in the plain of Argos, only one day's journey from the centre of Arcadia, the sun shines and the violets bloom, while snow is on the hills of Arcadia, and in the plain of Mantinea and Tegea. The most fertile part was towards the south, where the country sloped off, and contained many fruitful vales and numerous streams. This account of the land may serve in some degree to explain the character which the Arcadians had among the ancient Greeks: some of those who now occupy this district seem to be as rude as many of the former possessors. Their country is better adapted to pasturage than cultivation, and the Arcadians, who were scarcely a genuine Greek race, continued their pastoral habits and retained their rude manners amid their native mountains. To their pastoral mode of life may be ascribed their attachment to music; and hence also the worship of Pan as the tutelary deity of Arcadia. Nature, observes a modern writer, has destined this country for herdsmen. The pastures and meadows in summer are always green and unscorched; for the shade and moisture preserve them. The country has no appearance similar to that of Switzerland, and the

Arcadians, in some measure, resemble the inhabitants of the Alps. They possessed a love of freedom and a love of money; for wherever there was money, you might see Arcadian hirelings. But it is chiefly the western part of Arcadia (where Pan invented the shepherd's flute) which deserves the name of a pastoral country. Innumerable brooks, one more delightful than the other, sometimes rushing impetuously, and sometimes gently murmuring, pour themselves down the mountains. Vegetation is rich and magnificent; everywhere freshness and coolness are found. One flock of sheep here succeeds another, till the wild Taygetus is approached, where numerous herds of goats are also seen. (*Bartholdy, Bruchstücke zu nähern Kenntniss Griechenlands*, p. 239, *seqq.*) The inhabitants of Arcadia, devoted to the pastoral life, preferred, therefore, for a long time, to dwell in the open country rather than in the cities; and when some of these, particularly Tegea and Mantinea, became considerable, the contests between them destroyed the peace and liberties of the people. The shepherd-life among the Greeks, although much ornamented by the poets, betrays its origin in this, that it arose among a people who did not wander like the Nomades, but were in possession of stationary dwellings.—The most ancient name of Arcadia was *Drymotis* (the woody region), from *δρῦς*, “a tree.” The Arcadians themselves carried their origin very far back, and gave their nation the name of *Proseleni* (before the moon). They seem to have derived the first rudiments of civilization, if not their origin itself, from the Pelasgi; and hence the tradition that a king, named Pelasgus, taught them to build huts, and clothe themselves with the skins of animals. Arcas, a descendant of this same Pelasgus, taught them the art of baking bread, and of weaving. From this second benefactor the people and their country were respectively called Arcades and Arcadia. A republican form of government arose subsequently, after the first Messenian war, Aristocrates II. having been stoned to death by the Arcadians for his treachery towards the Messenians. Arcadia eventually attached itself to the Achaean league, and fell under the Roman power.—It is commonly believed that a colony of Arcadians settled in Italy in very early times. This, however, is a mere fable, and is contradicted by the inland nature of the country, and by the Arcadians never having been a maritime people. (*Vid.* Pelasgi and Italy, and also Evander—*Polyb.*, 4, 20.—*Diod. Sic.*, 4, 34.—*Thucyd.*, 7, 57.—*Plin.*, 4, 5.—*Apollod.*, 2, 1.—*Pausan.*, 8, 4.)

ARCADIUS, eldest son of Theodosius the Great, succeeded his father A.D. 395, who, at his death, divided the empire between his two sons, giving Arcadius the eastern, and Honorius the western division. Arcadius was only eighteen years of age when he ascended the throne, and he only occupied it to become the vile slave of the ambitions, who each in turn distracted the state by their perfidies, their quarrels, and their connivance with the Goths, Huns, and Vandals, to whom they surrendered the provinces and treasures of the empire. The history of Arcadius, in fact, is that of one, whose weakness and vices made him subservient to, and excited the audacity of, a Rufinus, who, charged by Theodosius with the guidance of the young monarch, wished to give him his daughter in marriage, and become his colleague in the empire, and who, disappointed in his ambitious schemes, invited the Huns and Goths into Asia and Greece: a Eutropius, a vile eunuch, who attained to the influence of a Rufinus, after the tragical death of the latter, and, still more unprincipled, succeeded by his violent conduct in degrading and discouraging the people: a Gainas, a general who ravaged instead of defending the empire, but who contributed nevertheless to the ruin of Eutropius: and an Empress Eudoxia, at one moment the enemy, at another the support of the ambitious, and who perse-

cuted the virtuous Chrysostom, patriarch of Constantinople. Arcadius was in succession the tool of all these designing individuals. He saw, with equal indifference, Alaric ravaging his territories, his subjects groaning under oppression, the succours brought him by Stilicho, general of Honorius, rendered of no avail by the perfidy of his own ministers, the best citizens falling by his proscriptions, and, finally, Arianism desolating the religion which Chrysostom in vain attempted to defend. Such was the reign of this prince, which lasted for fourteen years. He died A.D. 408, at the age of thirty-one. Nature had given him an exterior corresponding to his character; a small, ill-made, disagreeable person, an air of imbecility, a lazy enunciation, everything, in fact, announcing the weakest and most cowardly of emperors. He had by his wife Eudoxia a son named Theodosius, who succeeded him as the second of that name. (*Socrat., Hist. Eccles.*, 5.—*Cassiod., Chron.*, &c.)

ARCEAS, a son of Jupiter and Callisto. (*Vid. Callisto.*) The fabulous legend relative to him and his mother is given by the ancient writers with great difference in the circumstances. According to the most common account, Jupiter changed Callisto into a bear, to screen her from the jealousy of Juno, and Arcas her son was separated from her and reared among men. When grown up, he chanced to meet his mother in the woods, in her transformed state, and was on the point of slaughtering her, but Jupiter interfered, and translated both the parent and son to the skies. Arcas, previously to this, had succeeded Nyctimus in the government of Arcadia, the land receiving this name first from him. He was the friend of Triptolemus, who taught him agriculture, which he introduced among his subjects. He also showed them how to manufacture wool, an art which he had learned from Aristæus. (*Apollod.*, 3, 8.—*Or., Met.*, 2, 401, *seqq.*)

ARCE, a city of Phœnicia, north of Tripolis, and south of Antaradus. It was the birthplace of Alexander Severus, the Roman emperor. (*Lamprid., Vit. Alex.*, c. 5.—*Plin.*, 5, 18.) The name is sometimes given as Arcæ. (*Socrat., Hist. Eccles.*, 7, 36.)

ARCESILÆUS, I. son of Battus, king of Cyrene, was driven from his kingdom in a sedition, and died B.C. 575. The second of that name died B.C. 550. (*Polyan.*, 8, 41.—*Herodot.*, 4, 159.)—II. A philosopher, born at Pitane, in Æolis, and the founder of what was termed the Middle Academy. The period of his birth is usually given as 316 B.C., while according to Apollodorus, as cited by Diogenes Laertius (4, 45), he flourished about B.C. 299. If these numbers are accurate, he must have had an early reputation, as he would at the latter date have been only seventeen years of age. There is therefore some error here in the remark of Apollodorus. (*Clinton's Fasti Hellenici*, vol. 1, p. 179, and 367, *not.*) Arcesilaus at first applied himself to rhetoric, but subsequently passed to the study of philosophy, in which he had for teachers, first Theophrastus, then Crantor the Academician, and probably also Polemo. (*Diog. Laert.*, 4, 24, 29.—*Cic., Acad.*, 1, 9.) The statement of Numenius (*ap. Eus., Pr. Ev.*, 14, 5), that Arcesilaus was the disciple of Polemo at the same time with Zeno, appears to be ill-grounded, and to involve great chronological difficulties. It is very probably a mere fiction, designed to suggest some outward motive for the controversial relation of the Porch and the Academy.—Besides the instructors above named, Arcesilaus is also said to have diligently attended the lectures of the Eretrian Menodæmus, the Megarian Diodorus, and the sceptic Pyrrho. His love for the philosophemes of these individuals has been referred to as the source of his scepticism, and his skill in refuting philosophical principles. At the same time, it is on all hands admitted that, of philosophers, Plato was his favourite. He seems to have been sincerely

of opinion, that his view of things did not differ from the true spirit of the Platonic doctrine; nay, more, that it was perfectly in agreement with those older philosophemes, from which, according to the opinion of many, Plato had drawn his own doctrines, namely, those of Socrates, Parmenides, and Heraclitus.—Upon the death of Crantor, the school in the Academy was transferred by a certain Socratides to Arcesilaus, who here introduced the old Socratic method of teaching in dialogues, although it was rather a corruption than an imitation of the genuine Socratic mode. Arcesilaus does not appear to have committed his opinions to writing, at least the ancients were not acquainted with any work which could confidently be ascribed to him. Now, as his disciple Lycydes also abstained from writing, the ancients themselves appear to have derived their knowledge of his opinions only from the works of his opponents, of whom Chrysippus was the most eminent. Such a source must naturally be both defective and uncertain, and accordingly we have little that we can confidently advance with respect to his doctrine. According to these statements, the results of his opinions would be a perfect scepticism, expressed in the formula that he knew nothing, not even that which Socrates had ever maintained that he knew, namely, his own ignorance. (*Cic., Acad.*, 1, 12.) This expression of his opinion implicitly ascribes to Arcesilaus a full consciousness that he differed in a most important point from the doctrine of Socrates and Plato. But, as the ancients do not appear to have ascribed any such conviction to Arcesilaus, it seems to be a more probable opinion, which imputes to him a desire to restore the genuine Platonic dogma, and to purify it from all those precise and positive determinations which his successors had appended to it. Indeed, one statement expressly declares, that the subject of his lecture to his most accomplished scholars was the doctrine of Plato (*Cic., l. c.*); and he would therefore appear to have adopted this formula with a view to meet more easily the objections of the dogmatists. Now if we thus attach Arcesilaus to Plato, we must suppose him to have been in the same case with many others, and unable to discover in the writings of Plato any fixed and determinate principles of science. The ambiguous manner in which almost every view is therein advanced, and the results of one investigation admitted only conditionally to other inquiries, may perhaps have led him to regard the speculations of Plato in the light of mere shrewd and intelligent conjectures. Accordingly, we are told, that Arcesilaus denied the certainty, not only of intellectual, but also of sensuous knowledge. (*Cic., de Orat.*, 3, 18.) For his attack upon the former, Plato would furnish him with weapons enough; and it is against it principally that his attacks were directed, for the Stoics were his chief opponents.—The true distinction between the Sceptics and the members of the Middle Academy, at its first formation by Arcesilaus, appears to have been this. The former made the end of life to be the attainment of a perfect equanimity, and derived the difference between good and bad, as presented by the phenomena of life, from conversion, and not from nature. The Academicians, on the other hand, taught, as a general rule, that, in the pursuit of good and the avoidance of evil, men must be guided by probabilities. They admitted that the sage, without absolutely mortifying his sensual desires, will live like any other in obedience to the general estimate of good and evil, but with this simple difference, that he does not believe that he is regulating his life by any certain and stable principles of science. It is on this account that we do not meet with any statements concerning the strangeness of their habits of life, like to those about Pyrrho; on the contrary, Arcesilaus is usually depicted as a man who, in the intercourse of life, observed all its decencies and proprieties, and was somewhat disposed

to that splendour and luxury which the prevailing views of morality allowed and sanctioned. His doubts, therefore, as to the possibility of arriving at a knowledge of the truth, may probably have had no higher source than a high idea of science, derived perhaps from his study of Plato's works, and compared with which all human thought may have appeared at best but a probable conjecture.—Arceasius continued to flourish as late as the 134th Olympiad, B.C. 244. (*Clinton's Fasti Hellenici*, vol. 1, p. 179.—*Ritter's History of Philosophy*, vol. 3, p. 600, *seqq.*)—III. A painter of Paros, acquainted, according to Pliny, with the art of enamelling, some time before Aristides, to whom the invention is commonly assigned. He appears to have been contemporary with Polygnotus. (*Plin.*, 35, 11.—*Sillig, Dict. Art.*, s. v.)—IV. A painter, subsequent to the preceding, and who appears to have flourished about the 128th Olympiad, B.C. 268. (*Plin.*, 35, 11.—*Sillig, Dict. Art.*, s. v.)—V. A sculptor of the first century before our era. His country is uncertain. (*Plin.*, 35, 12.—*Id.*, 36, 5.)

ARCHELĀUS, I. a king of Sparta, of the line of the Agidæ, who reigned conjointly with Charilaus. During this reign Lycurgus promulgated his code of laws. (*Pausan.*, 3, 2).—II. A king of Macedonia, natural son of Perdiccas, who ascended the throne, after making away with all the lawful claimants to it, about 413 B.C. He proved a very able monarch. Under his sway Macedonia flourished, literature and the arts were patronised, and learned men and artists were invited to his court. Euripides and Agatho, the two tragic poets, spent the latter part of their days there, and the painter Zeuxis received seven talents (about 8000 dollars) for adorning with his pencil the royal palace. The celebrated philosopher Socrates was also invited to come and reside with the monarch, but declined. Archelaus died after a reign of about 14 years. Diodorus Siculus makes him to have lost his life by an accidental wound received in hunting, but Aristotle states that he fell by a conspiracy. (*Diod. Sic.*, 13, 49.—*Id.*, 14, 37.—*Aristot., Polit.*, 5, 10.—Compare the remarks of Wesseling, *ad Diod.*, 14, 37.)—III. Son of Amyntas, king of Macedonia. He was put to death by his half-brother Philip, the father of Alexander the Great. (*Justin.*, 7, 4).—IV. A native of Cappadocia, and one of the ablest generals of Mithradates. He disputed with the Romans the possession of Greece, but was defeated by Sylla at Chæronea, and again at Orchomenus. Archelaus, convinced of the superiority of the Romans, prevailed upon Mithradates to make peace with them, and arranged the terms of the treaty along with Sylla, whose esteem he acquired. Some years after he became an object of suspicion to Mithradates, who thought that he had favoured too much the interests of the Roman people. Well aware of the cruelty of the monarch, Archelaus fled to the Romans, who gave him a friendly reception. Plutarch thinks that he had been actually unfaithful to Mithradates, and that the present which he received from Sylla, of ten thousand acres in Eubœa, was a strong confirmation of this. He informs us, however, at the same time, that Sylla, in his commentaries, defended Archelaus from the censures which had been cast upon him. (*Plut., Vit. Syll.*, c. 23).—V. Son of the preceding, remained attached to the Romans after the death of his father, and was appointed by Pompey high-priest at Comana. As the temple at Comana had an extensive territory attached to it, and a large number of slaves, the high-priest was in fact a kind of king. This tranquil office, however, did not suit his ambitious spirit; and when Ptolemy Auletes had been driven from Egypt, and Berenice his daughter had ascended the throne, he obtained her hand in marriage. Ptolemy, however, was restored by the Roman arms, and Archelaus fell in battle, bravely defending his new dignity. Marc Antony, who had been on friendly terms with him, gave him an honourable funeral.

(*Dio Cass.*, 39, 12, *seqq.*—*Id.*, 39, 55.—*Epit. Liv.*, 105.—*Plut., Vit. Anton.*, c. 3.)—VI. A natural son of the preceding by Glaphyre. He is called by Apian *Sicinnus*. (*Bell. Civ.*, 5, 7.—Consult *Schweigh.*, *ad loc.*) After his father's death he succeeded to the high-priesthood at Comana, but was deposed by Julius Cæsar. Some years after (B.C. 36), Antony made him king of Cappadocia, in place of Ariarathes X., whom he deprived of the throne. Archelaus took part with Antony at the battle of Actium, but was pardoned by Augustus. The emperor even subsequently added Armenia and Cilicia Trachea to his territories, because he had aided Tiberius in restoring Tigranes, the Armenian king. When Tiberius retired to Rhodes, into a kind of exile, Archelaus, fearful of offending Augustus, treated the former with neglect. In consequence of this, when Tiberius came to the throne, Archelaus was enticed to Rome by a letter from Livia, which held out the hope of pardon, but on reaching the capital he was accused of designs against the state. His age, however, and feeble state of health, together with the imbecility of mind which he feigned on the occasion, disarmed the anger of the emperor. He died at Rome, B.C. 17, having reigned 52 years. After his death Cappadocia became a Roman province. (*Dio Cass.*, 57, 17.—*Tacit., Ann.*, 2, 42.—*Sueton., Tib.*, 37.)—VII. A son of Herod the Great. His father intended him for his successor, and named him as such in his will; but as Philip Antipas, another son of Herod's, had been designated as successor to the throne in a previous will, a dispute arose between the two brothers, and they repaired to Rome to have the question settled by Augustus. The emperor, after having heard both parties, gave to Archelaus, under the title of tetrarch, one half of the territories of his father Herod, comprising Judæa, properly so called, together with Idumæa. On his return home, Archelaus indulged in the hereditary cruelty of his family, and being complained of to Augustus, was deposed (B.C. 6), and sent to Vienna (*Vienne* in *Dauphiné*) as an exile. This happened in the tenth year of his reign. (*Joseph., Ant. Jud.*, 17, c. 2.—*Id. ibid.*, c. 12, *seq.*—*Id., Bell. Jud.*, 2, 4.—*Noldius, de Vita et Gestis Herodum*, p. 219, *seqq.*)—VIII. A philosopher, a native of Athens, though others, with less probability, make him to have been born at Miletus. (*Simpl. Phys.*, fol. 6, b.) He was a pupil of Anaxagoras, whom he accompanied in exile to Lampsacus, and to whom he succeeded as head of the Ionic sect. After the death of this philosopher, he returned to Athens, and is said to have had Socrates and also Euripides among his pupils; but as to the former of the two this is very doubtful. Of his life and actions we have very scanty information, as also of his doctrines; so that it is extremely difficult to arrive at any certain result with respect to his peculiar views. He received the appellation of *Φυσικός*, (*Physicus*, i. e. "Natural Philosopher"), because, like Anaxagoras, he directed his principal attention to physical inquiries. He is said to have adopted the same primal substance as Anaxagoras; but to have aimed at giving an explanation of his own of the mode in which the universe was produced, and of some other details. (*Simpl. Phys.*, fol. 7, a.) His mode of accounting for the separation of the elements, and of connecting therewith the origin of men and animals, indicates in the most remarkable manner the affinity of his theory with that of Anaxagoras. First of all, he taught, fire and water were separated, and, by the action of the fire on the water, the earth was reduced to a slimy mass, which was afterward hardened; but water, by its motion, gave birth to air, and thus was the earth held together by air, and the air by fire. While the earth was hardening by the action of heat, a certain mixture of warmth with cold and moist particles was effected, of which animals of various kinds were formed, each animal different, but all having the

same nourishment, the slime in which they were born. At first they were of very brief duration, and subsequently only acquired the faculty of propagating their species. Men were distinct from the other kinds, and became the ruling race. Mind, however, was inborn in all animals alike, and all have a body for use, only some a more perishable, others a more durable one. The fundamental principle of Archelaus in ethics was as follows: "Good and evil are not by nature, but by convention." (*Diog. Laert.*, 2, 16.—*Orig. Phil.*, 9.—*Ritter's Hist. of Philosophy*, 1, 319, *seqq.*)

ARCHEMÖRUS. *Vid.* Opheltes.

ARCHIAS, I. a Corinthian, leader of the colony that founded Syracuse. *Vid.* Syracuse.—II. A Greek poet, a native of Antioch, who came to Rome in the consulship of Marius and Catulus (B.C. 102). He soon became intimate with the most distinguished men in this latter city, and accompanied Lucullus to Sicily, and, on returning with him to that province, received the rights of Roman citizenship at the municipal town of Heraclea, in southern Italy. A conflagration, however, having destroyed the records of this place, a certain Grattius contested judicially his title to the rights and privileges of a Roman citizen. Cicero, his friend and former pupil, defended Archias in a brilliant oration, which has come down to us, and which contains not only the praises of his old instructor, but a beautiful eulogium also on the culture of letters. The poet gained his cause. Archias before this had composed a poem on the war with the Cimbri, and had commenced another on the consulship of Cicero. There remain, however, of his productions, only some epigrams in the Anthology. It is difficult to reconcile the eulogiums which Cicero heaps on Archias, with the extreme mediocrity of the pieces that have reached us. A servile imitator of Leonidas the Tarentine, and of Antipater, he handles the same themes which they had selected before him, and only produces, after all, unfaithful copies. Two or three pieces are somewhat superior to the rest, but still we must take it for granted that his poem on the Cimbrian war was a very different production from any of his epigrams, or else that Cicero's vanity got the better of his judgment, and that, in praising Archias, he felt he was praising himself. (*Cic., pro Arch.*)

ARCHIDAMUS, I. son of Theopompus, king of Sparta, died before his father.—II. Another king of Sparta, son of Anaxidamus, succeeded by Agasicles. He ascended the throne about 620 B.C.—III. Son of Zeuxidamus, of the line of the Proclidæ. He ascended the Spartan throne B.C. 476, his father having died without becoming king. Laconia was desolated by an earthquake about the 12th year of his reign, and after this the Messenians revolted. Archidamus displayed great coolness and ability amid these events, and finally reduced the Messenians to submission, having taken the fortress of Ithome after a siege of ten years. He opposed the Peloponnesian war; but, his counsel not having been followed, he took the command of the confederate army, and made many invasions of Attica. He died B.C. 428.—IV. Son of Agesilaus, of the line of the Proclidæ. Before coming to the throne, he had the command of the troops which the Lacedæmonians sent to the aid of their countrymen after the battle of Leuctra. On his return to the Peloponnesus, he gained some advantages over the Arcadians, although the Thebans had come to their aid. Having ascended the throne (B.C. 361), he prevailed upon the Lacedæmonians to aid the Phocians, and took an active part in their behalf, in the Sacred war. He afterward went to the aid of the Tarentines, who were at war with some of the neighbouring communities, and fell in battle there, B.C. 338. His body could not be found after the action, which some ascribed to the vengeance of Apollo, who thus deprived him of the rites of burial for the part he had acted in the Sacred war.—V. Son

of Eudamidas, was king of Sparta when Demetrius Poliorcetes came to attack that city, B.C. 293. He was defeated by Demetrius, in the very view of Sparta itself, and the city would have been taken had not other events called the victor to a different quarter of Greece. The rest of his history is unknown. Larcher makes his reign to have been one of 46 years, but does not give the data on which he founds this opinion. (*Plut., Vit. Agid.*—*Larcher, Hist. d'Hérod.*, 7, 509.)

ARCHIGÈNES, a physician, born at Apamea in Syria. He lived in the reign of Domitian, Nerva, and Trajan. Archigenes enjoyed a high reputation among his contemporaries, and for some generations after. He is regarded as the founder of the Eclectic school of Medicine, and was also one of the pneumatic sect, having received the principles of the latter from his preceptor Agathinus. He wrote on the pulse (a work on which Galen commented), on chronic affections, on pharmacy, &c. Galen often cites him with eulogiums, and Juvenal, his contemporary, makes frequent mention of him in his satires. Only fragments of his writings remain. According to Suidas, he died at the age of 63; but Eudocia makes him to have reached 83 years. The latest edition of the fragments of Archigenes is that of Harles, *Lips.*, 1816, 4to.—(*Galen, de diff. puls.*, 2, p. 26.—*Id.*, *de loc. affect.*, 2, p. 262. &c.—*Suidas, s. v.*—*Eudocia, ap. Villoison, Anecd. Græc.*, vol. 1, p. 65.—*Sprengel, Hist. de la Méd.*, vol. 2, p. 75.)

ARCHILOCHUS, a Greek poet, a native of Paros, who flourished 688 B.C. His mother Enipo was a slave, but his father Telesicles one of the most distinguished citizens of the island. The particulars which the ancients have given us respecting the life of Archilochus appear to be in a great measure fabulous. It is certain, however, that, while still young, he accompanied his father, who, in obedience to a Delphic oracle, led a colony from Paros to Thasos, and that his subsequent career was one succession of misfortunes, which appear to have exasperated his character, and given to his poetry that severe cast which the ancients ascribed to it. Among the various tales related of Archilochus, the one most commonly mentioned is that concerning Neobule and her parent. (*Vid.* Lycambes.) This story, however, appears to have been invented after the poet's time; and one of the scholiasts on Horace remarks, that Neobule did not destroy herself on account of any injurious verses on the part of Archilochus, but out of despair at the death of her father. (*Horat., Epod.*, 6, 12.) Archilochus states one fact relative to himself, in some verses that have come down to us, which is, that in a battle between the Thasians and people of Thrace, he saved himself by flight, throwing away at the same time his buckler. This act of weakness or cowardice was the occasion of a galling affront which he afterward received: for, having visited Sparta, he was ordered by the magistrate to quit the city immediately. Dissatisfied eventually with the posture of affairs at Thasos, which the poet often represents as desperate, Archilochus must have quitted Thasos and returned to Paros, since we are informed, by credible writers, that he lost his life in a war between the Parians and the inhabitants of the neighbouring island of Naxos. The ancients ascribe to Archilochus the invention of a great number of poetic measures. (Consult, on this subject, *Victorinus*, lib. 4, p. 2588, *ed. Putsch*; and, as regards the Epode, which he is also said to have invented, compare the remarks of *Vandenbourg*, in his edition of *Horace*, vol. 2.) With respect to iambic verse, of which he is, in like manner, named as the author (*Hor., Ep. ad Pis.*, 79), some difference of opinion seems to exist; and it has been thought that the invention, in this case, relates less to the iambic rhythm, which appears so natural to the Greek language, than to a particular kind of versification. (Compare *Schöll, Hist. Lit. Gr.*, vol. 1, p. 199, *seqq.*) Archilochus was, in general, regard-

ed by the ancients as one of the greatest poets that Greece had produced. Cicero classes him with Homer, Sophocles, and Pindar (*Orat.* 1); and in an epigram in the Anthology (vol. 2, p. 286), the Emperor Hadrian remarks, that the Muses, fearing for the glory of Homer, inspired Archilochus with the idea of composing in iambics. One production of this poet's, in particular, his Hymn in honour of Hercules, was the subject of high eulogium; this piece he himself sung at the Olympic games. The anniversary of his birth was celebrated, as in the case of Homer; and the rhapsodists recited his verses as they did those of the Iliad. Blame, however, attaches itself to the bitter and vindictive spirit that characterized his verses, as well to the indecency which pervaded them; and it is probably to this latter cause that we must ascribe the loss of his poems, of which we possess only a few fragments, preserved as citations in the writings of Athenæus, St. Clement of Alexandria, Stobæus, the scholiasts, &c. If the ancients speak of the *Fables* of Archilochus, it is not because he ever published any collections of apologies, but because he was accustomed to give life and movement to his iambics by introducing into them occasionally this species of composition. The fragments of Archilochus were published by H. Stephens and Froben in their respective collections, and by Brunck in his *Analecta*. An edition of them by Liebel, with a critical commentary, appeared from the Leipsic press in 1812, and also in an enlarged form, in 1819, 8vo.

ARCHIMÈDES, the most celebrated mathematician among the ancients, a native of Syracuse in Sicily, and related to King Hiero. He flourished about 250 B.C. Under what masters he studied, or how much of his extraordinary knowledge he acquired from his predecessors, is not known. That he travelled into Egypt appears certain; but it is probable that, in his scientific acquaintance with that country, he communicated more than he received, and that he owes the great name which he has transmitted to posterity to his own vigorous and inventive intellect. He was equally skilled in the science of astronomy, geometry, mechanics, hydrostatics, and optics, in all of which he excelled, and produced many extraordinary inventions. His ingenuity in solving problems had in Cicero's days become proverbial; and his singular ingenuity in the invention and construction of warlike engines is much dwelt upon by Livy. His knowledge of the doctrine of specific gravities is proved by the well-known story of his discovery of the mixture of silver with gold in King Hiero's crown, which fraud he detected by comparing the quantity of water displaced by equal weights of gold and silver. The thought occurred to him while in the bath, on observing that he displaced a bulk of water equal to his own body; when, at once, perceiving a train of consequences, he ran naked out of the bath into the street, exclaiming, *Εὕρηκα*, "I have found it!" This part of the story, however, is regarded by some as a mere exaggeration. (*Biogr. Univ.*, vol. 2, p. 379.) To show Hiero the wonderful effects of mechanic power, he is said, by the help of ropes and pulleys, to have drawn towards him, with perfect ease, a galley which lay on the shore manned and loaded. His intimate acquaintance with the powers of the lever is evinced by his famous declaration to the same monarch: *Δός μοι στύλ, καὶ τὸν κόσμον κινήσω*, "Give me where I may stand, and I will move the world." But his greatest efforts of mechanic skill were displayed during the siege of Syracuse, when he contrived engines of annoyance of the most stupendous nature. Among other applications of science, he is said to have fired the Roman fleet by means of reflecting mirrors, of which story, long treated as a fable, Buffon has proved the credibility. (*Mém. de l'Acad. des Sciences*, 1747.) There are not wanting persons, however, even at the present day,

who, from the silence of Polybius, Livy, and Plutarch on this subject, still view the tale with an eye of unbelief. (Compare *Biogr. Univ.*, vol. 2, p. 381.—*Foreign Review*, No. 1, p. 305.) Eminent as this great mathematician was for his knowledge of mechanics, he was still more so for the rare talent which he possessed of investigating abstract truths, and inventing conclusive demonstrations in the higher branches of geometry. According to Plutarch (*Vit. Marcell.*), intellectual speculations of this nature most delighted him; and he did not deem it worth his while to leave any account in writing of his mechanical inventions. We have, indeed, no precise indication of any works in which they are described, except it be with regard to a sphere representing the movements of the stars, of which Cicero and Claudian make mention. Archimedes prided himself on the discovery of the ratio between the cylinder and the inscribed sphere, and requested his friends to place the figures of a sphere and cylinder on his tomb, with an inscription expressing the proportion between them; a desire that afterward led to its discovery by Cicero. The Roman orator, when he was quæstor in Sicily, discovered this monument in the shape of a small pillar, and showed it to the Syracusans, who did not know that it was in being. He says there were some iambic verses inscribed upon it, the latter halves of which were almost eaten out by time; and that there were likewise to be seen (as those verses asserted) the figures of a cylinder and a sphere. From the death of this great mathematician, which happened A.U.C. 542, to the quæstorship of Cicero, A.U.C. 678, a hundred and thirty-six years had elapsed. This period, though it had not effaced the cylinder and the sphere, had put an end to the learning of Syracuse, once so respectable in the republic of letters. (*Cic., Tusc. Quæst.*, 5, 23.) Archimedes's sepulchre, which stood near one of the city gates, was almost overgrown with thorns and briars, and, but for the exertions of Cicero, would most probably have never been discovered. Various accounts are given by Plutarch of the manner of Archimedes' death. The period when it occurred was during the capture and storming of Syracuse. According to the narrative most commonly received, Archimedes was engaged in study when the city fell; and so intent was he upon a geometrical figure which he was tracing in the sand, as to be altogether unconscious of the confusion around him. A soldier suddenly entered his room, and ordered him to follow him to Marcellus, the Roman general having given particular orders to spare him. Archimedes refused to go until he had finished his demonstration, whereupon the soldier, in a passion, drew his sword and killed him. The Roman commander took upon himself the charge of his funeral, and protected and honoured his relations.—Several valuable remains of this celebrated mathematician are preserved. In abstract geometry there are two books "On the Sphere and Cylinder;" a treatise "On the Dimensions of the Circle;" two books "On obtuse Conoids and Spheroids;" a book "On Spiral Lines;" and another "On the Quadrature of the Parabola." Besides these geometrical works, he wrote a treatise, entitled *Ψαφίτης* (*Arenarius*), in which he demonstrates that the sands of the earth might be numbered by a method somewhat similar to that of logarithms. In mechanics he has left a treatise "On Equiponderants, or Centres of Gravity;" and in hydrostatics, a treatise "On bodies floating in fluids." Other works of Archimedes are mentioned by ancient writers, which are now lost. Of those that remain various editions have appeared, the latest of which was issued in 1792 from the Clarendon press in Oxford, with a new Latin translation, a preface, notes by Torrelli of Verona, purchased of his executor Albertini, and with various readings. The edition was published under the care of the Rev. A. Robertson, of Christ Church, Oxford, and may be

regarded as the first truly complete one of the works of Archimedes. Translations have also appeared in some of the modern languages. That of Peyrard, in French (1807, 4to, and 1808, 2 vols. 8vo) is most deserving of mention. Delambre has appended to this version a memoir on the Arithmetic of the Greeks; a subject of great interest, as we have very scanty data left us on this point. A review of this translation is given in the *London Quarterly*, vol. 3, p. 89, *seqq.*—Compare *Hutton's Math. Dict.*—*Aikin's G. Dict.*—*Saxii Onomast.*—*Biogr. Univ.*, vol. 2, p. 378, *seqq.*

ARCHIPPE, a city of the Marsi, destroyed by an earthquake, and lost in Lake Fucinus. It is thought by Holstenius, on the authority of some people of the country who had seen vestiges of it, to have stood between the villages of *Transaquia* and *Ortuocia*, on the spot which retains the name of *Areiprete*. (*Holst., Adnot.*, p. 154.)

ARCHIPPUS, I. a king of Italy, from whom perhaps the town of Archippe received its name. He was one of the allies of Turnus. (*Virg., Æn.*, 7, 752.)—II. An Athenian comic poet, who gained the prize but once (*Olymp.* 91), according to Suidas. For some of the titles of his pieces consult Fabricius, *Bibl. Gr.*, vol. 1, p. 747, and Schweighauser's *Index Auctorum to Athenæum* (*Animadv.*, vol. 9, p. 47).

ARCHONTES, the name of the chief magistrates of Athens. At first the archons were for life, and on their death the office descended to their children. This arrangement took place after the death of Codrus, the Athenian state having been previously governed by kings. The first of these perpetual archons was Medon, son of Codrus, from whom the thirteen following and hereditary archons were named Medontidae, as being descended from him. In the first year of the seventh Olympiad, the power of the archons was curbed by their being allowed to hold the office only for ten years. These are what are termed decennial archons. Seventy years after this the office was made annual, and continued so ever after.—These annual archons were nine in number, and none were chosen but such as were descended from ancestors who had been free citizens of the republic for three generations. They were also to be without any personal defect, and must show that they had been dutiful towards their parents, had borne arms in the service of their country, and were possessed of a competent estate to support the office with dignity. They took a solemn oath that they would observe the laws, administer justice with impartiality, and never suffer themselves to be corrupted. If they ever received bribes they were compelled by the laws to dedicate to the god of Delphi a statue of gold, of equal weight with their body. (*Plut., Vit. Solon*, c. 19.—*Pollux*, 8, 9, 85.) They possessed the entire power of punishing malefactors with death. The chief among them was called *Archon*; the year took its denomination from him, and hence he was also called *ἐπὶ ἔτηνος*. He determined all causes between man and wife, and took care of legacies and wills; he provided for orphans, protected the injured, and punished drunkenness with uncommon severity. If he suffered himself to be intoxicated during the time of his office, the misdemeanor was punished with death. The second of the archons was called *Basileus*: it was his office to keep good order, and to remove all causes of quarrel in the families of those who were dedicated to the service of the gods. The profane and the impious were brought before his tribunal; and he offered public sacrifices for the good of the state. He assisted at the celebration of the Eleusinian festivals and other religious ceremonies. His wife was to be a citizen of the whole blood of Athens, and of a pure and unsullied life. He had a vote among the Areopagites, but was obliged to sit among them with-

out his crown. The *Polemarch* was another archon of inferior dignity. He had the care of all foreigners, and provided a sufficient maintenance, from the public treasury, for the families of those who had lost their lives in the defence of their country. But because these three magistrates were often, by reason of their youth, not so well skilled in the laws and customs of their country as might have been wished, that they might not be left wholly to themselves, they were each accustomed to make choice of two persons of age, gravity, and reputation, to sit with them on the bench, and assist them with their advice. These they called *ἡπάδρτοι*, or *assessors*, and obliged them to undergo the same probation as the other magistrates. The six other archons were indifferently called *Thesmothetæ*, and received complaints against persons accused of impiety, bribery, and ill behaviour. Indictments before the Thesmothetæ were in writing; at the tribunal of the *Basileus*, they were by word of mouth. They settled all disputes between the citizens, redressed the wrongs of strangers, and forbade any laws to be enforced but such as were conducive to the safety of the state. After some time, the qualifications which were required to be an archon were not strictly observed, and, when the glory of Athens was on the decline, even foreigners, who had been admitted to the rights of citizenship, were created archons. Thus Hadrian, before he was elected emperor of Rome, was made archon at Athens, though a foreigner; and the same honours were conferred upon Plutarch.—Many lists of the Athenian archons have been published in various works, but all of these were more or less inaccurate till the time of Corsini, and on that account of little use in illustrating ancient history. A catalogue of the archons is given in Stanley's "*Lives of the Philosophers*," p. 938, *seqq.*; another by Du Fresnoy (*Tablettes*, vol. 1, p. 66, *seqq.*), and a third by Dr. Hales (*Analysis of Chronology*, vol. 1, p. 230, *seqq.*). One cause of the incorrectness of these lists has been, the not adverting to a peculiarity of the Parian marble; that the compiler places the annual archons, who preceded the Peloponnesian war, one year higher respectively than the Julian year, with which they were in reality connumerary. Hence two archons have been often made out of one. Again, those who have used this document did not always distinguish between what was attested by the marble, and what was supplied by conjecture where the marble was defaced. Hence the marble is often quoted for that which was only inserted by its editors. Various forms or corruptions of the name of an archon have been sometimes admitted as the names of different archons. From these causes, the catalogues of archons are not as correct and accurate as they might have been rendered. (*Clinton's Fasti Hellenici*, vol. 1, p. x., *Introduction*.) The most accurate tables, as far as they extend, are those given by Clinton, in the work which has just been quoted.

ARCHYTAS, a native of Tarentum, and one of the Pythagoric preceptors of Plato. He is said to have been the eighth in succession from Pythagoras; and this account deserves more credit than the assertion of Iamblichus, that he heard Pythagoras in person; for the father of this sect flourished, as we shall see, about the 60th Olympiad, B.C. 540; but Archytas conversed with Plato upon his first visit to Sicily, which was in the 96th Olympiad, B.C. 396; whence it appears, that there was an interval of above a century between the time of Pythagoras and that of Archytas. Such was the celebrity of this philosopher, that many illustrious names appear in the train of his disciples, particularly Philolaus, Eudoxus, and Plato. To these Suidas, and, after him, Erasmus (*Chil.*, p. 550), add Empedocles; but Empedocles certainly flourished about the 84th Olympiad, near fifty years before Ar-

chyas.—So high was his character for moral and political wisdom, and so deservedly did he enjoy the unlimited confidence of his fellow-citizens, that, contrary to the usual custom, he was appointed seven different times to the responsible office of general, and never experienced either check or defeat. (*Diog. Laert.*, 8, 79.—*Ménage, ad loc.*—Ælian makes it six times. *Var. Hist.*, 7, 14.) Archytas was eminently distinguished for his self-command and purity of conduct; and as uniting with a rare knowledge of mankind such a childlike feeling of universal love, and such simplicity of manners, that he lived with the inmates of his house a real father of a family. Amid all his public avocations, however, he still found leisure to devote to the most important discoveries in science, and to the composition of many works of a very diversified character. His discoveries were exclusively in the mathematical and kindred sciences. He was occupied not merely with theoretical, but also practical mechanics; and his inventions in this department of study imply a considerable advance in their cultivation. He also published a musical system, which was referred to by all succeeding theoretical students of the art. (*Ptolem.*, *Harm.*, 1, 13.—*Boeth.*, *de Mus.*) He wrote, moreover, a treatise on agriculture. (*Varro, de R. R.*, 1, 1.—*Colum.*, 1, 1.) Of his philosophical doctrines many accounts have come down to us; but wherever our information on this head is derived exclusively from writers of later date, we cannot be too much on our guard, lest we should adopt anything which rests merely on supposititious writing, since nearly all the fragments attributed to him are spurious. These fragments have been preserved by Stobæus and others, and edited from him by Gale, in his *Opuscula Mythologica* (*Cantabr.*, 1671, 12mo), among the Πυθαγορείων ἀποσπασμῆτα. They are given, however, more fully and correctly by Orellius, in his *Opuscula Græcorum*, &c., vol. 2, p. 234, *seqq.*—Aristotle, who was an industrious collector from the Pythagoreans, is said to have borrowed from Archytas the general arrangements which are usually called his “Ten Categories.”—The sum of the moral doctrines of Archytas is, that virtue is to be pursued for its own sake in every condition of life; that all excess is inconsistent with virtue; that the mind is more injured by prosperity; and that there is no pestilence so destructive to human happiness as pleasure. It is probable that Aristotle was indebted to Archytas for many of his moral ideas; particularly for the notion which runs through his ethical pieces, that virtue consists in avoiding extremes. Archytas perished by shipwreck, and his death is made a subject of poetical description by Horace, who celebrates him as a geometer, mathematician, and astronomer. (*Od.*, 1, 28.—*Ritter, History of the Pythag. Philos.*, p. 67.—*Id.*, *Hist. Anc. Phil.*, vol. 1, p. 350, *seq.*)

ARCTIŒNENS, an epithet applied to Apollo, as bearing a bow (*arcus* and *teneo*). The analogous Greek expression is ἄρκτηόροπος. (*Virg.*, *Æn.*, 3, 75, &c.)

ARCTINUS, a cyclic bard, born at Miletus. He was confessedly a very ancient poet, nay, he is even termed a disciple of Homer. The chronological accounts place him immediately after the commencement of the Olympiad. Arctinus composed a poem consisting of 9100 verses. (*Heeren, Bibliothek der Alten Lit.*, &c., pt. 4, p. 61.) It opened with the arrival of the Amazons at Troy, which event followed immediately after the death of Hector. The action of the epic of Arctinus was connected with the following principal events. Achilles kills Penthesilea, and then, in a fit of anger, puts to death Thersites, who had ridiculed him for his love of her. Upon this, Memnon, the son of Aurora, appears with his Ethiopians, and is slain by the son of Thetis, after he himself has killed in battle Antilochus, the Patroclus of Arctinus. Achilles himself falls by the hand of Paris, while pursuing the Trojans into the

town. Ajax and Ulysses contend for his arms, and the defeat of Ajax causes his suicide. (*Schol. Prind.*, *Isthm.*, 3, 58.) Arctinus farther related the story of the wooden horse, the careless security of the Trojans, and the destruction of Laocoon, which induced Æneas to fly for safety to Ida, before the impending destruction of the city. In this he is quite different from Virgil, who, in other respects, has in the second book of the *Æneid* chiefly followed Arctinus. The sack of Troy by the Greeks returning from Tenedos, and issuing from the Trojan horse, was described so far as to display in a conspicuous manner the arrogance and mercilessness of the Greeks, and to occasion the resolution of Minerva, already known from the *Odyssey*, to punish them in various ways on their return home. This last part, when divided from the preceding, was called the *Destruction of Troy* (Ἰλίου πέρας); the former, comprising the events up to the death of Achilles, was termed the *Æthiopis* of Arctinus. (*Procl.*, *Chrestom.*—*Schöll, Hist. Lit. Gr.*, vol. 1, p. 169.—*Hist. Lit. Gr.*, p. 65, in *Lobr. Us. Knowl.*)

ARCTOPHYLLAX, a constellation near the Great Bear, called also Boötes. The term is derived from ἄρκτος, “a bear,” and φύλαξ, “a keeper or guard,” for the position of the constellation on the celestial sphere is such, that it appears to watch over the Greater and Smaller Bear. Hence Ovid calls it “*Custos Ursæ*” (*Trist.*, 1, 10, 15), and Vitruvius simply “*Custos*” (9, 4.—Compare *Ideler, Untersuch.*, &c., *der Sternnamen*, p. 47.—*Cic.*, *de Nat. D.*, 2, 42).

ARCTOS, two celestial constellations near the north pole, commonly called *Ursa Major* and *Minor*, supposed to be Arcas and his mother, who were made constellations. Ovid calls them *Feræ* conjointly: “*magna minorque Feræ*” (*Trist.*, 4, 3, 1). Originally, the Greater Bear alone had the name of *Arctos*, and Homer appears merely to have been acquainted with this constellation, not with that of the Smaller Bear. (*Il.*, 18, 487.—*Od.*, 5, 275.) The discoverer of the latter constellation is said to have been Thales, who lived at least two centuries after Homer. (*Schol. ad Il.*, l. c.—*Achill. Tat. Isag. in Arat.*, *Phæn.*, c. 1.—*Hygin.*, *Poet. Astron.*, 2, 2.) The truth is, however, that Thales merely brought the knowledge of the Smaller Bear from the East into Greece, for the Phœnicians were acquainted with it at a much earlier period, and hence the name Φοινίκη, *Phœnicæ*, that was sometimes given to it. (*Eratosth.*, *Cat.*, c. 2.—*Schol. ad German.*, p. 89.) Another name for the Greater Bear was Ἀμαζα, or “the Wain,” an appellation known already to Homer (*Il.*, l. c.). Subsequently, a distinction was made between the *Greater* and *Smaller Wain*, as between the Greater and Smaller Bears. Hence we have, in Latin, the plural form *Plaustra* applied to both constellations of the Wain. (*German.*, v. 25.—*Arven.*, v. 103.) The more common Latin expression, however, is *Septem Triones*, “the seven ploughing oxen,” originally applied to the Greater Bear, but afterward to both. Hence the Latin *Septemtrio*, as indicating the north. (*Varro, L. L.*, 6, 4.—*Aul. Gell.*, 2, 21.—*Virg.*, *Æn.*, 1, 748.) Two other names are also found among the ancients for the Bear, namely, Ἑλική (*Helicæ*), and Κυνόσουρα (*Cynosura*). The first of these is derived from ἐλίζ, “curled,” and has reference to the curved or s-like position of the stars composing the Greater Bear, if we regard what is commonly called the Square or Quadrangle, merely as a semicircle opening towards the north. (*Buttmann*, as cited by *Ideler, Untersuch. über die Beobacht. der Alt.*, p. 376.) The term Κυνόσουρα, on the other hand, which signifies the “*Dog’s tail*,” was applied by the ancients to the constellation of the Smaller Bear, because this animal is represented on the celestial planisphere with its tail bent upward like that of a dog, or, as the scholiast on Homer remarks (*Il.*, 18, 487), διὰ τὸ ὡς κύνος ἔχειν ἀνακεκλυσμένην οὐράν. At

a later period, however, the etymology of the two terms was forgotten or neglected, and Helice and Cynosura appear in fable as two nymphs, the nurses of Jove. (*Arat.*, *Phæn.*, 30, *seqq.*—*Hygyn.*, *Poet. Astron.*, 2, 2.) The name *Cynosura* is sometimes improperly applied by the moderns to the Pole-star. (*Ideler*, *Sternnamen*, p. 8.)—The ancient name of the Greater Bear in the north is *Karlseagn*, the "Carle's," or "Old Man's Wain." The Carle, Magnussen says, is Odin or Thor. Hence our "Charles's Wain." The Icelanders call the Bears "Stoiri (great) Vagn," and "Litli Vagn." (*Edda Samundar*, 3, 304.)

ARCTŪRUS, a star near the tail of the Great Bear, the rising and setting of which was generally supposed to portend tempestuous weather. It belongs to the constellation Boötes or Arctophylax and forms its brightest star. Originally, according to Erotianus (*Expos. voc. Hippocr.*), the term Arcturus was synonymous with Arctophylax, being derived from ἀρκτος, a bear, and οὐρος, a watch or guard. Whether Hesiod, who twice makes mention of Arcturus (*Op. et D.*, 566. —*Ibid.*, 610), means the star or the constellation, is not very clear. Even some later writers, such as Martianus Capella, and the scholiast to Germanicus, employ the term as indicating the constellation itself. The common derivation of the name, from ἀρκτος, and οὐρά, a tail, as referring to the situation of the star near the tail of the bear, is condemned by Buttman. (*Ideler*, *Sternnamen*, p. 47, *seqq.*) Arcturus, observes Dr. Halley, in the time of Columella and Pliny rose with the sun at Athens, when the sun was in 12½ of Virgo; but at Rome three days sooner, the sun being in 9½ of Virgo, the autumnal equinox then falling on the 24th or 25th of September.

ARDĪLUS, a son of Vulcan, said to have been the first who invented the pipe. He erected a temple also at Træzene, in honour of the Muses, who were hence called, from him, *Ardalides*, or *Ardalotides*. (*Pausan.*, 2, 31.—*Steph. Byz.*, s. v.)

ARDEA, the capital of the Rutuli, a very ancient city of Italy, founded, as tradition reported, by Danaë, the mother of Perseus. (*Virg.*, *Æn.*, 7, 408.) Hence the boast of Turnus, that he could number Inachus and Acrisius among his ancestors. Pliny (3, 5) and Mela (2, 4) have improperly reckoned Ardea among the maritime cities of Latium; but Strabo (232) and Ptolemy (66) have placed it more correctly at some distance from the coast. The ruins which yet bear the name of *Ardea* are situated on a hill about three miles from the sea. Though the early accounts of this ancient city are lost in obscurity, we are led to infer that it must have attained to a considerable degree of power and prosperity at a remote period, if it be true, as Livy (21, 7) asserts, that a body of Ardeatæ formed part of the Zacynthian colony, which settled Saguntum in Spain. The first mention which occurs of this city in the history of Rome, is in the reign of Tarquinius Superbus. We are told that it was during the siege of Ardea, which the king was carrying on, that the memorable circumstance occurred which led to his expulsion from the throne, and the consequent change of government at Rome. (*Liv.*, 1, 57.—*Dion. Hal.*, 4, 64.) The Ardeatæ had the honour of affording an asylum to Camillus in his exile, and, under the conduct of that great man, were enabled to render a signal service to the Romans in their utmost distress (if indeed we are to give credit to Livy's account of these transactions): first by defeating a large body of Gauls who had advanced towards their city in quest of booty (*Liv.*, 5, 45), and afterward by contributing greatly to the decisive victory which freed Rome from her most dangerous enemies. (*Liv.*, 5, 49). In all probability, however, this story is merely to be regarded as one of the embellishments of the false legends of the Furian family. (Compare *Arnold's History of Rome*, vol. 1, p. 393, *seqq.*) The Ardeatæ, however, did not always

display the same zeal and constancy in the service of the republic. In the second Punic war, and at a time when the victories of Hannibal had exhausted the resources of the state, they refused to furnish any farther supplies of men and provisions. Their city was therefore included in the vote of censure which the Roman senate afterward passed on several refractory colonies. (*Liv.*, 27, 9.) Another curious circumstance in the history of Ardea is recorded by Varro (*R. R.*, 2, 2), who states, that the era in which barbers were first introduced into Italy from Sicily was noted in the archives of this city. This epoch Varro makes to coincide with 454 A.U.C. Strabo (22) informs us, that the country about Ardea was marshy, and the climate consequently very unfavourable; which is confirmed by Seneca (*Epist.* 105) and Martial (*Ep.*, 4, 60). Some warm springs, strongly impregnated with sulphur, noticed by Vitruvius (8, 3) in the vicinity of Ardea, still exist under the name of *la Solforata*, near the *Terre di S. Lorenzo*, in the direction of Antium. (*Cramer's Ancient Italy*, vol. 2, p. 21, *seqq.*)

ARDERICCA, I. a small town of Assyria, north of Babylon, on the Euphrates. Herodotus informs us (1, 185) that Nitocris, queen of Babylon, in order to render her territories more secure against the Medes, altered the course of the Euphrates, and made it so very winding, that it came, in its course, three times to Ardericca. (Compare *Larcher*, *ad loc.*, where a diagram is given, explanatory of the course of the stream.) Heeren thinks that this laborious undertaking had also another object in view, to facilitate, namely, the navigation of the vessels in their descent from the higher countries. He considers it probable that this was effected by a series of sluices and flood-gates, and that the numerous windings of the canal made it a three days' voyage to pass the village of Ardericca, the canal being cut in a zigzag manner, to diminish the fall occasioned by the steepness of the land. The name Ardericca has led to the conjecture, that it is the present *Akkerruf*, above Bagdad. *Akkerruf*, however, lies on the Tigris, not the Euphrates. (*Heeren*, *Ideen*, vol. 1, pt. 2, p. 138, *seqq.*—*Porter's Travels*, vol. 2, p. 277.)—II. A village in Cissia, about two hundred and ten stadia to the northeast of Susa. (*Herodotus*, 6, 119.—Compare *Larcher* and *Bähr*, *ad loc.*) It was here that the Eretrian captives were settled. (*Vid. Eretria*.)

ARDISCUS, a river of Thrace, falling into the Hebrus at Adrianopolis. Now the *Arda*.

ARDEUNNA, now *Ardennes*, a forest of Gaul, the longest in that country, reaching, according to Cæsar, from the Rhenus and the territories of the Treveri to those of the Nervii, upward of fifty miles in length. Others make the extent much larger. If it covered the whole of the intervening space between the countries of the Treveri and Nervii, it would greatly exceed fifty miles. The original Gallic name would seem to have been *Ar-Denn*, i. e., "the profound," or "deep" (forest). *Ar* is the article, *Denn* in the Kimric, *Don* in the Bas-Breton, and *Damhainn* in Gaelic, denote respectively "profound," "thick," &c. (*Thierry, Hist. des Gaulois*, vol. 2, p. 41, *in notis*.) The ground is now in many places cleared, and cities built upon it. It is divided into four districts. Its chief town is *Mezieres*. (*Tacit.*, *Ann.*, 8, 42.—*Cæs.*, *Bell. Gall.*, 6, 29.)

ARDYS, a son of Gyges, king of Lydia, who reigned forty-nine years, took Priene, and made war against Miletus. (*Herodot.*, 1, 16.—Compare *Clinton's Fasti Hellenici*, vol. 2, p. 296.)

ARELĀTUM (Ἀρελάτωρ, *Ptol.*: Ἀρελάται, *Strabo*: Arelate, among the Latin writers; and sometimes Arelas by the poets), a town of the Salyes on the east side of the Rhodanus, at the place where it divides into three branches, not far from its mouth. Strabo speaks of it as a commercial emporium, and, according to

Pomponius Mela, it was one of the richest cities in Gallia Narbonensis. It was also called Sextanorum Colonia, from having been colonized by the soldiers of the sixth legion, conducted thither by the father of Tiberius. It is now *Arles*. During the later periods of the Roman empire, Arlate was the residence of some of the emperors; and at a subsequent date, on account of the frequent inroads of the barbarians, the prætorian headquarters were transferred from Treveri (*Treves*) to this place. (*Cæs. Bell. Civ.*, 1, 36.—*Mela*, 2, 5.—*Suet.*, *Vit. Tib.*, 4.)

ARMORICA, or ARMORICA, a Celtic term, applied in strictness to all parts of Gaul which lay along the ocean. As the Romans, however, before Cæsar's time, knew no other part of the coast except that between the Pyrenees and the mouth of the Garumna, the name with them became restricted to this portion of the country. (*Mannert, Geogr.*, vol. 2, p. 112.) The appellation is derived from the Galic *ar*, "upon," and *moir*, "sea." (Compare *Thierry, Hist. des Gaulois*, vol. 1, *Introd.*, p. xxxix., *in notis*.)

ARENÆCUM, a fortified place on the Rhine, in the territories of the Batavi, not far from where the river separates to form the Vahalis. It is now, according to D'Anville, *Aert* or *Aerth*, but Mannert is in favour of *Arnhem*. (*Tacit. Hist.*, 3, 20.—Compare *Mannert, Geogr.*, vol. 2, p. 242.)

AREOPAGITÆ, the judges of the Areopagus, a seat of justice on a small eminence at Athens. (*Vid. Areopagus*.) The time in which this celebrated seat of justice was instituted is unknown. Some suppose that Cecrops, the founder of Athens, first established it, while others give the credit of it to Cranaus, and others to Solon. The constitution and form under which it appears in history, is certainly not more ancient than the time of Solon, though he undoubtedly appears to have availed himself of the sanctity already attached to the name and place, to ensure to it that influence and inviolability which were essential to the attainment of its chief object, the maintenance of the laws. Its original right of judging all cases of homicide continued, though evidently the least important part of its duties, since, when Ephialtes had deprived it of all but that, the Areopagus was thought to be annihilated. (*Demosth. adv. Aristocr.*, p. 642.—*Lex. Rhet.*, appended to *Porson's Plotius*, p. 585, *ed. Lips.*—*Hermann's Polit. Antiq.*, p. 215, *not. 6*.) It was not restored to its dignity of guardian of the laws till the fall of the thirty tyrants. Its office as such was, in principle, directly opposed to an absolute democracy, and must have appeared the more formidable to the partisans of that form, from the indefinite and arbitrary nature of the merely moral power on which its authority was founded, and which rendered it impracticable clearly to define the extent of its influence. In later times it was found particularly active as a censorship of morals, and in several respects may be viewed as a superior court of police, taking cognizance of luxury and morals, the superintendence of public buildings and public health, and, in particular, making it its business to direct public attention to men who might endanger the state, though its own power to inflict punishment in such cases was very limited. (*Hermann, l. c.*) The Areopagus, when originally constituted, was, as has already been remarked, merely a criminal tribunal. Solon, guided by motives which cannot now be easily explained, rendered it superior to the Epheta, another court instituted by Draco, and greatly enlarged its jurisdiction.—The number of judges composing this august tribunal is not clearly ascertained. It was probably about ninety. (*Tittmann, Griech. Staatsverf.*, p. 252.) The court consisted entirely of ex-archons; and every archon, on laying down his archonship, became a member of it. (*Tittmann, l. c.*—*Plut.*, *Vit. Sol.*, c. 19.) It was expressly provided, however, that the members of this court should be altogether pure and

blameless in their lives, and it was even required that their whole demeanour should be grave and serious beyond what was expected from other men. The dignity of a judge of the Areopagus was always for life, unless he was expelled for immoral or improper conduct. The Areopagites took cognizance of murders, impiety, and immoral behaviour, and particularly of idleness, which they deemed the cause of all vice. They watched over the laws, and they had the management of the public treasury; they had also the liberty of rewarding the virtuous, and inflicting severe punishment upon such as blasphemed against the gods, or slighted the celebration of the holy mysteries. Hence St. Paul was arraigned before this tribunal as "a setter forth of strange gods," because he preached to the Athenians of Jesus and the resurrection. They always sat in the open air; because they took cognizance of murder, and, by their laws, it was not permitted for the murderer and his accuser to be both under the same roof. (*Vid. Areopagus*.) This custom also might originate from the persons of the judges being sacred, and their being afraid of contracting pollution by conversing in the same house with men who had been guilty of shedding innocent blood. They always heard causes and passed sentence in the night, that they might not be prepossessed in favour of the plaintiff or defendant by seeing them. Whatever causes were pleaded before them were to be divested of all oratory and fine speaking, lest eloquence should charm their ears and corrupt their judgment. Hence arose the most just and most impartial decisions; and their sentence was deemed sacred and inviolable, and the plaintiff and defendant were equally convinced of its justice. The Areopagites generally sat on the 27th, 28th, and 29th day of every month. But if any business happened which required despatch, they assembled in the royal portico, *Βασιλικὴ Στρά.* This institution was preserved entire until the time of Pericles, who, as he had never filled the office of archon, could not be admitted a member of the Areopagus, and therefore employed all his power and influence in undermining an authority which was incompatible with his own. The earlier strictness too, as regarded the private characters of the judges, began now to be relaxed, and eventually, when the grandeur of Athens was on the decline, men of vicious and profligate lives became members of the Areopagus.—As regards the form *Areopagita* and *Ariopagita*, consult the remarks of *Bergman (Prof. ad Isocr. Areopag. init.)*.

AREOPAGUS (*Ἀρεῖοπάγος*, or *Ἄρειος πάγος*, i. e., "the hill of Mars"), a small eminence at Athens, a little distance to the northwest of the Acropolis. It was so called in consequence, as it was said, of Mars having been the first person tried there, for the murder of Halirrhothius, son of Neptune. (*Vid. Areopagitæ*.) This celebrated court consisted only of an open space, in which was an altar dedicated to Minerva Areia, and two rude seats of stone for the defendant and his accuser. From Vitruvius we learn (2, 1.—Compare *Poll.*, 8, 10), that at a later period this space was enclosed, and roofed with tiles. According to Herodotus (8, 52), the Persians were stationed in the Areopagus when they made their attack on the western side of the Acropolis. (Consult, as regards the form of the name, the remarks of *Bergman, Prof. ad Isocr. Areopag. init.*)

ARESTORIDES, a patronymic given to the hundred-eyed Argus, as son of Arestor. (*Ovid, Met.*, 1, 624.)

ARETEUS, a Greek physician of Cappadocia, who is supposed to have flourished A.D. 80. We have two productions of his remaining: *περὶ Αἰτιῶν καὶ Σημείων ὕψινων καὶ χρονίων παθῶν*, "On the causes and symptoms of acute and chronic maladies;" and, *περὶ Θεραπείας ὕψινων καὶ χρονίων παθῶν*, "On the cure of acute and chronic maladies." The works of this most elegant writer, which have come down to us,

are so truly valuable as to make us deplore the loss we have sustained by the mutilations they have suffered. His language is in the highest degree refined, and his descriptions are uncommonly graphic and accurate. For example, what picture could be truer to life than the one which he has drawn of a patient in the last stage of consumption? and what description was ever more poetically elegant than that which he gives us of the symptoms attending the collapse in ardent fever?—Considering that most probably he was prior to Galen, the correctness of his physical views cannot but excite our admiration. Thus, in his account of Paralysis, he alludes to the distinction between the Nerves of Sensation and those of Muscular motion, which doctrine is treated of at great length by Galen, in his work *De Usu Partium* (*περί Χρείας τῶν ἐν ἀνθρώπῳ σωματι μέρων*). He enumerates indigestion among the exciting causes of palsy, which seems to be an anticipation of a late pretended discovery, that paralysis of the limbs is sometimes to be referred to derangement of the stomach and bowels.—In speaking of epilepsy, he makes mention of the use of copper, which medicine has been tried of late years in this complaint with manifest advantage.—No other ancient writer that we are acquainted with gives us so correct an account of ulcers on the throat and tonsils. His description of the various phenomena of mania is very interesting, and contains the singular case of a joiner, who was in his right senses while employed at his profession at work, but no sooner left the seat of his employment than he became mad. He gives an interesting account of jaundice, which he attributes, probably with correctness, to a variety of causes, but more especially to obstruction of the ducts, which convey the bile to the intestinal canal. He makes no mention, indeed, of gall-stones, nor are they mentioned, as we know, by any ancient writer; only Nonnus recommends Lithontripics for the cure of the disease, which might seem to imply that he was acquainted with the existence of these concretions.—Aræteus was fond of administering hellebore, and concludes his work with a glowing eulogy on the properties of this medicine. The best editions of Aræteus are, that of Wigan, *Oxon.*, 1723, fol., and that of Boerhave, *Lugd. Bat.*, 1731, fol. This latter one, in fact, is superior to the former, since it contains all that is given in Wigan's edition, together with the commentary of Petit, and the notes and emendations of Triller. The edition of Aræteus given in Kuhn's collection of the Greek medical writers, has not proved very satisfactory in a critical point of view. (*Pierer., Annal. Aug.*, p. 1041.—*Hoffmann., Lex. Bibl.*, vol. 1, p. 248.)

ARÊTĒ, a daughter of the philosopher Aristippus. Ælian, however, contrary to the common account, makes her his sister. (*Hist. An.*, 3, 40.) Aristippus taught her the doctrines of his school, and she in her turn became the instructress of her own son, the younger Aristippus, who, on this account, received the surname of *Metrodidactus* (*Μητροδιδάκτορ*). Her attainments in philosophy were highly celebrated. (*Aristoteles, ap. Euseb., Præp. Ev.*, 14, 18.—*Diog. Laert.*, 2, 86.—*Cassaub., ad Diog.*, l. c.)

ARETHŪSA, I. a nymph of Elis, daughter of Oceanus, and one of Diana's attendants. As she returned one day from hunting, she came to the clear stream of the Alpheus, and, enticed by its beauty, entered into its waters to drive away the heat and fatigue. She heard a murmur in the stream, and, terrified, sprang to land. The river-god rose and pursued her. The nymph sped all through Arcadia, till with the approach of evening she felt her strength failing, and saw that her pursuer was close upon her. She then prayed to Diana for relief, and was immediately dissolved into a fountain. Alpheus resumed his aqueous form, and sought to mingle his waters with hers. She fled on under the earth, however, and through the sea, till she

rose in the island of Ortygia at Syracuse, still followed by the stream of the Alpheus. In proof of the truth of this fable, it was asserted that a cup (*κύπελλον*) which fell into the Alpheus rose in the fountain of Arethusa, whose pellucid waters also became turbid with the blood of the victims slain at the Olympic games. (*Ovid, Met.*, 5, 572, seq.—*Moschus, Idyll.*, 7.—*Keightley's Mythology*, 2d ed., p. 132.) An explanation of this legend will be found under the article *Alpheus*.—II. A lake in Armenia Major, through which the Tigris ran. It was near the sources of that river, and exhaled, according to Pliny, nitrous vapours. (*Plin.*, 6, 27.)—III. A city in the Macedonian district of Amphaxitis. (*Plin.*, 4, 10.)—IV. A city of Syria, on the eastern bank of the Orontes. It was either built or restored by Seleucus Nicator, and is supposed to have been destroyed by the Arabians. (*Strab.*, 518.—*Zosim.*, 1, 52.—*Theod., Hist. Eccles.*, 3, 7.)—V. A fountain in Eubœa, near Chalcis. (*Plin.*, 4, 12.)—VI. A fountain in Bœotia, near Thebes. (*Plin.*, 4, 7.)

ARËUS, I. (two syllables) a king of Sparta, preferred in the succession to Cleonymus, son of Cleomenes, who, on being defeated in his claim upon the throne, called in the aid of Pyrrhus. Aræus was in Crete when the King of Epirus marched against Sparta; and instantly leaving that island, whither he had gone to aid the Gortynians, he returned home and repulsed Pyrrhus. He afterward went to the aid of Athens, when attacked by Antigonus Gonatas, and lost his life in a battle with this prince in the environs of Corinth, B.C. 268. (*Pausan.*, 3, 6.)—II. (Arëus, Ἀρεῖος) a native of Alexandria, and member of the Pythagorean sect. According to the common account, he was one of the masters of Augustus, and enjoyed so high a degree of favour with this prince, that when, after the defeat of Antony and Cleopatra, Augustus appeared in the theatre of Alexandria, he had his old instructor on his right hand, and conversed familiarly with him, declaring that one of the causes of his sparing the inhabitants was his friendship for Aræus. (*Dio Cassius*, 51, 16.—*Fabrie., ad Dion.*, l. c.—*Plut., Vit. Anton.*, 80.) The eloquence and philosophy of Aræus were so persuasive, that, according to Seneca, he powerfully contributed to console Livia for the loss of Augustus! (*Senec., Consol. ad Mar.*, 4, 2.) It is thought by some that Dioscorides dedicated to him his work on the Materia Medica, but the point is not clearly ascertained. (*Biogr. Univ.*, vol. 2, p. 407.)

ARËVA, a river of Hispania Tarraconensis, in the territory of the Arævac. It rose southeast of Salamantica, and flowed into the Durus. The modern name is, according to Harduin, the *Arlanzo* (*ad Plin.*, 3, 4), but according to Florez, more correctly, the *Ucero*. (*Esp. Sagr.*, 5, 16, 39.)

ARĒVĀCI, a people of Hispania Tarraconensis, deriving their name, according to Pliny (3, 3), from the river Aræva. They lay between the Vaccei to the north and the Carpetani to the south, and formed one of the most powerful branches of the Celtiberi. According to some authorities, their chief city was Numantia. (*Strabo*, 162.—*Mela*, 2, 6.—*Appian, B. Hisp.*, c. 91.) Pliny, however, assigns this place to the Pelendones (3, 4). Their later capital was Segobia or Segubia, now *Segovia*. (*Itin. Ant.*, p. 435.—*Ptol.*, 2, 6.)

ARGÆUS, a mountain of Cappadocia, covered with perpetual snows, and so lofty that from its summit, according to the ancient writers, both the Euxine and the Mediterranean Seas might be seen, although, according to Strabo (538), there were very few who could boast of such a feat. It is now called *Argēdag*, and at its foot stood Mazæa, the capital of Cappadocia, called, in the time of Tiberius, *Cæsarea ad Argæum*, and now *Kaisariëh*. Mr. Kinneir observes, that Mount Argæus is unquestionably one of prodigious elevation; but he much questions whether any

human being ever reached its summit; and, indeed, he was positively informed that this was quite impossible. It was covered for some miles below the peak with snow, which was said to be eight or ten feet in depth in the month of October, when he was at Cæsarea. (*Journey through Asia Minor, &c.*, p. 94, *note*.)

ARGATHONIUS, or Arganthionius, a king of Gades, who, according to one account (*Herod.*, 1, 163.—*Cic.*, *de Senect.*, 19), lived 120 years, and reigned 80 years of this number. Pliny (7, 48) gives 150 years as the period of his existence; and Silius Italicus (3, 398), by poetic license, 300 years.

ARGES, a son of Cælus and Terra, who had only one eye in his forehead. (*Vid.* Cyclopes.)

ARGÆUS, a son of Perdiccas, king of Macedonia, who obtained the kingdom when Amyntas, father of Philip, was driven out for a season by the Illyrians (from 393 B.C. to 390). On the death of Perdiccas, B.C. 360, he endeavoured, but in vain, to remount the throne. (*Justin.*, 7, 1.)

ARGI (*plur. masc.*). *Vid.* Argos.

ARGIA, I. daughter of Adrastus, married Polynices, whom she loved with uncommon tenderness. When he was killed in the Theban war, and Creon had forbidden any one to perform his funeral obsequies, Argia, in conjunction with Antigone, disobeyed the mandate, and placed the corpse of Polynices on the funeral pile. Antigone was seized by the guards who had been stationed near the dead body, but Argia escaped. *Vid.* Antigone. (*Hygin.*, *fab.*, 69 and 72.)—II. A country of Peloponnesus, called also Argolis, of which Argos was the capital.—III. The wife of Inachus, and mother of Io. (*Hygin.*, *fab.*, 145.)

ARGILÆTUM, a street at Rome, which led from the Vicus Tuscus to the Forum Olitorium and Tiber. The origin of the name is uncertain. Some accounts derived it from Argus, a guest of Evander's (*vid.* Argus, V.), who was said to have been interred there; others from the abundance of argilla, or clay, found in the vicinity. (*Varro, L. L.*, 4, 32.) This street appears to have been chiefly tenanted by booksellers (*Martial, Ep.*, 1, 4.—*Id.*, 1, 118), and also by tailors. (*Martial, Ep.*, 2, 17.) Cicero informs us (*Ep. ad Att.*, 1, 14), that his brother Quintus had a house in the Argiletum. (*Cramer's Ancient Italy*, vol. 1, p. 545.)

ARGILUS, the first town on the coast of Bisaltia in Thrace, beyond Bromiscus and the outlet of the Lake Bolbe. It was founded by a colony from Andros, according to Thucydides (4, 102). Herodotus (7, 115) says it was the first town which Xerxes entered after crossing the Strymon. The Argilians espoused the cause of Brasidas on his arrival in Thrace, and were very instrumental in securing his conquest of Amphipolis. (*Thucyd.*, 4, 103.)

ARGINŪSÆ, small islands below Lesbos, and lying off the promontory of Cana or *Coloni* in Æolis. They were rendered famous for the victory gained near them by the Athenian fleet under Conon, over that of the Lacedæmonians, in the 26th year of the Peloponnesian war, B.C. 406. Of these three islands, the largest had a town called Arginusa. They are formed of a white, argillaceous soil, and from that circumstance took their names (*ἀργινώεις*, *shining white*, feminine *ἀργινώεσσα*, contracted *ἀργινώεα*.—Compare the remarks of *Heusinger, ad Cic.*, *de Off.*, 1, 24, 9).

ARGIPHONTES, a surname given to Mercury, because he killed the hundred-eyed Argus, by order of Jupiter. Cowper, in his version of Homer, renders the term in question by "Argicide." (Consult remarks under the article Io.)

ARGIPPÆI, a nation among the Sauromatæ, born bald, with flat noses and long chins. They lived upon the fruit of a tree called Ponticus, from which, when ripe, they made a thick black liquor called *Aschy*, which they drank clear, or mixed with milk. Of the husks they prepared a kind of cake. No man offered

violence to this people, for they were accounted sacred, and had no warlike weapon among them. They determined the differences between their neighbours, and whoever fled to them for refuge was permitted to live unmolested. (*Herodot.*, 4, 23.) Ritter thinks that these Argippæi were one of the early sacerdotal colonies from India, which had settled in the wilds of Scythia, and whose peaceful and sacred character had secured the regard of the neighbouring barbarians. Their bald heads he accounts for by the circumstance of the priests of Buddha being accustomed to shave the head. (*Vorhalle*, p. 286.) De Guignes, on the other hand, refers the description of Herodotus to the Sinæ. (*Mém. de l'Acad. des Inscr.*, vol. 35, p. 551.) The best opinion, however, is in favour of the Calmucs, whose peculiar physiognomy coincides with that ascribed to the ancient Argippæi. (*Malte-Brun, Annal. des Voyag.*, vol. 1, p. 372.) The Calmuc priests, moreover, called *Ghclongs*, are said to shave the entire head, and to do this also in the case of infants that are destined for the priesthood. (Compare Bähr, *ad Herod.*, l. c.—*Rennell, Geogr. of Herodotus*, vol. 1, p. 172, *seqq.*)

ARGIVA, a surname of Juno, as worshipped at Argos. (*Virg.*, *Æn.*, 3, 547.)

ARGIVI, the inhabitants of the city of Argos and the neighbouring country. The word is also applied by Homer, and, in imitation of him, by the later poets, to all the inhabitants of Greece.

ARGO, the name of the famous ship which carried Jason and his fifty companions to Colchis, when they resolved to recover the golden fleece. Jason having applied to Argus (*vid.* Argus, III.) to construct a vessel for the expedition, Argus built for him a fifty-oared galley, called from himself the Argo. Minerva aided the architect in its construction, and set in the prow a piece of timber cut from the speaking oak of Dodona, and which had the power of giving oracles. On the termination of the voyage, Jason consecrated the vessel to Neptune at the Isthmus of Corinth. According to the more popular account, however, Minerva translated the Argo to the skies, and made it a constellation. (*Apollod.*, 1, 9, 16.—*Id.*, 1, 9, 24.—*Id.*, 1, 9, 27.—*Diod. Sic.*, 4, 53.—*Eratosth.*, 35.—*Hygin.*, *fab.*, 24, &c.)

ARGOLICUS SINUS, a bay on the coast of Argolis, between this country and Laconia. It is now the *Gulf of Napoli*.

ARGOLIS, a country of Peloponnesus, to the east of Arcadia. It is properly a neck of land, deriving its name from its capital city Argos, and extending in a southeasterly direction from Arcadia fifty-four miles into the sea, where it terminates in the promontory of Scillaum. Many and important associations of the heroic age are connected with this country. Here was Tyrris, from which Hercules departed at the commencement of his labours; here was Mycenæ, the royal city of Agamemnon, the most powerful and the most unhappy of kings; here was Nemea, celebrated for its games instituted in honour of Neptune. But the glory of its early history does not seem to have animated Argos. No Themistocles, no Agesilaus was ever counted among its citizens; and though it possessed a territory of no inconsiderable extent, it never assumed a rank among the first of the Grecian states, but was rather the passive object of foreign policy. (*Heeren's Politics of Greece*, p. 19. *Bancroft's Transl.*)—For a sketch of the history of Argolis, *vid.* Argos.

ARGONAUTÆ, a name given to those ancient heroes who went with Jason on board the ship Argo to Colchis. The expedition arose from the following circumstance. Athamas, king of Orchomenus in Bœotia, married Nephele, by whom he had two children, a son and a daughter, named Phrixus and Helle. Having subsequently divorced Nephele, he married Ino, daugh-

ter of Cadmus, who bore him two sons, Learehus and Melicerta. Ino, feeling the usual jealousy of a step-mother, resolved to destroy the children of Nephele. For this purpose she persuaded the women to parch the seed-corn unknown to their husbands. They did as she desired, and the lands consequently yielded no crop. Athamas sent to Delphi to consult the oracle, in what way the threatening famine might be averted. Ino persuaded the messenger to say that Apollo directed Phrixus to be sacrificed to Jupiter. Compelled by his people, Athamas reluctantly placed his son before the altar; but Nephele snatched away both her son and her daughter, and gave them a gold-fleece ram she had obtained from Mercury, which carried them through the air over sea and land. They proceeded safely till they came to the sea between Sigæum and the Chersonese, into which Helle fell, and it was named from her Hellespontus (*Helle's Sea*). Phrixus went on to Colchis to Æetes, the son of Helios, who received him kindly, and gave him in marriage his daughter Chalciope. He there sacrificed his ram to Jupiter Phryxius, and gave the golden fleece to Æetes, who nailed it to an oak in the grove of Mars. It is thus that we find this legend related by Apollodorus (1, 9, 1). There are, however, many variations in the tale. Thus it is said that Ino was Athamas's first wife, and that he put her away by the direction of Juno, and married Nephele, who left him after she had borne two children, on finding that he still retained an attachment for Ino. When the response of the oracle came to Athamas, he sent for Phrixus out of the country, desiring him to come, and to bring the finest sheep in the flock for a sacrifice. The ram then spoke with a human voice to Phrixus, warning him of his danger, and offering to carry him and his sister to a place of safety. The ram, it was added, died at Colchis. (*Philostephanus, ap. Schol. ad. Il.*, 7, 86.—Compare, for another account, *Hygini, Poet. Astron.*, 2, 20.) Other statements again are given by the tragic poets, it being well known that they allowed themselves great liberties in the treatment of the ancient myths. (Compare *Hygini, fab.*, 4.—*Nonnus*, 9, 247, *seqq.*) Some time after this event, when Jason, the son of Æson, demanded of his uncle Pelias the crown which he usurped (*vid.* Pelias, Jason, Æson), Pelias said that he would restore it to him, provided he brought him the golden fleece from Colchis. Jason undertook the expedition, and when the Argo was ready (*vid.* Argo), consulted the oracle, which directed him to invite the greatest heroes of the day to share in the dangers and glories of the voyage. The call was immediately responded to, and numerous sons of gods hastened to embark with him. From the Peloponnesus came Hercules, Castor and Pollux, sons of Jupiter; Pelcus and Telamon, grandsons of that god, also came with Theseus; Erginos and Anceus, sons of Neptune, Augeas, son of Helius, Zetes and Calais, sons of Boreas. There were likewise Lyceus and Idas, and Meleagrus, Læertes, Periclymenus, Nauplius, Iphiclus, Iphitus, Admetus, Acæstus, Butes, Polyphemus, Atalanta, and many others. Idmon, the seer, the son of Apollo, came from Argos; Mopsus, also a prophet, from Thessaly, and Orpheus, the son of the muse Calliope. The steersman was Tiphys, son of Agnius, from Siphae in Bœotia. The entire number was fifty. (*Apollod.*, 1, 9, 16.—*Heyne, ad loc.*—*Burmman, Prof. ad Val. Flacc.*, 11, vol. 1, p. clxxiii.) When the heroes were all assembled, Mopsus took auguries, and the omens being favourable, they embarked. The joyful heroes grasped each his oar at the word of the soothsayer; and, while Orpheus struck his lyre in concert with his voice, their oars kept time to the harmony. At the close of the day they had reached the mouth of the bay of Pagasæ. Here they remained for two days, and then rowed along the coast of Magnesia; and, passing the peninsula of Pallene, at length reached the Isle of

Lemnos, in which there were at that time no men, Hypsipyle the daughter of Thoas governing it as queen. For the Lemnian women had murdered their husbands, being incensed at their neglect. (*Vid.* Hypsipyle.) The Argonauts, being invited to land, all disembarked with the exception of Hercules, and gave themselves up to joy and festivity, until, on the remonstrances of the son of Alemea, they tore themselves away from the Lemnian fair ones, and once more handled their oars. The offspring of this temporary union re-peopled, say the poets, the Island of Lemnos. After leaving Lemnos they came to Samothrace, and thence pursued their voyage through the Hellespont into the Propontis, where they came to an island with a lofty hill in it named the Bears' Hill, inhabited by giants with six arms. The adjacent country was possessed by the Dolionians, whose king was named Cyzicus. Having been hospitably entertained by this prince, and having slain the giants who opposed their departure, they set sail, but were driven back by adverse winds. It was in the night that they returned, and the Dolionians, taking them to be their enemies the Pelasgians, attacked them; and several of the Dolionians, and among them Cyzicus, lost their lives. With daylight discerning their error, the Argonauts shore their hair, and, shedding many tears, buried Cyzicus with solemn magnificence. They then sailed to Mysia, where they left behind them Hercules and Polyphemus; for Hylas, a youth beloved by the former, having gone for water, was seized and kept by the nymphs of the spring into which he dipped his urn. Polyphemus, hearing him call, went with his drawn sword to aid him, supposing him to have fallen into the hands of robbers. Meeting Hercules, he told him what had happened, and both proceeded in quest of the youth. Meantime the Argo put to sea, and left them behind. Polyphemus settled in Mysia, and built the city of Kios: Hercules returned to Argos. (*Vid.* remarks under the article Hylas.) The Argo next touched on the coast of Bebyrcia, otherwise called Bithynia, where Pollux accepted the challenge of Amycus, king of the country, in the combat of the cestus, and slew him. They were driven from Bebyrcia, by a storm, to Salmidyssa, on the coast of Thrace, where they delivered Phineus, king of the place, from the persecution of the harpies. Phineus directed them how to pursue their course through the Cyanean rocks, or the Symplegades (*vid.* Cyaneæ), and they safely entered the Euxine Sea. They visited the country of the Mariandynians, where Lycus reigned. Here died Idmon, the seer, wounded by the tusks of a wild boar. Tiphys also dying here, Anceus undertook the steering of the vessel. They now kept along the southern coast of the Euxine till they came to the Island of Arctias, which was haunted by birds that shot feathers sharp as arrows from their wings. These they drove off by clattering on their shields. While they remained in this isle, the sons of Phrixus, who were on their way to Greece, having been sent by Æetes to claim their father's kingdom, were cast on the shores of Arctias by a storm. These became the guides of the Argonauts to Colchis, and conducted them to Æea the capital. Jason explained the causes of his voyage to Æetes; but the conditions on which he was to recover the golden fleece were so hard, that the Argonauts must have perished in the attempt had not Medea, the king's daughter, fallen in love with their leader. She had a conference with Jason, and, after mutual oaths of fidelity, Medea pledged herself to deliver the Argonauts from her father's hard conditions, if Jason married her, and carried her with him to Greece. He was to tame two bulls, the gifts of Vulcan to Æetes, which had brazen feet, and breathed flame from their throats. When he had yoked these, he was to plough with them a piece of ground, and sow the serpent's teeth which Æetes possessed; for Minerva had given him one half of those

which Cadmus sowed at Thebes. All this was to be performed in one day. Medea, who was an enchantress, gave him a salve to rub his body, shield, and spear. The virtue of this salve would last an entire day, and protect alike against fire and steel. She farther told him that, when he had sown the teeth, a crop of armed men would spring up, and prepare to attack him. Among these she desired him to fling stones, and, while they were fighting with one another about them, each imagining that the other had thrown these, to fall on and slay them. The hero followed the advice of the princess: he entered the sacred grove of Mars, yoked the bulls, ploughed the land, and slaughtered the armed crop which it produced. But Æetes refused to give the fleece, and meditated burning the Argo and slaying her crew. Medea, anticipating him, led Jason by night to the golden fleece: with her drugs she cast to sleep the serpent which guarded it; and then, taking her little brother Absyrtus out of his bed, she embarked with him in the Argo, and the vessel set sail while it was yet night. (*Pherecydes, ap. Schol. ad Apoll. Rh.* 4, 223.—Another account is given under the article Absyrtus.) Æetes, on discovering the treachery and flight of his daughter, got on shipboard and pursued the fugitives. Medea, seeing him gain on them, cut her brother to pieces, and scattered his limbs on the stream; an event that was afterward transferred to the north side of the Euxine, where the town of Tomi (τόμι, *cuttings*) was said to have derived its name from it. (*Apollod.* 1, 9, 24.—*Ovid, Trist.* 3, 9.) While Æetes was engaged in collecting the limbs of his son, the Argo escaped. He then despatched a number of his subjects in pursuit of the Argo, threatening, if they did not bring back his daughter, to inflict on them the punishment designed for her. At length the Argo entered the western sea, and came to the Island of Circe. The belief for a long time prevailed, that there was a communication between the Palus Mæotis and the Oceanus or earth-encompassing stream. This communication the old poets made to be a narrow passage or strait, but later writers the river Tanais. The writer of the Orphic Argonautics makes the Argonauts pass up the Phasis into the Palus Mæotis, thence into the main Oceanus, and thence directing their course to the west, to come to the British Isles and the Atlantic, and to reach at last the Columns of Hercules. Circe performed the usual rites of purification to remove the blood-guilt of the death of Absyrtus, and the heroes then departed. Ere long they came to the Isle of the Sirens, charmed by whose enchanting strains they were about to land on that fatal shore, when Orpheus struck his lyre, and with its tones overpowered their voices. Wind and wave urged on the Argo, and all escaped but Butes, who flung himself into the sea to swim to the Flowery Isle. Venus, to save him, took him and set him to dwell at Lilybæum. The Argonauts now passed Scylla and Charybdis, and also the Wandering Rocks; over these they beheld flame and smoke ascending, but Thetis and her sister Nereids guided them through by the command of Juno. Passing Thrinakia, the Isle of the Sun, they came to the island of the Phæaciens. Some of the Colchians who were in pursuit of the Argonauts, arriving here, found the Argo, and requested Alcinoüs to give Medea up to them. He assented, provided she had not been actually married to Jason. His wife Arete, hearing this, lost no time in joining the lovers in wedlock; and the Colchians, then fearing to return, settled in the island. Sailing thence, the Argo was assailed by a tremendous storm, which drove it to the Syrtes, on the coast of Libya. After being detained there for some time, they proceeded on their homeward voyage, and came to Crete, where the brazen man, Talus, prohibited their landing; but Medea, by her art, deprived him of life. On leaving Crete, the night came on so black and dark that they knew not

where they were; but Apollo, taking his stand on the rocks called the Melantian Rocks, shot an arrow into the sea: the arrow flashed a vivid light, and they beheld an island, on which they landed. As this isle had appeared (*ἠνεψύνατο*) so unexpectedly, they named it Anäphe. Here they erected an altar to Apollo Æglêtes (the *Lightener*), and offered sacrifices. They thence proceeded to Ægina, where they watered; and they finally arrived at Iolcos after an absence of four months.—This celebrated voyage formed a theme for several ancient poets, and is noticed more or less by many other writers. Jason and the Argo are mentioned by Homer (*Il.* 7, 469.—*Ib.* 21, 40 —*Od.* 12, 69). Hesiod briefly narrates the principal events (*Theog.*, 992, *seqq.*); it is the subject of one of Pindar's finest odes (*Pyth.* 4), and of the epic poem of Apollonius, named from it. It is narrated in detail by Apollodorus and Diodorus Siculus. Ovid also relates a large part of it, and there is an unfinished poem on the subject by the Latin poet Valerius Flaccus, which displays genius and originality. We have also the Argonautics of the pseudo-Orpheus, a poem to which the ablest critics assign a date posterior to the commencement of the Christian era. To these are to be added the detached notices in other writers and in the various scholia. Of the dramas composed on this subject, not a single one has been preserved, except the Medea of Euripides. (*Keightley's Mythology*, 2d ed., p. 468, *seqq.*)—The Argonautic expedition, observes Thirlwall, when viewed in the light in which it has usually been considered, is an event which a critical historian, if he feels himself compelled to believe it, may think it his duty to notice, but which he is glad to pass rapidly over, as a perplexing and unprofitable riddle. For even when the ancient legend has been pared down into an historical form, and its marvellous and poetical features have been all effaced, so that nothing is left but what may appear to belong to its pith and substance, it becomes, indeed, dry and meager enough, but not much more intelligible than before. It still relates an adventure, incomprehensible in its design, astonishing in its execution, connected with no conceivable cause, and with no sensible effect. Though the account which we have given is evidently an artificial statement, framed to reconcile the main incidents of a wonderful story with nature and probability, it still contains many points which can scarcely be explained or believed. It carries us back to a period when navigation was in its infancy among the Greeks; yet their first essay at maritime discovery is supposed at once to have reached the extreme limit, which was long after attained by the adventurers who gradually explored the same formidable sea, and gained a footing on its coasts. The success of the undertaking, however, is not so surprising as the project itself; for this implies a previous knowledge of the country to be explored which it is very difficult to account for. But the end proposed is still more mysterious; and, indeed, can only be explained with the aid of a conjecture. Such an explanation was attempted by some of the later writers among the ancients, who perceived that the whole story turned on the golden fleece, the supposed motive of the voyage, and that this feature had not a sufficiently historical appearance. But the mountain torrents of Colchis were said to sweep down particles of gold, which the natives used to detain by fleeces dipped in the streams. This report suggested a mode of translating the fable into historical language. It was conjectured that the Argonauts had been attracted by the metallic treasures of the country, and that the golden fleece was a poetical description of the process which they had observed, or perhaps had practised; an interpretation certainly more ingenious, or, at least, less absurd than those by which Diodorus transforms the fire-breathing bulls which Jason was said to have yoked, at the bidding of Æetes, into a band of Taurians who guarded

the fleece, and the sleepless dragon which watched over it, into their commander Draco: but yet not more satisfactory; for it explains a casual, immaterial circumstance, while it leaves the essential point in the legend wholly untouched. The epithet *golden*, to which it relates, is merely poetical and ornamental, and signified nothing more, as to the nature of the fleece, than the epithets white or purple, which were also applied to it by early poets. (*Schol. ad Apoll. Rh.*, 4, 177.) According to the original and genuine tradition, the fleece was a sacred relic, and its importance arose out of its connexion with the tragical story of Phrixus, the main feature of which is the human sacrifice which the gods had required from the house of Athamas. This legend was not a mere poetic fiction, but was grounded on a peculiar form of religion, which prevailed in that part of Greece from which the Argonauts are said to have set out on their expedition, and which remained in vigour even down to the Persian wars. Herodotus informs us, that when Xerxes, on his march to Greece, had come to Alus, a town of the Thessalian Achaia, situate near the Gulf of Pagasæ, in a tract sometimes called the Athamantian plain, his guides described to him the rites belonging to the temple of the Iapthystian Jupiter, an epithet equivalent to that under which Phrixus is said to have sacrificed the ram to the same deity, as the god who had favoured his escape. (*Zeug Φύσις*,—*Müller, Orchomenus*, p. 164.) The eldest among the descendants of Phrixus was forbidden to enter the council-house at Alus, though their ancestor Athamas was the founder of the city. If the head of the family was detected on the forbidden ground, he was led in solemn procession, covered with garlands, like an ordinary victim, and sacrificed. Many of the devoted race were said to have quitted their country to avoid this danger, and to have fallen into the snare when they returned after a long absence. The origin assigned to this rite was, that, after the escape of Phrixus, the Achæans had been on the point of sacrificing Athamas himself to appease the anger of the gods; but that he was rescued by the timely interference of Cyttisus, son of Phrixus, who had returned from the Colchian Æa, the land of his father's exile: hence the curse, unfulfilled, was transmitted for ever to the posterity of Phrixus. This story, strange as it may sound, not only rests on unquestionable authority, but might be confirmed by parallel instances of Greek superstition; and it scarcely leaves room to doubt, that it was from this religious belief of the people, among whom the Argonautic legend sprang up, that it derived its peculiar character; and that the expedition, so far as it was the adventure of the golden fleece, was equally unconnected with piracy, commerce, and discovery. It closely resembled one of the romantic enterprises celebrated in the poetry of the middle ages, the object of which was imaginary, and the direction uncertain. And so Pindar represents it as undertaken for the purpose of bringing back, with the golden fleece, the soul of Phrixus, which could not rest in the foreign land to which it had been banished.—But the tradition must also have had an historical foundation in some real voyages and adventures, without which it would scarcely have arisen at all, or become so generally credited. The voyage of the Argonauts must not doubt be regarded, like the expedition of the Tyrian Hercules, as representing a succession of enterprises, which may have been the employment of several generations. And this is perfectly consistent with the manner in which the adventurers are most properly described. They are Minyans, a branch of the Greek nation whose attention was very early drawn by their situation, not perhaps without some influence from the example and intercourse of the Phœnicians, to maritime pursuits. The form which the legend assumed was probably determined by the

course of their earliest naval expeditions. They were naturally attracted towards the northeast, first by the islands that lay before the Hellespont, and then by the shores of the Propontis and its two straits. Their successive colonies, or spots signalized either by hostilities or peaceful transactions, would become the landing-places of the Argonauts.—If, however, it should be asked, in what light the hero and heroine of the legend are to be viewed on this hypothesis, it must be answered that both are most probably purely ideal personages, connected with the religion of the people to whose poetry they belong. Jason was perhaps no other than the Samothracian god or hero Jason, whose name was sometimes written in the same manner, the favourite of Ceres, as his namesake was of Juno, and the protector of mariners, as the Thesalian hero was the chief of the Argonauts. Medea seems to have been originally another form of Juno herself, and to have descended, by a common transition, from the rank of a goddess into that of a heroine, when an epithet had been mistaken for a distinct name. The Corinthian tradition claimed her as belonging properly to Corinth, one of the principal seats of the Minyan race. The tragical scenes, which rendered her story there so celebrated, were commemorated by religious rites, which continued to be observed until the city was destroyed by the Romans. According to the local legend, she had not murdered her children; they had been killed by the Corinthians; and the public guilt was expiated by annual sacrifices offered to Juno, in whose temple fourteen boys, chosen every twelvemonth from noble families, were appointed to spend a year in all the ceremonies of solemn mourning. The historical side of the legend seems to exhibit an opening intercourse between the opposite shores of the Ægean. If, however, it was begun by the northern Greeks, it was probably not long confined to them, but was early shared by those of Peloponnesus. It would be inconsistent with the piratical habits of the early navigators to suppose, that this intercourse was always of a friendly nature; and it may therefore not have been without a real ground that the Argonautic expedition was sometimes represented as the occasion of the first conflict between the Greeks and the Trojans. (*Thirlwall's History of Greece*, vol. 1, p. 142, *seqq.*—*Müller, Orchomenus*, p. 258, *seqq.*—*Id. ibid.*, p. 302, 357.—For other, but far less satisfactory theories on the subject, consult *Bryant's Mythology*, vol. 3, p. 362, *seqq.*—*Ritter, Vorhalle*, p. 420, *seqq.*—*Knight, Inquiry*, &c., § 220, *Class. Journ.*, No. 53, p. 75.—*Plass, Vor- und Urgeschichte der Hellenen*, vol. 1, p. 414, *seqq.*) Apollonius Rhodius gives another account, equally improbable. He says that they sailed from the Euxine up one of the mouths of the Danube, and that Absyrtus pursued them by entering another mouth of the river. After they had continued their voyage for some leagues, the waters decreased, and they were obliged to carry the ship Argo across the country to the Adriatic, upward of 150 miles. Here they met with Absyrtus, who had pursued the same measure, and conveyed his ship in like manner over the land. Absyrtus was immediately put to death; and soon after, the beam of Dodona (*vid.* Argo) gave an oracle, that Jason should never return home if he was not previously purified of the murder. Upon this they sailed to the island of Æa, where Circe, who was the sister of Æetes, expiated him without knowing who he was. There is a third tradition, which maintains, that they returned to Colchis a second time, and visited many places of Asia.

Argos (*sing. neut. et Argi, masc. plur.*), I. the capital of Argolis, situate on the river Inachus, and generally regarded as the most ancient city of Greece. (*Diod. Sic.*, 1, 17.) Its early prosperity and commercial connexion with the Phœnicians are

attested by Herodotus (1, 1). The walls of the city were constructed of massive blocks of stone, a mode of building which was generally attributed to the Cyclopes (*Euripides, Troad.*, 1087.—*Id.*, *Herc. Fur.*, 15), but which evidently shows the Pelagic origin of the place. It was also protected by two citadels, situated on towering rocks, and surrounded by fortifications equally strong. The principal one was named Larissa. (*Strabo*, 370.—*Livy*, 34, 25.) In the time of Strabo, Argos was inferior only to Sparta in extent and population, and from the description of Pausanias, it is evident that, when he visited this celebrated town, it was adorned with many sumptuous buildings and noble works of art. Argos produced some of the first sculptors of Greece, among whom were Ageladas, the master of Phidias, and Polyclethus, who surpassed all the artists of antiquity in correctness of design. Music also was highly cultivated in this city; and, as early as the reign of Darius, the Argives, according to Herodotus, were accounted the first musicians of the age. (*Herodot.*, 3, 131.)—Argos, if we follow the common tradition, was founded by Inachus, B.C. 1856. On the arrival of Danaus, who is said to have come from Egypt, the inhabitants changed their ancient appellation of Pelasgi to that of Danai. (*Eurip. Archel.*, frag. 2.—Compare *Strabo*, 371.) At that time the whole of what was afterward called Argolis acknowledged the authority of one sovereign; but, after the lapse of two generations, a division took place, by which Argos and its territory were allotted to Acrisius, the lineal descendant of Danaus, while Tiryns and the maritime country became the inheritance of his brother Proetus. A third kingdom was subsequently established by Perseus, son of the former, who founded Mycenæ; but these were all finally reunited in the person of Atreus, son of Pelops; who, having been left regent by his nephew Eurystheus, during his expedition against the Heraclidæ, naturally assumed the sovereign power after his death. Atreus thus acquired, in right of the houses of Pelops and Perseus, which he represented, possession of nearly the whole of Peloponnesus, which ample territory he transmitted to his son Agamemnon, who is called by Homer sovereign of all Argos and the islands. (*Il.*, 2, 107.—Compare *Thucyd.*, 1, 9.—*Strabo*, 372.) After the death of Agamemnon the crown descended to Orestes, and subsequently to his son Tisamenus, who was forced to evacuate the throne by the invasion of the Dorians and Heraclidæ eighty years after the siege of Troy. (*Pausan.*, 2, 18.) Temenus, the lineal descendant of Hercules, now became the founder of a new dynasty; but the Argives, having acquired a taste for liberty, curtailed so much the power of their sovereigns as to leave them but the name and semblance of kings: at length, having deposed Meltas, the last of the Temenic dynasty, they changed the constitution into a republican government. (*Pausan.*, 2, 19) As regards the inward organization of this government, we only know, that in Argos, a senate, a college of eighty men, and magistrates, stood at the head. In the time of the Achaean league the first officer of the state appears to have been elected by the people. (*Liv.*, 32, 25.) The Argives, after the establishment of their republican form of government, were engaged in frequent hostilities with the Spartans, each people claiming the possession of the small district of Cynuria. In the reign of Cleomenes, king of Sparta, the Argives met with a total defeat, and Argos itself was only saved from the enemy by the daring courage of a female, Telesilla, who incited the rest of the population, and even those of her own sex, to take up arms in defence of their city. (*Pausan.*, 2, 20.) Subsequently, however, the slaves of Argos, taking advantage of the enfeebled state of the country, openly rebelled, and, overturning the existing government, retained the sovereign power

in their own hands, till the sons of their former masters, arriving at the age of manhood, expelled them from the city. It was partly owing to these internal commotions, and partly also to the jealousy which subsisted between the Argives and the Lacedæmonians, that the former took no part in the Persian war. Not long after the termination of this war, the Argives, actuated by motives of envy against the Mycenæans, who had distinguished themselves at Thermopylæ, made war upon that people, and, after taking Mycenæ, finally destroyed that city, B.C. 468. (*Diod. Sic.*, 11, 65.—*Pausan.*, 2, 16.) At a subsequent period, we find the Argives uniting with the Athenians, Corinthians, and other powers against the Spartans. The judicious measures, however, pursued by King Agis and the Spartan allies, frustrated the operations of their Argive foes, and had the Lacedæmonian king pressed his advantage, the latter must have been totally routed. The following year, the hostile armies met in the plains of Mantinea, where a decisive battle was fought, which ended in the total defeat of the Argives and their allies. This event dissolved the confederacy against the Lacedæmonians; and the Argives not only made peace with that people, but were even persuaded by them to convert their hitherto democratical constitution into an aristocracy. (*Thucyd.*, 5, 65, *seqq.*) Not long after, however, a counter-revolution took place, when the people revolted, and, after overpowering the oligarchical party, entered once more into an alliance with Athens. Having obtained the assistance of that power, they now erected long walls, extending from the city to the sea, which ensured to them a constant communication with their allies by means of that element. (*Thucyd.*, 5, 82.) The Argives, induced by gratitude for the interest which Alcibiades had taken in their affairs, joined the Sicilian expedition (*Thucyd.*, 6, 29); and, even after the disastrous termination of that enterprise, they continued to support the Athenian cause, till the defeat they sustained near Miletus obliged them to recall their forces. Argos, adhering to the principle of opposing the aggrandizement of Sparta, joined the league which was afterward set on foot against that power by the influence of Persia; and furnished troops for the battles of Nemea, Coronea, and the other engagements which took place during what is usually termed the Corinthian war, which was concluded by the peace of Antalcidas. On the renewal of hostilities between the Bœotians and Lacedæmonians, the Argives again joined the former, and fought at the battle of Mantinea. (*Xen., Hist. Gr.*, 7, 5.) After this period, no event of interest or importance occurs in the history of Argos until the unsuccessful attempt made to surprise and capture that city by Pyrrhus. This prince, being then at war with Antigonus Gonatas, whom he had driven from Macedonia, having failed in the enterprise he meditated against Sparta, marched rapidly on Argos, which he reached during the night, and had already penetrated into the town, when succours arrived from Antigonus. Pyrrhus being slain, his troops were all destroyed or made prisoners. (*Plut., Vit. Pyrrh.*—*Pausanias*, 1, 13.—*Strabo*, 377.) Argos, like other Peloponnesian states, became afterward subject to the domination of a tyrant; but when, by the talents and energy of Aratus, Corinth and Sicyon had been emancipated, Aristomachus, who then reigned in Argos, voluntarily abdicated his authority, and persuaded the Argives to join the Achæan league. (*Polyb.*, 2, 44.) During the momentary success obtained by Cleomenes, Argos fell into the hands of that prince, but it was presently recovered by the Achæans, and continued to form part of their confederacy till its final dissolution by the Romans. (*Polyb.*, 2, 52, *seqq.*—*Strabo*, l. c.) The population of Argolis was divided into three classes, consisting of citizens, inhabitants of the country, or *περιούκοι*, and

slaves or vassals, called γυνῆτες. (*Aristot., Rep.*, 5, 2, 8.—*Pollux*, 3, 83.) The number of the first class might amount to 16,000, being nearly equal to that of the Athenian citizens. (*Lys., ap. Dion. Hal.*, p. 531.) The free part of the population may therefore be estimated at 65,000 souls, to which, if we add the *περίοικοι* and slaves, we shall have an aggregate of nearly 110,000 persons. (*Clinton's Fasti Hellenici*, 2d ed., vol. 1, p. 426.—*Cramer's Ancient Greece*, vol. 9, p. 226, *seqq.*)—II. Pelasgicum, a city of Thessaly, of Pelasgic origin, as its name indicates. It is generally supposed to have been identical with Larissa on the Peneus. Strabo (440) informs us that there was once a city named Argos close to Larissa. (Compare *Heyne, ad Il.*, 6, 457.)—III. Oresticum, a city of Macedonia, in the district Orestis and territory of the Orestæ. Its foundation was ascribed by tradition to Orestes, son of Agamemnon. (*Strabo*, 326.—Compare *Theag. Maced.*, *ap. Steph. Byz.*, s. v. Ὀρέσται, cf. Ἀργος.)—IV. A city of Acarnania, situate at the southeastern extremity of the Ambracian Gulf, in the territory of the Amphiloehi. It was founded, as Thucydides reports (2, 68), by Amphiloehus, son of Amphiphaeus, on his return from Troy, who named it after his native city, the more celebrated Argos of Peloponnesus. Ephorus, however, who is cited by Strabo (326), gave a somewhat different account, affirming that Argos in Acarnania owed its origin to Alemaeon, by whom it was named Amphiloehium, after his brother Amphiloehus. (Compare *Apollod.*, 3, 7.—*Dicaarch.*, *Stat. Grec.*, v. 46.) Argos was originally by far the largest and most powerful town of the country; but its citizens, having experienced many calamities, admitted the Ambraciots, their neighbours, into their society, from whom they acquired the knowledge of the Grecian language, as it was spoken at that time. The Ambraciots, however, at length gaining the ascendancy, proceeded to expel the original inhabitants, who, too weak to avenge their wrongs, placed themselves under the protection of the Acarnanians. These, with the aid of the Athenians, commanded by Phormio, recovered Argos by force, and reduced to slavery all the Ambraciots who fell into their hands. The Ambraciots made several attempts to retrieve their loss, but without effect. Many years subsequent to this we find Argos, together with Ambracia, in the possession of the Ætolians; and, on the surrender of the latter town to the Romans, we are informed by Livy, that the consul M. Fulvius removed his army to Argos, where, being met by the Ætolian deputies, a treaty was concluded, subject to the approbation of the senate. (*Liv.*, 38, 9.—*Polyb.*, *fragm.*, 22, 13.) Argos, at a later period, contributed to the formation of the colony of Nicopolis, and became itself deserted. The ruins of the city have been visited by several travellers, but Dr. Holland's account is perhaps the most circumstantial. He describes them as situated at the southeastern extremity of the Gulf of *Arta*, on one of the hills which form an insulated ridge running back in a southeast direction from the bay. The walls, forming the principal object in these ruins, skirt along nearly the whole extent of the ridge, including an oblong irregular area, about a mile in its greatest length, but of much smaller breadth. The structure of these walls is Cyclopiæ; they are of great thickness, and on the eastern side, where built with the most regularity, are still perfect to the height of more than twenty feet. (*Holland's Travels*, vol. 2, p. 224.—*Cramer's Ancient Greece*, vol. 2, p. 10, *seqq.*)

ARGUS, I. a son of Arestor, according to one account (*Asclep.*, *ap. Apollod.*, 2, 1, 3), and hence called by Ovid *Arestorides*. (*Met.*, 1, 624.) Others, however, make him a son of Inachus. (*Pherecyd.*, *ap. Eund.*) Acusilaus and Æschylus (*Supp.*, 318.—*Prom. V.*, 698) call him *Earth-born*. He was named *All-seeing* (πανόπτης), as having eyes all over his

body (*Apollod.*, l. c.). Ovid, however, gives him the poetic number of a hundred, of which only two were asleep at a time. (*Met.*, 1, 625.) The strength of Argus was prodigious; and Arcadia being at the time infested with a wild bull, he attacked and slew the animal, and afterward wore its hide. He also killed a satyr, who carried off the cattle of the Arcadians; and watching an opportunity, when he found the Echidna (the daughter of Tartarus and Earth) asleep, he deprived her of life. When Io had been changed into a cow, Juno gave the charge of watching her to Argus. He thereupon bound her to an olive-tree in the grove of Mycenæ, and kept guard over her. Jupiter, pitying her condition, sent Mercury to steal her away; but a vulture always gave Argus warning of his projects, and the god found it impossible to succeed. Nothing then remaining but open force, he killed Argus with a stone, and hence obtained the name of *Argus-slayer*, or *Argicide* (Ἀργεφόντης). Thus far Apollodorus. Ovid, however, varies the fable in several particulars, and, among other things, makes Mercury to have slain Argus with a *harpè*, or short curved sword. According to the same poet also, Juno transferred the eyes of Argus, after death, to the tail of her favourite bird the peacock.—An explanation of the whole legend will be given under the article Io. (*Apollod.*, l. c.—*Keightley's Mythology*, p. 406, 2d ed.)—II. A son of Jupiter and Niobe daughter of Phoroneus. According to one account he succeeded Phoroneus on the Argive throne, and gave the name of Argos to the whole Peloponnesus. Another statement, however, makes him to have been the successor of Apis. (*Apollod.*, 2, 1, 1.—*Heyne, ad loc.*—*Schol. ad Eurip.*, *Orest.*, 1247.)—III. The builder of the Argo. His parentage is differently given by different writers, and he is often confounded with Argus the son of Phrixus (IV.). Both he and this latter were in the number of the Argonauts. (Consult the remarks of Burmann in the list of the Argonauts appended to his edition of Valerius Flaccus, s. v. Argus.)—IV. Son of Phrixus and Chalciope daughter of Æetes. He is often confounded with the preceding, for example by Apollodorus (1, 9, 16) and Pherecydes (*ap. Schol. ad Apoll. Rh.*, 1, 4). He and his brothers were found by the Argonauts on the island of Aretias, in the Euxine, having been cast on it by a storm when on their way to Greece to claim their father's kingdom; and he guided the Argonauts to Colchis. (*Schol. ad Apoll. Rh.*, 2, 309, 384.) Valerius Flaccus, on the other hand, makes the Argonauts to have found Argus in Colchis, at the palace of Æetes (5, 461), and with this the account of the pseudo-Orpheus substantially agrees (v. 858, *seqq.*). Compare the remarks of Burmann, as cited in the previous paragraph (III.).—V. A guest of Evander's, who conspired against that monarch, and was slain in consequence by the followers of the latter without his knowledge. The spot where he was interred was called, according to some, Argiletum. (*Vid.* Argiletum.—*Virg.*, *Æn.*, 8, 345.—*Serv.*, *ad loc.*)—VI. A hound of Ulysses, that recognised its master after an absence on the part of the latter of nearly twenty years. (*Od.*, 17, 301.)

ARGYRASPIDES, a name given to the troops of Alexander, from the silver plates added by him to their shields when about to invade India. (Compare *Quintus Curtius*, 8, 5, 4, and *Justin*, 12, 7.) There is some doubt whether the name in question was confined to a particular corps of Alexander's invading army or to the whole. The latter opinion appears to be the more correct one. (Consult on this point the remarks of *Schmieder, ad Curt.*, 4, 13, 27, and 8, 5, 4.)

ARGËRA, a town of Achaia, a little to the southeast of Patræ. The river Selemmus flowed in its vicinity, and near it also was the fountain of Argyra. (*Pausan.*, 7, 23.)—II. A sea-nymph, of whom Selemmus, a young shepherd, was enamoured. She eventually slighted

his love, and he pined away until Venus changed him into a river. The Selenmus thereupon, like the Alpheus in the case of Arethusa, sought to blend its waters with those of the fountain Argyra, over which the inconstant nymph presided. According to another legend, however, Venus, again moved with pity, exerted her divine power anew, and caused him to forget Argyra. The waters of the Selenmus became, in consequence, a remedy for love, inducing oblivion on all who bathed in them. (*Pausan.*, 7, 23.)—III. A name given by the ancients to the silver region of the East, and the position of which tract of country varied with the progress of geographical discovery. At first Argyra was an island immediately beyond the mouths of the Indus. When, however, under the first Ptolemies, the navigation of the Greeks extended to the Ganges, the silver-island was placed near this latter stream. Afterward another change took place, and Argyra, now no longer an island, became part of the region occupied in modern times by the kingdom of Arracan. (*Ptol.*, 7, 2.—*Gosselin, Recherches*, &c., vol. 3, p. 280.)

ARGYRA, the more ancient name of *Arpi*. (*Vid.* *Arpi*.)

ARIA, the name given to a country of large extent, answering in some degree to the present *Khorasin*. It comprised several provinces, and was bounded on the west by Media, on the north by Hyrcania and Parthia, on the east by Bactria, and on the south by Carmania and Gedrosia. The capital was Artacoāna, now *Herat*. From Aria, however, in this acceptance of the term, we must carefully distinguish another and much earlier use of the name. In this latter sense the appellation belongs to a region which formed the primitive abode of the Medes and Persians, and very probably of our whole race. It appears to indicate a country where civilization commenced, and where the rites of religion were first instituted. In the *Schah-namēh* it is called *Erman* (i. e., Ariman), and in the Zend books *Irman* or *Iran* (i. e., Arjan). Its position would appear to coincide in some degree with that of ancient Bactria, though some writers, Rhode for example, make it include a much wider tract of country. The name of Arii, given to its early inhabitants, is said by Bohlen to be equivalent to the Latin "*venetrandi*," and reminds us (with the change of the liquid into the sibilant) of the far-famed *Asi*, who play so conspicuous a part in the early Asiatic as well as in the Scandinavian mythology. From these data we may account for the statement of Herodotus (7, 62), that the Medes were anciently called Arii (*Ἀριοι*, or *Ἀρειοι*). The same writer places in the neighbourhood of Sogdiana a people whom he calls Arii (*Ἀρειοι*). Diodorus Siculus (1, 94) makes mention of this same people under the name of *Arimaspi* (*Ἀριμασποί*), where we ought to read *Ariaspi* (*Ἀριασποί*), or else *Ariani* (*Ἀρειανοί*). He also speaks of their lawgiver Zathraustes, meaning evidently Zoroaster (i. e., Zeretosthré).—Consult on this curious subject the following authorities: *Von Hammer* (*Wien. Jahrb.*, vol. 9, p. 33)—*Ritter* (*Erdkunde*, vol. 2, p. 21, seqq.—*Vorhalle*, p. 303)—*Anquetil* (*Mém. de l'Acad. des Inscri.*, vol. 31, p. 376)—*Bohlen* (*De Orig. ling. Zend.*, p. 51)—*Bähr* (*ad Herod.*, 7, 62).

ARIADNE, daughter of Minos, king of Crete, by Pasiphaë. She fell in love with Theseus, and gave him a clew of thread, which enabled him to penetrate the windings of the labyrinth till he came to where the Minotaur lay, whom he caught by the hair and slew. Ariadne thereupon fled with Theseus from Crete. According to Homer (*Od.*, 11, 323) she was slain by Diana when they had reached the island of Dia or Naxos, on their way to Athens. (Compare Schol. ad loc. as to the reading *ἔκτα* or *ἔσχε*.) Another legend, however, makes her to have been deserted by Theseus on the shores of this same island, Minerva having appeared to him as he slept, and having ordered him to

leave her behind and make sail for Athens. While Ariadne was weeping at this abandonment, Venus came and consoled her by the assurance that she should be the bride of Bacchus. The god then presented himself, and gave her a golden crown, which was afterward placed among the stars. She bore him a son named Enopion. (*Pherecyd.*, ap. *Sturz.*, fr. 59.—*Ovid*, *A. A.*, 1, 527, seqq.—*Catull.*, 64, 76, seqq.—*Keightley's Mythology*, p. 457.—*Vollmer, Wörterb. der Mythol.*, p. 309, seqq.)—Ariadne evidently belongs to the mythology of Bacchus, with whom he was associated in the Naxian worship. The Athenians, always ready to enlarge their own narrow cycle at the expense of others, seem to have joined her with their Theseus, and it was thus perhaps that she became the daughter of Minos. The passage in the *Odyssey* would be decisive on this point, were it not that the Athenians were such tamperers with the works of the old poets, that we cannot help being suspicious of all passages relating to them. The passage of the *Iliad* in which Ariadne is mentioned is justly regarded as a late addition. (*Il.*, 18, 591.—*Knight*, ad loc.—*Keightley*, l. c.)—Cruzer gives a peculiar version to this ancient legend. He sees in Ariadne, as represented in ancient sculpture, now sunk in mournful slumber, and again awakened, joyous, and raised to the skies, an emblem of immortality. But Ariadne, according to the same beautiful conception of her character, is not merely the symbol of consolation in death; the clew in her hand, with which she guided Theseus through the mazes of the labyrinth, ranks her also among the class of the *Parcæ*. She is Proserpina-Venus. She presides over the death and the birth of our species. She guides the soul through the winding labyrinth of life: she leads it forth again to freedom and a new existence. (*Cruzer's Symbolik*, vol. 4, p. 116, seqq.)

ARIEUS, an officer in the army of Cyrus the Younger, the next in command to that prince over the Asiatic portion of his forces. After the battle of Cunaxa, the Greeks in the army of Cyrus offered to place him on the throne of Persia, but he declined it, and went over to Artaxerxes with his troops. (*Xen. Anab.*, 1, 8, 3.) The *Eton MS.* has *Ἀρισταῖος* (Aristaios) in place of *Ἀριαῖος* (Arieus). The copyist intended, perhaps, to write *Ἀριδαῖος* (Aridæus), as Diodorus Siculus (14, 22) has it. (Compare *Wesseling*, *ad Diod.*, l. c., and *Sturz.*, *Lex. Xen.*, vol. 1, p. 395, s. v. *Ἀριαῖος*.)

ARIANTAS, a king of Scythia, who, in order to ascertain the number of the Scythians, commanded each of his subjects, on pain of death, to bring him the point of an arrow. So great a number was collected, that, resolving to leave a monument of the act, he caused a large bowl of brass to be made out of them, and dedicated this in a spot of land between the Borysthenes and the Hypanis, called Exampæus. (*Herodot.*, 4, 81.)—Ritter ascribes this work to an early Cimmerian, or Buddhist colony, migrating from India to the countries of the West. He sees in the name Ariantas, moreover, a reference to Aria, the early home of our species, and the native country of the Buddhist faith. In confirmation of his opinion, he indulges in some very learned and curious speculations concerning the early usage, among both Greeks and barbarians, of consecrating colossal bowls or caldrons to the sun. (*Vorhalle*, p. 345, seqq.)

ARIARATHES, a name common to many kings of Cappadocia. They appear to have been originally nothing more than satraps of Persia, and, according to Diodorus, in a passage preserved by Photius (*Cod.*, 244, p. 1157), were descended from one of the seven conspirators who slew the false Smerdis. This Persian nobleman was named Anaphus, and his grandson Datames was the first sovereign of the Cappadocian dynasty. After him and his son Ariamnes, we have a long list of princes, all bearing the name of Ariarathes

for several generations. (Compare *Clinton's Fasti Hellenici*, vol. 2. *Appendix*, p. 429.) Although, however, the governors or satraps of Cappadocia held their government in hereditary succession, and are dignified by Diodorus with the title of kings, yet they could have possessed only a precarious and permitted authority till the death of Seleucus, the last of the successors of Alexander, in January, B.C. 281, removed the power by which the whole of western Asia was commanded. (*Clinton*, l. c.)—I. The first of the name was son of Ariamnes. He had a brother named Holophernes, whom he advanced to the highest offices in the kingdom, and who commanded the auxiliaries that were sent from Cappadocia when Ochus made his expedition into Egypt, B.C. 350. Holophernes acquired great glory in this war, and on his return home lived in a private station, leaving two sons at his death, Ariarathes and Aruses. Ariarathes, the reigning monarch, having no children of his own, adopted the former of these, who was also the elder of the two. Ariarathes was on the throne when Alexander invaded the Persian dominions, and he probably fled with Darius, since we learn from Arrian that the Macedonian prince appointed Sabietas governor of Cappadocia before the battle of Issus. (*Exp. Alex.*, 2, 4, 2.) After the death of Alexander, Ariarathes, then at the advanced age of eighty-two, attempted to recover his dominions, but he was defeated by Perdicas, the Macedonian general, and, being taken, was put to a most cruel death. (*Diod. Sic.*, *Exc.*, 18, 10.—*Arrian*, *ap. Phot.*, *Cod.*, 92, p. 217.)—II. The second of the name was the son of Holophernes, and was adopted by his uncle Ariarathes I. He recovered Cappadocia after the death of Eumenes, and during the contest between Antigonus and the other Macedonian chiefs. He was aided in the attempt by Ardatus, king of Armenia, who furnished him with troops. This Ariarathes transmitted the crown to his son Ariamnes. (*Diod. Sic.*, *ap. Phot.*, l. c.)—III. The third of the name was the son of the preceding Ariamnes, and his successor on the throne. Nothing more is recorded of him, except that on his death he left a son of the same name in his infancy. (*Diod. Sic.*, *ap. Phot.*, l. c.)—IV. The fourth of the name, son of the preceding by Stratonice daughter of Antiochus Theos, was a child at his accession. He married the daughter of Antiochus the Great, a union that involved him in a political alliance with that sovereign, and consequent hostility with the Romans. He was saved from dethronement after the battle of Magnesia by a timely and submissive embassy to the Consul Manlius, and the payment of 600 talents. Soon after we find him allied to Eumenes, king of Pergamus, who married his daughter; and by means of this monarch he was admitted to the favour and friendship of the Romans. (*Liv.*, 38, 39.) He was also the ally of Eumenes against Pharnaces, B.C. 183–179. After a reign of nearly fifty-eight years he transmitted his crown to his son Ariarathes V.—V. The fifth of the name, son of the preceding, was surnamed Philopator. He was dethroned by Demetrius Soter, king of Syria, who brought forward Holophernes, the supposititious son of Ariarathes IV. Being driven from his kingdom, he took refuge with the Romans, by whom he was restored; in which restoration Attalus II., of Pergamus, assisted. According to Appian (*Bell. Syr.*, 47), the Romans appointed Ariarathes and Holophernes to reign conjointly. This joint government, however, did not last long, since Polybius, about B.C. 154, describes Ariarathes as sole king. (*Polyb.*, *ap. Athen.*, 10, p. 440, b.—*Id.*, 33, 12.—*Id.*, *fragm. Vat.*, p. 440.) In return for this service he devoted himself to the interests of the Romans, and fell in the war they were carrying on against Aristonicus, the pretender to the throne of Pergamus. (*Justin*, 37, 1.) He left six sons, five of whom were murdered by his wife, the

cruel and ambitious Laodice. (*Justin*, l. c.)—VI. The sixth of the name was the only one of the sons of Ariarathes V. that escaped the cruelty of his mother Laodice. He married the daughter of the celebrated Mithradates, which female also bore the name of Laodice. Mithradates, however, caused him to be assassinated by an illegitimate brother, upon which his widow Laodice gave herself and kingdom to Nicomedes, king of Bithynia. Mithradates made war against the new king, and raised his nephew to the throne. The young king, who was the seventh of the name of Ariarathes, made war against the tyrannical Mithradates, by whom he was assassinated in the presence of both armies, and the murderer's son, a child eight years old, was placed on the vacant throne. The Cappadocians revolted, and made the late monarch's brother, Ariarathes VIII., king; but Mithradates expelled him, and restored his own son. The exiled prince died of a broken heart; and Nicomedes of Bithynia brought forward a boy, tutored for the purpose, who he pretended was a third son of Ariarathes VI. Laodice aided the deception, and the boy was sent to Rome to claim his father's kingdom. The senate, however, caused Ariobarzanes, a man of rank in Cappadocia, to be elected king by the people. (*Justin*, 38, 1.)—VII. The ninth of the name was brother and successor to Ariobarzanes II. (Clinton makes him his son). He was deposed and put to death by Antony, in the consulship of Gellius and Nerva, B.C. 36, after having reigned about six years. Archelaus, son of Glaphyra, was appointed in his stead. (*Dio Cass.*, 49, 32.—*Id.*, 49, 24.—*Val. Max.*, 9, 15, 2, *extern.*) Archelaus is called Siciannes by Appian. (*Bell. Civ.*, 5, 7.—Consult *Schweigh.*, *ad loc.*)

ARICIA, a city of Latium, a little to the west of Lanuvium. According to Strabo (239), Aricia was situated on the Appian Way, but its citadel was placed on the hill above. The origin of this city, which was apparently as ancient as any in Latium, is enveloped in too great a mythological obscurity to be now ascertained. Some have ascribed its foundation to a chief of the Siculi (*Solinus*, c. 13); others to Hippolytus, who, under the name of Virbius, was worshipped in common with Diana in the neighbourhood of this town. (*Virg.*, *Æn.*, 7, 774.) The name of Aricia often occurs in the history of Rome, and as early as the reign of Tarquinius Superbus. It must have been no mean city to merit the splendid character which Cicero gives of it in the third Philippic. What rendered this city, however, more particularly celebrated throughout Italy, was the worship of Diana, whose sacred temple, grove, and lake lay at no great distance from thence. The latter is now known by the name of *Lago di Nemi*. Strabo tells us (239) that the worship of Diana resembled that which was paid to the same goddess in the Tauric Chersonese; and that the priest of the temple was obliged to defend himself by force of arms against all who aspired to the office; for whosoever could slay him succeeded to the dignity. This barbarous custom seems to have afforded a subject of diversion to Caligula. (*Suet.*, *Vit. Calig.*, 35.—*Cramer's Anc. Italy*, vol. 2, p. 31.)

ARICINA, a surname of Diana, from her temple near Aricia. (*Vid.* Aricia.)

ARIÆUS, I. a commander in the army of Cyrus the Younger, otherwise and more correctly called Ariæus. (*Vid.* Ariæus).—II. A natural son of Philip of Macedon, and Philina a female dancer and courtesan of Larissa. He showed in early life so much promise of ability, that Olympias, fearing lest he might one day deprive Alexander of the crown, stultified him by means of secret potions. After the death of Alexander, he was chosen to succeed that monarch, with the proviso that, if Roxana, who was then pregnant, should be delivered of a son, a portion of the kingdom should be given to the latter. As the weak-

ness of mind under which Aridæus laboured unfitted him for rule, Perdicas, as protector, exercised the actual sway. He reigned seven years, under the title of Philip Aridæus, and was then put to death with his wife Eurydice by Olympias.—The more accurate form of the name is Arrhidæus, from the Greek Ἀρρίδατος. The more common one, however, is Aridæus. (*Justin*, 13, 2, 11.—*Id.*, 13, 3, 1.—*Id.*, 14, 5, 10.—*Quint. Curt.*, 10, 7, 2.—*Diod. Sic.*, 17, 2.—*Id.*, 18, 3.—*Arrian*, *ap. Phot.*, *Cod.*, 92.)

ARII. *Vid.* ARIA.

ARIMA (τὰ Ἀρῖμα ὄρη, *Arimi Montes*), a chain of mountains, respecting the position of which ancient authorities differ. Some place it in Phrygia (*Diod. Sic.*, 5, 71.—Compare *Wesseling*, *ad loc.*), others in Lydia, Mysia, Cilicia, or Syria. They appear to have been of volcanic character, from the fable connected with them, that they were placed upon Typhæus or Typhon. (*Hom.*, *Il.*, 2, 783.) Those who are in favour of Phrygia, Lydia, or Mysia, refer to the district called Cataceæumene (Κατακεαυμένη), as lying parched with subterranean fires. Those who decide for Cilicia or Syria agree in a manner among themselves, if by the Arimi as a people we mean the Aramei who had settled in the former of these countries. (Compare *Heyne*, *ad Hom.*, *Il.*, 2, 783, and consult remarks under the article *Inarime*.)

ARIMASPI, a people of Scythia, who, according to Herodotus (3, 116, and 4, 27), had but one eye, and waged a continual contest with the griffons (*vid.* Gryphes), that guarded the gold, which, according to the same writer, was found in vast quantities in the vicinity of this people. The name is derived by him from two Scythian words, *Arima*, one, and *Spu*, an eye. (Compare *Æschyl.*, *Prom. V.*, 809, *seqq.*—*Mela*, 2, 1, 15.—*Plin.*, 4, 26.—*Dionys. Perieg.*, 31.—*Philostr.*, *Vit. Soph.*, vol. 2, p. 584, *ed. Orell.*) Modern opinions, of course, vary with regard to the origin of this legend. De Guignes (*Mém. de l'Acad. des Inscri.*, vol. 35, p. 562) makes the Arimaspi to have been the *Hiong-nou*, of whom the Chinese historians speak, and who were situate to the north of them, extending from the river Irtsch, in the country of the Calmucs, to the confines of eastern Tartary. Reichard (*Thes. Top.*, p. 17) contends, that the name of the Arimaspi is still preserved in that of *Arimascheks Kaia*, in Asiatic Russia, in the Government of Perm. Rennell (*Geogr. Herod.*, vol. 1, p. 178) places this people in the region of Mount *Altai*, a tract of country containing much gold, the name *Altai* itself being derived, according to some, from *alta*, a term which signifies *gold* in the Mongol and Calmuc tongues. With this opinion of Rennell's the speculations of Völker agree. (*Myth. Geogr.*, vol. 1, p. 193, *seqq.*) Wahl also places the Arimaspi in the regions of *Altai*, and speaks of a people there whose heads are so enveloped against the cold as to leave but one opening for the vision, whence he thinks the fable of a one-eyed race arose. (*Ostind.*, p. 409.) Ritter transfers the Arimaspi, along with the Issedones and Massagetæ, to the southern bank of the Oxus, in ancient Bactria, making them a noble and warlike tribe of the Medes or Cadusii. (*Vorhalle*, p. 282, *seqq.*, 305.) Halling refers the term Arimaspan to the steed-mounted forefathers of the German race before the migrations of this people into Europe, and he deduces the name from the Persian *Arim* and *esp*, the latter of which words means "a horse." (*Wien. Jahrb.*, 69, p. 190.) Rhode, on the other hand, makes *Arimasp* a Zend term, though his explanation of it, "a mounted native of Aria," approaches that of Halling, *asp* in Zend meaning "a steed." (*Heilige Sage*, &c., p. 66, *seqq.*) The etymology assigned by Herodotus to the word in question, and which is given at the commencement of this article, is now justly regarded as of no value whatever, and decidedly erroneous, unless,

with Gatterer, we consider the words which form the derivation in the Greek text to be a mere interpolation. (*Comment. Soc. Gött.*, 14, p. 9.)

ARIMASPAS, a river of Scythia with golden sands, in the country of the Arimaspi. (*Vid.* Arimaspi.)

ARIMI, according to some, a people of Syria. (*Vid.* Arima, towards the close of that article.)

ARIMINUM, a city of Umbria in Italy, at the mouth of the river Ariminus, on the coast, not far to the southeast of the Rubicon. It was founded by the Umbri, and afterward inhabited partly by them and partly by the Pelasgi. It was taken by the Galli Senones. The Romans sent a colony to it A.U.C. 485. From this time Ariminum was considered as a most important place, and the key of Italy on the eastern coast; hence we generally find a Roman army stationed there during the Gallic and Punic wars. (*Polyb.*, 2, 23.—*Id.*, 3, 77.) In this place Cæsar is said to have harangued his troops, after having crossed the Rubicon; and here the tribunes of the commons, who were in his interest, met him. It is now called *Rimini*. (*Cramer's Anc. Italy*, vol. 1, p. 255.)

ARIMINUS, a river of Italy, rising in the Apennine mountains, and falling into the sea at Ariminum. It is now the *Marchia*. (*Plin.*, 3, 15.)

ARIOBARZANES, I. a nobleman of Cappadocia, elected king after the two sons of Ariarathes VI. had died. He was expelled by Mithradates, but was restored by Sylla, B.C. 92. He was again expelled in B.C. 88, and restored at the peace in B.C. 84. His kingdom, however, was again occupied by Mithradates in B.C. 66. He was restored by Pompey, and resigned the kingdom to his son. (*Cic.*, *pro. Leg. Man.*, c. 2.—*Id. ibid.*, c. 5.—*Appian*, *Bell. Mithr.*, c. 105.—*Id.*, *Bell. Civ.*, 1, 103.—*Val. Max.*, 5, 7, 2, *extern.*)—II. The second of the name, son of the preceding, and surnamed *Eusebes* and also *Philorhœmus*. He supported Pompey against Cæsar. (*Appian*, *Bell. Civ.*, 2, 71, where he is called by mistake Ariarathes.) The latter, however, forgave him, and enlarged his territories. He was slain, B.C. 42, by Cassius. (*Dio Cass.*, 47, 33.—*Appian*, *Bell. Civ.*, 4, 63.—*Clinton*, *Fast. Hell.*, vol. 2, p. 437.)—III. A name common to some kings, or, more correctly speaking, satraps of Pontus. Ariobarzanes I. is alluded to by Xenophon (*Cyrop.*, 8, 8, 4) as having been betrayed by his son Mithradates into the hands of the Persian monarch. (Consult *Aristot.*, *Polit.*, 5, 10, and compare *Schneider*, *ad Xen.*, *l. c.*)—IV. The second of the name, succeeded the Mithradates mentioned in the preceding paragraph, B.C. 363, and reigned twenty-six years. In the course of this reign he engaged in rebellion against Artaxerxes, B.C. 362. (*Diod. Sic.*, 15, 90.) Mention is made of him by Nepos, in his account of Datames (c. 2.—*Id.*, c. 5), and he is there called governor of Lydia, Ionia, and the whole of Phrygia. (Compare *Clinton*, *Fast. Hell.*, vol. 2, p. 421.)—V. The third of the name, succeeded Mithradates III. He began to reign B.C. 266. This prince, as we learn from Memnon (*ap. Phot.*, p. 720), conquered the city of Amastri, and drove from the country, in conjunction with the Gallo-Græci, or Galatæ, lately arrived in Asia Minor, an Egyptian colony sent by Ptolemy. (*Apollod.*, *ap. Steph. Byz.*, s. v. Ἀγκυρα.) He was succeeded by his son Mithradates IV., who was a minor when his father died. (*Clinton*, *Fast. Hell.*, vol. 2, p. 424.)—VI. A Persian commander, who bravely defended against Alexander the pass in the mountains of Susiana. (*Diod. Sic.*, 17, 68.—*Quint. Curt.*, 5, 3, 17.—Consult *Wesseling*, *ad Diod.*, *loc cit.*)

ARION, I. a famous lyric poet and musician of Methymna, in the island of Lesbos. His age is stated by Suidas as Olymp. 38; by Eusebius, Olymp. 40 (i. e., 628 or 620 B.C.). Though by birth a Methymnaean, and probably a disciple of Terpander, Arion chiefly

lived and wrote in the Peloponnesus, among Dorian nations. It was at Corinth, in the reign of Periander, that he first practised a cyclic chorus in the performance of a dithyramb; where he probably took advantage of some local accidents and made beginnings, which alone could justify Pindar in considering Corinth as the native city of the Dithyramb. (*Herod.*, 1, 23.—Compare *Hellanic.*, ap. *Schol. ad Aristoph. Av.*, 1403.—*Aristot.*, ap. *Procl.*, *Chrestom.*, p. 382, ed. *Gaisf.*—*Pind.*, *Olymp.*, 13, 18.)—A curious fable is related by Herodotus (*l. c.*) of this same Arion. He was accustomed to spend the most of his time with Periander, king of Corinth. On a sudden, however, feeling desirous of visiting Italy and Sicily, he sailed to those countries, and amassed there great riches. He set sail from Tarentum after this, in order to return to Corinth, but the mariners formed a plot against him, when they were at sea, to throw him overboard and seize his riches. Arion, having ascertained this, offered them all his treasure, only begging that they would spare his life. But the seamen, being inflexible, commanded him either to kill himself, that he might be buried ashore, or to leap immediately into the sea. Arion, reduced to this hard choice, earnestly desired them to allow him to dress in his richest apparel, and to sing a measure, standing at the time on the poop of the ship. The mariners assented, pleased with the idea of their being about to hear the best singer of the day, and retired from the stern to the middle of the vessel. In the mean time, Arion, having put on all his robes, took his harp and performed the Orthian strain, as it was termed. At the end of the air he leaped into the sea, and the Corinthians continued their voyage homeward. A dolphin, however, attracted by the music, received Arion on its back, and bore him in safety to Tænarus. On reaching this place, his story was disbelieved by Periander; but an examination of the seamen, when they also arrived, removed all the monarch's suspicions about Arion's veracity, and the mariners were put to death. In commemoration of this event, a statue was made of brass, representing a man on a dolphin's back, and was consecrated at Tænarus. Such is the story told by Herodotus. Larcher's explanation is a very tame and improbable one. He thinks that Arion threw himself into the sea in or near the harbour of Tarentum; that the Corinthians, without troubling themselves any farther, set sail; that Arion gained the shore, met with another vessel ready to depart, which had the figure-head of a dolphin, and that this vessel outstripped the Corinthian ship. (*Larcher*, *ad loc.*) The solution which Müller gives is far more ingenious, though not much in accordance with the simplicity of early fable. It is as follows: The colony which went to Tarentum under Phalanthus, sailed from Tænarus to Italy, with the rites and under the protection of Neptune. The mythic mode of indicating this was by a statue, representing Taras, the son of Neptune, and original founder of the place, seated on a dolphin's back, as if in the act of crossing the sea from Tænarus to Tarentum. This was placed on the Tænarian promontory. In process of time, however, the legend ceased to be applied to Taras, and Arion became the hero of the tale, the order of the voyage being reversed; and the love of music, which the dolphin was fabled by the ancients to possess, became a means of adding to the wonders of the story. (*Müller*, *Dorier*, vol. 2, p. 369, *not.*—*Plehn*, *Lesbuc.*, p. 166.)—II. A celebrated steed, often mentioned in fable, which not only possessed a human voice (*Propert.*, 2, 25, 37), but also the power of prophecy. (*Stat.*, *Theb.*, 6, 424.) According to one legend, he sprang from Ceres and Neptune, the goddess having fruitlessly assumed the shape of a mare, in order to avoid the addresses of Neptune, who immediately transformed himself into a steed. (*Pausan.*, 8, 25.—*Apollod.*, 3, 6, 8.) Another account made him the

offspring of Neptune and Erinnys, who had in like manner changed herself into a mare. (*Schol. ad Il.*, 23, 346.) Others again related, that he was produced from the ground by a blow of Neptune's trident, in the contest of that deity with Minerva for the possession of Athens. (*Serv. ad Virg.*, *Georg.*, 1, 12.) Eustathius mentions a still different origin for this fabled animal, namely, from Neptune and one of the Harpies. (*Eustath. ad Il.*, *l. c.*) Quintus Calaber (4, 570), from one of the Harpies and Zephyrus. Arion was trained up by Neptune himself, and was often yoked to the chariot of his parent, which he drew over the seas with amazing swiftness. (*Stat.*, *Theb.*, 6, 303, *seqq.*) Neptune gave him as a present to Copeus, king of Haliartus, in Bœotia. Haliartus bestowed him on Hercules, who distanced with him Cygnus, in the Hippodrome of the Pagæan Apollo, and afterward also made use of him in his car when contending with Cygnus in fight. From Hercules he came to Ardrastus, who was alone saved by his means from the Theban war. (*Schol. ad Il.*, 23, 346.—*Hesiod.*, *Scut. Herc.*, 120, *seqq.*—Compare *Müller*, *Dorier*, vol. 2, p. 480.)—The name of this fabled animal manifestly relates to his superiority over all other coursers (*Ἀρίων*, *superior*), and the legend itself is only one of the many forms, in which the physical fact of earth and water being the cause of growth and increase in the natural world has been enveloped by the ancient mythologists. (*Völcker*, *Myth. der Jap.*, p. 165, *seqq.*)

ARIOVISTUS, a king of the Germans, who invaded Gaul, conquered a considerable part of the country, and subjected the inhabitants to the most cruel and oppressive treatment. Cæsar marched against him, brought him to an action, and gained so complete a victory, that only a few of the army of Ariovistus, among whom was the king himself, effected their escape. He died soon after in Germany, either of his wounds, or through chagrin at his defeat. The name is probably derived from the German words *Hecr*, an army, and *Fürst*, a leader or prince. (*Cæs.*, *Bell. Gall.*, 131, *seqq.*—*Id. ibid.*, 5, 29.)

ARISBA, I. a town of Lesbos, destroyed by an earthquake. (*Plin.*, 5, 39.) Herodotus states that it was conquered by the people of Methymna (1, 151.—Compare *Steph. Byz.*, s. v. *Ἀρίσβη*).—II. A city of Troas, southeast of Abydus, and founded by a colony of Mytilænæans, in whose island there was a town of the same name. (*Fid.* No. 1.) Various traditions respecting the place are to be found in Stephanus of Byzantium. Homer makes mention of the place, together with the river Selleis. (*Il.*, 2, 835.) It was here, according to Arrian (1, 12), that Alexander stationed his army immediately after crossing the Hellespont at Abydus. When the Gauls passed over into Asia, some centuries after, they also occupied Arisba, but were totally defeated by King Prusias. (*Polyb.*, 5, 3.) Its ruins are supposed to be those at *Gangerlec*. (*Walpole's Turkey*, vol. 1, p. 92.—*Cramer's Asia Minor*, vol. 1, p. 71.)

ARISTÆNËTUS, a Greek writer, a native of Nicæa. He is supposed by some to have been the same with that friend of Libanius who perished in the earthquake which destroyed the city of Nicomedia. A.D. 358, and to whom are addressed many of the letters of this sophist that remain to us. If this opinion be correct, it must be confessed that the work of Aristænētus, which we at present possess, does not justify the eulogiums which Libanius passes on the talents of his friend: the identity of the two individuals, therefore, appears at best extremely doubtful. The only historical fact that occurs in Aristænētus seems to place him towards the close of the fifth century: it is a eulogium on the female dancer Panareta, where it is said that she imitated the pantomime Caramallus. Now this Caramallus lived in the time of Sidonius Apollinaris, who died A.D. 484. A third view of the

subject would seem to favour the supposition that the author of the work in question never bore the name of Aristænetus; this being the appellation given by the writer to the fictitious personage who is supposed to have written the first letter in the collection. And it may so have happened, that the copyists mistook this name for that of the author himself. This last opinion has been adopted by Mercier, Bergler, Pauw, and Boissonade.—The work of Aristænetus is a collection of Erotic Epistles, entitled *Ἐπιστολαὶ ἑρωτικαί*. The greater part of these pieces are only, in fact, so far to be regarded as letters, as bearing a superscription which gives them somewhat of an epistolary form; they are, in truth, a species of tales, or exercises on imaginary subjects. In one of them, a lover draws the portrait of his mistress; in another, we have a description of the artifices practised by a coquet; in a third, a tale after the manner of Boccaccio, &c. These letters are divided into two books, of which the first contains twenty-eight pieces; and the second, which is not complete, twenty-two. The style of Aristænetus, which is almost uniformly of a declamatory character, is frequently wanting in nature and taste. It is filled with phrases borrowed from the poets. The best editions of this writer are, that of Abresch, *Zwölfte*, 3 vols. 12mo, the third volume containing the notes and conjectures of various scholars; and that of Boissonade, *Paris*, 1822, 8vo. This latter edition is, on the whole, the better one of the two. On the merits of Abresch's edition consult the remarks of Bast, in his *Specimen ed. nov. Epist. Aristæni*, p. 9, *seqq.*; and on those of Boissonade's the observations of Hoffmann, *Lex. Bibl.*, vol. 1, p. 253. (Compare *Schöll, Hist. Lit. Gr.*, vol. 6, p. 248, *seqq.*)

ARISTÆUS, son of Apollo and the nymph Cyrene, was born in the part of Libya afterward named from his mother, and brought up by the Seasons, who fed him on nectar and ambrosia, and thus rendered him immortal. According to the prediction of the centaur Chiron, as made to Apollo respecting him, he was to be called "Jove," and "holy Apollo," and "Agreus" (*Hunter*), and "Nomios" (*Herdsmen*); and also Aristæus. (*Pind.*, *Pyth.*, 9, 104, *seqq.*) The invention of the culture of the olive, and of the art of managing bees, was ascribed to him; and Aristotle (*ap. Schol. ad Theocr.*, 5, 63) says he was taught them by the nymphs who had reared him. Tradition also related, that one time, when the isle of Ceos was afflicted by a drought, caused by the excessive heat of the dog-days, the inhabitants invited Aristæus thither; and, on his erecting an altar to Jupiter Icmæus (*the Moistener*), the Etesian breezes breathed over the isle, and the evil departed. After his death he was deified by the people of Ceos. (*Apoll. Rh.*, 2, 506, *seqq.*—*Schol. ad Apoll. Rh.*, 2, 498.—*Serv.*, *ad Virg.*, *Georg.*, 1, 14.) Virgil has elegantly related the story of the love of Aristæus for Eurydice the wife of Orpheus, his pursuit of her, and her unfortunate death by the sting of the serpent; on which the Napean nymphs destroyed all his bees; and the mode adopted by him, on the advice of his mother, to stock once more his hives. (*Georg.*, 4, 282, *seqq.*—Compare *Ovid, Fast.*, 1, 363, *seqq.*) Aristæus married Autonoe, daughter of Cadmus, by whom he became the father of Actæon. (*Keightley's Mythology*, 2d ed., p. 330.) Thus much for the legend. Aristæus would seem in reality to have been an early deity of Arcadia, whence the Parrhasii carried his worship into the island of Ceos; of Thessaly, whence the same worship was brought to Cyrene; and finally of Bœotia, where he was enrolled in the Cadmean genealogy. He appears to have been identical, originally, with Ζεύς Ἀριστοῦς, and subsequently with Ἀροῦλλον Νόμος, and to have been the god who presided over flocks and herds, over the propagation of bees, the rearing of the olive, &c. (*Müller, Orchem.*, p. 348.)

ARISTAGÖRAS, I. a writer who composed a history of Egypt, and who lived in the third century before our era. (*Plin.*, 36, 12.)—II. A son-in-law and nephew of Histæus, tyrant of Miletus, who revolted from Darius, and incited the Athenians and Eretrians against Persia. An expedition, planned though not commanded by him, burned the city of Sardis. This so exasperated the king, that every evening, before supper, he ordered his attendants to remind him of punishing Aristagoras. He was killed in a battle against the Persians, B.C. 499. (*Herodot.*, 5, 30.—*Id.*, 5, 101, *seqq.*)

ARISTANDER, a statuary, native of the Island of Paros, flourished about the time of the battle of Ægos Potamos, in Olmyp. 93, 4. He constructed the brazen tripod, which the Lacedæmonians dedicated at Amyclæ, out of the spoils taken by them. (*Pausan.*, 3, 18, 5.—*Silb.*, *Dict. Art.*, s. v.)

ARISTARCHUS, I. a tragic poet, a native of Tegea. He was the contemporary of Sophocles and Euripides, and lived upward of a hundred years. He exhibited seventy tragedies, but was only twice successful. Of all these seventy plays only one line is left us. According to Festus, his *Achilles* was imitated by Ennius, and also by Plautus in his *Panulus*. (*Theatre of the Greeks*, 2d ed., p. 151.)—II. A native of Samothrace, and preceptor to the children of Ptolemy VI. (Philometor). He is regarded as the most celebrated critic of all antiquity. The number of pupils formed by him was so great, that at one time forty distinguished professors or grammarians might be counted at Alexandria and Rome, who had been trained up in his school. All these disciples vied with each other in extolling the superiority and genius of their common master; and hence the name of Aristarchus was not only perpetuated in the classical tongues, but has passed into the modern languages, as indicative of an accomplished critic. Aristarchus quitted Egypt when Evergetes II, his pupil, ascended the throne and began to display his true character in driving men of letters from Alexandria. The grammarian, upon this, retired to Cyprus, where he died at the age of seventy-two, B.C. 157. In his old age he became dropsical, upon which he is said to have starved himself to death. Aristarchus was the author of a new recension of Homer, which, though altered by subsequent grammarians, is nevertheless the basis of our common text at the present day. It is this primitive recension of Aristarchus' which Wolf undertook to restore by the aid of the scholia that Villoison published. To Aristarchus is also attributed the division of the *Iliad* and *Odyssey* into twenty-four cantos or books. He wrote likewise commentaries on Archilochus, Alcæus, Anacreon, Æschylus, Sophocles, Ion, Pindar, Aristophanes, Aratus, and other poets; and composed in all, it is said, eight hundred different works. Of all the productions, however, of this industrious writer, we have only remaining at the present day some grammatical remarks cited by the scholasts. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 188, *seqq.*)—III. An astronomer of Samos, who flourished about the middle of the third century before Christ. He is well known to have maintained the modern opinion with regard to the motion of the earth round the sun, and its revolution about its own centre or axis. He also taught that the annual orbit of the earth is but a point, compared with the distance of the fixed stars. He estimated the apparent diameter of the sun at the 720th part of the zodiac. He found also that the diameter of the moon bears a greater proportion to that of the earth than that of 43 to 108, but less than that of 19 to 60; so that the diameter of the moon, according to his statement, should be somewhat less than a third part of the earth. The only one of his works now extant is a treatise on the magnitudes and distances of the sun and moon. The best edition is that of Wallis, *Oxon.*, 1688, 8vo. The following work may also be consult-

ed with advantage in relation to this astronomer: *Histoire d'Aristarque de Samos, suivie de la traduction de son ouvrage sur les distances du soleil de la lune, &c., par M. de Fortia d'Urban.* Paris, 1810, 8vo.

ARISTEAS, I. a poet of Proconnesus, who, as Herodotus relates, appeared seven years after his death to his countrymen, and composed a poem on the Arimaspians. He then disappeared a second time, and, after the lapse of three hundred and forty years, appeared in the city of Metapontum in Magna Græcia, and directed the inhabitants to erect an altar to Apollo, and a statue by that altar, which should bear the name of Aristeas the Proconnesian. He informed them also that he attended this god, and was at such times a crow, though now he went under the name of Aristeas. Having uttered these words he vanished. (*Herod.*, 4, 15.—Compare the somewhat different account given by *Pliny*, 7, 52.) The poem alluded to above was epic in its character, and in three books. The subject of it was the wars between Griffions and Arimaspians. Longinus (§ 10) has recorded six of the verses of Aristeas, which he justly considers more florid than sublime; and Tzetzes (*Chil.*, 7, 688) has preserved six more. (*Larcher, ad Herod.*, l. c.)—Ritter has made this singular legend the basis of some profound investigations. He sees in Aristeas a priest of the Sun (the Koros or Buddha of the early nations of India); and he compares with this the remark of Porphyry (*de Abst.*, 4, p. 399, ed. *Lugd. Bat.*, 1620), that, among the magi, a crow was the symbol of a priest of the sun. He discovers also in the earlier name of that part of Italy where Metapontum was situate, namely, *Bottia*, an obscure reference to the worship of *Buddha*. Whatever our opinion of his theory may be, the legend of Aristeas certainly involves the doctrines of the metempsychosis. (*Ritter, Vorhalle*, p. 278, seq.)—II. An officer under Ptolemy Philadelphus, to whom is ascribed a Greek work still extant, entitled, "A History of the Interpreters of Scripture," giving an account of the manner in which the Septuagint was written. The best edition is that printed at Oxford in 1692, in 8vo. It is found also, with a very learned refutation, in a work entitled *Hodii de Bibbhorum textibus originalibus libri iv.*, *Oxon.*, 1705, fol.; and likewise in the second volume of Havercamp's edition of Josephus; and at the end of Van Dale's Dissertation, *de LXX. Interpretibus super Aristeam*, *Amstelod.*, 1705, 4to. As to other works by Aristeas, consult *Schard (Arg., sub fin.—Joseph., ed. Hav.*, vol. 2. p. 102).

ARISTERA, an island lying to the southeast of the peninsula of Argolis, in the Sinus Hermonicus. (*Pausan.*, 2, 34).

ARISTIDES, I. a celebrated Athenian, son of Lysimachus, and a contemporary of Themistocles. He entered upon public affairs at a comparatively early age, and distinguished himself so much by his integrity, that, although inclined to the aristocracy, he nevertheless received from the people the remarkable appellation of the *Just*. His conduct at Marathon did no less honour to his military talents than to his disinterestedness. Of the ten Athenian generals, he was the only one who agreed with Miltiades upon the propriety of risking a battle; and, renouncing his day of command in favour of this commander, he prevailed upon the other generals to do the same. After services so important as these, he was, nevertheless, finally banished through the intrigues of Themistocles, and it was on this occasion that a singular circumstance is related to have taken place. While the shells were getting inscribed at the assembly that passed upon him the sentence of ostracism, a peasant approached Aristides, and taking him for a person of ordinary stamp, requested him to write upon his shell the name of Aristides, he himself being too illiterate to do so.

Aristides, without betraying who he was, asked the peasant what harm Aristides had done him. "None," replied the man, "nor do I even know him; but I am tired with hearing him called the *Just*." Aristides quitted his native city, praying the gods that nothing might occur to induce his countrymen to regret his absence; but this very thing happened during the sixth year of his exile, when Xerxes invaded Greece. He was then recalled, and was associated with Themistocles in the command of the Athenian forces. He took part in the battle of Salamis, and also shared with Pausanias the glory of the field of Plataea. After the total defeat of the Persian forces, he played an important part in the affairs of Athens and Greece, and by his wise counsels and successful negotiations he secured to his native city a decided pre-eminence over the neighbouring republics. When the Greek confederacy were to have the quotas regulated which they paid towards a common fund for the purposes of defence, Aristides was chosen to execute this commission, which he did to the satisfaction of all. Although having the control of large sums of money, in the management of the public finances, he notwithstanding died so poor, that the people had to pay the expenses of his funeral, and furnish marriage-portions to his two daughters. The Athenians, on one occasion, rendered a singular homage to the virtues of this distinguished man. During the representation of one of the tragedies of Æschylus, a passage occurred having reference to the character of a virtuous and upright man, whereupon the whole audience, with one common impulse, turned their eyes upon Aristides, and applied the passage to him alone of all who were present. When he sat as judge in a certain cause, the accuser began to make mention of injuries which had been done by the accused to Aristides himself. "Tell me," exclaimed the upright Athenian, "of the wrongs which he has done to you; for I sit here to dispense justice to you, not unto myself." (*Plut., in Vit.—Corn. Nep., in Vit.*)—II. An historian of Miletus, frequently quoted by Plutarch in his *Parallels*. (*Op., ed. Reiske*, vol. 7, p. 216, seq.) He was anterior to Sylla, and composed a history of Italy, in forty books, and Sicilian and Persian Annals. He was the inventor, also, of what were called "Milesian Tales," ingenious fictions, but too free in their character, which Lucian and Apuleius imitated, the former in his *Lucius sive Asinus*, and the latter in his *Asinus Aureus*. The Milesian Tales of Aristides were translated into Latin in the time of Sylla. (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 157.)—III. A statuary, one of the pupils of Polyclethus, celebrated on account of the chariots for two and for four horses which he constructed. (*Phn.*, 34, 8.)—IV. A very celebrated painter, rather older than Apelles, but contemporary with him. He was a native of Thebes. The refinements of the art were applied by him to the mind. "*Primum animum pinxit*," says Pliny, "*et sensus hominum expressit, quæ vocant Græci ἡθῶν, item perturbationes*" (35, 10). The passions which tradition had organized for Timanthes, Aristides caught as they rose from the breast, or escaped from the lips of Nature herself. His volume was man, his scene society: he drew the subtle discriminations of mind in every stage of life, the whispers, the simple cry of passion, and its most complex accents. Such, as history informs us, was his suppliant, whose voice you seemed to hear; such his sick man's half-extinguished eye and labouring breast; such, above all, the half-slain mother, shuddering lest the eager babe should suck the blood from her palsied nipple. This picture was probably at Thebes when Alexander sacked that town; what his feelings were when he saw it, we may guess from his sending it to Pella. (*Fuseli, Lectures on Painting*, vol. 2 p. 64.) Attalus is said to have given a hundred talents for a single painting by this artist. (*Plin., l. c.*) Some of

the ancients assigned to Aristides the invention of painting on wax. (*Sillig, Dict. Art., s. v.*)—IV. A Greek orator, born at Hadrianopolis in Bithynia, about A.D. 129, according to the common opinion; but more correctly in A.D. 117. After having applied himself, with extraordinary ardour, to the study of eloquence, he travelled in Asia, Greece, and Egypt, leaving behind him everywhere a high opinion of his talents and virtues. Many cities erected statues to him, one of which is still preserved in the Vatican. On finishing his travels, he took up his residence at Smyrna, where he continued to live until his death, holding a station in a temple of Æsculapius. Aristides, by a diligent perusal of Demosthenes and Plato, was able to avoid the errors of the declaimers of his time. His compatriots ranked him equal to the Athenian orator; an honour, however, to which he had no just claims. His discourses are distinguished for thought and argument. His style is strong, but often wanting in grace. We have fifty-four declamations of Aristides remaining at the present day, most of them celebrating some divinity, or else the Emperor Marcus Aurelius and other personages. One of these discourses is in the form of a letter to the emperor, on the destruction of Smyrna by an earthquake, A.D. 178. The monarch was so much affected by it, that he immediately gave orders for rebuilding the city. There exists also, from the pen of this orator, a work on the style that is adapted to public affairs, and that suited to plain and simple topics (*περί πολιτικοῦ καὶ ἀφελοῦς λόγου*). Among the discourses of Aristides there are five, and the beginning of a sixth, which were regarded by the ancients as the fruit of imposture, or of a credulity unworthy a man of so much general merit. Some of them appear to touch on animal magnetism.—The Abbé Mai found, not many years ago, a palimpsest manuscript of Aristides in the Vatican Library, containing some unedited fragments of this orator. The best editions of Aristides are that of Jebb, *Oxon.*, 1722–30, 4to; and that of Dindorf, *Lips.*, 3 vols. 8vo. The latter is decidedly the better of the two, the text having been more carefully corrected by MSS. Reiske complains heavily of the former, on account of the want of care in collating MSS., &c.—V. A platonic philosopher, born at Athens. He became a convert to Christianity, and presented to the Emperor Hadrian an “Apology” for the new religion, which, it is said, induced the monarch to pass his edict, by which no one was to be put to death without a regular accusation and conviction. This edict was directly favourable to the Christians. The Apology is lost, but is highly praised by St. Jerome, who had read it.—VI. A Greek writer on music. He is supposed to have lived about the commencement of the second century of our era. His work is in three books, and the best edition of it is that contained in the collection of Meibomius, *Antiquæ Musice Scriptores*, *Amstel.*, 1652, 4to.

ARISTIPPUS, I. a philosopher of Cyrene, disciple to Socrates, and founder of the Cyrenaic sect, who flourished about 392 B.C. Socrates, however, with whom he remained till his execution (*Plat., Phæd.*, p. 59), does not appear to have cured him of his inclination for pleasure. For although there is little consistency in the notices we have of his life and conduct, it is nevertheless clear, from a variety of anecdotes, that, notwithstanding he was able to endure privations and sufferings with equanimity and dignity, his serenity of mind arose principally from the readiness with which he could extract pleasures and gratifications from the most difficult situations of life. Hence he never avoided the society of the courtesan, or of the tyrant, or satrap, in full and calm reliance upon his tact in the management of men. Many anecdotes are told of him, which would seem to imply that Aristippus endeavoured to observe faithfully his own maxim, that a man ought to control circumstances, and not be con-

trolled by them. (*Horat., Ep.*, 1, 18.—*Diog. Laert.*, 4, 66, *seqq.*) Aristippus was the first disciple of the Socratic school who took money for teaching. He afterward was compelled to leave Athens, in consequence of the freedom of his manners, and visited, among other parts, the island of Sicily. Here he became one of the flatterers of Dionysius, and gained a large share of royal favour. He left Syracuse before the expulsion of the tyrant, and appears, in his old age, to have returned to Cyrene, where we find his family and school. (*Diog. Laert.*, 2, 86.) Aristippus taught, that good is pleasure, and pain is evil; but, at the same time, he appears to have maintained, that, in true pleasure, the soul must still preserve its authority; his true pleasure was, consequently, nothing more than the Socratic temperance. He taught also that a man ought not to desire more than he already possesses; for all pleasures are similar, and none more agreeable than another, and that he ought not to suffer himself to be overcome by sensual enjoyment. (*Diog. Laert.*, 2, 87.—Consult Ritter, *Hist. Anc. Phil.*, vol. 2, p. 88, *seqq.*, where a luminous account is given of the doctrines of the Cyrenaic school.)—II. His grandson of the same name, called the Younger, was a warm defender of his opinions. He flourished about 363 years B.C.—III. A tyrant of Argos, protected by Antigonus Gonatas, whose life was one continued series of apprehensions. He was slain by a Cretan, in a battle with Aratus, near Mycenæ, B.C. 242.

ARISTO. *Vid.* Ariston.

ARISTOBŪLUS, I. a name common to some of the high priests and kings of Judæa, &c. (*Joseph.*)—II. A brother of Epicurus.—III. A native of Potidæa, one of the generals of Alexander, who wrote a history of the expedition of that monarch into Asia. His work, which has not reached us, was more remarkable for adulation than truth.—IV. An Alexandrian Jew, preceptor of Ptolemy Energetes, flourished about 145 B.C. He was an admirer of the Greek philosophy, and united the study of the Aristotelian system with that of the Mosaic law. He endeavoured to identify, in some degree, the traditions of the sacred books with those of the Greeks; to explain Scripture and mythology by the aid of each other; and in this design he even went so far as to forge and interpolate verses of Orpheus, Linus, Homer, and Hesiod. His writings have not come down to us. (*Clem. Alex., Strom.*, 1, 305.—*Enfield's History of Philos.*, vol. 2, p. 154.)

ARISTŒLES, I. a peripatetic philosopher of Messene, who composed a critical examination of the different sects of philosophy, and wrote also on rhetoric and morals. He vigorously attacked the scepticism of Timon and Ænesidemus, showing that this doctrine contradicted itself, and led to the most deplorable results. We have nothing remaining of his works, except a single fragment preserved by Eusebius.—II. A native of Pergamus, who applied himself first to the peripatetic philosophy, and afterward to eloquence, which last he studied under Herodes Atticus. He became one of the ablest rhetoricians of his time, though he is censured as having been deficient in energy.—III. The earlier name of Plato.—IV. A statuary, a native of Cydon in Crete, who flourished, according to Pausanias (5, 25), before Zancle was termed Messana, that is, before Olymp. 71, 3. (*Sillig, Dict. Art., s. v.*)—V. A grandson of the former, also a statuary, born at Sicily. He made a statue of Jupiter with Ganymede, which was dedicated at Olympia. (*Plin.*, 5, 24.—*Sillig, Dict. Art., s. v.*)

ARISTOCRATES, I. a king of Arcadia, who ascended the throne B.C. 720. He was stoned to death by his subjects for offering violence to the priestess of Diana. (*Pausan.*, 8, 5.)—II. A grandson of the preceding. He was stoned to death for taking bribes,

during the second Messenian war, and being the cause of the defeat of his Messenian allies, B.C. 682. (*Id. ibid.*)

ARISTODĒMUS, I. son of Aristomachus, of the race of the Heraclidæ, who, together with his brothers Temenus and Cresphontes, conquered the Peloponnesus. He was the father of twin sons, Eurysthenes and Procles, and was, consequently, the parent-stem of the Eurysthenidæ and Proclidæ, the two royal lines at Sparta. Herodotus mentions the traditional belief prevalent among the Lacedæmonians, that this monarch had led their forefathers into Laconia (6, 52), whereas the poetic account made him to have died by lightning while preparing to invade the Peloponnesus. This latter account is followed by Apollodorus (2, 8) and Pausanias (3, 1). Compare the remarks of *Heine (ad Apollod., l. c.)* and *Bähr (ad Herod., l. c.)*.—II. A Messenian leader, the successor of Euphaeus on the throne of Messenia. He signalized his valour in the war against the Spartans. An account of him will be found in the remarks under the article Messenia.—III. A painter, born in Caria, and the contemporary and host of Philostratus the elder. He wrote a treatise on eminent painters, on the cities in which the art of painting had been most cultivated, and on the kings who had patronised it. (*Philostr., præm. Icon., p. 4, ed. Jacobs.—Sillig, Dict. Art., s. v.*)

ARISTOGITON, I. the friend of Harmodius, who, together with the latter, slew Hipparchus, one of the sons of Pisistratus. Consult the account given under the article Harmodius.—II. A Theban statuary, who, in connexion with Hypatodorus, made the presents dedicated by the Argives at Delphi. (*Pausan., 10, 10.*) He is supposed to have exercised his art from Olymp. 90 to 102. (*Sillig, Dict. Art., s. v.*)—III. An Athenian orator, surnamed *ὁ κῶαν, the dog*, from his consummate effrontery. He is the same with the Aristogiton against whom Demosthenes and Dinarchus both pronounced discourses. (*Schöll, Hist. Lit. Gr., vol. 2, p. 270.*)

ARISTOMĀCHUS, I. son of Cleodæus, grandson of Hyllus, and great-grandson of Hercules. He was the father of Aristodemus, Temenus, and Cresphontes, the three Heraclidæ that conquered the Peloponnesus. He himself had previously made the same attempt, but fell in battle. (*Apollod., 2, 8.—Pausan., 2, 7.—Herod., 6, 52.*)—II. A native of Soli in Cilicia, who devoted fifty-eight years of his life to studying the habits of bees. (*Plin., 11, 9.*)—III. A tyrant of Argos, successor to Aristippus, who resigned the sovereign power at the instigation of Aratus, and caused Argos to join the Achæan league. (*Pausan., 2, 8.*)

ARISTOMĒNES, a celebrated Messenian leader, who signalized his valour against the Spartans. A full account of him will be found in the remarks under the article Messenia.—II. An Acarnanian, who lived at Alexandria, and was appointed, by the Roman commander Æmilius, tutor to the young king Ptolemy Epiphanes. He executed this task with wisdom and talent, but was eventually put to death by his ungrateful pupil, when the latter had come to the throne, B.C. 196.

ARISTON, I. the son of Agasicles, king of Sparta. He repudiated two wives in succession on account of their sterility, and then married a third, said to have been the most beautiful woman in Sparta. She bore him a son, Demaratus, whom he at the moment disowned, but afterward acknowledged to be his. Consult the full account as given by Herodotus (6, 61, *seqq.*)—II. A stoic philosopher, a native of Chios. He was one of the immediate pupils of Zeno, but, when he became himself an instructor, openly deviated from the views of his master, and founded an independent school. He rejected all other points of philosophy but ethics. He considered physiology to be beyond

man; dialectics or logic to be ill suited to him. He even limited the domain of ethics itself; for he taught that its object is not to treat of particular duties, and of encouragements to virtue, such being the part of nurses and pedagogues; but it is the province of the philosopher to show wherein the supreme good consists, for this knowledge is the source of all useful intelligence. In accordance with his view, that physics transcend human power, Ariston doubted some of the most important doctrines of Zeno. It is impossible, he said, to form a conception of the shape or sense of the gods; it is doubtful whether God is or is not a living being. From this last position, it is clear that Ariston strongly leaned towards scepticism; yet he was careful not to extend this doubt to the common branches of knowledge, which are indispensable to the conduct of life. With Ariston, naught is of worth but virtue, nothing is evil but vice. (*Diog. Laert., 7, 160.—Stob., Serm., 80, 7.—Sext., Emp. adv. Math., 7, 12.—Cic., N. D., 1, 14.*) Ritter maintains, that Tennemann wholly misrepresents the doctrine of Ariston, when he calls it a practical science for mankind, or a science for life. (*Hist. Philos., vol. 3, p. 455, seqq.*)—III. A peripatetic philosopher, a native of Iulis, in the island of Cea, and hence called, for distinction's sake, *Iulietes*. He was the disciple and successor of Lycon. (Consult the *Bibl. Philol. Götting., vol. 2, pt. 1, p. 1, seqq.; pt. 2, p. 1, seqq.; pt. 6, p. 1, seqq.;* and p. 459, *seqq.*, where some very learned and acute remarks are given on both philosophers.)

ARISTONAUTÆ, the harbour of Pellene in Achaia, sixty stadia from that town. It was fabled to have been so called from the Argonauts having touched there in the course of their voyage. (*Pausan., 7, 26.*)

ARISTONICUS, I. son of Eumenes II. by a concubine of Ephesus, 126 B.C. invaded Asia and the kingdom of Pergamus, which Attalus III. had left by his will to the Roman people. He was at first successful, and conquered and put to death the consul P. Licinius Crassus, B.C. 128. Perpenna, however, having come on the scene soon after, defeated Aristonicus, who was led to Rome, where he died, or, according to some, was strangled in prison. (*Justin., 36, 4.—Flor., 2, 20.*)—II. A grammarian of Alexandria, who wrote a commentary on Hesiod and Homer, besides a treatise on the Musæum established at Alexandria by the Ptolemies. (*Strab., 38.*)

ARISTOPHĀNES, I. a celebrated comic poet, with regard to whom antiquity supplies us with few notices, and those of doubtful credit. The most likely account makes him the son of Philippus, a native of Ægina; and, therefore, the comedian was an adopted, not a natural, citizen of Athens. (*Achæarn., 651, seqq.—Schol. ad Achæarn., l. c.—Athenæus, 6, p. 227.*) The exact dates of his birth and death are equally unknown; the former, however, has been fixed, with some degree of probability, at 456 B.C., and the latter at B.C. 380, when he would be seventy-six years of age. At a very early period of his dramatic career, Aristophanes directed his attention to the political situation and occurrences of Athens. His second recorded comedy, the *Babylonians*, was aimed against Cleon; and his third, the *Acharnians*, turns upon the evils of the Peloponnesian war, then in its sixth year, and the advantages of a speedy peace. His talents and address soon gave him amazing influence with his countrymen, as Cleon felt to his cost the succeeding year, on the representation of the *Equites*. This piece was exhibited the very year after that in which Cleon had undeservedly gained so much glory by the capture of the Spartans in Sphacteria. He was then in the height of his power and insolence. No actor durst personate his character in the comedy, and no artist model a mask after his likeness. (*Eq., 230-4.*) Aristophanes himself was compelled to undertake the part, and ap-

peared for the first time on the stage, his face smeared with wine-lees. His success was complete.—The fame of Aristophanes was not confined to his own city. Dionysius of Syracuse would gladly have admitted the popular dramatist to his court and patronage, but his invitations were steadily refused by the independent Athenian. In B.C. 423, the Sophists felt the weight of his lash, for in that year he produced, though unsuccessfully, his *Nubes*. The vulgar notion that the exhibition of Socrates in this play was an intentional prelude to his capital accusation in the criminal court, and that Aristophanes was the leagued accomplice of Melitus, has of late years been frequently and satisfactorily refuted. (See particularly Mr. Mitchell's elegant and able introduction to his translation of Aristophanes.) The simple consideration that twenty-four years intervened between the representation of the *Nubes* and the trial of Socrates, affords a sufficient answer to any such charge. In fact, after the performance of this very comedy, we find Socrates and Aristophanes become acquainted, and occasionally meeting together on the best terms. (*Plato, Sympos.*) An imperfect knowledge of Socrates at the time, his reputed doctrines, his face, figure, and manners, so well adapted to comic mimicry, were doubtless the main reasons for the selection of him as the sophistic Coryphæus.—In the *Peace* and the *Lysistrata*, Aristophanes again reverts to politics and the Peloponnesian war: in the *Wasps*, the *Birds*, and the *Ecclesiazouse*, he takes cognizance of the internal concerns of the state; in the *Thesmophoriazouse* and the *Rana*, he attacks Euripides, and discusses the drama; while in the *Plutus* he presents us with a specimen of the middle comedy. Eleven of his comedies are still extant out of upward of sixty. (*Fab., Bibl. Gr., s. v. Aristophanes.*) Their Greek titles are as follows: 1. Ἀχαρνεῖς: 2. Ἰππτεῖς: 3. Νεφέλαι: 4. Σφήκες: 5. Εἰρήνη: 6. Ὀρνίθες: 7. Θεσμοφορίζουσαι: 8. Ἀνιστράτη: 9. Βάτραχοι: 10. Ἐκκλησιάζουσαι: 11. Πλούτος.—The *Acharnians* (Ἀχαρνεῖς) was represented B.C. 425. In this piece the object which the poet proposes to himself is to engage the Athenians to become reconciled with the Lacedæmonians, by making them see, through the aid of an allegory, that peace is preferable to war. He feigns that an Acharnian, called Diæopolis (*the just city*), had found the means of separating his cause from that of his fellow-citizens, by making peace, as far as it regarded himself, with the enemy; while the rest of the Acharnians, led astray by the suggestions of their generals, are suffering all the calamities of war.—The *Equites* or *Knights* (Ἰππτεῖς) was represented B.C. 424, a year after the Acharnians. The professed object of this singular composition is the overthrow of that powerful demagogue, the vainglorious and insolent Cleon, whom the author had professed in his *Acharnians* that it was his intention, at some future day, to "cut into shoe-leather;" and his assistants on the occasion are the very persons for whose service the exploit was to take place, the rich proprietors, who among the Athenians constituted the class of horsemen or knights. For this purpose Athens is here represented as a house; Demus (a personification of the Athenian people) is the master of it; Nicias and Demosthenes are his slaves, and Cleon is his confidential servant and slave-driver. The levelling disposition of the Athenians could not have been presented with a more agreeable picture. If the *dramatis personæ* are few, the plot of the peace is still more meagre: it consists merely of a series of humiliating pictures of Cleon, and a succession of proofs to Demus that his favourite servant is wholly unworthy of the trust and confidence reposed in him.—The *Clouds* (Νεφέλαι, *Nubes*) was twice represented; at first, B.C. 423, when it failed; and the second time, during the succeeding year. By some curious accident, it so happens that the play

originally condemned has come down to us, with part of a parabasis (or address to the audience) evidently intended for the second. The author here complains very bitterly of the injustice which had been done to this most elaborate of all his performances.—In the play of the *Clouds*, Socrates is made the chief subject of ridicule. As a person given to abstraction and solitary speculation is proverbially said to have his head in the clouds, it was but another step, therefore, in the poet's creative mind, to make the clouds the chorus of his piece, just as of the person, whose abstractions and reveries seemed to make him most conversant with them, he had formed the hero of the piece. The effect of this personification in the original theatre was no doubt very striking. A solemn invocation calls down the clouds from their ethereal abode; their approach is announced by thunder; they chant a lyric ode as they descend to the earth; and, after awakening attention by a well-managed delay, they are brought personally on the stage as a troop of females, "habited," says Mr. Cumberland, "no doubt in character, and floating cloudlike in the dance." The character of Strepsiades receiving the lessons of Socrates, is the original of Molière's "Bourgeois gentilhomme."—The *Wasps* (Σφήκες, *Vespa*), represented B.C. 422, is a satire against the corruption of justice and the mania of litigation. It is not a play historically political like the *Acharnians* and the *Equites*, nor personal like the *Clouds*: it is an attack, directed in the author's peculiar manner, upon the jurisprudence of Athens, and levelled chiefly at that numerous class of her citizens who gained a livelihood by executing the office of dicast, an office more nearly resembling our jurymen than judge. The hero of the piece is an Athenian citizen absolutely phrensied with a passion for litigation. His son endeavours to reclaim him to a better mode of life, by flattering his madness, and instituting a mock court of justice at his own house. The colleagues of the old gentleman are represented under the form of wasps, which circumstance has given name to the piece.—The *Peace* (Εἰρήνη) was represented B.C. 419, at the period when the Athenians and Lacedæmonians, after having concluded what was called the peace of Nicias, formed an alliance with the view of compelling the other states of Greece to accede to the pacification. The play turns on this point.—The *Birds* (Ὀρνίθες), represented B.C. 414, turns upon political affairs: two Athenians, disgusted with the divisions that prevail at Athens, transport themselves to the country of the birds, who build them a city. The design of the poet appears to have been to prevent his countrymen from fortifying Decelea, from the fear lest this place might become a rallying-point for the Lacedæmonians, and also to induce them to recall their forces from Sicily, in order to oppose them to their enemies at home.—The *Females celebrating the festival of Ceres* (Θεσμοφορίζουσαι) was represented B.C. 411. The female Athenians take the opportunity this festival affords, of deliberating on the means of destroying Euripides, the enemy of their sex. In order to save himself, Euripides is compelled to practise a thousand expedients, and at last obtains pardon.—The *Lysistrata* (Ἀνιστράτη), represented the same year with the preceding, has for its object to dispose the people to make peace with the Lacedæmonians. Lysistrata, the wife of one of the first magistrates of Athens, prevails upon all the married females of Athens, as well as of all the hostile cities, to separate themselves from their husbands until peace is made.—The *Frogs* (Βάτραχοι, *Rana*), represented B.C. 405, gave Aristophanes the prize, over Phrynichus and Plato. The people demanded a second representation of the piece, which was regarded as an extraordinary distinction. The poet, in this play, ridicules the tragic writers, but especially Euripides, who had died the year before. The chorus is composed of the frogs

of the Styx, over which stream Bacchus passes, in order to bring back to earth the poet Æschylus, in preference to Euripides.—*The Females met in Assembly* ('Εκκλησιαζούσαι), represented B.C. 392, is directed against the demagogues that disturbed the tranquillity of the state. It contains also some attacks levelled at the republic of Plato, and, above all, at the community of goods, of women, and of children, which formed the basis of Plato's system. The wife of one of the leading men in the state forms a plot with her female companions, the object of which is to force the people to give the reins of government into their hands. They succeed by a stratagem, and pass some absurd laws, which are a parody on those in existence at Athens.—*The Plutus* (Πλουτός) appears to have been first represented B.C. 409. It was re-exhibited twenty years after this. It would seem that our present text is made up of these two editions of the play. The play has no parabasis, and belongs to the Middle Comedy. A citizen of Athens meets with a blind man, and entertains him at his house. This blind personage is Plutus, the god of riches. Having recovered his sight by sleeping in the temple of Æsculapius, he is made to take the place of the ruler of Olympus, which affords the poet an opportunity of satirizing the cupidity and corruption of his countrymen.—“Never,” observes Schlegel, “did a sovereign power, for such was the Athenian people, show greater good-humour in permitting the boldest truths to be spoken of it; nay, more, jestingly thrown in its teeth, than in the case of Aristophanes. Even though the abuses of government might not be corrected thereby, yet it was a mark of magnanimity to permit this unsparing exposure of them. Besides, Aristophanes shows himself throughout to be a zealous patriot: he attacks the powerful misleaders of the people, the same who are represented as so destructive by the grave Thucydides; he advises them to conclude that internal war which irreparably destroyed the prosperity of Greece; he recommends the simplicity and rigour of ancient manners.—But I hear it asserted that Aristophanes was an immoral buffoon. Why, yes; among other things he was this too; nor do I mean to justify him for sinking so low with all his great qualifications, whether he was incited to it by natural coarseness, or whether he thought it necessary to gain over the mob, in order to be able to tell the people such bold truths. At any rate, he boasts of having striven for the laughter of the commonalty, by merely sensual jests, much less than any of his competitors, and of having thus contributed to the perfection of his art. To be reasonable, we must judge him, in those things which give us so much offence, from the point of view of a contemporary. The ancients had, in certain respects, a completely different and much freer system of morals than we have. This was derived from their religion, which was really the worship of nature, and which had hallowed many public usages grossly offensive to decency. Moreover, since, from the retired manner in which the women lived, the men were almost always by themselves, the language of social intercourse had obtained a certain coarseness, which always seems to be the case under similar circumstances. Since the age of chivalry, women have given the tone to society in modern Europe, and we are indebted to the homage which is paid them for the sway of a loftier morality in speech, in the fine arts, and in poetry. Lastly, the ancient comic writer, who took the world as it was, had a very corrupted state of morals before his eyes. The most honourable testimony for Aristophanes is that of the wise Plato, who says, in an epigram, that the graces had selected his mind as their place of habitation, who read him constantly, and sent the *Clouds* to the elder Dionysius with the information, that from this piece (in which, however, together with the trifling of the sophists, philosophy itself and his teacher Socrates were attacked) he

might learn to know the state of Athens. It is not likely that he merely meant that the piece was a proof of the unbridled democratic freedom which prevailed at Athens, but that he confessed the deep knowledge of the world displayed by the poet, and his sound views of the whole machinery of that government of citizens. But, however low and corrupt Aristophanes may have been in his personal inclinations, and however much he may have offended morals and taste by several of his jests, yet, in the general management and conduct of his poems, we cannot deny him the praise of the diligence and masterly excellence of an accomplished artist. His language is elegant to the last degree; it is a specimen of the purest Attic; and he employs it with the greatest dexterity in all its shades of difference, from the most familiar dialogue to the lofty flights of dithyrambic songs. We cannot doubt, that he would have succeeded in more serious poetry, when we see how he sometimes lavishes it in the mere wantonness of abundance in order immediately to destroy its effect. This high degree of elegance is the more attractive by contrast; as, on the one hand, he employs the roughest dialects and provincialisms of the common people, and even the broken Greek of foreigners; and, on the other hand, applies the same caprice, to which he subjects all nature, to speech likewise, and creates the most astonishing words by composition, by allusion to proper names, or by imitating sounds. We may boldly assert, that, in spite of all the explanations which have come down to us, in spite of all the learning which has been accumulated on him, half of the wit of Aristophanes is lost to us. It was only from the incredible quickness of Attic intellect that these comedies, which, with all their buffoonery, are connected with the most important relations of life, could be regarded as a diversion for the common people. We may envy the poet who could come before the public with such pre-suppositions; but it was a dangerous privilege. It was not easy to please spectators who understood with so much ease. Aristophanes complains of the too fastidious taste of the Athenians, with whom the best of his predecessors were no longer in favour as soon as the smallest decay in their faculties was perceptible. On the contrary, he says, the rest of the Greeks were out of the question as judges of the dramatic art. All persons who had talents in this line endeavoured to shine at Athens; and here again their contest was compressed into the short space of a few festivals, when the people always desired something new, and obtained it in abundance. It was settled, by a single representation, to whom the prize was to be given, and every one contended for it, as there were no other means of publication.” (Schlegel, *über Dram. Kunst*, &c., vol. 1, p. 286, seqq.—p. 283, *Eng. trans.*—*Theatre of the Greeks*, 2d ed., p. 175, seqq.)—Among the numerous editions of Aristophanes the following are most worthy of notice: that of Kuster, *Amst.*, 1710, fol.; that of Brunck, *Argent.*, 1783, 6 vols. 8vo, which would be more complete did it contain the scholia; and that of Invernitz, based on the readings of the Ravenna MS., and continued by Beck and Dindorff, *Lips.*, 11 vols. 8vo, 1794-1826. We have also a variorum edition, 5 vols. 8vo, 1829, from the London press. Hoffmann censures severely the carelessness evinced by the anonymous editor in compiling the notes to this edition, and in assigning many of them to wrong commentators. (*Lex. Bibl.*, vol. 1, p. 273.) Of the editions of separate plays, we may particularize those by Mitchell as displaying very great ability. Five of the series have already appeared, the *Frogs*, *Acharnians*, *Wasps*, *Knights*, and *Clouds*. (*Lond.*, 8vo, 1835-1838.)—II. A famous grammarian, a native of Byzantium, who flourished about B.C. 240. He was keeper of the library of Alexandria, under Ptolemy Evergetes; and arranged and commented upon the productions of Homer, Hesiod, Alceus, Pindar,

dar, and Aristophanes. His edition of Homer, in particular, enjoyed a high reputation, and was only obscured by the labours of his disciple Aristarchus. It is to Aristophanes that the grammarian Arcadius attributes the invention of accents and marks of punctuation. He is regarded also as the first who arranged the Canon of writers, to which Aristarchus subsequently put the finishing band. (*Vid.* Alexandrina Schola.) We have nothing remaining of the works of Aristophanes, excepting a small fragment, containing the explanation of some Greek words, which Boissonade found in the library of the King of France. It is published by this scholar at the end of his edition of the *Ἐπεροποιῶν* of Herodian. *London*, 1819, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 188.)

ARISTOPHON, I. a Greek comic poet, contemporary with Alexander.—II. An Athenian orator, whom Demosthenes, in his speech against Leptines, ranks among the most eloquent men of the republic.—III. Another orator of Athens, also distinguished in his profession. He was one of the masters of Æschines. (*Schöll, Hist. Lit. Gr.*, vol. 2, p. 268.)—IV. A painter, a native of Thasos, and brother of Polygnotus. He is supposed to have flourished about Olymp. 80. Pliny mentions several of his productions (35, 11.—Compare *Plut., de aud. poet.*, 3, p. 69, vol. 7, *ed. Hutten.*)

ARISTOTELĒA, annual feasts in honour of Aristotle, celebrated by the inhabitants of Stagira, in gratitude for his having obtained from Alexander the rebuilding and repeopleing of that city, which had been demolished by King Philip. (*Plut., Vit. Alex.*, 7.—*Ælian*, V. H., 3, 17.—*Diog. Laert.*, 5, 9)

ARISTOTELES, a celebrated philosopher, born at Stagira, B.C. 384. His father was Nicomachus, who is said to have left behind him many works on medicine and natural history (*Suidas*, s. v. *Νικόμαχος*), and who was the physician and friend of Amyntas, king of Macedonia. From the place of his birth Aristotle is frequently called the Stagirite. Having lost both his parents at a very early age, he received the first rudiments of learning from Proxenus of Atarneus in Mysia, of whom he always retained a respectful remembrance. In gratitude for the care which he had taken of his early education, he afterward honoured his memory with a statue, instructed his son Nicanor in the liberal sciences, and adopted him as his heir. At the age of seventeen Aristotle went to Athens, and devoted himself to philosophy in the school of Plato. The uncommon acuteness of his apprehension, and his indefatigable industry, soon attracted the attention of Plato, and obtained his applause. Plato used to call him the *Mind of the School*, and to say, when he was absent, "Intellect is not here." His acquaintance with books was extensive and accurate, as sufficiently appears from the concise abridgment of opinions, and the numerous quotations which are found in his works. The zeal, in fact, with which he strove to master the treasures not only of the olden philosophy, but of the whole literature of Greece, may be inferred from another name, "*the Reader*," which Plato gave him, as well as by the remark made by that philosopher, when, on comparing him with Xenocrates, he said that the latter required the spur, but Aristotle the bit. (*Diog. Laert.*, 4, 6.) He continued to reside at Athens for the space of 20 years, all of which time assuredly he did not devote to the instructions of Plato; on the contrary, we must assign to this period the preparatory labours of the great works of his after life. (*Ritter, Hist. Phil.*, vol. 3, p. 2.) It would appear from the language of some eminent writers, that, in the last years of Plato's life, the earlier friendship between the master and disciple had given place to mutual misunderstanding, not to say animosity. Aristotle is accused of ingratitude towards Plato, and the charge is sought to be substantiated, not only by several anecdotes, but

by an appeal to the writings of Aristotle himself, who takes every occasion, it is alleged, to refute the theory of his master. The anecdotes, however, which are adduced in support of this opinion, will be found, on examination, to be as unworthy of notice as the similar statements which speak of Plato's ingratitude to Socrates. As regards his writings themselves, it is very true that Aristotle nowhere prominently exhibits the signal merit of Plato in the service of philosophy. This, however, may be explained, partly from the scope and design of Aristotle's works, and partly from his scientific character. The object of the former was not so much to give a due estimate of every philosopher, as, by an examination of their systems, to prevent his own disciples being disheartened or perplexed by erroneous opinions, however widely or speciously diffused. The scientific character of Aristotle, on the other hand, prevented him from reviewing the system of Plato in its spirit; for it cannot be denied that the Aristotelian criticism attaches itself by preference to single tenets, which it estimates, not so much by their philosophical import, and relation to the system to which they belong, as by the form of expression. It cannot be denied, however, that Aristotle often finds fault with Plato, and never mentions him except to refute his doctrines; nay, that he at times evinces something of a bitterness in the zeal with which he attacks the system of Plato and the Platonists, and usually represents its tendency as fatal to science. (*Ritter*, p. 5, *seqq.*)—On the death of Plato he left Athens, and some time after was chosen by Philip preceptor to his son Alexander, which office he discharged with the greatest ability during eight years, until his pupil's accession to the throne. The letter which Philip wrote to Aristotle when he chose him preceptor to his son, was couched in the following terms: "Be informed that I have a son, and that I am thankful to the gods, not so much for his birth, as that he was born in the same age with you; for if you will undertake the charge of his education, I assure myself that he will become worthy of his father, and of the kingdom which he will inherit." After Aristotle had left his pupil, he returned to Athens, but the two still carried on a friendly correspondence, in which the philosopher prevailed upon Alexander to employ his power and wealth in the service of philosophy. Alexander accordingly employed several thousand persons in different parts of Europe and Asia to collect animals of various kinds, birds, beasts, and fishes, and sent them to Aristotle, who, from the information which this collection afforded him, wrote fifty volumes on the history of animated nature, only a small portion of which is now extant. Upon his return to Athens, Aristotle resolved to found a new sect in opposition to the Academy. He chose for his school a grove and enclosure in the suburbs of Athens, called the Lyceum. (*Vid.* Lyceum.) From his walking about as he discoursed with his pupils, his followers, according to the common account, were termed *Peripatetics* (*Περιπατητικοί, ἀπὸ τοῦ περιπατεῖν*). Others, however, more correctly derive the appellation from the public walk (*περίπατος*) in the Lyceum which Aristotle and his disciples were accustomed to frequent. (Compare *Brucker, Hist. Crit. Phil.*, vol. 1, p. 788.) His instructions were not confined to philosophy, but comprised every branch of inquiry which could profit the youth of an enlightened age, and especially rhetoric. (*Diog. Laert.*, 5, 3.—*Cic., de Orat.*, 3, 35.) His more abstruse discourses were delivered in the morning to his select disciples; this he called his morning walk. He delivered lectures to a more promiscuous auditory in the evening, when the Lyceum was open to all young men without distinction; this he termed his evening walk. The former investigations were called *acroatic* or *acroamatic*, the latter *exoterical*. Both were much frequented. Aristotle continued his school in the Lyceum for thirteen years, employed at the same time in the com-

position of the principal part of his written works. To this period also must be assigned his important labours in experimental knowledge, especially in the history of animals, wherein he was assisted, as we have already said, by the munificent liberality of Alexander. Subsequently, however, the philosopher appears to have fallen under the displeasure of his royal pupil and patron, in consequence of having expressed, in rather free terms, his disapprobation of the changed habits of the king. (*Diog. Laert.*, 5, 10.—*Plut.*, *Vit. Alex.*, 55.) The charge has even been brought against him, that he furnished Antipater with the poison by which Alexander was believed to have been taken off. (*Plut.*, *Vit. Alex.*, 77.)—At the close of this period, Aristotle retired to Chalcis with a few of his disciples, in order, it is said, to escape a fate similar to that of Socrates, a charge of impiety having been, in like manner, brought against him. (*Ritter*, p. 10, *note*.) He died at Chalcis not long after this, at the age of 63. It is pretended by some that he took poison, from the fear of being pursued by the Athenians; while others relate a still more idle tale, of his having thrown himself into the waters of the Euripus (*vid.* Euripus); it is most probable, however, that his death was the effect of premature decay, in consequence of excessive watchfulness and application. His body was interred at Stagira, where his memory was honoured with an altar and a tomb. Aristotle was twice married. By his second wife he had a son named Nicomachus, to whom he addressed his “Greater Morals.” His person was slender; he had small eyes, and a shrill voice; and when he was young, hesitated in his speech. He endeavoured to supply the defects of his natural form by an attention to dress, and commonly appeared in a costly habit, with his beard shaven, his hair cut, and rings on his fingers. (*Diog. Laert.*, 5, 1.—*Vit. Aristot.*, *ap. Menag.*, *fin.*) Concerning his character, nothing can be more contradictory than the accounts of different writers; some making him a model of every virtue, others the most infamous of human beings. (*Athen.*, 13, p. 566, *c.*—*Ritter*, p. 8, *note.*) The truth appears to be, that his virtues were neither of that exalted kind which command admiration, nor his faults so highly criminal as not to admit of some apology.—Aristotle possessed in a high degree the talents of discrimination and analysis, added to the most astonishing knowledge of books and the works of nature. To the latter, more especially, he devoted himself. He rejected the doctrine of ideas, maintaining that all our impressions and thoughts, and even the highest efforts of the understanding, are the fruit of experience. The Peripatetic is the great intellectual school of antiquity. In Aristotle we see the calm and sober inquirer, who does not, like Plato, pursue a lofty ideal, but keeps carefully in view the proximately practicable, and is not easily misled into any extravagance either of language or thought. In Aristotle we have the cold inquirer, and little more. Rarely, if ever, does he step aside to consider the bond which connects the science of the universal and of nature with the human intellect and will. Consequently, his works have none of that impressiveness which constitutes the principal charm of Plato’s writings. It is true, we only possess a portion of his writings, and the very portion which is designedly free from all accessory matter and embellishment. Nevertheless, the very manner in which this portion is treated, sufficiently proves that Aristotle, even if his mind were not wholly alien from every poetical element, was unable to combine the sober results of science with a lively imagination.—The school of Aristotle has been termed the *intellectual* school, with reference to his doctrines; the school of *experience*, as looking without; and, in a moral point of view, the school of *expediency* or *prudence*, as finding the rule of moral conduct in the result of actions.—Philosophy, according to Aristotle, is science arising out of the love of

knowledge, or knowledge according to certain principles. These principles cannot, of themselves, be regarded as objects of science, in so far as they are known previously to science (*Anal. Post.*, 1, 1.—*Eth. Nic.*, 5, 3); but they must be viewed as certain and fixed, and unable to be subjected to any scientific procedure. Accordingly, he assumes an immediate cognition, which he distinguishes from science in the strict sense, though he calls it certainty, and assigns it to science in a wider sense, or, rather, to wisdom and to reason. Aristotle’s mode of deriving knowledge is from externals, Plato’s from internals. According to the former, we obtain the knowledge of particulars immediately through the senses, while we acquire the *universal* (τὰ καθ’ ὅλον) mediately through experience and logic. Plato, on the contrary, began with universals, and reasoned downward. In this we have the leading difference between the two schools. In the system of Aristotle, logic is the ὄργανον, the instrument by which all general knowledge is obtained. Hence the importance of logic in the peripatetic school. Logic, however, is only the instrument of science or philosophy, *quoad formam*, for it is experience that must supply the matter to be worked upon, and wrought into general principles. By his works comprehended under the title of *Organum*, Aristotle has rendered the greatest service to logic, as the science which would establish the *formal* part of reasoning, and elucidate its theory; and he ought not to be made responsible for the abuse, which afterward prevailed, of this same art among his later followers, the schoolmen. The error into which they fell was to make logic capable of supplying not only the *form*, but even the *matter*, of argumentation; in other words, to consider it an instrument that could of itself discover the truth.—Aristotle, more than any other philosopher, enlarged the limits of philosophy. He comprised therein all the sciences (rational, empirical, or mixed), with the single exception of history; and he appears to have divided it, as a whole, into Logic, Physics, and Ethics, or speculative and practical. Aristotle’s τὰ Φυσικά is not equivalent to *Physics* in the modern acceptance of the term, but has a much wider range, comprehending the nature of all beings, and not confined to mere material ones. Under this head, therefore, the nature of Deity comes in for consideration. But, in treating this topic, Aristotle fell from the high and lofty teaching of his master Plato, and taught the existence of deity in a lower sense, without any of those attributes which may be said to constitute his very nature. With him, Nature is a great machine, the first spring of which is Deity. He says nothing of the Supreme Being; he speaks of him merely as a first cause of movements, itself unmoved (τὸ πρῶτον κινεῖν ἀκίνητον).—Aristotle has been accused of being an atheist and a necessitarian. The Christian fathers rejected his philosophy on the ground of atheism, because he taught that the world was eternal. His doctrine, however, would not seem to be in reality an atheistic one. He taught that Creation was not within the limits of time: that the essential nature of Deity was cause. Now if the cause be eternal, the effect must be eternal, and there never would be a time when Creation did not exist. It is evident that in this he did not mean to teach atheism. He is more justly chargeable with being a necessitarian, since all his reasonings on the Deity make him the first spring of the great machine of nature.—With regard to man, he likewise taught a less lofty doctrine than Plato. He makes the soul distinct from the body, but considered as its form (εἶδος or ἐντελεχεία), it is inseparable therefrom. He says little with regard to the immortality of the soul, and a future state of rewards and punishments; and has even by some been charged with materialism. A perfect unity of plan prevails through his Ethics, Politics, and Economics. Both the latter have for their end to show

how the object of man's existence, defined in the Ethics, namely, virtue combined with happiness, may be attained in the civil and domestic relations, through a good constitution of the state and household.—In the history of the Aristotelian school, four periods are commonly noticed. The *first*, from the death of Aristotle to the time of Cicero, was a period of gradual decline, for the philosophy of the Stagirate was deeper than suited ordinary intellects, and they could not carry it on. During the *second* period, from Cicero to the seventh century of the Christian era, the philosophy of Aristotle was quite neglected, and almost unknown. From the seventh to the tenth century, the *third* period, it was revived, but in a greatly corrupted state. From the tenth to the fifteenth, the *fourth* period, when it was overthrown by Bacon and Descartes, it went by the name of the scholastic philosophy, being connected with polemic theology.—Aristotle was the most voluminous of the ancient philosophers. A large catalogue of his writings is given by Diogenes Laertius, and in modern times by Fabricius and others. From this it appears that he wrote many books besides those which have been transmitted to our own day. We have all his *Logical* works, five in number, and usually published under the general title of *Organon*. We have 16 books on *Physical Philosophy*; 14 on *Metaphysics*; and three works on *Morals*; the first entitled *Nicomachean Ethics*, addressed to his son Nicomachus; the second *Magna Moralia*; the third a *Discourse on Virtue and Vice*. We have also separate works on *Economics*, *Government*, the *Art of Rhetoric*, and the *Art of Poetry*. The works of Aristotle, together with his library, passed very early through hazards which have rendered it a subject of critical inquiry how far the present volumes which bear his name are genuine. (Consult remarks under the article Apellicon.)—Before closing this article, it may not be amiss to offer a few observations relative to the term *Metaphysics*, as applied to some of the writings of Aristotle. This appellation is not found either in the works of the Stagirate himself, or in those of any Greek or Roman philosopher anterior to Nicholas of Damascus. It is said that Andronicus of Rhodes, wishing to arrange the works of Aristotle, distributed them into different classes, such as works on *logic*, on *rhetoric*, on *poetry*, &c. The last of these sections or divisions comprehended the works on *Physics*. Still, however, there remained over a number of writings, which he had been unable to assign to any class, because, being first essays in a new science, they did not fall under any one of the heads under which he had arranged the rest. He therefore united these into one class by themselves, and assigned them their rank *after the works on Physics* (μετὰ τὰ φυσικά), whence arose their peculiar name, which had no reference whatever to the subjects discussed in them. With a little more attention on his part, Andronicus might have found a better title in the writings of Aristotle himself; for it appears that the books which we have on Metaphysics are the same with what the Stagirate calls his *Λόγοι ἐκ τῆς πρώτης φιλοσοφίας*, "*Discourses on the First Philosophy*."—The best editions of the entire works of Aristotle are, that of Du Val, Paris, 1619, 2 vols. fol.; that of Bekker, *Berol.*, 1831, 5 vols. 4to; and the small stereotype one published by Tauchnitz, *Lips.*, 16 vols. 18mo, 1832, &c.—Of the separate treatises, the following editions may be mentioned. The best edition of the *Organon* is that of Geneva, 1605, 4to; of the *Ethics*, that of Cardwell, *Oxon.*, 1828-30, 2 vols. 8vo; to which we may add that of Bekker, *Berol.*, 1831, 8vo; of the *Art of Poetry*, that of Hermann, *Lips.*, 1803, 8vo; to which may be added the excellent one of Tyrwhitt, *Oxon.*, 1794, 4to, and that of Gräfenhahn, *Lips.*, 1821, 8vo; of the *Art of Rhetoric*, that published at Oxford, 1820, 2 vols. 8vo; of the *History of Animals*, that of Schneider, *Lips.*, 1811, 4 vols. 8vo; of the *Politics*,

that of Götting, *Lips.*, 1824, 8vo, &c. Among the subsidiary works on Aristotle may be mentioned the following: *Examen Critique de l'ouvrage d'Aristote intitulé Métaphysique*, par Michelet, Paris, 1836, 8vo.—*Essai sur la Métaphysique d'Aristote*, par Ravaisson, Paris, 1837, 2 vols. 8vo.—*La Logique d'Aristote*, par Saint-Hilaire, Paris, 1838, 2 vols. 8vo. These French works are all prize-essays of the Institute. (*Ritter's History of Philosophy*, vol. 3, p. 1, seq.—*Tennessen's Manual*, &c., p. 121, seq.—*Enfield's Hist. Philos.*, vol. 1, p. 260, seq.)

ARISTOXENUS, I. a native of Tarentum and disciple of Aristotle, who wrote both on philosophy and music. Among the works of a philosophical character which he composed, may be enumerated his treatise on the Laws respecting Education (περὶ παιδείων νόμων); his Pythagorean Theses (Πυθαγορικά ὑπόθεσις), a collection of the precepts of morality inculcated by that sect; and his Biography of Eminent Philosophers (Βίος ἀνδρῶν). In the last of these works he is unjust towards the character of Socrates, as far as we can learn from some fragments that have come down to us. The cause of this may either have been the little esteem in which music was held by Socrates, or a quarrel which had occurred between the latter and Spinthares, the father of Aristoxenus, who had been one of his disciples. Aristoxenus was celebrated among the ancients for applying the Aristotelian doctrine of knowledge to the scientific investigation of music. He compared the soul to a musical harmony, and thought that, as the latter is produced by the different relations subsisting between several tones, so, too, the soul is the consequence of the relative arrangement of the different parts of the body; for that it is this which produces the movement of the living body, and the soul is to be regarded as nothing more than a certain tension of the body. (*Cic.*, *Tusc.*, 1, 10.) As a writer on music, Aristoxenus must be regarded as the earliest that we possess. His work on Harmony was published by Meursius in 1616 (*Lugd. Bat.*, 4to), and subsequently, in a much more correct form, by Meibomius, in his collection of the Writers on Music. The fragments on Rhythm were published for the first time by Morelli, at the end of the speech of Aristides against Leptines (*Venet.*, 1785, 8vo). The remains of the philosophical writings of Aristoxenus are principally in Stobæus, but have not as yet been edited by any scholar. Compare, with regard to this writer, the remarks of *Meiners, Gesch. der Wissensch.*, vol. 1, p. 213, and *Mahne, Diatribe de Aristoxeno, Amst.*, 1793, 8vo).—II. A physician, disciple of Alexander Philaloes, cited by Galen (*diff. puls.*, 4, p. 47). He recommended the use of clysters in hydrophobia; and boasted much of the efficacy of frictions with oil and the plant termed by botanists *polygonum convolvulus*, in cases of quartan fever. He left a work on the principles of his school, which has not come down to us. (*Cod. Aurel.*, acut., 3, 16, p. 233.—*Apoll. Dysc.*, *hist. mirab.*, c. 33, p. 133.—*Galen*, l. c.)

ARIUS, a presbyter of the church of Alexandria, in the 4th century. He denied the divinity and consubstantiality of the Word. After having been persecuted for his opinions, he gained the favour of the Emperor Constantine, and supplanted St. Athanasius, his adversary, but died suddenly, when just about to enter in triumph the cathedral of Constantinople, A.D. 336. He gave name to the sect of the Arians. (*Epiph.*, *Hæres.*, 68.—*Soerat.*, *Hist. Eccles.*, &c.)

ARMENIA, a large country of Asia, divided into Armenia Major and Minor. The first, which is the modern *Turcomania*, and is still sometimes called Armenia, lies south of Mount Caucasus, and comprehends the Turkish pachalics *Erzerum*, *Kars*, and *Van*, and also the Persian province *Iran* or *Eriaran*. It was separated from Armenia Minor by the river Euphrates. Armenia Minor was, properly speaking, a part of Cappa-

docia. It is now called *Aladulia* or *Pegian*, belongs to the Turks, and is divided between the pachalics *Merashe* and *Sivas*. Armenia is a rough, mountainous country, which has Caucasus for its northern boundary, and in the centre is traversed by branches of Mount Taurus, to which belongs Mount Ararat. Here the two great rivers Euphrates and Tigris take their rise; likewise the Cyrus or *Kur*, and other less considerable streams. Herodotus (7, 73) says that the Armenians were a Phrygian colony, and used arms like those of the Phrygians; but, as Ritter well remarks (*Erdkunde*, vol. 2, p. 782), the nations whom the father of profane history designates as Phrygians, Armenians, Cappadocians, and Syrians, are all descendants of the Aramean stock. Hence we may, with some degree of probability, consider the name *Armenia* as derived from *Aram*, and the Semitic *Arameans* to have been the first inhabitants of the land, who were afterward overpowered by barbarian tribes from Upper Asia. (Compare *Adelung*, *Mithradates*, vol. 1, p. 420.) According to another opinion, the Armenian tongue may be traced to Nisuthros or Noah, and may boast of being antediluvian in its character. (*Recherches Curieuses*, &c., par *Chahan de Cubied et Martin*, Paris, 1806, 8vo.) Of the ancient history of Armenia but little is known. The native writers make Haïg to have been the first chieftain or prince that ruled over this country, and from him they called themselves *Haji*. He was the son of Taglath, who, according to them, was the same with Thogarma, grandson of Japhet. Twenty-two centuries before the Christian era he left Babylon, his native place, and established himself, with all his family, in the mountains of southern Armenia, in order to escape from the tyranny of Belus, king of Assyria. The latter attacked him in his new settlements, but perished by his hand. Aram, the sixth successor of Haïg, became so distinguished by his exploits, that, from his time, the surrounding nations called the country Armenia, after his name. Ara, son of the preceding, fell in defending his country against Semiramis, and Armenia became thenceforward an Assyrian province until the death of Sardanapalus, when a succession of native princes again appeared. (Compare *Klaproth*, *Tableaux Historiques de l'Asie*, &c., p. 50, *seqq.*) After the death of Alexander, it became part of the kingdom of Syria, and so remained till the overthrow of Antiochus the Great, when it fell into the hands of different rulers, and was divided into Armenia Major and Minor.—Armenia Major was exposed to many attacks. The Romans and Parthians fought a long time for the right of giving a successor to the throne, and it was governed at one period by Parthian princes, at another by those whom the Romans favoured, until Trajan made it a Roman province. Armenia afterward recovered its independence, and was under the rule of its own kings. Sapor, king of Persia, attempted its subjugation in vain, and it remained free until 650, when it was conquered by the Arabians. After this it several times changed its masters, among whom were Gengis-Khan and Timour-leng. In 1552, Selim II. conquered it from the Persians, and the greater part has since remained under the Turkish dominion.—Armenia Minor has also had several rulers, among whom Mithradates was first distinguished. From him Pompey took the kingdom, and gave it to Deiotarus. On the decline of the Roman Empire in the east it was conquered by the Persians, and in 950 fell into the hands of the Arabians, since which time it has shared the same fate as Armenia Major, and was made, in 1514, a Turkish province by Selim I.—The earlier capital of Armenia was Armavir, which, during 1800 years, was the residence of the kings. After Armavir, Artaxata (Artaschad) on the Araxes, built in the time of the Seleucidæ, became the capital, but sank into decay before the end of the 8th century.—

For some remarks on the Armenian language, consult *Balbi*, *Atlas Ethnographique*, &c., tabl. 4, and *Introduction à l'Atlas*, p. 45.—As regards the literary history of Armenia, it may be remarked, that the literature of the country begins with the conversion of the Armenians to Christianity in the commencement of the fourth century. Since that time they have translated from the Greek (there is a Homer in Armenian hexameters), Hebrew, Syriac, and Chaldee, into their own dialect, which some assert to be an original language, as has already been remarked; while others regard it as a mixed dialect, composed of the Syriac, Chaldee, Hebrew, and Arabic. Both opinions are correct. The old Armenian, the language of literature and of the church, is, as Vater agrees, an original language; the modern Armenian has been formed, as a popular language, by foreign additions during the successive changes of their conquerors, and consists of four principal dialects. The written language owes its cultivation to the translation of the Bible, begun in 411 by Mesrob, with his disciples (among whom was Moses Chorenensis), by the desire of the patriarch Isaac the Great, and finished in 511. Mesrob first added seven vowel-signs to the old Armenian alphabet, which before only contained 27 consonants. At the same time schools were established. The most flourishing period of Armenian literature was in the sixth century, at the time of the separation of the Armenians from the Greek church after the council of Chalcedon. It continued to flourish until the tenth century, revived in the thirteenth, and maintained a respectable character till 1453. In scientific inquiries it never rose to any considerable eminence. It is particularly valuable in what relates to history.—The best introduction to Armenian history, geography, and literature, is that which M. J. Saint-Martin, member of the French Institute, has extracted from old Armenian writings, inscriptions, and other sources, under the title of *Mémoires historiques et géographiques sur l'Arménie*, Paris, 1808, 2 vols. (*Encyc. Amer.*, 1, 373.)

ARMILUSTRIUM or ARMILUSTRUM, a festival at Rome, on the 19th of October, during which they sacrificed completely armed, and to the sound of trumpets. It was intended for the expiation of the armies, and the prosperity of the arms of the Roman people. The name is also sometimes applied to the place in which the sacrifice was performed. (*Varro*, *L. L.*, 4, 32.—*Id. ib.*, 5, 3.—*Liv.*, 27, 37.)

ARMINIUS (the Latin name for *Hermann*, i. e., leader or general), the deliverer of Germany from the Roman yoke. He was a son of a prince of the Cherusci, Sigimer (which, in the old German, signifies *a famous conqueror*), and was born 18 B.C. He was educated at Rome, admitted into the rank of *equites*, and appointed to an honourable station in the army of Augustus. But princely favour and the charms of learning were insufficient to make the young barbarian forget his early associations. Convinced that the rude strength of his savage countrymen would be unequal to cope with the disciplined forces of the Romans in the open field, he had recourse to stratagem. Having fomented the discontent prevailing among the German nations, and having produced a wide confederacy for revolt, he artfully drew Varus, the Roman commander on the Rhine, into an ambuscade, where three Roman legions were cut to pieces. Varus, unable to survive his disgrace, slew himself, A.D. 10. Germanicus marched with a powerful army to revenge the overthrow of Varus; but it required more than one campaign, and several battles, before he obtained any decided advantage; and at last Arminius fell a sacrifice only to the civil feuds in which he was involved with his own countrymen and kindred, being assassinated by one of his own relations, in the 37th year of his age. Tacitus relates, that he drew upon himself the

hatred of his countrymen by aiming at the regal authority. A short time before his death, Adgantes or Adgantesius, prince of the Catti, proposed to the Roman senate to despatch Arminius by poison, but the senate took no notice of the offer. Arminius was 26 years old when he destroyed the legions of Varus. In the language of Tacitus, "Arminius was doubtless the deliverer of Germany. He fought against the Romans, not like other kings and generals, when they were weak, but when their empire was mighty and their renown glorious. Fortune, indeed, sometimes deserted him; but, even when conquered, his noble character and his extensive influence commanded the veneration of his conquerors. For twelve years he presided over the destinies of Germany, to the complete satisfaction of his countrymen; and, after his death, they paid him divine honours." (*Tacit., Ann., 2, 88*.) If we dwell a moment on the results of his victory, we will find that it had a decided influence on the whole character of Germany, political and literary; because it is evident that, had the Romans remained in quiet possession of the country, they would have given a tone to all its institutions and its language, as was the case with all the other countries of Europe conquered by them. The reason, therefore, why the language of the Germans remained in a great degree unmixed with, and uninfluenced by, the Latin, and why their political institutions retained so much of their ancient character, is to be found in the victory of Arminius. (*Encyclop. Americ., vol. 1, p. 375, seqq.*—*Bibl. Univ., vol. 2, p. 480.*—*Menzel, Geschichte der Deutschen, p. 58*.)

ARMORICA. *Vid.* Aremorica.

ARNA, I. a city of Lycia, called afterward Xanthus. (*Vid.* Xanthus).—II. a town of Umbria, west of Nuceria, and near the Tiber. It is now *Civittella d'Arno*. (*Plin., 3, 14.*—*Sil. Ital., 8, 458*.)

ARNOBIVS, I. the Elder, called also the African, was born at Sicca Veneria in Numidia, in the latter part of the third century. He was at first a pagan, and taught rhetoric in his native city, where he acquired a high reputation; but he subsequently embraced Christianity, being moved thereto by dreams, according to St. Jerome. (*Chron. ad ann. xx. Const.*—*Compare de vir. ill., 79*). As, however, he had warmly attacked Christianity before his conversion, in the course of his public lectures, the bishop of Sicca refused to admit him within the pale of the church until he had evinced the sincerity of his conversion by some open act. In consequence of this, while yet a catechumen, he wrote a work entitled *Libri vii. adversus gentes*, in which he refuted the objections of the heathen against Christianity with spirit and learning. This work betrays, as may well be expected, a defective knowledge of the Christian religion, but it is rich in materials for the understanding of Greek and Roman mythology: hence it is one of the writings of the Latin fathers, which, like the works of his disciple Lactantius, are particularly valued by philologists. We have given above the more correct title of the work of Arnobius. It is commonly, but less correctly, called *Libri vii. disputationum adversus gentes*. (*Le Nourry, Appar. ad Bibl. Patr., 2, p. 285.*—*Bähr, Christlich-Rom. Theol., p. 67*.) The latest and best edition of Arnobius is that of Orellius (*Lips., 1816, 8vo*).—II. The younger, a Gallic divine in the last half of the 5th century. We have from him an insignificant commentary on the Psalms, which betrays the principles of the Semi-Pelagians. (*Bähr, l. c.*)

ARNUS, a river of Etruria, rising in the Umbrian Apennines, and falling into the Mediterranean. It is now the *Arno*. On its banks stood Florentia, the modern *Florence*, and near its mouth Pisæ, now *Pisa*. The portus Pisanus was at the very mouth. (*Strab., 222.*—*Rutil., Itin., 1, 531*.)

ARÔE, one of the three towns of Achaia on the site

of which Patræ was afterward built. The other two were Anthea and Messatis. (*Pausan., 7, 18*.)

AROMĀTA, or AROMĀTUM PROMONTORIUM, the most eastern land of the continent of Africa, now *Cape Guardafui*. (*Ptol., 1, 9, p. 11*.)

ARPI, a city of Apulia, in the interior of Daunia, remarkable for its antiquity. Its first name was Argrippa, an appellation supposed to be modified from Ἀργος Ἰππίων, the name which it received originally from its founder Diomedes. When Arpi is first introduced to our notice in the history of Rome, it is represented as an Apulian city of no great importance, and of which the Romans possessed themselves without difficulty. (*Liv., 9, 13*.) In the second Punic war it fell into the hands of Hannibal after the battle of Cannæ (*Polyb., 3, 88 and 118*), but was recovered by the Romans. Arpi was greatly reduced in the time of Strabo (283), but still continued to exist under Constantine as an episcopal see. (*Cramer's Ancient Italy, vol. 2, p. 282*.)

ARPINUM, a small town of Latium, southeast of Rome, still known by the name of *Arpino*. It is rendered illustrious in the page of history for having given birth to Marius and Cicero. It originally belonged to the Volsci, but was taken by the Samnites, from whom it was again wrested by the Romans. (*Liv., 9, 44*.) It became a municipal town, and its citizens were enrolled in the Cornelian tribe. Of course, frequent mention is made of Arpinum in Cicero's letters: he was fond of his native place, and dwells with complacency on the rude and primitive simplicity of its customs, applying to it those lines of the Odyssey (1, 27, *seqq.*) in which Ulysses expresses his love for Ithaca. (*Cramer's Ancient Italy, vol. 2, p. 114, seqq.*)

ARRĪA, the wife of Cæcina Pætus. Her husband, a man of consular rank, having taken part in the unsuccessful revolt of Scribonianus, in Illyricum, against the Emperor Claudius, was brought to Rome for trial. Arria, finding all means of saving him ineffectual, and perceiving him, at the same time, destitute of sufficient courage to destroy himself, plunged a dagger into her own bosom in the presence of her husband, and then drawing it forth, handed the weapon to him, calmly remarking at the time, "*it does not pain*." Martial has made this the subject of an epigram (1, 14).

ARRIĀNUS, I. a Greek historian, a native of Nicomedia, who flourished in the second century under Hadrian and the Antonines. In his own country he was a priest of Ceres and Proserpina; but, taking up his residence at Rome, he became a disciple of Epicure. He was honoured with the citizenship of Rome, and appointed prefect of Cappadocia by the Emperor Hadrian, who patronised him on account of his learning and talents. In this capacity he distinguished himself by his prudence and valour in the war against the Massagetæ, and was afterward advanced to the senatorial and even consular dignities. Like Xenophon, he united the literary with the military character, was conversant with philosophy and learning, and intimate with those who cultivated them. No less than seven of the epistles of Pliny the younger are addressed to Arrian. His historical writings were numerous; but of these, with the exception of some fragments in Photius, only two remain. The first is composed of seven books on the expedition of Alexander, which, being principally compiled from the memoirs of Ptolemy Lagus and Aristobulus, who both served under that king, are deemed proportionably valuable. Arrian, himself a soldier and a politician, possessed a sounder judgment than Quintus Curtius, and indulged less in the marvellous. To this work is added a book on the affairs of India, which pursues the history of Alexander, but is not deemed of equal authority with the former. An epistle from Arrian to

Hadrian is also extant, entitled, "A Periplus of the Euxine," probably written while he was prefect of Cappadocia. There are, besides, under the name of Arrian, "a treatise on Tactics;" "a Periplus of the Erythraean Sea," of which the authority is doubtful; "a treatise on Hounds and Hunting;" an "Enchiridion," or Manual, exhibiting an abstract of the doctrines of Epictetus; and the "Discourses," or Dissertations of that philosopher, compiled from notes taken during his lectures. The best editions of Arrian's Expedition of Alexander are, that of Gronovius (*Lugd. Bat.*, 1704, fol.), and that of Schmieder (*Lips.*, 1798, 8vo). The edition of Raphaelius (*Amst.*, 1757, 8vo) is, with the exception of the Greek index, almost wholly derived from that of Gronovius. Of the Indian history, the best edition is that of Schmieder (*Hale.*, 1798, 8vo). Of his Enchiridion, that of Upton (*Lond.*, 1739, 4to), and that of Schweighaeuser (*Lips.*, 1799, 8vo), forming part of the edition of the Discourses, by the same, which last-mentioned work is in 5 vols. 8vo, *Lips.*, 1799-1801. Of the rest of his works, the best edition is that of Blancard, *Amst.*, 1683, 8vo. The edition of his geographical writings, by Stuckius, *Genev.*, 1577, fol., is also valuable.—II. A Roman lawyer, whose era is unknown. A work of his, "*De Interdictis*," is mentioned in *lib. 2, D. V., 3, de hered. petit.*—III. A poet who wrote an epic poem in 24 books on Alexander; also another poem on Attalus, king of Pergamus. He likewise translated Virgil's Georgics into Greek verse. (*Suidas*, s. v.)

ARRIUS, a noted gourmand, mentioned by Horace. The poet alludes to an entertainment such as he should direct, which would of course be no unexpensive one. (*Serm.*, 2, 3, 86.)

ARSACES, I. a man of obscure origin, who incited the Parthians to revolt from the power of the Seleucidæ, and was elevated to the throne on account of his success. Justin (41, 4) makes this revolt to have taken place during the reign of Seleucus Callinicus, son of Antiochus Theos, but his account is inconsistent with his date. Arrian (*ap. Phot.*, *Cod.*, 58) seems to fix the revolt in the reign of Antiochus; while Apian (*Bell. Syr.*, 65) places it at the death of this monarch. Possibly, the establishment of the Parthian power was gradual, and was not completed till the reign of Seleucus. (*Clinton, Fast. Hell.*, vol. 2, p. 18.) Arsaces defeated Seleucus in battle, and when this monarch made a second expedition into Parthia, he took him prisoner and kept him long in captivity. (*Posidon.*, *ap. Athen.*, 4, p. 153, a.) Arsaces then laid the foundation of the Parthian empire, and his successors took from him the name of Arsacidæ. According to Justin (*l. c.*), who seems confirmed by Strabo (515), he reigned long and died in old age: according to Syncellus (p. 284, c.), who quotes from Arrian, he reigned only two years. (*Clinton, l. c.*)—II. The second of the name, son of the preceding, succeeded his father on the Parthian throne, and was, like him, a warlike prince. While Antiochus the Great was engaged in a war with Ptolemy Philopator, of Egypt, Arsaces made himself master of Media. Antiochus, when the war with Ptolemy was ended, marched against the Parthian king, drove him not only from Media, but from his own kingdom, and compelled him to take refuge in Hyrcania. Having subsequently, however, collected a numerous army, Arsaces appeared to Antiochus so formidable an antagonist, that the latter was glad to confirm to him the possession of Hyrcania as well as Parthia, on the sole condition of his concluding an alliance with him. Arsaces left his throne to his son Arsaces Priapatus or Phriapatus. (*Polyb.*, 10, 27.—*Justin*, 41, 5.—*Clinton, Fast. Hell.*, vol. 2, p. 315.)—III. The third of the name, son of the preceding, surnamed Priapatus or Phriapatus. He reigned 15 years, and left the kingdom to his son Phraates. (*Justin*, 41, 5.)—IV. A king of

Armenia, who was on the throne when Julian marched against Sapor, and was ordered to furnish auxiliaries for the Roman army. When Jovian, after the death of Julian, was compelled to sign an ignominious treaty of peace, Arsaces, by the very terms of it, was left to the mercy of the Persians, and was soon after entrapped and slain. (*Amn. Marcell.*, 23, 2, *seq.*—*Id.*, 25, 7, *et* 12.)

ARSACIDÆ, a name given to some of the monarchs of Parthia, in descent from Arsaces, the founder of the empire. Their power subsisted till the 226th year of the Christian era, when the dynasty of the Sassanides was founded by Artaxerxes. (*Vid.* Arsaces I., and Artabanus V.)

ARSAMOSATA, a city of Armenia Major, in the southwestern angle of the district of Sophene, and 70 miles from the Euphrates. It is now *Sirmat*. Another form of the ancient name is Armosata. (*Plin.*, 6, 9.—*Polyb.*, *Exc.* vii., lib. 8, 25, 1.—*Tacit.*, 15, 10.)

ARSANIAS, I. a river of Armenia Major, which D'Anville and Mannert, but especially the latter, consider as another name for the southern arm of the Euphrates. (*Vid.* Euphrates.)—II. There was another river of the same name lower down, which flowed from the northwest through Sophene, and entered the Euphrates below Melitene, on which Arsamosata was situate. This is now the *Arsen*. (*Pliny*, 5, 24.—*Tacit.*, 15, 15.)

ARSES, the youngest son of Ochus, whom the eunuch Bagoas raised to the throne of Persia, and destroyed with his children after a reign of three years. (*Vid.* Bagoas.)

ARSIA, a small river between Illyricum and Histria, and forming the limit of Italy in that quarter, after Histria was added to Italy by Augustus. (*Plin.*, 3, 19.—*Flor.*, 2, 5.)

ARSINOË, I. daughter of Meleager, and mother of Ptolemy I., of Egypt, by Philip, father of Alexander. During her pregnancy she was married to Lagos.—II. Daughter of Ptolemy I., of Egypt, and Berenice. She married Lysimachus, king of Thrace, who was already advanced in years, by whom she had several children. Lysimachus, setting out for Asia, left her in Macedonia, with two sons, Lysimachus and Philip, a part of the fruits of their union. This monarch having been slain in an expedition, Ptolemy Ceraunus seized on Macedonia, but could not take the city of Cassandria, where Arsinoë had taken refuge with her children. He therefore offered her his hand in marriage, and with much difficulty obtained her consent. But no sooner had he been admitted into the city for the purpose of celebrating the nuptials, than he caused her two sons to be slain, and exiled Arsinoë herself to Samothrace. From this island she soon took her departure to wed Ptolemy Philadelphus, her own brother, the first instance of this kind of union, and which became afterward so common in the time of the Ptolemies. Although many years older than Ptolemy, she nevertheless inspired him with such a passion, that, after her death, he gave her name to one of the nomes of Egypt (Arsinoitis), and to several cities both in that country and elsewhere. He even gave orders to have a temple erected to her, but his own death and that of the architect prevented the fulfilment of his wishes. It was intended to have had the ceiling of loadstone, and the statue of iron, in order that the latter might appear to be suspended in the air. (*Plin.*, 34, 14.)—II. Daughter of Lysimachus, king of Thrace, and the earlier wife of Ptolemy Philadelphus. She became by him the mother of Ptolemy III. (Euergetes), Lysimachus, and Berenice. After Ptolemy's union with Arsinoë, his own sister, she was banished to Coptos. The charge brought against her was a design to overthrow her rival.—III. Daughter of Ptolemy III., and Berenice, married Ptolemy Philopator, her brother. Her husband subsequently having become enamoured of Agathoclea, and being completely

ruled by this female and her brothers, was induced, at their instigation, to order Arsinoë to be put to death.—

IV. A daughter of Ptolemy Auletes, proclaimed queen by Ganymedes, when Cæsar attacked Alexandria. She was conquered, and brought in triumph to Rome; but, as this proved displeasing to the people, she was set at liberty. Subsequently, at the instigation of her younger sister Cleopatra, she was put to death by the orders of Antony, in the temple of Diana at Miletus. (*Hirt., Bell. Alex., 4.—Appian, Bell. Civ., 5, 9.*)—V. A city of Egypt, the capital of the Arsinoitic nome, lying to the west of the Nile, and between Heracleopolis Magna and Lake Moeris. It derived its name from Arsinoë, the sister and queen of Ptolemy Philadelphus. The earlier appellation was the “City of Crocodiles,” as the Greeks translated it (Crocodiopolis *Κροκοδείλων πόλις*, *Herod., 2, 148*). This last-mentioned name arose from the circumstance of the crocodile's being worshipped here; and a tamed representative of this fearful class of creatures was carefully nurtured and attended to in an adjacent pond or tank. Strabo gives an account, as an eyewitness, of this curious custom. The bodies of the sacred crocodiles were deposited after death in the cells of the Labyrinth, which stood near the city. The Egyptians honoured the crocodile here, because it was consecrated to Typhon, their evil genius, whom they dreaded, and sought to appease by worshipping an animal which was his symbolical image. The city of Arsinoë is now a pile of ruins, which lie not far to the north of the modern *Medinet el Faioum*. Jomard gives an accurate description of them. (*Descript. de l'Égypte*, vol. 4, p. 446.)—VI. A city of Egypt, at the head of the Sinus Arabicus, and not far from the spot where stands the modern *Suez*. Philadelphus constructed the harbour, and called the place after his sister and queen Arsinoë. In its immediate vicinity lay the city of Cleopatris, of later erection, and, in consequence of their proximity, both places were often called by the common name of Cleopatris, though actually distinct spots. (*Strab., 805.*) Arsinoë was connected with the Nile by means of the canal of Ptolemy, and for a long period was the very life of the navigation on the Sinus Arabicus, forming the connecting link between the traffic of Egypt and that of the East. In process of time, however, the dangerous navigation of the upper part of the gulf induced the Ptolemies to construct harbours lower down, and Arsinoë from this time sank in importance, and finally disappeared from notice. The Peutinger table, in the third century, makes mention of the place, but the Itinerary of Antonine passes it over in silence. (*Mannert*, vol. 10, pt. 1, p. 517.)—VII. A city of Cilicia Trachea, on the coast, between Celenderis and the mouth of the Arymagdus. (*Plin., 5, 27.*)—VIII. Another name for Patara, in Lycia. (*Vid. Patara.*)—IX. A town of Cyprus, near the promontory of Ammochostus. (*Strab., 682.*)—X. A harbour of Egypt, on the Sinus Arabicus, below Philoteræ ports. (*Plin., 6, 29.*)—XI. Another harbour, in the regio Troglodytica, in the vicinity of Diræ. (*Mela, 3, 8.—Artemid., ap. Strab.*)

ARSISSA PALUS, a great lake in the southern part of Armenia Major, now the *Lake of Van*. It was on its northern side embellished with cities, which were better known to the Byzantine writers than they had been before, viz., *Chalati* or *Athlat*, *Arzes* or *Argish*, and *Perkri*. This sheet of water is also sometimes called, in Armenian geography, the Lake of *Besnouikh*, from the district of that name in which it is situate. The name Besnouikh is deduced from that of Basus, a grandson of Haig, the first ruler of Armenia. (*Wahl, Vorder und Mittel Asien*, p. 508.)

ARTABANUS, I. son of Hystaspes, was brother to Darius the First. He endeavoured to dissuade his nephew Xerxes from making war upon the Greeks, but to no effect; and, after accompanying the monarch to

the Asiatic shore of the Hellespont, was sent back by him to Susa, to act as viceroy or regent in his absence. (*Herod., 7, 10, seqq.—Id., 7, 17.—Id., 7, 52.*) If the story related by Plutarch be true, Artabanus must always have possessed great influence with Xerxes, since, according to the Greek writer, the monarch owed his crown to his uncle, who was appointed by the Persians to decide between Xerxes and his elder brother Ariamenes. Artabanus adjudged the kingdom to the former, as having been born after his father came to the throne, and as being the son of Atossa the daughter of Cyrus. (*Plut., de frat. am.*, p. 488, f. p. 988, *Wyttcnb.*—Compare the account given by Herodotus, 7, 1, *seqq.*) We have nothing farther of Artabanus in history. He is by no means to be confounded with the individual of the same name (Artabanus II.) who slew Xerxes. (*Bähr, ad Ctes.*, c. 20, p. 151.—*Larcher, ad Ctes.*, vol. 6, p. 287.)—II. An Hyrcanian, captain of the guards of Xerxes, and for a long time one of his greatest favourites. When the monarch, after his return from Greece, gave himself up to a life of dissolute pleasure, Artabanus conceived this to be a favourable opportunity for seizing on the throne, and, having conspired with Mithradates, one of the eunuchs of the palace, and chamberlain to the king, he introduced himself by night into the royal apartment, and slew Xerxes, B.C. 464. After perpetrating the deed, he ran to Artaxerxes, the son of the monarch, and told him that Darius, his elder brother, had just murdered his father. Artaxerxes believed the story, and his brother was immediately arrested and put to death. After the new monarch had ascended the throne, Artabanus conspired against his life, but was betrayed by Megabyzus, an accomplice of his, and put to death. Such is the account of Ctesias (c. 30), which Larcher very justly prefers to the statements of Justin (3, 1) and Diodorus Siculus (10, 19), both of which appear tinged with absurdity.—III. A monarch of Parthia, known as Artabanus II., or Arsaces VIII. He succeeded his nephew Phraates II. (Arsaces VII.), and was killed in a war with the Thogarii, a Scythian nation. (*Justin*, 42, 2.)—IV. A monarch of Parthia, known as Artabanus III., or Arsaces XIX. He succeeded Vonones I., whom he drove from the throne, having himself previously reigned in Media. Faithful to the Romans, his protectors, as long as Germanicus inspired him with fear, he became, after the death of this commander, cruel and oppressive to his subjects, and arrogant towards Rome. His people complained of him to Tiberius, who named for them Phraates as king. This individual, however, dying on the route, the emperor nominated Tiridates. Artabanus fled into Scythia, but, being encouraged by the effeminacy of Tiridates, he took up arms again, and recovered his kingdom. The death of Tiberius saved him from punishment, and he made his peace with Caligula by dint of flatteries. Still, however, he was once more driven out by his subjects, and only returned eventually to die in his kingdom, about 44 A.D. (*Tacit., Ann.*, 2, 58.—*Id. ib.*, 6, 31.—*Id. ib.*, 6, 43, &c.)—V. A king of the Parthians, son of Volages IV., ascended the throne A.D. 216. His historical name is Artabanus IV., or Arsaces XXXI. He had hardly commenced his reign when he was menaced by Caracalla. The emperor demanded his daughter in marriage, in order to have a pretext for war in case he refused. The Parthian king, however, assented, and the Roman army was allowed to approach the Parthian capital, where Artabanus met it with a brilliant cortège. But on a given signal, the Roman troops fell upon the followers of the monarch, and an indiscriminate massacre ensued, from which Artabanus himself with difficulty escaped. Caracalla thereupon pillaged the surrounding country, and then returned to Mesopotamia. Artabanus, burning for revenge, assembled the largest army which the Parthians had ever as yet raised, crossed the Euphrates,

laid waste everything with fire and sword, and encountered the Roman forces in Syria. Macrinus had succeeded Caracalla. A bloody battle ensued, which lasted for two days. On the third day, a herald from the Romans announced the fact of Caracalla's being dead, and that Macrinus was his successor, and also proposed a treaty of peace between the two empires. The Romans accordingly restored the prisoners they had taken, paid the expenses of the war, and Artabanus returned to his capital. His prosperity, however, was of short duration. Ardshir Babegan, or Artaxerxes, excited the Persians to revolt, and Artabanus was defeated, taken prisoner, and put to death. With him ended the Parthian dynasty of the Arsacidæ. The family itself, however, was not extinct in the person of Artabanus, but continued to reign in Armenia, as tributary to the new Persian dynasty, until the time of Justinian. (*Biogr. Univ.*, vol. 2, p. 540.)

ARTABĀZUS, I. son of Pharnaces, commander of the Parthians and Chorasmiens in the army of Xerxes. He escorted this monarch through Europe to Asia, after the battle of Salamis, at the head of sixty thousand men, and rejoined Mardonius before the battle of Plataea. He endeavoured to dissuade him from engaging in this conflict, but to no purpose; and, after the death of Mardonius, succeeded in retreating to Asia with the residue of his own forces, having obtained a safe passage through Thessaly by assuring the inhabitants that Mardonius had defeated the Greeks. (*Herod.*, 7, 66.—*Id.*, 8, 126.—*Id.*, 9, 41.—*Id.*, 9, 89.)—II. A general of Artaxerxes Longimanus. He remained faithful to this prince as long as he reigned, and did everything in his power to conquer Datames, who had revolted against the king. He himself subsequently revolted against Ochus, but, after fleeing into Macedonia, was pardoned by that prince. He fought in the battle of Arbela, on the side of Darius, and, after the death of that prince, surrendered himself to Alexander, who made him satrap of Bactriana. He had a large number of sons, to whom Alexander assigned governments. His daughters were married, one to Ptolemy, son of Lagus; another to Eumenes, of Cardia; and a third to Seleucus. (*Biogr. Univ.*, vol. 2, p. 542.)

ARTĀBRUM PROMONTORIUM, a promontory on the northwestern coast of Spain, now Cape Finisterre, in Galicia. It was sometimes called *Celticium Promontorium* (*Plin.*, 4, 22), and also *Nerium*. (*Strab.*, 106.)

ARTACOĀNA, the capital of Aria, now *Herat*, situate on the river Arius, now the *Heri*. (*Arrian*, 3, 25.—*Strab.*, 350.)

ARTAGĒRAS or ARTAGICERTA, a town of Armenia Major, northeast of Amida, where Caius Cæsar, a nephew of Augustus, was dangerously wounded by one Addruss. It is now probably *Ardis*. (*Vell. Patere.* 2, 103.)

ARTAPHERNES, I. a brother of Darius, and son of Hytaspes, governor of Sardis. (*Herodot.*, 5, 25.)—II. A son of the preceding, whom Darius sent into Greece with Datis. He was conquered at the battle of Marathon by Miltiades. (*Vid. Datis*.—*Herod.*, 4, 153.—*Id.*, 5, 55.)

ARTAVASDES or ARTABĀZUS, king of Armenia, the son and successor of Tigranes, began to reign about 70 B.C. It was principally through his treacherous advice, as to the mode of entering Parthia, that Crassus failed in his expedition against that country. He was subsequently taken by Antony, to whom he had also acted a treacherous part in his Parthian expedition, who led him in triumph at Alexandria. He was put to death, after the battle of Actium, by Cleopatra, who wished to obtain succours from the King of Media, and therefore sent him the head of Artavasdes, his enemy. The prince appears to have been a very well educated man. He wrote in Greek two historical works, some tragedies, discourses, &c. (*Plut.*, *Vit. Anton.*, c. 50, *seqq.*)

ARTAXĀTA, a strongly fortified town of Upper Armenia, the capital of the empire, built upon a plain which Hannibal recommended as a proper site for the capital to King Artaxias. Near it ran the Araxes. It was burned by Corbulo, and rebuilt by Tiridates, who called it *Neronea*, in honour of Nero. It is now *Ardesh*. (*Plin.*, 6, 9.—*Flor.*, 3, 5.—*Tacit.*, *Ann.*, 13, 39, et 41.—*Id. ib.*, 14, 23.—*Id. ib.*, 15, 15.—*Strab.*, 363.)

ARTAXERXES, I. a name common to some of the kings of Persia, and the meaning of which will be considered at the close of this article. The first of the name succeeded his father Xerxes, who had been assassinated by Artabanus, captain of the royal guards. After discovering and punishing the murderer of his father, and bringing to a close a war in Bactria, occasioned by the revolt of a satrap, he reduced to obedience the Egyptians, who had revolted under Inarus, and who had been aided by the Athenians. Though severe in the earlier part of his reign, he became conspicuous afterward for mildness and moderation. This Artaxerxes was called Μακρόχειρ (*Longimanus*), from the extraordinary length of his arms, according to Strabo, which, on his standing straight, could reach his knees; but, according to Plutarch, because his right hand was longer than his left. He reigned thirty years, and died B.C. 425. (*Ctes.*, *Pers.*, c. 30, *seqq.*, p. 71, *seqq.*, ed. Bähr.—*Plut.*, *Vit. Artax.*, *init.*)—II. The second of the name, was surnamed Μνήμων (*Memnon*), on account of his extraordinary memory. He was son of Darius the Second, by Parysatis, the daughter of Artaxerxes Longimanus, and had three brothers, Cyrus, Ostanes, and Oxathres. His name was Arsaces, which he changed into Artaxerxes when he ascended the throne. His brother Cyrus was of an ambitious disposition, and he resolved to make himself king in opposition to Artaxerxes. Parysatis always favoured Cyrus; and when he was accused by Tissaphernes of plotting against his brother, she obtained his pardon by her influence and entreaties. According to Xenophon (*Anab.*, 1, 1), it was irritation against his brother for listening to this charge that induced Cyrus to revolt and aspire to the throne. Another reason, however, still more powerful in the eyes of an ambitious prince, would likewise appear to have urged him on to the step. Artaxerxes had been born before his father's accession to the empire, whereas Cyrus was born the son of a king, a distinction somewhat similar to that which had given Xerxes the throne. (*Vid. Artabanus*, I.) Cyrus had been appointed by his brother satrap of Lydia, and had also the command assigned him of whatever forces the Dorian cities along the coast of Asia Minor might be required to send as auxiliaries to the Persian armies. (*Consult Schneider*, ad *Xen.*, *Anab.*, 1, 1.) Taking advantage of this, he assembled under various pretexts a numerous army, and at length marched against his brother at the head of one hundred thousand barbarians, and nearly thirteen thousand Greeks. Artaxerxes met him at Cunaxa with an army of nine hundred thousand barbarians, and a brief conflict ensued, in which Cyrus was killed. He was slain in the very moment of victory; for he had routed with his body-guard the guards of the king, while the Greeks were in full pursuit of that part of the king's army which had been opposed to them. The loss of the battle was owing partly to the rash impetuosity of Cyrus in charging the royal guards, and partly to the circumstance of the Greeks having pursued too far the barbarians opposed to them. Artaxerxes was wounded in the action by Cyrus's own hand, while Cyrus, on the other hand, was slain by Mithradates, a young Persian noble, and by a Carian soldier, having been wounded in succession by each. So anxious, however, was Artaxerxes to have it believed that he himself had slain the young prince, that both Mithradates and the Carian eventually lost their lives for boasting of the deed.

After the battle of Cunaxa, the Greeks began their celebrated retreat, so graphic an account of which has been preserved for us in the pages of Xenophon. (*Vid. Xenophon.*) Artaxerxes was now peaceable possessor of the throne. Being irritated at the Lacedæmonians, who had embraced his brother's cause, he lent aid to Conon the Athenian admiral, and succeeded by his means in wresting from Sparta the dominion of the sea. He then furnished the necessary means for rebuilding the walls of Athens, and finally, by employing his gold in sowing dissensions among the Grecian states, he forced Agesilaus to abandon the extensive conquests he had already made in the Persian dominions. The war at length was brought to a close by a memorable treaty, by which the Greek cities of Asia were abandoned to his sway. Artaxerxes was not successful in checking a revolt on the part of the Egyptians, nor was his march in person against the Cadusii, in Upper Asia, crowned with any happier result. He was governed entirely by his mother Parysatis, who, by studying his inclinations, had gained a complete ascendancy over him. After having put to death Darius, his eldest son, for conspiring against him, he died at the advanced age of ninety-four years, bowed down by sorrow at the loss of two other sons whom Ochus, who reigned after him, had managed to cut off. According to Diodorus, he was on the throne forty-three years; but according to Eusebius and the Alexandrine Chronicle, forty years. Plutarch makes his reign sixty-two years, but this is an error of a transcriber. (*Diod. Sic.*, 13, 104.—*Clinton's Fast. Hell.*, vol. 1, p. 316, 323.)—III. The third of the name, called previously Ochus, and known in history as Artaxerxes Ochus, or simply Ochus, succeeded his father Mnemon. He commenced his reign with the massacre of his brothers, and of all who belonged to the royal family. Egypt was at this time in full revolt, Artaxerxes Mnemon having in vain attempted to reduce it, and Ochus continued the war by means of his generals. Learning, however, that the Egyptians indulged in railleries against his person, and, moreover, that Phœnicia and Cyprus had also rebelled, he put himself at the head of his armies, took Sidon through the treachery of Mentor, commander of the Greek mercenaries, and made an indiscriminate slaughter of the inhabitants. He then marched against Egypt, and reconquered it through the military talents of Bagoas. Once master of the country, he gave himself up to all manner of cruelty, destroyed the temples, insulted the Egyptian deities, and, to crown all, caused the sacred Apis to be killed, and his flesh served up for a repast. This conduct excited the indignation of Bagoas, who, being an Egyptian by birth, was, of course, strongly attached to the religion of his country. He concealed his angry feelings, however, until Ochus had returned to Persia, and resumed his indolent mode of life, giving up the reins of government entirely to Bagoas. The latter thereupon caused him to be poisoned, gave his body to be devoured by cats, and, to indicate his cruelty of disposition, had sabre handles made of his bones. Bagoas placed on the vacant throne Arses, the youngest son of Ochus, and put to death all the rest. Ochus reigned eleven years, not eighteen, as Manetho gives it. (*Ellian.*, V. H., 6, 8.—*Justin.*, 10, 3.)—IV. A soldier of fortune, founder of the dynasty of the Sassanidæ, and called by the Greek historians Artaxerxes. His true name was Ardechir Babegan, and he was the son or grandson of an individual named Sassan, who, though in very reduced circumstances, claimed descent from Artaxerxes Longimanus. He succeeded in dethroning Artabanus, the last of the Arsacidæ, and thus laid the foundation of the second or later Persian empire. Although a usurper, Artaxerxes appears to have had a peaceable reign, as far as the internal affairs of his kingdom were concerned. In his external relations he came in contact with the Emperor Severus, who de-

feated him on his invading the Roman territory, and forced him to retreat. Artaxerxes was about to renew the war with fresh forces, when he died. To rare prudence and heroic courage he united a love of letters, and is said to have composed several works. He reigned fourteen or fifteen years, and left the throne to Sapor I.—V. A brother and successor of Sapor II. He died after a reign of four years, A.D. 384.—As regards the form *Artaxerxes* (*Ἀρταξέρξης*), which sometimes occurs, in editions, in place of the more common *Artaxerxes*, consult the remarks of Bähr (*ad Ctes.*, p. 186, *seqq.*). The name Artaxerxes is supposed to have been *Artachshast* or *Artachshasta* in Persian, and to have been compounded of the Persian *Art* or *Ard*, "strong," and the Zendic *Khshetro*, *Khshered*, or *Khshetræ*, "a warrior." Hence the appellation Artaxerxes will signify "a strong or mighty warrior." (Compare *Hecdotus*, 6, 98, *Ἀρταξέρξης, μέγας ἀνὴρ*.) Others write the Persian name thus, *Artahschetz*, and make it equivalent to "a great king." (Consult Bähr, *ad Ctes.*, p. 187.—*Rosenmüller*, *Handbuch*, &c., vol. 1, p. 373, n. 40.—*De Sacy*, *Mémoires sur diverses antiquités de la Perse*, p. 100.)

ARTAXĪAS, the name of three kings of Armenia.—I. The first reigned in the Upper or Greater Armenia, with the consent of Antiochus the Great. He gave an asylum to Hannibal at one time, and was also taken prisoner by Antiochus Epiphanes, but afterward regained his liberty.—II. The son of Artavasdes. He was killed by his own subjects, A.D. 20, and Tigranes chosen as his successor. (*Tacit.*, *Ann.*, 2.)—III. Sur-named Zeno, son of Polemon. He was proclaimed king of Armenia by Germanicus, in the place of Vemones, who was expelled the throne. He died A.D. 35. (*Tacit.*, *Ann.*, 6, 31.)

ARTEMIDORUS, I. a philosopher of Cnidus, who, having been intrusted by his friend Brutus with the secret of the conspiracy set on foot against Cæsar, presented to the latter a memorial containing an account of the whole affair. Cæsar received it as he was going to the senate-house, and put it with other papers which he held in his hand, thinking it to be of no material consequence. Had it been read by him, the whole plot would have been crushed. (*Plut.*, *Vit. Cæs.*)—II. A geographer of Ephesus, who flourished about 104 B.C. After having visited the coasts of the greater part of the Mediterranean, and having seen Gades and portions of the Atlantic shores, as also the Sinus Arabicus or Red Sea, he published a geographical work in eleven books, entitled *Γεωγραφούμενα*. More than five centuries after this, Marcellanus of Heraclea made an abridgment of it, a part of which is preserved. We have also remaining some other fragments of Artemidorus. Athenæus likewise cites his *Ionic Memoirs*, *Ἰωνικὰ ἱστορήματα*. He is often referred to by Strabo, Pliny, and Stephanus of Byzantium. The remains of Artemidorus are given in the Minor Greek geographers by Hoeschel and Hudson, with the exception of one fragment, giving a description of the Nile, which was published for the first time by Berger in Arctin's *Beiträge zur Gesch. und Lit.*, vol. 2, 1804 (*May*), p. 50.

—III. A native of Ephesus, who lived in the time of the Antonines, and who was surnamed, for distinction from others, *Daldianus*, because his mother had been born in Daldis, a city of Lydia. He published, under the title of *Ὀνειροκριτικά*, a work *On the Interpretation of Dreams*, in five books. It contains all that the author had been able to collect during his travels in Greece, Italy, and Asia, from those persons who, in that superstitious age, had turned their attention to so futile and illusory a subject. The work, apart from its main topic, contains some very interesting information respecting ancient customs, and serves also to explain many symbols and allegorical objects connected with the sculpture of former times. It furnishes, moreover, some important aid in elucidating

points of mythology. The style is marked by a certain degree of neatness, if not elegance. The best edition is that of Reiff, *Leips*, 1865, 2 vols. 8vo.—IV. A physician in the age of Hadrian. He is charged with having mutilated the works of Hippocrates. Not content with removing expressions that had fallen into disuse, and substituting others that were more intelligible in his own day, he is said also to have interpolated the text, and to have struck out, at the same time, whatever appeared to clash with the new matter thus brought in by him. (*Ud.* Hippocrates.—*Galen, comm. in lib. de nat. hum.*, p. 4—*Sprengel, Hist. Med.*, vol. 1, p. 294.)—V. A painter, whose country is uncertain. He flourished towards the end of the first century of our era, and is referred to by Martial (*Ep.* 5, 49), who censures him, because, in painting Venus, he did not give that soft gracefulness to her person which other artists had done, but rather a degree of the austere dignity of Minerva. (*Sillig, Diet. Art.*, s. v.)

ARTEMIS (Ἄρτεμις), the Greek name of Diana. From a curious passage in Clemens Alexandrinus (*Strom.*, 1, p. 331, *Polit.*) it would appear, that the goddess was called Artemis because of Phrygian origin (Φρυγίαν τε οὖσαν, κεκληθῆναι Ἄρτεμιν). Hence Jablonski concludes, that the name itself is a Phrygian one, and he compares it with the royal appellation *Artimas*, as given in Xenophon to a king of Phrygia. (*Cyrop.*, 2, 1, 5.) It is very probable, that the primitive root of the term Artemis is to be traced to the Persian tongue (*Artu, Arte, Art, Ar*, all signifying "great," or "excellent"), and thus Artemis or Diana becomes identical with the "great" mother of Nature, even as she was worshipped at Ephesus. As a collateral confirmation of this etymology, we may state, that the Persians, according to Herodotus (7, 61), originally called themselves *Artai* (Ἀρταίοι), which Helianthus makes equivalent to the Greek ἥρωες, "heroes," i. e. great, strong, powerful. (*Hellani, fragm.*, p. 97, *Sturz*—*Id.*, ap. *Steph. Byz.*, s. v. Ἀρταία) Other derivations of the name Artemis are not so satisfactory. Sicker, for example, deduces it from the Semitic *Ar*, "a foe," and *tama*, "impurity," as indicating the foe of what is unchaste, gloomy, or obscure. (*Cadmus*, p. xc.) Welcker, on the other hand, regards it as an epithet of the same nature with Opis and Nemesis, and says that it is ἀνο-Οἶμος. (*Schrenk, Etymol. Mythol. Audent.*, p. 263) Plato, in his *Cratylus*, derives Ἄρτεμις from ἀρτεμής, "whole," "uninjured," and therefore, "sound" and "pure," as referring to the virgin purity of the goddess. This is about as correct as the rest of Plato's attempts at etymology. (*Cratyl.*, p. 50—*Op.*, ed. *Bekk.*, vol. 4, p. 248—Consult *Cruze-zer, Synbolik*, vol. 2, p. 190)

ARTEMISIA, I. daughter of Iygdamis of Halicarnassus, reigned over Halicarnassus, and also over Cos and other adjacent islands. She joined the fleet of Xerxes, when he invaded Greece, with five vessels, the best equipped of the whole fleet after those of the Sidonians; and she displayed so much valour and skill at the battle of Salamis, as to elicit from Xerxes the well-known remark, that the men had acted like women in the fight, and the women like men. The Athenians, indignant that a female should appear in arms against them, offered a reward of 10,000 drachmæ to any one who should take her prisoner. She however escaped after the action. (*Herod.*, 7, 99—*Id.*, 8, 88.—*Id.*, 8, 93.) If we are to believe Ptolemy Hephestion, a writer who mixed up many fables with some truth, Artemisia subsequently conceived an attachment for a youth of Abydos, named Dardanius; but, not meeting with a return for her passion, she put out his eyes while he slept, and then threw herself down from the lover's leap at the Promontory of Leucate. (*Ptol. Hephest.*, ap. *Phot.*, *Cod.*, 190, p. 153, *Bekk.*)—II. Another queen of Caria, not to be confounded with the

preceding. She was the daughter of Hecatomnus, king of Caria, and married her brother Mausolus, a species of union sanctioned by the customs of the country. She lost her husband, who was remarkable for personal beauty, B.C. 365, and she became, in consequence, a prey to the deepest affliction. A splendid tomb was erected to his memory, called *Mausoleum* (Μαυσωλείον, scil. μυρμηρίων, i. e., "tomb of Mausolus"), and the most noted writers of the day were invited to attend a literary contest, in which ample rewards were to be bestowed on those who should celebrate with most ability the praises of the deceased. Among the individuals who came together on that occasion were, according to Aulus Gellius (10, 18), Theopompus, Theodectes, Nancrites, and even Isocrates. The prize was won by Theopompus. (*Aul. Gell.*, l. c.) Valerius Maximus and Aulus Gellius relate a marvellous story concerning the excessive grief of Artemisia. They say that she actually mixed the ashes of her husband with water, and drank them off! (*Val. Max.*, 4, 6.) The grief of Artemisia, poignant though it was, did not cause her to neglect the care of her dominions; she conquered the isle of Rhodes, and gained possession of some Greek cities on the main land; and yet it is said that she died of grief two years after the loss of her husband. (*Vitrur.*, 2, 8.—*Strab.*, 656.—*Plin.*, 36, 5.)

ARTEMISIUM, a promontory of Eubœa, on the north-western side of the island. It had a temple sacred to Artemis (Diana), whence its name. Off this coast the Greeks obtained their first victory over the fleet of Xerxes, on the same day with the action of Thermopylæ. (*Herod.*, 7, 175, &c.)

ARTEMITA, I. a city of Assyria, north of Selencia, and southwest of Apollonia. It appears to have been the same with *Dastagerda* in the middle ages, and the *Chalasar* of more modern times. (*Tacit.*, 6, 41.—*Plin.*, 6, 26.—*Isid.*, *Charac.*)—II. Another in Armenia Major, near its southern boundary, now *Actamar* or *Van*. It lay at the southeastern extremity of the Arsissa Palus, now *Lake of Van*.

ARTEMON, I. a celebrated mechanician, a native of Clazomenæ, who was with Pericles at the siege of Samos, where it is said he invented the battering-ram, the *testudo*, and other equally valuable military engines. (*Plut.*, *Vit. Pericl.*, c. 27.)—II. A native of Syria, one of the lower order, whose features resembled in the strongest manner those of Antiochus Theos. The queen, after the king's murder, made use of Artemon to represent her husband in a lingering state, that, by his seeming to have died a natural death, she might conceal her guilt, and effect her wicked purpose. (*Plin.*, 7, 10.)

ARTIMPASA, a name given to a goddess among the Scythians, whose attributes resembled those of the Grecian Venus. (*Herod.*, 4, 59) Some read, in the text of Herodotus, Ἀρτίπασα (*Artippasa*): others, with Origen (*contr. Cels.* V, p. 609), prefer Ἀρτίμασα. Many consider the deity here mentioned to be none other than the "Earth," the German *Hertha*, for, according to Jamieson, the ancient Goths called Venus *Iordem-asa*, and *Artem-asa*, i. e., "terræ dea." The first part of the name reminds us at once of our English term "earth," through the German "*erde*," and the remainder refers to the Asi. or earliest deities of Asiatic and Scandinavian mythology. (*Hermes Scythicus*, p. 120.)

ARVÆLES OF AMBARVÆLES, a name given to twelve priests who celebrated the festivals called Ambarvalia. This sacerdotal order is said to have been instituted by Romulus in honour of his nurse Acca Laurentia, who had twelve sons; and when one of them died, Romulus, to console her, offered to supply his place, and called himself and the rest of her sons *Fratres Arvales*. Their office was for life, and continued even in captivity and exile. They wore a crown made of the ears of wheat, and a white woollen wreath around

their temples. The hymn sung by these priests was discovered in 1778, in opening the foundations of the sacristy of St. Peter's, inscribed on a stone. Consult *Forcellini* (*Lex. Tot. Lat.*, s. r. Arvales), where the question is considered, whether the Arvales and the Ambarvales were distinct priesthoods or not. Reference is there made to the work of Marnio, "*Degli Attiche Monumenti de' Fratelli Arvali, scolpiti gra in tavole di marmo, ed ora raccolti, discefferate commentati.*" Roma, 1795, 2 vols. 4to."

ARVERIS, a god of the Egyptians, son of Isis and Osiris. (*Ud. Horus.*)

ARVERNI, a powerful people of Gaul, whose territories lay between the sources of the Elaver or *Allier*, and Duranius or *Dordogne*, branches of the Liger and Garunna. The district is now *Auvergne*. Their capital was Augustanometum, now *Clermont*. They were a powerful nation, and were only conquered after great slaughter. Their name is supposed to be derived from *Ar*, or *al*, "high," and *Veraum* (*feuram*), "country" or "region." (*Thierry, Hist. des Gaulois*, vol. 2, p. 29.)

ARIUM PROMONTORIUM, a promontory of Chios. The adjacent country was famous for producing a wine (*Vinum Arium*) that was considered the best of all the Greek wines. (*Virg., Eclog.*, 5, 71.—*Strab.*, 955.—*Plut.*, non posse suav. vivi, &c., c. 17.—*Clem. Alex.*, *Ped.*, 2, 2.)

ARONS TARKINUS, I. a brother of Lucius Tarkinus, or Tarquin the Proud. He was of a meek and gentle spirit, and was married to the younger Tullia. His wife, a haughty and ambitious woman, murdered him, according to the old legend, and married Tarquin the Proud, who had, in like manner, made away with his own spouse. (*Liv.*, 1, 46.—*Arnold's Rome*, vol. 1, p. 41.)—II. A son of Tarquin the Proud. In the first conflict that took place after the expulsion of his father, he and Brutus slew each other. (*Liv.*, 2, 6.—*Arnold's Rome*, vol. 1, p. 108.)

ARUNTUS, I. a Roman writer, who, with an affectation of the style of Sallust, composed in the age of Augustus a history of the first Punic war. (*Voss., de Hist. Lat.*, 1, 18.)—II. A Roman poet, whose full name was Aruntius Stella. He is highly praised by Statius, who dedicated some of his productions to him, and also by Martial. Among the works that he composed was a poem on the victory of Domitian over the Sarmatæ. His writings have not come down to us. (*Statius, Sylv.*, 1, 2, 17.—*Id. ib.*, 1, 2, 258, &c.—*Martial*, 5, 59, 2.—*Id.*, 12, 3, 11, &c.)

ARUSPEX. *Ud. Haruspex.*

ARXATA, a town of Armenia Major, situate on the Araxes, east of Artaxata, towards the confines of Media. (*Strab.*, 528.) It is probably the Naxuana of Ptolemy.

ARYANDES, a Persian, appointed governor of Egypt by Cambyses. He was put to death by Darius for issuing a silver coinage in his own name. (*Herodot.*, 4, 166.)

ASANDER, a governor of the Cimmerian Bosphorus under Pharnaces. He revolted against him B.C. 47; and having defeated both him and his successor, obtained peaceable possession of the government, which was afterward confirmed to him by Augustus. He separated by a wall the Tauric Chersonese from the continent. (*Appian, Bell. Mithrad.*, 120.—*Dio Cassius*, 42, 46.)

ASCHBURGUM, I. a Roman fortified post on the German side of the Rhine. Ptolemy places it where the Canal of Drusus joined the Yssel.—II. A town of Germany, placed by the *Tab. Peut.* on the western bank of the Rhine, south of the modern *Santen*. (Compare *Munckert, Geogr.*, vol. 3, p. 454.) Ritter has some curious speculations upon the name of this place, and seeks to trace an analogy between it and that of the Aspurigiani, on the Palus Mæotis (*Strabo*, 495), as also between both of these and the famed

As-gard of Scandinavian mythology. (*Ritter's Vorhalle*, p. 296, *seqq.*—Consult remarks under the article *Asi*.)

ASBYTÆ, a small inland tribe of Africa, situate between the Gilligamæ on the east, and the Auschisæ on the west (*Herodot.*, 4, 170), and above Cyrenaica. They had no communication with the coast, which was occupied by the Cyreneans. According to Herodotus (*l. c.*), they were beyond all the Africans remarkable for the use of chariots drawn by four horses. (*Renell, Geogr. Herod.*, vol. 2, p. 265.)

ASCALAPHUS, I. a son of Mars and Astyoche, went to the Trojan war at the head of the Orchomenians, with his brother Ialmenus. He was killed by Deiphobus. (*Hom., Il.*, 2, 513.)—II. A son of Acheron by Gorgyra or Orphne, stationed by Pluto to watch over Proserpina in the Elysian fields. It was he who testified to the fact of Proserpina's having eaten a pomegranate seed in the kingdom of Pluto. (*Ud. Proserpina.*) He was changed into an owl for his mischief-making. (*Orind, Met.*, 5, 549.) Another legend says that Ceres placed a large stone on him in Erebus, which Hercules rolled away. (*Apollod.*, 1, 5, 3.—*Id.*, 2, 5, 12.) There are likewise other variations in the fable, as given by the ancient mythologists. According to Antoninus Liberalis (*c.* 21), who quotes from Nicander, the name of the individual was Ascalabus, son of the nymph Misme (*Micqu*). His mother having handed Ceres a drink when the latter was searching for her daughter, and the goddess having, through excessive thirst, drained the cup at a single draught, Ascalabus, in derision, ordered a caldron to be brought; whereupon the offended deity changed him into a lizard. (Compare *Munckert, ad Anton. Lib.*, *l. c.*, and *Cruzer, Symbolik*, vol. 4, p. 467, *seqq.*)

ASCALON, a maritime town of Palestine, 320 furlongs from Jerusalem, between Azotus to the north, and Gaza to the south. Venus Urania was worshipped in this city. Her temple was pillaged, according to Herodotus, by the Scythians, B.C. 630. Here also was worshipped the goddess Derceto. Ascalon was taken from the Assyrians by the Persians, and afterward fell successively into the hands of Alexander the Great, Ptolemy, and Antiochus I.; but, during the wars between Antiochus Epiphanes and his brother Philopator, it became independent, and remained so until it fell under the Roman power. It was frequently taken by the Saracens, and suffered much during the crusades. Baldwin, king of Jerusalem, took it, after a siege of five or six months, in 1153 or 1154, at which time it was erected into an episcopal town; but, falling at length into the hands of the Turks, it was almost destroyed, and is now an insignificant place, which they occupy for the purpose of opposing the inroads of the Arabians. Its modern name is *Scalona*. Herod the Great was born in Ascalon, and hence received the appellation of Ascalonites. (*Plin.*, 5, 13.—*Amm. Marcell.*, 14, 26.—*Ptol.*, 5, 16.—*Strabo*, 522.—*Joseph., Ant. Jud.*, 6, 1.)

ASCANIUS, I. son of Æneas by Cræusa. According to the old legend (for it is not right to dignify such narratives with the name of history) he was saved from the flames of Troy by his father, whom he accompanied to Italy, where his name was afterward changed to Iulus. He behaved with great valour in the war which his father carried on against the Latins, and succeeded Æneas in the kingdom of Latium, and built Alba, to which he transferred the seat of his empire from Lavinium. The fabulous chronology of the Roman writers makes the descendants of Ascanius to have reigned in Alba for about 420 years, under fourteen kings, till the age of Numa. Ascanius himself reigned, according to the same authorities, thirty-eight years, of which thirty were passed at Lavinium, and the remainder at Alba. He was succeeded by Sylvius Posthumus, son of Æneas by Lavinia. Iulus,

the son of Ascanius, disputed the crown with him; but the Latins gave it in favour of Sylvius, as he was descended from the family of Latinus, and Iulus was invested with the office of high-priest, which remained a long while in his family. (*Lin.*, 1, 3.—*Serv.*, *ad Virg.*, *Æn.*, 1, 270.—*Dionys. Hal.*, 1, 76.—*Plut.*, *Vit. Rom.*)—II. A river of Bithynia, which discharged into the Propontis the waters of the Lake Ascanius. (*Plin.*, 5, 32.—*Aristot.*, *ap. Schol. Apollon. R.*, 1, 1177.)—III. A lake in the western part of Bithynia, near the head waters of the Sinus Cianus. At its eastern extremity stood the city of Nicæa. Aristotle observes, that the waters of this lake were so impregnated with nitre, as to cleanse the clothes dipped into them. (*Mirab. Auscult.*, c. 54.—*Plin.*, 31, 10.) According to Colonel Leake, the Ascanian Lake is about ten miles long and four wide, surrounded on three sides by steep woody slopes, behind which rise the snowy summits of the range of Olympus. (*Leake's Asia Minor*, p. 7.—*Cramer's Asia Minor*, vol. 1, p. 180.)

ASCLEPIĒA (Ἀσκληπιεία), a festival in honour of Æsculapius (Ἀσκληπιός), celebrated in several parts of Greece, but nowhere with so much solemnity as at Epidaurus. One part of the celebration, as we learn from Plato, consisted of contests in poetry and music. (*Plat.*, *Ion. init.*—*Jul. Poll.*, 1, 37.—*Pausan.*, 2, 26, 7.) Another form of the name is *Asclepēa* (Ἀσκληπιεία), respecting which, consult the remarks of Siebelis (*ad Pausan.*, l. c.).

ASCLEPIĒDES, I. the reputed descendants of Æsculapius (Ἀσκληπιός), consisting of several families spread over Greece, and professing to have among them certain secrets of the healing art handed down to them from their great progenitor. The Asclepiades of Epidaurus were among the most famous of the name. The Asclepiades compelled all who were initiated into the mysteries of their science, to swear by Apollo, Æsculapius, Hygiea, Panacea, and all the other gods and goddesses, that they would not profane the secrets of the healing art, but would only unfold them to the children of their masters, or to those who should have bound themselves by the same oath. (Consult *Hippocr.*, *ῥήκος illustratus a Meibomio*, 4to, *L. B.*, 1643.) We may, in this point of view, regard as a *locus classicus* a passage of Galen, wherein he states that medical knowledge was at first hereditary, and that parents imparted it to their offspring as a kind of family prerogative or possession. This usage, however, became in process of time more relaxed, and then medical secrets began to be imparted to strangers who had gone through the forms of initiation (τέλειτοι ἄνδρες), and were in this way rendered less exclusive in their character. (*Galen*, *Administr. Anatom.*, lib. 2, p. 128.) It is for this reason that Aristides, in a later age, remarks, that a knowledge of medicine was for a long time regarded as the attribute of the family of the Asclepiades. (*Orat. Sacr.*, vol. 1, p. 80.) And hence, too, Lucian makes a physician say, "My sacred and mysterious oath compels me to be silent." (*Tragopod.*, p. 818.) The theurgic physicians of the Alexandrian school re-established, at a subsequent period, this ancient custom, in order to impart, by the obligation of religious silence, a greater degree of consideration to their superstitious practices. (*Alex. Trall.*, lib. 10, p. 593, *ed. Guinth. Andernac.*) The Asclepiades appear to have established, among their disciples and in their manner of instructing, a distinction which we find existing also in the schools of the philosophers. They imparted the ordinary branches of medical knowledge to those who were not yet initiated, but their profound secrets (αἱ ἀπὸρρήτοι διδασκαλίαι) only to those who had been admitted into their mysteries. The Asclepiades neglected entirely two essential parts of the healing art, diet and anatomy. Plato says that an acquaintance with die-

tetics was not cultivated before the time of Prodicus of Selymbria, and Hippocrates confirms the assertion of the philosopher. (*Sprengel, Apol. d'Hippocr.*, pt. 11, p. 271.) Anatomy, again, could not flourish in Greece, through the force of popular prejudice, and these prejudices took their rise from the belief, that the soul, after being disengaged from its material envelope, was obliged to wander on the banks of the Styx until the body was consigned to the earth or devoured by the flames. (*Horn.*, *Il.*, 23, 71.—*Sprengel, Hist. Med.*, vol. 1, p. 169, *seqq.*)—II. A Greek physician, a native of Prusa in Bithynia, who lived in the age of Cicero, and who was the first that brought the art of medicine into reputation at Rome. After having acquired a name in Asia, he came to the capital of Italy, B.C. 110, rejecting the offers of Mithradates, king of Pontus, who wished him to reside at his court. Asclepiades was one of those ardent spirits destined to bring about a revolution in whatever career they move, and nature had endowed him with an attractive kind of eloquence, which he often abused. At Rome he commenced giving lessons in rhetoric, but all of a sudden, persuading himself, after a very superficial acquaintance with medicine, that he was thoroughly master of the art, he began to practice it. Unhappily, he brought into this new pursuit all the rash eagerness of his independent spirit, and all the philosophical errors of opinion which, as a rhetorician, he had successfully adopted. The Romans had given a favourable reception to Archagathus before Asclepiades came among them, but they soon began to dislike his practice, from his having recourse frequently to painful remedies. Asclepiades, in order to gain a reputation, pursued a course directly opposite to this. He made it a point to give only such remedies as were agreeable and easy to bear. He applied, moreover, to the medical art all the erroneous philosophic notions of his day; and, speaking in this way to the Romans of things that entered into the plan of their studies, and alluring them also by the charms of his eloquence, he was enabled to gain their confidence the more easily, from being himself deceived into the belief that he was near the truth. Adopting the corpuscular philosophy of Epicurus, he made it the basis of his doctrine. He misunderstood that of Hippocrates, the only true one. He even criticised openly the method of this great physician, namely, the calm observation of nature, and called it, in derision, "the study of death" (θάνατον μελέτην.—*Galen*, *de venæ sect. adv. Erasistr.*, p. 3). From Pliny's account of him, Asclepiades would appear to have been nothing more than a successful charlatan, who flattered the whims of his patients, and rejected all the tortures which, under the name of regular remedies, had been previously in vogue. He admitted only five means of cure; dieting, occasional abstinence from wine, frictions, exercise on foot, and the being carried in litters. (*Plin.*, 26, 3.) The appearance, too, for the first time in Italy, of the disorder termed elephantiasis, and the alarm which it occasioned, could not fail to add greatly to the reputation of a medical man who was skilful in curing it. (*Plut.*, *Sympos.* 8, *qu.* 9.) Finally, the relations subsisting between him and the most distinguished Romans of his time, especially Cicero, contributed greatly to his celebrity. (*De Orat.*, 1, 14.) A singular circumstance also gained him great credit among the lower orders. Happening to pass, on one occasion, near a funeral train, he perceived that the body which was being conveyed to the funeral pile exhibited signs of life. He immediately employed the most active measures for its resuscitation, and succeeded, to the great astonishment of the by-standers, who regarded what he had done as a restoring from death to life, rather than as an act of ordinary healing. Asclepiades used to boast that he had never been sick; and if we credit Pliny, he did not even die of any malady, but from an

accident that befell him. We have some fragments of his writings remaining, an edition of which was given by Gumpert, with a preface by Grüner, *Vimar.*, 1794, 8vo. Asclepiades was the founder of a school, which enjoyed great celebrity among the ancients. Stephanus of Byzantium gives the names of several of his pupils (s. v. *Διπύχων*). A scholar of his, not mentioned by the latter, namely, Themisto, was the chief of the sect of the Methodists, as they were termed. (*Biogr. Univ.*, vol. 2, p. 564.—*Sprenghel, Hist. Med.*, 2, p. 3, seqq.)

ASCLEPIODORUS, I. an Athenian painter, contemporary with Apelles, who praised the former for the symmetry of his productions, and yielded him the palm in delineating the relative distances of objects. Mnaso, a tyrant of antiquity, employed him to paint the twelve deities (*Dii majores*), and paid him 300 minas (over \$5277) for each. (*Pliny*, 35, 10.)—II. A statuary, one of those, according to Pliny (34, 8), who excelled in representing the philosophers. (*Sillig, Dict. Art.*, s. v.)

ASCLEPIODOTUS, a native of Alexandria, the disciple of Jacobus in medicine and of Proclus in eclectic philosophy, in both of which he acquired a distinguished reputation. Damascius gave a long account of him in the life of Isidorus, of which Suidas and Photius have preserved fragments. In medicine he surpassed his instructor, and is said to have re-established the use of white hellebore, with which he made some very successful cures. He was well acquainted also with the virtues of plants, and with the history of animals; and made great progress also in the musical art. Some wonderful stories are likewise related of him, which would seem to place him in the class of Thaumaturgists. He wrote a commentary on the *Timæus* of Plato, which is now lost. (*Photius, Cod.*, 242, vol. 2, p. 343, seqq.)

ASCOLIÀ, a festival in honour of Bacchus, celebrated by the Athenian husbandmen, who generally sacrificed a goat to the god, because that animal is a great enemy to the vine. They made a bottle or bag with the skin of the victim, which they filled with wine, smearing at the same time the outer surface with oil. On this they endeavoured to leap with one foot, and he that first fixed himself was declared victor, and received the bottle as a reward. This was called *ἀσκολιάζειν*, *παρὰ τοῦ ἐπὶ τὸν ἀσκὸν ἄλλεσθαι*, from *leaping upon the bottle*, whence the name of the festival is derived. It was also introduced into Italy under the name of *Vinalia*, on which occasion the rustics put on hideous masks of bark, and invoked Bacchus in joyful strains. They also hung up, at the same time, little images on a lofty pine. These images they called *Oscilla*. (*Schol. ad Aristoph., Plut.*, 1129.—*Virg., Georg.*, 2, 387, seqq.) Spence gives engravings from several gems, on which figures are represented, called *oscilla* or *αἰώραι*. They are found also in the paintings at Herculaneum, and in Mercurialis (*Art. Gymn.*, 3, 8, p. 217). Spence attributes the origin of this rite to the popular belief, that when Bacchus turned his face towards the fields, their fertility was assured. Hence they exposed these small figures to the winds, that they might be free to turn in any direction. Some writers think that the *oscilla* were the same with phallic symbols (compare *Serv.*, *ad Virg.*, l. c.), but this opinion now finds few, if any, supporters. (*Turneb., Adv.*, 3, 20.—*Rolle, Recherches sur le culte de Bacchus*, vol. 1, p. 312.) The Athenians had their festival of *oscilla*, which they termed *αἰώραι*, and which was said to have been instituted in memory of Eri-gone; and hence Varro (*ap. Serv. ad Æn.*, 12, 603) gives another singular explanation to the custom of suspending *oscilla*. According to him, a rope was suspended at either extremity from a beam or tree, and in this way a swing was formed, to which a little image or *oscillum* was suspended. The movement of this swing to and fro, with the image attached, was re-

garded as a kind of funeral offering to those who had committed suicide by hanging.—There is evidently some analogy, in both form and meaning, between the Latin term *oscilla* and the Greek *ἀσκολία*, and the common derivations given in either case cannot be correct. (Consult the etymology given by Servius, *ad Virg.*, l. c.)

ASCONIUS PEDIANUS, a grammarian, born at Patavium, a little before the commencement of our era (*Madvig, de Pediani Comment. Disp. Crit.*, p. 16), and who is known to modern times by his commentary on the orations of Cicero. The statement of Philargyrius, that Asconius had heard Virgil in his youth, deserves no credit whatever (*ad Virg., Eclog.*, 3, 106), since it is contradicted in effect by the remark of St. Jerome, who informs us, that Asconius, in the 73d year of his age, and in the 7th of Vespasian's reign, suffered the loss of his sight, but still lived for twelve years after this. (*Hieron., in Chronic. Euseb., ad Olymp.* ccciii., 3.) Just as little credit is due to the supposition of there having been two individuals named Asconius, an earlier one, who was the friend of Livy and Virgil, and wrote a commentary on Cicero's orations, and a later one, who was an historical writer. All antiquity knows but one Asconius Pedianus. (*Jos., Scal. Animadv. ad Euseb. Chron.*, p. 183, *ed.* 1.—p. 200, *ed.* 2.)—Few particulars have reached us relative to Asconius. He composed a work in defence of Virgil, now lost (*Donat. in Vit. Virg.*, 16, 64), and another on the life of Sallust, which also has not reached us. He wrote likewise a commentary on the Orations of Cicero, for the use of his own son (*ad Orat. pro Milon.*, 6), some portions of which have reached our day. The importance of these makes us feel the more sensibly the loss of the other parts. (*Madvig, p. 72, seqq.*) We have fragments of the commentary on nine orations of Cicero: the *Divinatio*, three of those against Verres, the oration for Cornelius, the oration in *tog. candid.*, that against Piso, and those for Scaurus and for Milo. The character of this commentary is in general historical, and Asconius appears in it as a man well acquainted with the history and earlier constitution of Rome. Frequently he is our only authority for certain facts, since the sources from which he has drawn, in such cases, no longer exist. His Latinity is tolerably pure and correct, and comparatively free from the barbarisms of a declining tongue; always excepting the commentaries on the Verrine orations, which are thought by the learned to have been the work of a later writer, who lived shortly after Servius and Donatus, and who probably derived his materials from some commentary of Asconius, now lost. It is to this same later writer, and not to Asconius, that Niebuhr assigns the scholia found by Mai, in 1814, in the Ambrosian palimpsest. (*Nieb., ad Front. Op., ed. Berlin.*, p. xxxiv.—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 539, seqq.)

ASCRA, a town of Bœotia, situate on a rocky summit belonging to Helicon. It could boast of considerable antiquity, having been founded, as the poet Hegesinus, quoted by Pausanias (9, 29), asserts, by Ephialtes and Otus, sons of Aloeus. What rendered the place, however, most remarkable, was its having been the residence of Hesiod. The poet was not a native of Cyme, but his father came from Cyme to Ascræ, his native city, as he himself informs us (*Op. et D.*, v. 635, seqq.). He does not give us a very favourable idea of the climate of the place. From his birthplace Ascræ, Hesiod is commonly called the *Ascrean* bard. Pausanias reports, that in his day only one tower remained to mark the site of Ascræ (9, 29). Dr. Clark imagined that the village of *Zagora* represents Ascræ; but Sir W. Gell is inclined to identify it with an ancient tower he observed on a lofty, bare, conical rock; which agrees with the topography of Strabo, who places it to the right of Helicon, and

about forty stadia from Thespie. (*Cramer's Ancient Greece*, vol. 2, p. 207, *seqq.*)

ASCULUM, I. Picenum, a city of Picenum, so named to distinguish it from the Asculum of Apulia. It was situate in the interior, on the river Truentus, and some distance to the southwest of Firmum. Strabo describes it as a place of great strength, surrounded by walls and inaccessible heights. It was the first city to declare against the Romans when the Social war broke out, and its example was followed by the whole of Picenum. Asculum sustained, in the course of that war, a long and memorable siege against Pompey, who finally, however, compelled the place to surrender, and caused several of the chiefs of the rebels to be beheaded. (*Liv., Epit.*, 76.—*Vell. Patere*, 2, 21.—*Florus*, 3, 18.—*Appian, Bell. Civ.*, 1, 38.—*Plut., Vit. Pomp.*) We learn from Pliny (3, 13) that Asculum was a Roman colony, and regarded as the chief city of the province. It is now *Ascoli*.—II. Apulum, a city of Apulia, to which the epithet *Apulum* was attached to distinguish it from Asculum in Picenum. It was situate in the interior of Daunia, near the confines of Samnium, and is supposed to be represented by the modern town of *Ascoli*, which is about six miles to the southwest of *Ordona*. It was under the walls of this place that Pyrrhus encountered a second time the Roman army, after having gained a signal victory in Lucania. The action was attended with no advantage to either side. (*Florus*, 1, 18.—*Plut., Vit. Pyrrh.*—*Frontin., Strateg.*, 1, 3.) Frontinus, who classes it among the colonies of Apulia, terms it *Auscum*. This is probably the correct orthography, as may be seen from coins, the inscription on which is ATCAIΩN, and ATCKA. (*Cramer's Ancient Italy*, vol. 2, p. 288.)

ASDRUBAL. *Vid.* Hasdrubal.

ASI, or ASÆ (in the old Scandinavian *Æsir* or *Esir*, the plural form of *As*), a general appellation given, in the mythology of northern Europe, to the deities that came in with Odin from the East. Including this latter divinity they were twelve in number, according to some, thirteen (*Magnusén, Boreäl. Mythol. Lex.*, p. 720), and there was the same number of female deities or *Asynia*.—While some are inclined to see in the Asi merely an Asiatic colony, wandering in from the vicinity of the Don, others, with much more propriety, find in the name a curious chain of connexion between the early religions of the Eastern and European worlds. The term *As*, in fact, appears to have been an old appellation for deity, and meets us in numerous quarters, under various though not very dissimilar forms. Thus, in the Coptic, *Os* is said to signify "Lord" or "Deity"; in the old Persian, good deities or spirits were called *Ized*, while by *Berosus* the gods are termed *Isi*. (*Kanne, System der Ind. Myth.*, p. 228.) Again, in Sanscrit we have *Isha*, "a lord" or "master," the feminine of which, *Ishana*, reminds us at once of *Asyna*, a female deity, or *Asa*. Among the ancient Gauls, the supreme Being was denominated *Esus* or *Hesus*, a name that connects the Druidical worship with the East; while among many nations of Finnish origin, in Asiatic Russia, we have such terms for deity as *Eis*, *Ess*, *Essi*, and *Oss*. (*Magnusén*, p. 719, *note*.—*Heyl, Etymol. Versuch.*, Tübingen, 1824.) It is curious to connect with this the account given by the Roman writers, that in the Etrurian language *Æsar* signified "God." (*Sueton., Aug.*, 97.—*Dio Cass.*, 56, 29.—*Hezych.*, s. v. *Νῆσοι*.—*Müller, Etrusk.*, vol. 2, p. 81.) We may compare with this the old augural doctrine among the Etrurian priesthood, that the gods had their home or dwelling in the north, by which we see Scandinavia and Etruria brought singularly into contact. (*Serv., ad Æn.*, 2, 693.—*Dion. Hal.*, 2, 5.—*Plut., Quæst. Rom.*, 78.—*Müller, Etrusk.*, vol. 2, p. 126.)—Again, the traditions in the north of Europe are uniform, that the Asi came in

from the east or rather southeast, and mention is made of a country called *Asa-land*, and its metropolis *Asgard*, in the vicinity, or to the east, of the *Tanaïs*, from which Odin and the *Asa* are said to have come into Europe. (*Saga Olafs Tryggv. Ed. Skalh.*, 2, 49.—*Havn.*, 2, 183.—*Append. Ed. Jun.*, ed. *Rask.*, p. 354.—*Magnusén*, p. 287, 293.) We see here, at once, the striking analogy between *Asen-land* and *Asia*, and may easily suppose that by the former is meant merely a part of the latter, and that the name *Asia* itself means nothing more than the "land of the Asi," or "the Holy Land." ("Asa, Asia, solum divinum, sacra terra."—*Hickes, Thes. Ling. Septentr.*, 1, p. 193.) As Odin and Buddha are the same deity (*vid.* Odinus), the worship of the Asi is to be referred to the remote East as its native home, and Asgard near the *Tanaïs* must be regarded as merely one of many sacerdotal stations where this worship was observed, and whence colonies were sent forth. Traces of the root from which these names are derived may be found in several geographical appellations connected with the country around the *Tanaïs*. Thus we have *Caucasus* (*Cauc-asos*, i. e., the mountain of the Asi), the river *Phasis* (*Ph-asis*, i. e., the holy stream), the name *Amazonius*, sometimes applied to the *Tanaïs* (*Am-azonius*, i. e., *Am-azon*), and we find it retained even in the modern term *As-oph.* (*Ritter, Vorhalle*, p. 465.)—Many other curious analogies present themselves. Pausanias (3, 2, 45) makes mention of an ancient city in Laconia, named *Los* (*L-as*), which had succeeded a still earlier city of the same name, that had stood on Mount *Asia* (*As-ia*), and amid the ruins of this latter place were the remains of a temple of Minerva *Asia* (*As-ia*, i. e., *Asynia*). Pausanias adds that Minerva *Asia* had also a temple among the Colchians. We may compare with this the Doric form of the name of the goddess, as appearing in Aristophanes, *Ἀσὰν* (*Asana*, i. e., *Asa-na* or *Asynia*). There was also in Crete a very ancient sanctuary of Jupiter *Asius*. (*Steph. Byz.*, p. 181, *ed. Berk.*) The Greek adjective *ἅγιος* (*hos-ius*), "sacred," may be traced to the same source, as well as the earlier form of the Latin term *ara*, "an altar," namely, *asa* (*as-a*.—*Aul. Gell.*, 4, 3.) We may even carry our speculations into the Hebrew tongue, and connect with our subject the term *Az*, "mighty" or "strong," and the appellation *Azazel* (*Asa-el*), given to an idol or false deity. (Consult *Gesen., Lex. Hebr.*, s. v.)—If an etymology be sought for the name *Asi*, we may find it in the Sanscrit verb *as*, "to be," the participle of which, namely, *sant*, is analogous to the Greek *ἄρ*, and reminds us of *Zür*, one of the old Greek names for Jupiter or the Supreme Being. The Asi, then, are the "*Beings*," κατ' ἐξοχήν.

ASIA, I. one of the three parts of the ancient world, separated from Europe by the *Ægean*, the *Euxine*, the *Palus Mæotis*, the *Tanaïs* or *Don*, and the *Divina*; from Africa by the *Red Sea* and *Isthmus of Suez*. Asia is in its extent the largest continent, and in its situation the most favoured by nature. Its square contents amount to 14,000,000 miles. In comparison with other countries it has advantages, and especially over Africa. These advantages consist in the character of its broken shore, the fruitful islands which lie around it, its numerous gulfs that enter far into the land, its large rivers, and its few deserts in the interior. There are two principal chains of mountains extending from west to east. In the north, the *Altai*, which in antiquity was still without a name; in the south, the range of *Taurus*. Branches of both are the *Caucasus*, between the *Black* and *Caspian Seas*; the *Imaus*, along the golden desert (the desert of *Cobir*); the *Paropamisus*, on the northern side of *India*; the *Uralian chain*, in antiquity still without a name, unless these are the *Rhiphaean mountains* of the ancients. Of the chief rivers, four flow from

north to south; the Euphrates and Tigris into the Persian Gulf, the Indus and Ganges into the Indian Sea: two flow from east to west, the Oxus, now *Gihon*, and the Jaxartes, now *Sirr*.—Asia may therefore be divided into *Northern Asia*, the country north of the Altai range: *Middle Asia*, the country between the ranges of Altai and Taurus: and *Southern Asia*, the country south of Taurus.—Northern Asia lies between 76° and 50° of latitude (*Asiatic Russia and Siberia*). This in antiquity was very little known, yet not entirely unknown. Dark but true traditions respecting it may be found in the father of history, Herodotus.—Middle Asia, the country between 50° and 40° north latitude, comprehending Scythia and Sarmatia Asiatica (the *Great Tartary and Mongolia*), is almost one immeasurable unproductive prairie, without agriculture and forests, and, therefore, a mere pasture-land. The inhabitants leading pastoral lives (Nomades), are without cities and fixed places of abode; and therefore, instead of political union, have merely the constitution of tribes.—Southern Asia, comprising the lands from 40° north latitude to near the equator, is entirely different in its character from the countries of Middle Asia: it is, both in soil and climate, possessed of advantages for agriculture, and, in comparison with the other countries of the earth, it is rich in the costliest and most various products.—The early commerce of the world, especially of the east, was originally through Asia. The natural places of depôt in the interior were on the banks of the large rivers; on the Oxus, in Bactria; on the Euphrates, at Babylon. The natural places of depôt on the coast were the western coast of Asia Minor and Phœnicia, where arose the series of Grecian and Phœnician cities.—Asia from the first, as at present, contained in its interior empires of immense extent, by which they are distinguished from those of cultivated Europe, as well as by their constitution. They often underwent revolutions, but their form remained the same. For this causes must have existed, lying deep and of wide influence, and which, notwithstanding these frequent revolutions, still continued to operate, and always gave to the new empires of Asia the organization of the old ones. The great revolutions of Asia (with the exception of that of Alexander) were occasioned by the numerous and powerful nomadic nations which occupied a great part of that continent. Compelled by accident or necessity, they left their places of abode, and founded new empires, while they passed through and subjected the fruitful and cultivated countries of Southern Asia, until, unnerved by luxury and effeminacy, consequent on the change in their habits of life, they in their turn were in like manner subjected. From this common origin may be explained in part the great extent, in part the rapid rise and the usually short continuance, of these empires. The development of their internal form of government must, for the same reason, have had great resemblance; and the constant reappearance of despotism in them is to be explained partly from the rights of conquerors, and partly from their great extent, which rendered a government of satraps necessary. To this we must add, that the custom of polygamy, prevailing among all the great nations of inner Asia, ruined the mutual relations and obligations of domestic life, and thus rendered a good constitution impossible. For a domestic tyrant is formed instead of a father of a family, and despotism at once gains its foundation in private life. (*Heeren's History of the States of Antiquity*, p. 14, *seqq.*, *Bancroft's transl.*)—As early as the time of Herodotus, we find the name of Asia employed to designate this vast continent. The Greeks, as we learn from that historian, pretended that it was derived from Asia, the wife of Iapetus. The Lydians, on the other hand, deduced the name from *Asius*, one of their earliest kings. (*Herod.*, 4, 45.)

Bochart, in modern days, has traced the appellation to *Asi*, a Phœnician word according to him, signifying "a middle part," or something intermediate, and hence he makes Asia mean the continent placed between Europe and Africa. (*Geogr. Sacr.*, 4, 33, p. 298.) The true derivation, however, would seem to be that given in the preceding article. (*Vid. Asi*.)—Homer applies the name of Asia to a small district of Macedonia or Lydia, situated near the Cayster. (*Il.*, 2, 461.) Euripides, also, evidently restricts the appellation to a portion of Lydia, in a passage of the *Bacchæ* (v. 64.—Compare *Dionys. Perieg.*, 386, and *Eustath.*, *ad loc.*). It would appear, indeed, that the Ionian Greeks, on their first arrival on the banks of the Mæander and Cayster, found the name of Asia attached to this part of the continent, and communicated it to their European countrymen, who in process of time applied it to all the countries situated to the east of Greece. It would be wrong, however, to suppose, that the name in question originally belonged merely to that part of the continent with which the Ionian colonists first became acquainted. It would seem, on the contrary, to have been given at an early period to various spots connected with the worship of the Asi, all pointing, however, to some region of the remote East where the name most probably originated.—Herodotus employs the division of *Upper and Lower Asia*. The latter of these answers in fact to what we now call Asia Minor, while the former denotes the vast tract of country situated to the east of the Euphrates. It is not exactly known when the peninsula came to be designated by the name of Asia Minor; but it does not appear in any author prior to Orosius, who employs it (1, 2), as well as Constantine Porphyrogenetes (*de Themat.*, 1, 8). The term *Anadolî*, used by the Turks to denote this portion of the Ottoman empire, is a corruption of *Anatolia*, and this last is derived from the Greek *ἀνατολή* (*the rising of the sun*, i. e., *the east*), and answers to the Frank word *Lorient*.—Few countries present such a diversity of soil and climate as the peninsula of Asia Minor. Ionia, Lydia, Caria, and, indeed, generally speaking, the whole of Western Asia, were remarkable for their genial temperature and extreme fertility; while the mountainous districts of Lycia, Pisidia, Cilicia, and Cappadocia were very thinly inhabited, from the coldness of the climate and the unproductiveness of the soil. Many parts of Phrygia and Galatia were also nearly deserted from the barrenness of the ground, which was strongly impregnated with salt, and exhibited, besides, many traces of volcanic agency. The whole country, in fact, appears to have been subject at an early period to violent earthquakes, which destroyed or damaged many flourishing cities. (*Strab.*, 578.) Nevertheless, Asia Minor, taken collectively, was one of the most productive and opulent countries of which antiquity has left us any account; and we have the authority of Cicero for stating, that the Roman treasury derived its largest and surest revenues from this quarter. (*Or. pro Leg. Man.*, 2, 6.) Some idea of its various productions will be given in the remarks under each particular province. (*Vid. Mysia, Bithynia, Phrygia*, &c.) Asia Minor was furnished also with numerous excellent harbours along its coast. Nor was any country more favoured by nature, or more calculated to become the centre of a mighty and perhaps universal empire. But the moral character of its population has never kept pace with the resources of the country; and this will probably always be the case as long as the softness of the climate and the fertility of the soil continue to exercise an enervating influence over the character of the people. (*Cramer's Asia Minor*, vol. 1, p. 1, *seqq.*)—II. Provincia, or Asia Proconsularis, the Roman province of Asia, comprising Mysia, Lydia, Caria, and Phrygia, with the exception of Lycæonia. This is

meant by Asia in the legal sense of the term as employed by the Romans, and is the same with what the Greek writers of the Roman era call Asia Proper, or ἡ ἰδίας καλουμένη Ἀσία (*Strab.*, 626), in which sense we find the word Asia used in the New Testament. (*Acts*, 2, 9.) In another passage, however (*Acts*, 16, 6), we find a distinction made between Phrygia and Asia. So, again, in the book of Revelations, which is addressed to the seven churches of Asia, the name appears to be confined to that portion of ancient Lydia, which contained Ephesus, Smyrna, Pergamus, Sardis, &c. (*Cellarius, de Sept. Eccl. Asiae, inter Dissert. Acad.*, p. 412.—*Cramer's Asia Minor*, vol. 1, p. 3.)—III. One of the Oceanides. She married Iapetus, and became by him the mother of Atlas, Prometheus, Epimetheus, and Menœtius. (*Apollod.*, 1, 2.—*Heyne, ad loc.*)

ASIA PALUS (the Ἄσιος λειμὼν of Homer), a marsh in Lydia, formed by the river Cæster, near its mouth. It was the favourite haunt of swans and other waterfowl. (*Hom.*, *Il.*, 2, 470.—*Virg.*, *Geog.*, 1, 483.—*Id.*, *Æn.*, 7, 699.—*Ovid, Met.*, 5, 386.) Near it was another marsh or lake, formed in like manner by the river, and called Selinusia Palus. Both belonged to the temple of Ephesus, and were a source of considerable revenue. (*Cramer's Asia Minor*, vol. 1, p. 361.)

ASIĀNA, one of the later divisions of Asia Minor. Towards the decline of the Roman empire, Asia Minor was divided into two dioceses or provinces, called Asiana and Pontica, each governed by a lieutenant named *Vicarius*. (*Notit. Imper.*, 1.—*Cod. Theod.*, 5, tit. 2.)

ASIATICUS, I. the surname of one of the Scipios (Lucius Cornelius), obtained by him for his conquests in Asia. (*Vid.* Scipio V.)—II. A senator, put to death by Claudius, on a false charge made at the instigation of Messalina, who was desirous of seizing upon the gardens of Lucullus, which were in his possession. (*Tac.*, *Ann.*, 11, 1, *seqq.*)

ASINĀRUS, a river of Sicily, running into the sea to the north of Helorum. It is now called *Fiume di Noto*, from the little town of *Noto* on its northern bank. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 240.)

ASĪNE, I. a town of Argolis, northwest of Hermione, on the Sinus Argolicus, or *Gulf of Nauplia*.—II. Another in Messenia, southwest of Messene, founded by the inhabitants of the former place, when driven from their city by the Argives.

ASINUS, I. Pollio. (*Vid.* Pollio.)—II. Gallus, son of Asinius Pollio, was consul A.U.C. 748. He married Vipsania, the repudiated wife of Tiberius, a step which gave rise to a secret enmity on the part of the latter towards him. He starved himself to death, either voluntarily, or, what is more probable, having been ordered by the emperor to destroy himself. Asinius published in his lifetime a parallel between his father and Cicero, in which he assigned to the former a marked superiority over the latter. (*Tac.*, *Ann.*, 1, 76.—*Id. ib.*, 6, 23.—*Plin.*, *Ep.*, 7, 4.)—III. Quadratus, an historian of the third century of our era, who wrote a history of the Greeks, Romans, and Parthians, down to the time of Philip the Arabian, under whose reign he lived.—IV. Capito, a grammarian, who wrote a book of Epistles. Some read *Sinnius* for Asinius. (*Aul. Gell.*, 5, 20.)

ASUS, I. a son of Dymas, brother of Hecuba. He assisted Priam in the Trojan war, and was slain by Idomeneus. (*Hom.*, *Il.*, 2, 352.—*Id. ib.*, 12, 15.—*Id. ib.*, 13, 384.)—II. Son of Imbracus, accompanied Æneas to Italy. (*Virg.*, *Æn.*, 10, 122.)—III. A name given to a mythic personage in the legends of Lydia. Consult remarks under the articles Asi and Asia.—IV. A poet of Samos, who wrote about the genealogy of ancient heroes and heroines. (*Pausan.*, 7, 4.)

ASIUS CAMPUS, a place near the Cæster, and in the vicinity of the Asia Palus. (*Vid.* Asia Palus.)

ASOPĪADES, a patronymic of Æacus, son of Ægina a daughter of Asopus. (*Ovid, Met.*, 7, 484.)

ASŌPIS, I. a daughter of the Asopus.—II. A daughter of Thespius, mother of Mentor. (*Apollod.*, 2, 7.)

ASŌPUS, I. a river of Thessaly, rising in Mount Ceta, and falling into the Sinus Maliacus. It flows through a gorge in the mountain enclosing the Trachinian plain (*Herod.*, 7, 199.—*Strab.*, 428.)—II. A river of Bœotia, rising in Mount Cithæron near Plataea, and flowing into the Euripus. It separated the territories of Plataea and Thebes, and also traversed in its course the whole of Southern Bœotia. Though generally a small and sluggish stream, yet after heavy rains it could not easily be forded. (*Thucyd.*, 2, 5.) It was on the banks of the Asopus that the battle of Plataea was fought. (*Herod.*, 9, 43.) This river still retains the name of *Asopo*. The plain along its northern bank was called *Parasopias*. (*Cramer's Ancient Greece*, vol. 2, p. 217.)—III. A river of Achaia, rising in the Argolic mountains, on the frontiers of Arcadia, near Cyllene, and falling into the Corinthian gulf a little below Sicyon. The part of the Sicyonian territory which it watered was called *Asopia*. (*Strab.*, 382.—*Pausan.*, 2, 5.) On its banks were celebrated the games which Adrastus instituted in honour of Apollo. (*Pind.*, *Nem.*, 9, 20.) The neighbouring people believed that this river was none other than the Mæander of Asia Minor, which, emptying into the sea near Miletus, passed under the waters of the Mediterranean, and re-appeared in Achaia as the Asopus. (*Pausan.*, *l. c.*)—IV. A son of Oceanus, or, according to others, of Neptune, and god of the last-mentioned stream. His daughter Ægina was carried off by Jupiter, and the father, on seeking her, was struck by a thunderbolt, and driven back to his watery abode. Hence, say some of the ancient mythologists, coals were seen borne along on the surface of the Asopus. (*Apollod.*, 3, 12, 5.—*Heyne, ad loc.*)

ASPARAGIUM, a town of Illyricum, on the southern bank of the Aspus (or *Ergent*), about 34 miles south of Dyrrachium. (*Cæs.*, *Bell. Civ.*, 4, 13.)

ASPASĪA, I. a celebrated female, a native of Miletus, which place was early and long renowned as a school for the cultivation of female graces. She came as an adventurer to Athens, in the time of Pericles, and, by the combined charms of her person, manners, and conversation, completely won the affections and esteem of that distinguished statesman. Her station had freed her from the restraints which custom laid on the education of the Athenian matron, and she had enriched her mind with accomplishments which were rare even among men. Her acquaintance with Pericles seems to have begun while he was still united to a lady of high birth, before the wife of the wealthy Hipponicus. We can hardly doubt that it was Aspasia who first disturbed this union, although it is said to have been dissolved by mutual consent. But, after parting from his wife, who had borne him two sons, Pericles attached himself to Aspasia by the most intimate relation which the laws permitted him to contract with a foreign woman: and she acquired an ascendancy over him which soon became notorious, and furnished the comic poets with an inexhaustible fund of ridicule, and his enemies with a ground for serious charges. The Samian war was ascribed to her interposition on behalf of her birthplace; and rumours were set afloat, which represented her as ministering to the vices of Pericles by the most odious and degrading of offices. There was perhaps as little foundation for this report as for a similar one in which Phidias was implicated (*Plut.*, *Vit. Pericl.*, c. 13); though among all the imputations

brought against Pericles, this is that which it is the most difficult clearly to refute. But we are inclined to believe, that it may have arisen from the peculiar nature of Aspasia's private circles, which, with a bold neglect of established usage, were composed not only of the most intelligent and accomplished men to be found at Athens, but also of matrons, who, it is said, were brought by their husbands to listen to her conversation. This must have been highly instructive as well as brilliant, since Plato did not hesitate to describe her as the preceptress of Socrates, and to assert that she both formed the rhetoric of Pericles, and composed one of his most admired harangues, the celebrated funeral oration. (*Plat., Menex.*, 4,—vol. 6, p. 148, *ed. Bekk.*) The innovation, which drew women of free birth and good condition into her company for such a purpose, must, even where the truth was understood, have surprised and offended many; and it was liable to the grossest misconstruction. And if her female friends were sometimes seen watching the progress of the works of Phidias, it was easy, through his intimacy with Pericles, to connect this fact with a calumny of the same kind. There was another rumour still more dangerous, which grew out of the character of the persons who were admitted to the society of Pericles and Aspasia. No persons were more welcome at the house of Pericles than such as were distinguished by philosophical studies, and especially by the profession of new philosophical tenets. The mere presence of Anaxagoras, Zeno, Protagoras, and other celebrated men, who were known to hold doctrines very remote from the religious conceptions of the vulgar, was sufficient to make a circle in which they were familiar pass for a school of impiety. Such were the materials out of which the comic poet Hermippus, laying aside the mask, formed a criminal prosecution against Aspasia. His indictment included two heads: an offence against religion, and that of corrupting Athenian women to gratify the passions of Pericles. The danger was averted; but it seems that Pericles, who pleaded her cause, found need of his most strenuous exertions to save Aspasia, and that he even descended, in her behalf, to tears and entreaties, which no similar emergency of his own could ever draw from him. (*Athen.*, 12, p. 589.)—After the death of Pericles, Aspasia attached herself to a young man of obscure birth, named Lysicles, who rose through her influence in moulding his character to some of the highest employments in the republic. (*Thirlwall's Greece*, vol. 3, p. 87, *seqq.*—Compare *Plut., Vit. Pericl.*—*Xen., Mem.*, 2, 6.—*Max. Tyr.*, 24, p. 461.—*Harpocr.*, p. 79.—*Aristid.*, 2, p. 131.)—II. Daughter of Hermotimus, and a native of Phœcia in Asia Minor. She was so remarkable for her beauty, that a satrap of Persia carried her off and made her a present to Cyrus the Younger. Her modest deportment soon won the affections of the prince, who lived with her as with a lawful spouse, and their union became celebrated throughout all Greece. Her name at first was *Milto* (vermilion), which had been given her in early life on account of the brilliancy of her complexion. Cyrus, however, changed it to Aspasia, calling her thus after the female companion of Pericles. (*Vid.* Aspasia I.) After the death of the prince, she fell into the hands of Artaxerxes, who for a long time vainly sought to gain her affections. She only yielded at last to his suit through absolute necessity. When the monarch declared his son Darius his successor, the latter, as it was customary in Persia for an heir to ask a favour of him who had declared him such, requested Aspasia of his father. Aspasia was accordingly sent for, and, contrary to the king's expectation, made choice of Darius. Artaxerxes therefore gave her up, in accordance with established custom, but soon took her away again, and made her a priestess of Diana at Ecbatana, or of the

goddess whom the Persians called Anaitis. This station required her to pass the rest of her days in chastity. (*Plut., Vit. Artax.*) Justin, however, says that Artaxerxes made her one of the priestesses of the sun. (*Just.*, 10, 1.—*Elian.*, V. H, 12, 1.—*Plut., Vit. Artax.*—*Xen., Anab.*, 1, 10.—*Athen.*, 15, p. 576.)

ASPENDUS, a city of Pamphylia, lying for the most part on a rocky precipice, on the banks of the river Eurymedon. (*Arrian*, 1, 27.—*Zosim.*, 5, 16.—*Scylax*, p. 39.) Strabo makes it to have been well-peopled, and founded by an Argive colony. On this latter head, however, Scylax is silent. The city of Aspendus was a flourishing place even before the expedition of the younger Cyrus. (*Xen., Anab.*, 1, 2, 12.) It was here that the Athenian patriot Thrasybulus terminated his life. Being off the coast, he levied contributions from the Aspendians, who, seizing an opportunity when he was on shore, surprised him in his tent at night, and slew him. (*Xen., Hist. Gr.*, 4, 8.—*Corn. Nep., Thrasyb.*, c. 4.) Hierocles (p. 682) makes mention of Aspendus under the name of Trimupolis, where we must read Primupolis. The site of Aspendus has not yet been explored, but it would easily be discovered by ascending the banks of the Eurymedon. (*Mannert, Geogr.*, vol. 6, pt. 2, p. 125.)

ASPHALTITES LACUS. *Vid.* Mare Mortuum.

ASPIS, I. a town of the Contestani, in Hispania Tarraconensis, northwest of Illici, which lay above Carthago Nova on the coast. It is now *Aspe*, a village in *Valencia*.—II. An island on the coast of Ionia, opposite Lebedus. It was called by some Arconnesus. (*Strab.*, 643.) The modern name is *Carabash*.—III. A town of Africa Propria. (*Vid.* Clupea.)

ASPLEDON, a town of Bœotia, about twenty stadia to the northeast of Orchomenus. It derived its name from Aspledon, the son of Neptune, according to Pausanias (3, 38), and is mentioned by Homer. (*Il.*, 2, 511.) The name, at a later period, was changed to Eudielos, from its advantageous situation. (*Strabo*, 416.) Pausanias, however, affirms that in his time it was deserted on account of the scarcity of water. Dodwell is of opinion, that the site of Aspledon is marked by a tower, on an insulated hill, about two miles and a half to the northeast of Orchomenus, near the range of hills which enclose the lake and plain on that side. (*Dodwell's Tour*, vol. 1, p. 233.)

ASSA, a town of Macedonia, on the Sinus Singiticus. (*Herodot.*, 7, 122.)

ASSARACUS, a Trojan prince, son of Tros by Callirhoë. He was father to Capys, the father of Anchises. (*Homer. Il.*, 20, 239.)

ASSOS, a town of Mysia, on the coast, west of Adramyttium, founded by a colony from Lesbos. It was the birthplace of Cleanthes, the stoic; and is mentioned also in the Acts (20, 13). The modern site is called *Beriam Kalesi*. (*Leake*, p. 128.)

ASSYRIA, a country originally of small extent, but afterward greatly enlarged. It was bounded, according to Ptolemy, on the north by part of Armenia and Mount Niphates; on the west by the Tigris; on the south by Susiana; and on the east by part of Media and the mountains Choatra and Zagros. The country within these limits is called by some of the ancients Adiabene, and by others Aturia or Aturia. Assyria is now called *Kurdistan*, from the descendants of the ancient Carduchi, who occupied the northern parts. The Assyrian was one of the first and greatest empires of Asia. It is generally supposed to have been founded by Ashur or Assur, son of Shem, who went out of Shinar, driven out, as it appears, by Nimrod, and founded Nineveh, not long after Nimrod had established the Chaldean monarchy and fixed his residence at Babylon. This is the commonly received account of the origin of the Assyrian empire, founded on the Mosaic history as given in the text of our Bible; but

Bochart adopts the marginal translation, which, instead of "Out of that land went forth Assur and builded Nineveh," reads "Out of that land he (Nimrod) went forth into Assur (or Assyria) and built Nineveh." The opinion of Bochart is espoused by Faber, the converse by Michaelis and Bryant. The decision of the point is, indeed, a difficult one; but, if weight of authority can avail, the question will be speedily determined in favour of the marginal translation of the Bible, which represents Nimrod as the founder of Nineveh. This translation is supported by the Targums of Onkelos and Jerusalem; by Theophilus, bishop of Antioch, and Jerome, among the ancients; and, in addition to Bochart and Faber, by Hyde, Marsham, Wells, the writers of the Universal History, and Hales, among the moderns. Admitting, then, the force of these united authorities, Nimrod, when driven from Babel, still attended by a strong party of military followers, founded a new empire at Nineveh; which, as it was seated in a country almost exclusively peopled by the descendants of Ashur, was called Assyria. The crown of this new universal empire continued in the family of Nimrod for many ages, probably till its overthrow by Arbaces, which introduced a Median dynasty; while Babel remained in a neglected state until the same era, when Nabonassar became its first king. Whether there was an uninterrupted line of kings from Assur or Nimrod to Sardanapalus, or not, is unknown.—According to Herodotus, an Assyrian empire lasted 520 years, from 1237 to 717. Catalogues of the Assyrian kings are found in Syncellus and Eusebius. (*Mansford's Scripture Gazetteer*, p. 38, *seqq.*—Compare *Herein's History of the States of Antiquity*, p. 25, *seqq.*, *Bancroft's transl.*)

ASTABŌRAS, a river of Æthiopia, falling into the Nile. It is now called the *Tucacé*. (*Vid.* Nilus.)

ASTACUS, a city of Bithynia, on the Sinus Astaceus, founded, according to Strabo (563), by the Megarians and Athenians. This account is confirmed by Memnon (*ap. Phot.*, p. 722), who says, that the Megarians settled here in the 17th Olympiad, and that, some years after this, an Athenian colony joined them. Astacus was subsequently seized by Dædalus, a native chief, who became the founder of the Bithynian monarchy. In the war waged by his successor Xipoetes with Lysimachus, Astacus was ruined, and the inhabitants were transferred by Nicomedes to the city which he founded and named, after himself, Nicomedia. (*Strab.*, l. c.—*Steph. Byz.*, s. v.—*Cramer's Asia Minor*, vol. 1, p. 185.)

ASTAPA, a town of Hispania Bætica, east of Hispalis, famed for its vigorous defence against the Romans, A.U.C. 546. It is now *Estepa La Vieja*. (*Liv.*, 38, 20.)

ASTÆPUS, a river of Æthiopia, falling into the Nile. It is now the *Abavri*, or *Bahr-el-Azac*, and flows through Nubia, rising in a place called Coloe Palus, now *Bahr Dembea*. This is the river which Bruce mistook for the Nile. (*Joseph.*, *Ant.*, 2, 5—*Strab.*, 565.)

ASTARTE, a powerful divinity of Syria, the daughter of Cælus and Terra. She had a famous temple at Hierapolis in Syria, which was served by 300 priests. "Astarte," observes R. P. Knight, "was precisely the same as the Cybele, or universal mother of the Phrygians. She was, as Apian remarks (*Bell. Parth.*), 'by some called Juno, by others Venus, and by others held up to be Nature, or the cause which produced the beginnings and seeds of things from Humidity;' so that she comprehended in one personification both these goddesses, who were, accordingly, sometimes blended in one symbolical figure by the very ancient Greek artists. Her statue at Hierapolis was variously composed; so as to signify many attributes like those of the Ephesian Diana, Berecynthian Mother, and others of the kind. It was placed in the interior part of the temple, accessible only to priests of the

higher order; and near it was the statue of the corresponding male personification, called by the Greek writers Jupiter." (*Inquiry into the Symb. Lang.*, &c., § 218, *seqq.*—*Class. Journ.*, No 53, p. 74.)—Creuzer, however, thinks it more than probable, that the legend of Astarte is purely astronomical, and may apply to the moon in connexion with the planet Venus. The name Astarte would seem also, according to him, to signify a star or planet. Compare the Persian *astara*, as suggested by Von Hammer (*Fundgr. des Orients*, vol. 3, p. 275), and the Greek *ἀστρον*. (*Creuzer's Symbolik*, par Guignaut, vol. 2, p. 26.—*Lucian, de Dea Syria*.—*Cic.*, *de Nat. D.*, 3, 23.)

ASTER, a skilful archer, one of the garrison of Methone in Macedonia, when that place was besieged by Philip. He aimed an arrow at the monarch, and deprived him of an eye. On the arrow was inscribed, Ἀστὴρ Φιλίππου θανάσιμον πέμπει βέλος, an Iambic trimeter, meaning, "Aster sends a deadly shaft for Philip." The king shot back an arrow with the following inscription, Ἀστέρα Φιλίππου, ἣν λάβη, κρεμύσεται, another Iambic trimeter, implying, "Philip will suspend Aster" (on the cross) "if he take him." When the place surrendered, Aster was delivered up to the conqueror, who kept his word, and crucified him. (*Suidas*, s. v. *Κύριος*.—*Plut.*, *Parall.*, p. 307—*Diod. Sic.*, 16, 34.) Plutarch calls him an Olynthian; but Lucian, a native of Amphipolis. (*Lucian, Quomodo Hist. sit. conscrib.*, 38.) These two writers may be reconciled, by supposing him to have been an Amphipolitan, serving in the Olynthian auxiliaries of the Methonians. (*Palmer, Exercit.*, p. 557.)

ASTERIA, I. a daughter of Cæus (Κοῖος) one of the Titans, and Phæbe, daughter of Uranus and Gê (Cælus and Terra). She and Latona were sisters. Astræa married Perses, son of Crisus. According to a later fable, she fled from the suit of Jove, and, flinging herself down from heaven to the sea, became the island afterward named Delos. Callimachus (*H. in Del.*, 37), who relates this, makes her to have come down like a star (ἀστέρι ἴση), in allusion to her name Asteria (*Starry*). Another legend, however, stated that she took the form of a quail (ὄρνις)—*Apollod.*, 1, 4, 1.—*Hygin.*, 53.—*Serv.* *ad Æu.*, 3, 73), whence the isle was called Ortygia. This identification of Delos and Ortygia appears to have been later than the time of Pindar, who (*Nem.*, 1, 4) calls them sisters. The whole fable seems to owe its origin to the affinity of sense between the words Asteria and Delos. (*Keightley's Mythology*, p. 81, *not.*)—II. One of the daughters of Danaus, who married Chætus, son of Ægyptus. (*Apollod.*, 2, 1, 4.)

ASTERION, I. a rivulet of Argolis, rising on the slope of Mount Eubæa, near the temple of the Argive Juno, and soon after disappearing among the rocks. (*Pausan.*, 2, 17.)—II. (called also Asterius) A king of Crete, descended from Deucalion, who married Europa, and brought up the children whom she previously had from her union with Jupiter. He died without issue, and was succeeded by Minos. (*Apollod.*, 1, 2, 2, *seqq.*—*Schol. ad Il.*, 12, 397.) According to another account, he was the son of Minos, and was slain by Theseus, having been the most powerful competitor with whom that hero ever had to contend. (*Pausan.*, 2, 31.) Lycophron, again (v. 1301), makes him a leader of the forces of Minos. (Compare *Heyne, ad Apollod.*, l. c.—*Meurs.*, *Cret.*, 3, 2.—*Höck, Kret.*, 2, 48.)

ASTEROPEA, daughter of Deïon, king of Phocis, or more probably Phthiotis. (*Apollod.*, 1, 9, 3.—*Heyne, ad loc.*, *not. crit.*)

ASTEROPE, daughter of Cebren, and wife of Æsacus. (*Apollod.*, 3 12, 5.) Some MSS. of Apollodorus read Sterope (Στερόπη).—For other names, sometimes written Asterope and Asteropes, *vid.* Sterope and Steropes.

ASTRÆA, the goddess of Justice. Her origin is differently given. She is either a Titan or a descendant of the Titans; being in the former case the daughter of Jove and Themis (*Hesiod, Theog.*, 135, 191, *seqq.*), or of Astræus and Héméra, or Astræus and Aurora (Eos). When the Titans took up arms against Jupiter, she left her father Astræus, who, as the son of a Titan, fought on their side, and descended to earth, and mingled with the human race. This intercourse with mortals continued during the golden age, but was interrupted when that of silver ensued, for, during this latter age, she came down from the mountains only amid the shades of evening, unseen by, and refraining from all communion with, men. When the brazen age commenced she fled to the skies, having left the earth the last of the immortals. Jove thereupon made her the constellation *Virgo*, among the signs of the zodiac. (*Arat., Phan.*, 102, *seqq.*—*Schol. Theon.*, *ad loc.*—*Hesiod, Op. et D.*, 254.—*Pind., Ol.*, 13, 6.—*Orph., H.*, 61.—*Hygin., Astron.*, 2, 25.—*Eratosth., Cat.*, 9.) As the constellation *Virgo*, she is identical with *Erigone*, having a place in the zodiac between the Scorpion and the Lion. On the old star-tables, or celestial planispheres, the Scorpion extended over two signs, filling with its claws the space between itself and *Virgo*. (*Voss. ad Virg., Georg.*, 1, 33.—*Eratosth., Cat.*, 7.—*Ovid, Met.*, 2, 197.) Later astronomers, as we are told by Theon (*ad Arat.*, 89), named the sign occupied by the claws of Scorpio the Balance (*Libra*), and this balance Astræa (*Virgo*) held in her hand as a symbol of justice. Others, however, as in the case of the Farnese marble, made it the mark of the equality of the day and night at the æquinox. It is very probable that this latter explanation was the earlier one of the two, especially as Astræa ranked among the Horæ, and that the moral idea succeeded the physical. (*Vollmer, Wörterb. der Mythol.*, p. 354.—*Gruber, Wörterb. der Altclass. Mythol.*, vol. 1, p. 666.—*Ideler, Sternnamen*, p. 169.)

ASTRÆUS, I. a son of the Titan Crinus and Eurybia the daughter of Pontus. Hyginus, however, makes him the offspring of Terra and Tartarus, and brother of the giants Enceladus, Pallas, &c. (*Hyg., Pref.*, p. 3, *ed. Munk.*) He was the father of Astræa, mentioned in the preceding article, and begat also by Eos (Aurora) the winds Boreas, Notus, Zephyrus, and the stars of heaven. (*Hes., Theog.*, 378.) Some assign him also a son named Argestes, but this is merely an epithet of Zephyrus, meaning "the swift." Astræus united with the Titans against Jupiter, and was hurled along with them to Tartarus. (*Serv. ad Æn.*, 1, 136.)—II. A river of Macedonia, running by Berræa, and falling into the Erigonus, a tributary of the Axios. (*Ælian, Hist. An.*, 15, 1.) It is now thought to be the *Vostritza*. (Consult, however, as to the course of this river, the remarks of Cramer, *Anc. Greece*, vol. 1, p. 222, who makes it fall into the lake Ludias.—Compare also Bischoff und Möller, *Wörterb. der Geogr.*, p. 123.)

ASTURA, a small river and village of Latium, near the coast, below Antium. In the neighbourhood was a villa of Cicero, to which he retired to vent his grief for the loss of his beloved daughter, and where he thought of raising a monument to her memory. (*Ep. ad Att.*, 12, 19.) When proscribed by Antony, he withdrew to this same place from Tusculum, and sought escape from thence, intending to join Brutus in Macedonia. (*Plut., Vit. Cic.*) Astura seems to have been also the residence of Augustus, during an illness, with which he was seized towards the close of his life (*Suet., Aug.*, 98), and also of Tiberius (*Suet., Tib.*, 72). A decisive battle took place on the banks of the river Astura, between the Romans and some of the Latin states, which led to the complete subjugation of the latter. (*Liv.*, 8, 13.—*Cramer's Anc. Italy*, vol. 2, p. 89.)

ASTŪRES, a people of Hispania Tarraconensis, lying west and southwest of the Cantabri. They occupied the eastern half of modern *Asturias*, the greater part of the kingdom of *Leon*, and the northern half of *Palencia*. Their capital was Asturica Augusta, now *Astorga*. (*Mannert, Geogr.*, vol. 1, p. 363.)

ASTYAGES, son of Cyaxares, was the last king of Media. His reign continued from 595 to 560 B.C. He married Aryenis, daughter of Alyattes, and sister of Cræsus, by whom he had Mandane. Fearing, from a dream which he had, that he would be dethroned by a grandson, he married his daughter to Cambyses, a Persian, of a good family, but peaceful disposition, and one whom he himself thought inferior to a Mede even of moderate condition. A second dream, equally alarming with the first, induced him to send to Persia for his daughter, who was near her delivery, and, when she brought forth a son, he gave the infant into the hands of an individual named Harpagus, with strict orders to put it to death. The latter, however, disobeying these injunctions, gave the child to one of the king's herdsmen to expose, and the wife of this man, having just been delivered of a dead infant, took the son of Mandane in its place, and caused her husband to expose their own inanimate offspring. When Harpagus therefore sent some trusty persons to see whether the herdsman had executed his orders, the dead child of the latter was seen by them lying exposed, and was mistaken, of course, for the offspring of Mandane. The child thus preserved grew up, and became Cyrus the Great, dethroning Astyages according to the import of the two dreams. Astyages was in this way deprived of his crown after a reign of about 35 years. (*Vid. Cyrus.*) He appears to have been of a cruel and vindictive disposition. (*Vid. Harpagus.*)—According to the account of Xenophon, in his historical romance of the *Cyropædia*, Astyages and his grandson lived on terms of the closest friendship and intimacy, and the former left, besides a daughter, a son named Cyaxares, who succeeded the father, and, dying without issue, left the crown to Cyrus. (*Herod.*, 1, 46, 73, &c.—*Xen., Cyrop.*) Nothing is said in Herodotus of the end of Astyages. Ctesias, however, informs us, that, after having been treated kindly by Cyrus, he was sent for by the latter to come to Persia, but that the eunuch charged with this commission led him astray in a desert place, where he perished from hunger and thirst. (*Ctes., Pers.*, 5.) It is probable this was done by the secret orders of Cyrus, although Ctesias states that the eunuch was cruelly punished. (*Bähr, ad Ctes.*, l. c.)—There is great discrepancy in the form of this name, as given by the ancient writers; Herodotus, and most of the Greeks, following his authority, write Ἀστύαγης. Ctesias, on the other hand, gives Ἀστυιάγης, while Diodorus, citing Ctesias himself, has Ἀσπύδαγ (2, 34). Compare the remarks of Wessling (*ad Diod.*, l. c.), Marsham (*Can. Chron.*, p. 528), Bähr, (*ad Ctes., Assyr.*, 19), and Beck (*Weltgesch.*, vol. 1, p. 638).

ASTYANAX, a son of Hector and Andromache. Hector had called him Scamandrius, after the river Scamander, but the Trojans bestowed on him, out of compliment to his father, their great defender, the name of Astyanax, or "Prince of the city." (*Hom., Il.*, 22, 651.) He was very young when the Greeks besieged Troy; and when the city was taken, his mother saved him in her arms from the flames. After the capture of the city, the young prince excited great uneasiness among the Greeks, in consequence of a prediction by Calchas, that Astyanax, if permitted to live, would avenge the death of Hector, and raise Troy in fresh splendour from its ruins. Andromache, dreading the fury of the victorious Greeks, concealed Astyanax in the recesses of Hector's tomb; but his retreat was soon discovered by Ulysses, who, according to some, precipitated the unhappy boy from the battlements of Ilium. This cruelty is by Euripides ascribed to Menelaus, and by Pausanias

(10, 25), on the authority of Lesches, to Pyrrhus. Racine, in his "Andromaque," has indulged in the poetic license of making Astyanax survive the fall of Troy, and accompany his mother to Epirus. (Consult *Racine*, *Pref. de l'Androm.*) A beautiful lament over the corpse of Astyanax, from the lips of Hecuba, may be found in the Troades of Euripides (1146-1196), and also some fine lines, in the earlier part of the same play, where Andromache is taking leave of her son (742-781).

ASTYDAMAS, an Athenian tragic writer, son of Morsinus, and grandson of Philocles, the nephew of Æschylus. He studied under Isocrates, and composed, according to Suidas, two hundred and forty tragedies; a rather improbable number. He lived sixty years. His first exhibition was B.C. 398. (*Diod. Sic.*, 14, 43.—*Theatre of the Greeks*, 2d ed., p. 158.)

ASTYDAMIA, daughter of Amyntor, king of Orchomenos in Bœotia, married Acastus, son of Pelias, who was king of Iolcos. She is called by some Hippolyte. (*Vid.* *Aracustus*.)

ASTYPALÆA, one of the Cyclades, southeast of the island of Cos. It is eighty-eight miles in circuit, and distant, as Pliny (*H. N.*, 4, 12) reports, one hundred and twenty-five miles from Cadistus in Crete. Strabo informs us it contained a town of the same name. It is said that heres having been introduced into this island from Anaphe, it was so overrun with them that the inhabitants were under the necessity of consulting the oracle, which advised their hunting them with dogs: in one year six thousand are said to have been caught. (*Hegesandrius*, *Delph. ap. Athen.*, 9, 63.) According to Cicero, divine honours were rendered here to Achilles. It was called Pyrrha when the Carians possessed it, and afterward Pylæa. Its name Astypalæa is said to have been derived from that of a sister of Europa. It was also called *Θράνη*, or the Table of the Gods, because its soil was fertile, and almost enamelled with flowers. It is now *Stanpalia*. (*Cramer's Anc. Greece*, vol. 3, p. 416.)—II. A promontory of Caria, near the city of Myndus, now the peninsula of *Pasha Liman*. (*Cramer's Asia Minor*, vol. 2, p. 176.)

ASCHVIS, a king of Egypt, who, according to Herodotus (2, 136), during a scarcity of money, enacted a law to the following effect: That any man, by giving as a pledge the body of his father, might borrow money; but that, in case he afterward refused to pay the debt, he should neither be buried in the same place with his father, nor in any other, nor have the liberty of burying the dead body of any of his friends. This law was based on the popular belief, that those deprived of the rites of sepulchre were not permitted to enter the peaceful realms of Osiris. Hence it was a statute, in fact, of extraordinary severity. (Compare *Zoega*, *de Obelisc.*, p. 292.) Herodotus also informs us, that this same monarch, desiring to outdo all his predecessors, erected a pyramid of brick for his monument, with the following inscription: "Do not despise me in comparison with the pyramids of stone, which I excel as much as Jupiter surpasses the other gods; for, dipping down to the bottom of the lake with long poles, and then collecting the mire that stuck to them, men made bricks and formed me in this manner." (*Herod.*, 2, 136.) The pyramid here referred to is thought to be the same with the one seen at the present day near *El Lahun*, not far from the beginning of the canal that leads to *Medinat-el-Fayoum*. (*Descrip. de l'Egypt*, *livrais*, iii., vol. 2, c. 17, p. 23.)—Diodorus Siculus does not agree with Herodotus. He does not mention Aschvis, or his successor Anysis, but puts in their place Bocchoris. Larcher considers him to be in error. (*Larcher, ad Herod.*, l. c.—Compare *Beck*, *Anleit. zu Weltgesch.*, vol. 1, p. 692, 718.)

ATABŪLUS, a wind which was frequent in Apulia, and very destructive to the productions of the earth,

which it scorched or withered up. It is the same with the modern *Sirocco*. (*Horat.*, *Serm.*, 1, 5, 78.) Both Seneca (*Quæst. Nat.*, 5, 17) and Pliny (17, 36) make mention of this wind: the latter remarks concerning it: "*Hic enim, si flavit circa brumam, frigore exurit arefaciens, ut nullis postea solibus recreari possint.*" Etymologists derive the name from *ἀτρυ* and *βῆλλω*. (*Nork*, *Etymol. Handwort.*, vol. 1, p. 84.)

ATABŪRIS, or ATABŪRON, I. a mountain in Rhodes, the highest in the island, where Jupiter had a temple, whence he was surnamed *Atabyrius*. Ancient fables speak of brazen oxen at this place, which, by their bellows, announced approaching calamity. The meaning of the fable is said to have been, that the priests of this temple pretended to be possessed of the spirit of prophecy. (*Pind.*, *Ol.*, 7, 87, ed. *Bœckh*.—*Schol.*, *ad loc.*—*Strab.*, 655—*Steph. Byz.*, s. v. *Ἀτάβυρον*.—*Apollod.*, 3, 2.) The name is connected with the early traditions respecting the Telchines, and would seem to have come into Rhodes from Phœnicia, being in all probability derived from the Oriental Tabor. (*Vid.* *Atabyrion*.) Ritter indulges in some curious and profound speculations on the subject. (*Vorhalle*, p. 339, *seqq.*)—II. A mountain in Sicily, the name having been transferred to this island from Rhodes. (*Steph. Byz.*, s. v. *Ἀτάβυρον*.—*Cluver.*, *Sic. Ant.*, p. 488.—*Meurs.*, *Rhod.*, 1, 8.—*Göller*, *Syrac.*, p. 294.)—III. A city of Persia. (*Steph. Byz.*)

ATABYRION, a fortified town on the summit of a mountain in Galilee Inferior. Both the town and mountain answer to the *Thabor* of Scripture. Polybius (5, 70) gives an account of the capture of the place by Antiochus the Great. The Septuagint version writes the name *Ἰταβήριον* (*Hos.*, 5, 1), and so also Josephus (*Bell. Jud.*, 4, 1, 8, &c.). Reiske thinks, that the initial vowel in the Greek name arises from the Hebrew article; but if this were so, the Greek translator of Hosea, and Josephus also, being both Hebrews, would have written *Ἀταβήριον*, not *Ἰταβήριον*. Polybius describes Mount Thabor as a round or breast-like hill (*ὄρος μακροειδές*), while Dr. Clarke gives it a conical form. According to the latter, it is entirely detached from any neighbouring mountain, and stands upon one side of the great plain of *Esdraelon*. (*Clarke's Travels*, vol. 4, p. 239, *Lond. ed.*, 1817.)

ATACINI, a people of Gallia Narbonensis, south and southeast of the Volcæ Tectosages. They inhabited the banks of the Atax, or *Aude*, whence their name. Their capital was Narbo, now *Narbonne*. (*Mannert*, *Geogr.*, vol. 2, p. 63.)

ATALANTA, daughter of Iasos or Iasion, a descendant of Arcas and Clymene the daughter of Minyas. Her father reigned in Arcadia. He was anxious for male offspring, and, on his wife's bringing forth a female, he exposed the babe in the mountains, where she was suckled by a bear, and at last found by some hunters, who named her Atalanta, and reared her. She followed the chase, and was alike distinguished for beauty and courage. The centaurs, Rhecos and Hyleos, attempting her honour, perished by her arrows. She took part in the Argonautic expedition; was at the Calydonian hunt (*vid.* *Melager*); and at the funeral games of Pelias she won the prize in wrestling from Peleus. (*Apollod.*, 3, 9, 2.—*Callim.*, 3, 215.—*Ælian*, *V. H.*, 13, 1.) Atalanta was afterward recognised by her parents. Her father wishing her to marry, she consented, but only on condition that her suitors should run a race with her in the following manner: They were to run without arms, and she was to carry a dart in her hand. Her lovers were to start first, and whoever arrived at the goal before her would be made her husband; but all those whom she overtook were to be killed by the dart with which she had armed herself. As she was almost invincible in running, many of her suitors perished in the attempt, and

their heads were fixed round the place of contest, when Meilanion, her cousin, offered himself as a competitor. Venus had presented him with three golden apples from the garden of the Hesperides, or, according to others, from an orchard in Cyprus; and, as soon as he had started in the course, he artfully threw down the apples at some distance one from the other. While Atalanta, charmed at the sight, stopped to gather the apples, Meilanion won the race. Atalanta became his wife, and they had a son named Parthenopæus. It is added, that while hunting together on one occasion, they profaned the temenos, or sacred enclosure of Jove, with their love, for which offence they were turned into lions. (*Apollod., l. c.*, where for *μη θηρεύοντες* we must read, with Canter, *συνθηρεύοντες*.—*Theognis*, 1279, *seqq.*—*Hygin., fab.*, 185.—*Ovid, Met.*, 10, 560, *seqq.*—*Schol. ad Theocr.*, 3, 40.—*Musculus*, 153.) Other authorities, however, make the name of the victor Hippomenes, and say, that on his neglecting to give thanks to Venus for her aid, she inspired him with a sudden passion, which led to the profanation of the sanctuary of Jove, and the transformation of himself and his bride. (*Ovid, l. c.*—*Schol. ad Theocr.*, *l. c.*) According to other accounts, Atalanta was the daughter of Scheneus, son of Athamas, and therefore a Bœotian. (*Hesiod, ap. Apollod., l. c.*—*Ovid, l. c.*—*Hygin., l. c.*) There is no necessity for supposing two of the same name, as has usually been done. They are both connected with the Minyans, and are only examples of different appropriations of the same legend. (*Keightley's Mythology*, p. 427, *seq.*)

ATARANTES, a people of Africa, ten days' journey from the Garamantes. There was in their country a hill of salt, with a fountain issuing out of the summit. (*Herod.*, 4, 184.)—All the MSS. have *Ἀτλάντες* (*Atlantes*), which Salmasius (*in Solin.*, p. 292) first altered to *Ἀτρίαντες*, an emendation now almost universally adopted. Rennell thinks, that the people meant here are the same with the *Hammanientes* of Pliny (5, 5). What Pliny, however, says of the *Atlantes* suits the case better (5, 8). Castiglioni makes the *Atlantes* and *Atarantes* the same people. (*Mem. Geogr. et Numism.*, &c., Paris, 1826.) Herceon, on the other hand, places the *Atarantes* in the vicinity of *Tegeny*, the last city of *Fezzan*. (*Ideen*, vol. 2, pt. 1, p. 239.) Herodotus says, that the *Atarantes* were destitute of names for individuals; and they cursed the sun as he passed over their heads, because he consumed both the inhabitants and the country with his scorching heat. (*Herod., l. c.*)

ATARBECUS, a city of Egypt, sacred to Venus, in one of the small islands of the Delta called Prosopitis. The name of the city is said to be derived from *Atar* or *Athar* (*Etymol. Mag.*, s. v. *Ἀθῆν*), which signified "Venus," and *Bek*, "a city;" as Balbeck, "the city of the Sun," called by the Greeks Heliopolis. *Baki* is still found in the same sense among the Copts, and in their language *a* is pronounced as *c*. Strabo and Pliny call the city Aphroditespolis. (*Herod.*, 2, 41.—*Larcher, ad Herodot.*, *l. c.*)

ATARGATIS or ATERGATIS, an Eastern deity, the same with the Great Goddess of Syria. She was worshipped principally at Mabog or Bambyce (Edessa), and at a later period at Hierapolis. Strabo informs us that her true name was Athara. (Compare *Xanth., Lyd. ap. Hesych.*, s. v. *Ἀτταράδην*.—*Creuzer, fragm. hist. Græc. antiquiss.*, p. 183.) Ctesias calls her Derceto. It is probable that this latter name is only a corruption of *Atargatis* or *Atergatis*, and that these three appellations designate one and the same divinity. Lucian, however (*de Dea Syria*, c. 14.—*Op., ed. Bip.*, vol. 9, p. 96), distinguishes expressly between the goddess worshipped at Hierapolis and the Phœnician Derceto, stating that the latter was represented with the lower extremities like those of a fish, and the for-

mer under a figure entirely female. *Creuzer* seeks to reconcile this difficulty by supposing that *Atergatis* and *Derceto*, though originally the same, were at a subsequent period represented under forms that differed from each other. (*Symbolik, par Guigniaut*, vol. 2, p. 28, *seqq.*)

ATARNEUS, I. a town of Mysia, opposite to Lesbos. It was ceded to the Chians by the Persians, in the reign of Cyrus, for having delivered into their hands the Lydian Pactyas. (*Herod.*, 1, 160.) The land around *Atarneus* was rich, and productive in corn. (*Cramer's Asia Minor*, vol. 1, p. 133.)—II. A place near Pitane, in Mysia, and called "Atarneus under Pitane," to distinguish it from the town of the same name mentioned in the previous article. It was opposite the island of *Elæussa*. The bricks made here are said to be so light as to float in the water. (*Strab.*, 614.)

ATAX, a river of Gallia Narbonensis, rising in the Pyrenean mountains, and falling into the *Lacus Rubrensis* or *Rubresus*, at the city of *Narbo* (now *Narbonne*), for which the lake served as a harbour, an outlet or canal being cut to the Mediterranean. The *Atax* (otherwise called *Adax*) is now the *Aude*, and the modern name of the lake is *l'étang de Sigean*. (*Plin.*, 3, 4.—*Mela*, 2, 5.—*Lucan.*, 1, 403.)

ATE, the goddess of evil, and daughter of Jupiter. When Jupiter had been deceived by Juno into making the rash oath that rendered Hercules subject to the command of Eurystheus, the monarch of the skies laid the whole blame on Ate, and, having seized her by the hair, flung her to earth, declaring with an oath that she should never return to Olympus. Thenceforward she took up her abode among men. Her feet, according to Homer, are tender, and she therefore does not walk on the ground, but on the heads of mortals (*κατ' ἀνδρῶν κράατα βαίνει*). The name is derived from *ἀσμαι* (Poetic *ἀσμαι*), to injure, or, to adopt the language of Homer, *Ἀτη, ἥ πάντας ἀτάται*. (*Il.*, 19, 91, *seqq.*)

ATELLA, a town of Campania, to the west of *Suesula*, the ruins of which, as *Holstenius* reports (*Adnot.*, p. 260), are still to be seen near the village of *St. Elpidio* or *St. Arpino*, about two miles from the town of *Aversa*. *Atella* is known to have been an *Oscan* city, and it has acquired some importance in the history of Roman literature, from the circumstance of the name and origin of the farces called *Fabula Atellana* being derived from thence. We are told that these comic representations were so much relished by the Roman people, that the actors were allowed privileges not usually extended to that class of persons; but these amusements having at length given rise to various excesses, were prohibited under the reign of *Tiberius*, and the players banished from Italy. (*Liv.*, 7, 2.—*Strabo*, 233.—*Tacit., Ann.*, 4, 14.) *Atella*, in consequence of having joined the Carthaginians after the battle of *Cannæ*, was reduced, with several other Campanian towns, to the condition of a præfectura on the surrender of *Capua* to the Romans. (*Liv.*, 22, 61.—*Id.*, 26, 34.) Subsequently, however, it is mentioned by *Cicero* as a municipal town (*Ep. ad Fam.*, 13, 7), and *Frontinus* states that it was colonized by *Augustus*. (*Cramer's Ancient Italy*, vol. 2, p. 208.)

ATHAMĒNES, a rude mountaineer race of *Epirus*, whose territory lay between *Pindus* on the east and a parallel chain on the west. They were at first of little importance, either from their numbers or territorial extent, but they subsequently acquired great power and influence by the conquest or extirpation of several small Thessalian and Epirotic tribes, and they appear in history as valuable allies to the *Ætolians*, and formidable enemies to the sovereigns of *Macedon*. (*Strab.*, 427.—*Liv.*, 23, 13.—*Id.*, 36, 9.) The rude habits of this people may be inferred from the custom that prevailed among them, of assigning to their fe-

mates the active labours of husbandry, while the males were chiefly employed in tending their flocks. (*Hærad., Pont. frag.—Cramer's Anc. Greece*, vol. 2, p. 95, *seqq.*)

ATHAMAS, king of Thebes, in Bœotia, was son of Æolus. He married Nephele, and by her had Phrixus and Helle. Some time after, having divorced Nephele, he married Ino, the daughter of Cadmus, by whom he had two sons, Learchus and Melicerta. Ino became jealous of the children of Nephele, because they were to ascend their father's throne in preference to her own; therefore she resolved to destroy them; but they escaped from her fury to Colchis on a golden ram. (*Vid. Argonautæ*.) Athamas, through the enmity of Juno towards Ino, who had suckled the infant Bacchus, was afterward seized with madness. In his phrensy he shot his son Learchus with an arrow, or, as others say, dashed him against a rock. Ino fled with her other son, and being closely pursued by her furious husband, sprang with her child from the cliff of Melurus, near Corinth, into the sea. The gods took pity on her, and made her a sea-goddess, under the name of Leucothea, and Melicerta a sea god, under that of Palemon. Athamas subsequently, in accordance with an oracle, settled in a place where he built the town of Athamantia. This was in Thessaly, in the Phthiotic district. Here he married Themisto, daughter of Hypseus, and had by her four children, Leucon, Erythroë, Schæneus, and Proos. (*Apollod., 1, 9.*) Such is the account of Apollodorus. There are, however, many variations in the tale in different writers, especially in the tragic poets. (*Keightley's Mythology*, p. 333.)

ATHAMANTIDES, a patronymic of Melicerta. Phrixus, or Helle, children of Athamas. (*Ovid, Met., 13, 319.*)

ATHANASIUS, a celebrated Christian bishop of the fourth century. He was a native of Egypt, and a deacon of the church of Alexandria under Alexander the bishop, whom he succeeded in his dignity A.D. 326. Previous to his obtaining this high office he had been private secretary to Alexander, and had also led for some time an ascetic life with the renowned anchorite St. Anthony. Alexander had also taken him to the council at Nice, where he gained the highest esteem of the fathers by the talents which he displayed in the Arian controversy. He had a great share in the decrees passed here, and thereby drew on himself the hatred of the Arians. On his advancement to the prelacy he dedicated all his time and talents to the defence of the doctrine of the Trinity, and resolutely refused the request of Constantine for the restoration of Arius to the Catholic communion. In revenge for this refusal, the Arian party brought several accusations against him before the emperor. Of these he was acquitted in the first instance; but, on a new charge of having detained ships at Alexandria, laden with corn for Constantinople, either from conviction or policy, he was found guilty and banished to Gaul. Here he remained an exile eighteen months, or, as some accounts say, upward of two years, his see in the mean time being unoccupied. On the death of Constantine he was recalled, and restored to his functions by Constantius; but the Arian party made new complaints against him, and he was condemned by 90 Arian bishops assembled at Antioch. On the opposite side, 100 orthodox bishops, assembled at Alexandria, declared him innocent; and Pope Julius confirmed this sentence, in conjunction with more than 300 bishops assembled at Sardis from the East and West. In consequence of this, he returned a second time to his diocese. But when Constantius, emperor of the West, died, and Constantius became master of the whole empire, the Arians again ventured to rise up against Athanasius. They condemned him in the councils of Arles and Milan, and, as the worthy patriarch

refused to listen to anything but an express command of the emperor, when he was one day preparing to celebrate a festival in the church, a body of soldiers suddenly rushed in to make him prisoner. But the surrounding priests and monks placed him in security. Athanasius, displaced for a third time, fled into the deserts of Egypt. His enemies pursued him even here, and set a price on his head. To relieve the hermits, who dwelt in these solitary places, and who would not betray his retreat, from suffering on his account, he went into those parts of the desert which were entirely uninhabited. He was followed by a faithful servant, who, at the risk of his life, supplied him with the means of subsistence. In this undisturbed spot Athanasius composed many writings, full of eloquence, to strengthen the faith of the believers or expose the falsehoods of his enemies. When Julian the apostate ascended the throne, he allowed the orthodox bishops to return to their churches. Athanasius, therefore, returned after an absence of six years. The mildness which he exercised towards his enemies was imitated in Gaul, Spain, Italy, and Greece, and restored peace to the church. But this peace was interrupted by the complaints of the heathen, whose temples the zeal of Athanasius kept always empty. They excited the emperor against him, and he was obliged to fly to the Thebais to save his life. The death of the emperor and the accession of Jovian again brought him back; but, Valens becoming emperor eight months after, and the Arians recovering their superiority, he was once more compelled to fly. He concealed himself in the tomb of his father, where he remained four months, until Valens, moved by the pressing entreaties and threats of the Alexandrians, allowed him to return. From this period he remained undisturbed in his office till he died, A.D. 373.—Of the 46 years of his official life, he spent 20 in banishment, and the greater part of the remainder in defending the Nicene Creed. Athanasius is one of the greatest men of whom the church can boast. His deep mind, his noble heart, his invincible courage, his living faith, his unbounded benevolence, sincere humility, lofty eloquence, and strictly virtuous life, gained the honour and love of all. His writings are on polemical, historical, and moral subjects. The polemical treat chiefly of the mysterious doctrines of the Trinity, the incarnation of Christ, and the divinity of the Holy Spirit. The historical ones are of the greatest importance for the history of the church. In all his writings, the style is distinguished, considering the age in which they were produced, for clearness and moderation. His apology, addressed to the Emperor Constantine, is a master piece. The Creed which bears his name is now generally allowed not to have been his. Dr. Waterland supposes it was made by Hilary, bishop of Arles. It was first printed in Greek in 1540, and several times afterward to 1671. It has been questioned whether this Creed was ever received by the Greek and Oriental churches. In America, the episcopal church has rejected it. As to its matter, it is given as a summary of the true orthodox faith: unhappily, however, it has proved a fruitful source of unprofitable controversy.—The best edition of his works is that of Montfaucon, *Paris*, 1698, 3 vols. fol. As a supplement to this may be added the second vol. of the *Bibliotheca Patrum*, from the same editor, 1706. (*Encyclop. Americ.*, vol. 1, p. 440, *seqq.*)

ATHENA, the name of Minerva among the Greeks (*Ἀθηνά* and *Ἀθήνη*).

ATHËNÆ, I. the celebrated capital of Attica, founded, according to the common account, by Cecrops, 1550 B.C. The town was first erected on the summit of a high rock, probably as a protection against attacks from the sea. The primitive name of this early settlement was Cranae, from Cranaus, as is said, from whom the Pelasgi took the name of Cranaï, and all Attica that of Cranaë. At a later period it was called

Cecropia, from Cecrops; and finally Athenæ by Erechthonius, from its being under the protection of Minerva or Athênê (*Ἀθῆνη*). A distinction was also made between the ancient city on the rock and the part subsequently added in the plain. The former, the primitive Cecropia, was called, from its situation, *ἡ ἄνω πόλις*, or *Ἀκρόπολις*, "the upper city," where afterward stood the Parthenon, and other splendid edifices; the buildings in the plain, where eventually Athens itself stood, were termed *ἡ κάτω πόλις*, "the lower city." (Compare, as regards the various names given to this city, *Steph. Byz.*, s. v. *Κρανία*—*Plin.*, 7, 56.—*Kiuse, Hellas*, vol. 2, p. 77.)—The Acropolis was sixty stadia in circumference. We have little or no information respecting the size of Athens under its earliest kings; it is generally supposed, however, that, even as late as the time of Theseus, the town was almost entirely confined to the Acropolis and the adjoining Hill of Mars. Subsequently to the Trojan war, it appears to have been increased considerably, both in population and extent, since Homer applies to it the epithets of *ἐκτίμενος* and *εὐρύς*. The improvements continued, probably, during the reign of Pisistratus, and, as it was able to stand a siege against the Lacedæmonians under his son Hippias, it must evidently have possessed walls and fortifications of sufficient height and strength to ensure its safety. The invasion of Xerxes, and the subsequent irruption of Mardonius, effected the entire destruction of the ancient city, and reduced it to a heap of ruins, with the exception only of such temples and buildings as were enabled, from the solidity of materials, to resist the action of fire and the work of demolition. When, however, the battles of Salamis, Plataea, and Mycale had averted all danger of invasion, Athens, restored to peace and security, soon rose from its state of ruin and desolation; and, having been furnished by the prudent foresight and energetic conduct of Themistocles with the military works requisite for its defence, it attained, under the subsequent administrations of Cimon and Pericles, to the highest pitch of beauty, magnificence, and strength. The former is known to have erected the temple of Theseus, the Dionysiac theatre, the Stœæ or porticoes, and Gymnasium, and also to have embellished the Academy, the Agora, and other parts of the city at his own expense. (*Plut., Vit. Cimon*.) Pericles completed the fortifications which had been left in an unfinished state by Themistocles and Cimon: he likewise built several edifices destroyed by the Persians and to him his country was indebted for the temple of Eleusis, the Parthenon, and the Propylæa, the most magnificent buildings, not of Attica only, but of the world. It was in the time of Pericles that Athens attained the summit of its beauty and prosperity, both with respect to the power of the republic and the extent and magnificence of the architectural decorations with which the capital was adorned. At this period, the whole of Athens, with its three ports of Piræus, Munychia, and Phalerus, connected by means of the celebrated long walls, formed one great city, enclosed within a vast peribolus of massive fortifications. The whole of this circumference, as we collect from Thucydides, was not less than 124 stadia. Of these, forty-three must be allotted to the circuit of the city itself; the long walls, taken together, supply twenty-five, and the remaining fifty-six are furnished by the peribolus of the three harbours. Xenophon reports that Athens contained more than 10,000 houses, which, at the rate of twelve persons to a house, would give 120,000 for the population of the city. (*Xen., Mem.*, 3, 6, 14.—*Id., Econ.*, 8, 22.—Compare *Clinton's Fasti Hælenici, Append.*, p. 395.)—From the researches of Col. Leake and Mr. Hawkins, it appears that the former city considerably exceeded in extent the modern Athens; and though little now remains of the ancient works to afford certain evidence of their

circumference, it is evident, from the measurement furnished by Thucydides, that they must have extended considerably beyond the present line of wall, especially towards the north. Col. Leake is of opinion, that on this side the extremity of the city reached to the foot of Mount Anchesmus, and that to the westward its walls followed the same brook which terminates in the marshy ground of the Academy, until they met the point where some of the ancient foundations are still to be seen near the gate Dipylum; while to the eastward they approached close to the Ilissus, a little below the present church of the *Mologitades*, or confessors. The same antiquary estimates the space comprehended within the walls of Athens, the longomural enclosure and the peribolus of the ports, to be more than sixteen English miles, without reckoning the sinuosities of the coast and the ramparts; but if these are taken into account, it could not have been less than nineteen miles. (*Topography of Athens*, p. 362, *seqq.*) We know from ancient writers that the extent of Athens was nearly equal to that of Rome within the walls of Servius. (*Dion. Hal.*, 4, p. 670.) Plutarch (*Vit. Nic.*) compares it also with that of Syracuse, which Strabo estimates at 180 stadia, or upward of twenty-two miles. The number of gates belonging to ancient Athens is uncertain; but the existence of nine has been ascertained by classical writers. The names of these are Dipylum (also called Thriasie, Sacre, and perhaps Ceramicæ), Diomeiæ, Diocharis, Melitides, Piræicæ, Acharnicæ, Itoniæ, Hippades, Heriæ. (*Cramer's Anc. Greece*, vol. 2, p. 312, *seqq.*) The early history of Athens and its kings is blended with more or less of fable. A brief sketch of the affairs of Attica, from the first glimpses of tradition down to the period when Greece fell beneath the Roman arms, will be found under the article Cecrops. The Athenians have been admired in all ages for their love of liberty, and for the great men that were born among them; but favour there was attended with danger; and there are very few instances in the history of Athens that can prove that the jealousy and fickleness of the people did not persecute the man who had fought their battles and exposed his life in the defence of his country. Perhaps not one single city in the world can boast, in the same space of time, of so large a number of illustrious citizens, as regarded either warlike operations or the walks of civil life.—The Athenians claimed to be of indigenous origin, or, in other words, sprung from the earth itself. Hence they called themselves *αὐτάρχωνες* (*Autochthōnes*), i. e., Aborigines; and, as a proof of their indigenous origin, the early Athenians are said by Thucydides (1, 6) to have worn in the hair of the head golden ornaments, formed like cicadae, a species of insect believed to spring from the earth. The custom only went entirely out of use a short time previous to the age of the historian. The Romans, in the more polished ages of their republic, sent their youths to finish their education at Athens, and respected the learning, while they despised the military character, of the inhabitants.—Modern Athens, in *Livadia*, a few years ago contained 1300 houses and 12,000 inhabitants, 2000 of whom were Turks. The Greeks here experienced from the Turks a milder government than elsewhere. They also retained some remains of their ancient customs, and annually chose four archons. The Greek archbishop residing here had a considerable income. In 1822, the Acropolis, after a long siege, fell into the hands of the free Greeks. In 1825, a Greek school, under the care of the patriot professor, George Genadios, was in a flourishing condition. The most thorough investigation of the places among the ruins of Athens worthy of attention, is contained in *Leake's Topography of Athens* (London, 1821, with an atlas in folio). The splendid work of *Stuart and Revett (Antiquities of Athens)* must also be consulted. Leake

makes it appear probable, that, in the time of Pausanias, many monuments were extant which belonged to the period before the Persian war; because so transitory a possession as Xerxes had of the city scarcely gave him time to finish the destruction of the walls and principal public edifices. In the restoration of the city to its former state, Themistocles looked more to the useful, Cimon to magnificence and splendour; and Pericles far surpassed them both in his buildings. The great supply of money which he had from the tribute of the other states belonged to no succeeding ruler. Athens, at length, saw much of her ancient splendour restored; but, unluckily, Attica was not an island; and, after the sources of power, which belonged to the fruitful and extensive country of Macedonia, were developed by an able and enlightened prince, the opposing interests of many free states could not long withstand the disciplined army of a warlike people, led by an active, able, and ambitious monarch. When Sylla destroyed the works of the Piræus, the power of Athens by sea was at an end, and with that fell the whole city. Flattered by the triumvirate, favoured by Hadrian's love of the arts, Athens was at no time so splendid as under the Antonines, when the magnificent works of from eight to ten centuries stood in view, and the edifices of Pericles were in equal preservation with the new buildings. Plutarch himself wonders how the structures of Ictinus, of Menesicles and Phidias, which were built with such surprising rapidity, could retain such a perpetual freshness. The most correct criticism on the accounts of Greece by Pausanias and Strabo is in Leake. Probably Pausanias saw Greece yet un plundered. The Romans, from a reverence towards a religion approaching so nearly to their own, and wishing to conciliate a people more cultivated than themselves, were ashamed to rob temples where the master-pieces of art were kept as sacred, and were satisfied with a tribute in money, although in Sicily they did not abstain from the plunder of the temples, on account of the prevalence of the Carthaginian and Phœnician influence in the island. Pictures, even in the time of Pausanias, may have been left in their places. The wholesale robberies of collectors; the removal of great quantities of the works of art to Constantinople, when the creation of new specimens was no longer possible; Christian zeal, and the attacks of barbarians, destroyed, after a time, in Athens, what the emperors had spared. We have reason to think, that the colossal statue of Minerva Promachos was standing in the time of Alaric. About 420 A.D. paganism was totally annihilated at Athens; and, when Justinian closed even the schools of the philosophers, the recollections of the mythology were lost. The Parthenon was turned into a church of the Virgin Mary, and St. George stepped into the place of Theus. The manufacture of silk, which had hitherto remained, was destroyed by the transportation of a colony of weavers, by Roger of Sicily; and in 1456 the place fell into the hands of Omar. To complete its degradation, the city of Minerva obtained the privilege (an enviable one in the East) of being governed by a black eunuch as an appendage to the harem. The Parthenon became a mosque, and, at the west end of the Acropolis, those alterations were commenced which the new discovery of artillery then made necessary. In 1687, at the siege of Athens by the Venetians under Morosini, it appears that the temple of Victory was destroyed, the beautiful remains of which are to be seen in the British Museum. On the 28th September of this year, a bomb fired the powder-magazine kept by the Turks in the Parthenon, and, with this building, destroyed the ever-memorable remains of the genius of Phidias. Probably the Venetians knew not what they destroyed; they could not have intended that their artillery should accomplish

such devastation. The city was surrendered to them September 29th. They wished to send the chariot of Victory, which stood on the west pediment of the Parthenon, to Venice, as a trophy of their conquest; but, in removing it, it fell and was dashed to pieces. In April, 1688, Athens was again surrendered to the Turks, in spite of the remonstrances of the inhabitants, who, with good reason, feared the revenge of their returning masters. Learned travellers have, since that time, often visited Athens; and we may thank their relations and drawings for the knowledge which we have of the monuments of the place. How little the Greeks of modern times have understood the importance of these buildings, is proved by Crusius's *Turko-Græcia*. From them originated the names *Temple of the unknown God*, *Lantern of Demosthenes*, &c. It is doing injustice to the Turks to attribute to them exclusively the crime of destroying these remains of antiquity. From these ruins the Greeks have supplied themselves with all their materials for buildings for hundreds of years. The ruins in the neighbourhood of inhabited places and in the seaport towns are particularly exposed, because ease of transportation is added to the daily want of materials. In the mean time, the most accessible part of Athens has rich treasures to reward well-directed searches; and each fragment which comes to light in Athens proves the all-pervading art and taste of the ancient race. It is fortunate that many of the remains of Grecian art have been covered by barbarous structures until a brighter day should dawn on Greece. (*Encyclop. Americ.*, vol. 1, p. 445, *seqq.*) For an accurate and interesting account of the various works that have been published in modern times, illustrative of the remains of Grecian art, as well as of the numerous travellers that have visited these classic regions, consult *Kruse's Hellas*, vol. 1, p. 65-156. In this work also will be found an account of Lord Elgin's operations. For remarks on the coinage and commerce of Athens, *vid.* Mina and Piræus, and for some account of its public structures, consult the separate articles throughout the volume, such as Parthenon, Erechtheum, &c.—II. A town of Eubœa, in the northwestern corner of the island, and near the promontory of Cænæum. It was founded, according to Strabo, by an Athenian colony, but, according to Ephorus, by Dias, a son of Abas. (*Steph. Byz.*, s. v. *Ἀθήναι*.—*Eustath.*, ad *Il.*, 2, 537.) The modern name is *Port Calos*.—III. An ancient city, which, according to tradition, stood at an early period, along with another named Eleusis, near the spot where the town of Copæ was erected at a later day. Athenæ was situate on the river Triton, which, if it is the torrent noticed by Pausanias, was near Alalcomenæ. (*Strab.*, 407.—*Pausan.*, 9, 24.) Stephanus of Byzantium reports that, when Crates drained the waters which had overspread the plains, the ruins of Athenæ became visible (s. v. *Ἀθήναι*). Some writers asserted, that it occupied the site of the ancient Orchomenus. (*Strab.*, l. c.—*Steph. Byz.*, l. c.) The existence of such a city, at so remote a date, might form the basis of no uninteresting theory respecting the early migrations of the people of Attica from the north. (Compare *Müller, Orchomenus*, p. 58.)

ATHENÆA, festivals celebrated at Athens in honour of Minerva. One of them was called *Panathenæa*, and the other *Chalcea* for an account of which, see those words.

ATHENÆUM, a building at Athens, sacred to Minerva, whence its name (*Ἀθηναῖον*, from *Ἀθήνη*). Here poets, philosophers, and literary men in general were accustomed to assemble and recite their compositions, or engage in the discussion of literary subjects, as the Roman poets and others were wont to do in the temple of Apollo at Rome. The Emperor Hadrian built an Athenæum at Rome in imitation of that at Athens. The ancient Athenæa were generally in the form of

amphitheatres. (*Lamprid., in Alex. Sev., c. 35.—Aurel. Vict., de Cas., c. 14.—Forellini, Lex. Tot. Lat., s. v.*)

ATHENÆUS, I. a native of Naucratis in Egypt, and the author of a very interesting compilation, entitled *Deipnosophistæ* (Δειπνοσοφισταί, "the learned men at supper"), from which the moderns have derived a large portion of their knowledge respecting the private life of the ancient Greeks. He declares himself to have been a little later than the poet Oppian; and, as that writer dedicates his *Haliæticæ* to the Emperor Caracalla, the age of Athenæus may be fixed at the beginning of the third century of the Christian era. The professed object of Athenæus was to detail to his contemporaries the convivial antiquities of their ancestors, and he has chosen to convey his information in the form of a dialogue as the most convenient and amusing. The plan of the work is as follows: A considerable number of learned men, among whom we find the celebrated Galen, assemble at the table of Larrensus, a liberal and wealthy Roman, where they bestow as large a portion of erudition on every part of their entertainment as the memory or commonplace-book of the author could supply. So much of the business of human life is connected, mediately or immediately, with eating and drinking, that it does not require any great share of ingenuity to introduce into a work of so miscellaneous a nature much useful and curious information, which, at first sight, does not appear to be very closely connected with the science of cookery. "Accordingly," says the author of the *Epitome*, "we find disquisitions on fish of every sort, together with potherbs and poultry; not to mention historians, poets, and philosophers; likewise a great variety of musical instruments, witty sayings, and drinking vessels; royal magnificence, ships of prodigious magnitude, and many other articles too tedious to mention." Although this kind of conversation bears no very strong resemblance to the dying speculations of Socrates on the immortality of the soul, our author has selected the *Phædo* of Plato for his prototype, and has borrowed the beginning of that dialogue, with no alteration, except the substitution of the names of Timocrates and Athenæus for those of Echecrates and Phædo. A strong objection to the dramatic form which the work assumes, arises from the impossibility of collecting the productions of all the different seasons at one banquet. The author seems to suppose, that an astonished fishmonger might exclaim, in the words of Theocritus, Ἀλλὰ τὰ μὲν θέρειος, τὰ δὲ γίνονται ἐν χειμῶνι. The loss of the two first books renders us unable to judge how far he was able to palliate this palpable absurdity. The most valuable part of the work is the large quantity of quotations which it presents from authors whose writings no longer exist. The Athenian comic poets afforded an ample store of materials, and Athenæus seems to have been by no means sparing in the use of them. Many of the extracts from their works, which he has inserted in his own, are highly interesting; and the mass is so considerable, as far to exceed in bulk all that can be collected from every other Greek or Latin writer. The number of theatrical pieces which he appears to have consulted, was probably not less than two thousand. The middle comedy furnished him with eight hundred.—The compilation of Athenæus immediately became the prey of other compilers less diligent than himself. Ælian, who was nearly his contemporary, has made use very liberally of the *Deipnosophists* in his *Various History*. In a later age we find our author again pillaged by Macrobius, who seems to have taken from him not only many of the materials, but even the form and idea, of his *Saturnalia*. But of all writers, ancient or modern, there is none who is so highly indebted to Athenæus as the industrious Eustathius. Although

the Archbishop of Thessalonica appears never to have seen the entire work, but to have made use of the *Epitome*, the stores of his erudition would be miserably reduced if he were compelled to make restitution of the property of our author which he has converted to his own benefit.—By the same fortunate accident which has preserved a few of the writings of the ancients, a single copy of Athenæus appears to have escaped from the ravages of time, ignorance, and fanaticism. That MS. still exists. After the death of Cardinal Bessarion, who probably brought it from Greece, it passed into the library of St. Mark at Venice. In this sepulchre of books it would certainly have continued for many ages, unknown to the learned, if the French successes had not caused it to be included in the valuable spoils of Italy, which, until lately, enriched the national collection of Paris. Many transcripts of this manuscript exist in different parts of Europe, which were probably made while it was in the possession of Cardinal Bessarion. All of them betray their origin, as, besides their coincidence in orthographical errors, the same parts are wanting in all of them. The two first books, the beginning of the third, a few leaves in the eleventh, and part of two leaves in the fifteenth, are wanting in the Venetian manuscript, and the deficiency appears evidently to have proceeded from accident. The same *lacunæ* occur in every other manuscript, but are exhibited in a manner which shows the cause to have existed in the copy from which they were transcribed. Fortunately for Athenæus, the integrity of his work is in some measure preserved by an epitome of the whole, which has been transmitted to us without defalcation. This abridgment, if it may be called so, is nearly as bulky as the original work. The age of it is uncertain. It is executed in a careless manner; and the copy which the writer had before his eyes appears to have suffered so much from time or accident, that he frequently breaks off in the middle of an extract, and declares his inability to decipher the remainder. From these sources our editions are derived; and it will easily be seen that, where the original copies are so few and so faulty, conjectural emendation will find ample scope to display its powers.—The best editions of Athenæus are those of Casaubon, Schweighæuser, and Dindorff. Of the edition of Casaubon there are three different impressions, in the years 1597, 1612, and 1664, which do not differ considerably from each other. To these editions is annexed the Latin translation of James Dalechamp of Caen, which was first printed by itself in 1583. The Greek text is much more perfect and accurate than in the preceding editions; as in the long interval which had elapsed between the edition published at Basle and the first of Casaubon's, many new transcripts had been discovered, and much labour had been bestowed on Athenæus by some of the most celebrated scholars of that age. The most valuable part of the edition of Casaubon is his celebrated commentary, which constitutes a folio of no inconsiderable magnitude. The edition of Athenæus by Schweighæuser was published at Strasburg (*Argentorati*) in 1801–1807, and consists of 14 vols. 8vo. The text occupies 5 vols., and the remaining nine contain the commentaries and indexes. This commentary is made up of a large portion of the notes of Casaubon, together with others by Schweighæuser himself. The greatest advantage which this editor enjoyed was the collation of the Venetian manuscript. This was performed by his son. The least commendable part of the work is the critical observations, in which Schweighæuser's little acquaintance with Greek metre exposes him to many mistakes. The edition, however, is extremely valuable. Dindorff's edition is in 5 vols. 8vo, *Lips.*, 1827. (*Elmsley, in Edinburgh Review*, vol. 3, p. 181, *seqq.*)—II. A contemporary of Archimedes His native country is not known. He has left a trea

tise on Machines of War (*περὶ Μηχανημάτων*), addressed to Marcellus. This Marcellus is generally supposed to be the same with the conqueror of Syracuse. Schweighaeuser, however, is of a different opinion (*ad Athen.*, vol. 1, p. 637). His work is contained in the collection of Thevenot. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 367.)—III. A celebrated physician, born at Atalia in Pamphylia, and who flourished at Rome 50 A.D. He separated the *Materia Medica* from Therapeutics. He treated also, with great care, of Dietetics. Of his numerous writings only a few chapters remain in the collection of Ōribasius. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 343.)

ATHENAGORAS, a Platonising father of the church, the author of an "Apology for Christians," and of a treatise "On the Resurrection of the Body." It appears from his writings that he was a native of Athens, and that he passed his youth among the philosophers of his time. He flourished towards the close of the second century. After he became a convert to Christianity, he still retained the name and habit of a philosopher, probably in expectation of gaining greater credit to the Christian doctrine among the unconverted heathen. In his Apology he judiciously explains the notions of the Stoics and Peripatetics concerning God and divine things, and exposes with great accuracy and strength of reasoning their respective errors. He frequently supports his arguments by the authority of Plato, and discovers much partiality for his system. In what he advances concerning God, and the Logos or Divine Reason, he evidently mixes the dogmas of paganism with the doctrines of Christianity. His two works are contained in the editions of the Greek fathers by Oberthür (*Würceb.*, 1777, vol. 3) and Gallaud (vol. 2, p. 3). There are also separate editions of each, and Latin, French, Italian, and English translations, to say nothing of numerous works illustrating his writings. (Consult *Hoffmann, Lex. Bibl.*, vol. 1, p. 427, *seqq.*)—The romance of Theagenes and Charis is erroneously ascribed to him. This romance was the production of a Frenchman named *Martin Fumée*. It was published in 1599 and 1612, in French, and purported to be a translation from a Greek manuscript brought from the East. No such manuscript ever existed. (*Fabric.*, *Bibl. Gr.*, vol. 6, p. 800, *seqq.*)

ATHENION, I. a peripatetic philosopher, 108 B.C.—II. A painter, born at Maronea, and who flourished about 300 B.C. Pliny enumerates several of his productions, and adds, that, had he not died young, he would have stood at the head of his profession (35, 11).

ATHENODORUS, I. a philosopher, born at Cana, near Tarsus in Cilicia. He lived at Rome, in the reign of Augustus, and, on account of his learning, wisdom, and moderation, was highly esteemed by that emperor. His opinion and advice had great weight with the monarch, and are said to have led him into a milder plan of government than he had at first adopted. Athenodorus obtained, for the inhabitants of Tarsus, relief from a part of the burden of taxes which had been imposed upon them, and was on this account honoured with an annual festival. He was intrusted by Augustus with the education of the young prince Claudius; and, that he might the more successfully execute his charge, his illustrious pupil became for a while a resident at his house. This philosopher retired in his old age to Tarsus, where he died in his 82d year. (*Fabric.*, *Bibl. Gr.*, vol. 7, p. 391.—*Zosim.*, 1, 6.—*Suet.*, *Vit. Claud.*, c. 4.—*Enfield's Hist. Philos.*, vol. 2, p. 109.)—II. A stoic philosopher, a native of Pergamus according to some, but, more correctly, of Tarsus. He was surnamed *Cordylion* (*Κορύλλιον*), and was intimate with Cato the younger (*Utiensis*). Cato made a voyage to Pergamus expressly to see him, and brought him back with him to Rome. He died at Cato's house. (*Strabo*, 673.)—III. An Arcadian statuary, mentioned by Pliny (34, 8) as one of the

pupils of Polyclethus, and as having made, with great success, the statues of some distinguished females. (*Sillig, Dict. Art.*, s. v.)—IV. A sculptor, who, in connexion with Agesander and Polydorus, made the celebrated Laocoon group. (*Sillig, Dict. Art.*, s. v.)

ATHERBAL. *Vid.* Adherbal.

ATHËSIS, a river of Venetia, in Gallia Cisalpina, rising in the mountains of the Tyrol (Rætian Alps), and, after a course of nearly two hundred miles, discharging its waters into the Adriatic. It is now the *Adige*, and, next to the *Po*, must be looked upon as the most considerable stream of Italy. (*Virg.*, *Æn.*, 9, 679, *seqq.*)

ATHOS, a mountain in the district Chalcidice of Macedonia. It is situate on a peninsula between the Sinus Strymonicus, or *Gulf of Contessa*, and the Sinus Singiticus, or *Gulf of Monte Santo*. It is so high that, according to Plutarch and Pliny, it projected its shadow at the summer solstice on the market-place of Myrina, the capital city of the island of Lemnos, though at the distance of 87 miles. On this account a brazen cow was erected at the termination of the shadow, with this inscription,

Ἄθος καλύπτει πλευνρὰ Ἀθηνίας βοός.

Strabo reports that the inhabitants of the mountain saw the sun rise three hours before those who lived on the shore at its base. (*Epit.*, 7, p. 331.) Pliny, however, greatly exaggerates, when he affirms that Athos extends into the sea for seventy-five miles, and that its base occupies a circumference of one hundred and fifty miles (4, 10). Strabo says the circumnavigation of the whole peninsula was four hundred stadia, or fifty miles. (*Epit.*, 7, p. 331.) When Xerxes invaded Greece, he cut a canal through the peninsula of Athos, in order to avoid the danger of doubling the promontory, the fleet of Mardonius having previously sustained a severe loss in passing around it. This canal was made in the vicinity of the cities Acanthus and Sana. (*Vid.* Acanthus.)—The architect Dinocrates offered unto Alexander the Great to cut Mount Athos into a statue of the king, holding in its left hand a city, and in its right a basin to receive all the waters that flowed from the mountain. The monarch, however, declined the offer, on the ground of their being no fields around to furnish supplies, which would have to come entirely by sea. (*Vitruv.*, *Prof.*, lib. 2.)

ATIA LEX, a law enacted A.U.C. 690, by T. Atius Labienus, a tribune of the commons. It repealed the Cornelian law, and restored the Domitian, which gave the election of priests to the people, not to the colleges. (*Dio Cass.*, 37, 37.)

ATILIA LEX, I. gave the prætor and a majority of the tribunes power of appointing guardians to orphans and women. It was enacted A.U.C. 443.—II. Another, which ordained that sixteen military tribunes should be created by the people for four legions; that is, two thirds of the whole number. (*Adams, Rom. Ant.*, s. v.)

ATINA, I. one of the most ancient cities of the Volsci. It was situate to the southeast of Arpinum, and near the source of the river *Melfa*. If we are to credit Virgil (*Æn.*, 7, 629), it was a considerable town as early as the Trojan war. We learn from Cicero (*pro Planc.*), that Atina was in his time a præfectura, and one of the most populous and distinguished in Italy. Frontinus says it was colonized during the reign of Nero. The modern name is *Atino*.—II. A town of Lucania, not far from the Tanager. Several inscriptions and many remains of walls and buildings, prove that it was no inconsiderable place. (*Romanelli*, vol. 1, p. 438.) The modern name is *Atena*. (*Cramer's Ancient Italy*, vol. 2, p. 378.)

ATINIA LEX, was enacted by the tribune Atinius, A.U.C. 623. It gave a tribune of the people the priv-

ileges of a senator, and the right of sitting in the senate. (*Aul. Gel.*, 14, 8.)

ATLANTES, a people of Africa, the more correct name of whom was Atarantes. (*Vid.* Atarantes.)

ATLANTIADES, a patronymic of Mercury, as grandson of Atlas. (*Ovid, Met.*, 1, 639.)

ATLANTIDES, a name given to the daughters of Atlas. They were divided into the Hyades and Pleiades. (*Vid.* Atlas, Hyades, and Pleiades.)

ATLANTIS, a celebrated island, supposed to have existed at a very early period in the Atlantic Ocean, and to have been eventually sunk beneath its waves. Plato is the first that gives an account of it, and he obtained his information from the priests of Egypt. (*Plat., Timæus*, p. 24, *seqq.*, *ed. Bip.*, vol. 9, p. 296, *seqq.*—*Id., Critias*, p. 108, *seqq.*, *ed. Bip.*, vol. 10, p. 39, 43.) The statement which he furnishes is as follows: In the Atlantic Ocean, over against the Pillars of Hercules, lay an island larger than Asia and Africa taken together, and in its vicinity were other islands, from which there was a passage to a large continent lying beyond. The Mediterranean, compared with the ocean in which these lands were situated, resembled a mere harbour with a narrow entrance. Nine thousand years before the time of Plato, this island of Atlantis was both thickly settled and very powerful. Its sway extended over Africa as far as Egypt, and over Europe as far as the Tyrrhenian Sea. The farther progress of its conquests, however, was checked by the Athenians, who, partly with the other Greeks, partly by themselves, succeeded in defeating these powerful invaders, the natives of Atlantis. After this a violent earthquake, which lasted for the space of a day and night, and was accompanied with inundations of the sea, caused the islands to sink, and, for a long period subsequent to this, the sea in this quarter was impassable, by reason of the slime and shoals.—Thus much for the narrative of Plato. A dispute arose among the ancient philosophers and naturalists, whether this statement was based upon reality, or was a mere creation of fancy. Posidonius thought it worthy of belief. (*Strabo*, 102.—*Epit.*, 1, p. 11, *ed. Huds*) Pliny remains undecided (2, 92.—Compare *Ammian. Marcell.*, 17, 7.—*Tertull.*, *de Pallio*, *ed. Op.*, Antwerp, 1581, p. 6.—*Id.*, *Apolog.*, *adv. gentes*, p. 82, c. 40.—*Philo.*, *quod mund. sit. incorrupt.*, p. 963.) From other writers we have short notices, which merely show how many various interpretations were given to the passage in Plato. (*Proclus*, *ad Plat.*, *Tim.*, p. 24.) A certain Marcellus related a similar tradition with that of Plato (*ἐν τοῖς Αἰθιοπικοῖς ap. Procl.*, lib. 1, p. 155.) According to this writer there were seven islands in the Atlantic Ocean sacred to Proserpina; of these, three were of a very large size, and the inhabitants had a tradition among them that these were originally one large island, which had ruled over all the rest.—Nor have modern theorists been inactive on this captivating subject. Rudbeck, with great learning, labours to prove that the Atlantis of the ancients was Sweden, and that the Romans, Greeks, English, Danes, and Germans originated from Sweden. His work, entitled *Atlantica (Atlant eller Manheim)*, is in Latin and Swedish, and is a typographic rarity. The first edition appeared in 1675–79, at Upsal. Several editions of it followed. The last Latin edition is of 1699, and bears a high price. Written copies of it are in several European libraries.—Bailly, well known by his history of Astronomy, places Atlantis and the cradle of the human race in the farthest regions of the north, and seeks to connect the Atlantes with the far-famed Hyperbo-reans. (*Lettres sur l'Atlantide de Platon*, &c., p. 384, *seqq.*—Compare *Lettres sur l'Origine des Sciences*, by the same.)—Carli and others find America in the Atlantis of Plato, and adduce many arguments in support of their assertion. (*Carli, Lettres*

Américaines, *French transl.*, vol. 2, p. 180, *seqq.*) The advocates of this theory might easily connect with the legend of the lost Atlantis the remains of a very remote civilization that are found at the present day in Spanish America. We have there the ruins of cities, the style of whose architecture carries us back to Pelasgic times, and the religious symbols and ornaments connected with which remind us strongly of the phallic mysteries of antiquity. Even the lotus flower, the sacred emblem of India, may be seen in the sculptures. (Compare the plates given by Del Rio, *Description of the Ruins of an Ancient City discovered near Palenque, in Guatemala*, &c., *Lond.*, 1822, 4to.) These curious remains of former days are long anterior to Mexican times, nor have they anything whatever to do with Phœnician settlements, such settlements on the shores of America being purely imaginary. In connexion with the view just taken, we may point to the peculiar conformation of our continent, along the shores of the Gulf of Mexico, where everything indicates the sinking, at a remote period, of a large tract of land, the place of which is now occupied by the waters of the gulf; a sinking occasioned, in all probability, by the sudden rush of a large body of water down the present valley of the Mississippi. The mountain tops of this sunken land still appear to view as the islands of the West Indian group: and thus the large continent lying beyond Atlantis and the adjacent islands, and to which Plato refers, may have been none other than that of America.—We proceed a step farther. Admitting that Atlantis was situate in the ocean which at present bears its name, it would require no great stretch of fancy to suppose that the Canaries, Madeira Isles, and Azores once formed portions of it, and that it even extended as far as Newfoundland. The Cape de Verd Islands, though so much to the south, may also be included. It is curious to observe what quantities of seaweed (*fucus natans*) are found floating on the surface of the sea, not only near the Cape de Verd Islands, but also more to the northeast, almost under the meridian of the isles Cuervo and Flores, among the Azores, between the parallels of 23° and 35° north latitude. (*Humboldt, Tableaux de la Nature*, vol. 1, p. 99, *French transl.*) The ancients were acquainted with these collections of seaweed, resembling somewhat a vast inundated meadow. "Some Phœnician vessels," observes Aristotle, "impelled by the east winds, reached, after a navigation of thirty days, a part of the sea where the surface of the water was covered with rushes and seaweed (*ὄπρον καὶ φῆκος*)." The passage occurs in the treatise *de Mirabilibus*, p. 1157, *ed. Duval*. Many ascribed this abundance of seaweed to some cause connected with the submerged Atlantis. (Compare *Irving's Columbus*, vol. 1, p. 133.) The quantities of seaweed in the neighbourhood of the Cape de Verd Islands are also alluded to by Scylax (*ed. Gronov.*, p. 126), if we suppose the conjecture of Ideler to be correct, that the Cerne of Scylax is the modern Arguin. (*Humboldt, Tableaux*, &c., vol. 1, p. 101.) The existence of a large island, at a remote period, where the waves of the Atlantic now roll, has been regarded by modern science as visionary in the extreme. But even science herself can be made to contribute data towards this captivating theory. Immediately below the chalk and green sand of England, a fluviatile formation, called the wealden, occurs, which has been ascertained to extend from west to east about 200 English miles, and from northwest to southeast about 220 miles, the depth or total thickness of the beds, where greatest, being about 2000 feet. (*Futon's Geology of Hastings*, p. 58.) These phenomena clearly indicate, that there was a constant supply in that region, for a long period, of a considerable body of fresh water, such as might be supposed to have drained a continent or a large island, containing within it a lofty chain

of mountains. (*Lyell's Geology*, vol. 4, p. 308, *Lond.* ed.) If Geology can furnish us with such facts as these, it may surely be pardonable in us to linger with something of fond belief around the legend of Atlantis; a legend that could hardly be the mere offspring of a poetic imagination, but must have had some foundation in truth. Nor will it appear surprising if some of the learned, in the ardour of theorizing, have actually constructed maps of the position of this island. Among the number of these we may mention *De Lisle* and *Dureau de la Malle*, but more particularly *Bory de St. Vincent*, in his *Essai sur les Isles Fort, et l'antique Atlantide* (*Paris*, an xi., 4to). *Carli* also, in the second volume of his work, already referred to, gives maps representing what he terms flats and shallows (*seches et bas fonds*) between America and Africa, in the vicinity of the equator, and also in the neighbourhood of the Cape de Verd Islands. (Compare his remarks on this subject, vol. 2, p. 225, *seqq.*)—It has been thought by some, but very erroneously, that the account given in *Diodorus Siculus* may have reference to some island, now submerged, of the lost Atlantic group. This writer speaks of an island situate at a distance in the Atlantic Ocean, and remarkable for its beauty, to which the Carthaginians had resolved to transfer the seat of their republic in case of any irreparable disaster at home. Aristotle had already, before *Diodorus*, made mention of a similar island, the charms of which had attracted many of the Carthaginians to it, until the senate at home forbade any person from going to it under pain of death. (*Arist., de Mirab.*, c. 85, *ed. Beckman.*) The reference here, however, is probably to one of the Canaries.—Before quitting this subject, it may not be amiss to give the description of Atlantis, as handed down to us by the ancient writers. Though a mere picture of the imagination, it will nevertheless serve to show the opinion entertained on this subject by the poetic minds of antiquity. According to this account, the isle of Atlantis was one of the finest and most productive countries in the universe. It produced abundance of wine, grain, and the most exquisite fruits. Here were seen wide-spread forests, extensive pasture-grounds, mines of various metals, hot and mineral springs; in a word, whatever could contribute to the necessities or comforts of life. Here commerce flourished under a most excellent system of government. The island, divided into ten kingdoms, was governed by as many kings, all descendants of Neptune, and who lived in perfect harmony with each other, though severally independent. Atlantis had numerous and splendid cities, together with a large number of rich and populous villages. Its harbours beheld the produce of almost every country wafted to them: and they were strengthened with fortifications, and supplied with arsenals containing everything calculated for the construction and equipment of navies. Neptune was not only the progenitor and legislator, but also the principal divinity of the people of Atlantis. He had a temple in this island, a stadium in length, and ornamented with gold, silver, orichalcum, and ivory. Among various statues with which it was adorned, was seen that of the god himself, which was of gold, and so high that it touched the ceiling. He was represented as standing in a chariot, and holding the reins of his winged steed. Such were some of the bright visions of former days respecting the lost island of Atlantis. (*Plato, Critias*, p. 114, *seqq.*—*ed. Bip.*, vol. 10, p. 51, *seqq.*)

ATLAS, I. son of the Titan Iapetus and Clymene one of the Oceanides. He was the brother of Menæceus, Prometheus, and Epimætheus. The name Atlas signifies “the Endurer” (from *a*, intensive, and *τλάω*, to endure), an epithet that will presently be explained. Homer calls him the wise or deep-thinking (*ὄλοο-φρων*), “who knows all the depths of the sea, and keeps the long pillars which hold heaven and earth asunder.”

(*Od.*, 1, 52) In the Theogony of Hesiod (517, *seqq.*) he is said to support the heaven on his head and hands in the extreme West, a task assigned him by Jupiter, in punishment, the later writers say, for his share in the Titan war. (*Hygin., fab.*, 150.) Atlas was the father of the fair nymph Calypso, who so long detained Ulysses in her island in the distant West. Pleione, an ocean-nymph, bore him seven daughters named Pleiades. (*Hes., Op. et D.*, 383.—*Schol. ad Il.*, 18, 486.) He was also said to be the father of the Hyades. (*Timæus, ap. Schol. ad Il.*, l. c.)—It is hardly necessary to state, that the Atlas of Homer and Hesiod is not the personification of a mountain. In process of time, however, when the meaning of the earlier legend had become obscured or lost, Atlas, the keeper of the pillars that support the heaven, became a mountain of Libya. It is remarkable, however, that, in all the forms which the fable assumes, it is the god or man Atlas who is turned into or gives name to the mountain. Thus, according to one mythologist (*Ovid, Met.*, 4, 631), Atlas was a king of the remotest West, rich in flocks and herds, and master of the trees that bore the golden apples. An ancient prophecy, delivered by Themis, had announced to him, that his precious trees would be plundered by a son of Jupiter. When, therefore, Perseus, on his return from slaying the Gorgon, arrived in the realms of Atlas, and, seeking hospitality, announced himself to be a son of the king of the gods, the western monarch, calling to mind the prophecy, attempted to repel him from his doors. Perseus, inferior in strength, displayed the head of Medusa, and the inhospitable prince was turned into the mountain which still bears his name. (*Ovid, l. c.*—*Serv. ad Æn.*, 4, 246.) According to another account, Atlas was a man of Libya, devoted to astronomy, who, having ascended a lofty mountain to make his observations, fell from it into the sea, and both sea and mountain were named after him. (*Tetz. ad Lycophr.*, v. 879.) His supporting the heavens was usually explained by making him an astronomer and the inventor of the sphere. (*Diocl. Sic.*, 3, 60.—*Id.*, 4, 27.—*Serv. ad Virg., Æn.*, 1, 741.)—There is also another curious legend relating to Atlas, which forms part of the fables connected with the adventures of Hercules. When this hero, in quest of the apples of the Hesperides, had come to the spot where Prometheus lay chained, moved by his entreaties, he shot the eagle that preyed upon his liver. Prometheus, out of gratitude, warned him not to go himself to take the golden apples, but to send Atlas for them, and, in the mean time, to support the heaven in his stead. The hero did as desired, and Atlas, at his request, went and obtained three apples from the Hesperides; but he said he would take them himself to Eurystheus, and that Hercules might continue to support the sky. At the suggestion of Prometheus the hero feigned consent, but begged him to take hold of the heavens till he had made a pad (*πίπαι*) to put on his head. Atlas threw down the apples and resumed his burden, and Hercules then picked them up and went his way. (*Pherecyd., ap. Schol. ad Apoll. Rhod.*, 4, 1396.)—Various elucidations of the legend of Atlas have been given by modern expounders of mythology. The best is that of Völcker. This writer, taking into consideration the meaning of his name, in connexion with the position assigned him by Homer and Hesiod, and the species of knowledge ascribed to him, and also his being the father of two of the constellations, regards Atlas as a personification of navigation, the conquest of the sea by human skill, trade, and mercantile profit. (*Völcker, Myth. der Iap.*, p. 51.) With this view Müller agrees. (*Proleg. zu einer wissenschaftl. Mythol.*—*Keightley's Mythology*, p. 287, *seqq.*)—II. A celebrated range of mountains in Africa. It is divided into two leading chains: the Greater Atlas runs through the kingdom of Morocco, as far south as the

desert of *Sahara*; the Lesser Atlas extends from *Marocco* towards the northeast to the northern coast. The great height of Mount Atlas is proved by the perpetual snows which cover its summits in the east part of *Marocco*, under the latitude of 32° . According to Humboldt's principles, these summits must be 12,000 feet above the level of the sea. Leo Africanus, who travelled here in the month of October, narrowly escaped being buried in an avalanche of snow. In the state of Algiers, the snow disappears on the tops of Jurjura and of Felizia in the month of May, and covers them again before the end of September. The Wanashize, situated in $30^{\circ} 55'$, and forming an intermediate chain between the maritime one and that of the interior, is covered with a mantle of snow nearly the whole of the year. The fertility of the region of Atlas is celebrated by Strabo and Pliny. The latter (15, 18) extols its figs, olives, corn, and valuable woods. (*Id.*, 17, 12.—*Id.*, 18, 7.—*Id.*, 13, 15.) He observes, that the wines had a certain sharpness, which was corrected by adding to them a little plaster (*Id.*, 14, 9), and says that the vineyards had a northern and western exposure. (*Id.*, 17, 2.) Strabo informs us (369), that the vine-trunks were sometimes so thick that two men could scarcely clasp them round, and that the clusters were a cubit in length. A horrible government and a total absence of civilization have not succeeded in annihilating these bounties of nature. Barbary and Marocco still export large quantities of grain. The olive-tree is superior here to that of Provence; and the Moors, notwithstanding the hostility to Bacchus, which marks their religion, cultivate seven varieties of the vine. The soil of the plains in many places resembles that of the rest of Africa, being light and sandy, and containing numerous rocks: but the valleys of Mount Atlas, and those of the rivulets which descend from it to the Mediterranean, are covered with a compact, fertile, and well-watered soil. Extensive forests cover the sides of the fertile mountains in the northern parts of these countries. All the valleys that have a moderate elevation form in April and May so many little Elysiums. The shade, the coolness, the bright verdure, the diversity of the flowers, and the mixture of agreeable odours, combine to charm the senses of the botanist, who, amid such scenes, might forget his native country, were he not shocked and alarmed by the barbarity of the inhabitants.—A question has arisen in modern times, whether the chain of mountains here described was really the Atlas of the ancients? This is denied by Ideler, who maintains that the Atlas of Homer and Hesiod is the *Peak of Teneriffe*. The Atlas of the Greek and Roman geographers he allows, on the other hand, to be the modern Mount Atlas. His arguments are given by Humboldt (*Tableaux de la Nature*, vol. 1, p. 144, *seqq.*), but are more ingenious than satisfactory. The Atlas of Herodotus might be a promontory of the southern chain, rising from the plains of the desert, such as Mount Saluban, in Biledulgerid, appears to be. It agrees with the distances assigned by this historian. It is, besides, possible, that all the contradictions mentioned by Ideler may owe their origin to that optical illusion by which a chain of mountains, seen in profile, has the appearance of a narrow peak. "When at sea," says Humboldt, "I have often mistaken long chains for isolated mountains." This explanation might be still farther simplified, if it were admitted that the name of Atlas belonged originally to a promontory remarkable for form and its peculiar isolated situation, such as most of those on the coast of Marocco. A curious passage in Maximus Tyrius seems to countenance this hypothesis:—"The Ethiopian Hesperians," says he (*Diss.*, 38.—p. 457, *seqq.*, ed. Oxon.), "worship Mount Atlas, who is both their temple and their idol. The Atlas is a mountain of moderate elevation, concave,

and open towards the sea in the form of an amphitheatre. Half way from the mountain a great valley extends, which is remarkably fertile, and adorned with richly-laden fruit-trees. The eye plunges into this valley as into a deep well, but the precipice is too steep for any person to venture to descend, and the descent is prohibited by feelings of religious awe. The most wonderful thing is to see the waves of the ocean at high water overspreading the adjacent plains, but stopping short before Mount Atlas, and standing up like a wall, without penetrating into the hollow of the valley, though not restrained by any earthly barrier. Nothing but the air and the sacred thicket prevent the water from reaching the mountain. Such is the temple and the god of the Libyans; such is the object of their worship and the witness of their oaths." In the physical delineations contained in this account, we perceive some features of resemblance to the coast between Cape *Tefelneh* and Cape *Geer*, which resembles an amphitheatre crowned with a series of detached rocks. In the moral description we find traces of fetishism; rocks remarkable for their shape being still worshipped by some negro tribes. (*Malte-Brun, Geogr.*, vol. 4, p. 155, *seqq.*)—Before closing this article it may not be amiss to remark, that, according to Pliny, the ancient Mauritians called Atlas *Dyris*. The chain of Atlas, at the present day, bears among the Arabs the name of *Darah* or *Daran*, the close approximation of which to the ancient appellation is easily perceived. Horn, on the contrary, however, recognises the term *Dyris* in *Aya-Dyrma*, the Guanche name for the *Peak of Teneriffe*. (*Hornius de Originibus Americanorum*, p. 185.—Humboldt, *Tabl. de Nat.*, vol. 1, p. 151.)

ATOSSA, a daughter of Cyrus the Great. She married her own brother Cambyzes, the first instance of the kind that occurred among the Persians, according to Herodotus (3, 31). After the death of Cambyzes she became the wife of the false Smerdis, and subsequently of Darius Hystaspis. (*Herod.*, 3, 88.) She possessed great influence over the last of these, in consequence of her royal birth, and her son Xerxes succeeded him on the throne. She was cured of a cancer in the breast by the Greek physician Democedes; and this individual, through a desire of returning to his native land, induced Atossa, it is said, to urge Darius to a war with Greece. (*Herod.*, 3, 133, *seqq.*)—According to Creuzer, the name Atossa is in Persian *Atesh*. There was also a city called Atusia in Assyria, on the river Caprus, whose coins displayed a female head, crowned with turrets, and also the inscription ΑΤΟΥΣΙΕΩΝ. (*Creuzer, ad Herod.*, 3, 68.—*Götting. Anzeig.*, 1811, nr. 78.)

ATRÆCES, the people of Atrax, an ancient colony of the Perræbi in Thessaly, ten miles from Larissa, higher up the Peneus, and on the right bank of that river. It was successfully defended by the Macedonians against T. Flaminius. (*Liv.*, 32, 15.—*Strabo*, 438 and 441.) Dr. Clarke was led to imagine, that this city stood at *Ampelakia*, from the circumstance of the green marble, known to the ancients by the name of Atræcium Marmor, being found there; but this supposition is erroneous, since it is evident from Livy that Atrax was to the west of Larissa, and only ten miles from that city; whereas *Ampelakia* is close to Tempe, and distant more than fifteen miles from Larissa. (*Cramer's Ancient Greece*, vol. 1, p. 386, *seqq.*)

ATRAMYTIIUM. *Vid.* Adramyttium.

ATRAX, I. a son of Ætolus, or, according to others, of the river Peneus. He was king of Thessaly, and built a town which he called Atrax. Hence the epithet *Atræcius* is sometimes employed with the same meaning as *Thessalus* or "Thessalian." (*Propert.*, 1, 8, 25.) Atrax was father to Hippodamia, who married Pirithoüs, and whom we must not confound

with the wife of Pelops, who bore the same name. (*Stat., Theb.*, 1, 106.—*Ovid, Met.*, 12, 209.)—II. An ancient city of Thessaly. (*Vid.* Atreaces.)—III. A river of Ætolia, running through the country of the Lœri Ozolæ, and falling into the Sinus Corinthiacus, to the west of Naupactus. (*Plin.*, 4, 2.)

ATREBATES, a people of Belgic Gaul, southeast of the Morini. They were a powerful community, and promised 15,000 men as their quota for the Nervian war against Julius Cæsar. (*B. G.*, 2, 4.) After their reduction by the Roman commander, Commius, one of their own nation, and friendly to Cæsar, was placed over them as king. Their capital was Nemetacum, afterward Atrebat, and now Arras, or, as the Flemings call it, *Atrecht*. Strabo writes the name of this people Ἀτρεῖβατοι, and Ptolemy Ἀτρεβάτιοι. (*Plin.*, 4, 17.—*Ptol.*, 2, 9.)

ATREBATI, a people of Britain, situate on both banks of the Tamesis or *Thames*, and occupying the larger part of *Oxfordshire*, *Buckinghamshire*, a part of *Middlesex*, and the southern part of *Berkshire*. Their chief city was Caleva, now *Silchester*. (*Manerct, Cægr.*, vol. 2, pt. 2, p. 193.)

ATREUS, son of Pelops and Hippodamia, and king of Mycenæ. Having, with his brother Thyestes, killed out of jealousy his half-brother Chrysippus, they were both banished by their father, who at the same time pronounced a curse on them, that they and their posterity should perish by means of one another. They retired to Midea, whence, on the death of Pelops, Atreus came with an army and took possession of his father's throne. (*Hellanicus, ap. Schol. ad Il.*, 2, 105.) Thyestes, it is said, afterward seduced Ærope, the wife of Atreus, who, for this offence, drove him from his kingdom; and Thyestes, out of revenge, sent Atreus's son Plisthenes, whom he had brought up as his own, to murder his father. Atreus, taking the youth to be the son of Thyestes, put him to death, and the curse of Pelops began thus to be accomplished. (*Hygin., fab.*, 86.) Others, however, make Plisthenes to have died a natural death, and on friendly terms with his father, and Atreus to have married his widow Ærope. (*Vid.* Ærope.)—Another legend thus accounts for the enmity between the brothers. Mercury, in order to avenge his son Myrtilus, whom Pelops had murdered, put a gold-fleeced lamb into the flocks of Atreus, between whom and Thyestes, according to this version of the story, the kingdom was disputed. Atreus, in order to prove that the kingdom by right was his, said he would produce a gold-fleeced lamb. Thyestes, however, having corrupted Atreus's wife Ærope, had got the lamb; and, when Atreus could not exhibit it as he promised, the people, thinking he had deceived them, deprived him of his kingdom. Some time after, however, Atreus returned, and said that, to prove his right, he would let them see the sun and Pleiades moving from west to east. This miracle Jove performed in his favour, and he thus obtained the kingdom, and drove Thyestes into exile. (*Schol. ad Eurip., Orest.*, 802, 995.—Compare the somewhat different account of Eudocia, *Vallois., Anecd. Græc.*, vol. 1, p. 77.)—Another legend continues the tale in a more horrible and tragic form. Atreus, it is said, invited his brother to return, promising to bury all enmity in oblivion. Thyestes accepted the proffered reconciliation; a feast was made to celebrate it; but the revengeful Atreus killed the two sons of Thyestes, and served the flesh up to their father; and, while Thyestes was eating, he caused the heads and hands of his children to be brought in and shown to him. The sun, it is said, at the sight of this horrible deed, checked his chariot in the midst of his course. (*Schol. ad Eurip., Orest.*, 802.—*Hygin., fab.*, 88, et 258.—*Senec., Thyest.*) Thyestes fled to Thesprotia, whence he went to Sicily, where his daughter Pelopia dwelt. He arrived on the very night in which she was to offer a sacrifice to

Minerva, met her in the dark, and forcibly embraced her, without knowing who she was. In the struggle she drew his sword from the sheath, and, taking it back with her, concealed it in Minerva's temple. Meantime famine and plague had come to punish the crime of Atreus; and the oracle had declared that, to remove it, Atreus should bring back his brother. He went to Thesprotia in search of him, saw Pelopia by the way, and, supposing her to be the daughter of the King of Sicily, demanded her in marriage. He obtained her hand. She, however, was already pregnant by her father, and, shortly after her marriage, brought forth a son, whom Atreus caused to be exposed; but the herdsman, taking pity on him, reared him on the dugs of a she-goat (αἰς, αἰγός), whence he derived his name, Ægisthus. Atreus, hearing he was alive, had him sought for, and brought him up as his own son. Atreus afterward sent Agamemnon and Menelaus in search of Thyestes. They went to Delphi, where they met him, he having also come to consult the god on the nature of the vengeance which he should seek to take on his brother. They seized and brought him to Atreus, who cast him into prison. Atreus then called Ægisthus, and directed him to put the captive to death. Ægisthus went to the prison, bearing the sword which his mother had given him; and the moment Thyestes beheld it, he knew it to be the one which he had lost, and asked the youth how he had come by it. He replied that it was the gift of his mother. At the desire of Thyestes, Pelopia came, and the whole deed of darkness was brought to light. The unfortunate daughter of Thyestes, under pretence of examining the sword, plunged it into her bosom. Ægisthus drew it forth reeking with blood, and brought it to Atreus as a proof of having obeyed his commands. Rejoiced at the death, as he thought, of his brother, Atreus offered a sacrifice of thanksgiving on the seashore; but, while he was engaged in it, he was attacked and slain by Thyestes and Ægisthus. (*Hygin., l. c.*)—This is the most horrible legend in the Grecian mythology. It is evidently post-Homeric, since it is utterly irreconcilable with the account of the Pelopidae, as given in the Homeric poems. Of Agamemnon's sceptre it is there said, that Vulcan made it and gave it to Jupiter, who gave it to Mercury, by whom it was presented to "horse-lashing" Pelops, who gave it to Atreus, the shepherd of the people, who, when dying, left it to "lamb-abounding" Thyestes, who left it to Agamemnon. (*Hom., Il.*, 2, 101, *seqq.*) Here we have a family of princes legitimately transmitting the sceptre from one to another, a state of things totally at variance with the atrocities that have been related. It was probably at the time when the Greeks had become familiar with Asia and the barbarous regions round the Euxine, that the nameless deeds of the line of Pelops were invented. The author of the *Alcæmonis*, whoever he was, is said to have related the story of the gold-fleeced lamb. (*Schol. ad Eurip., Orest.*, 995.) We know not who first told of the horrid banquet, but we find it frequently alluded to by Æschylus (*Agam.*, 1104, 1228, *seqq.*; 1594, *seqq.*; *Chœph.*, 1065), though he does not appear to have made the deeds of Atreus and Thyestes the subject of a drama. Sophocles wrote two *Thyestes*, and Euripides one; and we have probably their contents in the legends transmitted to us by Hyginus. (*Keightley's Mythology*, p. 447, *seqq.*)

ATREÏDÆ, a patronymic given by Homer to Agamemnon and Menelaus, who were brought up by their grandfather Atreus, as if they had been his own sons, the term *Atridæ* meaning "sons of Atreus." (Consult remarks at the commencement of the article Agamemnon.)

ATROPATIA or ATROPATENÊ, a name given to the northwestern part of Media, between Mount Taurus and the Caspian Sea. It received this name from

Atropates, a satrap of this province, who, after the death of Alexander, rendered himself independent, and took the title of king, which his successors enjoyed for many ages. It was a cold, barren, and inhospitable country, and on that account allotted by Shalmanezar for the residence of many captive Israelites, after the conquest of their kingdom. It is now called *Aderbigian*, from the Persian term *Ader*, signifying *fire*; according to the tradition that Zerdust or Zoroaster lighted a pyre, or temple of fire, in a city named *Urmiah*, of this his native country. Its metropolis was Gaza, now *Tebzir*, or, as it is more commonly pronounced, *Tauris*. (*Strab.*, 360.—*Plin.*, 6, 13.)

ATROPŌS, one of the Parcæ, daughter of Nox and Erebus. According to the derivation of her name (*a, priv.*, and *τρέπω*, "to turn" or "change"), she is inexorable and inflexible, and her duty among the three sisters is to cut the thread of life without any regard to sex, age, or condition. (*Vid.* Parcæ.)

ATTA, Titus Quintus, a Roman comic writer, who died A.U.C. 633, B.C. 121. His productions appear to have been extremely popular in the time of Horace, though, as would seem from the language of the latter, not very deserving of it. (*Hor.*, *Ep.*, 2, 1, 79.) He received the surname of Atta from a lameness in his feet, which gave him the appearance of a person walking on tiptoe. Thus Festus remarks: "*Attæ appellatur, qui, propter vitium crurum aut pedum, plantis insistent et attingunt magis terram quam ambulant.*" It is to this personal deformity that Horace (*l. c.*) pleasantly alludes, when he supposes the plays of Atta to limp over the stage like their lame author. Bothe's assertion, that Atta also composed tragedies, is contradicted by Schmid. (*Ad Hor.*, *l. c.*—Compare *Crin.*, *Poet. Lat.*, c. 23.—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 111, *seqq.*)

ATTALĒA, I. a city of Pamphylia, southwest of Perga, built by King Attalus II. The site of this city is called *Palata Attalia*, while the modern city of *Attalia*, or, as it is commonly called, *Satalia*, answers to the ancient Olbia. (*Cramer's Asia Minor*, vol. 2, p. 275.)—II. A city of Lydia, on the river Hermus, and northeast of Sardis. Its earlier name was Agroira or Alloira. (*Steph. Byz.*, s. v.) The ecclesiastical notices have recorded some of its bishops. The site is occupied by a village called *Adala*. (*Keppel's Travels*, vol. 2, p. 335.—*Cramer's Asia Minor*, vol. 1, p. 435.)

ATTALICUS. *Vid.* Attalus II.

ATTĀLUS, I. king of Pergamus, succeeded Eumenes I. This prince was first proclaimed king of Pergamus after a signal victory obtained by him over the Gallo-Græci, or Galatæ, and, for his talents and the soundness of his policy, deserves a distinguished place among the sovereigns of antiquity. He formed, at an early period, an alliance with the Romans, whom he vigorously assisted in their two wars against Philip of Macedon. In conjunction with the Athenians, he invaded Macedonia, and recalled Philip from his enterprise undertaken against Athens; on which account the Athenians gave his name to one of their tribes. His wealth was so great as to become proverbial. (*Hor.*, *Od.*, 1, 12.) He had married Apollonias, a lady of Cyzicus, of obscure birth, but great merit and virtue: by her he had four sons, Eumenes, Attalus, Philætaus, and Athenæus. He died at an advanced age, after a prosperous reign of 43 or 44 years, and was succeeded by Eumenes. (*Polyb.*, 18, 24.—*Liv.*, 33, 21.—*Strab.*, 624.)—II. The 2d of the name succeeded his brother Eumenes II., B.C. 159. Before ascending the throne he had been twice sent to Rome, to solicit aid against Antiochus the Great and against the Greeks. When he commenced his reign, he found two adversaries in Prusias of Bithynia and Demetrius Soter, who meditated the conquest of his

kingdom; and the Romans appeared little disposed to aid him. Prusias in fact gained some advantages over him, but Attalus eventually, by his valour and skilful, freed himself from his foes. The friendship of the Romans, subsequently conciliated by him, placed him in security for the time to come, and he devoted the period of repose thus afforded him to the building of cities, and the munificent patronage of learning. He died at the age of 82, after a reign of 21 years, having been poisoned by his nephew, the son of Eumenes II. Attalus was surnamed *Philadelphus*, from the fraternal love he displayed towards his brother Eumenes during the lifetime of the latter. (*Liv.*, 35, 23.—*Id.*, 37, 43.—*Id.*, 38, 12.—*Justin*, 25, 1.)—III. The third of the name was son of Eumenes II., and succeeded to the throne after poisoning his uncle Attalus II. He made himself extremely odious by the destruction of many of his relations and friends. Repenting soon after of his cruelties, he assumed all the habiliments of sorrow; and subsequently, giving up the cares of government to others, he turned his attention to gardening. In full accordance, however, with his natural disposition, he bestowed particular attention upon the cultivation of noxious and poisonous plants, which he intermingled with the fruits and flowers that he sent as presents to his friends. He afterward turned his attention to the melting and working of metals. Attalus died after a reign of five years, from a stroke of the sun, while superintending the erection of a tomb for his mother, his affection for whom had procured him the surname of *Philometor*. He died without issue, and his will is said to have contained the following words: "*Populus Romanus bonorum meorum hæres esto.*" The Romans regarded this as conveying to them the entire kingdom, and accordingly made it a province of their empire. Considering all the circumstances of the case, and especially the character of the testator, the construction which the Romans put upon the words in question was fair enough. Mithradates, however, in his letter to Arsaces (*Sall.*, *Hist. fragm.*, p. 409, *ed. Burnouff*), regards it as a forced and fraudulent interpretation. (*Justin*, 36, 4.—*Vell. Patere.*, 2, 4.—*Liv.*, *Ep. et Suppl.*, 58.)

ATTHIS, a daughter of Cranaus the successor of Cecrops. She was fabled to have given name to the country of Attica. (*Apollod.*, 3, 14, 5.)

ATTICA, a country of Greece, without the Peloponnesus, forming a kind of triangular peninsula, and bounded on the north by Bœotia and the Euripus; on the west by Megaris; on the south by the Sinus Saronicus; and on the east by part of the *Ægean Sea*; extending from northwest to southeast about eighty miles, with decreasing breadth, but at an average of about forty miles. According to the popular account, it received its name from Atthis, the daughter of Cranaus. The more correct etymology, however, is from *ἀκτή* (*actê*), the Greek term for "*shore*," the country being of a peninsular shape, or, in other words, two sides of it being shore. The original name, therefore, would seem to have been *Acta*, which was afterward changed to the more euphonious *Attica*. (*Plin.*, 4, 11.—*Harpocrat.*, s. v. *ἀκτή*.—*Aul. Gell.*, 3, 6.—*Eustath.*, *ad Dionys. Perieg.*, 413.) The situation of Attica marked it out in an eminent degree for a commercial country. The base, or northern side of the irregular triangle which it forms, is applied to the continent of Greece; with its eastern face it looks towards Asia; from its apex on the south, it contemplates Egypt; and on the west it directs its view to the Peloponnesus, and to the countries of Italy and Sicily lying beyond it. By this combination of the advantages of inland communication with those of an extensive and various intercourse with all the civilized countries of the world, it was distinguished from all the other states both of the peninsula and continent of Greece. As Greece was

the centre of the civilized world of antiquity, so was Attica the centre of Greece; and as the climate and temperature of Hellas was considered to be more favourable than that of any other country of Europe or Asia, for the healthy and vigorous development of the physical and intellectual faculties of man, so did every Hellenic province yield in these respects to the superior claims of the Athenian territory. Again: it was not merely aided by these natural advantages, which arose from its form, its position, and its climate; the very defects also under which this country laboured, the very difficulties with which it was compelled to struggle, supplied to Attica the inducements, and afforded it the means, for availing itself in the most effectual manner of those benefits and privileges with which nature had so liberally endowed it. One of these apparent deficiencies was the barrenness of its soil. The geological formation of Attica is primitive limestone: on its northern frontier a long ridge of mountains, consisting of such a stratification, stretches from east to west: a range of similar character bounds it on the west, and in the interior of the country it is intersected with hills from north to south, which belong to the same class. Thus it will appear that the geographical dimensions of Attica, limited as they are, must be reduced by us within a still narrower range, when we consider it as far as it is available for the purposes of cultivation. In this respect, its superficial extent cannot be rated at more than one half the value which has been assigned to the whole country. The mountains of which we have spoken are either bare or rugged, or thinly clad with scanty vegetation and low shrubs. The mountain pine is found on the slopes of Laurium; the steeps of Parnes and Pentelicus are sprinkled over with the dwarf oak, the lentisk, the arbutus, and the bay. But the hills of this country can boast few timber trees; they serve to afford pasture to numerous flocks of sheep and goats, which browse upon their meager herbage and climb among their steep rocks, and to furnish fuel to the inhabitants of the plain. While such is the character of the mountainous districts of the province, its plains and lowlands cannot lay a much better claim to the merit of fertility. In many parts of them, as in the city of Athens itself, the calcareous rock projects above the surface, or is scarcely concealed beneath a light covering of soil: in no instance do they possess any considerable deposit of alluvial earth. The plains of this country are irrigated by few streams, which are rather to be called torrents than rivers, and on none of them can it depend for a perennial supply of water. There is no lake within its limits. It is unnecessary to suggest the reason, where such was the nature of the soil, that the olive was the most common, and also the most valuable, production of Attica. Such then were some of the physical defects of the land. But these disadvantages were abundantly compensated by the beneficial effects which they produced. The sterility of Attica drove its inhabitants from their own country. It carried them abroad. It filled them with a spirit of activity, which loved to grapple with danger and difficulty: it told them, that, if they would maintain themselves in the dignity which became them, they must regard the resources of their own land as nothing, and those of other countries as their own. It arose also from the barrenness of her soil, that Attica had always been exempt from the revolutions which in early times agitated the other countries of Greece; and hence Attica, secure in her sterility, boasted that *her* land had never been inundated by tides of immigration. The race of her inhabitants had been always the same; nor could she tell whence they had sprung; no foreign land had sent them; they had not forced their way within her confines by a violent irruption. She traced the stream of her population in a backward course, through many

generations, till at last it hid itself, like one of her own brooks, in the recesses of her own soil. This belief that her people was indigenous, she expressed in different ways. She intimated it in the figure which she assigned to Cecrops, the heroic prince and progenitor of her primeval inhabitants. She represented him as combining in his person a double character; while the higher parts of his body were those of a man and a king, the serpentine folds in which it was terminated declared his extraction from the earth. The cicadæ of gold, which she braided in the twinings of her hair, were intended to denote the same thing; they signified that the natives of Attica sprang from the soil upon which these cicadæ sang, and which was believed to feed them with its dew. (*Wordsworth's Greece*, p. 69, *seqq.*)—The total population of Attica, in B.C. 317, may be taken at 527,660. Of these the free inhabitants amounted to 90,000; the resident aliens to 45,000; while the slaves made up the residue. Of the free inhabitants of Attica, the *citizens*, or those who had votes in the public assembly, amounted to 21,000. About 127 years before they had been 19,000, until Pericles reduced their number. Twenty thousand were computed as the number in the earliest times, under Cecrops. (*Schol. ad Pind., Ol., 9, 68.*) The slaves of Attica, at the census made B.C. 309, when Demetrius was archon *eponymus*, were 400,000. Hume, in his Essay on the Populousness of Ancient Nations (*Essays*, vol. 1, p. 443), thinks, that there is error or corruption in this high number, and that for 400,000 we ought to read 40,000 (namely, *τετρακταμύριον* instead of *τεσσαράκοντα μυριάδας*). But he forgets, that in this enumeration of 400,000 we are not to take the slaves as all males of full age. Slaves were property, and therefore, in enumerating them, it would be necessary to compute all the individuals who composed that property. The 400,000 therefore express all the slaves, of either sex and of every age, and in this number the men of full age would be less than 100,000. (*Clinton, Fast. Hell.*, vol. 1, p. 387, *seqq.*)—Some remarks on the ancient kings of Attica will be found under the article Cecrops, and on the coinage and commerce of the Athenians, under Mina and Piræus.

ARRICIUS, I. Titus Pomponius, a Roman knight, who, in the most agitated times, preserved the esteem of all parties. The Pomponian family, from which he originated, was one of the most distinguished of those of equestrian rank, and pretended to derive its origin from Numa Pompilius. Atticus lived in the latter period of the republic, and acquired great celebrity from the splendour of his private character. He inherited from his father, and from his uncle Q. Cæcilius, great wealth. When he attained maturity, the republic was disturbed by the factions of Cinna and Sylla. His brother Sulpicius, the tribune of the commons, being killed, he thought himself not safe in Rome; for which reason he removed with his fortune to Athens, where he devoted himself to science. His benefits to the city were so great, that he gained the affections of the people in the highest degree. He acquired so thorough a knowledge of Greek, that he could not be distinguished from a native Athenian, and hence the surname of *Atticus* bestowed upon him. When Rome had acquired some degree of quiet, he returned, and inherited from his uncle ten millions of sesterces. His sister married the brother of Cicero. With this orator, as well as with Hortensius, he lived on terms of intimate friendship. It was his principle never to mix in politics, and he lived undisturbed amid all the successive factions which reigned in Rome. Cæsar treated him with the greatest regard, though he was known as a friend of Pompey's. After the death of Cæsar he lived in friendship with Brutus, without, however, offending Antony. When Brutus was obliged to flee from Italy, he sent him a million

of sestercies; and likewise supported Fulvia, the wife of Antony, after the battle of Mutina, and therefore was spared when fortune again smiled on Antony, and the friends of Brutus generally were the victims of his vengeance. Even in the bad times of the triumvirate, he caused all the proscribed who fled to Epirus to be liberally relieved from his estates in that country, and by his interest recovered the forfeited property of several of them. Such was his credit with Octavius, that his daughter was preferred to all the great matches of Rome as a wife for his friend Agrippa. Octavius himself cultivated the closest intimacy with Atticus, who, at the same time, maintained an equally intimate correspondence with Antony. The mode of living pursued by Atticus was that of a man of great fortune, whose mind was devotedly attached to literary and philosophical pursuits. His domestics were not numerous, but choice and well educated; his table was elegant, but not costly; and he delighted in what would now be called literary suppers, where an anagnostes always read something aloud, in order that the guests might enjoy a mental as well as physical banquet. He was extremely studious, much attached to inquiries relative to the antiquities of his country, its laws, customs, and treaties, and wrote several works on these subjects, which appear to have been much valued. The conclusion of his life was conformable to the principles of Epicurean philosophy, by which it had been all along governed. Having reached the age of seventy-seven with little assistance from medicine, he was seized with a disorder in the intestines, which terminated in an ulcer deemed incurable. Convinced of the nature of his case, he ordered his son-in-law Agrippa, and other friends, to be sent for, and declared to them his intention of terminating his life by abstaining from food. When, in spite of their affectionate entreaties, he had persisted in this resolution for two days, some of the unfavourable symptoms of his complaint abated; but, not thinking it worth while to take the chance of a cure, he persevered, and the fifth day closed his existence, B.C. 33.—In modern times the character of Atticus has been the subject of much curious discussion, and his neutrality in the midst of civil contentions has, by some politicians, been termed selfish and criminal. From the fearless generosity which he exhibited to the unfortunate on all sides, it may, however, be presumed that, looking on the state of the commonwealth without passion, he was convinced of the inutilty of attempting to stop an inevitable career. Certain it is, that as a medium of friendship, a reconciler of differences, and a protector against the ferocity of party hatred, he was eminently serviceable in the calamitous times in which he lived; and possibly, with his cast of temper and talents, could scarcely have acted more beneficently for his country as well as for himself. His line of conduct has been attributed to his Epicurean philosophy; but native disposition and temper must have formed his peculiar character much more than speculative principles. The correspondence between Cicero and Atticus is highly honourable to both parties, especially as the latter was also intimate with his rival Hortensius, and a mediator between them. According to Cicero, Atticus wrote annals of great value, comprising a sort of universal history for 700 years. (*Corn. Nep. in Vit.—Aikin's Gen. Dict., s. v.—Gorton's Biog. Dict., vol. 1, p. 134, seq.—Encyclop. Americ., vol. 1, p. 457.*)—II. Herodes, or Tiberius Claudius Atticus Herodes, an Athenian philosopher and statesman of the age of the Antonines. His father, Julius Atticus, descended from the family of Miltiades, was raised from indigence to wealth by the discovery of a hidden treasure. Herodes received an education suitable to the condition to which his father had been advanced by this fortunate accession to his property. Scholastic rhetoric, or the art of declamation, then esteemed a

most fashionable accomplishment, became his principal study; and he prosecuted it under the first masters of the age with such success as to acquire great reputation as an orator. After travelling abroad, he settled at Athens, and gave public lectures on eloquence, which were attended by sophists and rhetoricians, whose admiration of his talents was, perhaps, not altogether disinterested, as his hospitality and munificence were lavishly extended to his followers. The fame of Herodes reached from Athens to Rome, and he was invited by the Emperor Antoninus Pius to become rhetorical tutor to Marcus Aurelius and Lucius Verus, the adopted sons and destined successors of Antoninus. This promotion led to his being created consul A.D. 143. He was also made prefect of the free cities of Asia Minor, and president of the Panhellenic and Panathenean games, at which he was crowned. He testified his sense of this honour by building a marble stadium, or course for running matches, one of the grandest works ever executed by a private individual. He also erected a new theatre at Athens, and repaired and embellished the Odeon of Pericles. These and other splendid monuments of his wealth and liberality have perpetuated his name, while his literary productions have perished. The latter part of the life of Herodes was embittered by the ingratitude of his fellow-citizens, who preferred accusations against him in his public capacity; but these were quashed by the friendship of his pupil Marcus Aurelius, then emperor. He passed his latter days at Marathon, his birthplace, where he died about A.D. 185, aged seventy-five. His remains were interred at Athens with public honours. (*Gorton's Biogr. Dict., vol. 1, p. 134.*)

ATTILA (in German, *Etzel*), the son of Mundzuck, or, as he is less correctly called, Mandras, a Hun of royal descent, who succeeded his uncle Rugilas (A.D. 433), and shared the supreme authority with his brother Bleda. These two leaders of the barbarians, who had settled in Scythia and Hungary, threatened the Eastern empire, and twice compelled the weak Theodosius II. to purchase an inglorious peace. Their power was feared by all the nations of Europe and Asia. The Huns themselves esteemed Attila their bravest warrior and most skilful general. Their regard for his person soon amounted to superstitious reverence. He gave out that he had found the sword of their tutelary god, the Scythian Mars, the possession of which was supposed to convey a title to the whole earth; and, proud of this weapon, which added dignity to his power, he designed to extend his rule over the world. He caused his brother Bleda to be murdered (A.D. 444), and, when he announced that it was done by the command of God, this murder was celebrated like a victory. Being now sole master of a warlike people, his unbounded ambition made him the terror of all nations; and he became, as he called himself, the *Scourge of God* for the chastisement of the human race. In a short time he extended his dominion over all the people of Germany and Scythia, and the Eastern and Western emperors paid him tribute. The Vandals, the Ostrogoths, the Gepidæ, and a part of the Franks, united under his banners. Some historians assure us that his army amounted to 700,000 men—His portrait, as given by Jornandes, was that of a modern Calmuc, with a large head, swarthy complexion, flat nose, small sunken eyes, and a short, square body. His looks were fierce, his gait proud, and his deportment stern and haughty; yet he was merciful to a suppliant foe, and ruled his own people with justice and lenity.—When he had heard a rumour of the riches and power of Persia, he directed his march thither. He was defeated on the plains of Armenia, and fell back to satisfy his desire of plunder in the dominions of the emperor of the East. He easily found a pretext for war; he therefore went over to Illyricum, and laid waste all the countries from the Euxine to the Adriatic.

The Emperor Theodosius collected an army to oppose his progress; but in three bloody battles fortune declared herself for the barbarians, and Constantinople was indebted to the strength of its walls, and to the ignorance of the enemy in the art of besieging, for its preservation. Thrace, Macedonia, and Greece all submitted to the savage invader, who destroyed seventy flourishing cities. Theodosius was at the mercy of the victor, and was compelled to purchase a peace. A scheme was laid in the court of Theodosius to assassinate him under the cover of a solemn embassy, which intention he discovered; and, without violating the laws of hospitality in the persons of the ambassadors, wisely preferred a heavy ransom for the principal agent in the plot, and a new treaty at the expense of fresh payments. On the accession of Marcian, Attila demanded tribute, which was refused; and, although much exasperated, he resolved first to turn his arms against the Western Emperor Valentinian, whose licentious sister Honoria, in revenge for being banished for an intrigue with her chamberlain, sent an offer of herself to Attila. The Hun, perceiving the pretence this proposal supplied, preceded his irruptions into Gaul by demanding Honoria in marriage, with a share of the imperial patrimony. Being of course refused, he affected to be satisfied, and pretended he was only about to enter Gaul to make war upon Theodoric, king of the Ostrogoths. He accordingly crossed the Rhine, A.D. 450, with a prodigious host, and marked his way through Gaul with pillage and desolation, until completely defeated by Theodoric and the famous Ætius, in the bloody battle of Chalons. He was, however, allowed to retreat, and, having recruited his forces, he passed the Alps the next year and invaded Italy, spreading his ravages over all Lombardy. This visitation was the origin of the famous republic of Venice, which was founded by the fugitives who fled at the terror of his name. Valentinian, unable to avert the storm, repaired from Ravenna to Rome, whence he sent the prelate Leo with a solemn deputation, to avert the wrath of Attila, who consented to quit Italy on receiving a vast sum as the dowry of Honoria, and an annual tribute. He did not much longer survive these transactions; and his death was singular, he being found dead, in consequence of suffocation from a broken blood-vessel, on the night of his marriage with a beautiful young virgin named Ildegund. This event took place in 453. The news of his death spread sorrow and terror in the army. His body was enclosed in three coffins: the first was of gold, the second of silver, and the third of iron. The captives who had made the grave were strangled, in order that the place of interment might be kept concealed from his foes. (*Menzel, Gesch. der Deutschen*, p. 93, *seqq.*—*Gorton's Biogr. Dict.*, vol. 1, p. 135.—*Encyclop. Americ.*, vol. 1, p. 457, *seqq.*)

ATTILIUS, I. one of the first three military tribunes with consular power, chosen by the people, B.C. 444, in place of the regular consuls. (*Liv.*, 4, 7.)—II. Regulus. (*Virg. Regulus*).—III. Calatinus, consul B.C. 258, in which year he took the city of Mylistratus, in Sicily. Chosen consul again B.C. 256, he captured Panormus and many other cities. In B.C. 249 he was appointed dictator.—IV. A Roman poet, who translated into Latin verse the Electra of Sophocles. From the allusion made to him by Cicero, he appears to have been a very harsh and rugged writer. (*Cic., de Fin.*, 1, 2.—*Ep. ad Att.*, 14, 20.)—V. A freedman, who (A.D. 27) exhibited games at Fidenæ in an amphitheatre so badly constructed that it broke down, and killed or wounded 50,000 persons. In consequence of this he was banished, and a law was made prohibiting any individual from exhibiting games who was not possessed of a fortune of 400,000 sesterces, and thus enabled to erect a secure edifice. It was ordained also that buildings intended for such purposes

should be erected on a firm foundation. (*Tac., Ann.*, 4, 62.)

ATTIUS, I. (or Accins, as he is sometimes, but improperly, called), a Roman tragic writer, born A.U.C. 584. His style was harsh; but he was, notwithstanding, held in high estimation by his countrymen for the force and eloquence of his productions. Horace, in the same line where he celebrates the dramatic skill of Pæuvius, alludes to the loftiness of Attius (*Epist.*, 2, 1, 56), by which is meant sublimity both of sentiment and expression. Most of the plays of Attius were taken from the Greek tragedians; two of them, however, the *Brutus* and the *Decius*, hinged on Roman subjects, and were both probably written in compliment to the family of his patron Decius Brutus. (*Dunlop's Roman Literature*, vol. 1, p. 350, *seqq.*—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 79, *seq.*)—II. Tullius, the general of the Volsci, to whom Coriolanus fled when banished from Rome. (*Vid.* Coriolanus.)

ATTUS NAVIUS, a Roman augur, of whom a marvellous story is related. Tarquinius Priscus, after his victory in the Sabine war, which was owing to his having doubled the number of his cavalry, wished to double the number of the equestrian centuries, and to name the three new ones after himself and his friends. His design was opposed by the augur Attus Navius, who represented, that Romulus had acted under the guidance of the auspices in regulating the centuries, and that nothing but the consent of the auspices could warrant a change in the distribution of the knights. Attus was by descent a Sabine; the gift of observing and interpreting auguries was the endowment of his countrymen; even when a boy, without instruction, he had practised the art, and afterward, on being taught, had acquired the greatest insight into it that any priest ever attained to. Tarquinius, to shame the augurs, or for his own conviction, as Cæsius tried the veracity of the oracle, commanded him to divine whether what he was at that moment thinking of were possible or impossible. When Attus had observed the heavens and declared that the object of the king's thoughts could be effected, Tarquinius held out to him a whetstone, and a razor to split it with; the augur did so without delay. The whetstone and razor were preserved in the Comitium under an altar: beside them, on the steps of the senate-house, stood the statue of Attus, a priest, with his head muffled. (*Liv.*, 1, 36.—*Dion. Hal.*, 3, 70, *seq.*—*Cic., de Div.*, 1, 17, § 32.—*Niebuhr's Rom. Hist.*, vol. 1, p. 307, *seqq.*, 2d ed., *Cambridge transl.*)

ΑΤΥΝΑΞ, the descendants of Atys, an ancient king of Lydia. (*Vid.* Atys I.)

ATYS, I. an ancient king of Lydia. He is mentioned by Herodotus, who calls him the son of Manes (1, 95). The historian, however, in another part of his work, makes the son of Manes to have been Cotys (4, 45), a circumstance which has occasioned some trouble to the commentators. Wesseling (*ad Herod.*, 4, 45) thinks it probable that Manes had two sons, Atys and Cotys. It seems more natural, however, to make Atys and Cotys two names for one and the same person, the latter appellation being evidently the same as the former, except that it commences with a strong aspirated consonant, and has the vowel sound changed. Lanzi sees in the name Atys an Etrurian root. (*Saggio di Ling. Etrusc.*, vol. 2, p. 223.) The appellation *Manes*, moreover, is given in the Vatican MS. as *Masnes* (Μάσνης), which last approximates to *Masses* (Μάσσης), a form sometimes given to the name of the river god Marsyas. (*Plut., de Mus.*, p. 1133.—*Müller, Etrusk.*, vol. 1, p. 81, *not.*) Ritter considers *Manes* and *Atys* as appellations of Oriental origin, made euphonic by the Greeks, and connects them with the early worship of Buddha. According to this writer, *Manes* (*Man-es*) is nothing more than the term "man," and to the same family of words belong the

Hindu *Mennu*, the Egyptian *Menes*, the Greek *Minos*, and even the Latin *mens*. On the other hand, *Cotys* or *Khodo* is the same as the *Boda* of the Persians. (*Vorhalle*, p. 365.)—II. A son of Cræsus, king of Lydia. His father dreamed that Atys was to be killed by the point of a spear, and therefore, in order to frustrate the prediction, kept his son at home, and carefully avoided exposing him to any danger. Meanwhile, a large wild boar infested the country around the Mysian Olympus, and the inhabitants of the adjacent territory applied to Cræsus for assistance against the animal. After urgent entreaties on the part of the young prince, his father allowed him to accompany the hunters sent out from Lydia to the aid of the Mysians, but gave him in charge to Adrastus, a Phrygian of royal birth, who had slain by accident his own brother, and had been purified of the homicide by Cræsus. The party encountered the boar, and, in making the onset, Atys was killed by an accidental blow from the javelin of Adrastus, the very one who had been appointed by Cræsus to guard him from danger. Such is the account of Herodotus (1, 34, *seqq.*). Ptolemy, the son of Hephæstion, calls the son of Cræsus, whom Adrastus slew, by the name of Agathon. He also states, that the young prince had a dispute with Adrastus about a quail, in which he fell by the hand of the latter. (*Photius, Bibl.*, vol. 1, p. 146, *ed Bekker.*)—III. A Trojan who came to Italy with Æneas, and was fabled to have been the progenitor of the family of the Attii at Rome. (*Virg., Æn.*, 5, 568.)—IV. A beautiful shepherd of Phrygia, beloved by Cybele, and to whom she intrusted the care of her altars and the superintendence of her religious ceremonies. Having proved unfaithful to the goddess, she inspired him with phrensy to such a degree, that, in a paroxysm of his malady, he deprived himself of his virility. Ovid, however, makes him to have been changed by the goddess into a pine-tree (*Mét.*, 10, 104). According to Diodorus, on the other hand, who assigns Mæon, king of Phrygia, as the mortal father of Cybele, Atys was put to death by her parent on discovering the intimacy subsisting between the parties. (*Diod. Sic.*, 3, 58.) Another, and wilder legend, of Lydian origin, may be found in Pausanias (7, 17.—Compare *Catull.*, *de Aty*, &c.—*Ovid, Fast.*, 4, 223.—*Lucian, de Dea Syra*). The fable of Atys is astronomical in its origin. Atys, deprived of his virility, is a symbol of the sun, shorn of its generative powers in the season of winter, and moving in the lower hemisphere: the luminary of day resumes its energies on ascending into the upper hemisphere. Atys, an incarnation of the sun, is himself the first of the Galli; and his priests, by a voluntary mutilation, celebrate the period of his weakness and impotence. But as, in accordance with a decree of the gods, not a single member of Atys is to perish, every year he returns to the upper world, and celebrates anew his union with Cybele. This return, this renewal of the productive powers and the fecundity of nature, gave rise to all those demonstrations of savage joy which are so well described in the verses of Lucretius (2, 618, *seqq.*). For farther remarks illustrative of this curious portion of ancient mythology, consult *Creuzer's Symbolik, par Guignaut*, vol. 2, p. 69, *seqq.* As regards the different forms of the name, *Atys*, *Attis*, or *Attes*, consult the remarks of Hemsterhuis (*ad Lucian.*, D. D. 12), and of Grævius (*ad Lucian.*, *de Dea Syra*, 15). Diodorus says that Atys was subsequently called *Papas* (Πάπας), which is, no doubt, the same with the old Greek word *πάπας* or *πίππας*, "father," other forms of which are *ἄππα*, *ἄππα*, and *ἄπφα*. We see lurking, therefore, in the names *Atys*, *Attis*, *Attes*, and *Papas*, a reference to the sun as the great father of life and parent of fertility. (Compare the remarks on the origin of the name Apollo, under that article.)

AVARICUM, a strongly fortified town of Gaul, the

capital of the Bituriges, now *Bourges*. It received its former appellation from the river Avara, or *Eure*, one of the southern branches of the Liger. It was taken by Cæsar during the Gallic wars, and its inhabitants massacred. (*Cæs., Bell. Gall.*, 7, 27, *seqq.*)

AVELLA. *Vid.* Abella.

AVENTINUS I. a son of Hercules by Rhea, who assisted Turnus against Æneas. (*Virg., Æn.*, 7, 657.)—II. A king of Alba, buried upon Mount Aventine. (*Ovid, Fast.*, 4, 51.)—III. One of the seven hills of Rome, and the largest of the whole number. It was divided from the Palatine by the valley of the Circus Maximus, and round its northern base flows the Tiber. This hill is said to have derived its name from Aventinus, an ancient king of Alba, who was buried there in a laurel grove, which was preserved on this hill to a very late period. The Aventine was the place on which Remus was fabled to have taken his station when watching for an omen in his competition with Romulus for the crown; and here, too, he is said to have been buried. Hence some derive the name from the Latin *avens*, "omens." The Aventine, in consequence of what has been said, was considered a place of evil omen. The period when it was included within the walls of Rome is differently given. Some make this to have been done by Ancus Marcius, others not till the time of the Emperor Claudius. No authority, however, can be adduced in support of the latter opinion, though advocated by some antiquarians, while an irresistible weight of evidence can be brought against it. (*Liv.*, 1, 33.—*Dion. Hal.*, lib. 2, 3, 4.—*Nardini*, 1, 5.) In the early ages of Rome, however, it is certain that the whole neither of the Esquiline nor Aventine hills was inhabited. We read in Livy (2, 28) of nightly meetings of the disaffected being held upon the former, to the great alarm of the senate; and the two armies, that joined in rebellion against the tyranny of the decemvirs, encamped upon the latter. (*Liv.*, 3, 50.) But from the prodigious extent of the Aventine, which is computed by Dionysius of Halicarnassus to be three miles in circumference, it is not surprising that there was abundant room for encampments at that early period. The Aventine has two distinct summits; and, indeed, it might almost be called two hills, for they are divided by a valley. Near the base of the more southern of its heights are the gigantic ruins of the baths of Caracalla. (*Rome in the Nineteenth Century*, vol. 1, p. 191, *seqq.*)—The Aventine was likewise called *Collis Murcias*, from Murcia, the goddess of sleep, who had a chapel (*sacellum*) on it; *Collis Dianæ*, from a temple of Diana (*Liv.*, 1, 33.—*Dion. Hal.*, 3, 43); and *Remonius*, from Remus.

AVERNUS LACUS, a lake in Campania, near Baïæ and Puteoli. It lay within, from the Lucrine lake, and was connected with the latter by a narrow passage. Strabo describes it as surrounded on almost every side, except this outlet, by steep hills. (*Strab.*, 248.) These hills were covered with immense forests, so that gloom and darkness surrounded the lake, and accumulated effluvia filled the air with contagion. The ancients even had a popular belief among them, that birds, on attempting to fly over this lake, became stupefied by its exhalations and fell into it. Hence the common though erroneous derivation of the name, from *a, priv.*, and *ἄρνις*, "a bird." (*Virg., Æn.*, 6, 237, *seqq.*—*Lucret.*, 6, 748.) As little credit is due to the account which places here the scene of Ulysses' descent to the lower world, and his evocation of the dead, as described in the *Odyssey*, together with the subterranean abodes of the Cimmerians. (*Strab.*, 244.)—The forests that covered the hills around Avernus were dedicated to Hecate, and sacrifices were frequently offered to that goddess. These forests and shades disappeared, when Agrippa converted the lake into a harbour by opening a communication with the

sea and the Lucrine basin. (*Vid.* Portus Julius.) The modern name of the lake is *Lago d'Averno*. Eustace describes Avernus at the present day as a circular sheet of water, about a mile and a half in circumference, and of great depth (in some places 180 feet). It is surrounded with grounds on one side low, on the other high but steep, cultivated all around, but not much wooded; a scene, on the whole, light, airy, and exhilarating. (*Classical Tour*, vol. 2, p. 394, *London*, ed.)

AUFIDENA, a city of Samnium, and the capital of the Caraceni, situate on the Sagrus or *Sangro*. It is now *Alfidena*. (*Liv.*, 10, 12.—*Plin.*, 3, 12.)

AUFIDIA LEX, was enacted by the tribune Aufidius Furco, A.U.C. 692. It contained this singular clause, that if any candidate, in canvassing for an office, promised money to a tribe, and failed in the performance, he should be excused; but if he actually paid it, he should be compelled to pay every tribe a yearly fine of 3000 sesterces as long as he lived. (*Cic.*, *ad Att.*, 1, 13.) This law, however, soon became a dead letter, as is apparent from what Suetonius states respecting the bribery practised by Cæsar and Bibulus. (*Suet.*, *Vit. Jul.*, 19.—Compare *Heinecc.*, *Antiq. Rom.*, p. 807, ed. *Haubold*.)

AUGURINUS, I. Bassus, an historian in the Augustan age, and in part of the reign of Tiberius. He wrote a history of the Roman civil wars, and another of the war in Germany. This latter work was continued by the elder Pliny. (*Plin.*, *Min. Ep.*, 3, 5, 6.—*Quintil.*, 10, 1, 103.)—II. Cæsius Bassus, a lyric poet, to whom Persius addressed his sixth Satire. He perished during the same eruption of Vesuvius that proved fatal to the elder Pliny. (*Quintil.*, 10, 1, 96.—*Schol. ad Pers.*, *Sat.*, 6, 1.—*Voss.*, *de poet. Lat.*, c. 3.)—III. Saleius Bassus, a poet in the time of Vespasian. He is highly praised by Quintilian (10, 1, 90), and by the author of the Dialogue "*de caus. corrupt. eloq.*" (c. 5).—IV. Luscus, a recorder in the town of Fundi, ridiculed by Horace. (*Serm.*, 1, 5, 24.)

AURIVUS, a river of Apulia, now the *Ofanto*. It was on the banks of this stream that the battle of Cannæ was fought. Polybius (3, 110) remarks of the Aufidus, that it is the only river which, rising on the western side of the Apennines, finds its way through that continuous chain into the Adriatic. But it may be doubted whether the historian speaks with his usual accuracy. It is certain that the Aufidus cannot be said to penetrate entirely through the chain of those mountains, since it rises on one side of it, while the Silarus flows from the other. The Aufidus was remarkable for the rapidity of its course. (*Horat.*, *Od.*, 4, 14.—*Id.*, *Od.*, 30, 3.—*Id.*, *Od.*, 4, 9.—*Cramer's Ancient Italy*, vol. 2, p. 295.)

AUGE, daughter of Aleus, king of Tegea. She became a mother by Hercules, and secretly laid her offspring, a son, in the sacred enclosure (τέμενος) of Minerva. A famine coming on the land, Aleus went to the τέμενος of the goddess; and, searching about, found his daughter's infant, which he exposed on Mount Parthenion. But the babe was protected by the care of the gods, for a hind which had just brought forth came and suckled him; and the shepherds, finding him thus nursed, named him Telephus from that circumstance (ἐλάφος, a hind). Aleus gave his daughter Auge to Nauplius, the son of Neptune, to sell her out of the country; and he disposed of her to Teuthras, king of Teuthrania, on the Caÿster, in Mysia, who made her his wife. Telephus having, when grown up, consulted the oracle respecting his parents, came to Mysia, where he was kindly received by Teuthras, whom he succeeded in his kingdom. (*Pausan.*, 8, 4.—*Apollod.*, 3, 9, 1.) This legend is connected apparently with the worship of Minerva Alea. The true meaning of Telephus is *Far-shining* (τηλέφαος). Auge (Αὐγή) is *bright*. (*Keightley's Mythol.*, p. 367.)

AUGEÆ, I. a town of Laconia, supposed to be the same with Ægiæ. It stood near the coast, northwest of Gythium. (*Il.*, 2, 583.—*Strabo*, 364.)—II. A town of the Epicnemidian Locri. (*Il.*, 2, 532.)

AUGEAS (poetic form ΑΥΓΕΑΣ), son of Neptune, according to others, of the Sun, while a third class of mythologists make him to have been the offspring of Phorbas. He was one of the Argonauts, and, after returning from that expedition, ascended the throne of Elis. Augeas kept a very large number of herds, and the filth and dung of these had been allowed to accumulate for many years, when Eurystheus imposed on Hercules, as one of his tasks, the cleansing of the stables of the Elian monarch. When Hercules came accordingly to Augeas, he said nothing to him of the commands of Eurystheus, but offered for a tenth of his herds to clean out his stables in one day. Augeas agreed, thinking the thing impossible, and Hercules took Phyleus, the son of Augeas, to witness the agreement. He then broke down a part of the wall of the court, and turning in the rivers Peneus and Alpheus by a canal, let them run out at the other side. Augeas, on learning that this was one of the tasks imposed by Eurystheus, not only refused to stand by his agreement, but denied that he had promised anything, and offered to lay the matter before judges. When the cause was tried, Phyleus honestly gave testimony against his father, and Augeas, in a rage, even before the votes had been taken, ordered both his son and Hercules to depart from Elis. The former retired to Dulichium, the latter returned to Eurystheus, stopping first at Olenus, where he aided Dexamenus against the centaur Eurytion. Eurystheus, however, refused to count the feat of Hercules, in cleansing the Augean stables, among the twelve tasks, saying that he had done it for hire. After the termination of all his labours, Hercules came with an army to Elis, slew Augeas, and set Phyleus on the throne. For an explanation of this myth, consult the article Hercules. (*Apollod.*, 2, 5, 4.—*Keightley's Mythology*, p. 356, 366.)—To "cleans the Augean stables" has become a common proverb, and is applied to any undertaking where the object in view is to remove a mass of moral corruption, the accumulation of which renders the task almost impossible. The Latin form of this same proverb is "*Augeæ stabulum repurgare*;" the Greek, merely Αὐγείων βοστασία. (*Lucian*, *Pseudom.*—*Erasmus*, *Chil.* 2, cent. 3, n. 21.)

AUGULA, now *Angela*, one of the Oases of the great African desert, with a town of the same name. It lay west of Ammon, and south of Cyrene, and was famed for the abundant produce of its date palms. This was one of the stations for the caravans which carried on the inland trade of Africa. It is at present also a caravan station. (*Mannert*, vol. 10, pt. 2, p. 181.—*Pacho*, *Voyage dans la Marmarique*, p. 272, *seqq.*)

AUGURES, a name given to a class of sacerdotal officers among the Romans, whose duty it was to observe and interpret omens, and perform other analogous acts of religion. The term *Augur* is commonly but erroneously derived from *avis*, "a bird," and *garrus*, "to chirp," on the supposition that this priesthood originally drew omens merely from the notes of birds. The true etymology, however, ought very probably to be referred to some Etrurian term, assimilated both in form and meaning to the Greek *αὐγή*, "light" (compare the German *auge*, "an eye"), so that the primitive meaning of the term *augur* will be "a seer."—The duties and powers of the Roman augurs are given somewhat in detail by Cicero (*de Leg.*, 2, 8), and may be arranged under four heads: 1. The inspecting or observing of omens. 2. The declaring the will of heaven, as ascertained by them from these omens. 3. The inaugurating of magistrates, and the consecrating of places and buildings. 4. The determining whether the omens observed by them allowed a thing

to be done or not, and also in what way the omens themselves were to be taken. (Compare *Müller, Etrusk.*, vol. 2, p. 117.)—The whole system of augural science was of Etrurian origin. In this latter country it served as a powerful engine of state in the hands of the aristocracy, and the same result was for a considerable time effected at Rome. Meetings of the *Comitia Centuriata*, for example, could not be held at all, if any augur declared the omens unpropitious; or the *Comitia* were broken off if a magistrate, virtually invested with augural powers, declared that he had heard thunder or seen lightning. So, again, all the business transacted at any *comitia*, except the *Tributa*, went for nothing, if, after the assembly had been held, an augur declared that there had been some informality in taking the auspices before the meeting was convened.—The augurs are supposed to have been first instituted by Romulus, who appointed three, one for each tribe. This, however, was mere popular opinion, and had no foundation in reality. A fourth augur was added, it is thought, by Servius Tullius, when he increased the number of tribes, and divided the city into four tribes. The augurs were at first all patricians, until A.U.C. 454, when five plebeians were added. Sylla increased their number to fifteen. The chief of the augurs was called *Magister Collegii*. The augurs enjoyed this singular privilege, that of whatever crime they were guilty, they could not be deprived of their office; because, as Plutarch remarks, they were intrusted with the secrets of the empire. The laws of friendship were anciently observed with great care among the augurs, and no one was admitted into their college who was known to be inimical to any of their number.—The augur made his observations on the heavens usually in the dead of night, or about twilight. He took his station on an elevated place, where the view was open on all sides, and, to make it so, buildings were sometimes pulled down. Having first offered up sacrifices, and uttered a solemn prayer, he sat down with his head covered, and with his face turned to the east, so that he had the south on his right and the north on his left. Then he determined with his *lituus* the regions of the heavens from east to west, and marked in his mind some object straightforward, at as great a distance as his eyes could reach, within which boundaries he should make his observations. There were generally five things from which the augurs drew omens: the first consisted in observing the phenomena of the heavens, such as thunder, lightning, comets, &c. The second kind of omen was drawn from the chirping or flying of birds. The third was from the sacred chickens, whose eagerness or indifference in eating the food which was thrown to them was looked upon as lucky or unlucky. The fourth was from quadrupeds, from their crossing or appearing in some unaccustomed place. The fifth was from different casualties, which were called *Dira*, such as spilling salt on the table, or wine upon one's clothes, hearing ill-omened words or strange noises, stumbling or sneezing, meeting a wolf, hare, fox, or pregnant bitch, &c. These the augur explained, and taught how they ought to be expiated.—In whatever position the augur stood, omens on the left, among the Romans, were reckoned lucky. But sometimes omens on the left are called unlucky, in imitation of the Greeks, among whom augurs stood with their faces to the north, and then the east, which was the lucky quarter, was on the right. Thunder on the left was a good omen for everything else but holding the *Comitia*. The croaking of a raven on the right, and of a crow on the left, was reckoned fortunate, and *vice versa*. In short, the whole art of augury among the Romans was involved in uncertainty, and was, in effect, a mere system of deception for restraining the multitude, and increasing, as has already been remarked, the influence of the leading men over them. (*Cic.*,

de Div., 1, 7.—*Id.*, 2, 36.—*Aulus Gellius*, 5, 8, &c.)

AUGUSTA, I. a name given singly, or in conjunction with some epithet, to a large number of cities, either founded, embellished, or protected by Roman emperors. The appellation is derived from the name of the first emperor of Rome, Augustus. The term *Augusta* sometimes appears under its Greek form, *Sebaste* (Σεβαστη).—II. A title of honour, borne by many Roman empresses.

AGUSTALIA, a festival at Rome, in commemoration of the day on which Augustus returned to Rome, after he had established peace in the different parts of the empire. It was celebrated on the 12th of October.

AUGUSTINUS, one of the most renowned fathers of the Christian church, born at Tagaste, a city of Africa, November 13, A.D. 354, during the reign of the Emperor Constantine. He has related his own life in the work to which he gave the title of *Confessiones*, and it is from this source, together with the *Retractationes*, some of his letters, and the *Vita Possidii* of the semi-Pelagian Gennadius, that we derive our principal information respecting him. His parents sent him to Carthage to complete his education, but he disappointed their expectations by his neglect of serious study and his devotion to pleasure. In his sixteenth year he became very fond of women. For fifteen years he was connected with one, by whom he had a son. He left her only when he changed his whole course of life. A book of Cicero's, called *Hortensius*, which has not come down to our times, led him to the study of philosophy; and when he found that this did not satisfy his feelings, he went over to the sect of the Manichæans. He was one of their disciples for nine years; but, after having obtained a correct knowledge of their doctrines, he left them, and departed from Africa to Rome, and thence to Milan, where he announced himself as a teacher of rhetoric. Saint Ambrose was bishop of this city, and his discourses converted Augustine to the orthodox faith. The reading of St. Paul's epistles wrought an entire change in his life and character. The Catholic church has a festival (May 3d) in commemoration of this event. He retired into solitude, wrote there many books, and prepared himself for baptism, which he received in the 33d year of his age, together with his son Adeodatus, from the hands of Ambrose. He returned to Africa, sold his estate, and gave the proceeds to the poor, retaining only enough to support him in a moderate manner. As he was once present in the church at Hippo, the bishop, who was a very old man, signified a desire to consecrate a priest to assist and succeed him. At the desire of the people, Augustine entered upon the holy office, preached with extraordinary success, and, in 395, became bishop of Hippo. He entered into a warm controversy with Pelagius concerning the doctrines of free-will, of grace, and of predestination, and wrote a book concerning them. Augustine maintained that men were justified merely through grace, and not through good works. He died August 28, A.D. 403, while Hippo was besieged by the Vandals. There have been fathers of the church more learned, masters of a better language and a purer taste; but none have ever more powerfully touched the human heart and warmed it towards religion. Painters have, therefore, given him for a symbol a flaming heart. Augustine is one of the most voluminous of the Christian writers. His works, in the Benedictine edition of Antwerp, 1700–3, fill 12 folio volumes. The first of these contains the works which he wrote before he was a priest, and his retractations and confessions; the former a critical review of his own writings, and the latter a curious and interesting picture of his life. The remainder of these volumes consist of a treatise "On the City of God;" comment

aries on Scripture; epistles on a great variety of subjects, doctrinal, moral, and personal; sermons and homilies; treatises on various points of discipline; and elaborate arguments against heretics. With the exception of those of Aristotle, no writings contributed more than Augustine's to encourage the spirit of subtle disputation which distinguished the scholastic ages. They exhibit much facility of invention and strength of reasoning, with more argument than eloquence, and more wit than learning. Erasmus calls Augustine a writer of obscure subtlety, who requires in the reader acute penetration, close attention, and quick recollection, and by no means repays him for the application of all these requisites. His works are now almost wholly neglected. (*Encyclop. Americ.*, vol. 1, p. 468.)—Among the sources of information in modern times respecting the life and productions of St. Augustine, the following may be mentioned: *Ceillier, Hist. General. des Aut. Eccles.* (Paris, 1744, 4to), vols. 11 and 12.—*Tillemont, Memoires*, &c., vol. 13.—*Vit. August. Vaillant, et Du Frische: ed. Op. Benedict.*, vol. 11.—*Act. Sanct. Mens. Aug.*, vol. 6, p. 213, *seqq.*—*L. Berti, de rebus gestis S. August.* (Venet., 1746, 4to).—*Rösler, Bibl. der Kirchenwät.*, vol. 9, p. 257.—*Fabric., Bibl. Lat.*, vol. 3, p. 519, *seqq.*—*Schröckh, Kircheng.*, vol. 15, p. 219, *seqq.*—*Biogr. Univ.*, vol. 3, p. 54, *seqq.*—*Wiggers, Versuch. einer pragmat. Darstellung des August. und Pelagianismus* (Hamburg, 1822, 8vo), vol. 1, p. 7, *seqq.*

AUGUSTULUS (Römulus Momyllus, surnamed Augustus, or, in derision, Augustulus), the last Roman emperor of the West. He was the son of Orestes, a patrician and commander of the Roman forces in Gaul. Augustulus was crowned by his father A.D. 475; but was dethroned the next year by Odoacer, king of the Heruli, who put Orestes to death, and banished the young monarch to Campania, allowing him at the same time a revenue for his support. The true name of this emperor was Augustus, but the Romans of his time gave him, in derision, the appellation of Augustulus (*The Little Augustus*), which has become the historical name of this feeble sovereign. His father Orestes was the actual emperor, and the son a mere puppet in his hands. (*Cassiod. et Marcell. in Chron.*—*Jornandes.*—*Procopius.*)

AUGUSTUS (CAIUS OCTAVIUS CÆSAR AUGUSTUS), originally called Caius Octavius, was the son of Caius Octavius, and of Atia daughter of Julia the sister of Julius Cæsar. The family of the Octavii were originally from Velitræ, a city of the Volsci. The branch from which Augustus sprung was rich, and of equestrian rank. His father was the first of the name that obtained the title of senator, but died when his son was only four years old. The mother of the young Octavius soon after married L. Philippus, under whose care he was brought up, until his great uncle Julius Cæsar, having no children, began to regard him as his heir (*Vell. Paterc.*, 2, 85), and, when he was between sixteen and seventeen years of age, bestowed upon him some military rewards at the celebration of his triumph for his victories in Africa. (*Suet., Aug.*, 8.) In the following year he accompanied his uncle into Spain, where he is said to have given indications of talent and activity; and in the winter of that same year he was sent to Apollonia in Epirus, there to employ himself in completing his education, till Cæsar should be ready to take him with him on his expedition against the Parthians. He was accordingly living quietly at Apollonia when the news of his uncle's death called him forth, though he was then hardly more than eighteen years of age, to act a principal part in the contentions of the times. On Cæsar's death being known, M. Vipsanius Agrippa and Q. Sabinienus Rufus, who are here first spoken of as his friends (*Vell. Paterc.*, 2, 85), advised him to embrace the offers which many of the centurions and

soldiers made him, of assisting him to revenge his uncle's murder. But, as he was not yet aware of the strength of that party which he would find opposed to him, he judged it expedient to return to Italy, in the first instance, in a private manner. On his arrival at Brundisium, he learned the particulars of Cæsar's death, and was informed also of the contents of his will, by which he himself was declared his heir and his adopted son. (*Dio Cassius*, 45, 3.—*Vell. Paterc.*, 2, 85.) He did not hesitate instantly to accept this adoption, and to assume the name of Cæsar; and it is said that numerous parties of his uncle's veterans, who had obtained settlements in the districts of Italy through which he passed, came from their homes to meet him, and to assure him of their support. (*Appian, Bell. Civ.*, 3, 12.) At Rome two parties divided the state, that of the republicans, who had made away with Cæsar, and that of Antony and Lepidus, who pretended to avenge his death, but who had, in reality, no other intention but to elevate their authority above that of the laws. The latter of these two parties was in the ascendant when Octavius visited the capital, and the consul Antony exercised an almost absolute control. He received Octavius with great coolness, and declined any co-operation with him. It is even said, that, not content with slighting him as a political associate, Antony endeavoured to obstruct, or, at least, to delay, his adoption into the Julian family, since Octavius could not claim the possession of his uncle's inheritance till he had gone through the forms by which he became Cæsar's adopted son. (*Florus*, 4, 4.—*Dio Cassius*, 45, 5.) On this provocation, Octavius resolved to do himself justice by the most atrocious means; and, although he was only nineteen years of age, he suborned some ruffians to assassinate Antony, the consul of the republic, in his own house. (*Cic., ep. ad fam.*, 12, 23.—*Senec., de Clem.*, 1, 9.) The attempt was discovered in time, but it threw Antony into the utmost perplexity and alarm. As it had not succeeded, a large portion of the people doubted its reality, and believed that the charge had been falsely brought against Octavius, in order to procure his ruin, that Antony might enjoy his property without disturbance. So strong, in fact, was the public feeling, and so unpopular was Antony at this period, that he did not think it advisable to bring his intended assassins to trial. But he trembled at the insecurity of his situation, and determined to employ a stronger military force than the guard with which he had hitherto protected his person, and by which he had overawed the senate and the forum. With this view Antony endeavoured to gain over the veterans of Cæsar that were stationed at Brundisium, but the more liberal offers of the young Octavius drew them over to the side of the latter. At length the two competitors for empire had recourse to arms, and Cisalpine Gaul became the theatre of warfare. Decimus Brutus, who held the command of this province, threw himself into Mutina, where Antony besieged him, but the latter was defeated by Octavius and the consuls Hirtius and Pansa, and compelled to retreat towards Transalpine Gaul. All the veteran legions which had been commanded by the late consuls (these leaders had fallen in the battle of Mutina) were now, with one exception, under the orders of Octavius, and neither they nor their general were inclined to obey any longer the authority of the senate. Marching to Rome at the head of his forces, Octavius was now elected consul by open intimidation of the senate and people, and the liberty of the commonwealth was lost for ever. Antony and Lepidus, meanwhile, had united their forces, and recrossed the Alps; and Octavius, now invested with the title of consul, and commanding a numerous army, marched back again towards Cisalpine Gaul, and found the two leaders in the neighbourhood of Mutina. A friendly correspondence

had been carried on between the chiefs of the two armies before they were advanced very near to one another; and it was determined that all differences should finally be settled, and the future measures which they were to take in common should be arranged at a personal interview. This interview resulted in the formation of a Triumvirate, or High Commission of three, for settling the affairs of the Commonwealth during five years. (*Liv., Epit.*, lib. 120.—*Appian, Bell. Civ.*, 4, 3.) They divided among themselves those provinces of the empire which were subject to their power, and the triumvirate was cemented by the most dreadful scenes of proscription and murder, during which fell the celebrated Cicero, a victim to the vengeance of Antony, and basely left to his fate by the heartless Octavius. After the hopes of the republican party had been crushed at Philippi, Antony, in an evil hour for himself, turned his back upon Italy, and left the immediate government of the capital in the hands of his associate. On returning to Rome, Octavius satisfied the cupidity of his soldiers by the division of the finest lands in the Italian peninsula. This division gave rise to the most violent disturbance. In the midst of the stormy scenes that now convulsed Italy, Octavius was obliged to contend with Fulvia, whose daughter Clodia he had rejected, and with Lucius, the brother-in-law of Antony. After several battles, Lucius threw himself into the city of Perugia, where he was soon after obliged to surrender. The city was given up to be plundered, and 300 senators were condemned to death, as a propitiatory sacrifice to the manes of the deified Cæsar. After the return of Antony an end was put to the proscriptions, and such of the proscribed persons as had escaped death by flight, and whom Octavius no longer feared, were allowed to return. There were still some disturbances in Gaul, and the naval war with Sextus Pompeius continued for several years. After his return from Gaul, Octavius married the famous Livia, the wife of Claudius Nero, whom he compelled to resign her, after he himself had divorced his third wife Scribonia. Lepidus, who had hitherto retained an appearance of power, was now deprived of his authority, and died as a private man B.C. 13. Antony and Octavius then divided the empire. But while the former, in the East, gave himself up to a life of luxury, the young Octavius pursued his plan of making himself sole master of the Roman world. He especially strove to obtain the affections of the people. A firm government was established; the system of audacious robbery, which the distresses of the times had long fostered at Rome and throughout Italy, was speedily and effectually suppressed. He showed mildness and a degree of magnanimity, if it could be so called, without the appearance of striving after the highest power, and even declared himself ready to lay down his power when Antony should return from his war against the Parthians. He appeared rather to permit than to wish himself to be appointed perpetual tribune, an office which virtually invested him with sovereign authority. The more he advanced in the affections of the people, the more openly did he declare himself against Antony. Meanwhile the latter had excited a strong feeling of disgust not only among the Romans at home, but even among his own officers, by his shameful abandonment to the celebrated Cleopatra, the queen of Egypt. His divorcing himself from Octavia, the sister of his colleague in the triumvirate, seemed like dishonouring a noble Roman lady in order to gratify the jealousy of a barbarian paramour; and an act of baseness on the part of Octavius himself completed the blow. Having got possession of Antony's will, he broke open the seals, and read the contents of it publicly, first to the senate, and afterward to the assembly of the people. The clause in it which especially induced Octavius to commit

this act, was one in which Antony desired that his body might, after death, be carried to Alexandria, and there buried by the side of Cleopatra. This proof of his romantic attachment for a foreigner seemed, in the eyes of the Romans, to attest his utter degeneracy, and induced the populace, at least, to credit the inventions of his enemies, who asserted that it was his intention, if victorious in the contest that now appeared inevitable, to give up Rome to the dominion of Cleopatra, and transfer the seat of empire from the banks of the Tiber to those of the Nile. It is clear, from the language of those poets who wrote under the patronage of Augustus, that this was the light in which the war was industriously represented; that every effort was made to give it the character of a contest with a foreign enemy; and to array on the side of Octavius the national pride and jealousy of the people of Rome. (*Hor., Od.*, 1, 37, 5, *seqq.*—*Virg., Æn.*, 8, 678, 685, 698.) Availing himself of this feeling, Octavius declared war against the Queen of Egypt, and led a considerable force by both sea and land to the Ambracian Gulf, where Agrippa gained the naval victory of Actium, which made Octavius master of the Roman world. He pursued his rival to Egypt, and ended the war after he had rejected the proposal of Antony to decide their differences by a personal combat. Cleopatra and Antony killed themselves. Octavius caused them to be splendidly buried. A son of Antony and Cleopatra was sacrificed to ensure the safety of the conqueror; and Cæsarion, a son of Cæsar and Cleopatra, shared the same fate. All the other relations of Antony remained uninjured, and Octavius, on the whole, used his power with moderation. After having spent two years in the East, in order to arrange the affairs of Egypt, Greece, Syria, Asia Minor, and the islands, he celebrated, on his return to Rome, a triumph for three days in succession. Freed from his rivals and enemies, and master of the world, he was undecided concerning the way in which he should exercise his power for the future. Agrippa, whose victory had given him universal dominion, counselled him to renounce his authority. Mæcenas opposed this; and Octavius followed his advice, or, rather, his own inclinations. In order to make the people willing to look upon him as an unlimited monarch, he abolished the laws of the triumvirate, beautified the city, and exerted himself in correcting the abuses which had prevailed during the civil war. At the end of his seventh consulship, he entered the senate-house, and declared his resolution to lay down his power. The senate besought him to retain it; and the farce ended by his yielding to their pressing entreaties, and consenting to continue to govern through them. He now obtained the surname of *Augustus*, which marked the dignity of his person and rank, and by degrees he united in himself the offices of emperor, or commander-in-chief by sea and land, with power to make war and peace; of proconsul over all the provinces; of perpetual tribune of the people, which rendered his person inviolable, and gave him the power of interrupting public proceedings; and, in fine, of censor (*magister morum*) and pontifex maximus, or controller of all things appertaining to public morals and religion. The laws themselves were subject to him, and the observance of them depended on his will. To these dignities we must add the title of "Father of his Country" (*Pater Patriæ*). Great as was the power thus given him, he nevertheless exercised it with moderation. It was the spirit of his policy to retain old names and forms, and he steadfastly refused to assume the title of *Dictator*, which Sylla and Cæsar had rendered odious.—Augustus carried on many wars in Africa, Asia, and particularly in Spain, where he triumphed over the Cantabri after a severe struggle. His arms subjected Aquitania, Pannonia, Dalmatia, and Illyria, and held the Dacians, Numidians, and

Æthiopians in check. He concluded a treaty with the Parthians, by which they gave up Armenia, and restored the eagles taken from Crassus and Antony. At the foot of the Alps he erected monuments of his triumphs over the mountaineers, the proud remains of which are yet to be seen at *Susa* and *Aosta*. After he had established peace throughout the empire, he closed (for the third time since the foundation of Rome) the temple of Janus (B.C. 10). This universal repose, however, was interrupted, A.D. 9, by the defeat of Varus, who lost three legions in an engagement with the Germans under Arminius, and killed himself in despair. The intelligence of this misfortune greatly agitated Augustus. He let his beard and hair grow, and often cried out, as if in the deepest sorrow, "*Oh Varus, give me back my legions!*" Meanwhile the Germans were held in check by Tiberius. During the peace, to which we have just referred, Augustus had issued many useful decrees, and abolished many abuses in the government. He gave a new form to the senate, employed himself in improving the manners of the people, promoted marriage, suppressed luxury, introduced discipline into the armies, and, in a word, did everything in his power to subserve the best interests of the state. He adorned Rome in such a manner, that it was truly said by him, "he found it of brick, and left it of marble." (*Sueton., Aug., 29.—Dio Cass., 56, 30.*) He also made journeys everywhere, to increase the blessings of peace; he went to Sicily and Greece, Asia Minor, Syria, Gaul, and other quarters: in several places he founded cities and established colonies. (*Vell. Patere., 2, 92.*) The people erected altars to him, and by a decree of the senate, the month *Septilis* was called by the new appellation of *Augustus* (August). Two conspiracies, which threatened his life, miscarried. Cæpio, Muræna, and Egnatius were punished with death: Cinna was more fortunate, receiving pardon from the emperor. This forbearance increased the love of the Romans, and diminished the number of the disaffected; so that the master of Rome would have had nothing to wish for, if his family had been as obedient as the world. The debauchery of his daughter Julia gave him the greatest pain, and he showed himself more severe towards those who destroyed the honour of his family than towards those who had threatened his life. History says, that in his old age he was ruled by Livia, the only person perhaps whom he truly loved. He had no sons, and lost by death his sister's son Marcellus, and his daughter's sons Caius and Lucius, whom he had appointed his successors. Drusus, also, his son-in-law, whom he loved, died early; and Tiberius, the brother of the latter, whom he hated on account of his bad qualities, alone survived. These numerous calamities, together with his continually increasing infirmities, gave him a strong desire for repose. He undertook a journey to Campania, from whose purer air he hoped for relief; but disease fixed upon him, and he died at Nola (August 19, A.D. 14), in the seventy-sixth year of his age, and forty-fifth of his reign.—Augustus was in his stature something below the middle size, but extremely well proportioned. (*Sueton., Aug., 79.*) His hair was a little inclined to curl, and of a yellowish brown; his eyes were bright and lively; but the general expression of his countenance was remarkably calm and mild. His health was throughout his life delicate, yet the constant attention which he paid to it, and his strict temperance in eating and drinking, enabled him to reach the full age of man. As a seducer and adulterer, and a man of low sensuality, his character was as profligate as that of his uncle. (*Sueton., Aug., 69, 71.*) In his literary qualifications, without at all rivaling the attainments of Cæsar, he was on a level with most Romans of distinction of his time; and it is said, that both in speaking and writing, his style was eminent for its perfect plainness and propriety. (*Sueton., Aug.,*

63, *seqq.*) His speeches on any public occasion were composed beforehand, and recited from memory; nay, so careful was he not to commit himself by any inconsiderate expression, that, even when discussing any important subject with his own wife, he wrote down what he had to say, and read it before her. Like his uncle, he was strongly tinged with superstition. He was very deficient in military talent; but in every species of artful policy, in clearly seeing, and steadily and dispassionately following his own interest, and in turning to his own advantage all the weaknesses of others, his ability, if so it may be called, has been rarely equalled. His deliberate cruelty, his repeated treachery, and his sacrifice of every duty and every feeling to the purposes of his ambition, speak for themselves; and yet it would be unjust to ascribe to a politic premeditation all the popular actions of his reign. Good is in itself so much more delightful than evil, that he was doubtless not insensible to the pleasure of kind and beneficent actions, and perhaps sincerely rejoiced that they were no longer incompatible with his interests.—Among the various arts to which Augustus resorted to beguile the hearts of his people, and perhaps to render them forgetful of their former freedom, one of the most remarkable was the encouragement which he extended to learning, and the patronage he so liberally bestowed on all by whom it was cultivated. To this noble protection of literature he was prompted not less by taste and inclination than sound policy; and in his patronage of the learned, his usual artifice had probably a smaller share than in those other parts of his conduct by which he acquired the favourable opinion of the world. Augustus was, besides, an excellent judge of composition, and a true critic in poetry; so that his patronage was never misplaced, or lavished on those whose writings might rather have tended to corrupt than improve the taste and learning of the age. No writer could hope for patronage except by cultivating a style both chaste and simple, which, if ornamental, was not luxurious, or, if severe, was not rugged or antiquated. The court of Augustus thus became a school of urbanity, where men of genius acquired that delicacy of taste, that elevation of sentiment, and that purity of expression, which characterize the writers of the age. To Mæcenas, the favourite minister of the emperor, the honour is due of having most successfully followed out the views of his master for promoting the interests of literature; but it is wrong to give Mæcenas the credit, as some have done, of first having turned the attention of Augustus to the patronage of literature. On the contrary, he appears merely to have acted from the orders, or to have followed the example, of his imperial master. (*Encyclop. Metrop., Div. 3, vol. 2, p. 294, seqq.—Encyclop. Amer., vol. 1, p. 469.—Biogr. Univ., vol. 3, p. 37, seqq.—Dunlop's Rom. Lit., vol. 3, p. 10, seqq.*)—II. A title which descended from Octavius to his successors. It was purely honorary, and carried with it the idea of respect and veneration rather than of any authority. The feminine form *Augusta* was often given to the mothers, wives, or sisters of the Roman emperors. Under Dioclesian, when the new constitution was given to the empire, the title of *Augustus* became more definite, and then began to be applied to the two princes who held sway conjointly, while the appellation of *Cæsar* was given to each of the presumptive heirs of the empire. The term *Augustus* is derived, not from *augere*, but from *augur*. (*Gronov., Thes. Antiq. Gr., vol. 7, p. 462.*) Places or buildings consecrated by auguries were originally called *augusta*; and the name was afterward applied to other things similarly circumstanced. Thus Ennius, as cited by Suetonius (*Aug., 7*), uses the expression "*augusto augurio*." (Compare *Fest., p. 43.—Ovid, Fast., 1, 607, seqq.*) Consequently, when the title *Augustus* is applied to a person, it is equivalent in meaning to *sanctus*, *sacratu*s, or *sacrosanctus*. (Com-

pare *Dio Cass.*, 53, 16.) And hence, as Gronovius correctly remarks, the term in question contains θεῖόν τι, "something of a divine nature." The Greeks, moreover, rendered *Augustus* into their language by Σεβαστός, which *Dio Cassius* (*l. c.*) explains by σεπτός. (*Creuzer, Röm. Antig.*, p. 292, *seqq.*)

AVIANUS, Flavius, a Latin versifier of Æsopic fables, forty-two in number. The measure adopted by him is the elegiac. According to Cannegieter, one of his editors, Avianus flourished about 160 A.D. (*Henric. Canneg. de ætate, &c., Flav. Aviani Dissertatio*, p. 231, *seqq.*) This opinion, however, is rendered altogether untenable by the inferior character of the Latinity, which Cannegieter endeavours, though unsuccessfully, to defend. Avianus would seem to have lived in the reign of Theodosius, long after the date assigned by the scholar just mentioned. His work is dedicated to a certain Theodosius, supposed to have been the grammarian Macrobius Theodosius. The fables of Avianus are sometimes erroneously ascribed to Avienus. The best editions of Avianus are, that of Cannegieter, *Amstelod.*, 1731, 8vo, and that of Nodell, *Amstelod.*, 1787, 8vo. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 317.)

AVIENUS, Rufus Festus, a Roman poet, whose age and country have both been disputed. St. Jerome speaks of him as of a recent writer (*in Epist. ad Titum*, v. 12), and we can scarcely, therefore, with Crinitus, place him in the reign of Dioclesian. (*Crinit. de poet. Lat.*, c. 80.) The death of Jerome happened A.D. 420, in his ninety-first year: on the supposition, therefore, that Avienus flourished about the middle of that father's protracted life, we may assign him to about A.D. 370, or the period of Valentinian, Valens, and Gratian. Tradition or conjecture has made him a Spaniard by birth; but this opinion is unsupported by written testimony, and even contradicted, if the inscription found in the Cæsarian Villa refer to this poet, which there seems small reason to doubt. From this we learn that he was the son of Musonius Avienus, or the son of Avienus and descendant of Musonius, accordingly as we punctuate the first line ("Festus Musonii soboles prolesque Arieni"); that he was born at Vulturni in Etruria; that he resided at Rome; that he was twice proconsul, and the author of many poetical pieces. The same inscription contradicts the notion, too precipitately grounded on some vague expressions in his writings, that he was a Christian; for it is nothing else than a religious address to the goddess Nortia, the Fortune of the Etrurians. The extant and acknowledged works of this poet are versions of the *Φαινόμενα* of Aratus, and the *Περὶ ἡρώδης* of Dionysius; and a portion of a poem "*De Ora Maritima*," which includes, with some digressions, the coast between Cadiz and Marseilles. The other poems generally believed to be the work of Avienus are, an Epistle to Flavianus Myrmecius, an elegiac piece "*de Cantu Sirenum*," and some verses addressed to the author's friends from the country. A poem "*de urbibus Hispania Mediterraneis*," is cited by some Spanish writers as the production of Avienus (*Nicolaus Antonius, Bibl. Vet. Hisp.*, 2, 9), but it is generally supposed to be the forgery of a Jesuit of Toledo. Servius (*ad Virg., Æn.*, 10, 272-388) ascribes to Avienus iambic versions of the narrative of Virgil and the history of Livy; which observation of the grammarian, together with a consideration of the genius and habits of this poet, renders it not altogether improbable that he is the author of a very curious and spirited Latin Epitome of the Iliad, which has reached us, and which throws some light on the poetical history of the time. —The best edition of Avienus is that of Wernsdorff, in the *Poete Latini Minores*, vol. 5, pt. 2, *Helmstadt*, 1791, 12mo. (*Encyclop. Metrop.*, Div. 3, vol. 2, p. 575, *seqq.*—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 185, *seqq.*)

AULERICI. Under this name are reckoned three
H H

nations of Gaul. I. The Aulerci Brannovices, contiguous to the Ædui, and subject to them, answering to what is now *le Briennois*. (*Cæs., B. G.*, 7, 75.)—II. The Aulerci Cenomani, situate between the Sarta or *Sarthe*, and the *Ladus*, two of the northern branches of the *Liger*. Their country is now the Department *de la Sarthe*. (*Cæs., B. G.*, 7, 75.)—III. The Aulerci Eburovices, on the left bank of the *Sequana* or *Seine*, below *Intetua* or *Paris*, answering now to the Department *de l'Eure*. (*Cæs., B. G.*, 3, 17.)

AULÈTES, the surname of one of the Ptolemies, father of Cleopatra. The appellation is a Greek one, meaning "flute-player" (*Αὐλητής*), and was given him on account of his excellence in playing upon the flute, or, more correctly speaking, pipe.

AULIS, a town of *Bœotia*, on the shores of the *Euripus*, and nearly opposite to *Chalcis*. It is celebrated as being the rendezvous of the Grecian fleet when about to sail for *Troy*, and as the place where they were so long detained by adverse winds. (*Vid. Iphigenia*.) Strabo (403) remarks, that, as the harbour of Aulis could not contain more than fifty ships, the Grecian fleet must have assembled in the neighbouring port of *Bathys*, which was much more extensive. From Xenophon we learn, that, when Agesilaus was on the point of setting out for *Asia Minor*, to carry on the war against *Persia*, he had intended to offer up sacrifice at Aulis, but was opposed in this design by the *Bœotarchs*, who appeared in the midst of the ceremony with an armed force. (*Hist. Gr.*, 3, 4, 4.) Livy says the distance between Aulis and *Chalcis* was three miles. (*Liv.*, 45, 27.) Pausanias (9, 19) reports, that the temple of *Diana* still existed when he visited Aulis, but that the inhabitants of the place were few, and those chiefly potters. (*Cramer's Ancient Greece*, vol. 2, p. 262, *seqq.*)

AULON, I. a fertile ridge and valley near *Tarentum*, in Southern Italy, the wine of which equalled the *Falerian* in the opinion of *Horace*. (*Horat., Od.*, 2, 6, 18.)—II. A valley of *Palestine*, extending along the banks of *Jordan*, called also *Magnus Campus*.—III. Another in *Syria*, between the ridges of *Libanus* and *Antilibanus*.—IV. A district and city of *Messenia*, bordering on *Triphylia* and part of *Arcadia*, being separated from these two by the *Neda*. (*Strab.*, 350.—*Steph. Byz.*, s. v.)

AULUS, I. A prænomen common among the Romans.—II. *Gellius*. (*Vid. Gellius*.)

AURELIA LEX, was enacted A.U.C. 683, and ordained that *judices* or *jurymen* should be chosen from the Senators, Equites, and *Tribuni Aerarii*.—Another, A.U.C. 678. It abrogated a clause of the *Lex Cornelia*, and permitted the tribunes to hold other offices after the expiration of the tribuneship.

AURELIANI. *Vid. Genabum*.

AURELIANUS, I. (*Lucius Domitius*) an emperor of *Rome*, distinguished for his military abilities and stern severity of character, was the son of a peasant in the territory of *Sirmium*, in *Illyria*. His father occupied a small farm, the property of *Aurelius*, a rich senator. The son enlisted in the troops as a common soldier, successively rose to the rank of centurion, tribune, prefect of a legion, inspector of the camp, general, or, as it was then called, duke of a frontier; and at length, during the Gothic war, exercised the important office of commander-in-chief of the cavalry. In every station he distinguished himself by matchless valour, rigid discipline, and successful conduct. Theoclius, as quoted in the *Augustan history* (p. 211), affirms, that in one day he killed forty-eight *Sarmatians*, and in several subsequent engagements nine hundred and fifty. This heroic valour was admired by the soldiers, and celebrated in their rude songs, the burden of which was "*Mille, mille, mille, occidit*." At length *Valerian II.* raised him to the consularship, and his good fortune was farther favoured by a wealthy and noble marriage.

His next elevation was to the throne, Claudius II., on his deathbed, having recommended Aurelian to the troops of Illyricum, who readily acceded to his wishes. The reign of this monarch lasted only four years and about nine months; but every instant of that short period was filled by some memorable achievement. He put an end to the Gothic war, chastised the Germans who invaded Italy, recovered Gaul, Spain, and Britain out of the hands of Tetricus, and destroyed the proud monarchy which Zenobia had erected in the East on the ruins of the afflicted empire. Owing to the ungenerous excuse of the queen, that she had waged war by the advice of her ministers, her secretary, the celebrated Longinus, was put to death by the victor; but, after having graced his triumphal entry into Rome, Zenobia herself was presented with a villa near Tibur, and allowed to spend the remainder of her days as a Roman matron. (*Vid.* Zenobia, Longinus, Palmyra.) Aurelian followed up his victories by the reformation of abuses, and the restoration throughout the empire of order and regularity, but he tarnished his good intentions by the general severity of his measures, and the sacrifice of the senatorian order to his slightest suspicions. He had planned a great expedition against Persia, and was waiting in Thrace for an opportunity to cross the straits, when he lost his life, A.D. 125, by assassination, the result of a conspiracy excited by a secretary whom he intended to call to account for peculation. Aurelian was a wise, able, and active prince, and very useful in the declining state of the empire; but the austerity of his character caused him to be very little regretted. It is said that he meditated a severe persecution on the Christians, when he was so suddenly cut off. (*Hist. August.*, p. 211, *seqq.*—*Gibbon, Decline and Fall*, c. 11.—*Biogr. Univ.*, vol. 3, p. 72.—*Encyclop. Am.*, vol. 1, p. 474.)—II. Cælius, a native of Sicca, in Numidia, who is supposed to have lived between 180 and 240 A.D. He was a member of the medical profession, and has left behind him two works: the one entitled, "*Libri Quinque tardarum sive chronicarum passionum*," and the other, "*Libri tres celerum sive acutarum passionum*." Both are drawn from Greek authors; from Themison, Thessalus, and, above all, Soranus. Cælius Aurelianus being the only author of the sect called Methodists who has come down to us (if we except Octavius Horatianus, who lived in the days of the Emperor Valentinian, and is little known), his work is particularly valuable, as preserving to us an account of many theories and views of practice which would otherwise have been lost; but even of itself it is deserving of much attention for the practical information which it contains. Cælius is remarkable for learning, understanding, and scrupulous accuracy; but his style is much loaded with technical terms, and by no means elegant. He has treated of the most important diseases which come under the care of the physician in the following manner. In the first place, he gives a very circumstantial account of the symptoms, which he does, however, more like a systematic writer and a compiler, than as an original observer of nature. Next, he is at great pains to point out the distinction between the disease he is treating of and those which very nearly resemble it. He afterwards endeavours to determine the nature and seat of the disease; and this part frequently contains valuable references to the works of Erasistratus, the celebrated Alexandrian anatomist. Then comes his account of the treatment, which is, in general, sensible and scientific, but somewhat too formal, timid, and fettered by the rules of the sect. He is ingenious, however, in often delivering a free statement of modes of practice, essentially different from his own. His account of Hydrophobia is particularly valuable, as being the most complete treatise upon that fatal malady which antiquity has furnished us with. He states, that the disease is occasioned not only by the bite of a dog, but

likewise by that of wolves, bears, leopards, horses, and asses. He also mentions an instance of its being brought on by a wound inflicted by the spurs of a cock. Nay, he says that he knew a case of the disease being brought on by the breath of a dog, without a wound at all. Sometimes too, he says, the complaint comes on without any apparent cause. His description, if compared with modern descriptions (for example, with that given in Hufeland's *Journal* for 1816, by Dr. Goden), will be found in every respect very complete. He considers the affection as a general one, but that the nerves of the stomach are more particularly interested in the disease; and Dr. Goden likewise is of opinion, that the splanchnic nerves are more especially affected. In short, his theory is, that the complaint consists of an *incendium nervorum*, or increased heat of the nerves. He treats the disease upon much the same plan as tetanus, to which he appears to have considered it allied, by frictions with tepid oil, oily clysters, and other remedies of a relaxing nature. He approves of venesection, but not to a great extent. He condemns the use of hellbore, which is a mode of treatment approved of by every ancient authority except himself. Neither, also, does he make mention of the application of the actual cautery to the wound, which practice is recommended by the best authorities, both ancient and modern. (*Sprengel, Hist. de la Med.*, vol. 2, p. 37, *seqq.*)

AURELIUS, I. Marcus, a Roman emperor. (*Vid.* Antoninus II.)—II. Victor, a Roman historian. (*Vid.* Victor.)

AURINIA, a prophetess held in great veneration by the Germans. (*Tacit., Germ.*, 8.) Some imagine the true form of the name to have been, when Latinized, *Aurinia*; and trace an analogy between it and the *Atruna* of northern mythology. (Consult Oberlinus, *ad Tacit.*, l. c.)

AURORA, the goddess of the dawn, daughter of Hyperion and Theia. Her Greek name was Eōs, (Ἠώς). Other genealogies represent her as the daughter of Titan and Terra, or of Pallas, the son of Crisus and husband of Styx, whence she is sometimes styled *Pallantias*. In Homer and Hesiod she is simply the goddess of the dawn, but in the works of succeeding poets she is identified with Hæmera, or the Day. (*Æschyl., Pers.*, 384.—*Eurip., Troad.*, 844.—*Bion, Idyll.*, 6, 18.—*Quint., Smyrn.*, 1, 119.—*Nonnus*, 7, 286, 294.—*Id.*, 25, 567.—*Musæus*, 110, &c.) Aurora became, by Astræus, the mother of the winds Boreas, Zephyrus, and Notus, and also of the stars of heaven. (*Hes., Theog.*, 378.) She was more than once, moreover, deeply smitten with the love of mortal man. She carried off Orion, and kept him in the isle of Ortygia till he was slain there by the darts of Diana. (*Od.*, 5, 121.) Clitus, the son of Mantius, was for his exceeding beauty snatched away by her, "that he might be among the gods." (*Od.*, 15, 250.) She also carried off Cephalus, and had by him a son named Phæthon. (*Hes., Theog.*, 986.—*Eurip., Hippol.*, 457.) But her strongest affection was for Tithonus, son of Laomedon, king of Troy. (*Vid.* Tithonus.) The children whom she bore to Tithonus were Memnon and Anathion.—The most probable derivation of the name Eōs (Ἠώς, Doric Ἀώς) seems to be that from *āw*, to blow, regarding it as the cool morning air whose gentle breathing precedes the rising of the sun. The Latin term *Aurora* is similarly related to *Aura* (*Hermann, über das Wesen*, &c., p. 98.—*Keightley's Mythology*, p. 63, *seqq.*) Aurora is sometimes represented in a saffron-coloured robe, with a wand or torch in her hand, coming out of a golden palace, and ascending a chariot of the same metal. Homer describes her as wearing a flowing veil, which she throws back to denote the dispersion of night, and as opening with her rosy fingers the gates of day. Others represent her as a nymph crowned with flowers, with a

star above her head, standing in a chariot drawn by winged horses, in one hand she holds a torch, and with the other scatters roses, as illustrative of the flowers springing from the dew, which the poets describe as diffused from the eyes of the goddess in liquid pearls. (Compare *Inghirami, Mon. Etrusc.*, 1, 5.—*Millin, Vases de Canosa*, 5. *Vases*, 1, 15.—*Id. ibid.*, 2, 37.—*Eckhel, Syll.*, 7, 3.—*Müller, Archæol. der Kunst*, p. 611.)

AURUNCI, a people of Latium, on the coast towards Campania, southeast of the Volsci. They were, in fact, identical with the Ausonians. The Italian form of the name Ausones can have been no other than *Aurini*, for from this *Aurunci* is manifestly derived. *Auruncus* is *Aurunicus*; the termination belongs to the number of adjective-forms in which the old Latin luxuriated, so as even to form Tuscanus from Tuscus. (*Niebuhr's Rom. Hist.*, vol. 1, p. 56, 2d ed., *Cambridge transl.*)

AUSAR, a river of Etruria, which formerly joined the Arnus, not far from the mouth of the latter. At present they both flow into the sea by separate channels. Some indication of the junction of these rivers seems preserved by the name of *Osari*, attached to a little stream or ditch which lies between them. (*Cramer's Anc. Italy*, vol. 1, p. 174.)

AUSCHISÆ, a people of Libya. (*Herodot.*, 4, 171.) They extended from above Barca to the neighbourhood of the Hesperides. (Compare *Rennell's Geography of Herodotus*, vol. 2, p. 266.)

AUSCI, a people of Gallia Aquitania. Their capital was Ausci, now *Ausch*, on the *Ger*, one of the southern branches of the Garumna or *Garonne*. Its earlier name was Clumberis or Climberrum. (*Cæs.*, *B. G.*, 3, 27.—*Mela*, 3, 2.—*Amm. Marc.*, 15, 28.)

AUSON, a son of Ulysses and Calypso, from whom the Ausones, a people of Italy, were fabled to have been descended. (*Vid.* Ausonia.)

AUSONIA, a name properly applied to the whole southern part of Italy, through which the Ausones, one of the ancient races of Italy, had spread themselves. Its derivation from Auson, son of Ulysses and Calypso, is a mere fable. The sea on the southeast coast was for a long time called from them *Mare Ausonium*. Niebuhr makes the Ausonians a portion of the great Oscan nation. (*Rom. Hist.*, vol. 1, p. 56, 2d ed., *Cambridge transl.*)

AUSONIUS (Decius, or, more correctly, Decimus, Magnus), a Roman poet of the fourth century. The most authentic particulars respecting him are to be found in his own writings, and more especially in the second volume of his *Præfatiuncule*, wherein he treats the subject professedly. He was born at Burdigala (*Bordeaux*), where his father, Julius Ausonius, was an eminent physician, and also a Roman senator and member of the Municipal Council. Had his education been solely confided to paternal attentions, it is probable that no record of him would have been necessary among the Latin poets, since the elder Ausonius, although well read in Greek, was but indifferently acquainted with the Latin tongue. By the exertions, however, of his maternal uncle, Æmilius Magnus Arborius, himself a poet, and the reputed author of an elegy still extant, "*Ad nympham nimis cultam*," and those of the grammarians Minervius, Nepotian, and Staphylus, the disadvantages of our poet's circumstances were abundantly removed. From these eminent men he acquired the principles of grammar and rhetoric. His success in the latter of these studies induced him to make trial of the bar; but the former was his choice, and in A.D. 367 he was appointed by the Emperor Valentinian tutor to the young prince Gratian, whom he accompanied into Germany the following year. He became successively Count of the empire, quæstor, governor of Gaul, Libya, and

Latium, and first consul. The last of these dignities he obtained A.D. 379. The question has been often started, whether Ausonius was a Christian or not. Some have doubted the circumstance on account of the extreme licentiousness of certain of his productions. It is difficult, however, to deny the affirmativity of this question without attacking the authenticity of some of his pieces, such as, for example, his first *Idyl*: besides, how can we imagine that so zealous a Christian as Valentinian would have confided to a pagan the education of his son? As to the licentious character of some of his poetry, it may be remarked, that, in professing the prevailing religion of the day, he omitted, perhaps, to follow its purer precepts, and hence indulged in effusions revolting to morality and decency. The frequent use which he makes of the pagan mythology in his writings does not prove anything against his observance of Christianity, since the spirit of the times allowed this absurd mixture of fable with truth.—The exact time when Ausonius died is uncertain; he was alive in 392.—The poetry of Ausonius, on the whole, like that of Avienus, is marked by poverty of argument, profusion of mechanical ingenuity, and imitation of, or, rather, compilation from, the ancients. It is valuable, however, to the literary historian: its variety alone affords us a considerable insight into the state of poetry in that age; and the station and pursuits of the author allowed him that familiarity with contemporary poets which has imparted to his works the character of poetical memoirs.—Of the editions of Ausonius, the best, although a very rare one, is that of Tollius, *Amst.*, 1671, 8vo. It contains the learned commentary of Joseph Scaliger, together with selected notes from Accursius, Barthus, Gronovius, Grævius, and others. The Delphin edition is also held in considerable estimation. The Biont edition, published in 1783, 8vo, is a useful and correct one. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 304, *seqq.*—*Schüll, Hist. Lit. Rom.*, vol. 3, p. 52.—*Encyclop. Metropol.*, *Dir.* 3, vol. 2, p. 576, *seq.*)

AUSPICES, a sacerdotal order at Rome, nearly the same as the augurs. *Auspex* (the nom. sing.) denoted a person who observed and interpreted omens, especially those connected with the flight, the sounds, and the feeding of birds; and hence the term is said to be derived from *avis*, "a bird," and *specio*, "to behold" or "observe;" the earlier form of the word having been *avispec*. In later times, when the custom of consulting the auspices on every occasion lost much of its strictness, the term *auspex* acquired a more general signification. Before this, the name was particularly applied to the priest who officiated at marriages; but now, those employed to witness the signing of the marriage contract, and to see that everything was rightly performed, were called *auspices nuptiarum*, otherwise *proxenete, conciliatores*, and *pronubi*, in Greek *παράνυμφοι*. (*Val. Max.*, 2, 1, 1.—*Cic.*, *de Divin.*, 1, 16.—*Sueton.*, *Claud.*, 26.—*Serv.*, *ad Æn.*, 1, 350, et 4, 45.—*Buleng.*, *de Aug.*, et Aug., 3, 13.) Hence *auspex* is put for a favourer or director; thus, *auspex legis*, "one who advocates a law;" *diis auspibus*, "under the guidance of the gods;" *auspice musa*, "under the inspiration of the muse," &c. (Consult remarks under the article **AUGURES**.)

AUSTER, the South wind, the same with the Notos of the Greeks. Pliny (2, 48) speaks of it as a drying, withering wind, identifying it, therefore, with the *Sirocco* of modern times. Aristotle (*Probl.*, 1, 23) ascribes to its influence burning fevers. Horace (*Serm.*, 2, 6, 18) calls it "*plumbæus Auster*," thus characterizing it as unhealthy; and, on another occasion, he speaks of it in plainer language, as "*nocens corporibus*." (*Od.*, 2, 14, 15.) Statius describes the roses as dying at its first approach, "*Pubescens rosæ primos moriuntur ad Austros*." (*Syle.*, 3, 3, 129.—

Compare *Virg., Eclog., 2, 58.*) Pliny recommends the husbandman neither to trim his trees nor prune his vines when this wind blows (18, 76). On another occasion (16, 46) he states, that the pear and the almond trees lose their buds if the heavens be clouded by a south wind, though unaccompanied by rain. This remark, however, is not confirmed by modern experience. The south wind is also described by the Latin poets as bringing rain. (*Tibull., 1, 1, 47.—Ovid, Met., 13, 725, &c.*) We must distinguish, therefore, between the dry and humid southern blasts, as Pliny does in the following passage: “(*Auster*) humidus aut æstuosus Italia est; Africa quidem incendiis cum seruitute adfert” (18, 76).

AUTOCHTHŌNES, an appellation assumed by the Athenians, importing that they sprang from the soil which they inhabited. (Consult remarks under the article **ATTICA**.)

AUTOLŌLE, a people of Africa, on the western or Atlantic coast of Mauritania Tingitana. (*Plin., 6, 31.—Lucan, Pharsal., 4, 677.—Sil. Ital., 2, 63.*)

AUTOLŪCUS, son of Mercury and Philonis, according to the scholiast on Homer (*Od., 19, 432*), but, according to Pausanias (8, 4), the son of Dædalion, and not of Mercury. He dwelt on Parnassus, and was celebrated as a stealer of cattle, which he carried off in such a way as to render it nearly impossible to recognise them, all the marks being defaced. Among others, he drove off those of Sisyphus, and he defaced the marks as usual; but, when Sisyphus came in quest of them, he, to the great surprise of the thief, selected his own beasts out of the herd, for he had marked the initial letter of his name under their hoofs. (The ancient form of the Σ was C, which is of the shape of a horse's hoof.) Autolycus forthwith cultivated the acquaintance of one who had thus proved himself too able for him; and Sisyphus, it is said, seduced or violated his daughter Anticlea (who afterward married Laertes), and thus was the real father of Ulysses. (*Phærecycl., ap. Schol. ad Od., 19, 432.—Schol. ad Il., 10, 267.—Tzet., ad Lycophr., 344.—Keightley's Mythology, p. 400.*)

AUTOMĒDON, a son of Dioreus, who went to the Trojan war with ten ships. He was the charioteer of Achilles, after whose death he served Pyrrhus in the same capacity. (*Hom., Il., 9, 16, &c.—Virg., Æn., 2, 477.*)

AUTONŌE, a daughter of Cadmus, who married Aristæus, by whom she had Actæon, often called *Autoniceus heros*. The death of her son (*vid. Actæon*) was so painful to her that she retired from Boeotia to Megara, where she soon after died. (*Pausan., 1, 44.—Hygin., fab., 179.—Ovid, Met., 3, 720.*)

AUTRICŌNES, a people of Hispania Tarraconensis, among the Cantabri. They occupied what is now the eastern half of *La Montana*, the western quarter of *Biscay* and *Alava*, and the northeastern part of *Burgos*. Their capital was Flaviobriga, now *Porto Galleto*, near *Bilboa*. (*Florez, Esp. S., 24, 10.—Ukert, Geogr., vol. 2, p. 446.*) Mannert, however, makes it to be *Santander*. (*Geogr., vol. 1, p. 373.*)

AXĒNUS, the ancient name of the Euxine Sea. The word signifies *inhospitable*, which was highly applicable to the manners of the ancient inhabitants of the coast. It took the name of Euxinus after the coast was settled by Grecian colonies. (*Vid. Pontus Euxinus.*)

AXIUS, the largest river in Macedonia, rising in the chain of Mount Scardus, and, after a course of eighty miles, forming an extensive lake near its mouth. It falls into the Sinus Thermaicus, after receiving the waters of the Erigonis, Ludias, and Astræus. In the middle ages this river assumed the name of Bardarus (*Theophylact., Epist., 55.—Niceph. Greg., vol. 1, p. 230*), whence has been derived that of *Vardari* or *Vardar*, which it now bears. (*Cramer's Anc. Greece, vol. 1, p. 235.*)

AZAN, I. a mountain of Arcadia, sacred to Cybele. (*Stat., Theb., 4, 292.*)—II. A son of Arcas, king of Arcadia, by Erato, one of the Dryades. He divided his father's kingdom with his brothers Aphidas and Elatus, and called his share Azania. There was in Azania a fountain called *Chlorius*, whose waters gave a dislike for wine to those who drank them. (*Vitr., 8, 3.—Ovid, Met., 15, 322.—Pausan., 8, 4.—Plin., 21, 2.—Etymol. Mag., s. v. Κλιόριον.*)—III. A region on the northeastern coast of Africa, lying south of Aromatum Promontorium and north of Barbaria. It is now *Ajan*. (*Ptol.—Arrian, Peripl. Mar. Erythr.—Stukius, ad Arrian, l. c., p. 93.*)

AZĪRIS, a place in Libya, surrounded on both sides by delightful hills covered with trees, and watered by a river, where Battus built a town, previous to founding Cyrene. (*Herod., 4, 157.*) Ptolemy calls the place *Azylis*. The harbour of *Azaris*, mentioned by Synesius (c. 4), appears to coincide with this same place. Pachto thinks, that the Aziris of Herodotus coincides with the modern *Temminch*. (*Voyage, &c., p. 50, seqq.*)

AZŌTUS (the Asdod of Scripture), one of the five chief cities of the Philistines, and, at the same time, one of the oldest and most celebrated cities of the land. The god Dagon was worshipped here. It lay on the seacoast, and in the division of the country among the Israelites, it fell to the tribe of Judah, but was not conquered until the reign of Solomon. In the time of King Hezekiah it was taken by the Assyrians, and subsequently by Psammetichus, king of Egypt, after a siege of twenty-nine years. (*Herod., 2, 157.*) At a later period Azotus became the seat of a Christian bishop. The ruins of the ancient city are near a small village called *Esdud*. (*Mannert, Geogr., vol. 6, pt. 1, p. 261, seq.*)

B.

BABRĪUS or **BABRĪAS** (or, as the name is sometimes corrupted, **BABRIAS**), a Greek poet, who lived, according to Tyrwhitt, either under Augustus or a short time before that emperor; while Coray, on the other hand, makes him a contemporary of Bion and Moschus. The particulars of his life have not reached us. All that we know of him is, that, after the example of Socrates, who, while in prison, amused himself with versifying the fables of Æsop, Babrius published a collection of fables under the title of *μύθοι* or *μυθιαῖοι*; from which the fables of Phædrus are closely imitated. They were written in choliambics, and comprised in ten books, according to Suidas, or two volumes, according to Avianus. (*Av., Pref. Fab.*)—These two accounts are not at variance with each other, as the books were doubtless divisions made by the author, like the books of Phædrus, perhaps with an appropriate introduction to each; while the “*volumina*” of Avianus were probably rolls of parchment or papyrus, on which the ten books were written. It may be farther observed, that Avianus calls the books of Phædrus *libelli*, and not *volumina*. In this manner may be explained the statement of Pliny (8, 16), that Aristotle's writings on Natural History were contained in nearly fifty *volumina*. (Compare *Ménage, ad Diog. Laert., 5, 25.*) This collection threw all preceding ones into comparative obscurity. It appears to have been still in existence as late as the twelfth century, in the days of Tzetzes: the copyists, however, of succeeding times, little sensible of the charms of the versification which Babrius had adopted, thought they could not do better than convert it into so much prose; and the fragments of verses, which they were unable in this way perfectly to disguise, are all that recalls the original lines which they have spoiled. The collection of Babrius, thus dishonoured, was perpetuated by numerous copies, in which traces

of the original became more and more obscured, until a single apologue alone, that of the swallow and nightingale, bore marks of a versified fable. This piece found its way into a collection of fables attributed to Ignatius Magister, a priest of Constantinople, who, being in possession of a copy of the original fables of Babrius, in choliambic verse, as that author had written them, resolved to change them into iambic tertrasties. With this view he abridged and tortured each apologue until he succeeded in reducing them individually to four verses. Fifty-three fables were thus strangled; but as if Ignatius had wished, by means of a comparison, to augment our regrets for those which he had altered, he preserved entire and unchanged a single fable, the one to which we have alluded. At the period when the Greek authors began to be printed, the true collection of Babrius no longer existed: it was thought, however, that the collection of Ignatius was the original one, and hence it was published under the name of Babrius, or rather Gabrias, the B in the manuscripts being confounded with a Γ. The error of the name was only perceived about the close of the sixteenth century. Two English scholars, the celebrated Bentley, in his dissertation on Æsop, and, at a later period, Tyrwhitt, in his dissertation on Babrius (*Lond.*, 1776, 8vo), have avenged the memory of the poet, and dissipated much of the obscurity which hung over this portion of literary history. The latter of these two scholars reunited all the fragments of Babrius to be found in Suidas, as well as all those which were to be met with in other works. In this way he succeeded in recomposing four of the fables of Babrius, so that their number now amounted in all to five. Thirty-three years afterward (1809) De Furia published many fables of Æsop, up to that time indited. In the number of these were thirty-six, which he believed to be written in prose like the rest, and which he printed as prose compositions; they were, in reality, however, versified fables, and a few corrections sufficed to restore them to their primitive form. This service has been rendered by Coray, in his collection of Æsop's Fables; by J. G. Schneider, at the end of his edition of Æsop, from the Augustan MS.; by Berger, in an edition of the remains of Babrius, published at Munich in 1816; by Mr. G. Burges, in the Classical Journal (whose collection, however, is unfinished); by the present Bishop of London (Dr. Blomfield), in the third number of the *Musenm Criticum*; and by an anonymous writer in the second number of the Cambridge Philological Museum. (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 61, *seq.*—*Cambridge Philol. Mus.*, n. 2, p. 282, *seq.*)

BABYLON, I. a celebrated city, the capital of the Babylonian empire, situate on the Euphrates, in 32° 25' north latitude, and 44° east longitude, as is supposed. Its origin is lost in the obscurity of early times. It is remarkable enough that Herodotus should have given us no intimation respecting its founder; he merely informs us that Semiramis and Nitocris, two of its queens, strengthened the fortifications, and guarded the city against inundations of the river, as well as improved and adorned it. May we not conclude from this, asks Rennell (*Geography of Herodotus*, vol. 1, p. 442), that its antiquity was very great; and ascended so high that Herodotus could not satisfy himself concerning it? At the same time, adds this intelligent writer, the improvements that took place in the city in the reign of Semiramis, might occasion the original foundation to be ascribed to her; the like having happened in the history of other cities. Herodotus informs us (1. 178), that Babylon became the capital of Assyria after the destruction of Nineveh. Perhaps, then, we ought to date the foundation of those works which appear so stupendous in history from that period only: for, wonderful as these works appear, even when ascribed to the capital of an em-

pire, the wonder increases when ascribed to the capital of a province only. If, then, with the ancient authors generally, we allow Semiramis to have been the founder of that Babylon described by Herodotus, we cannot fix the date of the improved foundation beyond the eighth century before the Christian era: so that the duration of this city, in its improved form, was less than 800 years, reckoning to the time of Pliny. (*Rennell, Geography of Herodotus*, vol. 1, p. 443, *seq.*)—The shape of the city of Babylon was that of a square, traversed each way by twenty-five principal streets, which, of course, intersected each other, dividing the city into 625 squares. These streets were terminated at each end by gates of brass, of prodigious size and strength, with a smaller one opening towards the river. Respecting the height and thickness of the walls of Babylon, there are great variations among the ancient writers. Herodotus makes them 200 royal cubits, or 337 feet, 8 inches high, and 50 royal cubits, or 84 feet, 6 inches broad. Ctesias gives 50 fathoms (*ὀργυιαί*), or 300 feet, for the height. An anonymous writer in Diodorus Siculus makes the height 50 common cubits, or 75 feet, and this estimate is followed by Strabo and Quintus Curtius. Pliny gives 200 feet, and Orosius 200 common cubits, or 300 feet. (*Herod.*, 1, 178.—*Ctesias*, p. 402, *ed. Baehr.*—*Diod. Sic.*, 2, 7.—*Strabo*, 738.—*Curtius*, 5, 1.—*Pliny*, 6, 25.—*Orosius*, 2, 6.) In this statement, Ctesias evidently copies from Herodotus, since 50 fathoms make exactly 200 cubits; only he appears not to have perceived that royal cubits were meant by the latter. It is also clear, that the anonymous writer mentioned by Diodorus Siculus, as well as Strabo and Quintus Curtius, had Ctesias respectively in view, but that, startled at the number of 50 fathoms, they have reduced it to the number of 50 cubits. The number 200, employed by Pliny, proves that he had consulted Herodotus merely; but that, through inadvertence on his part, or through the fault of later copyists, feet are substituted for cubits. Orosius follows Herodotus, but, forgetting that the latter speaks of royal cubits, he contents himself with giving 200 common cubits. (*Larcher, ad Herodot.*, 1, 178.) But are we to receive the estimate of Herodotus as correct, and entitled to full belief? Evidently not: the measurement is incredible, and bears on its very front the impress of gross exaggeration. A difficulty also presents itself with regard to the extent of the walls of Babylon. Herodotus makes them 120 stadia each side, or 480 in circumference. Pliny and Solinus give the circuit at 60 Roman miles; which, reckoning eight stadia to a mile, agrees with the account of Herodotus. Strabo makes it 385 stadia. Diodorus, from Ctesias, assigns 360, but from Clitarchus, who accompanied Alexander, 365. Curtius gives 368. It appears highly probable, remarks Rennell (*Geography of Herodotus*, vol. 1, p. 447), that 360 or 365 was the true statement of the circumference, since one of these numbers was reported by Ctesias, the other (which differs so little) by Clitarchus, both of them eyewitnesses. Taking the circumference of Babylon at 365 stadia, and these at 491 feet, each side of the square (which is equal to 914 stadia) will be 8.485 British miles, or nearly 8½. This gives an area of 72 miles and an inconsiderable fraction. If the same number of stadia be taken at 500 feet each, the area will be 74.8. And, finally, the 385 stadia of Strabo, at 491 feet, about 80. The 480 stadia of Herodotus would give about 126 square miles, or eight times the area of London! But that even 72 contiguous square miles should have been in any degree covered with buildings, is on every account too improbable for belief. This famous city, in all likelihood, occupied a part only of the vast space enclosed by its walls. It is a question that no one can positively answer, "what proportion of the space was occupied?" It is possible, however, that nearly two

thirds of it might have been occupied in the mode in which the large cities of Asia are built; that is, in the style of some of those of India at the present day, having gardens, reservoirs of water, and large open places within them. Moreover, the houses of the common people consist of one floor only; so that, of course, fewer people can be accommodated in the same compass of ground in an Indian than in a European city. This accounts at once for the erroneous dimensions of some of the Asiatic cities; and perhaps we cannot allow much less than double the space to accommodate the same number of Asiatics that Europeans would require. That the area enclosed by the walls of Babylon was only partly built on, is proved by the words of Quintus Curtius (5, 4), who says, that "the buildings in Babylon are not contiguous to the walls, but some considerable space was left all around." Diodorus, moreover, describes a vast space taken up by the palaces and public buildings. The enclosure of one of the palaces was a square of 15 stadia, or near a mile and a half; the other of five stadia: here are more than $2\frac{1}{2}$ square miles occupied by the palaces alone. Besides these, there were the temple and tower of Belus, of vast extent; the hanging gardens, &c. From all this, and much more that might be adduced, we may collect most clearly, that much vacant space remained within the walls of Babylon: and this would seem to do away, in some degree, the great difficulty respecting the magnitude of the city itself. Nor is it stated as the effect of the subsequent decline of Babylon, but as the actual state of it, when Alexander first entered the place: for Curtius leaves us to understand, that the system of cultivating a large proportion of the enclosed space originated with the foundation itself; and the history of its two sieges, by Cyrus and Darius Hystaspis, seems to show it. (*Renell's Geography of Herodotus*, vol. 1, p. 447.)—The walls of Babylon were built of brick baked in the sun, cemented with bitumen instead of mortar, and were encompassed by a broad and deep ditch, lined with the same materials, as were also the banks of the river in its course through the city, the inhabitants descending to the water by steps through the smaller brass gates already mentioned. Over the river was a bridge, connecting the two halves of the city, which stood, the one on its eastern, the other on its western bank; the river running nearly north and south. The bridge was five furlongs in length, and thirty feet in breadth, and had a palace at each end, with it, it is said, a subterranean passage beneath the river from one to the other, the work of Semiramis. Within the city was the temple of Belus, or Jupiter, which Herodotus describes as a square of two stadia: in the midst of this arose the celebrated tower, to which both the same writer and Strabo give an elevation of one stadium, and the same measure at its base. The whole was divided into eight separate towers, one above another, of decreasing dimensions to the summit; where stood a chapel, containing a couch, table, and other things, of gold. Here the principal devotions were performed: and over this, on the highest platform of all, was the observatory, by the help of which the Babylonians are said to have attained to great skill in astronomy. A winding staircase on the outside formed the ascent to this stupendous edifice.—The two palaces, at the two ends of the bridge, have already been alluded to. The old palace, which stood on the east side of the river, was 30 furlongs (or three miles and three quarters) in compass. The new palace, which stood on the west side of the river, opposite to the other, was 60 furlongs (or seven miles and a half) in compass. It was surrounded with three walls, one within another, with considerable spaces between them. These walls, as also those of the other palace, were embellished with an infinite variety of sculptures, representing all kinds of animals to the life. Among the rest was a
